LEIDEN
BRILL
2000

AUTHORS OF ARTICLES IN THIS VOLUME

For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have decided to list after each contributor's name the pages on which his signature appears. Academic but not other addresses are given (for a retired scholar, the place of his last known academic appointment).

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this Encyclopaedia or from the *Shorter Encyclopaedia of Islam*. An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his name appears within square brackets after the name of the original author.

E. Chaumont, Centre National de la Recherche Scientifique, Aix-en-Provence. 16, 866
P. Chelkowski, New York University. 408
Moncef Chenoufi, Kuwait University. 425
Mohamed-Hédi Chérif, University of Tunis. 651
W.C. Chittick, State University of New York, Stony Brook. 324
V. Christides, University of Ioannina, Athens. 213, 790
Nathalie Clayer, Ecole des Hautes Etudes en Sciences Sociales, Paris. 255, 416, 418, 534, 919, 920
J. Cler, University of Strasbourg. 734
W.L. Cleveland, Simon Fraser University, British Columbia. 908
J.F. Coakley, Harvard University. 899
P.M. Cobb, University of Notre Dame. 822, 884
Mercè Comes, University of Barcelona. 837
D. Commins, Dickinson College, Carlisle, Penn. 133
S. Conermann, University of Kiel. 186
M. Côte, University of Aix-en-Provence. 358, 580, 590
J. Couland, University of Paris. 7
D. Crecelius, California State University, Los Angeles. 834
Patricia Crone, Institute for Advanced Study, Princeton, NJ. 954
Stephanie Cronin, London. 23
Yolande Crowe, Geneva. 767
F. Daftary, Institute of Ismaili Studies, London. 404, 855
Radhi Daghfous, University of Tunis. 648
H. Daiber, University of Frankfurt. 750
B. van Dalen, University of Frankfurt. 271
Virginia Danielson, Harvard University. 856
R.E. Darley-Doran, Winchester. 185, 410, 527, 621
G. Dávid, Eötvös Loránd University, Budapest. 417
D. Davis, Ohio State University, Columbus. 672
R.H. Davison, George Washington University. 209
F.M. Denny, University of Colorado, Boulder. 75, 385, 398, 863
[J. Deny, Paris]. 598
D. DeWeese, Indiana University, Bloomington. 563
E. Dickinson, Yale University. 935
A. Dietrich, University of Göttingen. 23, 587, 768, 868, 946
Moktar Djebli, University of Paris. 108, 136, 431
G. Doerfer, University of Göttingen. 188
Anne-Marie Eddé, University of Reims. 600
D.F. Eickelman, Dartmouth College, Hanover, New Hampshire. 225
R. Eisener, University of Bamberg. 67
Taïeb El Achèche, University of Tunis. 142, 386, 429, 463, 542, 782
Mohamed El Mansour, University of Rabat. 185
W. Ende, University of Freiburg. 140
G. Endress, University of Bochum. 53, 530
C. Ernst, University of North Carolina, Chapel Hill. 337
J. van Ess, University of Tübingen. 344, 450
T. Fahd, University of Strasbourg. 94, 161, 164, 178, 789
H. Fähndrich, University of Zurich. 193
[H.G. Farmer, Glasgow]. 34, 38, 626, 770, 894
Suraiya Faroqhi, University of Munich. 113, 210, 219, 914
Ana Fernández Félix, University of Madrid. 945
Halima Ferhat, University of Rabat. 169, 531, 549, 550
Maribel Fierro, C.S.I.C., Madrid. 11, 159, 585, 608
R. Firestone, Hebrew Union College, Los Angeles. 169
Kais M. Firro, University of Haifa. 192
Barbara Flemming, University of Leiden. 352, 718
W. Floor, Bethesda, Maryland. 926
P. Fodor, University of Budapest. 166
Ch.-H. de Fouchécour, University of Paris. 831
B.G. Fragner, University of Bamberg. 64
G.S.P. Freeman-Grenville, Sheriff Hutton, York. 301, 622
M. Gaborieau, Centre National de la Recherche Scientifique, Paris. 39, 580
A. Gacek, McGill University, Montreal. 409, 871
Expiracion Garcia-Sanchez, C.S.I.C., Granada. 480
J.-Cl. Garcin, University of Aix-Marseille. 938
G.J.H. van Gelder, University of Oxford. 4, 5, 79, 123, 180, 341
E. Geoffroy, University of Strasbourg. 61, 117, 246, 854, 864
Cl. Gilliot, University of Aix-en-Provence. 10, 805
D. Gimaret, Ecole Pratique des Hautes Etudes, Paris. 2, 139, 183, 389, 931
Altan Gökalp, University of Paris. 126, 736
P.B. Golden, Rutgers University. 303, 371, 417, 552, 557, 623, 691, 693
Lisa Golombek, Royal Ontario Museum, Toronto. 523, 524
G. Goodwin, Royal Asiatic Society, London. 569
M.S. Gordon, Miami University, Oxford, Ohio. 618
W.A. Graham, Harvard University. 312, 357
W. Granara, Harvard University. 662
Vincenza Grassi, University of Naples. 240
P. Guichard, University of Lyons. 584
J.-P. Guillaume, University of Paris. 193, 376, 835
D. Gutas, Yale University. 231
the late U. Haarmann, Free University, Berlin. 796
Mohammad Hajji, Rabat. 56, 77
H. Halm, University of Tübingen. 814
Wael B. Hallaq, McGill University, Montreal. 161
S. Nomanul Haq, Cambridge, Mass. 28
G.R. Hawting, University of London. 99, 432, 847
G. Hazai, University of Cyprus. 715
[W. Heffening, Cologne]. 53, 469, 907
W.P. Heinrichs, Harvard University. 7, 53, 70, 132, 360, 424, 452, 482, 589, 670, 910, 928, 951
C.J. Heywood, University of London. 801
Carole Hillenbrand, University of Edinburgh. 528
M. Hofelich, University of Frankfurt. 146
V. Höhfeld, University of Tübingen. 571, 759
C. Holes, University of Oxford. 818
P.M. Holt, Oxford. 622
[E. Honigmann, Brussels]. 481
M.B. Hooker, Australian National University, Canberra. 430, 807
D. Hopwood, University of Oxford. 389, 873
B. Hourcade, Centre National de la Recherche Scientifique, Paris. 496
[M.T. Houtsma, Utrecht]. 554
R.S. Humphreys, University of California, Santa Barbara. 276, 280, 283
J.O. Hunwick, Northwestern University. 89, 122, 134, 143, 299, 340, 510, 810
C. Imber, University of Manchester. 420, 738
Halil Inalcik, Bilkent University, Ankara. 507
B. Ingham, University of London. 957
Svetlana Ivanova, National Library, Sofia. 547
Mawil Y. Izzi Dien, University of Wales, Lampeter. 77, 93, 304, 358, 406, 800
P. Jackson, University of Keele. 552, 591, 593
Renate Jacobi, Free University, Berlin. 400, 776
J.J.G. Jansen, University of Leiden. 62, 938

ÉVA JEREMIÁS, Eötvös Loránd University, Budapest. 370
PENELOPE C. JOHNSTONE, University of Oxford. 740, 752
F. DE JONG, University of Utrecht. 326
G.H.A. JUYNBOLL, Leiden. 78, 81, 382, 399, 446, 546
O. KAHL, Sheffield. 476
MEHMET KALPAKLI, Bilkent University, Ankara. 478
N. KAPTEIN, University of Leiden. 257
A.T. KARAMUSTAFA, Washington University, St. Louis. 716
BARBARA KELLNER-HEINKELE, Free University, Berlin. 685
P.F. KENNEDY, New York University. 125
R.G. KHOURY, University of Heidelberg. 762, 836, 949
[H. KINDERMANN, Cologne]. 786
D.A. KING, University of Frankfurt. 55, 133, 163, 313
G.M.H. KING, University of Oxford. 438
F. KLEIN-FRANKE, Hebrew University, Jerusalem. 461
SIGRID KLEINMICHEL, Free University, Berlin. 733
A. KNYSH, University of Michigan, Ann Arbor. 922
TIMUR KOCAOĞLU, Koç University, Istanbul. 686
EBBA KOCH, University of Vienna. 60
E. KOHLBERG, Hebrew University, Jerusalem. 40, 41
LINDA KOMAROFF, Los Angeles County Museum of Art. 525
M.G. KOSSMANN, University of Leiden. 242
[J.H. KRAMERS, Leiden]. 82, 416, 417, 766, 925
REMKE KRUK, University of Leiden. 148, 379
P. KUNITZSCH, University of Munich. 531
H. KURIO, Staatsbibliothek Berlin. 181
ABDERRAHMANE LAKHSASSI, Mohammed V University, Rabat. 551
J. LAMBERT, Musée de l'Homme, Paris. 211
ANN K.S. LAMBTON, Kirknewton, Northumberland. 290, 551
J.M. LANDAU, Hebrew University, Jerusalem. 177, 365
ELLA LANDAU-TASSERON, Hebrew University, Jerusalem. 604
D.M. LAST, University College, London. 951
J.D. LATHAM, University of Manchester. 449, 873
M. LAVERGNE, Centre National de la Recherche Scientifique, Paris. 19, 216
A. LAYISH, Hebrew University, Jerusalem. 157, 161, 354
the late HAVA LAZARUS-YAFEH, Hebrew University, Jerusalem. 112, 395, 960
O.N.H. LEAMAN, John Moores University, Liverpool. 83
M. LECKER, Hebrew University, Jerusalem. 93, 116, 176, 401, 432, 774, 784, 960
S. LEDER, University of Halle. 827
J.L. LEE, Leeds University. 158
R. VAN LEEUWEN, University of Amsterdam. 194, 211
G. LEISER, Vacaville, California. 170, 412, 413, 570
T. LEISTEN, Princeton University. 675
AMALIA LEVANONI, University of Haifa. 7, 925
[G. LEVI DELLA VIDA, Rome]. 401
[E. LÉVI-PROVENÇAL, Paris]. 83, 171, 913
A. LEVIN, Hebrew University, Jerusalem. 121
B. LEWIS, Princeton University. 81
L. LEWISOHN, University of London. 332, 378
G. LIBSON, Hebrew University, Jerusalem. 888
CHANG-KUAN LIN, National Cheng-chi University, Taipei. 476, 575, 808
B. LORY, Institut National des Langues Orientales Vivantes, Paris. 372, 624
P. LORY, Ecole Pratique des Hautes Etudes, Paris. 248
P. LOSENSKY, Indiana University, Bloomington. 892
M.C. LYONS, University of Cambridge. 436, 955
M.C.A. MACDONALD, University of Oxford. 438, 968
D. MACEOIN, University of Durham. 41
W. MADELUNG, University of Oxford. 89, 162, 431, 762, 792, 916, 927
ALI MAHJOUBI, University of Tunis. 654
AMMAR MAHJOUBI, University of Tunis. 644
FEDWA MALTI-DOUGLAS, Indiana University, Bloomington. 587
the late R. MANTRAN, University of Aix-Marseilles. 566
BEATRICE F. MANZ, Tufts University, Medford, Mass. 513, 516, 814
[G. MARÇAIS, Paris]. 405
MANUELA MARÍN, University of Madrid. 106, 285
Y. MARQUET, University of Paris. 546
P.J. MARSHALL, King's College, London. 533
[L. MASSIGNON, Paris]. 1, 498
R. MATTHEE, University of Delaware. 756
CATHERINE MAYEUR-JAOUEN, University of Paris. 190
DANIELA MEROLLA, University of Leiden. 119
L.B. MILLER, New Paltz, N.Y. 241
[V. MINORSKY, Cambridge]. 486, 487, 673, 744, 896, 917
J.-P. MOLÉNAT, Centre National de la Recherche Scientifique, Paris. 607, 765
L. MOLINA, University of Granada. 243, 586, 777, 853
G. MONNOT, Ecole Pratique des Hautes Etudes, Paris. 441
J.E. MONTGOMERY, University of Cambridge. 220, 586, 823, 839, 946
P.F. DE MORAES FARIAS, University of Birmingham. 78
R. MORELON, Centre National de la Recherche Scientifique, Paris. 429
D.O. MORGAN, University of London. 412
M. MORONY, University of California, Los Angeles. 361
D.W. MORRAY, University College Dublin. 167
ABDERRAHMANE MOUSSAOUI, Oran, Algeria. 758
J.-M. MOUTON, University of Picardy, Amiens. 532
M. MURANYI, University of Bonn. 840
R. MURPHEY, University of Birmingham. 812
SILVIA NAEF, University of Basel. 366
LAILA NEHMÉ, Collège de France, Paris. 968
I.R. NETTON, University of Leeds. 869
E. NEUBAUER, University of Frankfurt. 144, 759, 810
A.J. NEWMAN, University of Edinburgh. 937
C. NIJLAND, Leiden. 619
[B. NIKITINE, Paris]. 398
the late K.A. NIZAMI, Aligarh Muslim University. 257, 807, 896
G. NONNEMAN, Lancaster University. 854
A. NORTHEDGE, University of Paris. 792
ANNETTE OEVERMANN, University of Tübingen. 97
R.S. O'FAHEY, University of Bergen. 4, 250
K. ÖHRNBERG, University of Helsinki. 190
G. OMAN, University of Naples. 212, 214
T. PENCHOEN, Hood River, Oregon. 170
CH. PICARD, University of Toulouse. 795
D. PINGREE, Brown University. 28
[M. PLESSNER, Jerusalem]. 179, 548
I. POONAWALA, University of California, Los Angeles. 392
A. POPOVIC, Centre National de la Recherche Scientifique, Paris. 255, 574, 923
CATHERINE POUJOL, Institut National des Langues et Civilisations Orientales, Paris. 222, 351, 560, 681
K.-G. PRASSE, University of Copenhagen. 381
I. PROUDFOOT, Australian National University, Canberra. 302

Nasser Rabbat, Massachusetts Institute of Technology, Cambridge. 538
B. Radtke, University of Utrecht. 317
F.J. Ragep, University of Oklahoma. 752
Munibur Rahman, Oakland University, Rochester, Michigan. 104, 114, 164, 165, 439, 599, 872
R. Rashed, Ecole Pratique des Hautes Etudes, Paris. 429
S.A. al-Rashid, King Saud University, Riyadh. 759, 959
A.K. Reinhart, Dartmouth College, Hanover, New Hampshire. 99, 114, 400
R.C. Repp, University of Oxford. 805
A. Rieck, University of Hamburg. 117
A. Rippin, University of Calgary. 88, 341, 359, 434, 765
C.F. Robinson, University of Oxford. 763, 764, 783
D. Robinson, Michigan State University, East Lansing. 603
Ruth Roded, Hebrew University, Jerusalem. 855, 856
Fatima Roldán Castro, University of Seville. 145, 149, 242
B.A. Rosenfeld, Pennsylvania State University. 834
F. Rosenthal, Yale University. 165, 168, 348
A. Rouaud, Centre National de la Recherche Scientifique, Paris. 72
E.K. Rowson, University of Pennsylvania, Philadelphia. 428
D.J. Roxburgh, Harvard University. 519
P.C. Sadgrove, University of Manchester. 233, 679
J. Samsó, University of Barcelona. 942
F. Sanagustin, University of Lyons. 926
Paula Sanders, Rice University, Houston. 538
T. Sato, University of Tokyo. 919
Emilie Savage-Smith, University of Oxford. 356, 460

Ayman F. Sayyid, The Egyptian National Library, Cairo. 916
Jennifer M. Scarce, National Museums of Scotland, Edinburgh. 88
[J. Schacht, New York]. 155, 859
A. Schippers, University of Amsterdam. 216
[O. Schirmer]. 368
G. Schoeler, University of Basel. 306, 434, 913
D. Schroeter, University of California, Irvine. 406
R. Schulze, University of Berne. 168
O. Schumann, University of Hamburg. 420, 475
P. Sebag, Paris. 639
T. Seidensticker, University of Jena. 108, 224
R. Sellheim, University of Frankfurt. 98, 399, 462
Hafedh Sethom, University of Tunis. 643
C. Shackle, University of London. 881
R. Shaham, Hebrew University, Jerusalem. 354
Irfan Shahîd, Georgetown University, Washington, DC. 192, 403, 436, 789
Maya Shatzmiller, University of Western Ontario. 475
S. von Sicard, Selly Oak Colleges, Birmingham. 197, 781
Mohammad Yusuf Siddiq, Islamic University, Kushtia, Bangladesh. 541, 550, 574, 598
H.J.A.J. Smeets, University of Leiden. 574, 766
G.R. Smith, University of Manchester. 10, 107, 118, 303, 392, 430, 449, 482, 673, 815, 817, 868, 913, 960
P. Smoor, University of Amsterdam. 172, 836
Priscilla P. Soucek, New York University. 363
S. Soucek, Princeton University. 302, 353, 571, 677, 811
Susan A. Spectorsky, City University of New York. 30
I. Steblin-Kamensky, St. Petersburg State College. 65
F.H. Stewart, Hebrew University, Jerusalem. 95, 443, 892
J. Stewart-Robinson, University of Michigan, Ann Arbor. 55
the late Yedida K. Stillman, University of Oklahoma, Norman. 538
W. Stoetzer, University of Leiden. 390
[M. Streck, Jena]. 641, 665, 668
G. Strohmaier, Berlin. 928
[R. Strothmann, Hamburg]. 183
Zeinab A. Taha, American University in Cairo. 4
Mohamed Talbi, University of Tunis. 101, 172, 411
W.M. Thackston, Harvard University. 517, 760, 835
F. Thiesen, University of Oslo. 236
D. Thomas, Selly Oak Colleges, Birmingham. 18, 375
Amin Tibi, University of Oxford. 357, 825, 916
Shawkat M. Toorawa, University of Mauritius. 103, 104, 762
Comi M. Toulabor, Centre National de la Recherche Scientifique, Bordeaux. 558
J.L. Triaud, University of Aix-Marseilles. 575
M. Tuchscherer, University of Aix-en-Provence. 940
[V. Vacca, Rome]. 913
D.M. Varisco, Hofstra University. 147
G. Veinstein, Ecole des Hautes Etudes en Sciences Sociales, Paris. 959
Chantal de La Véronne, Centre National de la Recherche Scientifique, Paris. 149
C.H.M. Versteegh, University of Nijmegen. 361
Maria J. Viguera, University Complutense of Madrid. 304, 390, 739, 753
the late F. Viré, Centre National de la Recherche Scientifique, Paris. 118, 396, 433, 510, 784
D. Waines, University of Lancaster. 115, 32, 529
[J. Walker, London]. 510
S.M. Wasserstrom, Reed College, Portland. 778
B.G. Weiss, University of Utah. 867
A. Welch, University of Victoria. 595
[A.J. Wensinck, Leiden]. 98, 119, 222, 360, 945, 952
Mary C. Wilson, University of Massachusetts, Amherst. 887
Christine Woodhead, University of Durham. 295, 352, 450, 679, 738, 908, 920
Mohammed Yalaoui, University of Tunis. 20, 499, 500, 657, 791
E. Yarshater, Encyclopaedia Iranica, New York. 167
St. Yerasimos, Institut Français d'Etudes Anatoliennes, Istanbul. 539, 616, 924
Alexandra Yerolympos, Aristotelian University, Thessaloniki. 540
A. Zaborski, University of Cracow. 582
Elizabeth A. Zachariadou, University of Crete. 777, 867
Th. Zarcone, Centre National de la Recherche Scientifique, Paris. 253, 334, 963
[K.V. Zettersteen, Uppsala]. 555
Ming Zhu, Beijing University of Chinese Medicine and Pharmacy. 461
P. Zieme, Free University, Berlin. 715
E.J. Zürcher, University of Leiden. 418, 697

ADDENDA AND CORRIGENDA

VOLUME II

P. 274ª, **DIHLĪ SULTANATE**, l. 9 from foot, *add to Bibl.*: P. Jackson, *The Delhi Sultanate, a political and military history*, Cambridge 1999.

P. 1055ª, **GHAZNAWIDS**, Art and monuments, l. 12, *add to Bibl.*: Roberta Giunta, *Les inscriptions de la ville de Gaznī (Afghanistan)*, thèse de doctorat N.R., Univ. de Provence Aix-Marseille 1999, 3 vols., unpubl.; R. Hillenbrand, *The architecture of the Ghaznavids and Ghurids*, in Carole Hillenbrand (ed.), *Studies in honour of Clifford Edmund Bosworth. 2. The Sultan's turret*, Leiden 2000, 124-206.

P. 1104ª, **GHŪRIDS**, l. 13, *add to Bibl.*: Roberta Giunta, *Les inscriptions de la ville de Gaznī (Afghanistan)*, thèse de doctorat N.R., Univ. de Provence Aix-Marseille 1999, 3 vols., unpubl.; R. Hillebrand, *The architecture of the Ghaznavids and Ghurids*, in Carole Hillebrand (ed.), *Studies in honour of Clifford Edmund Bosworth. 2. The Sultan's turret*, Leiden 2000, 124-206; P. Jackson, *The fall of the Ghurid dynasty*, in *ibid.*, 207-37.

P. 1142ª, **GURGANDJ**, l. 40, *add after* "iv, 260 f.)": A building surviving there, on stylistic grounds attributable to the later 6th/12th century, is by popular local tradition considered as the tomb of the Khwārazm Shāh Tekish b. Il Arslan (567-96/1172-1200 [*q.v.*]), but is more probably a palace or government building, perhaps part of a larger complex (see S. Chmelnizkij, *The mausoleum of Tekesh in Kunya Urgench*, in F. Reroche *et alii, Art turc/Turkish art. 10th International Congress of Turkish Art... Geneva 17-23 September 1995*, Geneva 1999, 217-23).

VOLUME III

P. 1178ᵇ, **IMRU' AL-ḲAYS**, *add to Bibl.*: Irfān Shahîd, *Byzantium and Kinda*, in *Byzantinische Zeitschr.*, liii (1960), 57-73; idem, *Byzantium and the Arabs in the sixth century*, Washington D.C. 1995; idem, *The last days of Imru' al-Qays: Anatolia*, in Issa J. Boullata and T. DeYoung (eds.), *Tradition and modernity in Arabic literature*, Fayetville, Ark. 1997, 207-22; Sezgin, *GAS*, ii, 122-6, ix, 266.

VOLUME IV

P. 915ª, **KHĀḲĀN**, l. 33, and **KHĀN**, p. 1010ᵇ, l. 23 from foot, *add to Bibl.*: G. Moravcsik, *Byzantino-turcica*, ii, *Sprachreste der Türkvölker in der byzantinischen Quellen*, ²Berlin 1958, 148-9, 332-4; A.G.C. Savvides, *Some notes on the terms Khān and Khagan in Byzantine sources*, in I.R. Nettorn (ed.), *Studies in honour of Clifford Edmund Bosworth. 1. Hunter of the East*, Leiden 2000, 267-79.

VOLUME V

P. 71ª, **KHŪRYĀN-MŪRYĀN**, l. 13 from foot, *add to Bibl.*: G.R. Smith, *The Kuria Muria Islands, 1959-60. A footnote of British colonial history*, in I.R. Netton (ed.), *Studies in honour of Clifford Edmund Bosworth. I. Hunter of the East*, Leiden 2000, 280-96.

SUPPLEMENT

P. 411[a], **ĪLĀḲ**, l. 51, *add* In the later 4th/10th century and early 5th/11th centuries, the *dihḳāns* of Īlāḳ took the side of the incoming Ḳarakhānids [see ILEK-KHĀNS] against their Sāmānid overlords. It now seems possible to place the *fulūs* minted during this period, going up to 403/1012-13, as emanating from three apparently successive *dihḳāns*. See M. Fedorov, *A rare fals of AH 401 struck at Īlāq (new data about the "Dihqāns of Īlāq" dynasty), in Oriental Numismatic Society Newsletter*, n°. 162 (winter 2000), 11-13.

T

TĀʾ and **ṬĀʾ**, the third and sixteenth letters of the Arabic alphabet, with the numerical values in the *abdjad* system of 400 and 9 respectively. In the modern standard pronunciation, the former represents a voiceless, slightly aspirated, dental (or dento-alveolar) stop; the latter a voiceless, unaspirated, dental (dento-alveolar) stop with simultaneous velarisation, i.e. with the back of the tongue lifted towards the soft palate. Sībawayh and his successors classify *ṭāʾ* as *madjhūr*, which most modern scholars have understood to mean "voiced" [see ḤURŪF AL-HIDJĀʾ and the references cited there], but the evidence of modern Arabic dialects and of the other Semitic languages seems hardly reconcilable with the alleged voiced articulation of *ṭāʾ*. It is true that in a large area of central Yemen, including Ṣanʿāʾ, the reflex of classical *ṭāʾ* is in fact realised as a voiced [ḍ] in pre- and inter-vocalic positions, but in many of these dialects *tāʾ* is also voiced in the same positions (see P. Behnstedt, *Die nordjemenitischen Dialekte. Teil 1. Atlas*, Wiesbaden 1985, 13 and Karte 6). Thus the Yemenite evidence does not really support the supposedly ancient voiced realisation specifically for "emphatic" *ṭāʾ*.

In words of Greek or Latin origin which entered Arabic via Aramaic original [t] is normally represented by *ṭāʾ*; this continues the scribal practice in Aramaic, where the letter *taw* represents the (originally aspirated, later fricative) Greek θ, while the letter *ṭēth* is reserved for the Greek (unaspirated) τ. Similarly in borrowings from Iranian languages, original [t] is very often represented by *ṭāʾ* in Arabic (e.g. in place-names like Ṭabaristān, Ṭūs, Iṣṭakhr), possibly suggesting that in early New Persian [t] was still (as in Old Iranian) unaspirated. However, in modern Persian [t] is pronounced almost exactly like Arabic [t], i.e. with some degree of aspiration, and when the Persians began to write their own language in Arabic script they consistently used *tāʾ* for their [t], restricting *ṭāʾ* to words borrowed from Arabic.

Turkic languages, when written in Arabic script, generally use *tāʾ* for the more or less palatalised [t] occurring in the vicinity of front vowels and *ṭāʾ* for the same phoneme next to back vowels. Urdū uses *tāʾ* for its voiceless, unaspirated dental [t] and puts (at least in the modern orthography) a miniaturised *ṭāʾ* over the letters *rāʾ*, *dāl* and unpointed *tāʾ* to indicate the Indian retroflex consonants [ṛ], [ḍ] and [ṭ]; ordinary *ṭāʾ* is used (as in Persian) only in Arabic words and is not distinguished from *tāʾ* in pronunciation.

DE BLOIS)

ṬĀ-HĀ, two isolated letters at the head of sūra XX in the Ḳurʾān. It has been proposed to explain them as an abbreviation, either of an imperative (from the root *w-ṭ-ʾ*; al-Ḥasan al-Baṣrī) or from a proper name (Ṭalḥa; Abū Hurayra), meaning the Companion of the Prophet, who supplied this sūra to the first compilers of the Ḳurʾān.

The important thing to note is that Muslim tradition since the 3rd/9th century has made Ṭā-Hā one of the names of the Prophet, and as a result, to this day we find boys in Egypt and ʿIrāḳ given the name Muḥammad Ṭā-Hā. From the 4th/10th century, mystics unanimously see in Ṭā-Hā the purity (*ṭahāra*) and rectitude (*ihtidāʾ*) of the heart of the Prophet. Such are in *djafr* [*q.v.*] the classical meanings of the two letters.

On the other hand, the two letters *ṭā-sīn* (found at the head of sūra XXVII), following the methods of *djafr* which sees in them abbreviations of *ṭahāra* + *sanā*, have been taken by certain early mystics to designate Iblīs, whose monotheistic preaching among the angels was parallel with the monotheistic mission of Ṭā-Hā (= Muḥammad) among men (see al-Ḥallādj, *Ṭāsīn al-azal*. In this connection, it may be asked whether *ṭā-sīn* was not formed by the inversion of *shī-ṭān* and this after the year 309/922, date of the death of al-Ḥallādj, for numerically *ṭā* + *sīn* = 300 + 9).

The personal name, reduced to Ṭāhā, has not acquired a comparatively frequent usage in the Islamic lands. This is particularly seen in the name of the famous Egyptian man of letters and politics, Ṭāhā Ḥusayn [*q.v.*].

ṬĀʿA (A., pl. *ṭāʿāt*), a term of the theological vocabulary for an act of obedience to God, contrasted with *maʿṣiya*, pl. *maʿāṣī*, act of disobedience to God, hence sin. The two terms represent respectively good and bad actions, but add, or substitute for, these purely moral ideas the religious concept of conformity or non-conformity to the divine Law.

Ṭāʿa is not a Ḳurʾānic term (good actions are usually called *ṣāliḥāt*, or much more rarely, *ḥasana*, pl. *ḥasanāt* (see VI, 160; XI, 114; XXV, 70; XXVII, 89; XXVIII, 84). On the other hand, the verb *aṭāʿa* "to obey", is very common (74 attestations), and in 31 instances it involves, in effect, obedience to God; but

one should note that this obedience to God, when expressly formulated, is always linked with obedience to the Prophet (see III, 32, 132; IV, 13, 59, 69, 80; V, 92; VIII, 1, 20, 46; etc.). In seven cases, it is a question of obeying *tout court*, without further precision (II, 285; IV, 46; V, 7; XXIV, 47, 51; XLVIII, 16; LXIV, 16), and, once, obedience involves only the Prophet (XXIV, 56). It is not, however, the same with the verb *ʿaṣā* "to disobey", for which there are seven mentions, in various ways, of disobedience to God alone (VI, 15; X, 15; XI, 63; XIX, 44; XX, 121; XXXIX, 13; LXVI, 6). One should nevertheless mention that the noun *maʿṣiya*, which appears in a unique passage (LVIII, 8-9), figures only in the expression *maʿṣiyat al-rasūl*.

In *Ḥadīth*, so far as one can judge, obedience to God is expressed exclusively in the explicit formula *ṭāʿat Allāh*, with the plural never found. On the other hand, the pl. *maʿāṣī* is already used, in an absolute form, for sinful actions (see e.g. al-Bukhārī, *buyūʿ*, 2; *tafsīr sūra* II, 47).

It would indeed be futile to claim to be able to say at exactly what moment the usage of *ṭāʿa* and *maʿṣiya*, used absolutely, for good and bad actions, came to be employed. One can only say that, in the theological writings which are presumed to be the oldest (end of the 1st century A.H.), this usage seems to be already firmly established (thus in the *Risāla* attributed to al-Ḥasan al-Baṣrī, ed. Ritter, in *Isl.*, xxi [1933], 74, ll. 6-7, 76, ll. 7-20, 78, l. 5; in that attributed to the caliph ʿUmar II, ed. J. van Ess, in his *Anfänge muslimischer Theologie*, Beirut 1977, §§ 14-16).

On the exact meaning of *ṭāʿa*, Sunnī and Muʿtazilī theologians were opposed, as a corollary of the debate which divided them on the crucial question whether God willed the evil actions of men or not. For the Muʿtazilīs, God—by the fact of His justice—only wills men's good acts. He wills neither their unbelief nor their sins. In other words, there is no difference between what God wills and what He ordains, and to obey Him is thus the equivalent of conforming to His will. For the Sunnī theologians, on the contrary, God—from the fact of His all-powerfulness—necessarily wills everything which exists, including men's evil acts. Hence there cannot be in any circumstances an equivalence between His will and His order; to obey Him is to do what He ordains, and not necessarily to do what He wills. On this question, see ʿAbd al-Djabbār, *Mughnī*, vi/a, 39, ll. 17 ff.; Ps. ʿAbd al-Djabbār, *Sharḥ al-uṣūl al-khamsa*, Cairo 1965, 457, ll. 16 ff.; Ibn Fūrak, *Mudjarrad maḳālāt al-Ashʿarī*, Beirut 1987, 70, ll. 20-3, 157, ll. 12-18; al-Baghdādī, *Farḳ*, ed. ʿAbd al-Ḥamīd, Cairo n.d., 183, ll. 4-11; D. Gimaret, in *SI*, xli (1975), 69-71; idem, *La doctrine d'al-Ashʿarī*, Paris 1990, 298-9.

Another question, connected with the foregoing, is that of knowing whether every act of obedience to God only merits being called thus if it is an act of conscious obedience to a divine order known as such. Certain theologians—admittedly a very small minority—held that the answer was no, and admitted (at the time when there is, objectively, a coincidence between the act and such-and-such divine prescription) the existence of "acts of obedience in which God is not intended" (*ṭāʿāt lā yurādu bihā Allāh*): thus the Muʿtazilī Abu 'l-Hudhayl [*q.v.*] and certain Ibāḍīs (see Gimaret-Monnot, *Livre des religions et des sectes*, i, Paris 1986, 409, 411). Most of the Muʿtazila rejected this thesis (see al-Ashʿarī, *Maḳālāt*, 2nd ed. Ritter, 429, ll. 12 ff.). For his part, al-Baghdādī affirms that, in the eyes of the Sunnīs, there is only one solitary case of unintentional obedience to God, sc. when a man who does not yet have knowledge of God uses reasoning power (*al-naẓar wa 'l-istidlāl*) which leads him to this (*Farḳ*, 126, ll. 1-7; *Uṣūl al-dīn*, Istanbul 1928, 267, ll. 6-10).

According to ʿAbd al-Djabbār, *ṭāʿa* can be said of every act willed by God (in the Muʿtazilī sense of the expression), by which he means it to be understood as either an obligatory act (*wādjib*) or a recommended one (*nadb*). It cannot be said of an act simply permitted (*mubāḥ*) (*Mughnī*, vi/a, 39, ll. 12-14). Al-Baghdādī is more explicit, and distinguishes four categories of *ṭāʿa*: (1) the most important is faith, which will vouchsafe to the believer entry to Paradise; (2) the affirmation of faith *bi 'l-lisān*, which will enable him to enjoy all the privileges reserved for Muslims in this present life; (3) involves performing all obligatory acts and eschewing grave faults, which will preserve him from Hell; and (4) the practice of supererogatory acts (*nawāfil*), which will guarantee him an extra reward in Paradise (*Uṣūl al-dīn*, 268, ll. 3-12).

Bibliography: Given in the article.

(D. Gimaret)

TAʾABBAṬA SHARRAN, the nickname of the pre-Islamic *ṣuʿlūk* poet Thābit b. Djābir b. Sufyān of the Banū Saʿd b. Fahm (of the group Ḳays ʿAylān, see Ibn Ḥabīb, *Alḳāb*, 307). The traditions which have attempted to explain this nickname ("he carried an evil under his arm") should not be taken at face value; the evil that was carried round by this very young man possessed a legendary significance, whether it concerned snakes, a sabre or a *ghūl* [*q.v.*]. This name was intended to convey a particular image of a poet dominated by an inborn tendency to cause nuisance as well as to suggest the presence of an unconquerable determinism.

There are details in his biography which could well pass for authentic, but they are mixed with "traditions" (or rather literary episodes) which attempt to illustrate or enhance the essential themes of his poems. These narratives seem to have taken shape from the 2nd/8th century onwards. Muḥammad b. Ḥabīb (d. 245/859) speaks about numerous extraordinary stories connected with the raids he made, but he declines to report them (*al-Muḥabbar*, 196); al-Baghdādī (*Khizānat*, i, 138) speaks of numerous stories which remain perplexing because of their fantastical nature. In this list are recorded his encounters and victorious battles with the *ghūl* (Ibn Ḳutayba, *Shiʿr*, 175, a theme which is found again in ʿUbayd b. Ayyūb al-ʿAnbarī, a *ṣuʿlūk* of the Umayyad period, see Ḥusayn ʿAṭwān, *al-Shuʿarāʾ al-ṣaʿālīk fi 'l-ʿaṣr al-islāmī*, Beirut 1407/1987, 155-7), his legendary speed, and his effectiveness in handling weapons and in the art of making raids. Similarly, the whole account accompanying the poem by Abū Kabīr al-Hudhalī in al-Tibrīzī (*al-Ḥamāsa*, Bonn 1828, 41-4) aims to illustrate the mutual hatred between Taʾabbaṭa Sharran and the Hudhalīs, who were responsible for the death of the poet (see below).

The more authentic biographical details indicate that the poet possessed a good lineage: his mother was an Arab of the Banū Ḳayn (Fahm); one of his sisters, Umayya, was married to Nawfal b. Asad b. ʿAbd al-ʿUzzā (of Ḳuraysh), and she bore him a son ʿAdī b. Nawfal (Ibn Ḥazm, *Djamharat ansāb al-ʿArab*, Cairo 1382/1962, 120). It is also known that he married a woman of the Banū Kilāb.

Taʾabbaṭa Sharran was a brigand, but despite his activities, just like ʿUrwa b. al-Ward [*q.v.*], he was one of the very few *ṣaʿālīk al-ʿArab* who managed to remain integrated within his own tribe. Thus he never

suffered the reproaches of khalʿ (repudiation by the tribe) and was never recorded as being called a khalīʿ. His band of men seem also to have belonged to the Fahm: his alleged maternal nephew al-Shanfarā, ʿĀmir b. al-Akhnas, al-Musayyab b. Kilāb, Murra b. Khulayf, Saʿd b. al-Ashras and ʿAmr b. Barrāḳ.

His incursions seem to have been directed in the main against the Badjīla, from whom he helped himself to camels and sheep (*ghanam*), against the Hudhayl and the Azd, as in the episode of an escape helped by honey which he poured on to the slope of a mountain, and down which he was then able to slide to safety, and against the Khathʿam.

Brigands and their booty used to find refuge in the Sarāt mountains, escaping pursuit by the clans they had raided. He met his death pierced in the heart by the arrows of a mere youth (*duwayn al-ḥilm*) of the Banū Hudhayl. His mortal remains were thrown to the bottom of the cave of al-Rakhmān (for the narrative detail see Ibn Ḥabīb, *Mughtālīn*, 215). He was mourned by his sister Umayya or Rayṭa and his mother (Sezgin, *GAS*, ii, 139).

The latter paints a very engaging portrait in a famous threnody of the perfect Djāhilī hero who was also a careful and perceptive leader of his men. Because of his attentive care, he was eulogised as *umm al-ʿiyāl*, mother of the hearth and home (al-Tibrīzī, 523), and also as *ʿayr al-ʿāna*, the wild ass who has a herd of females (*ibid.*, 526), because of his courage and relentless intransigence.

There were two chains of scholars who specialised in transmitting the poetry of Ta'abbaṭa Sharran: 1. Abū ʿAmr al-Shaybānī (d. 206 AH) > Ibn Ḥabīb > al-Sukkarī; 2. al-Mufaḍḍal al-Ḍabbī > Ibn al-Aʿrābī. A good part of the poet's work is said to have been cited in *al-Durra al-fākhira* (al-Baghdādī, *Khizāna*, iii, 344). This transmission was actually a little later than Khalaf al-Aḥmar (d. 180/821-2). It has been suggested that it is legitimate to have a certain distrust towards this poetry (238 verses divided into 32 fragments and pieces), and some caution should be observed concerning Khalaf, one of the grand masters in the art of forgery.

However, this poetry reflects in an exemplary fashion the usual ideas of the life of the *ṣuʿlūk*. The work of Ta'abbaṭa Sharran expresses the fierce claims of the "me", and a no less absolute contesting against collectivity, against the "us". Typical terms used in pre-Islamic poetry such as *ḳawm, ḥayy, ḳabīla, ḳabīl* and the pronouns of the first person plural are totally absent from these texts; more precisely he uses them to describe his enemies and those he attacks and pillages. Nevertheless, these texts fit naturally into the three parameters of all poetry of the *ṣuʿlūk* type [see ṢUʿLŪK]: the apologetic, the lyric and the therapeutic parameters, and can be divided thus:

1. apologetic parameter (Yūsuf Shukrī Farḥāt, *Dīwān Ta'abbaṭa Sharran*, in *Dīwān al-ṣaʿālīk*, Beirut 1413/1992, nos. I, II, VI, IX, X, XII, XIII, XV, XVI, XX, XXI, XXII, XXIV, XXV, XXVI, XXVII, XXVIII, XXIX, XXX, XXXI);

2. lyric parameter: (nos. VII, VIII, XII, XVIII, XIX, XXV);

3. therapeutic parameter: (nos. III, V, XI, XII, XVI, XVII, XVIII, XXV, XXIX).

The most beautiful piece is the *ḳāfiyya* (*al-Mufaḍḍaliyyāt*, no. 1; *Dīwān*, no. XVIII). Gabrieli, however, considers it an accumulation of heterogeneous verses. According to him, it creates the impression of a mosaic of which the pieces have been arbitrarily collected by later rhapsodists (F. Gabrieli, *Ta'abbata Sharran, Shanfarā, Khalaf al-Aḥmar*, in *Atti della Accademia Nazionale dei Lincei*, 8th series [1946], i, 49-50).

Goethe translated the *lāmiyya* of the brigand poet into verse in 1819 (*Goethes Werke*, ii, *Gedichte und Epen*, Hamburg 1952, 130-3), using Freytag's Latin translation. After carrying out a study of the structure of the poem, in which he detected a profound order and harmony, the great German artist concluded in his analysis that this bare style reflected the serious element of the work. After a careful reading of the text, he wrote, the event unfolded to the smallest detail before the eyes of our imagination (*ibid.*, 133-4). (Lyall, however, thought that Goethe's interpretations were not always correct.)

(A. ARAZI)

TAʿADDĪ (A., *maṣdar* of the form V verb), literally "act of going beyond, passing over... to", a term of Arabic grammar denoting transitivity; the related form *taʿdiya* is also found.

The term is understood in terms of the syntactic effect of the transitive verb which goes beyond and passes over the agent to fall on the direct object (Levin, 1979). In that sense, the verb is considered an operator which governs the syntactic inflections of the agent and the direct object. Verbs such as *kāna* ("to be"), *ẓanna* ("to suppose"), which is a verb that introduces what were originally the subject and predicate of a nominal sentence and keeps them in the now verbal proposition as its objects, and *ḍaraba* ("to

hit") which is a transitive real verb—are each called *mutaʿadd*ⁱⁿ by all Arab grammarians. By definition, *mutaʿadd*ⁱⁿ verbs cause the agents to be in the nominative and the verb complements to be in the accusative. The term *mutaʿadd*ⁱⁿ is therefore subsumed under the concept of *ʿamal* or government.

Arab grammarians regarded the morphological patterns of verbs as essential in determining verb transitivity. Therefore, the patterns were always related to the concepts of *taʿaddī*. However, the emphasis on how much the morphology of the verb could be the determining element of its transitivity or intransitivity decreased significantly by the 4th/10th century especially with the writing of Ibn al-Sarrād̲j̲'s *al-Uṣūl fī 'l-naḥw*. Ibn al-Sarrād̲j̲ (d. 316/928) gave more emphasis to the meaning denoted by the verb over the meaning denoted by the morphological pattern (Bohas and Guillaume, 1990).

Starting with the work of al-Mubarrad (d. 285/898 [*q.v.*]) and continuing very clearly in the work of Ibn al-Sarrād̲j̲, the use of the word *mutaʿadd*ⁱⁿ as a technical, structural term was based on purely syntactic processes. These processes concerned case inflections not only on the verb's agent and direct object, but also on all the other accusative complements used with the verb. In this manner, *taʿaddī* reflected the verb's power to govern the nouns surrounding it.

On the other hand, al-Mubarrad introduced the term *wāṣil* ("reaching") which Ibn al-Sarrād̲j̲ later used consistently to refer to a different level of interaction between the action denoted by the verb, the doer, and the semantic object. This interaction covers the semantic side of verb transitivity which the structural term *taʿaddī* does not (Taha, 1995).

TAʿAD̲J̲D̲J̲UB (A.), lit. "amazement", a term of rhetoric. Though sometimes given a separate place in lists of *badīʿ* [*q.v.*], as in Rādūyānī's [*q.v.*] *Tard̲j̲umān al-balāg̲h̲a* or Ras̲h̲īd al-Dīn Waṭwāṭ's [*q.v.*] *Ḥadāʾik al-siḥr*, it is far more often mentioned, in more general discussions of poetry, as one of the basic effects or aims of the poetic process, especially of imagery. It is found, together with its active counterpart *taʿd̲j̲īb* ("causing amazement") in the Aristotelian tradition (Ibn Sīnā, Ḥāzim al-Ḳarṭād̲j̲annī [*q.vv.*]) and, in a somewhat different sense, in the poetics of ʿAbd al-Ḳāhir al-D̲j̲urd̲j̲ānī [*q.v.*]. This "amazement", which is in fact usually "feigned amazement", is related to concepts such as *ig̲h̲rāb* or *istig̲h̲rāb* "[evoking] wonder", found in works of poetics since Ḳudāma b. D̲j̲aʿfar [*q.v.*], and lies at the basis of the common figure of *badīʿ* called *tad̲j̲āhul al-ʿārif*, "feigned ignorance".

(G.J.H. van Gelder)

TAʿĀʾIS̲H̲A, one of a series of Arabic-speaking ethnic groups collectively called Baḳḳāra [*q.v.*] "cattle people", who live in the Sudan Republic across the southern Gezira, Kordofan [*q.v.*], Dār Fūr [*q.v.*] and eastern Chad. The Taʿāʾis̲h̲a tribal home is in the far southwest of Dār Fūr, neighbouring on the east the Habbāniyya, with whom they are closely linked. Little is known of the history of the Baḳḳāra; nor can much be said about how and when the present groupings emerged, although in Dār Fūr they were already in conflict with the sultanate to the north by the late 18th century.

The Taʿāʾis̲h̲a rose to power when one of their number, ʿAbdullāhi b. Muḥammad Karrār [see ʿABD ALLĀH B. MUḤAMMAD AL-TAʿĀʾIS̲H̲Ī], a member of a holy family affiliated to the Sammāniyya *ṭarīḳa*, became a follower of the Sudanese Mahdī, Muḥammad Aḥmad [see AL-MAHDIYYA] before his public manifestation in 1882. During the revolution, ʿAbdullāhi became the strongman of the movement and was designated as senior *k̲h̲alīfa* by the Mahdī. Following the Mahdī's death in June 1885, the K̲h̲alīfa ʿAbdullāhi ruled the Mahdist state until its destruction by an Anglo-Egyptian army. He himself was hunted down and killed at Umm Diwaykarāt on 24 November 1899.

During the K̲h̲alīfa's rule, he made extensive use of his relatives and other fellow-Taʿāʾis̲h̲a as soldiers and administrators, leading to what P.M. Holt has called "The Taʿāʾis̲h̲a autocracy" (*The Mahdist state in the Sudan, 1881-1898*, ²Oxford 1970, 204-22). Throughout the Mahdist period there was constant tension between the Taʿāʾis̲h̲a leaders and the riverain Sudanese.

London 1967, i, 271-306; Faraḥ ʿĪsā Muḥammad, *al-Turāt̲h̲ al-s̲h̲aʿbī li-ḳabīlat al-Taʿāʾis̲h̲a*, Institute of African and Asian Studies, University of Khartoum 1982 (a folklore study).

(R.S. O'Fahey)

ṬAʿĀM (A.), food, nourishment. For foods and food habits, see G̲H̲IḎĀʾ; for cookery and the culinary art, see ṬABK̲H̲. The present article deals with the restricted topic of food etiquette.

Since pre-Islamic times, the rules of food etiquette were divided between host and guests, the prime rules being that the former should be as generous as possible and the latter should not appear too greedy. Much may be learned from the numerous anecdotes on those who sinned against these rules: see the monographs and chapters in *adab* anthologies on misers (*buk̲h̲alāʾ*), especially the book by al-D̲j̲āḥiẓ [*q.v.*], and parasites and cadgers (*ṭufayliyyūn*), e.g. the *K. al-Taṭfīl* by al-K̲h̲aṭīb al-Bag̲h̲dādī [*q.v.*], D̲j̲udda 1986. Explicit prescriptions, all but absent from the Ḳurʾān (cf. XXIV, 61), are found in *Ḥadīt̲h̲* literature, e.g. al-Buk̲h̲ārī, *al-Ṣaḥīḥ, Aṭʿima*, or Muslim, *al-Ṣaḥīḥ, As̲h̲riba* (*bāb ādāb al-ṭaʿām*), where one is enjoined to begin with pronouncing the *basmala*, to eat with the right hand, not to condemn any food but merely to leave it if one dislikes it, to praise God after a meal, etc. More detailed and comprehensive treatment of "table manners"—although instead of a table (*k̲h̲iwān*), a mat (*sufra* or *simāṭ*) is often preferred—is found primarily in religious works as well as secular texts. To the former category belongs the *Kitāb Ādāb al-akl*, which opens the second "quarter" of al-G̲h̲azālī's [*q.v.*] *Iḥyāʾ* (cf. the section on the Prophet's eating behaviour, *ādābuhu fī 'l-ṭaʿām*, in *K. Ādāb al-maʿīs̲h̲a wa-ak̲h̲lāḳ al-nubuwwa*, which closes the same "quarter"). Aimed particularly at Ṣūfīs are the similar but shorter chapter

on *ādāb al-akl* in ʿUmar al-Suhrawardī's *ʿAwārif al-maʿārif* and the lengthy chapters (39-40) in Abū Ṭālib al-Makkī's *Ḳūt al-ḳulūb*, tr. R. Gramlich, *Die Nährung des Herzen*, iii, Stuttgart 1995, 266-390. The secular category, never devoid of religious elements, includes sections in all of the large *adab* anthologies that have chapters on eating and food. A *K. Adab al-mawāʾid* by al-Rāmhurmuzī (d. *ca.* 370/971) is mentioned in the *Fihrist* but is now lost. His contemporary Ibn Sayyār al-Warrāḳ concluded his cookery manual *K. al-Ṭabīkh* (ed. Helsinki, 1987) with chapters on table manners. Yaḥyā b. ʿAbd al-ʿAẓīm al-Djazzār (d. 669/1270 or 679/1281), butcher and poet, wrote *Fawāʾid al-mawāʾid*, still unpublished but discussed by Traini (see *Bibl.*). ʿAbd al Raʾūf al-Munāwī [*q.v.*] was the author of the unpublished *K. Ādāb al-akl wa ʾl-shurb wa-ʾl-malbas...*. In the entertaining *R. Ādāb al-muʾākala* by Badr al-Dīn al-Ghazzī (d. 984/1577), ed. in *RAAD*, xlii (1967), 503-23, 732-57, many forms of bad eating behaviour are exposed in a fashion already found in al-Djāḥiẓ's *Bukhalāʾ*. On eating with kings, see Pseudo-Djāḥiẓ, *K. al-Tādj* (Cairo 1914: *bāb fī muṭāʿamat al-mulūk*).

In general, eating etiquette seems to have been similar in many ways to what is expected of polite society in the West, stressing an aversion from unsavoury noises and messy or greedy behaviour. During communal meals, always preferred to solitary eating, particular care is to be taken to avoid contact with one another's saliva. Conversation during meals is generally encouraged, in spite of what seems a widespread practice in modern Arab countries, where food is consumed quickly and silently.

On the contemporary Middle East, see e.g. D. Hawley, *Debrett's manners and correct form in the Middle East*, London 1984.

(G.J.H. van Gelder)

TAʿARRUB (a.), the verbal noun of a denominative verb formed from *ʿArab*, pl. *Aʿrāb*, in the sense of "nomads, Bedouins" (the Ḳurʾānic sense of this latter term, cf. e.g. IX, 98/97, XLIX, 14; *taʿarrub* itself does not occur in the Ḳurʾān). In earliest Islam, *taʿarraba* and its synonym *tabaddā* denote the return to the Arabian desert after *hidjra* [*q.v.*] to the garrison towns (*amṣār* [see miṣr. B]) and participation in the warfare to expand the Arab empire and the Abode of Islam. Some of this movement back to the desert was doubtless legitimate, but on occasion it was denounced by circles of pietistic town dwellers as a kind of apostasy, the reversion to a life where the full, town-oriented Islamic cult could not be practised and its obligations fulfilled. See the full discussion in C.E. Bosworth, *A note on taʿarrub in early Islam*, in *JSS*, xxxiv (1989), 355-61.

Bibliography: Given in the article.

(C.E. Bosworth)

TAʿAṢṢUB [see ʿaṣabiyya].

TAʿĀWĪDHĪ [see ibn al-taʿāwīdhī].

TAʿĀWUN (a.), co-operation in all modern senses of the term; a noun of activity and sometimes an abstract noun, parallelled, in the latter case, by *taʿāwuniyya* (co-operativism). It was established in the early years of the 20th century as the term designating this field of meaning, by transference from the sense of mutual aid (still valid), with the adjective *taʿāwunī* (co-operative), the active participle *mutaʿāwin* (co-operator), then, later, the substantive *taʿāwuniyya* (co-operative, principally agricultural, but also organised on the basis of supply of goods, housing, credit, crafts and manufacture). Since the middle of the 20th century it has been applied to the activities and institutions of international co-operation. It is attested in Persian (*taʿāvon*), although contemporary Turkish translates co-operative by *kooperatif*, retaining *teʿāwün* (currently *teavün*) in the sense that it possessed at the turn of the century (of mutual aid, solidarity), a sense for which Arabic prefers *taʿāḍud*.

The co-operative movement was inaugurated in Egypt by the Waṭanī Party. Confronted by the financial crisis of 1907 which devastated the countryside, ʿUmar Luṭfī made inquiries in Italy regarding that country's experience of the agrarian co-operative movement and the judicial aspects of co-operative credit. It was above all a case of protecting medium and well-to-do landowners from usurers and of major landowners protecting themselves against state fiscal policies. In 1912, a *Niḳāba ʿāmma li ʾl-taʿāwun* united the score of co-operatives instituted since December 1909, agrarian ones (*Niḳābāt zirāʿiyya* [see niḳāba]), credit and services into a *sharikat* (*Sharikat al-taʿāwun*).

It was only during the 1920s that legislation concerning associations of this type was passed, and then to little effect. The same applied elsewhere, the Maghrib under French domination representing an exceptional case (reference to co-operativism by European labour organisations from the turn of the century, a number of successful foundations, outside this affiliation, primarily agricultural and restricted to the European sector).

The concept was re-launched during the 1940s, in association with the movement of decolonisation. It was the peasants—to whom the present survey is limited—who were principally concerned, the United Nations (and the United States) insisting on the necessity of agrarian reforms and the formation of co-operatives for a dual purpose, preventive and developmental. However, the movement proved genuinely successful only in tandem with policies of economic and social planning, whether these had the object of guaranteeing independent and autonomous development or of promoting liberally-oriented growth. From the associative form, the co-operative sector has thus, in most cases, advanced to the status of a category of ownership (alongside public, private, and sometimes mixed ownership).

The first experiments were made in Nasserite Egypt. The law of agrarian reform of September 1952 (revised in 1961 and 1969) obliged landowners and smallholders to belong to *djamʿiyyāt taʿāwuniyya*. When the process was completed, this consisted of pyramidal groupings, with examples at local, cantonal and provincial levels and a governing council. In the 1960s, the system was extended to include sectors of land unaffected by the reform (village co-operatives) or upgraded in parallel with the progress of construction of the Aswān Dam, these sectors, open to landless peasants, remaining, however, included within state farms. Specialised co-operatives also appeared. The liberalisation (*infitāḥ*) introduced by President Anwar al-Sādāt had

the effect of limiting the role of co-operatives (credit, logistics and commerce), as well as the representation of small landowners (previously 80%) in the administrative councils in order to stimulate the profitability of land and to permit foreign involvement. A new law regulating co-operativism (since revised) was passed in 1980. The number of local co-operatives, formally subject to centrally-imposed regulation of production and prices, is in decline, whilst that of the specialised co-operatives is steadily growing.

Other countries are related to this "model" (with its genuine, but relative social effects), conceiving this sector as a method of organising the agrarian branch of the public sector, depending on state planning (with its relative or negative effects).

In Syria, the agrarian reform of September 1958, suspended after the breaking of the union with Egypt (February 1958—October 1961), was the object of a new law in June 1963, since amended. The obligation to form co-operatives was maintained, but redistribution was sporadic, even with the addition of the upgraded land. In April 1974, agricultural co-operatives were combined with peasant associations (small landowners, farmers and labourers) in a National Union, a consultative body, but also the agrarian wing of central planning.

In ʿIrāḳ, the law of agrarian reform (August 1958), which followed the revolution of ʿAbd al-Karīm Ḳāsim [*q.v.*], was applied only to a limited extent until the Baʿthists returned to power (July 1968). A new law (May 1970) made "collective" exploitation (state, collective, co-operative farms) the framework of a "total agrarian revolution". If resistance in Kurdistān is discounted, the co-operative sector has been effective. In 1977, peasant and co-operative associations were combined in one organisation. Here too, and to an even greater extent since the fragmentation of the Front in 1979, it is the Baʿthist structure which is dominant in serving the objectives of central planning.

Algeria was slow to introduce such measures. From 1962 to 1970, the formula of self-management, exercised over vacant land and nationalised colonial territories, developed into nothing more than the agrarian branch of the state's public sector. Preceded by partial texts, the Charter of Agrarian Revolution (1972) opted for global and progressive agrarian reform and for the creation of co-operatives of various kinds, and later of Agrarian Revolution villages, in liaison with the Combined Agricultural Co-operatives with which self-managed holdings and the private sector were to be associated. But this experiment did not achieve the hoped-for results, and during the 1980s a return to privatisation has been observed.

In Tunisia, the recovery of colonial territory and agrarian reforms coincided with the choice of a state-run and centralised planned development (1961-9). The agrarian programme was structured on "co-operative units" (all forms of production, development and services). The decision to extend this co-operative system to the entirety of agricultural enterprise (January 1969), provoked a crisis. The return to liberalism has led, in this case, to the dissolution of the co-operatives.

In Morocco, the recovery of colonial territory proceeded in stages (1963, 1973). As envisaged by ʿAllāl al-Fāsī [*q.v.* in Suppl.] as early as 1952, a law of agrarian reform was passed in 1966, but it was the Code of Agricultural Investment (1969) which, by the encouragement of more favourable credit arrangements, boosted the formation of co-operatives (of utilisation of materials and of market-gardening). But this tended to favour major and medium-sized landowners, or at least, family groupings. Once subsidies were received, a number of them disintegrated.

The choice made by Iran, at the beginning of the 1960s, for a policy of planned growth, was accompanied by agrarian reform (1962). A central organisation of rural co-operatives was created in 1963 in order to serve the interests of the latter. Conditions of repurchase or leases tended, however, to favour farmers backed by capital. The same has been the case in Turkey, where until 1960 laws of reform were sporadic or unimplemented; the agrarian co-operative structure is poorly developed there. In Sukarno's Indonesia, under the agrarian law of 1960, the use of co-operatives was no longer obligatory, but it was among the demands of the rural movements during the unrest preceding the *coup* of 1965.

The experience of the two Yemens before their unification (1990) deserves mention. In the North, the co-operative movement was the result of popular initiatives at the time of the civil war (1962-70) and had the object of filling the gaps in matters of infrastructure and local services. In 1963 and 1969, laws were passed with the object of harmonising the regulations, and in March 1973 the *Hayʾāt al-Taʿāwun al-Ahlī* were combined in a Federation. Incorporated into the single party (People's General Congress, 1982-), it supplied a basic framework of organisation. It was through the expedient of elections of local councils of co-operative development (*taṭwīr*) (1985) that the country was endowed with municipal and communal councils. In South Yemen, as agreed in principle in the months which followed independence (1967), agrarian reform and the constitution of a co-operative sector were the object, from October 1970 onwards, of peasant *intifāḍāt* which took possession of land and extended the co-operative sector, to include fishing and some sections of industry. The radical Arab nationalists in power (1969-) supported a new law, passed in November 1970, which encouraged this movement. The merging of the radical Left into the Marxist Socialist Party (1978), confirmed the interest taken in this sector. In 1988, there were the beginnings of public consultation on the issue of ownership in the countryside, but it was after the unification of the two Yemens that moves were made in the direction of privatisation. The defeat of the Yemenite Left in the civil war of 1994 led to the overall collapse of the co-operative movement, often to the benefit of the former landowners.

TAʿAWWUD͟H (a.) means the use of the phrase *aʿūd͟hu bi ʾllāhi min* ... "I take refuge with God against...", followed by the mention of the thing that the utterer of the phrase fears or abhors. The term *istiʿād͟ha* "seeking refuge", is often used as a synonym. The phrase, with variants, is well attested in the Ḳurʾān, in particular in the last two sūras which each consist of one extended *taʿawwud͟h* [see al-muʿawwid͟hatān]. The litany-like enumeration of evil things in the first of the two foreshadows similar strains in a number of Prophetic invocations recorded in the *Ḥadīth* collections (see e.g., several *abwāb* in the *kitāb al-daʿawāt* of al-Buk͟hārī's *Ṣaḥīḥ*, which actually have the terms *taʿawwud͟h* or, less frequently, *istiʿād͟ha* in their titles). With such precedent it is not surprising that *taʿawwud͟h* becomes a clearly recognisable subgenre of *duʿāʾ* "invocation", in the devotional literature (see C.E. Padwick, *Muslim devotions*, London 1961, 83-93). Remarkably, *taʿawwud͟h* here often forms part of a two-pronged prayer in which the praying person asks for the good in the thing that is the object of the prayer and takes refuge against the evil in that very same thing (*ibid.*, 89). If it is God's wrath (*g͟haḍab*) that the praying person wants to guard against, refuge can only be taken with God's good pleasure (*riḍā*), which leads to the mysterious formula "I seek refuge from Thee with Thyself" (*ibid.*, 90-2).

More specifically, *taʿawwud͟h* is also used to denote the formula *aʿūd͟hu bi ʾllāhi mina ʾl-s͟hayṭāni ʾl-rad͟jīm* which usually precedes any Ḳurʾānic recitation (and thus also the *ṣalāt*) as a safeguard against misspeaking, omission of words, and other such mistakes. It is the counterpart of the formula *ṣadaḳa ʾllāhu ʾl-ʿaẓīm* which follows any formal recitation. The works on Ḳurʾānic readings [see ḳirāʾāt] have extended chapters on the *taʿawwud͟h*, dealing with its exact wording, its correct delivery, and its legal status (see e.g. Ibn al-D͟jazarī, *al-Nas͟hr fi ʾl-ḳirāʾāt al-ʿas͟hr*, ed. ʿA.M. al-Ḍabbāʿ, 2 vols., Cairo n.d., i, 243-59).

ṬABAḲA (a., pls. *ṭibāḳ* or *aṭbāḳ*), a term of Mamlūk military organisation. The *ṭibāḳ* were the barracks in the Cairo Citadel, *Ḳalʿat al-D͟jabal*, where the Mamlūk sultans (648-922/1250-1517) had their Royal Mamlūks quartered and which also housed the military academies where newly-bought *mamlūks* received their training. We first learn of the *ṭibāḳ* during the reign of al-Ẓāhir Baybars who "established... barracks for the *mamlūks* which overlooked the great al-Dirka gate, and inside the al-Ḳarāfa gate he put up... a large building with small halls for the *mamlūks*' quarters, and above them barracks for those who were married" (Ibn S͟haddād, 341, 343). According to the sources, there were seventeen *ṭibāḳ* during the third reign of al-Nāṣir Muḥammad (709-41/1310-41 [*q.v.*]), but their number may have varied, as old ones were habitually demolished to make room for new ones and barracks could bear more than one name. The historian al-Ẓāhirī speaks of twelve barracks in the next century, each of which could house 1,000 *mamlūks*. Some of the better-known *ṭibāḳ* were Ṭabaḳat al-Rafraf, Ṭabaḳat al-Zimām or al-Zimāmiyya, Ṭabaḳat al-Ḥaws͟h, Ṭabaḳat al-Ṭāziyya, Ṭabaḳat al-Muḳaddam, Ṭabaḳat al-Ṣandaliyya and Ṭabaḳat al-As͟hrafiyya.

As their appellation indicates, many of the *ṭibāḳ* were named after the eunuchs who had the overall responsibility for their administration. The *ṭibāḳ*'s staff of teachers and instructors, too, was mainly composed of eunuchs, according to a strict hierarchy: at the bottom were the *ṭawās͟hiyya*, or *k͟huddām al-ṭibāḳ*, responsible for training small groups of *mamlūks* only; placed above them were the *muḳaddamū ʾl-ṭibāḳ*, each of which stood at the head of a *ṭabaḳa*, and at the apex stood the *muḳaddam al-mamālīk al-sulṭāniyya*, who carried the responsibility for all Royal Mamlūks. Then there were religious scholars (*faḳīh*, pl. *fuḳahāʾ*) who were charged with the religious education of the *mamlūk* trainees. One of the adult *mamlūks* of each *ṭabaḳa* was appointed as leader (*ag͟hā*, pl. *ag͟hāwāt*, lit. "elder brother") of the younger *mamlūks* (*inī*, pl. *iniyyāt*, lit. "younger brother") whose task it was mainly to help them acclimatise to the life and discipline of the *ṭabaḳa*. Ties between guardian and trainee were often kept up long after the period of training at the *ṭibāḳ* had come to an end. Upon entering the military academies, *mamlūks* were divided into peer groups, according to age and ethnic origin, and further split up into smaller groups so as to make their instruction as efficient as possible. Two principal stages characterised a *mamlūk*'s education: the first lasted into adolescence and concentrated on religious studies, e.g., reading the Ḳurʾān, the Islamic prescriptions and the *s͟harīʿa*, so as to make him a Muslim, while the second began at adolescence and was only concluded when the young *mamlūk*'s professional skill in the arts of war was deemed to have reached the highest level of accomplishment. The period of training at the *ṭibāḳ* culminated in a special ceremony (*ʿitḳ*) during which *mamlūks* of one and the same age group (*k͟hard͟j*) were released from servitude and became members of the Mamlūk household of the Sultan at the Citadel.

Ayalon, *L'esclavage du Mamelouk*, in *Oriental Notes and Studies*, i, Jerusalem 1951, 9-22, repr. in *The Mamlūk military society*, Variorum, London 1979, no. I; A. Levanoni, *A turning point in Mamlūk history*, Leiden 1995, 14-19. (Amalia Levanoni)

ṬABAḲĀT (a.), pl. of *ṭabaḳa*, "everything which is related to another and which is similar or analagous to it, which comes to mean a layer of things of the same sort (Flügel, *Classen*, 269, n. 1). From this a transition can be made to the idea of a "rank, attributed to a group of characters who have played a role in history in one capacity or another, classed according to criteria determined by the religious, cultural, scientific or artistic order etc." (Hafsi, i. 229; cf. al-Tahānawī, *Kas͟hs͟hāf*, 917). In biographical literature it is the "book of classes" of characters arranged by "categories" and organised into "generations".

A. Lexicography and literature.

1. This term does not appear in the Ḳurʾān, but two other expressions approaching it do: *ṭabaḳ* and *ṭibāḳ* "analagous things which follow each other" (in a temporal or qualitative sense) or "placed on top of each other" (in a spatial sense); "You shall surely ride stage after stage" (LXXXIV, 19, tr. Arberry: *ṭabaḳ^an ʿan ṭabaḳ^in* from one state to another, or from one calamity to another; see al-Tabarī, *Tafsīr*); "[God] who created seven *ṭibāḳ^an*" (the ranks or stages of the heavens, LXVII, 3; LXXI, 15). The common point

of reference is the idea of covering everything by something equivalent, of applying oneself to it (*Ḳāmūs*, s.v.). The idea of equivalence is again found in *ṭabaḳa* "a similar epoch" (*al-ḳarn min al-zamān*). According to al-Aṣmaʿī, *ṭibḳ* designates a "group of people"; for Ibn al-Aʿrābī (d. 231/846) *ṭabaḳ* reflects "a given state [or category] whatever its sort" (*al-ḥāl ʿalā 'khtilāfihā*). So does *ṭabaḳa*, according to al-Layth: *kāna fulānun ʿalā ṭabaḳātin shattā min al-dunyā: ay ḥālāt; K. al-ʿAyn*; M.-N. Khan, *Die exegetischen Teile des Kitāb al-ʿAyn*, Berlin 1994, 220, or again *al-umma baʿd al-umma* "one community succeeding another". For Ibn Sīduh, *ṭabaḳ* is "a group of people who correspond to an analogous group". The variant *ṭibḳ* designates a vast number of people, grasshoppers, camels, etc. (*LA* and al-Ṣaghānī, *Takmila*..., ed. Muṣṭafā al-Ḥidjāzī, Cairo 1988, s.v.; Ibn Sīduh, *Mukhaṣṣaṣ*, ix, 118). According to al-Layth, *ṭabaḳa*, which may be *ṭabaḳ* in the masculine, is used as a unitary form of the noun of action *ṭibāḳ*. Numerous other meanings are to be found in Lane, s.v.

2. In *adab* and historiography, *ṭabaḳa* is in common use in the sense of category or class, in particular of society: Ibn al-Muḳaffaʿ, *Risāla fi 'l-ṣaḥāba*, ed. and tr. Ch. Pellat, Paris 1976, §31; Ibrāhīm b. M. al-Shaybānī (d. 298/911) according to *al-ʿIḳd al-farīd*, ed. Tarḥīnī, iv, 262-3; G. Makdisi, *The rise of humanism*, Edinburgh 1990, 233-4. As for al-Djāḥiẓ, he uses it in the sense of degree, as in *al-shakk fī ṭabaḳātin* "doubt is made up of degrees" (*Ḥayawān*, vi, 35, 37, Jâhiz, *Le cadi et la mouche*, tr. L. Souami, Paris 1988, 74, 75); *ṭabaḳat maʿānīhā* "degree or level (of meaning)" (*op. cit.*, i, 10, Jâhiz, 231; cf. i, 98). (Cf. Ibn Khaldūn, *Muḳaddima*, 1073, tr. Rosenthal, ii, 344: *ṭabaḳāt al-kalām*.) What is more, in his work the meaning of "social categories/classes" is often associated with types of character: misers, singers, singing slave girls, traders, secretaries, Turks, etc. (Ch. Pellat, *Arabische Geisteswelt*, Zürich 1967, 48-9, 436 ff.; S. Enderwitz, *Gesellschaftlicher Rang und ethnische Legitimation*, Berlin 1979, 72-3, *passim*: al-Djāḥiẓ on the Africans, the Persians and the Arabs). Finally, the notion of *ṭabaḳa* applied to poets has been attested at least since the second half of the 2nd/8th century; see al-Aṣmaʿī (d. 213/828), *K. Fuḥūlat al-shuʿarāʾ*, ed. Torrey, in *ZDMG*, lxv (1911), 495, 499.

As to the following Prophetic tradition reported by Anas, it is very obviously spurious: "My community will be made up of five classes: firstly forty years with charitable and pious people; they will be followed for the next 150 years by people who will live in compassion and mutual harmony; then for 160 years more there will come people who will turn their backs on each other and will separate themselves; then will come a period of scattering (*hardj*) [and of war or of flight] and every-man-for-himself (*nadjā*)". In another version it is said that each class would last for forty years and that another class would be added between year 40 and year 80 to arrive at the number of five (Ibn Mādja, *Sunan*, 36, *Fitan*, no. 4058; cf. Ibn al-Djawzī, *Mawḍūʿāt*, iii, 196; idem, *Talḳīḥ*, 714, several versions). It is possible that it may have been modelled on the following tradition: "The best of men are those of my century (*ḳarnī*), and below them are those of the next century" (al-Bukhārī, 62, *Faḍāʾil al-ṣaḥāba*, i, tr. Houdas, ii, 583).

In modern texts, the term is accepted most clearly to designate a "social class", as in *ṣirāʿ al-ḳabaḳāt* "the class struggle".

B. The division into "classes".

1. Origin and meaning.

For several scholars, the origin of this division in Arab biographical literature is found in the criticism of tradition (Loth, 594 ff.). It has even been written that the genre of the *ṭabaḳāt* "was born within the framework of the *ḥadīth* and is inseparable from it" (Hafsi, i, 227). What supports the thesis of Hafsi is that the first book of classes was perhaps the *K. Ṭabaḳāt al-muḥaddithīn* of al-Muʿāfā b. ʿImrān al-Mawṣilī (d. 184/800; Sezgin, i, 348; Hafsi, i, 241). One argument against his position would be the *K. Ṭabaḳāt ahl al-ʿilm wa 'l-djahl* of Wāṣil b. ʿAṭāʾ (d. 131/748), but the subject matter is not known: was it the "orthodox" believers, i.e. the Ḳadarīs and the "ignorant", i.e. the predestinationists (Van Ess, *TG*, v, Berlin 1993, 137-8)?

For Heffening, on the other hand, this grouping "much rather owes its origin to the interest of the Arabs in genealogy and biography". Rosenthal, 93-5, for his part, considers that the division is genuinely Islamic and that it would seem to be the oldest chronological division which presented itself to Muslim historical thinking. It was the natural consequence of the concept of the Companions of Muḥammad, the "Followers", etc., which in conjunction with the *isnād* criticism of traditions developed in the early second century of the *hidjra*.

Without denying the fundamental role which it played in the birth and development of the genre, it does not seem that it originated from the genre, as the semantic survey above (cf. Heffening) would suggest. The ideas of covering, of egality, of analogy (cf. also *ḳarn*, which perhaps preceded *ṭabaḳa* in the sense of "generation", Rosenthal, 93, and which also has the connotation of analogy) and of succession which this term conveys, correspond well to the Muslim concept of "the history of salvation", with the succession of pious men, beginning with the "prophets", whose characters were so many models to be imitated. Even if tribal genealogy continued to exist, it gave way more and more to a particular form of spiritual or intellectual genealogy which also appeared, of course, in the *ḥadīth*, "the transmission of knowledge", but also in other disciplines. In addition, by the use of certain types of *ṭabaḳāt* every effort was made to maintain the link with the primitive community which was widely mythologised. Finally, the fact that al-Aṣmaʿī (see above) had already used the term *ṭabaḳa*, however loosely, to compare two poets, and that al-Djumaḥī (d. 232/846) organised his *Ṭabaḳāt al-shuʿarāʾ* (see Kilpatrick) according to an order which has nothing to do with religious merit, about the same epoch as Ibn Saʿd (d. 230/845) composed his own work, suggests that the genre in its origins was part of a global preoccupation of all scholars in different fields: to give to society the canons for transmitting knowledge, whether sacred or secular, and in particular by means of a biographical tool. This concern for continuity (Khalidi, 46-8, 205 and n. 50) insists at one and the same time on "sacred history continued" and on the equally secular aspects of the genre deeply rooted in its origins, also apparent in the genre of the *awāʾil* [*q.v.*], which was attested at least since the time of Ibn Shayba (d. 235/849; see book 34 of his *Muṣannaf*, Beirut 1995, vii, 247-76). It is not fortuitous if in *Talḳīḥ*, 461-8, the section concerning them follows that on the *ṭabaḳāt*.

The interest in "genealogy" understood in that way was specified above, and can also be observed in the role which local stories play in the evolution of the genre, with certainly a touch of regional pride, but especially in order to justify the juridical practices in use in one place or another (Rosenthal, 94). Already

by this time, Ibn Saʿd had given a special place to the grouping according to the capital cities and towns (Mecca, Medina, Baṣra, Kūfa), or even events (Badr) but the *History of Wāsiṭ* of Baḥshal (d. 292/905 [*q.v.*]; ed. K. ʿAwwād, Baghdād 1967; Rosenthal, 166-7) is essentially a work about the classes of traditionalists in this town. Later this division was extended to all sorts of persons, but generally scholars.

2. Criteria of classification.

For the classification of the Companions, especially in the work of Ibn Saʿd, see ṢAḤĀBA. For the Successors, see TĀBIʿ. For both, see al-Ḥākim al-Nīsābūrī, *Maʿrifat ʿulūm al-ḥadīth*, chs. 7, 14 (twelve classes of Companions, fourteen classes of Successors); al-Suyūṭī, *Tadrīb al-rāwī*, 221-2, 234 ff., ch. 39-40, according to precedent; Marçais, 222-4; Hafsi, i, 242-4, 236-8.

It is difficult to give general criteria for classification for all the *ṭabaḳāt*; four can be distinguished: moral and chronological, relationship with the Prophet for the first generations, chronological, and finally a late classification where alphabetical order is used (Hafsi, i, 234-6).

For the classes of traditionalists, the "encounter" (*luḳyā*) between master and disciple is a fundamental criterion for distinguishing between the two classes (ʿUmarī, 51). The principles of hierarchisation and also of illustration of the forged *ḥadīth* cited above, are seen in the original grouping which goes back to Abū Ṭālib al-Makkī (d. 386/996). He distinguished five classes of forty years up to his era, citing five names for each one: caliph, jurist, traditionist, reader and ascetic (*Talḳīḥ*, 714-17, takes up this classification which was continued by others until 560 A.H., perhaps some 40 classes).

The organisation of works into classes did not seem very practical, as would appear in the work of al-Dhahabī: *Tadhkirat al-ḥuffāẓ* comprised twenty-one (80 years); *Maʿrifat al-ḳurrāʾ*, seventeen; *Siyar aʿlām al-nubalāʾ*, about forty (from seven to thirty years); *Taʾrīkh al-Islām* [i-xxvii (up to 400 A.H.). ed. ʿU.ʿA. Tadmurī, Beirut 1987-92; i-iv (611-40 A.H.), ed. B.ʿA. Maʿrūf *et alii*, Beirut 1988]; seventy (in general ten years). In this work he associates chronological organisation with organisation into classes, but in that way the traditional principle of the "encounter" is abandoned. Furthermore, in two of his works he designates each class by one of its illustrious representatives, cf. "the class of al-Zuhrī". Thus he continues in *al-Mudjarrad fī asmāʾ ridjāl K. Ibn Mādja* (eight classes, Maʿrūf, 103; ʿUmarī 49-50; Sezgin, i, 148; ed. Fayṣal al-Djawābira, Riyāḍ 1988) and in *al-Muʿīn fī ṭabaḳāt al-muḥaddithīn* [Gilliot, in *MIDEO*, xix, no. 105, mistaken by Hafsi, 31, for *Tadhkirat al-ḥuffāẓ*], where the first classes have names, e.g. "the class of al-Aʿmash and of Abū Ḥanīfa", then from the 3rd/9th centuries onwards he has recourse to the classes of twenty to thirty years.

C. Works in the genre.

See Ḥādjdjī Khalīfa, ed. Flügel, nos. 7879-7932. The lines which follow are the addenda (sometimes the corrigenda) to Hafsi, in particular the editions of texts which have appeared since.

Philologists (Hafsi, ii, 155-61) and poets (iii, 50-61): Ibn al-Anbārī, *Nuzhat al-alibbāʾ fī ṭabaḳāt al-udabāʾ*, ed. I. al-Sāmarrāʾī (Baghdād 1970[2]); Ibn Ḳāḍī Shuhba (d. 851/1448 [*q.v.*]), *Ṭabaḳāt al-nuḥāt wa ʾl-lughawiyyīn*, ed. M. Ghayyāḍ, Nadjaf 1974.

Readers and exegetes (Hafsi, ii, 2-7): Ibn al-Djazarī [*q.v.*], *K. Maʿrifat al-ḳurrāʾ al-kibār ʿalā ʾl-ṭabaḳāt wa ʾl-aʿṣār*, i-ii, ed. M.S. Djād al-Ḥaḳḳ, Cairo 1969; Dāwūdī (M. b. ʿA., d. 945/1538), *Ṭabaḳāt al-mufassirīn*, ed. ʿA.M. ʿUmar, Cairo 1972, Beirut 1983.

Traditionists and associates (Hafsi, i, 241-65): Khalīfa b. Khayyāṭ [*q.v.*]; Muslim, *K. al-Ṭabaḳāt* (Hafsi, i, 248-9), ed. S.ʿA.M. al-Ḳazaḳī, announced in *ATA*, xxxv (1988), 17; Bardīdjī (A. b. Hārūn, d. 301/816; Sezgin, i, 166; Hafsi, i, 249-50), *Ṭabaḳāt al-asmāʾ al-mufrada fī ʾl-ṣaḥāba wa ʾl-tābiʿīn wa-aṣḥāb al-ḥadīth*, ed. S. al-Shihābī, Damascus 1987; contrary to Sezgin, i, 350, al-Azdī (Abū Zakariyyāʾ Yazīd b. M., d. 334/935), *K. al-Ṭabaḳāt*, lost work, which is different from *Taʾrīkh al-Mawṣil*, ed. ʿA. Ḥabība, Cairo 1967, 11; Abū Shaykh (ʿAl. b. M. b. Djaʿfar, d. 369/979; Hafsi, 25), *Ṭabaḳāt al-muḥaddithīn bi-Iṣbahān*, ed. ʿA.S. al-Bundārī, i-iv, in two vols., Beirut 1989; ʿAlī b. al-Mufaḍḍal (al-Maḳdisī al-Iskandarānī al-Mālikī, d. 611/1214; Hafsi, i, 256), *al-Arbaʿūn al-murattaba ʿalā ṭabaḳāt al-arbaʿīn*, ed. announced in *ATA*, xl-xli (1989), 15.

Ḥanafīs (Hafsi, ii, 11-17): Ibn Abi ʾl-Wafāʾ al-Ḳurashī (d. 775/1373), i-v, ed. ʿA.M. al-Ḥulw, Cairo 1993[2], see Gilliot in *MIDEO*, xxii, 191; M. b. ʿU. al-Ḥanafī (d. 959/1551), *add.* Hafsi, ii, 15, n. 4: ms. Ali Emiri 2510; al-Hinnāʾi (d. 979/1572), *Ṭabaḳāt al-ḥanafiyya: add.* Hafsi, ii, 16, n. 1: Baghdād, Awḳāf 929-30; al-Ghazzī (A. b. ʿAk. al-Tamīmī, d. 1004/1595), *al-Ṭabaḳāt al-saniyya fī tarādjim al-ḥanafiyya*, ed. ʿA.M. al-Ḥulw, Cairo 1989[2] (1970[1]).

Mālikīs (Hafsi, ii, 9-11): ʿIyāḍ b. Mūsā [*q.v.*], *Tartīb al-madārik*, i-viii, ed. M.T. al-Ṭandjī *et alii*, Rabat 1966 ff. (1983[2]), preferable to the edition of A. Bakīr Maḥmūd, i-iii, Beirut 1965-8; Ibn Farḥūn, *al-Dībādj al-mudhahhab*, i-ii, ed. M. al-Aḥmadī Abu ʾl-Nūr, Cairo 1972; continued by Aḥmad Bābā al-Takrūrī al-Tinbutktī (d. 1036/1627; Brockelmann, II, 176), *Nayl al-ibtihādj*, ed. ʿA. b. ʿAl. al-Harlama, Tripoli (Libya) 1989.

Shāfiʿīs (Hafsi, ii, 17-24; introduction to al-ʿAbbādī by G. Vitestam, *K. Ṭabaḳāt al-fuḳahāʾ al-shāfiʿiyya*, Leiden 1964, 3-5; introduction of Khān, see below under Ibn Ḳāḍī Shuhba): Muṭawwiʿī (ʿU. b. ʿA., d. *ca.* 440/1048); Abu ʾl-Ṭayyib Sahl al-Ṣuʿlūkī (d. 404/1013-14); Khān, 10, according to Ḥādjdjī Khalīfa, no. 7900; al-Subkī (Tādj al-Dīn, *q.v.*): *Ṭabaḳāt al-shāfiʿiyya al-kubrā*, i-x, ed. al-Ṭannāḥī and al-Ḥulw, Cairo 1964-76; al-Asnawī (ʿAbd al-Raḥīm b. al-Ḥasan, d. 772/1370), *Ṭabaḳāt al-shāfiʿiyya*, i-ii, ed. ʿAl. al-Djubūrī, Baghdād 1970-1 (Riyāḍ 1981); Ibn Ḳāḍī Shuhba, *Ṭabaḳāt al-shāfiʿiyya*, i-iv, Ḥaydarābād 1978-80, i-iv in 2 vols., ed. Ḥ.ʿA. Khān, Beirut 1987; Ibn Kathīr (ʿImād al-Dīn, d. 774/1373), *Ṭabaḳāt al-fuḳahāʾ al-shāfiʿiyyīn*, with the *Dhayl* of al-Maṭarī al-ʿUbādī (d. 765/1363), i-iii, ed. M.Z.M. ʿAzab, Cairo 1993 (Gilliot, in *MIDEO*, xxii, no. 192, and *corr.* in *MIDEO*, xxiii, *add.* Hafsi, ii, 21: Ibn Mulaḳḳin (A. Ḥafṣ ʿU. b. ʿA., d. 804), *al-ʿIḳd al-mudhahhab fī ḥamalat [corr.* Hafsi: *djumlat] al-madhhab*, ms. DK 579 *taʾrīkh*).

Ḥanbalīs (Hafsi, ii, 24-6): Ibn al-Mabrid (or Ibn ʿAbd al-Hādī, d. 909/1503), *al-Djawhar al-munaḍḍad fī ṭabaḳāt mutaʾakhkhirī aṣḥāb Aḥmad*, ed. A.S. al-ʿUthaymīn, Cairo 1987 (Gilliot, in *MIDEO*, xix, no. 106); al-ʿUlaymī (ʿAr. b. M. al-ʿAmrī (d. 928/1521), *al-Manhadj al-aḥmad fī ṭabaḳāt al-imām Aḥmad*, ed. M.M. ʿAbd al-Ḥamīd, Cairo 1965.

Muʿtazilīs (Hafsi, iii, 175-6, Madelung, 330): M. b. Yazdādh al-Iṣfahānī (last wrote 3rd/9th century; Madelung), *K. al-Maṣābīḥ*; Abu ʾl-Ḥ. b. Farzawayh, a disciple of Abū ʿAlī al-Djubbāʾī, *K. al-Mashāyikh*; ʿAbd al-Djabbār, *Ṭabaḳāt al-muʿtazila* (ten classes), with the addition of two supplementary classes by al-Ḥākim al-Djishumī, in *Faḍl al-iʿtizāl wa-ṭabaḳāt al-muʿtazila*, ed. F. Sayyid, Tunis 1974; Ibn al-Murtaḍā, *Ṭabaḳāt al-muʿtazila*, ed. S. Diwald-Wilzer, Wiesbaden 1961. Overall, see Gilliot in *MIDEO*, xix, no. 56.

Ashʿarīs: Ibn Fūrak, *K. Ṭabaḳāt al-mutakallimīn*, prob-

ably the oldest (Hafsi, iii, 180; Madelung 334), and Kamāl al-Dīn b. Imām al-Kamāliyya (d. 864/1460; al-Sakhāwī, *Ḍaw'*, ix, no. 259), *Ṭabaḳāt al-ashā'ira* are not preserved (Hafsi, ii, 26; Madelung, *ibid.*); Ibn 'Asākir [*q.v.*], *Tabyīn kadhib al-muftarī*, divides them into five classes.

Ibāḍīs (Hafsi, iii, 176): al-Dardjīnī (d. 626/1229 [*q.v.*]), *K. al-Mashāyikh fi 'l-Maghrib* (*Ṭabaḳāt mashāyikh al-ibāḍiyya*), i-ii, Beirut 1974.

Shī'īs and Zaydīs (Hafsi, iii, 171-5): al-Barḳī (Abū Dja'far, d. 280/893), *K. al-Ridjāl*, ed. Dj. Muḥaddith Urmawī, Tehran 1964; al-Kashshī [*q.v.*], *K. al-Ridjāl*, ed. S.A. al-Ḥusaynī, Karbalā *ca.* 1960/*Ikhtiyār ma'rifat al-ridjāl* (summary by al-Ṭūsī), ed. Ḥ. Muṣṭafawī, Mashhad 1970.

Ascetics and mystics (Hafsi, ii, 27-41): Ibn al-Mulaḳḳin, *Ṭabaḳāt al-awliyā'*, ed. N. Sharība, Beirut 1986[2] (1973[1]); al-Munāwī ('Abd al-Ra'ūf [*q.v.*]), *al-Kawākib al-durriyya fī tarādjim al-sāda al-ṣūfiyya* (*al-Ṭabaḳāt al-kubrā*; first complete ed.), i-iv, in 2 vols., ed. 'A.Ṣ. Ḥamdān, Cairo 1994 (see Gilliot, in *MIDEO* xxiii).

Physicians and sages (Hafsi, iii, 161-5): Ṣā'id al-Andalusī (d. 462/1070), *Ṭabaḳāt al-umam, add.* Hafsi, iii, 161, ed. L. Cheikho, Beirut 1912; ed. Ḥ. Bū 'Alwān, Beirut 1985; M.S. Khan, *Qāḍī Ṣā'id al-Andalusī's* Ṭabaḳāt al-umam, in *Islamic Studies*, xxx/4 (1991), 517-40; missing from Hafsi are the *Ṣiwān al-ḥikma*, wrongly atributed to Abū Sulaymān al-Sidjistānī [*q.v.*], and *Tatimmat Ṣiwān al-ḥikma* of Ẓahīr al-Dīn al-Bayhaḳī [*q.v.*], new ed. R. al-'Adjam, Beirut 1992.

Others: Mālikī (A. Bakr 'Al. b. M., d. 453/1061; Hafsi, iii, 166), *K. Riyāḍ al-nufūs fī ṭabaḳāt 'ulamā' al-Ḳayrawān wa-Ifrīḳiya*, i-iii, ed. B. al-Bakkūsh, Beirut 1983; Burayhī ('Abd al-Wahhāb b. 'Ar. al-Saksakī, d. 904), *Ṭabaḳāt al-mudjtahidīn*, ed. Abū 'Abd al-Raḥmān Ibn 'Aḳīl, in *Risālatān li-Ibn Kamāl Bāshā wa-Ṭāshkubrīzādah*, Cairo 1976.

(CL. GILLIOT)

TABĀLA, a town and wadi just within the northern boundaries of the 'Asīr emirate of present-day Saudi Arabia, situated about 200 km/125 miles as the crow flies from the Red Sea coast line and less than 100 km/62 miles due west of Bīsha (Zaki M.A. Farsi, *National guide and atlas of the Kingdom of Saudi Arabia*, map 34, G5).

The town is an ancient one, and is mentioned in the literature on the Prophet. Al-Wāḳidī (ed. Marsden Jones, London, 1966, ii, 853-4 and iii, 981) twice mentions his raids against Khath'am in Tabāla in 8/629 and 9/630. It is stated in more than one source that the town is on the Yemeni pilgrim route, with al-Ḥarbī (*K. al-Manāsik wa-amākin ṭuruḳ al-ḥadjdj wa-ma'ālim al-Djazīra*, ed. Ḥamad al-Djāsir, Riyāḍ 1969, 644) expressly placing the town between Bīsha and Adjrab. The mediaeval geographers describe the town as large, with springs and wells which water date-palm groves and agricultural lands. Al-Hamdānī (127, 258) adds that it was the centre of the pre-Islamic idol Dhu 'l-Khalaṣa and that most of its inhabitants were from Ḳuraysh. The story is also told that, when he was sent as governor by the caliph 'Abd al-Malik b. Marwān, al-Ḥadjdjādj b. Yūsuf [*q.v.*] thought it too insignificant a place since it was hidden from his route by a hill. Consequently, he turned back and never entered the town.

Bibliography: Apart from the sources mentioned in the text, see Ibn Khurradādhbih, 134, 188; Idrīsī, *Opus geographicum*..., ed. E. Cerulli *et alii*, facs. 2, Leiden 1970-84, 146, 151; Yāḳūt, *Mu'djam al-buldān*, ed. Beirut 1979, ii, 9.

(G.R. SMITH)

AL-ṬABARĀNĪ, ABU 'L-ḲĀSIM SULAYMĀN b. Ayyūb b. Muṭayyir al-Lakhmī, one of the most important traditionists of his age (260-360/873-971).

He is said to have begun his studies in *ḥadīth* at the age of 13, with his education spanning his native Syria, 'Irāḳ, the Ḥidjāz, Yemen and Egypt, and he is said to have frequented several thousand masters in the course of a *riḥla fī ṭalab al-'ilm* which lasted for 33 years. Amongst these were Abū Zur'a al-Dimashḳī, al-Ṭabarī and al-Nasā'ī [*q.v.*]. He died at Iṣfahān, where he had lived for sixty years under the aegis of the governor Abū 'Alī Aḥmad b. Muḥammad b. Rustum, even though at the end of his life he left it because of havinq held suspect views on Abū Bakr and 'Umar. Amongst his numerous disciples were Abū Nu'aym al-Iṣfahānī [*q.v.*] and Ibn Manda.

He is known above all for three works on *ḥadīth*: *al-Mu'djam al-kabīr* [*'alā asmā' al-ṣaḥāba*], ed. Beirut 1983, 10 vols., from which he excluded the traditions from Abū Hurayra, which he treated in a separate work, *al-Mu'djam al-awsaṭ* [*fīhi aḥādīth al-afrād wa 'l-gharā'ib*], classed according to the names of his masters; and *al-Mu'djam al-ṣaghīr*, which gave a *ḥadīth* from each of his masters. Amongst his numerous other works in the same field, one may mention the *K. al-Du'ā'*, *K. al-Manāsik*, *K. al-Sunna*, *K. al-Nawādir*, *K. Dalā'il al-nubuwwa*, *Musnad Shu'ba*, *Musnad Sufyān* and *K. al-Awā'il*. He also wrote a *Tafsīr*, a *Radd 'alā 'l-Mu'tazila* and a *K. al-Ṣalāt 'alā 'l-nabī*. There are lists of his extant works in Brockelmann, S I, 279, and Sezgin, i, 196-7, as well as a complete list of his works in al-Dhahabī, *Ḥuffāẓ*, iii, 912-17. Ibn Ḥadjar, *Lisān al-mīzān*, iii, 73-5 no. 275 gives some unfavourable reports on his work as a traditionist.

Bibliography (in addition to references in the article): Ibn 'Asākir, *T. Dimashḳ* (not seen); Ibn Khallikān, ed. 'Abbās, ii, 407 no. 274; Dhahabī, *Siyar a'lām al-nubalā'*, xvi, 119-30 no. 86; Ṣafadī, *Wāfī*, xv, 244-6 no. 492; Ibn Taghrībirdī, *Nudjūm*,

iv, 59-60; Ibn al-ʿImād, *Shadharāt*, iii, 30; Ḥādjdjī Khalīfa, v, 629; Kaḥḥāla, *Muʾallifīn*, iv, 253, xiii, 391. (MARIBEL FIERRO)

AL-ṬABARĪ, ABŪ DJAʿFAR MUḤAMMAD B. DJARĪR b. Yazīd, polymath, whose expertises included tradition and law but who is most famous as the supreme universal historian and Ḳurʾān commentator of the first three or four centuries of Islam, born in the winter of 224-5/839 at Āmul, died at Baghdād in 310/923.

1. Life.

It should be noted at the outset that al-Ṭabarī's own works, in so far as they have been preserved for us, give little hard biographical data, though they often give us leads to his teachers and authorities and help in the evaluation of his personality and his scholarly attitudes. Several persons who knew him directly wrote on his life and works at an early date, though none of the works in question has survived *in extenso*, and they are only known from excerpts preserved by later authors. Thus the judge Abū Bakr Aḥmad b. Kāmil (d. 350/961) was close to al-Ṭabarī and was an early adherent of al-Ṭabarī's own *madhhab*, the Djarīriyya (see below), whilst Abū Muḥammad ʿAbd Allāh al-Farghānī (d. 362/972-3 [*q.v.*]) knew al-Ṭabarī when al-Farghānī was a student, prepared an edition of the latter's *History* and wrote a *ṣila* [*q.v.*] or continuation to it which contained a long obituary notice of al-Ṭabarī. The Egyptian historian Abū Saʿīd b. Yūnus al-Ṣadafī (d. 347/958 [see IBN YŪNUS] included a section of al-Ṭabarī in his *K. al-Ghurabāʾ* "Book of strangers [coming to Egypt]" because al-Ṭabarī visited Egypt for study (see below). But there seems to have then been an hiatus until al-Ḳifṭī (d. 646/1248 [*q.v.*]) compiled an enthusiastic biography, *al-Taḥrīr fī akhbār Muḥammad b. Djarīr*. For knowledge of these lost works, we rely on the authors' material cited in the general biographical works of al-Khaṭīb al-Baghdādī, in his *Taʾrīkh Baghdād*, and of Ibn ʿAsākir, in his *Taʾrīkh Dimashḳ* (because al-Ṭabarī came to the Syrian capital for study; see *Annales, Introductio*, pp. LXIX ff.), and, above all, the literary biographical work of Yāḳūt, the *Irshād al-arīb*.

Al-Ṭabarī stemmed from Āmul [*q.v.*] in Ṭabaristān, where his father Djarīr seems to have been a moderately prosperous landowner. He provided his son with a steady income during the early part of his life, brought to the latter from Ṭabaristān to Baghdād by the annual Pilgrimage caravan from Khurāsān, and when he died (at an unknown date), al-Ṭabarī inherited a share of his estate. Whether the family was of indigenous stock or descended from Arab colonists in Ṭabaristān is unknown. At all events, al-Ṭabarī's modest degree of financial family support enabled him to travel extensively as a student and then, when he was an established scholar, gave him some independence from outside pressures and influences and from the necessity which poorer scholars experienced of seeking patronage.

He was a precocious student who was, as he himself states, a *ḥāfiẓ* or memoriser of the Ḳurʾān aged seven, qualified as an *imām* or leader of the Muslim worship aged eight and studied the Prophetic traditions aged nine. It seems well-authenticated that he left home aged twelve *fī ṭalab al-ʿilm*, and during a stay of five years in the metropolis of northern Persia, Rayy, he received an intellectual formation which gave him solid grounding for his future career. The most significant of his teachers there was ʿAbd Allāh b. Ḥumayd al-Rāzī (d. 248/862), who as Ibn Ḥumayd figures as an oft-quoted authority in al-Ṭabarī's *History*, above all, for information going back to Ibn Isḥāḳ, since Ibn Ḥumayd was an authorised transmitter of Ibn Isḥāḳ's *Kitāb al-Maghāzī* through Salama b. al-Faḍl (d. after 190/805-6). From Rayy, al-Ṭabarī progressed naturally, at the age of less than seventeen, to the intellectual centre of the Islamic world, Baghdād, according to one story, in the expectation of studying with Aḥmad b. Ḥanbal (unfulfilled, at it happened, since Ibn Ḥanbal died at that point). After a year in Baghdād, he seems to have left for southern ʿIrāḳ (by 242/856-7) to study with the leading scholars of Wāsiṭ, Baṣra and Kūfa, whom he was afterwards to cite in his own works, such as Muḥammad b. ʿAbd al-Aʿlā al-Ṣanʿānī (d. 255/869) and Muḥammad b. Bashshār, called Bundār (d. 252/866, see Sezgin, i, 113-24) in Baṣra, and Abū Kurayb Muḥammad b. al-ʿAlāʾ (d. 247 or 248/861-2) in Kūfa. He probably returned to Baghdād after less than two years away and spent eight further years there, including a spell as tutor to one of the sons of the caliph al-Mutawakkil's vizier ʿUbayd Allāh b. Yaḥyā b. Khāḳān [see IBN KHĀḲĀN. 2], hence at some point between 244/858-9 and 248/862.

He then embarked on his major educational and research journey, this time to Syria, Palestine and Egypt. His precise itinerary is unknown, but he was certainly in Beirut and the considerable number of scholars from or connected with such towns as Ḥimṣ (a particularly important centre, with its own special tradition of *ḥadīth* transmission), al-Ramla and ʿAskalān probably points to stays in those places and an interchange of views and information with the local scholars. Al-Ṭabarī's entry into Egypt seems to be fixable with some certainty as the year 253/867; he made a side-trip to the Syrian lands and then came back to Egypt, possibly in 256/870, though this is much less sure than the first date. In Egypt he met the leading Egyptian *muḥaddith* and authority on the *ḳirāʾāt* Yūnus b. ʿAbd al-Aʿlā (d. 264/877, see Sezgin, i, 38), and profited especially from contacts with the leading authorities there on Mālikism and Shāfiʿism, including with the Ibn ʿAbd al-Ḥakam [*q.v.*] family, which had been especially close to the Imām Muḥammad al-Shāfiʿī and whose head was the eminent scholar Muḥammad b. ʿAbd Allāh b. ʿAbd al-Ḥakam.

Al-Ṭabarī returned from Egypt to Baghdād around the year 256/870. He may at some point have made the Pilgrimage but cannot have made a prolonged stay there for study, since Ḥidjāzī scholars do not seem to figure amongst his teachers. His return to Baghdād marked the end of his student *Wanderjahre*, and he now settled down for the remaining fifty years of his life in order to devote himself to teaching and authorship, producing an amount of high-quality scholarship such as to evoke the admiration, in an age of prolific authors anyway, of both contemporaries and subsequent generations. During this half-century, he merely made two journeys to his native Ṭabaristān, the second in 289-90/902-3. See, in general, for al-Ṭabarī's years of learning and study, with lists of his teachers, Cl. Gilliot, *La formation intellectuelle de Ṭabarī*, in *JA*, cclxxvi (1988), 203-44, and idem, *Exégèse, langue et théologie en Islam. L'exégèse coranique de Tabari (m. 311/923)*, Paris 1990, ch. I, 19-37 (adds additional references to the preceding article).

He was now able to follow a career in a multiplicity of branches of knowledge. This was to embrace not only history, Ḳurʾān exegesis, *ḥadīth* and *fiḳh*, but he also possibly wrote in the field of ethics and had an educated person's interest in Arabic poetry. His comfortable, if not luxurious, financial and economic

circumstances enabled him to follow an even tenor of life in which he seems to have eaten temperately, dressed modestly and generally to have avoided excess in all things. Anecdotal evidence suggests that he never accepted any official employment (such as that of *ḳāḍī* or judge, for which he would have been supremely well-equipped), although his post as tutor to the son of a vizier would doubtless have given him the entrée to such a career had he wished for it. These stories also stress his high moral standards and his great probity, with a reluctance to accept in return for services costly gifts which he did not feel he had earned or for which he could not give equally valuable presents in return. He did probably add to his income from teaching a wide circle of students, one increasingly attracted by his fame, although he does not seem energetically to have sought after such sources of income; and he may perhaps have received fees for legal advice and opinions, one apparent instance being for services rendered to the caliph al-Muktafī [*q.v.*]. It does not appear that he ever married, but was wed to his scholarship; his continuator and biographer, the Andalusian Maslama b. al-Ḳāsim al-Ḳurṭubī (d. 353/964) says that he lived as an *ḥaṣūr*, one leading a celibate life. On the sketchy evidence of one story, he may conceivably have had a son by a slave mother; his having a *kunya*, Abū Dja'far, does not of course imply in any way that he was a biological father. No progeny of his is mentioned, as one would certainly expect of a man of his celebrity, and all the evidence points to the fact that al-Ṭabarī never married.

In Baghdād, he apparently installed himself on the eastern side of the city, in al-Shammāsiyya, certainly in this quarter by the year 290/903, and lived there till he died, aged about 85 lunar years, on Monday, 27 Shawwāl 310/17 February 923. He was buried in his house on the next day, much eulogised by the scholars of his day; one of these encomia, by al-Ṭabarī's acquaintance the philologist Ibn Durayd [*q.v.*], is preserved in its entirety.

The Baghdād years were filled with his various scholarly activities which, as noted above, embraced not only the traditional "Arab" sciences in which he excelled and with which he was primarily concerned, but also the "foreign" science of medicine; he possessed a copy of the medical encyclopaedia, the *Firdaws al-ḥikma*, of his older contemporary and compatriot 'Alī b. Rabban al-Ṭabarī (d. in the 850s or early 860s? [*q.v.*]), and occasionally prescribed medical treatment for friends and students. All his surviving works indicate that he had a reverence for scholarship and wished to present what must have already become, over the course of some two-and-a-half centuries, a formidable body of knowledge in such fields as *fiḳh, tafsīr, ḥadīth* and *akhbār* in as concise and accurate a manner as possible. An anecdote says that he originally intended his *History* and his *Commentary* to be much lengthier and more detailed, but cut them down to more manageable proportions for his students and later scholars; the tale is very probably apocryphal, but indicates al-Ṭabarī's concern for conveying essentials in a form which could be used by the following generations.

In his approach to scholarship, most notable is his emphasis on *idjtihād* [*q.v.*] or independent exercise of judgement. After quoting his sources—in his major works, he depended essentially on existing written works and reports—he gives what he considers to be the most acceptable view. His own dogmatic beliefs appear to have been basically within the framework of "orthodox" Islam as conceived, e.g. in the environment of Ibn Ḥanbal just before al-Ṭabarī's time and that of al-Ash'arī after him. This is clear from his extant dogmatic writings such as the *Ṣarīḥ al-sunna* and the partly-preserved *Tabṣīr ulī 'l-nuhā wa-ma'ālim al-hudā* (see below, section 3., nos. v, vi) and he further appears as a firm opponent of all "heretical innovations" (*bida'*) [see BID'A]. On the question of the imāmate or headship and leadership of the Muslim community, the most hotly-disputed dogmatic question of his time, when Shī'ism was becoming a force not only in peripheral areas like the Caspian provinces and Yemen but also in the heartland of the caliphate itself, he was a resolute defender of the pre-eminence of all four of the Rightly-Guided Caliphs, venerating Abū Bakr and 'Umar and defending the rights of 'Alī equally. Nevertheless, since accusations of Shī'ī sympathies, however ill-founded, were a standard weapon at this time against opponents, al-Ṭabarī seems to have found himself accused of such sympathies by his Ḥanbalī opponents, who were to stir up the Baghdād mob against al-Ṭabarī on more than one occasion. Yet despite his origins from Ṭabaristān—which had not, in any case, become in the early 3rd/9th century so closely identified with Zaydī Shī'ism as it was later to become—there is no evidence whatever of any inclination by al-Ṭabarī towards Shī'ism beyond the admiration for 'Alī as a person which was often found in the staunchest of Sunnīs. In *fiḳh*, al-Ṭabarī was at first a Shāfi'ī, but as his views developed into a distinct and self-sustaining corpus of law, he and his followers came to constitute themselves as a separate *madhhab*, that of the Djarīriyya (named after his father, a not uncommon feature of the nomenclature of sects and schools, cf. the Khāridjite 'Adjārida and Azāriḳa [*q.vv.*]). In al-Ṭabarī's later years, his students were considered as adherents of the Djarīriyya, and the school's ranks included several leading scholars of the age; but its principles do not seem to have been distinctive enough from Shāfi'ism to have ensured its future growth and development after al-Ṭabarī's death, especially since the intellectual environment was one in which the three well-established Sunnī *madhāhib* of the Mālikiyya, Ḥanafiyya and Shāfi'iyya were by now firmly entrenched and competing for supremacy in various regions of the Islamic world.

Al-Ṭabarī had debates and altercations with Abū Bakr Muḥammad b. Dāwūd, son of the founder of the Ẓāhirī law school with whom al-Ṭabarī had in fact studied [see DĀWŪD B. 'ALĪ B. KHALAF], but these took place on the level of courtesy and mutual respect. His conflicts with the belligerent and uncompromising Ḥanbalīs were, on the other hand, acerbic and may well have had a disturbing and unsettling effect on al-Ṭabarī's life. Ḥanbalism was at this time struggling to carve a niche for itself alongside the existing three main *madhāhib* and its advocates were pugnacious and often unscrupulous, being ready to whip up the mindless Baghdād mob. Al-Ṭabarī himself had originally been drawn to study at Baghdād by the presence there of Aḥmad b. Ḥanbal (see above), and he always regarded him with great respect; he and Ibn Ḥanbal's youngest son 'Abd Allāh, the transmitter of his father's teaching, had many common teachers. The break with the Ḥanbalīs seems to have occurred over al-Ṭabarī's legal work, the *Ikhtilāf al-fuḳahā'* (see below, section 3. no. iii) in which al-Ṭabarī totally disregarded Ibn Ḥanbal as being essentially a *ḥadīth* scholar and not a jurist. This was a perfectly valid and sustainable judgement, but it enraged the touchy Ḥanbalīs. The ensuing dispute—

only known to us in the form of conflicting reports from both sides—involved such rallying-points for the Ḥanbalīs as the interpretation of Ḳurʾān, XVII, 81/79, with its mention of the "praiseworthy position" (*maḳām*^an^ *maḥmūd*^an^) promised to the Prophet: did this mean, as a tradition from the Successor Mud̲j̲āhid b. D̲j̲abr [*q.v.*] stated, that Muḥammad would be seated with God on the divine throne, as the Ḥanbalīs asserted? Al-Ṭabarī discussed the interpretation of the phrase at great length in his *Commentary* (ed. Būlāḳ, x, 97-100, partial tr. Rosenthal, in *The History of al-Ṭabarī*, i, *General introduction and from the Creation to the Flood*, Albany, N.Y. 1989, 149-51), and in a circumspect and reasoned manner, but—perhaps aroused by Ḥanbalī intransigence and misinterpretation—is said publicly to have denied the credibility of Mud̲j̲āhid's tradition, and this led to Ḥanbalīs stoning his house in a riot which had to be put down by the Bag̲h̲dād *s̲h̲urṭa*. The Ḥanbalīs may have been behind occasional difficulties which al-Ṭabarī had in delivering his lectures and may have deterred students from coming to him from outside Bag̲h̲dād. Violence around al-Ṭabarī's house is reported at the time of his death, again involving the controversial *maḳām*^an^ *maḥmūd*^an^ formula, although the reports of Ḥanbalī hostility at the time of his funeral may be exaggerated; if al-Ṭabarī's funeral was a quiet one, attended by few people, it was probably because al-Ṭabarī had thus requested it.

2. Al-Ṭabarī's methodology.

This topic has already been broached in regard to al-Ṭabarī's emphasis on *id̲j̲tihād* after a thorough consideration of his sources, these being essentially written ones. The great virtues of his *History* and *Commentary* are that they form the most extensive of extant early works of Islamic scholarship and that they preserve for us the greatest array of citations from lost sources. They thus furnish modern scholarship with the richest and most detailed sources for the political history of the early caliphate, above all for the history of the eastern and central lands of the *Dār al-Islām* during the first centuries of the Hid̲j̲ra, and also for the early stages of the development and subsequent variety and vitality of Islam as a religious institution and corpus of legal knowledge and practice.

In the building-up of these two great syntheses of knowledge, al-Ṭabarī relied, as by this time had become possible, on a wide spectrum of written sources which were available to him. When he introduced sources by such formulae as *ḥaddat̲h̲anā*, *ak̲h̲baranā* or *kataba*, this meant that he had the *id̲j̲āza* [*q.v.*] for the book from which the passage in question was quoted, whilst when he relied on older books for which he had no firm transmission tradition on which he could rely, he used words like *ḳāla, d̲h̲akara, rawā, ḥuddit̲h̲tu*, etc. Hence al-Ṭabarī's works are above all compilations of material written down during the two centuries from *ca.* 50/670 to *ca.* 250/864, and he did not in general use the works of his contemporaries. In his *Commentary*, when he does not trace traditions back to the Prophet, this means that al-Ṭabarī's sources were books which enshrined the interpretations or exegesis of their authors or their contemporaries.

We must not suppose that al-Ṭabarī worked single-mindedly on a particular work, completed it and then went on to a fresh project. It is likely that all his major works first took shape as dictated lectures (see, concerning this technique, MUSTAMLĪ), and developed and grew over lengthy periods of his life, especially when the subject-matter concerned allowed of its treatment in self-contained, component sections. This meant that a work might reach its final form on a certain date but parts of it might well have been in circulation at earlier times. This accounts for the facts that the same work appears under different titles, or that what seem to be works with separate titles are in fact component parts of greater works. But in any case, al-Ṭabarī rarely gives formal titles when he himself cites his works, but rather, he refers to them by their subject-matter; formal titles may never have existed for some (or the majority) of them. All these uncertainties make it difficult to arrange his works chronologically, although there is a certain amount of evidence, internal and external, regarding their times of composition and their issue in final, complete copies.

3. Works.

Only al-Ṭabarī's major works are mentioned here. A complete listing of titles as mentioned in the sources, including those which seem to denote parts of larger works only or which appear to be wrongly attributed to al-Ṭabarī, is given by Rosenthal, in his *General introduction*, 81-134, with a classification by subject and an attempt at placing the works in chronological order, is given in his Appx. B at 152-4. Likewise valuable is Gilliot, *Les œuvres de Ṭabarī*, in *MIDEO*, xix (1989), 49-90 (Gilliot must have been writing contemporaneously with Rosenthal), concentrating with great detail on al-Ṭabarī's works in the field of the legal sciences; Gilliot points out (49-50) how great a confusion there exists regarding the number, titles and contents of al-Ṭabarī's works as listed in the sources, in large measure due to the fact that *kitāb* is used both for complete works and also for chapter titles only. Ch. II of his *Exégèse, langue et théologie en Islam* (39-68) modifies his *MIDEO* article in some points. Of older listings, see Brockelmann, I², 148-9, S I, 217-18, and Sezgin, i, 326-8.

i. The *History*, usually simply referred to as such because of its fame; its most authentic title, as given by al-Ṭabarī himself in the colophon of one of the manuscripts, would appear to be *Muk̲h̲taṣar taʾrīk̲h̲ al-rusul wa 'l-mulūk wa 'l-k̲h̲ulafāʾ*, but others are found. The use of the term *muk̲h̲taṣar* "short version, epitome" apparently reflected the author's own modesty and may also have reflected the report that the fuller, original version was ten times as long as the extant version, which itself fills twelve-and-a-half volumes in the printed Leiden edition made by the team of editors brought together by M.J. de Goeje in the later 19th century (*Annales quos scripsit Abu Djafar Mohammed ibn Djarir at-Tabari*, 1879-1901, 15 vols. including Introductio, Glossarium, Addenda et corrigenda, Indices, etc.).

In form it is a universal history, dealing firstly with the Creation, the Old Testament patriarchs and prophets, the rulers of ancient Israel and of the ancient Persians, and the culmination of the prophets before Muhammad, Jesus, before arriving at the history of the Persian Sāsānids. Then, after the account of the career of the Prophet Muḥammad, the *History* is arranged annalistically, with very great detail on the conquests period, the Umayyads and ʿAbbāsids, ups to the date 22 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 902/6 July 915. Al-Ṭabarī's sources included an Arabic version of the Persian *K̲h̲^w^atāy-nāmag* or "Book of Kings" for pre-Islamic Persian history and an array of *ak̲h̲bāriyyūn* for early Islamic history, such as al-Zuhrī, Abū Mik̲h̲naf, al-Madāʾinī, Sayf b. ʿUmar, Naṣr b. Muzāḥim, ʿUmar b. S̲h̲abba, Ibn Isḥāḳ, Ibn Saʿd, al-Wāḳidī, Ibn Abī Ṭāhir Ṭayfūr [*q.vv.*], etc. (Sezgin, i, 324 n. 1, mentions a study published as articles from 1950 to 1961 by the ʿIrāḳī scholar D̲j̲awād ʿAlī, on al-Ṭabarī's sources, *Mawārid Taʾrīk̲h̲ al-Ṭabarī*). Al-Ṭabarī gave parallel accounts from all these last authorities of earlier Islamic

times, rather than attempting to furnish a conflated, connected story of historical events, even when the parallel accounts could not easily be harmonised or were even contradictory. His aim was, rather, to present the evidence for the course of the early Islamic history of the lands between Egypt and the far eastern fringes of the Iranian world so that others could evaluate it in a more critical fashion should they so wish. Hence a later historian like Ibn al-Athīr was to use the *History* very extensively, in general simplifying it, endeavouring to harmonise disparate accounts and trying to supply gaps from other sources. It was, indeed, through intermediaries like Ibn al-Athīr that subsequent historians continued indirectly to use the *History*, at a time when complete manuscripts of the original were less and less copied and were becoming harder to find: Ibn Khaldūn at first copied the famous *waṣiyya* or charge of Ṭāhir Dhu 'l-Yamīnayn to his son ʿAbd Allāh from Ibn al-Athīr, and was only later able to collate this with the original text of al-Ṭabarī (actually itself stemming from Ibn Abī Ṭāhir Ṭayfūr) (see *Muḳaddima*, tr. Rosenthal, ii, 139 n. 751). The specific relationship between al-Ṭabarī's *History* and Ibn al-Athīr's *Kāmil* was examined by C. Brockelmann in his dissertation *Das Verhältnis von Ibn al-Aṯīrs Kāmil fit-ta'rīḫ zu Ṭabarīs Aḫbār er-rusul wal mulūk* (Strassburg 1890).

The work's fame speedily led to continuations by other Arabic scholars, such as the *Ṣila* of the Andalusian scholar ʿArīb b. Saʿd al-Ḳurṭubī; the *Mudhayyil* or *Ṣila* of al-Ṭabarī's pupil Abū Muḥammad ʿAlī al-Farghānī, who had his master's *idjāza* to transmit the *History*; the *Takmila* of Muḥammad b. ʿAbd al-Malik al-Hamadhānī; continuations by Hilāl b. al-Muḥassin al-Ṣābi' and his son Ghars al-Niʿma; etc. A Persian adaptation was made in 352/963 by the Sāmānid vizier Abū ʿAlī Muḥammad al-Balʿamī [see BALʿAMĪ] which epitomised the original but added a certain amount of new matter, making it to some extent an additional historical source besides being of philological interest for students of early New Persian (see G. Lazard, *La langue des plus anciens monuments de la prose persane*, Paris 1963, 38-41; E.L. Daniel, *Manuscripts and editions of Balʿamī's* Tarjamah-i tārīkh-i Ṭabarī, in *JRAS* [1990], 282-308), with further Arabic and Turkish translations made from this last. See Sezgin, i, 327, and ṢILA, at vol. IX, 604b; and for knowledge of the *History* in the West, and previous translations of parts of it before the appearance of the English translation under the general editorship of Ehsan Yarshater (*The History of al-Ṭabarī, an annotated translation*, Albany N.Y. 1985-, to be completed in 38 vols.), see Rosenthal, *General introduction*, 135-47. See also on the *History*, D.S. Margoliouth, *Lectures on Arabic historians*, Calcutta 1930, 110-12; Rosenthal, *A history of Muslim historiography*², Leiden 1968, index.

ii. The *Commentary*, the official title of which, *Djāmiʿ al-bayān ʿan ta'wīl al-Ḳur'ān*, is mentioned in the *History* but was never apparently much in general use, the work being simply known as the *Tafsīr* par excellence. Al-Ṭabarī worked on this, too, over many years, and it was not ready for dissemination till some date between 283/896 and 290/903. It was immediately regarded very highly, and probably considered as al-Ṭabarī's outstanding achievement, even more so than his works on law and tradition; it has retained its importance for scholars till the present day. The Jacobite Christian philosopher and theologian Yaḥyā b. ʿAdī (d. 363/974 [*q.v.*]) reportedly copied it twice for sale to provincial rulers. Also like the *History*, it is said to have been longer than its present very extended form; an authority cited in Yāḳūt's *Irshād* says that he saw a manuscript of it in Baghdād of 4,000 folios, although this does not seem to be extraordinarily longer than the 3,000 and more closely-printed pages of the text which we have.

In his work, al-Ṭabarī in general treated the Ḳur'ānic verses from a grammatical and lexicographical standpoint, but also made dogmatic theological and legal deductions from the Ḳur'ān text. After the commentary of Muḳātil b. Sulaymān (d. 150/767 [*q.v.*]) al-Ṭabarī's is the first major commentary to have survived—perhaps one should say that it is the first major running commentary *tout court* to have survived—other ones antedating al-Ṭabarī, such as those of al-Ḥasan al-Baṣrī [*q.v.*], having to be reconstructed or such as those of Mudjāhid b. Djabr and ʿAbd al-Razzāḳ b. Hammām al-Ḥimyarī al-Ṣanʿānī (d. 211/827 [*q.v.*]) having survived only fragmentarily in late, possibly reconstituted manuscripts. Al-Ṭabarī took over al-Ḥimyarī's commentary in its entirety for his own work. H. Horst, in his *Zur Überlieferung im Korankommentar aṭ-Ṭabarīs*, in *ZDMG*, ciii (1953), 290-307, surmised that al-Ṭabarī in fact used several, complete, older commentaries now lost.

The *Commentary*'s great value and its popularity ensured that supercommentaries upon it and epitomes early appeared, with an abridgement speedily made by the Baghdādī scholar of Turkish origin, Ibn al-Ikhshīd (d. 326/938, cf. Sezgin, i, 624, and D. Gimaret, *EIr* art. *Ebn al-Ekšīd*). A Persian translation was commissioned by the Sāmānid *amīr* Manṣūr I b. Nūḥ I (d. 365/976) and made by a group of scholars in Transoxania; this translation, or rather, adaptation, has survived in far fewer copies than al-Balʿamī's *Tardjama-yi Ta'rīkh-i Ṭabarī*, but these manuscripts are old and the text likewise of great philological interest (see Lazard, *op. cit.*, 41-5). A French abridged translation and an English translation have recently started to appear (see Rosenthal, *Introduction*, 111), though it may be doubted whether any modern translation can convey the subtlety of al-Ṭabarī's thought and scholarship except in a very circuitous and prolix fashion. See further, TAFSĪR, and the extensive works on early Ḳur'ān exegesis by Gilliot, including his *Textes anciens édités en Egypte*, in *MIDEO*, xix (1989) to xxii (1996), *Les débuts de l'exégèse coranique*, in *RMMM*, lviii (1990), 82-100, *Exégèse, langue et théologie en Islam*, and *Mythe, récit, histoire du salut dans le commentaire coranique de Tabari*, in *JA*, cclxxxii (1994), 235-68. The *Commentary* was first printed in 30 vols. at Cairo, 1321/1903, with a further edition (considered the better of these two) in 1323/1905, and more recently edited by Maḥmūd Muḥammad Shākir and A.M. Shākir, 16 vols. Cairo 1954-68, incomplete (up to sūra XIV, 27); the best, complete edition is now that of A.S. ʿAlī, Muṣṭafā al-Saḳḳā *et alii*, Cairo 1954-7, repr. Beirut with indices, 30 vols.

iii. The *Ikhtilāf al-fuḳahā'*, partially preserved, seems to have had the full title *Ikhtilāf ʿulamā' al-amṣār fī aḥkām sharā'iʿ al-Islām*. In this work on the differences between the approaches and doctrines of the "orthodox" great jurists of early Islam, al-Ṭabarī, according to Yāḳūt, presented the legal scholarship of Mālik b. Anas, al-Awzāʿī, Sufyān al-Thawrī, al-Shāfiʿī, Abū Ḥanīfa, Abū Yūsuf, Muḥammad al-Shaybānī and (?) Abū Thawr Ibrāhīm al-Kalbī, but excluded any representation of the Muʿtazila (and, as noted above, in section 1., he excluded Ibn Ḥanbal as not primarily a *faḳīh*). Yāḳūt also reports that the original ran to about 3,000 folios. The Cairo fragment was edited by F. Kern, Cairo 1902, and the Cairo one by

J. Schacht, *Das Konstantinopler Fragment des Kitāb iḫtilāf al-fuqahā'*, Leiden 1933. See Rosenthal, *General introduction*, 103-5; Gilliot, *Les œuvres de Ṭabarī*, 52-6.

iv. *Tahḏhīb al-āthār* [*wa-tafṣīl maʿānī al-thābit ʿan Rasūl Allāh min al-akhbār*] was al-Ṭabarī's most ambitious work on traditions, arranged according to the latest transmitter of the *ḥadīths* and also according to the Prophet's Companions, but apparently never completed. It is more than a mere collection of traditions like Ibn Ḥanbal's *Musnad*, but examines exhaustively the philological and legal implications of each tradition, discussing its meaning and characteristics (e.g. whether it has any *ʿilal* or weaknesses) as well as its significance for religious practice; its contents thus amount to mongraphs on a number of topics. Only fragments are preserved, including those in which al-Ṭabarī took material from the *Musnads* of traditions going back to the Companions ʿUmar b. al-Khaṭṭāb, ʿAlī and ʿAbd Allāh b. al-ʿAbbās [see MUSNAD, at vol. VII, 706 a, middle]. What remains of the *Musnads* going back to the second and third of these three authorities has been published by Maḥmūd Muḥammad Shākir, 3 vols. Beirut n.d., introd. dated 1982. See Rosenthal, *op. cit.*, 128-30; Gilliot, *op. cit.*, 68-70; idem, *Le traitement du* ḥadīṯ *dans le* Tahḏīb al-āṯār *de Ṭabarī*, in *Arabica*, xli (1994), 309-51.

v. *Tabṣīr ulī 'l-nuhā wa-maʿālim al-hudā*, partly preserved and still in manuscript, is a statement of the principles of the faith (*uṣūl al-dīn*) written at the request of the scholars of his home town of Āmul. See Rosenthal, *op. cit.*, 126-8.

vi. *Ṣarīḥ al-sunna*, a brief profession of faith or creed (*ʿaḳīda*), preserved, and published with a French translation by D. Sourdel, *Une profession de foi de l'historien al-Ṭabarī*, in *REI*, xxxvi (1968), 177-99. See Rosenthal, *op. cit.*, 125-6.

vii. *al-Faṣl bayn al-ḳirā'a*, preserved but unpublished, on Ḳur'ānic readings, also mentioned under the title *al-Djāmiʿ fi 'l-ḳirā'āt*; this last was conceivably, but improbably, a separate work. Yāḳūt quotes Abū ʿAlī al-Ḥasan al-Ahwāzī (d. 446/1054-5) that the latter had seen a copy of it in 18 volumes, admittedly in a large script. See Rosenthal, *op. cit.*, 95-7; Gilliot, *op. cit.*, 73.

viii. *Dhayl al-mudhayyal*, only surviving in a brief selection (*muntakhab*), was a supplement to al-Ṭabarī's *History*, with historical information on the religious scholars needed in connection with the *History*. The surviving text was appended to the Leiden edition of the *History* at iii, 2295-2561. The whole work would appear to be that often mentioned by the literary biographers, etc., as the *Ta'rīkh al-Ridjāl*, i.e. of religious scholars. See Rosenthal, *op. cit.*, 89-90; Gilliot, *op. cit.*, 72.

Numerous other, substantially lost works are mentioned both within al-Ṭabarī's own works or in later literature, including a *Laṭīf al-ḳawl fī sharā'iʿ al-Islām* (many variants of this title), a "slim" work on the laws and principles of the Islamic faith; separate works on the *faḍā'il* or merits of the first four caliphs and of the Prophet's uncle al-ʿAbbās, on which al-Ṭabarī seems at times to have lectured and for which he gathered material, without living long enough to put this into a single, compendious work; on the interpretation of dreams, *ʿIbārat al-ru'yā*; a refutation of the founder of the Ẓāhiriyya, Dāwūd b. ʿAlī, *al-Radd ʿalā dhi 'l-asfār*; a refutation of some of Ibn ʿAbd al-Ḥakam's view on Mālik, originating during his stay in Egypt; etc. There were also various works which were probably falsely attributed to al-Ṭabarī, including, e.g., *al-Radd ʿalā 'l-Ḥurkūṣiyya*; cf. on this last work, Rosenthal, *op. cit.*, 123-4 (accepting the possibility that it was by al-Ṭabarī), and Gilliot, *op. cit.*, 24-6 (sceptical of the attribution).

Bibliography: For earlier works, see the *Bibl.* to R. Paret's *EI*[1] art. The more recent bibl. is given by Rosenthal—combined with that for his tr. of the first 201 pp. of the *History*—in his *General introduction*..., 373-8, and Gilliot has a very detailed bibliography appended to his *Exégèse, langue et théologie en Islam*. References are also given within the body of the present article, which is based substantially on Rosenthal's exhaustive *General introduction*. Finally, one should note, of most recently-appeared works, Gilliot, *Ṭabarī et les chrétiens taġlibites*, in Université Saint-Joseph, Faculté des Lettres et des Sciences Humaines, *Annales du Département des Lettres Arabes*, vi/B (1991-2) [1996] (= *In memoriam Professeur Jean Maurice Fiey, o.p., 1914-1995*), 145-59 (al-Ṭabarī held that the People of the Book should be expelled from the whole of the *Dār al-Islām* when they were no longer of use to the Muslim community); and idem, *Al-Ṭabarī and "The history of salvation"*, in H. Kennedy (ed.), *Procs. of the conference on the life and works of Muḥammad b. Jarīr al-Ṭabarī, St. Andrews 30 August-2 September 1995*, forthcoming.

(C.E. BOSWORTH)

AL-ṬABARĪ, al-Ḳāḍī al-Imām ABU 'L-ṬAYYIB ṬĀHIR B. ʿABD ALLĀH b. ʿUmar b. Ṭāhir, principal authority of his time in the ʿIrāḳī branch of Shāfiʿism [see SHĀFIʿIYYA], born at Āmul in Ṭabaristān in 348/959-60, died in Baghdād in Rabīʿ I 450/May 1058.

At fourteen years of age, Abu 'l-Ṭayyib al-Ṭabarī began his legal training under the tutelage of Abū ʿAlī al-Zadjdjādjī, who had been a pupil of Ibn al-Ḳāṣṣ, in his turn a disciple of the great Ibn Suraydj [*q.v.*]. Al-Ṭabarī completed his education with various Shāfiʿī masters, primarily Abu 'l-Ḥasan al-Māsardjisī but also Abū Isḥāḳ al-Isfarā'īnī, who taught him theology and *uṣūl al-fiḳh*, and Abū Ḥāmid al-Isfarā'īnī, in Djurdjān, Nīsābūr and Baghdād, where he established himself definitively.

"The Judge" (*al-Ḳāḍī*), as he was called by ʿIrāḳī Shāfiʿīs, pursued parallel careers as an educator and a judge. He apparently composed a considerable body of work in various branches of legal sciences but only a fragment of one of his texts, *al-Taʿlīḳa* (it is either a commentary which he wrote on the *Mukhtaṣar* of al-Muzanī or his commentary on the *furūʿ* of Ibn al-Ḥaddād), has survived to this day in manuscript form (Istanbul, Ahmet III, no. 850, see G. Makdisi, *Ibn ʿAqīl*, Damascus 1963, 204). In fact, as is indicated by the manner in which al-Ṭabarī is introduced by al-Nawawī ("the master of the author of the *Muhadhdhab*": *Tahdhīb al-asmā' wa 'l-lughāt*, Beirut n.d., ii, 247), his renown was rapidly eclipsed by that of his more famous disciple, Abū Isḥāḳ al-Shīrāzī [*q.v.*], who devoted to him one of the most laudatory notices in his *Ṭabaḳāt al-fuḳahā'*, describing him as "the greatest *mudjtahid*" whom he had ever encountered (Beirut n.d., 135). Only the titles of his other works have been preserved (besides the two above-mentioned works: *al-Mudjarrad, al-Minhādj fi 'l-khilāfiyyāt* and *Ṭabaḳāt al-shāfiʿiyya*, Beirut 1988, 210-11). Al-Ṭabarī conducted his lectures in a *masdjid* in the *Bāb al-Marātib* quarter of Baghdād, attracting large numbers of students. Among his disciples or pupils who are still renowned, are included the Shāfiʿī historian and traditionist al-Khaṭīb al-Baghdādī and the Ḥanbalī Ibn ʿAḳīl [*q.vv.*].

An important personality of Baghdād (*madīnat al-salām*), and already well advanced in age, al-Ṭabarī was appointed to the post of judge (*ḳāḍī*) of the Karkh

quarter at the time of the death, in 436/1045, of his predecessor in this function, the Ḥanafī al-Ṣaymarī. Abandoning teaching, al-Ṭabarī remained *ḳāḍī* of al-Karkh until his death. According to al-Shīrāzī, although a centenarian "his reason was not disturbed nor his understanding impaired". His funeral was conducted on a lavish scale in the mosque of al-Manṣūr and he was interred in the cemetery of Bāb al-Ḥarb.

Bibliography: In the corpus of Shāfiʿī biographical literature, it is invariably the notice devoted to al-Ṭabarī by al-Shīrāzī (see above) which is reproduced as such, usually without any addition. The notice devoted to him by al-Subkī (*Ṭabaḳāt al-shāfiʿiyya al-kubrā*, Cairo n.d., v, 12-50) is considerably longer because it is augmented by, firstly, lengthy quotations from poems of al-Ṭabarī; secondly, the text of the controversies in which he was opposed by the Ḥanafīs (Abu 'l-Ḥasan al-Ṭālikānī, who was *ḳāḍī* of Balkh, and Abu 'l-Ḥusayn al-Ḳudūrī); and thirdly, a brief account of the special features of the master's legal thinking.

(E. CHAUMONT)

AL-ṬABARĪ, AḤMAD B. ʿABD ALLĀH b. Muḥammad b. Abī Bakr Muḥibb al-Dīn Abū Djaʿfar and Abu 'l-ʿAbbās, Shāfiʿī traditionist and jurist, b. 27 Djumādā II 615/20 September 1218, d. 2 Djumādā II 694/19 April 1295.

Considered as the greatest scholar of his century in the Ḥidjāz, he was born into a family who had recently settled in Mecca and who were destined to become one of the most important *buyūtāt*. His great-grandfather, Abū Bakr, had emigrated from Ṭabaristān to the Holy City in the seventies of the 6th/12th century. There he married and had seven sons and one daughter. From the second generation onwards the family became well established, with several of his sons already occupying prestigious positions (*khaṭīb*, *ḳāḍī* and *imām* of the *maḳām Ibrāhīm* [*q.v.*]; in fact, this last position became the almost exclusive privilege of this family until the 18th century).

Al-Ṭabarī was educated essentially at Mecca. Sources do not take into account any *riḥla fī ṭalab al-ʿilm*. His principal teachers were the Ḥanbalī traditionist Ibn al-Muḳayyar (545-643/1151-1246, al-Fāsī, *Dhayl al-taḳyīd*, ii, 189-90), Ibn Abī Ḥaramī (d. 645/1247, Brockelmann, S I, 607), the Mālikī scholar Sharaf al-Dīn al-Mursī (569-655/1173-1257, Brockelmann, I, 312; S I, 546), the Shāfiʿī traditionist Ibn al-Djummayzī (559-649/1164-1251, al-Ṣafadī, *al-Wāfī*, xxii, 284), the mystic Bashīr b. Ḥāmid al-Tibrīzī (570-646/1174-1248, al-Ṣafadī, x, 161-2), and finally ʿAlī b. Abī Bakr al-Ṭabarī (576-640/1180-1242, al-Fāsī, *al-ʿIḳd al-thamīn*, vi, 143-4) and Yaʿḳūb b. Abī Bakr al-Ṭabarī (592-665/1195-1266, al-Fāsī, vii, 473), both uncles of his father. He went to Ḳūṣ [*q.v.*] to complete his education as a legal expert with the Mālikī Madjd al-Dīn al-Ḳushayrī (581-667/1185-1268, al-Ṣafadī, xxii, 298-303).

Al-Ṭabarī maintained privileged relations with the Rasūlid dynasty of the Yemen. Sultan al-Muẓaffar (r. 647-94/1250-95) appointed him as teacher in the *madrasa* of al-Manṣūriyya, which had been founded by his father al-Manṣūr within the precincts of the Kaʿba. Al-Ṭabarī travelled repeatedly to the Yemen to impart a knowledge of the tradition and of some of his own works to the sultan himself and to his children. He was the author of about forty works that have largely disappeared. The most important of them can be conveniently classified according to their main themes: Ḳur'ān, *Fiḳh*, *Ḥadīth*, History, Poetry, Mysticism and Miscellaneous.

a. Ḳur'ān

(1) *al-Ḳabas al-asnā fī kashf al-gharīb wa 'l-maʿnā*; (2) *al-Kāfī fī gharīb al-Ḳur'ān al-djāmiʿ bayn al-ʿUzayzī wa 'l-bayān*; (3) *K. Marsūm al-muṣḥaf al-ʿuthmānī al-madanī*; (4) a *tafsīr*.

b. *Fiḳh*

(5) *ʿAwāṭif al-nuṣra fī al-ṭawāf wa 'l-ʿumra*, a *fatwā* on the preferences available for the circumambulation or the minor pilgrimage (*unicum* at Princeton, no. 2275); (6) *Istiḳṣā' al-bayān fī mas'ala Shādhirwān*, *fatwā* on the Shādhirwān of the Kaʿba; (7) a *madjmūʿ fi 'l-khilāf* in the style of the ancients; (8) a summary (*al-Maslak al-nabīh fī talkhīṣ al-Tanbīh*) and a commentary on the *Tanbīh* by al-Shīrāzī.

c. *Ḥadīth*

(9) *Ghāyat al-iḥkām fī aḥādīth al-aḥkām*, a collection of precepts drawn from the canonic corpus or otherwise in six volumes (the work is preserved in its entirety in manuscript); (10) al-Ṭabarī produced two abridged versions of this: *al-Aḥkām al-wusṭā* and *al-Aḥkām al-ṣughrā*; (11) *al-Ḳirā li-ḳāṣid umm al-ḳurā*, a text on the rites of pilgrimage (ed. M. al-Saḳḳā, Cairo 1367/1948); (12) *Ṣafwat al-ḳirā fī ṣifat ḥidjdjat al-Muṣṭafā*, partly abridged from *al-Ḳirā* (ed. R.M. Riḍwān, Cairo 1354/1935); (13) *K. Gharīb Djāmiʿ al-uṣūl*, commentary on the *rara* of *Djāmiʿ al-uṣūl* of Madjd al-Dīn Ibn al-Athīr [*q.v.*] (ms. Rağıb Paşa Musalla Medresesi 1950/60); (14) *al-Muḥarrar li 'l-Malik al-Muẓaffar*, a collection of precepts of the two *Ṣaḥīḥ*s dedicated to the Rasūlid sultan al-Muẓaffar; (15) *al-ʿUmda*, an abridged version of the previously-mentioned work; (16) two alphabetic rearrangements of *al-Gharīb fi 'l-ḥadīth* of Abū ʿUbayd al-Ḳāsim b. Sallām [*q.v.*]: *al-Durr al-manthūr li 'l-Malik al-Manṣūr* and *Taḳrīb al-marām fī gharīb al-Ḳāsim b. Sallām*; (17) *Tartīb Djāmiʿ al-masānīd wa 'l-alḳāb*, an edition of the work of Ibn al-Djawzī [*q.v.*].

d. History

(18) *Khulāṣat siyar sayyid al-bashar*, a compendium on the life of the Prophet (Indian edition 1343/1924-5); (19) *al-Riyāḍ al-naḍira fī manāḳib al-ʿashara al-mubashsharīn bi 'l-djanna*, a work on the Ten Destined for Paradise (ed. Cairo 1327/1909, many reprints); (20) *Dhakhā'ir al-ʿuḳbā fī manāḳib dhawī 'l-ḳurbā*, a work on the close agnatic relationship of the Prophet (first annotated edition based on six manuscripts by F. Bauden, see *Bibl.* below); (21) *al-Simṭ al-thamīn fī manāḳib ummahāt al-mu'minīn*, a work on the wives of the Prophet (ed. M.R. al-Ṭabbākh, Aleppo 1346/1928, with many reprints).

e. Poetry

(22) *Dīwān* (fragments in the mss. Leiden Or. 2427, ff. 78a-b, and Berlin, Sprenger 872, ff. 173-7).

f. Mysticism

(23) *Mukhtaṣar ʿAwārif al-maʿārif*, an abridged version of the work of al-Suhrawardī [*q.v.*].

g. Miscellaneous

(24) two *mashyakha*s edited at the request of the sultan al-Muẓaffar, *al-Taʿrīf bi-mashyakhat al-Ḥaram al-sharīf* and *al-ʿUḳūd al-durriyya wa 'l-mashyakha al-makkiyya al-muẓaffariyya*.

The attractiveness of al-Ṭabarī lies especially in the method which he adopted. He omitted the *isnād* of the traditions which he cited but took care to give his sources. He probably thought that the *isnād* distracted the reader and stopped him from coming directly to the point which interested him, in other words, the *matn*. As far as al-Ṭabarī was concerned, anyone preoccupied with the *isnād* had only to refer to the source which he mentioned. If al-Ṭabarī did not innovate in regard to this method, it appears that he was the first to make use of it on such a scale, since he applied it to most of his works. This was

essentially why he gave a bibliographical list (170 titles) in his introduction to *al-Riyāḍ al-naḍira*. He was to use this list for his other works without having to repeat it. Several later traditionists (al-Yāfiʿī, iv, 224; al-Fāsī, *al-ʿIkd al-thamīn*, iii, 62-3) reproached him for not indicating which traditions were weak (*daʿīf*) or fabricated (*mawḍūʿ*) as such, and this despite his method. Nonetheless, al-Ṭabarī remains an extremely interesting author, if only for his sources, most of which are lost today and which only live on in the citations which he made of them.

Bibliography: On the family of al-Ṭabarī at Mecca, see F. Bauden, *Les Ṭabariyya. Histoire d'une importante famille de la Mecque (fin XII^e-fin XV^e s.)*, in U. Vermeulen and D. De Smet (eds.), *Egypt and Syria in the Fatimid, Ayyubid and Mamluk eras*, Louvain (OLA 73), 1995, 253-66 (a preliminary study with a family tree of 164 members of the family, from a more extensive study which includes the family history from the 12th to the 18th centuries. The most thorough study of Muḥibb al-Dīn al-Ṭabarī is that of Bauden, *Les Trésors de la Postérité ou les fastes des proches parents du Prophète (Kitāb Dhaḫā'ir al-ʿukbā fī manāḳib ḏawī al-ḳurbā) par Muḥibb al-dīn Aḥmad ibn ʿAbd Allāh ibn Muḥammad al-Ṭabarī al-Makkī (ob. 694/1295). Édition critique accompagnée d'une traduction annotée et d'une étude sur la vie et l'œuvre de l'auteur*, unpubl. doctoral diss. in 4 volumes, University of Liège, 1996. Vol. i contains the biography, a complete inventory of his works listing the manuscripts that are still extant, and a study of the sources in *al-Riyāḍ al-naḍira* and *Dhakhā'ir al-ʿukbā*.

Biographical sources: Ibn Rashīd, *Mil' al-ʿayba*, ed. Muḥammad al-Khūdja, v, 233-52; Birzālī, *Ta'rīkh*, ms. Berlin Sprenger 61, fol. 416a; Muḥammad b. (F. Bauden)

AL-ṬABARĪ, ʿAlī b. Rabban, a 3rd/9th century convert from Christianity to Islam, who was known for his writings on medical topics and for two works in which he demonstrated the weaknesses of his former faith and the truth of the one he embraced.

ʿAlī's father's name is recorded in a variety of forms. Ibn al-Ḳifṭī explains that the word read by various authors and their copyists as a name was really the Jewish title *al-rabban*, which was given to experts on the religious law, and that ʿAlī's father was a distinguished Jewish scholar (*T. al-Ḥukamā'*, Cairo 1326, 128, 155, repeated by Ibn Abī Uṣaybiʿa, *ʿUyūn al-anbā'*, ed. Müller, i, 309-10). This, however, must be regarded as an *ex post facto* reconstruction in view of the fact that for most of his life ʿAlī himself was a Christian (e.g. Abū Djaʿfar al-Ṭabarī, *Ta'rīkh*, iii, 1276, 1283, 1293, and Ibn Khallikān, tr. de Slane, iii, 312, in addition to the evidence of ʿAlī's own works cited below), and in all probability so was his father's brother (ʿAlī al-Ṭabarī, *K. al-Dīn wa 'l-dawla*, ed. A. Mingana, Manchester 1923, 129). In fact, without showing any religious self-consciousness, ʿAlī explains that his father was given this title because of his dedication to learning (*Firdaws al-ḥikma*, ed. M.Z. Siddiqi, Berlin 1928, 1; M. Meyerhof, *ʿAlī ibn Rabban aṭ-Ṭabarī, ein persischer Arzt des 9. Jahrhunderts n. Chr.*, in *ZDMG*, N.F. x [1931], 44, suggests it was a Syriac title). It seems safe to say that ʿAlī's full name was Abu 'l-Ḥasan ʿAlī b. Sahl Rabban al-Ṭabarī.

As a native of Ṭabaristān, ʿAlī is mentioned as secretary to the governor Māzyār b. Ḳārin [see ḲĀRINIDS], whom he represented more than once in negotiations (al-Ṭabarī, iii, 1276-7; *Fihrist*, 296). He stayed loyal throughout Māzyār's insurrection against al-Muʿtaṣim, though when the governor was captured and executed in 225/840 he was admitted to the caliph's service in the new capital Sāmarrā' (*Fihrist*, 296; Ibn Isfandiyār, *History of Ṭabaristān*, tr. E.G. Browne, Leiden 1905, 43). He evidently remained at court through the reigns of al-Muʿtaṣim, al-Wāthiḳ and al-Mutawakkil, and the latter made him a table companion (*Fihrist*, 296). Given these connections and dates, it is difficult to identify him with the Abu 'l-Faḍl ʿAlī b. Rabban al-Naṣrānī, who was secretary to the Nestorian Patriarch Timothy I (*Islamochristiana*, i [1975], 158-9), since Timothy died as early as 208/823, although ʿAlī very probably was a Nestorian (S.K. Samir, *La réponse d'al-Ṣafī ibn al-ʿAssāl à la réfutation des Chrétiens de ʿAlī al-Ṭabarī*, in *Parole de l'Orient*, xi [1983], 284-6).

At some point in this period he became a Muslim. Ibn al-Nadīm suggests that this was under al-Muʿtaṣim (*Fihrist*, 296), thus between 225/840 and the caliph's death in 227/842; but ʿAlī himself implies that al-Mutawakkil played an important part in his conversion, when he records this thanks for what the caliph has done (*K. al-Dīn wa 'l-dawla*, 144).

The evidence of ʿAlī's works themselves supports what he says here. For elsewhere in the *K. al-Dīn wa 'l-dawla* (86, 93) he refers to an attack he has written on Christian doctrines, the *Radd ʿalā al-Naṣārā*, and at the beginning of this earlier work he explains that he was a Christian for the first seventy years of his life (ed. I.A. Khalifé and W. Kutsch, *Ar-Radd ʿala-n-Naṣārā de ʿAlī aṭ-Ṭabarī*, in *MUSJ*, xxxvi [1959], 119). This valuable item of information makes it much more likely that he converted in al-Mutawakkil's reign, since a conversion under al-Muʿtaṣim means that he would have been improbably old by the time he came to write the *K. al-Dīn wa 'l-dawla*, which is quite definitely linked with al-Mutawakkil. It is likely that he converted in or after 235/850, since in the *Firdaws al-ḥikma*, which he says he completed in this year, he mentions al-Mutawakkil without any sign of intimacy or thanks for kindness (*Firdaws*, 2).

The *K. al-Dīn wa 'l-dawla* may well have been written in 241/855 (see A. Mingana, *The book of religion and empire*, Manchester 1922, 138, n. 1), making it

possible that ʿAlī's conversion took place a few years earlier, and giving 165/781 or just after as a possible date for his birth. The date of his death cannot be fixed, though if he was over seventy in the late 230s/early 850s he cannot have survived long after 250/864.

According to this dating, it is quite possible that the reports which link ʿAlī with the historian Abū Dja'far al-Ṭabarī [*q.v.*] are correct. According to Yāḳūt (*Udabā'* vi, 460, and cf. 429), Abū Djaʿfar, who was born in 224-5/839, took down his own copy of the *Firdaws al-ḥikma* from ʿAlī's dictation. But ʿAlī's link with the great physician Abū Bakr Muḥammad b. Zakariyyā al-Rāzī [*q.v.*], as reported by Ibn al-Ḳifṭī (155), Ibn Abī Uṣaybiʿa, (309) and Ibn Khallikān (*loc. cit*), is problematic in view of the fact that al-Rāzī was not born until 250/864, and could not have begun his education until ʿAlī would have been extremely old. This link, and particularly Ibn al-Ḳifṭī's vivid portrayal of it, must presumably be ascribed to the tendency to make connections between well-known scholars in a shared discipline, and maybe also to al-Rāzī's knowledge and use of ʿAlī's medical writings.

Of ʿAlī's works, twelve titles are known. These are, according to Ibn al-Nadim (*Fihrist*, 296, repeated by Ibn al-Ḳifṭī, 155), the *Firdaws al-ḥikma, K. Tuḥfat al-mulūk, K. Kunnāsh al-ḥadra, K. Manāfiʿ al-aʿṭima wa 'l-ashriba wa 'l-ʿaḳāḳīr*; in addition, from Ibn Abī Uṣaybiʿa (309), *K. Irfāḳ al-ḥayāt, K. Ḥifẓ al-ṣiḥḥa, K. fi 'l-ruḳan, K. fi 'l-ḥidjāma, K. fī tartīb al-aghdhiya*; from Ibn Isfandiyār (*History*, 80), *Baḥr al-fawā'id*; cited by ʿAlī in the *Firdaws al-ḥikma* (113), *K. al-Īḍāḥ min al-siman wa 'l-huzāl wa-tahayyudj al-bāh wa-ibṭālihī*; and the two apologetic works, *K. al-Dīn wa 'l-dawla*, and *al-Radd ʿalā al-Naṣārā* (which ʿAlī also calls *al-Radd ʿalā aṣnāf al-Naṣārā, K. al-Dīn wa 'l-dawla*, 86). If he is identical with the ʿAlī b. Rabban al-Naṣrānī mentioned by Ibn al-Nadīm (*Fihrist*, 316), then that author's *K. fī 'l-ādāb wa 'l-amthāl ʿalā madhāhib al-Furs wa 'l-Rūm wa 'l-ʿArab* is a further title. Of these, some may well be alternative names for the same work.

Three of these works have been published, the *Firdaws al-ḥikma*, the *K. al-Dīn wa 'l-dawla* and the *Radd ʿalā al-Naṣārā*. The *Firdaws* was employed by many later medical authors, and enjoyed considerable circulation (see Meyerhof, *ʿAlī aṭ-Ṭabarī's "Paradise of Wisdom", one of the oldest Arabic compendiums of medicine*, in *Isis*, xvi [1931], 16-46). The anti-Christian works, however, did not gain a comparable popularity. The *Radd* is incomplete, but its latter sections can be reconstructed in part from the quotations preserved in the 4th/10th century *al-Radd ʿalā al-Naṣārā* of another convert from Christianity al-Ḥasan b. Ayyūb (quoted at length in Ibn Taymiyya, *al-Djawāb al-ṣaḥīḥ li-man baddala dīn al-Masīḥ*, Cairo 1905, ii, 312 ff., ed. and Dutch tr. F. Sepmeijer, *Een Weerlegging van het Christendom uit de 10e eeuw. De brief van al-Hasan b. Ayyub aan zijn broer ʿAlī*, Kampen 1985), and from the refutation made by the 7th/13th century Copt al-Ṣafī Ibn al-ʿAssāl (see Samir, *art. cit.*). Also, the authenticity of the *K. al-Dīn wa 'l-dawla* has been questioned ever since it was translated and edited in 1922-3. Despite strong defences of the work by a number of scholars, it has always been surrounded by the suspicion that it is a modern forgery. However, its antiquity is virtually settled by two convincing pieces of evidence, which are that the unique ms. which contains the work is undoubtedly old, and that it was almost certainly used by the 4th/10th century authors al-Ḥasan b. Ayyūb (see Sepmeijer, *op. cit.*, 4-8) and Abu 'l-Ḥasan Muḥammad b. Yūsuf al-ʿĀmirī (d. 381/992 [*q.v.* in Suppl.]) So its age should no longer be questioned and its authorship not seriously disputed (see D. Thomas, *Ṭabarī's Book of Religion and Empire*, in *BJRUL*, lxix [1986], 1-7, adducing this evidence and citing the major participants in the debate).

These two anti-Christian works show great inventiveness in their arguments, and reflect ʿAlī's learning in his former faith. It could be that his informed approach was not well understood by Muslims whose knowledge of Christian teachings and beliefs was less extensive, and this may account for their comparative lack of direct influence in later discussions.

(D. THOMAS)

ṬABARISTĀN, in northern Persia, the name for the southern shore of the Caspian Sea, comprising both the narrow coastal plain region and the steeply-rising mountainous interior of the Elburz chain. It was bounded in mediaeval Islamic times by Gīlān and Daylam on the west and by Gurgān on the east.

The name Ṭabaristān enshrines a memory of the ancient people of the Τάπυροι, but received a popular etymology as "land of the axe (*tabar*)" because wood-cutting was an activity in this heavily-wooded region. Ṭabaristān (*nisba*, al-Ṭabarī) was the designation for the region up to Saldjūḳ times, but thereafter the name Māzandarān comes in and becomes general from the Mongol period onwards. Hence for the historical geography, history, coins, etc. of the region, see MĀZANDARĀN. (ED.)

ṬABARIYYA, Tiberias, modern Israeli Ṭeverya, a town of Palestine situated on the edge of the Sea of Galilee (Yam Kinnereth in Hebrew, Buḥayrat Ṭabariyya in Arabic) in the Jordan valley, already at this point 208 m/680 feet below sea level (lat. 32° 48' N., long. 35° 32' E.).

According to some traditions, the town which Herod Antipas founded in *ca.* A.D. 87 as a capital, which he called Tiberias after the Emperor Tiberius, was built on the site of the Biblical Rakkath of Josh. xix. 35. It was built on the model of Hellenistic towns, with temples, an amphitheatre, etc., and with the royal palace described by Josephus almost certainly on the mount of Herod (in recent times called *Ḳaṣr Bint al-Malik*) within the ancient walls. Strictly-observant Jews at first avoided Tiberias, hence it had a mixed population of people forcibly settled there by Herod and people attracted by the privileges which he conferred on them. However, it later became a centre of Talmudic studies, where a strict Jewish life could be lived, and where the Sanhedrin sat. It was here that the famous Mishna or collection of legal prescriptions was composed, and here that, at the opening of the 4th century, the Palestine Gemara (also called the Jerusalem Talmud) was put together. There were a series of tombs of great Jewish scholars, and one of them, that of Rabbi Meir Baʿal ha-Nes, was to become a place of pilgrimage. After the conversion of Constantine, Christianity appeared in Galilee. The town walls, which had been destroyed, were rebuilt by Justinian.

In 16/635 Tiberias fell into the hands of the Muslims, surrendering to Shuraḥbīl b. Ḥasana [*q.v.*], who guaranteed to the inhabitants their security and possession of half their houses and churches. They were also to hand over for every *djarīb* of cultivated land a *djarīb* of wheat or barley and a dīnār for each head of animals. Shuraḥbīl also reserved for himself the place where a mosque was to be built. In ʿUthmān's time, the inhabitants broke the agreement but were

subdued by ʿAmr b. al-ʿĀṣ (or by Shuraḥbīl again) and accepted the former conditions. As capital of the province of al-Urdunn [*q.v.*], the town is described by the mediaeval Arab geographers, including by al-Muḳaddasī, 161-2, who describes it as a mile in length, stretched between the mountains and the Sea. When Nāṣir-i Khusraw passed through the town in 438/1047 he described it as surrounded by walls except on the lake side, with a principal mosque and another one on the western side called the Masdjid al-Yāsamīn, which had the tombs of Joshua, son of Nun, and of 70 prophets killed by the Israelites, as well as the tomb of the Companion Abū Hurayra [*q.v.*] (*Safar-nāma*, ed. Schefer, 16, tr. W.M. Thackston, Albany 1986, 18-19).

At the time of the Crusades, the town was given as a fief to Tancred, before falling finally to Raymond of Tripoli. Al-Idrīsī, who visited it in 549/1154, praises it as a fine town and mentions the making of rush mats there and the activity of boats provisioning it. On 23 Rabīʿ II 583/2 July 1187 Ṣalāḥ al-Dīn took possession of the town and burnt it. The Crusader troops encamped nearby at Ṣaffūriyya let themselves be convinced by the Grand Master of the Templars to make a move to rescue the town, despite the warnings of Raymond, and this attempt led to the disaster of Ḥaṭṭīn [*q.v.*], with the fall of Jerusalem and the reduction of much Crusader authority in the Levant. In 1240 it was recovered by the Christians, only to fall to Khʷārazmian troops in 1247. According to Ibn Baṭṭūṭa, in 725/1325 the town was still in ruins.

After the Ottoman conquest of Syria, in *ca.* 1560 an attempt to revive the town by introducing the manufacture of silk, begun by Don Joseph Nasi, Duke of Naxos (to whom the town and its area had been granted by the sultan for Jewish settlement), failed, the exact reason for this being unknown. The modern town was founded in 1740 by the *shaykh* Ẓāhir al-ʿAmr, later the governor of Acre, who built a fortified wall with towers, the remains of this being still visible today. But the town suffered two severe earthquakes, in 1759 and above all in 1837.

The hot springs (*al-ḥammāmāt*) to the south of the town, the most important in Palestine, have always played a prominent role in Tiberias's history, being mentioned by Pliny (*Natural history*, V. 15) and often in the Talmud. They are described by the Arab geographers (their average temperature is 60° C.); al-Idrīsī mentions especially the great baths called al-Damāḳir and others called al-Luʾluʾ which were reportedly not saline. The springs were much frequented by those suffering from paralysis, chest complaints and wounds, who remained for three days in the waters and came out cured. The mild winter climate contributed much to making the town a famed centre for treatment. In 1703, the springs reportedly dried up for a period. Since the old baths had fallen into ruins, new premises, described by Burckhardt, were built at the opening of the 19th century. Ibrāhīm Pasha built a second one, splendidly decorated, in 1833, and a third, further to the south, was built in 1890.

But up to the First World War, the nearby region was almost desert, with traffic on the lake much reduced from what it had been in Antiquity. Only from *ca.* 1900 did the town revive, with the foundation in 1920 of the suburb of Qiryat Shemuel (named after Sir Herbert Samuel, the first High Commissioner for Palestine under the British Mandate) for Jewish settlers, some 80 m/260 feet above the old Arab walled town. There was fighting at Tiberias during the war of 1948, with Arab and Jewish quarters of the old town largely destroyed, and the Arab population was evacuated in April 1948 by British troops. Since then it has come within the State of Israel, and has become essentially a centre for tourism and recreation, with the role of industry deliberately kept small. In 1970 the population was *ca.* 23,000.

ṬABARḲA, Tabarca, known locally as Ṭbarḳa, a town on the north-west coast of Tunisia, 170 km/105 miles west-north-west of Tunis, 17 km/10 miles to the east of the Algerian frontier and 60 km/37 miles to the north of Djandūba, the chief town of the governorate of the region, of which Ṭabarḳa is a subdivision of 12,600 inhabitants. The layout of the road network which serves it is based on the two great ancient major axes, east-west and north-south, and since 1993 it has had an international airport. The railway line, which was the main link with the capital, now transports only freight. Ṭabarḳa also enjoys the asset of being a fishing port which is accessible to large trawlers, and has a marina frequented by holidaymakers in the Mediterranean.

Ṭabarḳa is built around a fertile sandy beach watered by the Oued-el-Kebir, the ancient Tusca, which rises in the mountains of Khumayr [*q.v.*]. The modern town is a tourist centre as well as a fishing resort where the most sought-after product for a long time has been coral. Citrus groves are also found there, and livestock is bred on the farms. Several timber-based industries have been established which produce fibreboard and cork stoppers (out of a total area of 37,000 ha there are 27,000 ha of forest in the district); briar blocks used in the manufacture of pipes, as well as tiles, cardboard, carved wooden objects and coral are all produced locally.

Ṭabarḳa was chiefly known in history as a rocky islet of 40 ha, which rises some 40 m from the shore, and this is the Tabarca of Western narratives. It is separated from the mainland by a small strait, but this has now been filled in to make a causeway, up to the Genoese fort; this fort was built by the Lomellini in about 1535 by order of Charles V.

This coastal locality did not find favour in the eyes of the Muslim travellers. For Ibn Ḥawḳal, *Ṣūrat al-arḍ*, Beirut 1979, 76, it had a notoriety because of the intense commercial transactions which made it "the port of the Andalusians". He added that they had formerly been compelled to pay tithes (*taʿshīr*). For al-Idrīsī, ed. Beirut 1989, 289, it was a coastal fort with only a few constructions round it, but it was also a very busy port. Al-Ḥimyarī, *al-Rawḍ al-miʿṭār*, ed. ʿAbbās, Beirut 1984, adds that it was here the galleys were armed for their incursions against the Christians. He is in fact the only writer to mention the coral there, "several hundred quintals of which were gathered every year". Most of these authors agree that it had been possible to divert the Oued

el-Kebir to the gates of the city, and even in 1725 a French agent wrote to the minister Maurepas "that the river could be navigated with large flat boats (Denise Brahimi, *Témoignages sur l'île de Tabarque au XVIII^e siècle*, in *ROMM*, i [1970], 30). Today, the current of this river is much reduced. Al-Bakrī, *Masālik*, ed. Van Leeuwen-Ferré, Tunis 1992, did not say much about it, but located here the scene of the heroic death of Kāhina [*q.v.*], or in a nearby place since called "Bīr el-Kāhina" (the Well of Kāhina); but M. Talbi, *L'Épopée de la Kāhina*, in *CT* [1971], 47, casts doubt on that location.

It is, however, an ancient site. Roman and Byzantine Thabraca was the port where Numidian marble was loaded from the quarries of Simitthu (Chemtou, 20 km from D̲jendouba on the left bank of the Med̲jerda), as well as other products from the hinterland such as cereals, oil, construction timber, minerals and even wild animals for the circus games at Rome (P. Gauckler, *Mosaïques tombales ... à Thabraca*, 1906, repr. *CT*, 1972, 154). Even writers as early as al-Bakrī, Yāḳūt and al-Ḥimyarī speak about the ancient ruins; the excavations undertaken since the end of the 19th century have brought to light more than one Christian necropolis where some of the sarcophagi were discovered to have been overlaid with mosaic, just like the semi-circular pavements from the trifolium of the "Godmet farm" (now in the Bardo Museum in Tunis). Ancient cisterns still exist in modern times; one of these has preserved the name basilica, because it was used until recently as a parish church, and is today the home of the Festival of Ṭabarḳa.

The modern population of the region certainly seems to have very ancient antecedents. Libyan inscriptions and Punic inscriptions have been discovered in the burial chambers (*ḥwānet*, pl. of *ḥanūt*) which are found in underground caves hollowed out of the cliff and covered with bichrome drawings. In a place called Keff Blīda one of these drawings represents a naval scene (Monique Selmi-Longerstay, *Les Houânet*, in *Bull. dactyl. de la Soc. hist. et archéol. de la Khroumirie et des Mogods*, Tabarka 1980, 21) which would be evidence to support very ancient maritime activity.

From the 17th century onwards, however, Ṭabarḳa gained more importance thanks to the Isle of Tabarca and' the richness of the coral beds surrounding it. J. Ganiage, *Les origines du Protectorat français en Tunisie*, Paris 1959, 62, talks of the sole fishing rights granted to the French from the reign of Henri IV onwards, but what is most certain is that the island was retroceded by the Spanish in 1530 or 1540 to the Lomellini of Genoa, who were given the responsibility for building a fort there. This was built in 1553 (Lt.-Col. Hannezo, *Tabarca*, in *RT* [1916]) to accommodate a garrison and to pay a rent in coral (J. Pignon, *Gênes et Tabarka au XVII^ème siècle*, in *CT* [1979], 26).

But commercial enterprise was not restricted to coral. Tabarca soon became the base from which forty coral-gathering frigates operated and a trading post from where the products of the region were sent to Europe: wheat, animal hides, leathers, honey, wax, livestock and horses. The island was also used as a staging post for the Christian prisoners being redeemed, an operation in which the Genoese probably played the role of intermediary. This concession was granted, it is said, in payment of the ransom for the famous Dragut who was captured by a pirate ship belonging to the same Lomellini (A. Rousseau, *Annales tunisiennes*, 124; Ch.-A. Julien, *Histoire de l'Afrique du Nord*, Paris 1931, 572). The benefits gained under the Genoese, which had enhanced the strategic value of the island, succeeded in arousing the jealousy of the French companies established after 1561 in the French bastion near La Calle (the governor of this trading post, the adventurous Sanson Napollon, even tried to take possession of the island and was killed in the course of the operation), and of the French companies in Cap Nègre (where the Compagnie d'Afrique used to fix as it pleased the purchase price of local products which it then exported without even paying any duty to the Bey, cf. art. xiii of the treaty of August 1766). The other powers, however, England, Spain, the kingdom of Naples, etc., also wanted to appropriate the coral reefs. The Lomellini were harrassed by their consuls and their agents and consented to get rid of the island at the risk of being thought traitors to their faith and to their country, according to Italian authors (see A. Gallico, *Tunis et les consuls sardes*, tr. L. and M. Yalaoui, Beirut 1992, 105, and the *Fragments historiques et statistiques sur la Régence de Tunis du consul Filippi*, ed. Ch. Monchicourt, 1929, 171).

ʿAlī Bey, acting on a warning, decided to liberate the island (June 1741) after two centuries of Christian occupation. The inhabitants, who since that time had been called Tabarcans, generally went to repopulate the Sardinian island of San Pietro or settled in Tunis, but 168 of them converted to Islam. Two women, Sofia Bosso and Salvatora Paona, even became the wives of the beys Sīdī Muḥammad and Sīdī Muṣṭafā (A. Riggio, *Cronaca Tabarchina dal 1756 ai primordi dell'Ottocento*, in *RT* [1937], 10). The capture of the island by Yūnus Bey was the subject of two different narratives: the memoirs of A. Napoly, published by Plantet, *Correspondance des Beys de Tunis avec la cour de France*, ii, 324, and the chronicle of Ṣag̲h̲īr b. Yūsuf, *al-Mas̲h̲raʿ al-malakī*, ms. BN (from Tunis) 18,688, fol. 194b, tr. V. Serres and M. Lasram, Paris 1900, 196. The latter document confirmed that the Bey had the fortifications demolished and had the arm of the sea separating the island from the shore filled in with rubble, though al-Ḥimyarī had already said that there was such a causeway visible above the surface, except in winter when the waves sometimes covered it.

Within the Genoese fort there is accommodation for barracks and a working lighthouse. In 1742 De Saurins, a French naval officer, attempted an abortive raid on the island (Rousseau, *op. cit.*, 130). But the island remained Tunisian until April 1881 when, using the K̲h̲umayr tribal incursions into Algerian territory as a pretext, the French military authorities organised an expedition by land and sea which ended in the occupation of the region concomitantly with the occupation of the whole of Tunisia.

Bibliography: Given in the text.

(G. Yver-[M. Yalaoui])

TABARRUʾ (a.), a term of Islamic religious polemics, derived from form V of the verb *bariʾa*. The term *tabarruʾ* or *tabarrī*, which can also be found in the apparently incorrect but not uncommon Arabo-Persian form *tabarrā* (see below), primarily denotes the general idea of exemption or of disengagement, in particular exemption from responsibility. Among the Arabs *barāʾa*, which is also called *k̲h̲alʿ* or *tabarruʾ*, is a pre-Islamic social and legal phenomenon, which has persisted in Bedouin society (Kohlberg, 1986, 139 ff.).

In the text of the Ḳurʾān it seems that *barāʾa* appears very late in the career of Muḥammad. *Barāʾa* and *ad̲h̲ān* ([*q.v.*], the call to prayer) were declared following the day of the great farewell pilgrimage. This gave rise to many commentaries, especially because of the association between the *barāʾa* and the

surrogatory prayers known as *ḳunūt* [*q.v.*], taken in the sense of imprecations or supplications (Rubin, 25; Kohlberg, 1986, 140 ff.). S̲h̲īʿī traditions attribute the proclamation of the *barāʾa* to ʿAlī b. Abī Ṭālib, acting on orders from Muḥammad, and this would have involved the Islamisation of pagan allies of Muḥammad (Rubin, 26 ff.).

With successive exegeses and other commentaries, *barāʾa* passed in meaning from dissociation to disunification or repudiation, these ideas being taken up in different separatist or sectarian movements. The K̲h̲āridjites were apparently the first to develop an important point of doctrine from *barāʾa* (dissociation from ʿAlī and from all their enemies; Kohlberg, 1986, 142 ff.). The expressions *tabarraʾa min/ʿan*, or often *bariʾa min/ʿan* in the sense of "to regard as an enemy", was used very early on by various groups of K̲h̲āridjites (see al-S̲h̲ahrastānī, 198, 203, 206, etc., tr. Gimaret, 366, 371, 372-3; see also Gimaret, index, under *tawallā*).

The S̲h̲īʿī use of *barāʾa* developed step by step, firstly in non-doctrinal terms, concerning the hostility between ʿAlī and his opponents, during and after the conflict with Muʿāwiya, on the occasion of his dissociation in connection with Abū Bakr and ʿUmar, which implied an allegiance (*walāya*) to ʿAlī. The association of *walāya* with *barāʾa* (or sometimes *ʿadāwa*, enmity) became a central idea for the S̲h̲īʿīs, although it had its opponents among the ʿAlids of Kūfa (Kohlberg, 1986, 144 ff.).

The Imāms, however, in particular Djaʿfar al-Ṣādiḳ, made it, for various reasons, an article of faith. The *barāʾa/ʿadāwa* was also expressed as a wrong against the Companions, *sabb al-ṣaḥāba*, an idea which had to remain played down during the Occultation in the name of *taḳiyya* (Kohlberg, 1986, 145 ff.; Amir-Moezzi, 217 ff.).

The idea of *barāʾa/tabarrī/tabarruʾ* could apply to various opposing parties, even at the heart of Imāmism, including the members of the families of the Imāms (Kohlberg, 1986, 158-67). The concept of juxtaposing *tawallī—tabarrī* which Gimaret (64-5, 142, 435 and index), prefers to translate as avowal—disavowal, had various connotations among the S̲h̲īʿīs. But it was the Imāmīs especially, often known as the Rāfiḍīs [see AL-RĀFIḌA], who were distinguished by their practice of *walāya—barāʾa* which was condemned as a whole by the hard line of Sunnism, as particularly expressed in Ḥanbalism (see H. Laoust, *La profession de foi d'Ibn Baṭṭa*, Damascus 1958, 162).

Although the idea of *barāʾa* and its variants (*tabriʾa, mubāraʾa, istibrāʾ, berāt* [*q.v.*] in Turkish, *barāt* in Persian) have preserved the technical and legal connotations included in Imāmism, the Imāmīs have been particularly characterised by their partisan practice of the *walāya—barāʾa*.

In Persian usage, instead of *tabarruʾ/tabarrī*, in accordance with Arab grammar, the term *tabarrā* is often used in association with *tawallā*. This terminology, and especially the expression *tabarrā* in the sense of "to abstain" or "to dissociate oneself from" was used by the great classical Persian poets (see the entry *Tabarrā* in Dihk̲h̲udā, *Lug̲h̲at-nāma*). The practice of *tawallā—tabarrā* has been attributed to the Ilk̲h̲ancid G̲h̲āzān [*q.v.*] regarding his so-called conversion to Imāmism (see Calmard, 1993, 119). But it was particularly during the imposition of Twelver Imāmism as the state religion by the Ṣafawid S̲h̲āh Ismāʿīl (1501-24, [*q.v.*]) at the beginning of the 10th/16th century that the use of the term *tabarrā* was widely extended beyond the closed circles of scholars and the *ʿulamāʾ*. In its use as a sort of euphemism for insult or execration (*sabb, taʿn, laʿn*) this term had the advantage of providing an agent noun, *tabarrāʾī*, execrator, with a usage current in Ṣafawid Persia.

The doctrine and practices of exclusion, or even excommunication of the Companions (*takfīr al-ṣaḥāba*), were ancient in Imāmism (see Kohlberg, 1984, 148 ff.). Various methods were used to slander or curse the Great Companions by the Imāmīs, the *G̲h̲ulāt*, the Zaydīs and the Ismāʿīlīs (Kohlberg, 1984, 160 ff.). Despite differences of opinion, the ancient Imāmī *barāʾa* was aimed especially at Abū Bakr, ʿUmar and ʿUt̲h̲mān. Other enemies of the *Ahl al-Bayt* were included in this dissociation, in particular the Umayyad caliphs and the women ʿĀʾis̲h̲a, Ḥafṣa, Hind and Umm al-Ḥakam (Kohlberg, 1986, 144 ff.). However, the Rāfiḍīs were denigrated and condemned (Calmard, 1993, 121), most particularly for the execration or insulting of the Companions (*sabb al-ṣaḥāba*), and more especially of the first two caliphs (*sabb al-s̲h̲ayk̲h̲ayn*), which certain people practised more or less openly.

The imposition of Ṣafawid S̲h̲īʿism on a population which was largely Sunnī posed various political and religious problems, and these were only partly resolved, in particular concerning the *tabarrāʾīs* and the contents of their imprecations. These official execrators—delators, whose social origin remains uncertain—seem to have practised their profession first of all at Tabrīz during the proclamation of S̲h̲īʿism in 1501. But they were practised above all at Harāt in 1510, at the time of the dramatic circumstances surrounding that proclamation (where acknowledging their presence under this name poses, however, problems), and especially at the time of the Uzbek-Ṣafawid conflicts. In the course of these the town changed hands several times, and then the *tabarrāʾīs* and their collaborators were seen at work. The latter were instructed, under pain of death, to curse and have cursed the first two or three caliphs, the Ottomans (there was some confusion in regard to the caliph ʿUt̲h̲mān), Yazīd (who was particularly denigrated in the heterodox and popular circles, both Sunnī and S̲h̲īʿī, in the Turco-Iranian area), and the Sunnīs (Calmard, 1993, 121 ff.; on Yazīd among the *G̲h̲ulāt*, see Moosa, index).

The cursing persisted under S̲h̲āh Ṭahmāsp I (1524-76 [*q.v.*]), including in his correspondence with Süleymān Ḳānūnī, which caused diplomatic complications with the Ottomans as well as with the Uzbeks (Calmard, 1993, 126 f.). These practices also annoyed the Imāmī *ʿulamāʾ* living in the territories under Ottoman control. Some of them condemned the doctrinal stance taken by the *mudjtahids* who had gone over into the service of the Ṣafawids, and particularly al-Karakī (Newman, 82 ff.). Despite the undertaking given to the Ottomans by Ṭahmāsp at the peace of Amasya (962/1555) to stop the ritual cursing, it persisted at least until Ismāʿīl II decreed its abolition. He also had suspended the *tabarrāʾīs* who were officially appointed and took measures against certain execrators, among whom were the *ʿulamāʾ*, who had a reputation for fanaticism (Calmard, 1993, 126; Calmard, 1996, 161). After this decree the *tabarrāʾīs* do not seem to have functioned as official agents in Ṣafawid Persia. The execrators included under this name nevertheless continued to practise, especially in the *rawḍa-k̲h̲ʷānīs* [*q.v.*] and other S̲h̲īʿī religious festivals.

The efficacy of the *tabarrāʾīs* can be measured by the very wide dissemination of the practice of cursing followed by the preachers and faithful S̲h̲īʿīs, which was to last at least until the Ḳādjār period in Persia. Among the opponents of the *Ahl al-Bayt* was above

all the caliph ʿUmar, who was both privately and publicly increasingly execrated and vilified, especially at the time of the ritual feast (*ʿUmar-kushān*) celebrated on 9 Rabīʿ I, in the course of which his effigy was burned, and also sometimes at ceremonies of Muḥarram; he is then confused with ʿUmar b. Saʿd, one of those chiefly responsible for the massacre of Karbalā (see Calmard, 1996, 161 ff.).

But in their hatred of the Sunnīs and the Ottomans, the *ʿulamāʾ* of Ṣafawid Persia made every effort to extend the ritual cursing to Abū Ḥanīfa, the founder of the official Ottoman *madhhab* (Arjomand, 166). His tomb in Baghdād was desecrated and destroyed by Shāh Ismāʿīl (1508), ornamented with a cupola by Süleymān Ḳānūnī (1534), destroyed again by Shāh ʿAbbās (1623), and reconstructed by Murād IV (1638). Amid the almost permanent socio-religious troubles, the execratory character of Imāmism continued in ʿIrāḳ, which from then on was under Ottoman control, and among the strong Persian community in Istanbul until the end of the 19th century (see S. Derengil, *The struggle against Shiism in Hamidian Iraq. A study in Ottoman counter-propaganda*, in *WI*, xxx [1990], 45-62).

Shīʿism with its sectarian practices was to some extent exported to India, notably in the Shīʿī sultanates of the Deccan which resulted from the decline of the Bahmānids (1347-1527 [*q.v.*]). This is particularly the case for the ʿĀdilshāhīs of Bidjāpūr (1490-1686), the first Shīʿī state in India (see R.E. Eaton, art. *ʿĀdelšāhīs*, in *EIr*). The rituals of the *tawallā—tabarrā* also persisted in the popular Shīʿism of the state of Awadh [*q.v.*] in the north of India (see J.R.I. Cole, *Roots of North Indian Shīʿism in Iran and Iraq. Religion and state in Awadh, 1722-1859*, Berkeley and Los Angeles 1988, 108, 239 ff.). The adoption or rejection of these practices in other Shīʿī states in India (which were often more moderate) remains to be determined.

In the use that they made of the terms *tabarrā/tabarrāʾī* for elaborating and propagating Shīʿism, the Ṣafawids largely went beyond *taḳiyya* during the Occultation of the Imām. This was not accepted by all the Imāmī *ʿulamāʾ*. For some, insult (*sabb*, i.e. the effective content of the Ṣafawid *barāʾa/tabarrā*) was worse than *barāʾa* in the sense of dissociation (see Kohlberg, 1986, 156, n. 89; Calmard, 1993, 145).

Bibliography: This subject, which has only been briefly outlined here, and the related concepts which cover a very wide period, plus numerous references to primary sources, are given in the works cited in the text and in the following: Shahrastānī, *K. al-Milal wa 'l-niḥal*, ed. Fatḥ Allāh Badrān, Cairo 1366-75/1947-55, tr. D. Gimaret, with introd. and notes by idem and G. Monnot, *Le Livre des religions et des sectes*, i, Louvain-Paris 1986; S.A. ṬABARSARĀN (in Yāḳūt, *Buldān*, ed. Beirut, iv, 16, Ṭabarstarān), a district of the eastern Caucasus, essentially the basin of the Rūbās river which runs into the Caspian Sea just south of Darband [see DERBEND], the early Islamic Bāb al-Abwāb [*q.v.*]. It now comes within the southernmost part of Dāghistān (see map in ḲABḲ, at IV, 344). Its population comprises Caucasian mountaineers plus a considerable admixture of Iranian speakers of Tātī dialect [see TĀT].

At the time of the Umayyad prince Marwān b. Muḥammad's raids through the Caucasus, there was a Ṭabarsarān Shāh (known also with this title in pre-Islamic times), who agreed to pay tribute to the Arabs (al-Balādhurī, *Futūḥ al-buldān*, 196, 208; al-Masʿūdī, *Murūdj*, ii, 2 = § 442). It is frequently mentioned in the *Taʾrīkh Bāb al-Abwāb* from the 4th/10th century onwards, being ruled at various times by the Hāshimid *amīrs* of Darband and the Yazīdī Shīrwān Shāhs; see V. Minorsky, *A history of Sharvān and Darband in the 10th-11th centuries*, Cambridge 1958, 91-2 and index.

Bibliography: Given in the article. See also ḲABḲ and SHĪRWĀN SHĀH. (C.E. Bosworth)

AL-**ṬABARSĪ** [see AL-ṬABRISĪ].

ṬABAS, the name of two places in eastern Persia, denoted in the early mediaeval Islamic sources by the dual form al-Ṭabasān[i] (e.g. in al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, ix, 45, and Yāḳūt, *Buldān*, ed. Beirut, iv, 20) and distinguished as Ṭabas al-Tamr "Ṭ. of the date-palms" and Ṭabas al-ʿUnnāb "Ṭ. of the jujube trees", later Persian forms Ṭabas Gīlakī and Ṭabas Masīnān respectively. Ṭabas al-Tamr lay to the west of Ḳuhistān [*q.v.*] in the central Great Desert at a junction of routes between the Dasht-i Lūṭ in the south and the Dasht-i Kawīr in the north and west. Ṭabas al-ʿUnnāb lay farther to the east in Ḳuhistān, adjacent to the modern border of Persia with Afghānistān. It is the first which has been more important and which has played a role in Islamic history.

Ṭabas al-Tamr was reached in ʿUmar's caliphate by Arab raiders from Kirmān under ʿAbd Allāh b. Budayl al-Khuzāʿī, and a peace treaty made with the inhabitants (al-Balādhurī, *Futūḥ*, 403). In the 4th/10th century it was a fortified place with a mosque, notable for its extensive date-palms and supplied with water brought to reservoirs by *ḳanāts*. Nāṣir-i Khusraw passed through it in 444/1051 and noted that it was called Ṭabas Gīlakī after its *raʾīs*, Abu 'l-Ḥasan b. Muḥammad Gīlakī (*Safar-nāma*, ed. M. Dabīr-siyāḳī, Tehran 1335/1956, 125-6, tr. W.M. Thackston, Albany 1986, 100). In the later 5th/11th century it passed under the control of the Ismāʿīlīs of Ḳuhistān, and in 494/1102 was attacked and partly destroyed by a Saldjūḳ army sent by Sultan Sandjar (Farhad Daftary, *The Ismāʿīlīs, their history and doctrines*, Cambridge 1990, 341, 354). In the time of the Ṣafawid Shāh ʿAbbās I it was devastated by the Özbegs. It was soon after this, in 1621, that the first European to visit Ṭabas reached there, the Silesian nobleman Heinrich von Poser (A. Gabriel, *Die Erforschung Persiens*, Vienna 1952, 58). In the early 19th century, according to Sir John Malcolm, *History of Persia*, ii, 43-4, the virtually independent ruler in Ṭabas was the Arab chief Mīr Ḥusayn Khān, who maintained a powerful army there; by Curzon's time, however, the hereditary chief Mīrzā Bāḳir ʿImād al-Mulk supplied only 150 cavalrymen to the Ḳādjār army (*Persia and the Persian question*, London 1892, i, 202-3).

Modern Ṭabas (Gīlakī) (lat. 33° 37' N., long. 56° 54' E.) is now the chef-lieu of a *bakhsh* in the *ustān* of Khurāsān. In *ca.* 1950 it had a population of 8,114, which had risen in 1991 to 17,071 (Preliminary results of the 1991 census, Statistical Centre of Iran, Population Division). Ṭabas (Masīnān), also in Khurāsān province (lat. 32° 48' N., long. 60° 14' E.), is a village in the *shahristān* of Bīrdjand; in *ca.* 1950 it had a population of 1,513, but in 1991 only 468 (*ibid.*).

(C.E. Bosworth)

ṬABĀSHĪR, a medicament used in mediaeval Islam. It is a crystalline concretion in the internodes of the bamboo (*Bambusa arundinacea Willd., Gramineae*). The concretions, also known as "bamboo sugar", consist of silicic acid, silicates, and carbonate of calcium. They are extracted by burning the bamboo stems, often also through auto-combustion due to the heat by mutual friction of the stems when moved by strong winds (*yaḥtariḳ min dhātihī li 'ḥtikāk baʿḍihā bi-baʿḍ bi-rīḥ shadīda*). Some believed the concretions to be burnt elephant bones; most likely this is just a falsification using elephant teeth. Falsifications were also done with the burnt bones of ram's heads, whenever the price for *ṭabāshīr*, which in its Indian place of origin was practically worthless, was higher in the outside world. Others consider *ṭabāshīr* to be the roots of "Indian cane" (*al-ḳaṣab al-hindī*). The white, light, and soft concretions which were easily crushed and pulverised were considered the best (according to others those with a blueish hue). The Indians held especially the "knots" (*ʿuḳad*) and the dirham-size disks inside the stems in high esteem. *Ṭabāshīr* had been part of the Indian *materia medica* as of old; the Persian-Arabic name is supposed to be a translation of a Sanskrit word. The idea that *ṭabāshīr* is simply Dioscorides' σάκχαρον is no longer held. Popularly in Egypt and Syria *ṭabāshīr* denotes "chalk."

The medicinal effects attributed to *ṭabāshīr* are manifold. Taken internally or externally, it is used against inflammations of the gall bladder; it fortifies the stomach, is efficacious against high fever and thirst, lowers the heat of the liver, is beneficial against ulcers, pustules, haemorrhoids, and stomatitis of children. It is astringent, tonic, and a mild expectorant due to its slight bitterness. It is beneficial against eye inflammations, fortifies the heart, calms down heart palpitations and soothes stomach troubles of all kinds. Its application is also recommended in cases of diarrhoea and chronic liver ailments.

ṬABĀṬABĀʾĪ, Sayyid Ḍiyāʾ al-Dīn, Persian statesman (1888-1969).

He was born in Yazd into a conservative, clerical family, and spent much of his childhood and youth in Shīrāz, where he received a traditional education, and then embarked upon a career in journalism, editing a pro-constitutional newspaper, the *Nidā-yi Islām*. He moved to Tehran where he continued his work as a journalist, editing the newspaper *Raʿd*.

In Tehran, Sayyid Ḍiyā''s reputation as a reformer grew and he became the centre of a group of like-minded individuals. He also assiduously cultivated the confidence of the British military and diplomatic establishment. In late 1919-early 1920 he was sent by the then Prime Minister, Wuthūḳ al-Dawla, to Baku to negotiate with the anti-Bolshevik Musāwāt party. As a result of this mission his prominence in official circles increased significantly.

In the circumstances of political collapse prevailing in Persia in late 1920-early 1921, Sayyid Ḍiyāʾ entered into a conspiracy with Riḍā Khān [see riḍā shāh], commander of the Cossack force then stationed under British control at Ḳazwīn, and with certain officers of the nationalist Government Gendarmerie. On 20-21 February 1921 these elements marched on and captured Tehran and overthrew the government of Sipahdār, Sayyid Ḍiyāʾ becoming the new Prime Minister. The programme of his government contained far-reaching proposals for the reform and reconstruction of the state with, as its centrepiece, the creation of a national army. Many members of the landed aristocracy, whose overthrow Sayyid Ḍiyāʾ had consistently advocated, were arrested and imprisoned, Sayyid Ḍiyāʾ intending to extract money from their families with which to finance the government's reforms.

Sayyid Ḍiyāʾ remained Prime Minister for three months, being forced out of office and into exile in early May 1921 as a result of the growth and combination of opposition from a variety of sources, including the Shāh and the court, the notables, state officials and the *ʿulamāʾ*, and, decisively, from Riḍā Khān, now War Minister. Sayyid Ḍiyāʾ was given refuge in Palestine, then under British mandatory rule, where he devoted his attention to Islamic issues, participating in the Islamic Congress in 1931, and also to farming and agriculture.

In 1943 Sayyid Ḍiyāʾ returned to Persia and resumed his political and journalistic activity on a right-wing and pro-British basis. He founded the National Will party, and was elected to the Madjlis. In the early 1950s he opposed both Muṣaddiḳ [*q.v.*] and the Tūdah party. Subsequently he withdrew from politics. He died in 1969.

TABATTUL [see zuhd].

ṬABBĀKH (a.), cook, a professional term, although rarely used as a *laḳab* in early Islamic times; however, the *ṭāhī* or *shāwī* "roaster" is mentioned in ancient poetry describing feasts, but these were probably slaves deputed to do the job, and not professionals.

The early Arabs' diet used to include dates, milk, vegetables, mushroom, lentils, onion, honey, coarse bread, and meat of various animals like lamb, goats, camels, rabbits, reptiles, etc. Most of the food they

ate did not require much cooking, hence the profession of cook only appears with the political expansion of the Arabs. The Umayyad governor of ʿIrāḳ and Khurāsān, al-Ḥadjdjādj b. Yūsuf, apparently had a taste for good food and employed a cook named Bashīr from eastern Persia (*Taʾrīkh Baghdād*, xiv, 86). The Arabs became familiar with the life-styles of their non-Arab subjects, including cooking tasteful food. By the time the ʿAbbāsids came to power in 132/750, the Arabs and Persians co-operated in social, economic and cultural activities. They also learnt a good deal of ancient culinary art and about applying colour to food. Al-Djāḥiẓ (d. 255/869) observed that a professional cook (*ṭabbākh*) would talk about his ability to dye food, and the many ways of cooking chicken and making sweets (cf. *al-Bayān wa ʾl-tabyīn*, ed. Sandūbī, i, 222). However, *muḥtasib*s denied cooks the license to dye food as they wished, and only approved saffron as the dye for food. Moreover, in the urban centres of the caliphate like Baghdād, Fusṭāṭ and Cairo there were food markets (*sūḳ al-ṭaʿām*) wherein a person could buy and eat cooked food. However, market inspectors inspected the quality of food sold in cookshops and fined offenders who failed to observe the legal and customary guidelines for cooks. The *ḥisba* officials demanded cleanliness of cooks for the sake of public hygiene, and even recommended the cooks to follow instructions in al-Kindī's culinary pamphlet *Kīmiyāʾ al-ṭabāʾikh* "The chemistry of cooked foods".

Cooks of both sexes are cited in Arabic proverbs and literary works. In Fāṭimid Egypt there were female slaves (*djawārī*) working as professional cooks who were praised for their culinary skill, and in modern Egypt cooks have formed guilds.

(M.A.J. BEG)

ṬABBĀL (A.), lit. drummer; owner of a drum; a drumming expert who earned his livelihood by playing various kinds of drums [see ṬABL].

The drummers (*ṭabbālūn*) as a group emerge in Arabic historical writings of the ʿAbbāsid period. Al-Iṣfahānī noted that people used to sing with drumbeats. Drummers performed in various celebrations and festivities. Birthdays were celebrated by the wealthy who feasted with friends and fed the poor amidst musical entertainment. In one particular instance, the drummers beat drums and musicians played clarions (*būḳāt*) while celebrating the birth of a son to the caliph al-Muḳtadī (467-87/1075-94) (*al-Muntaẓam*, ix, 14). Some Christians attended a funeral procession carrying crosses, accompanied by relatives, mourners and drummers in Baghdād in 403/1012 (*ibid.*, vii, 262).

Al-Djāḥiẓ cited the drums (*ṭubūl*) as a characteristic musical instrument of the Turks, who were recruited into the ʿAbbāsid army and housed in special barracks in Sāmarrāʾ from the reign of al-Muʿtaṣim onwards. Drummers often accompanied the army on the battlefield and, despite their humble position, were required to wear coats of mail to protect themselves, because the outcome of the battle often depended on the standard-bearers and spirit-stirring drummers. Victory celebrations by the public also brought the drummers to the fore, as was the case in celebrating al-Ḳāʾim's victory over the rebel al-Basāsīrī in 451/1059 when men and women played kettledrums (*dabādib*), tambourines (*dufūf*) and clarions in daylight hours and carried torches at night. In times of emergency, the drummers awakened the public to impending danger, as they did at midnight during a Ḳarmaṭī military threat to the ʿAbbāsid capital in 320/932 (cf. *The Eclipse*, i, 132).

The custom of beating drums in front of the caliph's palace at the five times of prayer was recorded during the 4th/10th century. The Buwayhid Amīrs, especially Muʿizz al-Dawla and ʿAḍud al-Dawla, requested the same privilege from the *Khalīfa*. After prevarication, the latter granted a reduced privilege of beating the drum away from the gate of Muʿizz al-Dawla's palace for three times: at dawn, sunset and night prayers. Al-Ṭāʾiʿ allowed ʿAḍud al-Dawla to employ drummers in front of his palace in the Shammāsiyya district of Baghdād at three of the times of prayer. Under the Saldjūḳs, a certain Saʿd al-Dawla, according to Ibn al-Athīr, also enjoyed the privilege of being serenaded by drummers in front of his residence in 471/1078. The Persian traveller Nāṣir-i Khusraw witnessed an impressive display of beating of drums and blowing of trumpets by a thousand soldiers (perhaps an exaggerated number) in front of the royal palace at the sunset prayer (*maghrib*) in Cairo in 439/1047. The customary beating of drums thrice a day at prayer times (*rasm al-ṭabl al-nawba fī ʾl-ṣalawāt al-thalāth*) for *amīrs*, according to Ibn al-Fuwaṭī, was practiced until 634/1236.

During the Mamlūk period the drummers were employed as part of a military band at *ṭabl-khāna* [*q.v.*] where they performed at fixed hours and regular occasions for the sultans. In Yemen during the Rasūlid period (628-723/1228-1323), the *ṭabl-khāna* existed, wherein drums were beaten with other musical instruments like cymbals at processions as well as on various celebrations for three or seven days. Some members of the military band were of African descent. The privilege of having *ṭabl-khāna*s was sometimes extended to various *amīrs*. A place in Ṣanʿāʾ was known as the quarter of the drum-band (*ḥārat ṭabl-khāna*).

The drummers' status in society was low. In Ṣafawid Iṣfahān, they were grouped with people of other demeaning professions like dancers, singers, pigeon-trainers and brothel keepers. Inferior social status promoted solidarity among the drummers, who formed guilds in Ṣafawid Persia and early modern Egypt.

In Syria, the drummers earned their livelihood by performing their art at the circumcision of male children, at mock sword-plays for folk-entertainment and in marriage ceremonies for three days. During the harvesting seasons of olives and grapes, they per-

formed ritual beating of drums and sang songs to eke out a meagre wage. The drummers' work in pre-modern Syria, as elsewhere in the Middle East, was treated as a demeaning profession (*ḥirfa danīʾa*).

(M.A.J. BEG)

TĀBIʿ [see POSTA].

ṬABĪʿA (A.), literally "nature", functional equivalents *ṭibāʿ* and *ṭabʿ*, a term of Islamic science, philosophy and theology. Numerous Arabic-writing authors have defined the term, and a first survey shows that in a large number of cases these definitions betray Aristotelian origins. In such cases, therefore, it would be legitimate to analyse *ṭabīʿa* in the context of Aristotle's φύσις, a term usually translated as "nature", provided that the distinct and varying conceptual range of the Arabic term is kept in view and it is not considered identical to its Greek source.

1. Appropriations of the Greek φύσις tradition.

Ibn Sīnā [*q.v.*] writes in his *K. al-Ḥudūd* that "*ṭabīʿa* is an essential first principle (*mabdaʾ awwal*) for the essential movement of that in which it is present; in short, for every essential change (*taghayyur*) and every essential persistence (*thabāt*)" (*Rasāʾil*, Cairo 1326, 86; cf. A.-M. Goichon, *Lexique de la langue philosophique d'Ibn Sīnā*, Paris 1938, 201). This is clearly an Aristotelian definition; in fact, in the *ʿUyūn al-ḥikma*, we find Ibn Sīnā providing a fairly faithful Arabic paraphrase of Aristotle's *Physics*, ii/1, 192.b.20-3: "*Ṭabīʿa* is a cause (*sabab* = αἰτία) in that it is a certain essential principle (*mabdaʾ* = ἀρχή) of motion and rest to that in which it is inherent, essentially and not by accident" (Arabic text in Goichon, 201). Similarly, to take another example, the *Ghāyat al-ḥakīm* of pseudo-Maslama b. Aḥmad al-Madjrīṭī [*q.v.*] also defines *ṭabīʿa* as a cause and an essential principle; and in conformity with Aristotle it is expressly called a potentiality: we are told that *ṭabīʿa* is a certain *ḳuwwa* (δύναμις) existing in physical bodies by means of which their forms and acts are preserved for a finite period of time—"natural philosophers (*ṭabīʿiyyūn*) call this *ḳuwwa* the constraining cause (*al-sabab al-mumsik*) by means of which bodies persist without collapsing, disintegrating, or calcining. . . . The definition of *ṭabīʿa* is that it is the essential first principle . . . of motion and rest" (ed. H. Ritter, Berlin 1933, 284). Recall Aristotle's *Metaphysics*, ix/8, 1049.b.9-10: "φύσις is in the same genus as δύναμις; for it is a principle of movement". Ibn Ḥazm [*q.v.*], too, in his polemical discourses on *ṭabīʿa*, says that it is a potentiality, and so do the Ikhwān al-Ṣafāʾ [*q.v.*] (see below).

But pseudo-Madjrīṭī continues to give the definitions of *ṭabīʿa* according to others, and here the question of sources, though they remain evidently Greek, becomes rather complex. According to the philosophers, he says, *ṭabīʿa* is a corporeal form (*ṣūra djismiyya*) and "it is in physical bodies (*al-badan*) through the mediation of the Sphere lying between this [corporeal form] and the Soul" (*loc. cit.*). Plato, he tells us, defined *ṭabīʿa* as a natural substance (*djawhar ṭabīʿī*). And like Ibn Sīnā—and here the texts of the *Ḥudūd* (Goichon, 201) and *Ghāya* are practically identical—he gives the definition of the physicians: "They apply the term *ṭabīʿa* to humour, natural heat (*al-ḥarāra al-gharīziyya*), aspects of the bodily organs (*hayʾāt al-aʿḍāʾ*), movements, and the vegetative soul" (*loc. cit.*).

Indeed, the term is widely used by Arabic physicians and, as Goichon points out (200), in this usage it carries the broad sense of the Latin *natura rerum*. In this connection, one should note what seems to be a fairly common feature of Arabic encyclopaedic works on animals: found in these writings is a section devoted to the *ṭabāʾiʿ* of each animal, followed by its properties (*khawāṣṣ*) (see, for example, Ibn Abi 'l-Ḥawāfir (d. 701/1301), *Badāʾiʿ al-akwān fī manāfiʿ al-ḥayawān*, ms. Chester Beatty 4325; ʿĪsā b. ʿAlī (*fl.* 3rd/9th century), *K. Manāfiʿ al-ḥayawān*, ms. Berlin 6240; cf. Sezgin, *GAS*, iii, Leiden 1970). Also, in natural historical writings sometimes the term used is *ṭibāʿ*, which functions as the equivalent of *ṭabīʿa*. Thus Aristotle's title *History of animals* is translated *Fī maʿrifat ṭibāʿ al-ḥayawān al-barrī wa 'l-baḥrī* (ed. A. Badawī, Kuwait 1977). Again, in the Arabic translation of Aristotle's *Generation of animals* attributed to Yaḥyā b. al-Biṭrīḳ, φύσις is consistently rendered *ṭibāʿ* (see ed. J. Brugman and H.J. Drossaart Lulofs, Leiden 1971, 249). But the use of *ṭibāʿ* is not restricted to this particular context, since, for example, in a discourse on the souls of heavenly bodies Ibn Sīnā speaks of their *ṭibāʿ* in which, he says, inheres the principle of change and multiplicity (Arabic text in Goichon, 201).

An unmistakably Neoplatonic account of *ṭabīʿa* is found in the *Rasāʾil* of the Ikhwān al-Ṣafāʾ which contains a whole chapter on the quiddity (*māhiyya*) of *ṭabīʿa*. "Those among the sages and philosophers who used to talk about cosmic phenomena occurring in the sublunar realm", we read in the *Rasāʾil*, "attributed all natural events and processes to *ṭabīʿa* . . . Know, O my brother, . . . that *ṭabīʿa* is only one of the potentialities of the Universal Soul, a potentiality spreading through all sublunar bodies, flowing through each of their parts". Then we are told that, expressed in terms of Divine Law, *ṭabīʿa* is a group of "angels who are assigned the task of protecting the world and carrying out natural creation (*tadbīr al-khalīḳa*) by the permission of God" (*Rasāʾil*, Beirut 1957, ii, 63). This is an interesting appropriation of the Neoplatonic doctrine of emanation, particularly as it is found in the historically important *Theologia Aristotelis*, a pseudo-Aristotelian text whose ultimate substratum is Plotinus' *Enneads*, iv-vi in Porphyry's arbitrary arrangement. In this text *ṭabīʿa* is spoken of as an emanation ultimately radiating forth from the First Cause, through the successive emanations of the hypostases of the Intellect and Soul (ed. A. Badawi, in idem, *Plotinus apud Arabes*, Cairo 1955, 6). Note that both Plotinus

and the Ik͟hwān agree on the intermediary roles of the Intellect and Soul in the creation of the natural world. God's method was to act indirectly, and for the Ik͟hwān, this meant that He carried out the affairs of the world through His angelic agents—and *ṭabīʿa* was one of them: "*ṭabīʿa* is only one of God's angels, His supporters and His obedient slaves, doing whatever they are commanded to do" (*Rasāʾil*, ii, 127; cf. I. Netton, *Muslim Neoplatonists*, Edinburgh 1982, 38). We have already seen that pseudo-Mad͟jrīṭī assigns this role to the Sphere.

Given the hierarchical ethos of Neoplatonic metaphysics, one frequently finds in the Islamic philosophical literature elaborate discourses on the ranks of created beings, and man's place on this scale. An example is the ethical treatise *K. al-Nafs wa 'l-rūḥ* (ed. M.S.H. Maʿṣūmī, Islamabad 1968) of Fak͟hr al-Dīn al-Rāzī [*q.v.*]. In this work, the author organises his four ranks of beings on the basis of, *inter alia*, the existence or non-existence of *ṭabīʿa* in a given being. Angels were on the top, endowed with intellect but no *ṭabīʿa*; next came lower animals possessing *ṭabīʿa* and desire, but no intellect; then inanimate objects, having none of the three; and finally the fourth place belonged to human beings, possessing all three, *ṭabīʿa*, intellect, and desire. But then, we are told that it is the privilege only of human beings to be God's vicegerents, because they had faculties of which other beings were deprived (see M. Fakhry, *Ethical theories in Islam*, Leiden 1991, 186); and in this sense man becomes the highest created being. Here it is interesting to note that al-Rāzī does not admit of *ṭabīʿa* in inanimate objects, and this clearly means that he is thinking of it exclusively in psychological terms; for him, *ṭabīʿa* was a faculty which necessarily implied volition, and this is certainly not Aristotle's φύσις.

2. In Kalām.

In the *kalām* literature [see ʿILM AL-KALĀM], the term *ṭabīʿa* is often used interchangeably with *ṭabʿ*. Thus, in his own reformulation of the meaning of the two terms, the *mutakallim* al-As͟hʿarī [*q.v.*] conflates them: when, he says, one is accustomed to seeing the occurrence (*ḥudūt͟h*) of some specific accidents (*aʿrāḍ*) invariably (*ʿalā watīratⁱⁿ wāḥidatⁱⁿ*) in some specific bodies, one calls them "*ṭabʿ* and *ṭabīʿa*" (Ibn Fūrak, *Mud͟jarrad maḳālāt al-As͟hʿarī*, ed. D. Gimaret, Beirut 1987, 131-2). But this does not mean that here we have a total conceptual equivalence, for frequently one finds in *kalām* a distinction between *ṭabʿ* and *ṭabīʿa*. In general, the latter term in its standard non-*kalām* usage is understood by the *mutakallimūn* to mean the natural disposition of a physical entity which *necessarily* determines its particular behaviour, and here *ṭabīʿa* is practically synonymous with the *k͟hilḳa* of the *mutakallim* al-Naẓẓām as reported by al-S͟hahrastānī [*q.v.*]: "Everything that lies beyond [the action of human beings] ... is the work of God by the necessitation of a *k͟hilḳa*" (al-S͟hahrastānī, 38). Again, in a qualified manner, the term is functionally equivalent to the *maʿnā* of Muʿammar (see R. Frank, *Al-maʿnà: Some reflections on the technical meaning of the term in the Kalâm and its use in the physics of Muʿmmar*, in *JAOS*, lxxxvii [1967], 248; cf. H.A. Wolfson, *Philosophy of the kalâm*, Cambridge, Mass. 1976, 566). On the other hand, the *mutakallimūn* view the standard notion of *ṭabʿ* in a distinct generic sense of a natural causal agency which brings about the real phenomena of the world (see below). It would appear, then, that here *ṭabīʿa* is a special case of *ṭabʿ*; and since both of them were equally considered to imply natural causation for physical processes, as opposed to direct divine will or command, they were both equally unacceptable to practically all *mutakallimūn*. It is for this reason, it seems, that they sometimes do not bother to keep the two terms distinct from each other.

Mentioned among those whom the *mutakallimūn* censure for believing in natural causation is a group of thinkers called *aṣḥāb al-ṭabāʾiʿ*, espousers of *ṭabāʾiʿ*—and this seems to be a rather broad designation for those who pursue natural philosophy (see A. Dhanani, *The Physical theory of kalām*, Leiden 1994, 4, 182). However, it is clear that the *mutakallimūn* attribute to these *aṣḥāb* such views on *ṭabʿ/ṭabīʿa* as are shared also by the alchemists, for the alchemists did believe in *ṭabʿ/ṭabīʿa* as an agency of natural causation (see 3. below). But it is an interesting fact that in the *Sirr al-k͟halīḳa* of pseudo-Apollonius of Tyana [see BALĪNŪS], a fundamentally important source of early Arabic alchemy [see RUKN], we find mentions of *aṣḥāb al-ṭabāʾiʿ* as a group of people who deify and worship *ṭabāʾiʿ* and whom the author of the text strongly condemns (*K. Sirr al-k͟halīḳa wa-ṣanʿat al-ṭabīʿa*, ed. U. Weisser, Aleppo 1979, 30, 60). Further, in his *K. al-Sabʿīn*, D͟jābir b. Ḥayyān [*q.v.*], too, refers to *aṣḥāb al-ṭabāʾiʿ*, whom he evidently considers outsiders to his field of alchemy (see P. Kraus, *Jâbir ibn Ḥayyân*, ii, Cairo 1942, 17). Thus the self-perception of some alchemists was that they are not among this group; but they do nonetheless fulfill the *mutakallimūn*'s criterion of what definitively characterises *aṣḥāb al-ṭabāʾiʿ*.

Ṭabīʿa and ṭabʿ as causality. It should be noted that the *kalām* discourses on *ṭabʿ/ṭabīʿa*, and they are voluminous, are always carried out in the larger context of the problem of causality. Indeed, one would agree with the claim that for the *mutakallimūn* the "term [*ṭabʿ/ṭabīʿa* is] the equivalent of causality" (Wolfson, *op. cit.*, 559). Ibn Rus͟hd [*q.v.*] expresses this the other way around, but categorically: denial of causality is, in effect, a denial that things have a *ṭabīʿa* (*Tahāfut al-tahāfut*, ed. M. Bouyges, Beirut 1930, xvii/5, 520). A lucid explanation of the *mutakallimūn*'s position on this matter is to be found in the *Dalālat al-ḥāʾirīn* of Mūsā b. Maymūn (Maimonides) [see IBN MAYMŪN]. Here one reads the report of the *kalām* doctrine that all physical bodies consist of atoms (*d͟jawhar*, pl. *d͟jawāhir*/*d͟juzʾ*, pl. *ad͟jzāʾ*) and accidents (*ʿaraḍ*, pl. *aʿrāḍ*) created by God through His will. All attributes of bodies (colour, smell, motion, growth, decay, life, death, etc.) are accidents. But these accidents do not arise out of, even less, are necessarily caused by, a *ṭabʿ* or *ṭabīʿa* inhering in bodies and acting naturally without God's direct creative causal action. Everything in the world that comes into being comes into being by an act of free creation by God as He wills. The object of this doctrine, Maimonides tells us, is to guard against the idea that there is in any sense a *ṭabīʿa* in things and that this *ṭabīʿa* of a thing requires necessarily that there should be joined to it such and such accident (*Le Guide des égarés*, ed. and tr. S. Munk, Paris 1856-66, i, 375 ff.).

In other words, *ṭabʿ/ṭabīʿa*, in its standard usage, is considered by the *mutakallimūn* to signify a real principle of natural causation, and this is in conformity with Aristotle. Again, Ibn K͟haldūn [*q.v.*], speaking of the *mutakallimūn*'s denial of causality, characterises them succinctly by his statement "They denied *ṭabīʿa*" (*Muḳaddima*, iii, 114). Ibn Ḥazm says of the As͟hʿarīs that they used the term *ʿāda* (custom) instead of *ṭabīʿa* to designate the natural course of events not broken off by miracles (*K. al-Fiṣal fi 'l-milal*, Cairo 1320, v, 15). To be sure, in the *Maḳālāt* al-As͟hʿarī declares: "One who holds *ṭabīʿa* to be necessitating (*al-mūd͟jiba*) and

ṭabʿ to be that which causally engenders (*al-muwallid*) is mistaken" (Ibn Fūrak, 131; note here the distinction between *ṭabʿ* and *ṭabīʿa*). He then explains his position by saying that it is simply a matter of linguistic usage that people say, "the *ṭabʿ* of so and so is good" and that "the *ṭabʿ* of so and so is evil". They do so because they are accustomed to (*iʿtādū*) seeing some specific accidents occurring invariably in certain bodies (132). Thus *ṭabʿ*/*ṭabīʿa* has no ontological significance. Again, "He [al-Ash̲ʿarī] used to reject the views of the philosophers, the espousers of *ṭabāʾiʿ* (*ṭabāʾiʿiyyūn*), and the Muʿtazila, all of whom argue for their belief in causality (*tawallud*) by saying that there exists in fire a tendency (*iʿtimād*) which causally engenders its upward motion, and a tendency in stone which causally engenders its downward motion. He would say: all that is in these bodies is the creation of the All-Powerful, the Wise, Who does whatever He wills to do, without cause (*sabab*) and without any mediating processes (*muʿālad̲j̲a*). Indeed, we have already elucidated his views concerning his denial of the doctrine of *ṭabāʾiʿ*" (276).

In explaining the regularity and predictability of natural phenomena, Abū Ḥāmid al-G̲h̲azālī [*q.v.*] also substitutes *ʿāda* for *ṭabʿ*/*ṭabīʿa*. But his explanation is more sophisticated. Why is it that fire always burns, and (to take one of his own examples) a boy never turns into a dog? His answer is twofold: (a) God creates certain events in succession to other events; this succession continues in the same way since God has caused the continuance of custom (*ʿāda*), and (b) God has created in us the knowledge of (a), namely that the custom will continue, and that fire will continue to burn, and a boy will not turn into a dog. Thus natural phenomena are not caused, of necessity, owing to a *ṭabʿ*, but due to a divinely-created custom, a custom of which we possess a divinely-created knowledge. (*Tahāfut al-falāsifa*, ed. Bouyges, Beirut 1927, 270-86).

But the substitution of *ʿāda* for *ṭabʿ*/*ṭabīʿa* came under heavy criticism in the hands of Ibn Ḥazm. Thus arguing on grounds of linguistic usage, he says, "'*ʿāda* in the Arabic language" is used with regard to something which may either be avoided (*tarkuhu*) or not avoided, and whose absence (*zawāluhu*) is possible (*mumkin*), in contradistinction to the term *ṭabīʿa*, which is used with regard to something the avoidance of which (*al-k̲h̲urūd̲j̲ ʿanhā*) is impossible (*mumtaniʿ*) (*Fiṣal*, v, 15-6). Thus unlike *ṭabīʿa*, *ʿāda* cannot explain the regularity in the processes of the world, since they always happen in the same way. He then explicates the term: *ṭabīʿa*—which is, he tells us, synonymous (*mutarādifa*) to *k̲h̲alīḳa*, *salīḳa*, *bahīra*, *g̲h̲arīza*, *sad̲j̲iyya*, *sīma*, and *d̲j̲ibilla*—only means the potentiality (*ḳuwwa*) of a thing whereby the qualities therein, such as they are, come to pass (*Fiṣal*, v, 15). But Ibn Ḥazm goes on to say that this does not mean that bodies act independently by virtue of their *ṭabīʿa*, for *ṭabīʿa* so defined has no intelligence (*ʿaḳl*) and therefore actions of things are not created by the things themselves. Of necessity, says Ibn Ḥazm, we know that with regard to these actions, their creation is due to something outside of the things in which they appear, and that can be none other than God. Thus by rejecting the ontological equivalence of *ṭabīʿa* and natural causation, Ibn Ḥazm makes *ṭabīʿa* a potentiality whose actualisation is caused directly by divine will, even though for him the *ṭabīʿa* of a thing is fixed once and for all by God ("*al-kalām fi 'l-tawallud*", *Fiṣal*, v, 59-60; cf. Wolfson, *op. cit.*, 576-7).

3. *Ṭabāʾiʿ* in the alchemical tradition.

In the Islamic alchemical literature there exists a rigorously systematic and rich theory of *ṭabāʾiʿ*, and the grand corpus of tantalising Arabic texts attributed to D̲j̲ābir b. Ḥayyān remains its supreme representative. Indeed, so central is the doctrine of *ṭabāʾiʿ* in the alchemy of D̲j̲ābir that his entire natural scientific system can be reduced to a theory of *ṭabāʾiʿ*, their place, and their combinations; and in the development of this theory the *Sirr al-k̲h̲alīḳa* of pseudo-Apollonius seems to have served as a direct source (cf. Kraus, *op. cit.*).

"All things", says the author of the *Sirr*, "arise out of the four *ṭabāʾiʿ*, and they are: Hot (*al-ḥarr* [elsewhere *al-ḥarāra*]), Cold (*al-bard* [elsewhere *al-burūda*]), Moist (*al-līn* [elsewhere *al-ruṭūba/billa*]), and Dry (*al-yubs* [elsewhere *al-yubūsa*])" (ed. Weisser, 3). Identical declarations are to be found throughout the D̲j̲ābirian corpus (e.g., see *K. al-Aḥd̲j̲ār*, ed. S.N. Haq, in idem, *Names, natures and things*, Dordrecht and London 1993, *passim*). Indeed, for both pseudo-Apollonius and D̲j̲ābir, the four *ṭabāʾiʿ* constituted the fundamental principles of the natural world; they were the First Simple Elements (*al-ʿanāṣir al-basāʾiṭ/al-basāʾiṭ al-uwal*) of all bodies. They were uncompounded entities (*al-mufradāt*) out of which the first compound elements (*al-murakkabāt*), Fire, Air, Water, and Earth were formed, and these latter were Second Elements (*ʿanāṣir t̲h̲awānī*) (see *Muk̲h̲tār rasāʾil*, ed. P. Kraus, Paris 1935, *passim*; *Aḥd̲j̲ār*, ed. Haq, 38-4; *Sirr*, ed. Weisser, *passim*). Again, "when these four *ṭabāʾiʿ* enter into combination, they give rise to Fire, Water, Air (*al-rīḥ*), and Earth (*al-turāb*), and they are then called *usṭuḳussāt*; they are the generators (*al-ummahāt*) and principles (*al-uṣūl*) of all individual things (*al-afrād*)" (*Sirr*, 187).

The temptation to read Aristotle's four qualities into these *ṭabāʾiʿ* must be resisted; for even though some isolated similarities do exist here, the two sets of entities remain both metaphysically and functionally distinct from each other. Aristotle's qualities were conceptual entities, *ṭabāʾiʿ* were real elements; the former were not to be found in isolation from the four Empedoclean primary bodies in which they inhered, the latter were independently existing entities capable of physical acts, such as motion, combination, and separation. In the *Sirr*, each of the *ṭabāʾiʿ* is sometimes referred to as a *ḳuwwa* (e.g. 186, 330, 372), but in the context the term seems to have a peculiar sense of a motive force, something that is conceptually far removed from δύναμις or ποιότης (Ar. *kayfiyyāt*). As for the D̲j̲ābirian corpus, Aristotelian appellations in this particular matter are almost totally absent; indeed, the author of the corpus sometimes explicitly distinguishes *ṭabāʾiʿ* from *kayfiyyāt* (see *K. Ik̲h̲rād̲j̲ mā fi 'l ḳuwwa ilā 'l-fiʿl*, ed. Kraus, 92).

In both the *Sirr* and the D̲j̲ābirian corpus, the generation of bodies out of *ṭabāʾiʿ* is explained in mechanistic terms. Thus: "When the Sphere (*al-falak*) [which encloses the world] moves perpetually and becomes vigorous in its motion, the four *ṭabāʾiʿ* form pairs (*izdawad̲j̲at*), one with the other. They become different, and one knows one pair from the other by its essence (*ʿayn*) and form (*ṣūra*)... Thus come to pass by their combination the four compound *ṭabāʾiʿ*, namely, Fire... Water... Air... and Earth" (*Sirr*, 187). The explanation is more elaborate in D̲j̲ābir who speaks in Neoplatonic terms: At the root of the generation of the corporeal world lies the Desire (*s̲h̲ahwa*) of the Soul which endows substance (*d̲j̲awhar*) with formative power; thus substance attaches to *ṭabāʾiʿ*, and the four elementary bodies come to pass. The D̲j̲ābirian *ṭabāʾiʿ* get themselves "implanted" in substance, they "attack" substance, and "act upon" it;

they "shape" it, "embrace" it, and "compress" it (see Haq, 57-62). All this stands in sharp contradistinction to Aristotle.

It should be noted that the Djābirian *ṭabāʾiʿ* were indeed the true material elements of things; things could be decomposed into their constituent *ṭabāʾiʿ*; they could be made to undergo transmutation by augmentations, suppressions, and rearrangements of *ṭabāʾiʿ*; and like all material entities, *ṭabāʾiʿ* possessed weights and all other physical properties too (see *K. al-Sabʿīn*, ed. Kraus, 473). Indeed, the elixir was only a substance in which the four *ṭabāʾiʿ* existed in a perfect numerical proportion (see ed. Haq, *passim*). Aristotle had said that to each elementary body there was only one affection (*Generation and corruption*, ii/3, 331.a.3-6); this meant that when, say, Fire is deprived of Hot, the contrary quality, Cold, always appeared—Fire which was hot and dry, thus became Earth which was cold and dry. But in the Djābirian system, we could, through alchemical procedures, extract Hot from Fire, and in this way reduce the latter to pure Dry; and of course there did exist bodies which were only hot, or only cold, and so on (see Kraus, *Jâbir ibn Ḥayyân*, ii, 135-85). To be sure, the whole of alchemy consisted in nothing other than systematic operations on, and manipulations of, *ṭabāʾiʿ*.

In the Islamic alchemical literature, the words *ṭabʿ* and *ṭabīʿa* do occur in their ordinary sense of the natural properties or disposition of a thing, or the temperament of a person. But when so employed, these words do not seem to function as technical terms; rather, they are used informally in the way in which al-Ashʿarī describes them—that is, as they are uttered in ordinary linguistic usage.

4. In astronomy.

It seems that the non-Ptolemaic planetary models of the 7th/13th to 10/16th centuries largely grew out of metaphysical speculations on the *ṭabīʿa* of heavenly bodies. Recall that Ptolemy in Book ii of his *Planetary hypotheses* explains the diurnal rotation of the heavenly spheres by the *ṭabīʿa* of the outermost Sphere and that of all the other spheres, which move uniformly and simultaneously in a circular motion. But the motions of the spheres within each planetary sphere he attributes to the will of the soul of that planet as well as to the *ṭabīʿa* of ether (see A. Murschel, *The structure and function of Ptolemy's physical hypotheses of planetary motion*, in *Journal for the History of Astronomy*, xxvi [1995], 33). In the system of Ptolemy, then, simple bodies had composed motions.

Ibn al-Haytham [*q.v.*] was troubled by this, considering it to be a violation of the *ṭabīʿa* of celestial bodies. Thus in ms. Y of his *Fī hayʾat al-ʿālam* (ed. and tr. Y.T. Langermann, New York 1990, 66-7, 230-1) he is quoted as saying that stars are natural (*ṭabīʿiyya*) bodies that by themselves can have only *one* natural motion. There are four premises on which explanations of planetary motions must be based:

1. A natural body does not move by its nature with more than one natural motion,
2. A simple natural body does not move with a varying motion,
3. The body of the heavens does not admit of being acted upon,
4. A void does not exist.

Ibn al-Haytham's argument runs something like this: since each star is of a simple substance, its motions must be regular and uniform. And given that there cannot be a void, each planet has a sphere whose circular motion carries it about. But since each planet has several motions, all planets have a separate sphere to account for each of their motions.

Much of this is accepted by Naṣīr al-Dīn al-Ṭūsī [*q.v.*] in his *Tadhkira*, i/2. Of interest is i/2, 2: "If the motion of a self-moved mobile is monoform, its principle of motion is called a nature (*ṭabʿ*), whether the motion is natural and elemental or voluntary and celestial. Otherwise its [principle of motion] is called a soul (*nafs*), whether the [motion] be vegetative or animal" (ed. and tr. F.J. Ragep, New York 1993, 100). It is in ii/7, 25, that al-Ṭūsī enumerates the ways in which Ptolemy's lunar model violates the principle of simple motion for simple bodies (for Mercury, see ii/8, 19, and also ʿuṭārid)—a violation, that is, of their *ṭabīʿa*.

(D.E. Pingree and S. Nomanul Haq)

ṬABĪB [see ṭibb].

ṬABĪʿIYYĀT [see Suppl.].

TAʿBĪR [see ruʾyā].

TĀBIʿŪN (a.) (sing. *tābiʿ* or *tābiʿī*), usually translated as Successors, means the Successors of the Companions of the Prophet [see ṣaḥāba]. The Successors are the members of the generation of Muslims that followed the Companions, or those Muslims who knew one or more of the Companions but not the Prophet himself. They played a significant role in the early stages of Ḳurʾān commentary [see tafsīr], the biography of the Prophet including the history of his campaigns [see maghāzī; sīra; taʾrīkh], jurisprudence [see fiḳh] and the collection and dissemination of traditions [see ḥadīth]. In all these fields, the earliest material consists of reports about the actions and sayings of the Prophet, his family and his Companions. The Companions transmitted this information to the Successors, who in turn transmitted it, both in writing and orally, to one another, to their students and to the leadership of the larger Muslim world of the Umayyad and early ʿAbbāsid periods. Chronologically, the last of the Successors were those who knew the Companions who lived for the longest time after the Prophet's death. Among these are included those who studied and worked with the Companion Anas b. Mālik [*q.v.*], who did not die until 91-3/709-11 and was the last Companion to die in Baṣra.

There are biographies of the Successors in *ṭabaḳāt* [*q.v.*] works, as well as in the biographical dictionaries devoted specifically to establishing the reliability of *ḥadīth* transmitters [see AL-DJARḤ WA 'L-TAʿDĪL; ʿILM AL-RIDJĀL]. In *ṭabaḳāt* works, Successors are ranked chronologically; *ridjāl* works tend to list transmitters alphabetically (e.g. al-Bukhārī's *Kitāb al-Taʾrīkh al-kabīr*).

In his *Kitāb al-Ṭabaḳāt al-kubrā*, Ibn Saʿd (d. 230/845 [*q.v.*]) divides his biographies of the Successors into a number of classes corresponding to the places in which they taught and studied and to their contact with the most important Companions. The first class consists of Medinan Successors who transmitted from either Abū Bakr or ʿUmar or both; the second, of Medinan Successors who transmitted from ʿUthmān and ʿAlī, as well as from eight other well-known Companions. After the Medinans come the Successors of Mecca (starting with those who transmitted from ʿUmar), and then a few who were active in other parts of Arabia. He then moves on to notices of Successors active in Kūfa, Baṣra and Baghdād, then in Syria and North Africa and finally he mentions one person, Muʿāwiya b. Ṣāliḥ (d. 158/774), in al-Andalus.

Some of the Successors are especially noted for their contribution to one or another of the fields of learning mentioned above. In *tafsīr*, for example, among the students of the Companion ʿAbd Allāh b. ʿAbbās (d. 68/687 [*q.v.*]), Saʿīd b. al-Djubayr (d. 95/714) and Mudjāhid b. Djabr (d. 104/722 [*q.vv.*]) were particularly important; in *maghāzī*, Abān b. ʿUthmān (d. 105/723) and ʿUrwa b. al-Zubayr (d. *ca.* 94/713 [*q.vv.*]). A great many of them are known for their contributions to several fields. Ibn Shihāb al-Zuhrī (d. 124/742 [*q.v.*]) is possibly the most famous polymath among the Successors. As an historian, he was one of the foremost early authorities on the life of the Prophet [see SĪRA; MAGHĀZĪ] and he was a teacher of al-Wāḳidī (d. 207/823 [*q.v.*]); as a traditionist, he played a crucial role in the written transmission of *ḥadīth*. Al-Ḥasan al-Baṣrī (d. 110/728 [*q.v.*]) is claimed as a seminal figure by virtually all branches of religious learning (although Sezgin lists him with the theologians; see *Bibl.*).

As jurists, the Successors were considered the link to the early period of Islam that made it possible to ascertain the established practice, the *sunna* [*q.v.*], of the Prophet and of the early community. Certain of them are associated with the legal development of a particular place. In Medina, prominent among the many Successors mentioned in early Mālikī texts [see MĀLIKIYYA] are the Medinan Saʿīd b. al-Musayyab (d. 94/713) and Nāfiʿ b. ʿUmar (d. 117/735). In Kūfa, the legal opinions of Ibrāhīm al-Nakhaʿī (d. 96/715 [*q.v.*]) form the basis of early Ḥanafī doctrine. They were compiled by his student Ḥammād b. Abī Sulaymān (also a Successor, d. 120/738), with whom Abū Ḥanīfa (d. 150/767 [*q.v.*]) studied. In Mecca, ʿAṭāʾ b. Abī Rabāḥ (d. 114/732 [*q.v.*]) stands out; in Damascus, Ḳabīṣa b. Dhuʾayb (d. 86/705).

As the repositories of the legacy of the Prophet and the Companions, all the Successors were potentially traditionists. Distinguishing among them to determine exactly who each was and whether he could be considered a reliable transmitter in the link of an *isnād* chain is the most important component of the sciences of Tradition (*ʿulūm al-ḥadīth*) [see ḤADĪTH. IV]. Thus their biographers are particularly careful about their genealogies, the time and place of their birth, the cities where they spent their active lives and their teachers. Once it is ascertained with whom they studied, then the precise nature of the contact must be explored. In the case of the Successors who knew one or more Companions, for example, the question is whether they associated with them or simply encountered them, and whether they actually heard (*samāʿ*) traditions from those Companions, or merely transmitted on their authority (*rawā ʿan*, or only *ʿan*) [see MUʿANʿAN; also again ḤADĪTH].

The *ḥadīth* collections of a number of Successors happen to have survived in manuscript; they are listed in Sezgin (see *Bibl.*). Two examples are Ḥumayd b. al-Ṭawīl (d. 142/759), and Hishām b. ʿUrwa b. al-Zubayr (d. 146/763). The biographical information about them that can be gleaned from various sources (see *Bibl.*) will serve to illustrate what we find for the vast majority of Successors. The Baṣran Ḥumayd transmitted on the authority of the Companion Anas b. Mālik (see above), and is said to have taken and copied al-Ḥasan al-Baṣrī's books and then returned them. However, the jurist and traditionist Yaḥyā b. Saʿīd (d. 143/760) is reported to have said that, whenever he asked Ḥumayd anything about al-Ḥasan's *fatwās*, he would say he could not remember. It is not clear whether Ḥumayd actually heard ʿUmar b. al-Khaṭṭāb or only transmitted on his authority; similarly, he may have only transmitted on the authority of Anas b. Mālik without actually having known him, despite the fact that he was a younger contemporary of Anas's in Baṣra (al-Ḥākim al-Naysābūrī [see *Bibl.*] mentions Ḥumayd as one of those Successors guilty of *tadlīs* [*q.v.*], or improperly altering *isnāds*). Hishām was born in Medina and died in Baghdād. He related from his father, the Successor ʿUrwa b. al-Zubayr, and from his uncle ʿAbd Allāh b. al-Zubayr (d. 73/692 [*q.v.*]), a nephew of ʿĀʾisha's. The noted Kūfan traditionist Wakīʿ b. al-Djarrāḥ (d. 197/812) reported that at a certain point he spent some time among the scholars of Kūfa.

In his work on *ḥadīth* methodology, *K. Maʿrifat ʿulūm al-ḥadīth*, al-Ḥākim al-Naysābūrī (d. 404/1014 [*q.v.*]), like Ibn Saʿd, divides the Successors into a number of classes, although his classification system is not the same as Ibn Saʿd's (and is not fully explained). His first class is comprised of the Successors who transmitted from those Companions to whom the Prophet promised Paradise (*al-mubashshara al-ʿashara*). Other classes include one made up of the seven jurists of Medina [see FUḲAHĀʾ AL-MADĪNA AL-SABʿA, in Suppl.]; Successors born in the period of the *Djāhiliyya* [*q.v.*], *al-mukhaḍramūn* [see MUKHAḌRAM]; and people falsely credited with actually hearing (*samāʿ*) one of the Companions when they in fact had heard only a fellow Successor.

Al-Ḥākim prefaces his section on the Successors by saying that whoever does not know who the Successors are will not be able to distinguish between them and the Companions, nor will he be able to distinguish between them and the Successors of the Successors (*tābiʿ al-tābiʿīn* or *atbāʿ al-tābiʿīn*). These, al-Ḥākim explains, are the third generation (*ṭabaḳa*) of Successors after the Prophet and among them are found such people as Mālik b. Anas (d. 179/795 [*q.v.*]), Sufyān al-Thawrī (d. 161/778 [*q.v.*]), Shuʿba b. al-Ḥadjdjādj (d. 160/776 [*q.v.*]) and Ibn Djuraydj (d. 150/767).

With this group we move to the scholars in the forefront of the development of Islamic law who were known both as jurists and traditionists and whose use of traditions in legal reasoning, exemplified by al-Shāfiʿī (d. 204/820 [*q.v.*], made *ḥadīth* studies an inextricable part of jurisprudence [see again FIḲH; also UṢŪL]. During this period, when the lives of the Prophet and the Companions were becoming part of the dis-

tant past, the authority of the Successors as heirs to the knowledge of those times increased. Concern that their knowledge might be lost led the Umayyad caliphs of the early 2nd/8th century to patronise the efforts made by *ḥadīth* scholars, most notably al-Zuhrī, to collect and write down as many traditions as possible.

In Muslim scholarship both of the pre-modern and modern periods, biographical information about *isnād* transmitters is utilised to assess the worth of each transmitter's contribution. The fact that many transmitters are known to have been inaccurate about their contacts and scholarly activities is considered proof of the veracity of the biographies. In secular and orientalist scholarship, most, if not all, of this information is viewed as later fabrication, and it is utilised to figure out how, when and for what purposes the scholars of the generations after the Successors chose to participate in the practice of depending upon and elaborating *isnāds*; the Successor and Companion links in the *isnāds* that go back to the Prophet are considered particularly problematic.

Bibliography: For biographies of Successors, see Bukhārī, *K. al-Taʾrīkh al-kabīr*, Ḥaydarābād 1361-5, 8 vols.; Ibn Ḥadjār al-ʿAsḳalānī, *K. Tahdhīb al-tahdhīb*, Ḥaydarābād 1325-7, 12 vols.; Ibn Ḥanbal, *K. al-ʿIlal wa-maʿrifat al-ridjāl*, eds. Talât Koçyigit and İsmail Cerrahoğlu, Ankara 1963; Ibn Saʿd, *K. al-Ṭabaḳāt al-kubrā*. For individual Successors and primary and secondary sources about them, see Sezgin, *GAS*, i. For *ḥadīth* methodology, see al-Ḥākim al-Naysābūrī, *K. Maʿrifat ʿulūm al-ḥadīth*, Beirut n.d. For a reaction to the critical view of the role of the Successors, see Nabia Abbott, *Studies in Arabic literary papyri*, Chicago 1967, ii, and Sezgin, *op. cit.* For critical studies of their role, see M. Cook, *Early Muslim dogma*, Cambridge 1981, ch. 11 "The dating of traditions"; G.H.A. Juynboll, *Muslim tradition*, Cambridge 1983; J. Schacht, *The origins of Muhammadan jurisprudence*, Oxford 1950; H. Motzki, *Die Anfänge der islamischen Jurisprudenz. Ihre Entwicklung in Mekka bis zur Mitte des 2./8. Jahrhunderts*, AKM 50, 2, Stuttgart 1991. (SUSAN A. SPECTORSKY)

ṬABKH (A), the action of cooking either in a pot, by boiling or stewing; or by roasting, broiling, frying or baking. Beyond the narrow sense of cooking only fleshmeat, *ṭabkh* meant the transformation from a raw state of every conceivable foodstuff for consumption. Possibly the Arabic substantive for "cook" (*tabbākh* [*q.v.*]) also contained the Hebrew sense of serving food at table, in addition to its preparation. According to some lexicons, cooked food, *ṭabīkh*, was distinguished from *ḳadīr*, the latter specifying fleshmeat cooked in a pot seasoned with pepper, cumin and the like, while the former meant meat not thus seasoned; or, *ṭabīkh* meant fleshmeat cooked with broth or gravy, while a different term applied to meat prepared without such liquid (Lane, s.v. *ṭ-b-kh*). It is evident, however, from the extant mediaeval culinary manuals (*kutub al-ṭabīkh*) that such distinctions did not obtain in practice, the term "cooked" applying to a dish comprising any combination of ingredients prepared by any of the methods noted above. Food as nourishment, and factors determining diet in pre- and classical Islamic times, are treated in the art. GHIDHĀʾ, while MAṬBAKH describes the kitchen, its major appliances and utensils employed therein. Here, cooking techniques will be dealt with, together with the main categories of ingredients used.

Cooking techniques varied somewhat according to the social location of the "kitchen". Bread making, an activity common to all segments of the population, illustrates the point well. J.L. Burckhardt observed the following method among the Bedouin of the Arabian peninsula in the early 19th century. First, a circular "element" of stones was heated. The fire was then removed and dough made from coarse-ground grain was set on the stones over which the glowing ashes were placed until the bread was cooked (*Notes on the Beduins and Wahabys*, London 1831, 58). Unleavened bread made in this fashion was called *khubz malla* or "roasted" bread, *malla* referring to the hot ash and embers (Ibn Durayd, *Djamhara*, Ḥaydarābād, 1925-33, s.v.). Another method was a kind of grilling process which involved the cooking of large thin loaves on a concave metal plate (*ṣādj*) inverted and supported on stones over a fire, with the dough placed on the convex side (A. Musil, *The manners and customs of the Rwala Beduins*, New York 1928, 92). Bread was also prepared in the communal oven (*furn*) employed by households among settled hamlet and village as well as the less affluent urban populations; either the dough was prepared in the home and baked in the *furn*, the baker retaining a portion of the dough as payment, or else a poorer quality bread could be purchased directly from the baker. By contrast, bread made for a comfortable urban household was prepared in its own kitchen from the best wheat flour; the appliance used was the *tannūr*, the bee-hive shaped baking oven of Mesopotamian origin. Another general contrast between the urban and rural-nomadic techniques may be found in methods of food preservation. In the latter tradition, sun- and wind-drying of raw materials like meat were common, desiccation being nature's own way of preservation. In the urban kitchen, ingredients such as salt, vinegar, lemon juice, mustard and other spices and the process of smoking were used in addition to the more "natural" means of preservation. Finally, there was a contrast in the use of condiments accompanying a dish and flavourings in food. Complicated preparations like *murrī* and *kawāmikh* were commonplace in the urban "high" cuisine, while natural plant flavourings, where they could be had, were employed elsewhere. The cookbooks which have survived reflect the urban milieu of a leisure class, although they undoubtedly contain as well traces of regional or rural oral cooking traditions. For example, the preparation *sawīḳ* [*q.v.*] was traditionally made of barley, parched and dried for use on long journeys; the meal was reconstituted with water or milk when required. Food by the same name was sold in the markets of Baghdād as a poor man's staple made from powdered chickpeas. However, in more affluent households this rustic fare was made from fine wheat flour sweetened with sugar or mixed with other ingredients like pomegranate seeds. In the two extant cookbooks of Andalusī-North African provenance, regional tastes appear reflected in the frequent use of eggs in a range of substantial dishes, in the traditional dish of Berber origin, couscous [see KUSKUSŪ], and in dishes associated with particular locales (D. Waines, *The culinary culture of al-Andalus*, in *The legacy of Muslim Spain*, ed. S.K. Jayyusi, Leiden 1992). The processes and ingredients discussed below are, however, derived solely from the culinary manuals.

The most characteristic cooking method for creating substantial dishes was the "stew" or "casserole" preparation where the ingredients (e.g. meat, vegetables, seasonings) were cooked in liquid in a pot over the heat of a fire. Recipes for meat dishes other than fowl usually use only the word "meat" (*laḥm*) which, appearing unqualified, should be assumed to mean mutton, a meat preference supported by medical opin-

ion. It is impossible to tell at what age the mutton was deemed best for eating, whether as hoggets (between one and two years) or older. Lamb and kid were also enjoyed. Beef is only infrequently mentioned in recipes, possibly mirroring the medical view that, owing to its coarse nature, it was more suited to the toiling and labouring classes. Game meat such as rabbit, hare, wild cow, wild ass, gazelle, horse, mountain goat, oryx and stag were all considered edible. Dishes containing fowl, especially chicken, were also popular. In one recipe for the famous Persian dish *sikbād̲j̲* [*q.v.*], mutton, beef and chicken are cooked together (al-Warrāḳ, 132).

Typically, these are meat dishes with vegetables and seasonings, but also with dried fruit in many cases. The meat in the first stage of the cooking process may be sautéed briskly in hot oil to which water is then added, furthering the cooking, while other ingredients and seasonings are placed in the pot; conversely, the meat may first be boiled in a stock of water and oil to which other ingredients are added while the cooking process is brought slowly to an end. A recipe for *zirbād̲j̲* follows the second procedure:

Take a fine quality chicken, joint and clean it and place in a clean pot. Then pour over one-half *raṭl* of fresh water and a half *ūḳiyya* of good quality oil, some white of onion and boil all together. When boiled, pour in white vinegar of half a *raṭl* and two *ūḳiyya* of white sugar and one *ūḳiyya* peeled almonds and one *ūḳiyya* of rose water. Add the spices, pepper, cinnamon and ginger tied up in a fine cloth so that they do not alter the dish's colour. Leave on the fire a little, allowing it to thicken (al-Warrāḳ, 153).

This recipe illustrates a number of interesting points about the mediaeval cuisine. First, the dish is also Persian, indicating its strong influence upon the cosmopolitan character of the urban "high cooking culture"; many other dishes, such as *t̲h̲arīd, maṣliyya* and *maḍīra* [*q.v.*], are contributions of traditional Arab provenance. Second, the recipe gives measures of ingredients, a rare feature of the corpus where measures and proportions were left to the cook's discretion. However, characteristic of the recipes is their usually clear, step-by-step description of the process of preparation. Thirdly, *zirbād̲j̲* is an example of the common practice of "meat substitution" in dishes; while the main feature of the dish is its sweet-sour flavour, other recipes for *zirbād̲j̲* call for meat (*laḥm*) or a combination of meat and fowl, a practice found today, for example, in North African cooking. Fourthly, recipe references to slaughtering and cleaning an animal or bird indicate that fresh meat could be had from livestock, for example goats and chickens, kept by the household. Finally, a word on the use of spices in cooking. A spice combination in common use throughout the Middle East was cinnamon, coriander (often plus cumin), with pepper and saffron widely employed as well, while regional preferences probably also existed. The essential oils of pepper and cinnamon were known for their antiseptic, preservative properties. Their use was likely as much a matter of aesthetics as anything, their preservative function being useful when left over food could be served the following day, with the flavour of the dish perceptibly enhanced. This "spice spectrum" was inherited from the Middle East and transformed much of the European cuisine from the 14th century onward (T. Peterson, *The Arab influence on western European cooking*, in *J. of Medieval History*, vi [1980], 317-41). The achievement of balance in bouquet and flavour between "aromatic" (e.g. cinnamon) and "pungent" (e.g. coriander) spices was another feature of the cuisine.

Popular meat dishes were also prepared in milk or with milk products; for example, *maṣliyya* was a dish of lamb (or kid) with finely-chopped dried curd cheese (*maṣl*) sprinkled on top, while *maḍīra* was meat cooked in soured milk.

Other dishes containing meat were known, however, by a vegetable or fruit highlighted in it. Thus *isfānāk̲h̲iyya* was a spinach (and meat) dish, *tuffāḥiyya* an apple dish, and *sald̲j̲amiyya* a dish of turnip, chicken, onion, cheese and seasonings. In the gardens and orchards of the urban Middle East, vegetables and fruits were seasonally available the year round. In the mediaeval culinary lore, vegetables (*buḳūl*) included edible plants which today would be considered herbs such as mint, dill, fresh coriander and fennel. Fruits (*fawākih*) were classified as dried and fresh; dried fruits included soft fruit like apples and apricots as well as nuts like almonds, pine seeds and pistachios. Fresh fruit, the most common being dates, of which there were said to be more than three hundred varieties, was also used in cooked dishes or else consumed before or after a meal. Plant food classified as "grains" or "seeds" (*ḥubūb*) included chick peas, lentils and the mungo bean (*mās̲h̲*) and the grasses wheat, barley and rice.

Vegetables prepared alone without meat formed another broad category of victuals for the table. They could be served hot or cold. One process was to stew the vegetable and then blend into it a quantity of oil into which seasonings had been lightly heated, and finally fold a beaten egg into the mixture while heating it in a pan. Cold dishes were called *bawārid*, and were prepared not only from vegetables, but also from meat, fowl and fish. Frequent ingredients of vegetable *bawārid* were vinegar and a sweetening agent, sugar or honey.

Fish dishes were popular as well. Rather than being stewed, they were generally prepared in a (frying) pan. Fresh fish rather than salted or dried fish appear to be the norm; it was recommended washing the fish thoroughly first, including scaling and gutting, lightly flouring and then frying it. The dish might be simple, prepared for example with pepper, garlic, finely chopped fresh coriander and onion cooked into a kind of sauce which was served over the fish at table. Or else the cleaned fish could be filled and covered with a highly seasoned pasty stuffing and baked slowly in the communal oven.

The cereals wheat, barley and rice were probably common to the tables of the urban leisure class and poor alike. The difference between them was that the daily bread of poor was made from inferior quality wheat or other cereals while in times of real hardship, "secondary grains" such as pulses and nuts (acorn and chestnut) had to suffice. The well-to-do had access to the finest wheat for even their plainest loaf; the same kitchen could also produce "glass-bread" a loaf baked in a thin glass mould which was broken upon completion of the baking. Wheat flour was also used to prepare many varieties of pastry and sweetmeats.

The culinary manuals include not only preparations for immediate consumption. The preservation of foodstuffs by pickling made mealtime planning more flexible. A preparation called *ḥallām* describes the steps for slaughtering either a kid or calf and boiling the jointed carcass in vinegar until cooked; the meat was then soused overnight in a mixture of vinegar, cinnamon, galingal, thyme, celery, quince, citron, and salt and then stored in glass or earthenware vessels. Again, chicken lightly boiled whole in water, salt and

oil was then jointed and the portions placed in jars filled with vinegar and seasonings; when ready for use it was fried in oil and served. Vinegar, which was genuine *vin aigre*, was also the preserving agent for a wide variety of vegetable *mukhallalāt* which included pickled onions, capers, cucumber, turnip, garlic, egg-plant and mint. These dishes were offered during meals to "cleanse the palate of greasiness, to appetize, to assist the digestion, and to stimulate the banqueter" (A.J. Arberry (tr.) *A Baghdad cookery book*, in *IC*, xiii [1939], 205).

Another variety of relish or condiment was called *kawāmikh*. They may have been served, several at a time, in small bowls into which bread or morsels of food could be dipped. Certain kinds of *kāmakh* or *kāmakh* juice (*mā' kāmakh*) were added to the pot as seasoning during cooking. One of the most important of this class of condiment was *murrī*, a cereal-based preparation often mistakenly referred to as *garum*, the fish-based condiment of the classical world (D. Waines, *Murrī: the tale of a condiment*, in *al-Qanṭara*, xii, [1991], 371-88). It required a long, complicated process which took some three months from the end of March when preparation commenced. The condiment could then be stored for future use; shorter methods lasting only two days were also known which could have been employed the year round.

Activities in the mediaeval kitchen were not merely concerned with the preparation of food for pleasure but also with matters of bodily equipoise (see R. Kuhne Brabant, *Un tratado inedito de dietetica de al-Razi*, in *Anaquel de estudios arabes*, ii [1991], 35-55). Recipes for main dishes as discussed above often add a brief note as to its benefit for the régime and hygiene. One dish might be recommended to stimulate the appetite and strengthen the stomach, another for cooling the body. A certain class of meatless dish called *muzawwar* was identified for its aid to those with fever (D. Waines and M. Marín, *Muzawwar: counterfeit fare for fasts and fevers*, in *Isl.*, lxix [1992], 289-301). Moreover, other preparations were intended more directly to alleviate the consequences of over-indulgence of food, as well as to stimulate other bodily functions and desires; these included such "home remedies" as electuaries, stomachics and medicinal powders and syrups, all prepared in the kitchen for immediate or future use.

Finally, a word on "forbidden" beverages (*sharāb muskir*). Explicit religious injunctions notwithstanding, intoxicating beverages were consumed at every level of society, although never by those who strictly observed the *sharī'a* code. Recipes are found in the cookbooks for a barley beer called *fukkā'* which was simply and cheaply made; fermentation was achieved by placing the barley wort in a skin container and leaving it for two days so that it was ready for drinking on the third. Moreover, wine (*nabīdh* [*q.v.*]) was made in fermented and unfermented varieties. Some medical writers noted the medicinal benefits of *sharāb muskir*, although they warned against its possible addictive qualities or even shorter term dangers.

This brief survey of operations in the domestic kitchens of the urban leisure classes has covered the period from about the 3rd/9th to 8th/14th centuries. The major innovation of this "high cooking tradition" was in the collection, transformation, elaboration of and experimentation with hundreds of traditional, local, regional dishes within a dynamic cosmopolitan context. Although the culinary manuals are a rich resource for the study of this aspect of domestic life, they still do not yield answers to all a historian's questions. While the names of two cooks, one male the other female, are known to have held honourable positions in 'Abbāsid court circles, one would like to know much more about those who performed the myriad operations in this, the most important space of the domestic household, the kitchen; but see further ṬABBĀKH.

Bibliography: In addition to works cited in the article, the following items have been selected which deal with cooking activities in the broadest sense. The most important primary sources are A. Huici Miranda (ed.), *La cocina hispano-magrebi en la época almohade según un manuscrito anónimo*, Madrid 1965; *Faḍālat al-khiwān fī ṭayyibāt al-ṭa'ām wa 'l-alwān*, ed. M. Benchekroun, Beirut 1984; Ibn Sayyār al-Warrāḳ, *K. al-Ṭabīkh*, ed. K. Öhrnberg and S. Mroueh, Helsinki 1987; Ibn al-'Adīm, *al-Wuṣla ilā 'l-ḥabīb fī waṣf al-ṭayyibāt wa 'l-ṭīb*, ed. S. Maḥdjūb and D. al-Khaṭīb, Aleppo 1988; *Kanz al-fawā'id fī tanwī' al-mawā'id*, ed. M. Marín and D. Waines, Beirut-Stuttgart 1993. Two recent anthologies of essays are *La alimentación e las culturas islámicas*, ed. M. Marín & D. Waines, Madrid 1994; *Culinary cultures of the Middle East*, ed. S. Zubaida and R. Tapper, London 1994; see also M. Rodinson, *Recherches sur les documents arabes relatifs à la cuisine*, in *REI* (1949), 95-165, and E. Garcia Sanchez, *Fuentes para el estudio de la alimentación en la Andalucia Islámica*, in *Actas del XII Congreso de la U.E.A.I.*, Malaga 1984, 269-88. (D. WAINES)

ṬABL, the generic name for any instrument of the drum family. Islamic tradition attributes its "invention" to Tūbal b. Lamak (al-Mas'ūdī, *Murūdj*, viii, 88-9 = § 3213, and see LAMAK), whilst another piece of gossip says that Ismā'īl, the founder of the *musta'riba* Arabs [*q.v.*], was the first to sound it (Ewliyā Čelebi, *Travels*, i/2, 239). The word is connected with Aramaic *tablā*. According to al-Fayyūmī (733/1333-4), the term *ṭabl* was applied to a drum with a single membrane (*djild*) as well as to that with two membranes. This, however, does not include the *duff* or tambourine [*q.v.*]. It is certainly an ancient Middle Eastern instrument, and players of large and small kettle drums appear on the Sāsānid period Ṭāḳ-i Bustān reliefs (near Kirmānshāh), including as part of a military band, what in Islamic times would have been called a *ṭabl-khāna* [*q.v.*] (H.G. Farmer, *The instruments of music on the Ṭāq-i Bustān bas-reliefs*, in *JRAS* [1938], 404-5, 410).

The *ṭabl* family may be divided into two classes, viz.: 1. the cylinder type; and 2. the bowl type.

1. The cylinder type. There are two kinds of cylinder drums, viz.: *a*. the single membrane; and *b*. the double membrane. Of the former we have several shapes, although generally the body (*djism*) is either cylindrical or goblet-shaped. The earliest name for the cylindrical drum with a single membrane would appear to be *kabar* which we find mentioned as early as Ya'ḳūb al-Mādjishūn (d. 164/780-1) (Ibn Khallikān, tr. de Slane, iv, 270, ed. 'Abbās, vi, 376). It is identified by al-Mufaḍḍal b. Salama (d. 308/920) as a drum (*Ancient Arabian musical instruments as described by al-Mufaḍḍal ibn Salama (9th century) in the unique Istanbul manuscript of the* Kitāb al-malāhī *in the handwriting of Yāqūt al-Musta'ṣimī* (*d. 1298*). Text in facsimile and translation edited with notes by James Robson (= Collection of Oriental Writers on Music, ed. H.G. Farmer, iv), Glasgow 1938, 17: "... the *ṭabl*, which is the *kabar* and the *kūba*..."), and Ibn Khallikan (tr. de Slane, iv, 272, ed. 'Abbās, vi, 378) affirms that it had one membrane. The Arabic lexicographers confuse this word (cf. also the *Glossarium Latino-Arabicum*, 85, 562,

and Farmer, *Studies in oriental musical instruments*, 59; see now *WKAS*, i, 24b). The name was probably derived from the Ethiopic *kabaro*, and we know that the Arabs borrowed at least one drum from Abyssinia (Lane, *Lexicon*, col. 2013). A more definite clue to the identity of this particular kind of drum is to be found in al-Shaḳundī (d. 629/1231-2 [*q.v.*]), where an instrument called the *aḳwāl* is mentioned (al-Maḳḳarī, *Analectes*, ii, 144). It still exists in the Maghrib. Dozy (*Supplément*, i, 30) says that it is a Berber word and Meaken writes it *agwāl*. It is delineated by Höst who, however, gives it as a goblet-shaped drum and calls it the *akwāl* (*Nachrichten von Marokos und Fes*, Copenhagen 1781, 262, tab. xxxi, 9). The *aḳwāl/agwāl* is also known in Algeria as the *gullāl* and it is generally about 60 cm long. In Tripolitania, a similar instrument called the *tabdaba* is used among the folk (Delphin and Guin, *Notes sur la poésie et de la musique arabes*, Paris 1886, 39; Lavignac, *Encycl. de la musique*, 2794, 2932).

The goblet-shaped instrument may have been the *dirrīdj* mentioned by earlier Arabic writers such as al-Mufaḍḍal b. Salama (*op. cit.*, fol. 21), although he thought that it was a pandore (*ṭunbūr*), as do many of the Arabic lexicographers. That it was a drum we know from al-Maydānī (d. 518/1124). According to Ibn Manẓūr (d. 711/1311), the proper vocalisation is *durraydj*, and to-day it is this name, with colloquial variants, which is heard in the Maghrib (Crosby Brown, *Cat. of the Crosby Brown collection of musical instruments*, New York, iii, 51, 53: *AM*, xx, 239). East of Morocco, the instrument has come to have a different name. In Algeria, Tunisia, and Tripolitania, it has long been called the *darbūka* (Salvador-Daniel, *La musique arabe*, Paris 1879, 79; Christianowitsch, *Esquisse historique de la musique arabe*, Paris, 31; Delphin and Guin, 43; Laffage, *La musique arabe*, Tunis, vi, xxxii; Lavignac, 2935), whilst in Egypt and Syria it carries the name *darbukka* [*q.v.*], *darabukka, dirbakka, darābukka*, or *ḍarābukka* (Villoteau, *Description de l'Egypte. Etat moderne*, i, 996; Lane, *Modern Egyptians*, ch. xviii; Darwīsh Muḥammad, *Ṣafā' al-awḳāt*, Cairo, 13; El-Hefny, *Congrès de musique arabe*, Cairo, 660; H. Hickmann, *La daraboukkah*, in *Bull. de l'Inst. de l'Egypte*, xxxiii [1952]). For illustrations of both these instruments, see the authorities quoted above, whilst specimens may be found in most museums, notably Paris (nos. 954-7, 1457), Brussels (nos. 112, 330-4, 680), and New York (nos 335, 345, etc.). In some parts, the *darbūka* is known as the *ṭabla* (Farmer, *Studies*, i, 86).

In Persia, the instrument is known as the *dunbak* or *tanbak*, although wrongly registered by lexicographers as a bagpipe. See Advielle, *La musique chez les Persans*, Paris, 13, and pl.; Kaempfer, *Amoenitatum exoticarum ... fasciculi 5*, Lemgoviae 1716, 742, fig. 6; Lavignac, 3076.

The double-membrane drum is also found in several shapes. We read of the *kūba*, a drum shaped like an hour-glass which was forbidden to be used by Muslims, as early as ʿAbd Allāh b. ʿUmar (d. 18/639) (see *WKAS*, i, 420b-421a). It is condemned by several legists, including Ibn Abi 'l-Dunyā (d. 281/894) because of its association with people of low character (*Dhamm al-malāhī*, ed. and tr. J. Robson, London 1938, ed. M. ʿAbd al-Ḳādir, Cairo 1987, 55, 59). The Ikhwān al-Ṣafā' (10th century) call it the *ṭabl al-mukhannith* (ed. Bombay, i, 91). According to al-Djawharī (d. *ca.* 392/1002) it was "a small drum, slender in the middle", although al-Ghazālī says that it was "long" (*Iḥyā'*, Cairo 1908, ii, 186). Mediaeval designs of the *kūba* may be seen in the 6th/12th-century woodwork at Palermo (*BZ*, ii, 384), a 7th/13th-century bowl from al-Mawṣil (Victoria and Albert Museum, London 1856, 2734/56), and in a ms. of al-Djazarī (dated 755/1354) at Istanbul (Martin, *Miniature painting and painters of Persia*, ii, pl. 2). The *ṭabl* of which we read so frequently in the *Kitāb al-Aghānī* (ed. Būlāḳ, viii, 161, ix, 162) as a rhythmic instrument in concert music, was probably either the *kūba* or *dirrīdj* (= *darbūka*). It is rarely seen nowadays in the Islamic East, except in India.

The cylindrical or barrel-shaped drum has been more favoured. The former was probably the shape of the early warlike drum of which we read among the ʿAbbāsids in the 3rd/9th century (*Aghānī*, xvi, 139). It is to be seen in several mss. on automata by al-Djazarī dating from the 7th/13th and 8th/14th centuries (Schulz, *Die persisch-islamische Miniaturmalerei*, tab. ii; *The legacy of Islam*, 1st edn., Oxford 1931, fig. 91; D.R. Hill (tr. and comm.), *The Book of knowledge of ingenious devices* (Kitāb fī maʿrifat al-ḥiyal al-handasiyya) *by Ibn al-Razzāz al-Jazarī*, Dordrecht-Boston 1974, 43 (= fig. 34), showing the "water-clock of the drummers" with kettledrum, cylindrical drums (with drumstick, *ṣawladjān*), trumpet and cymbals). This long-bodied cylindrical drum was popular until the beginning of the 19th century and designs may be seen in Höst (tab. xxxi) and Niebuhr (tab. xxvi); Villoteau (*loc. cit.*) calls it the *ṭabl al-turkī*. Since mediaeval times it has been played with a curiously crooked drumstick. By the 18th century, a second percussive implement, a switch, was in use. In modern times, this drum has been superseded by a drum with a shorter body. In early times, this seems to have been known in Persia and Arabic-speaking lands as the *duhul*. It is mentioned by Nāṣir-i Khusraw (d. in the 1070s) as one of the martial instruments of the Fāṭimids (*Safar-nāma*, ed. Schefer, 43, 46, 47), and by al-Ẓāhirī (d. 872/1468) among the Mamlūk sultans (al-Maḳrīzī, *Khiṭaṭ*, i/1, 173-4). That it was different from the *ṭabl* we know from both Nāṣir-i Khusraw and Djalāl al-Dīn Rūmī (*Mathnawī*, tr. R.A. Nicholson, iii, 159). In Egypt of modern times it is known as the *ṭabl al-baladī* (Villoteau, *loc. cit.*; Lane, *op. cit.*, ch. xviii). Specimens may be seen at Brussels (nos. 336, 338, 341) and New York (nos. 417, 1321). Kaempfer (740, fig. 4) calls the Persian cylindrical drum the *danbāl* and delineates it. The *tabīr* of Firdawsī may have been similar. See also the *dhol* of India. The *dāwul* in Turkey is said by Ewliyā Čelebi (*Travels*, i/2, 226) to have been first used by Orkhan (724-61/1324-60), but we know of it in the time of his predecessor ʿOthmān I. The Turks, like the Arabs, used a drumstick (*čangal*) and a switch (*daynak*) to play this drum.

In modern Persia, the *dohol* is a barrel-shaped drum (Advielle, *loc. cit.*; Lavignac, 3076; cf. Kaempfer, 743, fig. 12). The Arabic *ṭabl* or the Persian *tabīr* was the parent of the European *tabel, atabal, tabor, tambour*, etc.

2. The bowl type. This is represented by the kettledrum. Although tradition says that Bābā Sawindīk, the Indian, played the kettledrum (*kūs*, for which see *WKAS*, i, 436a, *naḳḳāra*) in the wars of the Prophet Muḥammad (Ewliyā Čelebi, *loc. cit.*, 226), it is more likely, as Ibn Khaldūn tells us (*Muḳaddima*, ed. Quatremère, ii, 44, tr. Rosenthal, ii, 50) that the Arabs did not use drums in wartime at this period. The early Muslim legists discriminate between the *ṭabl al-ḥarb* (war drum), the *ṭabl al-ḥadjdj* (pilgrimage drum), and the *ṭabl al-lahw* (pastime drum). The first two were allowable but the last was not (al-Ghazālī, *Iḥyā'*, ii, 186). The two former were doubtless identical with the modern *naḳḳāra* and *ṭabl al-shāmī*.

The largest of the kettledrums used by Islamic

peoples was the *kūrgā* which was greatly favoured by the Mongols. It was the royal drum which conveyed commands. The *ṭabl al-kabīr* mentioned by Ibn Baṭṭūṭa (*Riḥla*, ii, 127, tr. Gibb, ii, 343) was doubtless the *kūrgā*. We get an idea of the size of this drum from the *Āʾīn-i Akbarī* (tr. H.G. Blochmann, i, 50-2), where it is nearly the height of a man. Abu 'l-Faḍl ʿAllāmī says here that the *kūrgā* and *damāma* were identical (i, 50), but the *damāma* of India is a much smaller kettledrum (see specimen at New York, 26). ʿAbd al-Razzāḳ al-Samarḳandī (d. 1482) clearly distinguishes between the *kūrgā, damāma* and *naḳḳāra* (*Maṭlaʿ al-saʿdayn*, in *NE*, xiv, 129, 321). See also Farmer, *Studies*, ii, 12-13.

The kettledrum next in size was the *kūs* which, among the Arabs of the 4th/10th century, was the largest of their kettledrums (Ikhwān al-Ṣafāʾ, i, 91). This also was a martial instrument; for its use, see ṬABL-KHĀNA. There is a 7th/13th-century Arabic ms. reproduced by Schulz (*op. cit.*, pl. 8) showing three pairs of *kūsāt*.

The ordinary kettledrum was what the Ikhwān al-Ṣafāʾ call the *ṭabl al-markab* (mounted drum). They say that its tone was softer than that of the *ṭabl al-kūs*. Another early name for this drum was *dabdāb* or *dabdaba*. Later, it came to be known as the *naḳḳāra*, a word, together with the instrument, which was adopted by Europe as the *naker, nacaire*, etc., whilst Persian *ṭinbal* became the European *timbale, tymbala*. For mediaeval designs of the *naḳḳāra*, see Schulz (*op. cit.*, tab. ii), *The legacy of Islam*, 1st edn. (fig. 91), the *Kitāb al-Burhān* (Bodleian ms., Or. 133, fol. 38), and the *Djāmiʿ al-tawārīkh* (Edinburgh University, fols. 54b, 157). See also ṬABL-KHĀNA. Early 19th-century examples are delineated by Villoteau (992-3), whilst actual specimens may be seen at Brussels (no. 335) and New York (no. 1232). For the Turkish *dunbalak* or *ṭablak*, see Farmer, in *JRAS* (1936).

In Turkey, a medium-sized kettledrum is known as the *ḳudūm*, and it is said to have been played at the nuptials of Muḥammad and Khadīdja (Ewliyā Čelebi, i/2, 234). It was to be found in the *darwīsh* communities; for an illustration of Mawlawī/Mewlewī *küdumzen*s or players in these drums, see *Oriens*, xv (1962), pl. viii.

The smallest of the kettledrums is the *nuḳayra* or *ṭubayla*, which belongs to concert music. We read of the former among the ʿAbbādids (5th/11th century) of Moorish Spain (Dozy, *Historia Abbadidorum*, ii, 243), and in the *Vocabulista Aravigo* (1505) the word equates with the Spanish *atabalia*. In Russell's *Aleppo* (1794), there is a design (pl. iv) of the *naḳḳāra* (= *nuḳayra*), whilst another may be found in Höst (tab. xxxi, 10) and Christianowitsch (32, pl. 12), the latter being copied by Fétis (*Hist. générale de la musique*, Paris, ii, 163) and Lavignac (2793).

Villoteau, speaking of Egypt at the close of the 18th century, mentions a number of small hand kettledrums but, with the exception of one called *ṭabl-i bāz*, most of these names are unknown today (Villoteau, 994). It was, obviously, a drum used for decoying birds or recalling the hawk (*bāz*), but by this time it had become the favourite instrument of the criers at Ramaḍān and the *darwīsh* fraternities, and was actually known as the *ṭablat al-musaḥḥira*. There are specimens at Brussels (no. 329) and New York (nos. 421, 2661). It was held in one hand and beaten with a short stick held in the other hand. A slightly larger instrument was the *ṭabl al-midjrī* (sic). This was beaten with a leathern strap.

Shallower types of kettledrums were the *ṭabl al-shāmī* and the *ḳaṣʿa*. The former was probably the *ṭabl al-ḥadjdj* so frequently quoted by the legists. It was suspended from the neck, the head or membrane being perpendicular. There is a representation (10th/16th century) of pilgrims with these drums in a Bodleian Library ms. (Or. 430, fol. 15). For early 19th-century designs and details, see Villoteau (992-4) and Lane (*Modern Egyptians*, chs. ii, vi, xviii). There are specimens at New York (nos. 386, 494). The *ḳaṣʿa* of the Maghrib today has a flat bottom like a dish (*ḳaṣʿa*), hence its name. It is played upon with rods called *maṭariḳ* (Delphin and Guin, 44; Lavignac, 2932); in the past it was a martial instrument.

ṬABL-KHĀNA, NAḲḲĀR-KHĀNA, NAḲḲĀRA-KHĀNA, NAWBA-KHĀNA, literally the "Drum House", "Kettledrum House", "Military Band House", the name given in Islamic lands to the military band and its quarters in camp or town. These names are derived from the drums (*ṭabl, naḳḳāra*) which formed the chief instruments of the military band, and from the name given to the special type of music (*nawba*) performed by this band. Originally, the *naḳḳāra-khāna* or *ṭabl-khāna* consisted of drums only, and in some instances of particular kinds of drums. This we know from several authorities. Ibn Taghrībirdī (d. 815/1412) speaks of the "kettledrums (*dabādib*), i.e. the *ṭabl-khāna*". Al-Ẓāhirī (d. 872/1468) alludes to "three sets (*aḥmāl*) of *ṭabl-khāna* and two trumpets". Ibn Iyās (d. *ca.* 930/1524) has a reference to "the *ṭabl-khāna* and the great kettledrums (*kūsāt*)" (al-Maḳrīzī, *Hist. des Sultans Mamlouks de l'Egypte*, tr. Quatremère, Paris 1845, ii/1, 123, ii/2, 268, al-Khazradjī, *The pearl-strings*, *GMS*, London 1906-18, iii/5, 135, 229). As for the *nawba*, this was a special piece of music, which later comprised several movements (*fuṣūl*), performed by the *naḳḳāra-khāna* at the five hours of prayer [see ṢALĀT] by royalty, but at the three obligatory hours of prayer by dignatories of lesser rank. The sounding of the *nawba* was not only jealously guarded as one of the attributes of sovereignty, but its performance necessitated respectful silence from auditors (Ibn Baṭṭūṭa, *Riḥla*, ii, 188, tr. Gibb, ii, 377-8; von Hammer, *Hist. de l'Empire Ottoman*, Paris 1835, i, 75). The custom of the *nawba* is said to have been handed down from the days of Alexander the Great (al-Nasawī, *Hist. du Sultan Djelal ad-Din Mankobirti*, Paris 1895, 21).

The Ancients. Instruments of percussion appear to have been specially favoured by peoples of the Orient for their martial display from time immemorial. According to the Greeks, who only used the trumpet and flute in war, instruments of percussion belonged to the barbarians. Yet in the Syriac version of Pseudo-Callesthenes of the *History of Alexander the Great* (tr. Budge, 96) we find that the world-conqueror added drums to his martial music. If we turn to the Pseudo-Aristotelian Arabic treatise the *Kitāb al-Siyāsa* (3rd-4th/8th-9th century) and the contemporary works of Mūrisṭus [*q.v.*], also in Arabic, it would seem that Alexander also introduced a monster organ (*urghanūn*) of the hydraulis type as a means of signalling to his troops and to spread dismay in the ranks of the enemy (Farmer, *The organ of the Ancients*, London 1931, 119-38). Strabo (1st century B.C.) says that the youth of

Persia were called to arms by the sound of brazen instruments, and that the kings of India moved in public to the din of drums and cymbals (*Geogr.*, xv.1, 55, xv.3, 18). Plutarch (d. *ca.* A.D. 120) speaks of the Parthians using kettledrums to frighten the enemy (Crassus, xxiii, 10). The pages of the *Sh̲āh-nāma* of Firdawsī (d. 411/1020) abound with details of the military music of Persia of old. Here we read of instruments of the horn and trumpet type (*karranāy, sh̲aypūr, būḳ*), the reed and brazen-pipe (*nāy, ruwīn nāy*), the drum and great kettledrum (*tabīra, kūs*), as well as the Indian bell, sonette and cymbal (*hindī darāy, zang, sind̲j̲*).

The Arabs of the D̲j̲āhiliyya. Clement of Alexandria (2nd century A.D.) says that the Arabs of pre-Islamic days used cymbals in war (*Paedagogus*), but Arabic authors only mention the tambourine (*duff* [*q.v.*]) of the matrons and singing-girls (*ḳiyān* [see ḲAYNA]) in battle. This is what we see at Uḥud and Badr, although it is highly probable that the reed-pipe (*mizmār* [*q.v.*]) was also an instrument of martial music in these days (Farmer, *Hist. of Arabian music*, London 1929, 10-11; *Kitāb al-Ag̲h̲ānī*, ed. Būlāḳ, ii, 172). That highly imaginative Turkish writer, Ewliyā Čelebi (d. *ca.* 1091/1680) avers that in the time of Muḥammad it was neither the trumpet nor the flute that sounded in his wars but only the great kettledrum (*kūs; Travels*, tr. von Hammer, London 1846, i/2, 194). On the other hand, Ibn K̲h̲aldūn (d. 808/1406) says that the early Muslims used neither horns (*abwāḳ*) nor drums (*ṭubūl*; ed. Quatremère, ii, 44, tr. Rosenthal, ii, 50). It is certain that, although the Arabs used the horn (*būḳ* [*q.v.*]) in civil life, it was not a military instrument with them since it is specially mentioned in the 3rd/9th century as being used by Christians (al-D̲j̲awharī, *Ṣaḥāḥ*).

Umayyads and ʿAbbāsids. Under the Umayyads, the drum and kettledrum appear to have been introduced into martial music and served as better accompaniments to the reed-pipe (*mizmār*) than the tambourine (*duff*; Seyyid Ameer Ali, *A short history of the Saracens*, London 1899, 65). Persian influences, which so strongly asserted themselves under the early ʿAbbāsids led to the Persian reed-pipe (*surnāy*) being adopted in place of the more primitive *mizmār* (*Ag̲h̲ānī*, xvi, 139, but read سرناى instead of سرناب). With the Persians the *surnāy* (= *suryānay*) went with the drum (*ṭabl*; al-Masʿūdī, *Murūd̲j̲*, viii, 90 = § 3214). By the 4th/10th century, several types of kettledrums were in use in martial array: the *ṭabl al-markab* or "mounted drum" which was probably identical with the *dabdāb* or *dabdaba* and the *naḳḳāra*, and a larger type, the great kettledrum called the *kūs* (*Rasāʾil Ik̲h̲wān al-Ṣafāʾ*, ed. Bombay, i, 91). These were used in pairs and were carried on either side of a horse's or camel's neck. The *būḳ* or horn had also been adopted into military music by this time. Although originally fashioned out of the natural horn of an animal like the more primitive *ḳarn*, it came to be made in metal, and Ewliyā Čelebi says that the metal form (*pirind̲j̲ būrū*) was introduced by the Sald̲j̲ūḳid Alp Arslan (d. 465/1073; *Travels*, i/2, 238). The trumpet proper was the *nafīr*. This was first known as the *būḳ al-nafīr* or "military *būḳ*" (Ibn al-Ṭiḳṭaḳā, *al-Fak̲h̲rī*, ed. Derenbourg 30).

The Buwayhids. Up to the 4th/10th century, the *naḳḳāra-k̲h̲āna* or *ṭabl-k̲h̲āna*, which by this time comprised kettledrums, drums, trumpets, horns and reed-pipes, was part of the insignia (*marātib*) of the caliph and reserved, with the *nawba*, for the Commander of the Faithful alone (Ibn K̲h̲aldūn, ed. Quatremère, ii, 42, tr. Rosenthal, ii, 48; Quatremère, *Hist. des Mongols*, 418). With the decline of the caliphate and the rise of petty rulers there came demands from all and sundry for the privilege of the *naḳḳāra-k̲h̲āna* and the *nawba*. Thus the custom arose that, when the caliph conferred regality on subject rulers, a drum or kettledrum usually accompanied the other patents or symbols of authority sent by the caliph, such as a diploma, banner, or standard; the type of instrument, the number, and the specific use of the *nawba*, being determined by the rank of the recipient. Muʿizz al-Dawla (d. 356/967), the Buwayhid *amīr*, sought from the caliph al-Muṭīʿ the privilege of the *naḳḳāra-k̲h̲āna*, but was refused. Yet in 355/966 this caliph allowed a commander to sound kettledrums (*dabādib*) during a campaign, an honour which the latter appears to have retained. It is said, however, that the first prince to obtain these coveted musical honours was the *amīr* ʿAḍud al-Dawla (d. 372/983). He was granted the *naḳḳāra-k̲h̲āna* by the caliph al-Ṭāʾiʿ in 368/979, but he was only allowed the three-fold *nawba* at the obligatory hours of prayer, the five-fold *nawba* being reserved for the caliph. One of the Buwayhids, Abū Kālīd̲j̲ār (d. 440/1048), assumed the five-fold honour in Bag̲h̲dād and although asked by the caliph to content himself with the three-fold one, he refused. Yet the caliph had already permitted others to have or assume this privilege. In the year 390/1000, under the caliph al-Ḳādir, a minister was allowed to beat a drum (*ṭabl*) for the five-fold *nawba*, and in 408/1017, Sulṭān al-Dawla was allowed or had assumed a similar honour (Quatremère, *op. cit.*, 418; Margoliouth, *The eclipse of the ʿAbbāsid caliphate*, ii, 264, 396, iii, 345; H. Busse, *Chalif und Grosskönig, die Buyiden im Iraq* (*945-1055*), Beirut-Wiesbaden 1969, 186-8).

The Sald̲j̲ūḳids. Considerable extensions of the privileges of the *naḳḳāra-k̲h̲āna* were made under these rulers. The caliph al-Muḳtadī (d. 487/1094), in appointing a governor to a province, conferred the great kettledrums (*kūsāt*) on him, with permission to sound the five-fold *nawba* within his province, but only the three-fold one outside of this. When the two Sald̲j̲ūḳid princes Berk-yaruḳ and Muḥammad took the titles of *sulṭān* and *malik* respectively in 494/1101, they adopted the five-fold and three-fold *nawba* with these respective ranks. Both Alp Arslan and the Eldigüzid Ḳïzïl Arslan (d. 587/1191) used the five-fold honour (Ibn al-D̲j̲awzī, *Muntaẓam*; al-Bundārī, *Zubda*).

The Arabs in Islamic times. In Yaman in the 3rd/9th century the Ḳarmaṭī al-Manṣūr b. Ḥasan had thirty drums (*ṭubūl*), and Saʿīd al-Aḥwal (d. 482/1089) of the Nad̲j̲āḥids [*q.v.*] had horns (*būḳāt*) and drums (*ṭubūl*). Later, we read of the *ṭabl-k̲h̲āna* and the great kettledrums (*kūsāt*) and kettledrums (*naḳḳārāt*; H.C. Kay, *Yaman, its early mediaeval history*, London 1892, 84; al-K̲h̲azrad̲j̲ī, *op. cit.*, iii/1, 103, 160, iii/2, 3, 75, iii/3, 52). At Ẓufār in ʿUmān in the 8th/14th century the sultan had reed-pipes (*surnāyāt*), horns (*būḳāt*), trumpets (*anfār*), and drums (*ṭubūl*) at his gate. At al-Ḥilla, the military music consisted of horns (*būḳāt*), trumpets (*anfār*), and drums (*ṭubūl*) (Ibn Baṭṭūṭa, ii, 98, 212, tr. Gibb, ii, 325, 390). At the beginning of the 5th/11th century, the ʿUḳaylids favoured the horn (*būḳ*) and kettledrum (*dabdāb*) in their martial music (*JRAS* [1901], 755, 785), whilst elsewhere we find a small shallow kettledrum called the *ḳaṣʿa* in use. In the *Alf layla wa-layla*, the most imposing martial musical display is made up of reed-pipes (*zumūr*), horns (*būḳāt*), trumpets (*anfār*), drums (*ṭubūl*), and cymbals (*kāsāt, kuʾūs*).

Egypt. The Fāṭimids dispensed musical honours upon subject rulers on very much the same lines as the caliphs of Bag̲h̲dād (D̲j̲ūzd̲j̲ānī, *Ṭabaḳāt-i Nāṣirī*, tr.

Raverty, London 1881, ii, 616; Badāʾūnī, *Muntakhab al-tawārīkh*, tr. Lowe and Ranking, Calcutta 1884-98, i, 94, 310). When al-ʿAzīz (d. 386/996) marched into Syria he had five hundred horns (*abwāḳ*) sounding (Ibn Khaldūn, ii, 45, tr. Rosenthal, ii, 51). Nāṣir-i Khusraw describes the Fāṭimid military band (*ca.* 438/1047), and mentions that it comprised such instruments as the horn (*būḳ*), reed-pipe (*surnā*), two kinds of drum (*ṭabl* and *duhul*), the latter a Persian variety, kettledrum (*kūs*) and cymbal (*kāsa; Safar-nāma*, ed. Schefer, Paris 1881, 43, 46, 47). In the year 567/1172, when Nūr al-Dīn and Ṣalāḥ al-Dīn were together at Damascus, the former, who was the suzerain of the latter, sounded the five-fold *nawba*, whilst the latter contented himself with the three-fold one (Quatremère, *Hist. des Mongols*, 419). Under the Mamlūk sultans, the military band was organised on more elaborate lines and, similar to the practice in ʿIrāḳ and al-Maghrib, it was linked up with the banners, standards and similar emblems of authority, as Ibn Iyās informs us (al-Maḳrīzī, i/1, 226). According to al-Ẓāhirī, the band of sultan Baybars I (d. 676/1277) comprised forty great kettledrums (*kūsāt*), four drums (*duhul*), four reed-pipes (*zumūr*), and twenty trumpets (*anfār*). He says that the *duhul* and *zumūr* were of recent adoption, but we have seen them in use under the Fāṭimids, the *zamr* and *surnā* both being reed-pipes. Ibn Taghrībirdī says that under Ḳalāwūn (d. 678/1290) a *wazīr* possessed a *ṭabl-khāna*, and we read of a similar privilege in 821/1418, although we are told that the custom was not usual. Ibn Khaldūn states that the great kettledrums (*kūsāt*) were allowed to each *amīr* and general (ii, 46, tr. Rosenthal, ii, 52), yet according to Ibn Taghrībirdī it was only the *umarāʾ* commanding a thousand men who were granted this honour. Among the instruments used in the *ṭabl-khāna* of an *amīr*, says al-Ẓāhirī, were the drum or *duhul* (two), the reed-pipe or *zamr* (two), and the trumpet or *nafīr* (four), but *not* the great kettledrum (*kūs*). An *atābak* was allowed twice this number, whilst an *amīr muḳaddam* was only permitted to have a horn or *būḳ*. By the 9th/15th century, however, an *amīr* of forty cavaliers was permitted to possess a *ṭabl-khāna*, but for a time he was only allowed to sound it when on duty. When the Ottomans conquered Egypt in 923/1517, the bands of the *umarāʾ* were suppressed (Quatremère, in al-Maḳrīzī, i/1, 173-4, i/2, 272). For instruments of martial music in 18th and 19th-century Egypt see Niebuhr, *Voyage en Arabie*, 1776, i, 145-6, tab. xxvi; Villoteau, *Description de l'Egypte. Etat moderne*, fol. ed., i, 701-3, 931-40, 948-9, 976-97 and plates.

The Maghrib. Ibn Khaldūn says that the nomadic Arabs of North Africa employed an improvisator (*munshid*) who sang at the head of the troops just as the Arabs of the Arabian peninsula did in the *Djāhiliyya*. The Almohads suppressed bands used by local governors, and reserved the use of the *ṭabl-khāna* for royalty alone (Ibn Khaldūn, ii, 45-6, tr. Rosenthal, ii, 51-2). This was formed into a separate company with the standards (*bunūd*) which became known as the *sāḳa*. The first Almohad sultan ʿAbd al-Muʾmin (d. 558/1163) had more than two hundred drums (*ṭubūl*) and among them were such large instruments that the ground quaked when they were played (al-Marrākushī, *Hist. des Almohades*, ed. Dozy, Leiden 1881, 165). The Marīnids possessed a large drum of this type, and this passed into the possession of the Saʿdian dynasty. It was an enormous instrument and could be heard a great distance (*Nuzhat al-hādī*, ed. Houdas, Paris 1888-9, 117). For designs of 18th-century instruments of martial music in Morocco, see G. Höst, *Nachrichten von Marokos und Fes*, 1787, tab xxxi, 261.

The Bilād al-Sūdān. In the 8th/14th century, Ibn Baṭṭūṭa was at Mogadishu [see MAḲDISHŪ] in the Eastern Sūdān and heard the *ṭabl-khāna* of the sultan, which comprised reed-pipes (*surnāyāt*), horns (*abwāḳ*), trumpets (*anfār*), and drums (*aṭbāl*). At Māllī in the Western Sūdān [see MALI], the sultan's military band was made up of horns (*abwāḳ*) and drums (*aṭbāl*), the former being made out of elephant's tusks (ii, 188, iv, 403 tr. Gibb, ii, 377-8, iv, 958). One of the last of the Sonni rulers of the Songhay of Gāo (1335-1493), ʿAlī (d. 1492), used a drum as a symbol of authority. Their successors, the *Askiya* kings (1493-1590), also used the drum, and under the *Askiya* al-Ḥādjdj Muḥammad troops were assembled in 1493 to the beating of the drum (*ṭabl*). In 1500-1, a large trumpet called the *kakaki* was adopted by the cavalry of the Songhay. The *Askiya* Muḥammad Bunkan (d. 1537) invented a horn called the *futurifu*. There was also a drum known as the *gabtanda*, and both this and the *futurifu* were used at Gāo. He fixed the limit outside a town where no drum save the royal drum (*ṭabl al-salṭana*) could be sounded. This royal drum continued to be used until the end of this dynasty. On the Moroccan conquest in 998/1590, and the governorship of the *pashas* in the place of the native kings, a change came in the martial music. Under Pasha Aḥmad al-Khalīfa (1105-6/1694-5), reed-pipes (*ghiyāt*), drums (*aṭbāl*), and other instruments, including the native tambourines (*dufūf al-asākī*), were counted among the martial instruments of the *pasha*'s court. The military music of the Bambara chiefs were horns (*būḳāt*) and tambourines (*dufūf*), and one chief had great horns (*būḳāt al-kibār*) as tall as a man (*Taʾrīkh al-Fattāsh*, ed. Houdas and Delafosse, Paris 1913, 49, 54-5, 70, 84, 153; *Tadhkirat al-nisyān*, ed. Houdas, Paris 1901, 43, 45, 93, 120, 152; *Taʾrīkh al-Sūdān*, ed. Houdas, Paris 1900, 79, 122, 197).

The Il-Khānids. Under the early Khāns, a royal prince was allowed kettledrums and a drum, whilst a *wazīr* had a kettledrum. The commander-in-chief was given drums, and an *amīr* of 10,000 (?) men, as well as tributary princes were allowed a [kettle]drum (d'Ohsson, *Hist. des Mongols*, iii, 581; iv, 96, 187, 566; Howorth, *History of the Mongols*, London 1876-88, iii, 296). Ibn Baṭṭūṭa gives a picturesque account of the military music of the sultan Abū Saʿīd (d. 736/1355) at Baghdād. It consisted of drums [and kettledrums] (*ṭubūl*), trumpets (*anfār*), horns (*būḳāt*), reed-pipes (*surnāyāt*), and singers. According to this writer, the *umarāʾ* had horns (*būḳāt*) as well as drums (*ṭubūl*), and each royal princess (*khātūn*) had a drum, whilst the Il-Khān himself had a special monster kettledrum called by Ibn Baṭṭūṭa the *ṭabl al-kabīr* ("great drum"), but known to the Mughals as the *kūrgā* (ii, 126 tr. Gibb, ii, 342-3). The *kūrgā* was the personal musical emblem of the Il-Khān and at his death it was destroyed, as Rashīd al-Dīn, the historian of the Mongols, has related. In times of mourning, it was also customary to refrain from sounding the *nawba*. This was an old practice which we find as early as the caliph al-Muḳtadī who, when he lost his son Muḥammad in 480/1087, forbade the beating at the hours of prayers (Ibn al-Djawzī, *Muntaẓam*). Similarly, Ṣalāḥ al-Dīn, having suffered a reverse at the hands of the Crusaders, abandoned the *nawba* until he had won a victory (al-Maḳrīzī, *Sulūk*, i, 42). During the Tīmūrid period, according to the apocryphal *Tūzūkāt* ("Institutes"), the military band was carefully regulated. A *beglerbeg* had a kettledrum (*naḳḳāra*) and a horn (*būrghū*: for یورغوی read بورغو), and the *amīr al-umarāʾ* and an

amīr of the four-tailed *tūḳ* had a kettledrum only. A *ming pas͟ha* had a trumpet (*nafīr*), and a *yüz pas͟ha* and *on pas͟ha* a drum (*ṭabl*), whilst an *oymāḳ* (tribal chief) had a horn (*būrg͟hū; Institutes, political and military*, ed. Davy and White, Oxford 1781, 290-2).

In India, the Mug͟hals maintained the *naḳḳāra-k͟hāna* as one of their attributes of sovereignty. Ibn Baṭṭūṭa points out that when the Medinan *s͟harīf* Abū G͟hurra visited India he caused great consternation by his use of drums (*ṭubūl*) and trumpets (*anfār*) because here, unlike ʿIrāḳ, Egypt or Syria, nobody but the king could use the *naḳḳāra-k͟hāna* (i, 422-4, tr. Gibb, i, 259-62). Al-ʿUmarī (d. 750/1349), in his *Masālik al-abṣār*, speaks of the five-fold *nawba* of the sultan of Dihlī being played by two hundred pairs of kettledrums (*naḳḳārāt*), forty pairs of great kettledrums (*kūsāt al-kibār*), twenty horns (*būḳāt*), and ten pairs of cymbals (*ṣunūdj*; see Quatremère, in *NE*, xiii, 189). The *naḳḳār-k͟hāna* of Akbar the Great (d. 1014/1605) is described by Abu 'l-Faḍl ʿAllamī. It was made up of the monster kettledrum called the *kuwargā* or *kūrgā* (about 18 pairs), the kettledrum or *naḳḳāra* (about 20 pairs), the drum or *duhul* (four), the reed-pipe or *surnā* (nine, both Indian and Persian types), the large trumpet known as the *ḳarranā* or *ḳarnā* (four or more), the trumpet or *nafīr* (Indian, Persian and European types), the horn or *sing* (two) and the cymbals or *ṣindj* (three pairs; *Āʾīn-i Akbarī*, tr. H.G. Blochmann, Calcutta 1873-94, i, 50-2). A description of the *nawba* is also given in this latter work. By this time, kettledrums were sometimes conferred on high civil or military functionaries, but the latter had to be of the rank of two thousand *suwārs* at least, and they could not be sounded in the presence of the emperor nor within a certain distance from his residence. In conferring this privilege, the recipient had miniature drums placed around his neck (Thorn, *Memoir of a war in India*, 1818, 356; *JASB* [1879], 161). For other details of the *naḳḳāra-k͟hāna* of the 18th century, see F. Bernier, *Travels in the Mogul Empire 1665-1668*, ed. Constable, 363; Manucci, *Storia do Mogor, or Mogul India 1653-1708*, tr. W. Irvine. For later information, see Irvine, *The army of the Indian Moghuls*, London 1903, 30, 196, 207; Day, *The music and musical instruments of Southern India*, London 1891, 96; Meadows-Taylor, in *Proceedings, Royal Irish Academy*, Dublin, ix/1.

The Ottomans. Until comparatively recent times, the Turks made a special feature of their military music which, like the Mongols, they linked up with the insignia of flags, banners and *ṭūg͟hs*. When ʿOt͟hmān I, the founder of the dynasty, was made a prince by the Saldjūḳ sultan of Rūm ʿAlāʾ al-Dīn in 688/1289, he was invested with a drum, flag and *ṭūg͟h*. At the ceremony, absolute silence was insisted on during the performance of the *nawba*. The large kettledrums called *kūsāt* were used in the time of ʿOt͟hmān I (d. 724/1324) when they were carried by elephants on some occasions. Ewliyā Čelebi, who mentions this latter point, gives a few details of the military music of the 11th/17th century (*Travels*, i, 225-6, 236-9). Murād IV (d. 1050/1640) introduced the large trumpet called the *ḳarnā* from Persia. Military music was regularly organised during this century, and Turkish bands comprised the large reed-pipe or *ḳābā zūrnā*, the small reed-pipe or *djura zūrnā*, the flute or *nay*, the big drum or *ḳābā duhul*, the ordinary drum or *duhul*, the great kettledrum or *kūs*, the kettledrum or *naḳḳāra*, the cymbal or *zill* and the "Jingling Johnny" or *čag͟hāna* (Mahillon, *Catalogue... du Musée Instrumental du Conservatoire Royal de Musique de Bruxelles*, 2nd ed., ii, 184). Coeck, in his *Les Mœurs... de Turcz*, 1553, ed. W.S. Maxwell in 1873 as *The Turks in 1553*, gives a woodcut of a party of Janissaries headed by reed-pipes and kettledrums. In the 18th-century, a *pas͟ha* of three tails had the reed-pipe or *zūrnā*, the trumpet or *būrū*, the kettledrum or *naḳḳāra* and the cymbal or *zill* (de Marsigli, *Stato militaire dell' imperio Ottomanno*, 1732, ii, 54-5 (and pl. xviii). The sultan's military band comprised sixty-two players under the command of an officer called the *mīr mihtār ṭabl wa-ʿalam*.

Persia. Before the rise of the Il-K͟hānids, we find how important the *naḳḳāra-k͟hāna* and the *nawba* were in the Middle East. G͟hiyāt͟h al-Dīn the G͟hūrid (d. 599/1203) had great kettledrums (*kūsāt*) of gold which were carried on a chariot (Djūzdjānī, *Ṭabaḳāt-i Nāṣirī*, tr. i, 404). Djalāl al-Dīn Mingburnu (d. 628/1231), the last S͟hāh of K͟hʷārazm, had his *nawba* performed on twenty-seven drums of gold encrusted with precious stones, the players being sons of subject rulers (al-Nasawī, *op. cit.*, 21). A fine pair of bronze kettledrums from Dag͟histān, but probably of Persian manufacture, were exhibited at the International Exhibition of Persian Art, London 1931, but were not catalogued. They belonged to the 6th-7th/12th-13th century. Persian art teems with representations of military bands (see *Bibl.*, Iconography). For the *naḳḳāra-k͟hāna* under the Ṣafawids and Ḳādjārs, and its survival into the Pahlawī period, see NAḲḲĀRA-K͟HĀNA. It would appear that the English trumpet was known in Persia, as it was in Turkey (Ewliyā Čelebi, *Travels*, i/2, 238). The instruments used in Persian military music were the reed-pipe (*surnā* or *surnāy*), the large trumpet (*karnā*), the trumpet (*nafīr*), the horn (*s͟hāk͟h*), the large kettledrum (*kūs*), the kettledrum (*naḳḳāra*), and the drum (*duhul*). For modern instruments, see Laborde, *Essai sur la musique*, 1780; Jourdain, *La Perse...*, 1814; Ouseley, *Travels in various countries in the East*, 1819; Fétis, *Hist. générale de la musique*, ii; Advielle, *La musique chez les Persans en 1885*, 1885; Lavignac, *Encyclopédie de la musique*, 3073-7.

Modern conditions. In almost every Islamic land today, the march of Western civilisation has brought Western ideas of the military band. Brass and reed instruments of European manufacture and of equal temperament are gradually ousting the old conception of the *naḳḳāra-k͟hāna*. Yet in the Middle Ages, it was Europe that borrowed from the Muslims. The *naḳḳāra-k͟hāna* was an indispensable factor in military discipline, exercise, and tactics, as Christian armies soon found out. It was the rallying-point in battle, and the silence of the band was a sign that the banners and standards were in danger. Europe soon adopted the device, and up till the 17th century at least, the colours and the regimental music were kept together (Sir John Fortescue, *History of the British Army*, London 1899, i, 14-15; Farmer, *Rise and development of military music*, London 1912, 13). The West also borrowed the *naḳḳāra* as the *naker*, *nacaire*, etc., the *ṭabl* as the *tabel*, *tabor*, etc., the *ṭinbāl* as the *timbale*, the *ḳasʿa* as the *caisse*, the [*al-*]*būḳ* as the *alboque*, the [*al-*]*nafīr* as the *anafil*, whilst such terms as *fanfare* and *tucket* may possibly be derived from *anfār* and *tuḳā* (see Farmer, *Historical facts for the Arabian musical influence*, London 1930, 18-19). The percussion instruments in the modern military bands of Europe were adopted from Turkey in the early 18th century, and when adopted in orchestral (string band) music they were for a long time called "Turkish Music".

The English "Jingling Johnny" (Fr. *chapeau chinois*, Germ. *Schellenbaum*), with its horse-tails, carries a relic of its Turkish name *čag͟hāna* (> "Johnny"). It has been superseded by the portable glockenspiel. The fanfares

of European military bands may very well be survivals of mediaeval Oriental practice.

Bibliography: The most important references to the *naḳḳāra-khāna* and *nawba* are to be found in the following works: Walley, *Year book of oriental art 1924-1925*, London 1929; al-Maḳrīzī, *Hist. des Sultans Mamlouks*, as cited; Ibn Khaldūn, *Muḳaddima*, as cited; Ibn Faḍl Allāh ʿUmarī, *Masālik al-abṣār fī mamālik al-amṣār*, tr. M. Gaudefroy-Demombynes, *La Syrie des Mamelouks*, Paris 1927, pp. lvi-lviii; Quatremère, *Hist. des Mongols*, as cited; Irvine, *The army of the Indian Moghuls*, as cited; Farmer, *Hist. of Arabian music*, 109, 154, 206-8.—Iconography. Printed books. Many of the numerous works on Oriental art and painting contain pictures of the military band and the *naḳḳāra-khāna* quarters, among them Martin, *The miniature painting and painters of Persia, India and Turkey from the viii*th *to the xviii*th *century*, 1912, ii, pl. 12, 183; P. Brown, *Indian painting under the Mughals*, 136, pls. xxxi, xlvi; N.C. Mehta, *Studies in Indian painting*, Bombay 1926, 93, pl. 38; *Ars Asiatica*, xiii, pls. i, xxix, lv.—Manuscripts. In all the great public collections of illustrated Oriental mss., examples of both the military band and the quarters of the *naḳḳāra-khāna* are to be found.—Instruments. For instruments used in the *naḳḳāra-khāna*, see the catalogues of museum collections mentioned in the *Bibls.* to BŪḲ, MIZMĀR, ṬABL. See also the *Bibl.* to NAḲḲĀRA-KHĀNA.

(H.G. FARMER*)

TABLĪGH [see DAʿWA].

TABLĪGHĪ DJAMĀʿAT (in Arabic, *Djamāʿat al-tablīgh*), a Muslim missionary organisation founded in India around 1927 and established after 1947 throughout the world. The internal designation is *dīnī daʿwat*, religious mission, from the term *daʿwa* [*q.v.*], taken here in the modern sense of a proselytising undertaking.

The movement is founded on five basic principles. The invitation (*daʿwat* in Urdu, for *daʿwa*) to the practice of Islam is not the business of an élite of religious specialists but the individual responsibility of all Muslims who are required to devote time and money to this project. One should not wait for people to come but take the initiative and go to them: preaching is the activity of self-financing itinerant groups, criss-crossing first India and then the world. The mingling of social classes is obligatory within these groups, since they must lodge together in mosques, eat at the same tables and engage in mutual instruction. The primary objective is the deepening of the faith of those who are already Muslims, preachers as well as congregations; proselytism directed towards non-Muslims remains a marginal activity. The promotion of Muslim unity is a fundamental objective; theological controversies are prohibited and the political sympathies of members must not interfere with the activity of what is ostensibly an apolitical movement.

However, the history of the movement is firmly rooted in politics. It was created between 1925 and 1927 at the time when, in British India, the rift between Hindus and Muslims was becoming irreparable, presaging the partition of the sub-continent which took place in 1947 with the creation of Pakistan. Both religious communities felt threatened; each promoted missionary organisations with the object of attracting converts from the other. Numerous Muslim groups committed to propagating the faith (*tablīgh*) were created at this time; linked to political parties they had an ephemeral existence. Muḥammad Ilyās (1885-1944) [see HIND. v, c] founder of the Tablīghī Djamāʿat, guaranteed its survival by avoiding any direct political involvement. Belonging to the scholarly lineage of the Kāndhalawī, he received a religious education in the Deoband [*q.v.*] movement, then lived in seclusion at the Ṣūfī sanctuary of Nizamuddin (Niẓām al-Dīn) at Dihlī; there he created the Tablīghī Djamāʿat with the object of purifying the religious practices of the Mēōs, semi-Islamised peasants from the region of Mēwāt [*q.v.*] to the west of Dihlī. He acquired the support of reformist schools such as Deoband and the *Nadwat al-ʿUlamāʾ* [*q.v.*] and of the merchants of Dihlī; he was thus enabled to establish his movement in northern and central India (United Provinces, Pandjāb, Karachi and Bhopal). In order to avoid political complications, proselytism directed towards non-Muslims was forbidden. His son and successor, Muḥammad Yūsuf (1917-65 [see YŪSUF, MUḤAMMAD]) refused to transfer to Pakistan in 1947 and retained his headquarters or "centre" (*markaz*) at Nizamuddin. He consolidated the Tablīghī Djamāʿat throughout the sub-continent with secondary centres in Pakistan (Raiwind near Lahore) and in East Pakistan, which in 1971 became Bangladesh (Tongi near Ḍhakā). He transformed it into a worldwide movement, extending proselytism to non-Muslims and operating systematically in five continents: the first missions were sent into the Arab states and Turkey between 1946 and 1951; the western countries (Britain, the United States, Japan and continental Europe) were reached between 1950 and 1961; the Afro-Asiatic countries (Black Africa and South East Asia) were explored systematically from 1956 onward; and the movement is currently active in Western China and in former Soviet Central Asia. Although omnipresent at the time of the death of Muḥammad Yūsuf, the Tablīghī Djamāʿat remained little known; it became visible and impossible to ignore under his cousin and successor Inʿām al-Ḥasan (d. 1995) at the end of the 1970s and during the 1980s; since then the annual gatherings (*idjtimāʿ*) held in India, Pakistan and Bangladesh have regularly attracted millions of worshippers; in western countries, the Tablīghī Djamāʿat is often the principal religious organisation for Muslim immigrants, especially in Britain, France, Belgium and Canada. Since the death of Inʿām al-Ḥasan, the movement has been led collectively by two sons of his, Iẓhār al-Ḥasan and Zubayr al-Ḥasan (d. 1996), and one grandson of Muḥammad Yūsuf, Saʿd.

A didactic literature which eschews all theological or political controversy is produced and diffused among the faithful: it constantly extols the merits (*faḍāʾil*) of canonical religious practices and preaches meticulous imitation of the Prophet and of his Companions. It essentially comprises nine monographs written between 1928 and 1964 by a cousin of Muḥammad Ilyās, Muḥammad Zakariyyā Kāndhalawī (1898-1982) who taught *ḥadīth* at Sahāranpūr [*q.v.*] (a subsidiary of Deoband) before moving to Medina, where he died. These monographs are distributed in the original Urdu and in English, French and Arabic translations as a means of reaching all the world's Muslims; most translations are printed in Dihlī. The entire corpus is collected in one or two volumes under the title *Tablīghī niṣāb* (officially translated as *The teachings of Islam/Les enseignements de l'Islam*). These texts are read and reread, memorised and discussed in order to permeate the minds of the faithful and to induce them to conform to the prestigious models of the Prophet and his Companions. The movement also distributes publications of Deoband-affiliated theologians, such as the *Bihishtī zewar* of Ashraf ʿAlī Thānawī (1863-1943 [*q.v.*]); broadly it adheres to the teachings of the Deoband

school, in other words a reformed Ḥanafī Sunnism which eschews the cult of saints but accepts a purified form of Ṣūfism. It enjoins an austere practice of Islam, with female seclusion, and prohibition of music and cinema attendance.

The organisation of the Tablīghī Djamāʿat is centralised and secret. Leadership has been provided since its inception by the dynasty of the Kāndhalawīs, three of whose members have so far been chiefs (*amīr*) of the movement, with the present collective directorship (see above) made up of their offspring; they are based at Nizamuddin (Dihlī), where they are also buried. Here a large building accommodates the central administration of the movement and the publishing house from which its literature is distributed throughout the world. Teams working in other countries are trained at this centre. In each country, the Tablīghī Djamāʿat has a chief who in his turn delegates authority, by stages, to those responsible for provinces, districts and towns... down to the smallest preaching group of some dozen persons, this group too having its own hierarchy. Members are trained and indoctrinated; in order to progress in the organisation they are required to gives pledges of their commitment, devoting a proportion of their time and their income to missionary ventures. Only then are they granted access to the inner circles of the movement, the functioning of which remains closed to outsiders. The financial apparatus of this vast world-wide organisation is also a closely-guarded secret.

This secrecy raises the question of the ultimate political motivations of the Tablīghī Djamāʿat. At its inception it had the form of a clan-based Ṣūfī fraternity; at the end of its universal expansion, its functioning is more closely related to that of a sect. It exercises considerable worldwide power, with its dynamic proselytising, which it conceives as a form of *djihād* [*q.v.*] enabling it to mobilise millions of persons on a global scale. It may be wondered whether one day it will reveal political ambitions which are for the time being disguised.

(M. GABORIEAU)

AL-ṬABRISĪ (Ṭabarsī), ABŪ MANṢŪR AḤMAD B. ʿALĪ B. ABĪ ṬĀLIB, Imāmī scholar and author. (For the vocalisation of his *nisba* see the next entry.) He lived in the first half of the 6th/12th century; the death-date of *ca.* 620/1223 given by some late sources is probably erroneous. Virtually nothing is known of his life; the claim that he hailed from Sāriya [*q.v.*] (Khwānsārī, i, 73), like the claim that he was related to al-Faḍl b. al-Ḥasan al-Ṭabrisī [*q.v.*], appears to be uncorroborated. He studied with Abū Djaʿfar Mahdī b. al-Ḥasan al-Ḥusaynī al-Marʿashī, and Ibn Shahrāshūb [*q.v.*] was among his pupils. Some of his legal opinions are cited by later authors, including al-Shahīd al-Thānī [*q.v.*]. His shrine, in a place named after him and today called Ḳaryat Shaykh Ṭabarsī, is located near Bārfurūsh [*q.v.*] in Māzandarān.

Ibn Shahrāshūb (in his *Maʿālim al-ʿulamāʾ*) lists six works by al-Ṭabrisī: *K. al-Kāfī fi 'l-fiḳh*, *al-Iḥtidjādj*, *Mafākhir (Mufākharat) al-ṭālibiyya*, *Taʾrīkh al-aʾimma*, *Faḍāʾil al-Zahrāʾ* and *K. al-Ṣalāt*. Of these, only the *Iḥtidjādj* (more fully, *al-Iḥtidjādj ʿalā ahl al-ladjādj*) is known to have survived. It opens with the text of debates which the Prophet held with representatives of various religions, but its bulk consists of disputations which the Imāms and a number of their followers held with opponents of the Shīʿa. Also included are rescripts from the Twelfth Imām to various Shīʿī leaders. Al-Ṭabrisī neither identifies his sources nor provides the *isnāds* of the traditions cited, except in

the case of the *Tafsīr* attributed to the Imām al-Ḥasan al-ʿAskarī [*q.v.*] which, al-Ṭabrisī explains, is less well-known than the other sources he uses (*al-Iḥtidjādj*, Beirut 1410/1989, 14; it is cited on pp. 15-55, 235-9, 319-21, 330-1, 445-61). The *Iḥtidjādj* was particularly popular in the Ṣafawid period, when it was twice rendered into Persian (Storey, i/i, 14, 16).

Bibliography: Ibn Shahrāshūb, *Maʿālim al-ʿulamāʾ*, Nadjaf 1380/1961, 25, § 125; idem, *Manāḳib āl Abī Ṭālib*, Beirut 1405/1985, i, 12; ʿAbd Allāh Afandī, *Riyāḍ al-ʿulamāʾ*, Ḳumm 1401/1981, i, 48-51; al-Ḥurr al-ʿĀmilī, *Amal al-āmil*, Nadjaf 1385/1965, ii, 17; Madjlisī, *Biḥār al-anwār*, Tehran 1376-94/1956-74, i, 9, 28; Yūsuf al-Baḥrānī, *Luʾluʾat al-Baḥrayn*, Nadjaf 1386/1966, 341-3; idem, *al-Kashkūl*, Nadjaf 1381/1961, i, 300-3; Tunakābunī, *Ḳiṣaṣ al-ʿulamāʾ*, n. p. 1320, 302; al-Khwānsārī, *Rawḍāt al-djannāt*, Beirut 1411/1991, i, 72-4; al-Nūrī al-Ṭabarsī, *Mustadrak al-wasāʾil*, Tehran 1382-4, iii, 485; Māmaḳānī, *Tanḳīḥ al-maḳāl*, Nadjaf 1349-52/1930-3, § 397; Muḥsin al-Amīn, *Aʿyān al-shīʿa*, ix, Damascus 1357/1938, 97-101 = Beirut 1406/1986, iii, 29-30; Brockelmann, S I, 709; ʿAbbās al-Ḳummī, *Fawāʾid al-raḍawiyya*, Tehran 1367/1948, 19; idem, *al-Kunā wa ʾl-alḳāb*, Beirut 1403/1983, ii, 444-5; Mudarris, *Rayḥānat al-adab*, iii, Tehran 1369, 18; Ismāʿīl al-Baghdādī, *Hadiyyat al-ʿārifīn*, Istanbul 1951-5, i, 91; ʿA.A. Karīmān, *Ṭabrisī wa Madjmaʿ al-bayān*, Tehran 1340-1 *Sh*., i, 180-1, 320-2; Kaḥḥāla, Beirut 1414/1993, i, 203; Ṭihrānī, *al-Thiḳāt al-ʿuyūn fī sādis al-ḳurūn*, Beirut 1392/1972, 11-2. (E. KOHLBERG)

AL-ṬABRISĪ (Ṭabarsī), AMĪN AL-DĪN (or AMĪN AL-ISLĀM) ABŪ ʿALĪ AL-FAḌL B. AL-ḤASAN, Imāmī scholar and author. His *nisba* refers to Ṭabris (Ṭabrish), which is the Arabicised form of Tafrish, a village between Kāshān and Iṣfahān mentioned by ʿAlī b. Zayd al-Bayhaḳī (d. 565/1169-70) as the place of origin of al-Ṭabrisī's family (*Tārīkh-i Bayhaḳ*, 420). The pronunciation Ṭabarsī was first defended by some 17th-century Ṣafawid scholars, who took the *nisba* Ṭ-b-r-s-ī to refer to Ṭabaristān; and in the following two centuries, a number of Shīʿī authors actually called themselves Ṭabarsī (see Karīmān, i, 166-205, 313-33).

Al-Ṭabrisī was born in 470/1077-8 or shortly before and grew up in Khurāsān. Among his masters were ʿAbd al-Djabbār b. ʿAbd Allāh al-Muḳriʾ al-Rāzī (alive in 503/1109-10), who was a student of Abū Djaʿfar al-Ṭūsī, and al-Ṭūsī's son Abū ʿAlī al-Ḥasan b. Muḥammad (alive in 515/1121-2). Some of al-Ṭabrisī's teachers were Sunnīs; they included the Ḳurʾān commentator Maḥmūd b. Ḥamza b. Naṣr al-Kirmānī (d. *ca.* 500/1106-7) and the Shāfiʿī Abu ʾl-Fatḥ ʿUbayd Allāh (in most sources, erroneously, ʿAbd Allāh) b. ʿAbd al-Karīm al-Ḳushayrī (d. 521/1127), a son of the renowned mystic [*q.v.*]. For many years al-Ṭabrisī lived in Mashhad, where he had close ties with the Shīʿī Zubāra family. In 523/1129 he moved to Sabzawār [*q.v.*] and taught in the Madrasat Bāb al-ʿIrāḳ. He died on 10 Dhu ʾl-Ḥidjdja 548/26 February 1154. According to al-Bayhaḳī, his death occurred in Sabzawār, though others maintain that he died in Mashhad; but all agree in any event that he was buried in Mashhad. Ḳuṭb al-Dīn Muḥammad b. al-Ḥusayn al-Bayhaḳī al-Kaydarī (Kaydhurī) (alive in 610/1213-4) refers to al-Ṭabrisī as a martyr (*shahīd*), and this is repeated by some later biographers, who suggest that he was poisoned. His shrine is at Ḳatl-gāh (or Ghuslgāh), said to be the spot where the Imām ʿAlī al-Riḍā [*q.v.*] died (or where his body was washed). Al-Ṭabrisī's students included some of the best-known Imāmī authors of the 6th/12th century, such as Ḳuṭb al-Dīn al-Rāwandī (d. 573/1177-8), Muntadjab al-Dīn (d. *ca.* 585/1189), Ibn Shahrāshūb (d. 588/1192) [*q.v.*] and Shādhān b. Djibrāʾīl al-Ḳummī (alive in 593/1196-7). Al-Ṭabrisī was a prominent jurist, and some of his legal pronouncements are cited by later authorities; but he is not known to have written a work of *fiḳh*. In theology, he broadly followed the Muʿtazilī doctrines adopted by his Imāmī predecessors.

The titles of over 20 works by al-Ṭabrisī are mentioned in the sources (cf. Karīmān, i, 260-90). Among the best-known are:

(i) *K. Madjmaʿ al-bayān li ʿulūm al-Ḳurʾān* (or *fī maʿānī ʾl-Ḳurʾān*/*fī tafsīr al-ḳurʾān*), described by Muntadjab al-Dīn (145) as comprising 10 volumes. It was written for al-Sharīf Djalāl al-Dīn Abū Manṣūr Muḥammad b. Yaḥyā b. Hibat Allāh al-Ḥusaynī al-Zubārī (d. 8 Dhu ʾl-Ḳaʿda 539/2 May 1145) and completed on 15 Dhu ʾl-Ḳaʿda 534/2 July 1140 or 536/11 June 1142; it eventually became one of the most authoritative Imāmī Ḳurʾān commentaries. In the introduction, al-Ṭabrisī acknowledges his debt to al-Ṭūsī's *K. al-Tibyān*, but criticises al-Ṭūsī for including unreliable material and for occasional stylistic infelicities. Al-Ṭabrisī's method is to take up one group of verses at a time and discuss *ḳirāʾāt*, language and grammar before providing a detailed commentary on the text, based on both Sunnī and Shīʿī sources and incorporating his own views.

(ii) *al-Kāfī al-shāfī min kitāb al-kashshāf*, a one-volume Ḳurʾān commentary also known as *al-Tafsīr al-wadjīz*. As its title suggests, it is an abridgement of al-Zamakhsharī's *Kashshāf*—a work which al-Ṭabrisī came to know and admire after completing the *Madjmaʿ al-bayān*. The *Kāfī* was still available to ʿAlī al-Karakī [*q.v.*] (see al-Madjlisī, *Biḥār al-anwār*, cviii, 48).

(iii) *Djawāmiʿ al-djāmiʿ*. This 4-volume work, also known as *al-Tafsīr al-wasīṭ*, was the last to be written of the author's three Ḳurʾān commentaries; it was composed at the request of al-Ṭabrisī's son al-Ḥasan and completed in a single year, on 24 Muḥarram 543/14 June 1148. The material in the *Djawāmiʿ* is culled from both the *Madjmaʿ al-bayān* and the *Kāfī*.

(iv) *Iʿlām al-warā bi-aʿlām al-hudā*, written for the Ispahbadī ʿAlāʾ al-Dawla ʿAlī b. Shahriyār b. Ḳārin (r. 511-34/1117-40) [see BĀWAND]. It comprises biographies of the Prophet, of Fāṭima and of the Imāms, and is based on a wealth of Sunnī and Shīʿī sources. This work, under its alternative title *Rabīʿ al-shīʿa*, was on occasion erroneously attributed to Raḍī al-Dīn Ibn Ṭāwūs (d. 664/1266) (Kohlberg, 65).

(v) *al-Ādāb al-dīniyya li ʾl-khizāna al-muʿīniyya*, a work of *adab* dedicated to Muʿīn al-Dīn Abū Naṣr Aḥmad b. al-Faḍl b. Maḥmūd, who for two years, until his assassination by Ismāʿīlī *fidāʾīs* in Rabīʿ I 521/March-April 1127, was a vizier of the Khurāsānian ruler Sandjar b. Malikshāh (d. 552/1157 [*q.v.*]).

(vi) *Tādj al-mawālīd*, containing succinct biographical information about the Prophet, Fāṭima and the Imāms. The work was written in 509/1115-6 (*Tādj al-mawālīd*, in *Madjmūʿa nafīsa fī taʾrīkh al-aʾimma*, Ḳumm 1406/1985-6, 139, 146).

(vii) *Nathr al-laʾālī*, alphabetically arranged apothegms of ʿAlī. It is sometimes confused with a work of the same title by ʿAlī b. Faḍl Allāh al-Rāwandī (alive in 589/1193) (Kohlberg, 298-9).

All of these, with the possible exception of the *Kāfī*, are extant.

Al-Ṭabrisī wrote abridgements (*ikhtiyārāt*) of various works, including (besides the *Kāfī*) the *Muḳtaṣad fī*

'l-naḥw of ʿAbd al-Ḳāhir al-Djurdjānī (d. 471/1078) [q.v., in Suppl.] and the Sharḥ al-Ḥamāsa of al-Marzūḳī (d. 421/1030) [q.v.]. He appears to have also written his own commentary on the Ḥamāsa, entitled al-Bāhir fī sharḥ al-Ḥamāsa, of which an incomplete manuscript survives (see H. Ritter, in Oriens, ii [1949], 259, whence F. Sezgin, GAS, ii, 71, no. 26; see also Brockelmann, S I, 40).

Prominent scholars among al-Ṭabrisī's descendants include his son Raḍī al-Dīn Abū Naṣr al-Ḥasan b. al-Faḍl (fl. mid-6th/12th century), author of Makārim al-akhlāḳ, and his grandson Abu 'l-Faḍl ʿAlī b. al-Ḥasan (fl. late 6th/12th century), author of Mishkāt al-anwār.

ṬABRISĪ (Ṭabarsī), Ḥādjdj Mīrzā Ḥusayn b. Muḥammad Taḳī Nūrī (1254-1320/1839-1902) Ithnā-ʿasharī Shīʿī scholar and divine considered by some to have been the greatest Shīʿī exponent of ḥadīth and akhbār since Muḥammad Bāḳir al-Madjlisī (d. 1699 [q.v.]). Ṭabrisī first studied in his home province of Nūr in northern Persia under Shaykh ʿAbd al-Raḥmān Burūdjirdī, with whom he later travelled to the Shīʿī shrine centres in ʿIrāḳ. He studied in Nadjaf, Karbalā' and Sāmarrā for several years (with intervals in Persia) under Shaykh ʿAbd al-Ḥusayn al-Ṭihrānī (known as Shaykh al-ʿIrāḳayn), as well as under the two leading marādjiʿ of the day, Shaykh Murtaḍā al-Anṣārī and Mīrzā Ḥasan Shīrāzī. He died in Nadjaf on 21 Djumādā II 1320/25 September 1902.

Ṭabrisī's scholarly interests lay mainly in the spheres of biography and tradition, specialising in the lives of ʿulamā', muḥaddithūn and ruwāt. His books include Nafs al-Raḥmān, a biography of Salmān al-Fārisī; al-Fayḍ al-ḳudsī, a biography of Muḥammad Bāḳir al-Madjlisī; Maʿālim al-ʿabr, a continuation of vol. xvii of Madjlisī's Biḥār al-anwār; and the well-known Mustadrak al-wasā'il wa mustanbaṭ al-masā'il (3 vols., Tehran 1311-21), a continuation of al-Ḥurr al-ʿĀmilī's ḥadīth collection the Tafṣīl wasā'il al-Shīʿa.

Bibliography: Mihdī Bāmdād, Tārīkh-i ridjāl-i Īrān, i, Tehran, 1347 Sh./1969, 430; Mīrzā Muḥammad Mihdī al-Lakhnawī al-Kashmīrī, Nudjūm al-samā': takmila, 2 vols., Ḳum 1396/1976, ii, 210-15; Muḥammad Ḥasan Khān Iʿtimād al-Salṭana, Kitāb al-Ma'āthir wa 'l-āthār, Tehran 1306/1889, 155-6; Murtaḍā al-Anṣārī, Zindigānī wa shakhṣiyyat-i Shaykh-i Anṣārī, ?Tehran 1380/1960-1, 257-60. (D. MacEoin)

TABRĪZ, the traditional capital of the Persian province of Ādharbāydjān [q.v.] and now the administrative centre of the ustān of eastern Ādharbāydjān (lat. 38° 05' N., long. 46° 18' E., altitude ca. 1,340 m/4,400 feet).

1. Geography and history.

Geographical position. The town lies in the eastern corner of the alluvial plain sloping slightly towards the north-east bank of Lake Urmiya. The plain is watered by several streams, the chief of which is the Adjī čay ("bitter river") which, rising in the south-west face of Mount Sawalān, runs along the Ḳaradja dagh which forms a barrier on the south and entering the plain runs around on the north-west suburbs of the town. The left bank tributary of the Adjī čay, Mihrān rūd (now the Maydān čay), runs through the town. Immediately to the north-east of the town rise the heights of ʿAynali-Zaynali (the ziyārat of ʿAwn b. ʿAlī and Zayd b. ʿAlī) which (6,000 feet) form a link between the mountain system of the Ḳaradja dagh (in the north and north-east) and the outer spurs of the Sahand whose peaks (about 30 miles south of the town) reach a height of 11,500 feet. As the Ḳaradja dagh is a very wild and mountainous region and the great massif of Sahand fills the whole area between Tabrīz and Marāgha, the site of Tabrīz is the only suitable pass for communications between east and north. Lastly, as the outer spurs of the Sahand leave a rather narrow couloir along the east bank of Lake Urmiya, communication between north (Transcaucasia, Ḳaradja dagh) and the south (Marāgha, Kurdistān) must also take place via Tabrīz.

This fortunate position predestined Tabrīz to become the centre of the vast and rich province lying between Turkey and the former Russian Transcaucasia and in general one of the most important cities between Istanbul and India (only Tiflīs, Tehran, Iṣfahān and Baghdād fall into the same category).

The climate of Tabrīz is very severe in winter with heavy snowfalls. In summer, the heat is tempered by the proximity of the Sahand and by the presence of numerous gardens about the town. The climate is on the whole healthy.

One feature of Tabrīz is the frequent earthquakes. The most formidable took place in 244/858, in 434/1042 (mentioned by Nāṣir-i Khusraw in his Safar-nāma and predicted by the astronomer Abū Ṭāhir Shīrāzī), in 1641, in 1727, in 1780, etc. Seismic shocks are of everyday occurrence at Tabrīz; they may be due to the volcanic activity of the Sahand. See further, N.N. Ambraseys and C.P. Melville, A history of Persian earthquakes, Cambridge 1982, 37 ff., 57, 62.

The fortifications of the town were razed to the ground in the reign of Nāṣir al-Dīn Shāh. The part of the town called the Ḳalʿa is therefore no longer

separated from the former part *extra muros*. The town has also incorporated the former suburbs to the west of the town and the south-east. The tendency of the city is to extend to the west and south-west.

The name. According to Yāḳūt, *Buldān*, i, 822, the name of the town is pronounced Tibrīz. Yāḳūt gives as his authority Abū Zakariyyā' al-Tabrīzī (a pupil of Abu 'l-'Alā' al-Ma'arrī [*q.v.*], of whom we know that he spoke the local Iranian dialect (see Sayyid Aḥmad Kisrawī Tabrīzī, *Ādharī yā zabān-i bāstān-i Ādharbāyagān*, Tehran 1304/1925, 11). The pronunciation Tibrīz must be one of the peculiarities of this dialect which is related to those called "Caspian", or, more probably, Arabic purism assimilating it to the *fi'īl* form of the noun. The modern pronunciation is exclusively Tabrīz (or with a metathesis typical of the Turkish dialect, now predominant throughout Ādharbāydjān: Tarbīz). The Armenian sources confirm the pronunciation with *a*. The popular Persian etymology explains *Tabrīz* as "making fever run" (= disappear) (Ewliyā Čelebi: *sïtma döküdjü*), but it is possible that the name rather means "that which makes the heat disappear", in some connection with the volcanic activities of the Sahand. The Armenian orthography reflects the peculiarities of Northern Pahlavi T'avrēž and this suggests the origin of the name may go back to a very early period, pre-Sāsānid and perhaps pre-Arsacid.

History. The identification of Tabrīz with some ancient city of Media has given rise to much discussion (cf. the résumé in Ritter, *Erdkunde*, ix, 770-9). According to the Armenian historian Vardan (14th century), Tabrīz was founded on Persian territory by the Arshakid Armenian Khusraw (217-33) as an act of revenge against the first Sāsānid king Ardashīr (224-41), who had killed the last Parthian king Artabanus; this story is not found in any ancient source and is probably to be explained by popular etymology.

Arab rule. During the conquest of Ādharbāydjān by the Arabs (*ca.* 22/642) the principal efforts of the latter were directed against Ardabīl. Tabrīz is not mentioned among the towns from which the Persian Marzubān had levied his troops (al-Balādhurī, *Futūḥ*, 326). After the devastation mentioned by Faustus of Byzantium (4th century), Tabrīz must have become a mere village. The later legend (Mustawfī, *Nuzhat al-ḳulūb*, 730/1340) of the "building" of Tabrīz in 175/791 by Zubayda, wife of Hārūn al-Rashīd, is perhaps based on the fact that after the sequestration of the Umayyad estates Zubayda had received Warthān (in Ādharbāydjān on the Araxes). According to al-Balādhurī, 331 and Ibn al-Faḳīh, 285 (cf. also Yāḳūt, i, 822), the rebuilding of Tabrīz was the work of the family of al-Rawwād al-Azdī and particularly of the latter's sons, al-Wadjnā' and others who built the walls round the town. Al-Ṭabarī (iii, 1171 = Ibn al-Athīr, vi, 315) speaking of the rebellion of Bābak (201-20/816-35 [*q.v.*]) mentions among his conquerors a certain Muḥammad b. Ba'īth, owner of two castles: Shāhī, which he had taken from al-Wadjnā', and Tabrīz (no details given).

When Ibn Khurradādhbih, 119, wrote (232/840), Tabrīz belonged to Muḥammad b. al-Rawwād. In 244 the town was destroyed by an earthquake but rebuilt before the end of the reign of al-Mutawakkil (232-47/847-61). Tabrīz seems then to have changed hands several times, for, according to al-Iṣṭakhrī (*ca.* 340/951), 181, the strip of territory which included Tabrīz, Djabrawān (or Dih-Kharraḳān?) and Ushnūh bore the name of the ruling tribe Banū Rudaynī, which had already disappeared by the time of Ibn Ḥawḳal (*ca.* 367/978), 289. These owners seem to have ruled in practical independence, for the history of the Sādjids [*q.v.*] (lords of Ādharbāydjān 276-317/889-929) contains no reference to their intervention in the affairs of Tabrīz.

After the disappearance of the Sādjids, Ādharbāydjān became the arena of numerous struggles. A former governor for the Ziyārid Mardāwīdj, Lashkarī b. Mardī, had seized the province in 326/938. He was driven out by the Kurd Daysam, who soon came into conflict with the Daylamī Musāfirids [*q.v.*]. The people of Tabrīz invited Daysam into their town, which was at once besieged by the Musāfirid al-Marzubān. Daysam left Tabrīz, and the rule of al-Marzubān was proclaimed in all the towns of Ādharbāydjān (*ca.* 330/942).

The end of the Musāfirid dynasty is not quite clear, but their successors the Rawwādids [*q.v.*] can be traced at Tabrīz down to 446/1054. The following events are connected with these Rawwādīs: in 420/1029, Wahsūdān b. Mahlān (Mamlān?) had a large number of Ghuzz chiefs massacred at Tabrīz (Ibn al-Athīr, ix, 279); in 434/1043 an earthquake destroyed Tabrīz, and the *amīr* (probably the same one) went to his other strongholds for fear of al-Ghuzz al-Saldjūḳiyya (*ibid.*, 351); in 438/1046-7 Nāṣir-i Khusraw found in Tabrīz a king Sayf al-Dawla wa-Sharaf al-Milla Abū Manṣūr Wahsūdān b. Muḥammad (Mamlān?) Mawlā Amīr al-Mu'minīn; in 446/1054 the Saldjūḳ Ṭoghrïl received the submission of the lord of Tabrīz, al-Amīr Abū Manṣūr b. Muḥammad al-Rawwādī (*ibid.*, ix, 410).

The geographers and travellers. While Ibn Khurradādhbih, 119, al-Balādhurī, 331, al-Ṭabarī, iii, 1171, Ibn al-Faḳīh, 285, and even al-Iṣṭakhrī, 181, simply mention Tabrīz among the little towns of Ādharbāydjān, al-Muḳaddasī already sings the praises of Tabrīz, and his contemporary Ibn Ḥawḳal (*ca.* 367/978) considers it the most prosperous town in Ādharbāydjān, with a busy trade. Miskawayh (d. 421/1030) calls Tabrīz a "noble city with a strong wall, surrounded by woods and gardens", and its inhabitants "brave, martial and rich". According to Nāṣir-i Khusraw, the area occupied by the town in 438/1046-7 was 1,400 × 1,400 paces, which is only about a third of a square mile.

Saldjūḳ period. Tabrīz is very rarely mentioned in the history of the Great Saldjūḳs. In the vicinity of the town, Ṭoghrïl celebrated his marriage with the caliph's daughter (Rāwandī, *Rāḥat al-ṣudūr*, 111). During his struggle with his brother Muḥammad, Berk-yaruḳ retired in 494/1101 to the mountainous region to the south of Tabrīz, but at the reconciliation of the brothers, Tabrīz fell to Muḥammad, who appointed Sa'd al-Mulk as *wazīr* there (498/1104-5). In 505/1111-12 we find Amīr Sukmān al-Ḳuṭbī mentioned as lord of Tabrīz, i.e. the founder of the dynasty of Shāhs of Armenia (Shāh-i Arman [*q.v.*]), which ruled at Akhlāṭ 493-604/1100-1207.

Under the branch of the Saldjūḳs of 'Irāḳ, whose capital was at Hamadān, Ādharbāydjān played a more important part. In 514/1120 Sultan Maḥmūd spent some time at Tabrīz to calm the inhabitants, who were alarmed at the inroads of the Georgians. The name of the Atabeg of Ādharbāydjān at this period was Kün-toghdï. After his death (515/1121), the Amīr of Marāgha Aḳ-Sunḳur Aḥmadīlī endeavoured to get Tabrīz out of the hands of Ṭoghrïl (brother of the sultan), but these intrigues came to nought. Maḥmūd appointed to Ādharbāydjān the Amīr Djuyūsh of Mawṣil, who was killed at the gate of Tabrīz in 516/1122. After the death of Maḥmūd (525/1131), his brother Mas'ūd occupied Tabrīz and was besieged there by

Dāwūd, son of Maḥmūd. Finally, Dāwūd established himself in Tabrīz and from this town ruled (526-33/1132-9) a great fief composed of Ādharbāydjān, Arrān and Armenia. Ādharbāydjān and Arrān were later entrusted to Ṭoghrïl I's old slave, the Atabeg Ḳara Sunḳur whose capital seems to have been at Ardabīl (Ibn al-Athīr, xi, 52). After his death in 535/1140-1, the Amīr Djā'ūlī (Čawlï) al-Ṭoghrïlī succeeded him, but we soon find Ildegīz [*q.v.*], the founder of the dynasty of Atabegs which ruled the province till 622/1225, established in Ādharbāydjān. The centre of Ildegīzid power was at first to the north-west of Ādharbāydjān, while Tabrīz became part of the possessions of the Aḥmadīlī [*q.v.*] Amīrs of Marāgha, for it was not till 570/1174-5 that the Atābeg Pahlawān b. Ildegīz [*q.v.*] took Tabrīz from Falak al-Dīn, grandson of Aḳ Sunḳur b. Aḥmadīl, and gave it to his brother Ḳïzïl Arslan. It was during the period that Ḳïzïl Arslan was Atābeg (582-87/1186-91) that Tabrīz definitely took its place as the capital of Ādharbāydjān.

In 602/1205-6 the Amīr Ḳara Sunḳur 'Alā' al-Dīn Aḥmadīlī, in alliance with the Atbeg of Ardabīl, made an attempt to retake Tabrīz from Ḳïzïl Arslan's successor, the bon-vivant Abū Bakr. The attempt failed, and Ḳara Sunḳur lost Marāgha.

The Ildegīzids lived in great style, as we may judge from the odes addressed to them by poets like Niẓāmī and Khāḳānī [*q.vv.*], but of their buildings we only know the remains at Nakhčiwān [*q.v.*].

The Mongols. The Mongols made their appearance before the walls of Tabrīz in the winter of 617/1220-1. The incapable Ildegīzid Atabeg Özbeg b. Pahlawān obtained their departure by paying a heavy ransom. Next year, the Mongols came back again. The Atabeg fled to Nakhčiwān, but a resistance was organised by the valiant Shams al-Dīn al-Ṭughrā'ī and the Mongols departed with a new ransom, after which Özbeg returned to Tabrīz. In 621/1224 a new horde arrived from Mongolia and demanded from Özbeg the surrender of all the Khʷārazmians in Tabrīz. Özbeg hastened to yield to this demand.

Djalāl al-Dīn. The Khʷārazm Shāh soon arrived from Marāgha and on 27 Radjab 622/15 July 1225 gained admittance to the town, which Özbeg had again abandoned. The inhabitants were glad to find a valiant defender, especially as Djalāl al-Dīn was soon to show his energy by an expedition against Tiflis and by the punishment of the marauding Turkomans of the tribe of Aywā (al-Aywā'iyya). Djalāl al-Dīn having married the *malika*, the former wife of Özbeg, held Tabrīz for six years, but towards the close of this period, his position was seriously compromised by his failures as well as by his personal conduct (Ibn al-Athīr, xii, 323). As early as 627/1230, a Turkoman chief of the tribe of Ḳush-yalwa (?), a chief of Rūyīndiz (near Marāgha), dared to plunder the environs of Tabrīz. In 628/1231 Djalāl al-Dīn left Ādharbāydjān and the Mongols conquered the whole province, including the town of "Tabrīz which is the very heart (*aṣl*) *of* the country [for] every one is dependent on it and on those who live there" (Ibn al-Athīr, xii, 328). The *malik* of the Mongols (Djurmaghun noyin) sent for the notables, levied a heavy indemnity, ordered the weavers to make *khatā'ī* stuffs for the use of the great king (Ögedey) and fixed the amount of the annual tribute. From the time of Güyük, the effective rule of Arrān and Ādharbāydjān was in the hands of Malik Ṣadr al-Dīn, a Persian ally of the Mongols (see Djuwaynī-Boyle, ii, 518).

The Mongol Il-Khāns. After the taking of Baghdād in 654/1256, Hülegü went to Ādharbāydjān and settled at Marāgha [*q.v.*]. In 661/1263, after the defeat inflicted on him in the northern Caucasus by Berke's troops, Hülegü returned to Tabrīz and massacred the merchants there of Ḳïpčaḳ origin. In 662/1264, at the re-distribution of the fiefs, Hülegü confirmed Malik Ṣadr al-Dīn in the governorship of the province of Tabrīz.

Tabrīz became the official capital under Abaḳa (663-80/1265-82) and kept this position under his successors till the coming of Öldjeytü. In 688/1289 under Arghun, the Jewish vizier Sa'd al-Dawla appointed his cousin Abū Manṣūr to Tabrīz. Under Gaykhatu, the revenues of the province of Tabrīz were estimated at 80 *tūmāns*. In 693/1294 Tabrīz was the scene of a rebellion as a result of the introduction of a paper currency (*čao*). It was in the reign of Ghazan Khān that Tabrīz attained its greatest splendour. This monarch entered Tabrīz in 694/1295 and took up his abode in the palace built by Arghun in the village of Shām to the west of the town, on the left bank of the Adjī čay. Orders were at once given to destroy the temples of idols, churches and synagogues, and fire-altars. These orders are said to have been revoked in the next year on the appeal of the Armenian king Hethum. In 699/1299 on his return from the Syrian campaign, Ghazan began a whole series of buildings. He intended Shām, already mentioned, as the site of his eternal rest. A building was erected there higher than the *gunbad* of Sultan Sandjar at Marw, which was then considered the highest building in the Muslim world. Besides this mausoleum, which was crowned by a dome, there was a mosque, two *madrasas* (one Shāfi'ī and the other Ḥanafī), a hostel for Sayyids (*dār al-siyāda*), a hospital, an observatory like that at Marāgha, a library, archives, a building for the officers of these establishments, a cistern for drinking-water and baths with hot water. *Wakfs*, the revenues from which amounted to 100 *tūmāns* of gold (Waṣṣāf), were set aside for the maintenance of these foundations. At each of the gates of the new town was built a caravanserai, a market and baths. Fruit trees were brought from distant lands.

In the town of Tabrīz itself, great improvements were also made. Hitherto its wall (*bārū*) was only 6,000 *gām* ("paces"). Ghazan gave it a new wall 25,000 *gāms* in length (4½ *farsakhs*). All the gardens and the Kūh-i Waliyān and Sandjarān quarters were incorporated in the town. Within the wall on the slopes of the Kūh-i Waliyān (now Kūh-i Surkhāb or 'Aynali-Zaynali) a series of fine buildings was erected by the famous vizier Rashīd al-Dīn, and the quarter was therefore known as *Rab'-i Rashīdī* (*Nuzhat al-ḳulūb*, 76, tr. 79-80). We have a letter from Rashīd al-Dīn in which he asks his son to send him from Rūm 40 young men and women to people one of the villages in the new quarter; cf. Browne, *LHP*, iii, 82.

As if to emphasise the fact that Tabrīz was the real centre of the empire which stretched from the Oxus to Egypt, the gold and silver coins and the measures (*kīla, gaz*) were standardised according to the standards of Tabrīz (d'Ohsson, *Hist. des Mongols*, iv, 144, 271-7, 350, 466-9).

Tabrīz was also at this time an important focus of Muslim literature, spirituality and mysticism, eulogised by Rūmī in his *Mathnawī*, Book VI, vv. 3106-5, tr. Nicholson, vi, 429-30. The Ṣūfī poet Maḥmūd Shabistarī (d. *ca.* 718-20/1317-20 [*q.v.*] came from a small town near Lake Urmiya and lived and worked at Tabrīz amongst other places (see L. Lewisohn, *The political milieu of Mongol Persia*, in *Beyond faith and infidelity. The Sufi poetry and teachings of Mahmud Shabistari*,

London 1995, 55-103), and another notable Ṣūfī master of Tabrīz was Kh^wādja Muḥammad b. Ṣadīḳ Kudjudjī (d. 677/1279), whose descendants were later *shaykh al-islāms* in Tabrīz under the early Djalāyirids, the Tīmūrids and the early Ṣafawids (see J. Aubin, *Études safavides. I. Shāh Ismāʿīl et les notables de l'Iraq persan*, in *JESHO*, ii [1959], 60-3, and Lewisohn, *Palāsī's memoir of Shaykh Kujujī, a Persian Sufi of the thirteenth century*, in *JRAS*, 3rd ser., vi [1996], 345-66).

In 703/1304 Ghazan Khān was buried with great ceremony in the mausoleum of Shām. In 705/1307 his successor Öldjeytü conceived the idea of creating a new capital at Sulṭāniyya [*q.v.*]. It was, however, not easy to move the inhabitants, as in 715/1315 we still find the ambassador from the Özbegs of Ḳïpčaḳ following the route by Tabrīz instead of the shorter Mughān-Ardabīl-Sulṭāniyya. It is also noteworthy that Tādj al-Dīn ʿAlī Shāh (vizier from 711/1312) had begun the construction of a magnificent mosque at Tabrīz (outside the Mihād-mihīn quarter).

In 717/1317 under Abū Saʿīd, the retiring vizier Rashīd al-Dīn went to Tabrīz and only left it the following year to meet his fate. His property was confiscated and Rabʿ-i Rashīdī sacked (Browne, *LHP*, iii, 71). His son Ghiyāth al-Dīn, who was called to power by Abū Saʿīd himself, continued to enlarge Rabʿ-i Rashīdī. The capital continued to be Sulṭāniyya, judging from the fact that Abū Saʿīd was buried there in a mausoleum which he himself had ordered to be built (d'Ohsson, iv, 720).

When in 736/1336 his successor Arpa lost the battle of Taghatu (this to be read for Baghatu), his vizier Ghiyāth al-Dīn was killed by the conqueror ʿAlī Pādshāh Oyrat. The property of the family of Rashīd al-Dīn was plundered by the people of Tabrīz, and valuable collections and precious books disappeared on this occasion.

The Djalāyirs and the Čobanids. In the midst of the anarchy which followed these events we have the rise of the Djalāyir [*q.v.*] dynasty, whose fortunes were closely associated with Tabrīz. In 736/1336 Ḥasan Buzurg Djalāyir established on the throne of Tabrīz his candidate Sultan Muḥammad. In spite of its temporary nature, this episode marks the restoration of its primacy to the old capital. The Čobanid Ḥasan Kūčik soon appeared on the scene with his own candidates. Ḥasan Buzurg retired to Baghdād and Ḥasan Kūčik (740/1340) put on the throne Sulaymān Khān with rule over ʿIrāḳ-i ʿAdjam, Ādharbāydjān, Arrān, Mughān and Georgia. The successor of Ḥasan Kūčik, his brother Ashraf, in 744/1344 proclaimed a new puppet, Anūshirwān, whom he relegated to Sulṭāniyya while he himself remained in Tabrīz as the real ruler and extended his authority as far as Fārs. His cruelty and exactions provoked an "intervention in the cause of humanity" by Djānī Beg Khān of the Blue Horde (Eastern Ḳïpčaḳ). Ashraf was defeated at Khoy and Marand and his head suspended over the door of a mosque in Tabrīz (756/1355). The vizier Akhidjūḳ whom Djānī Beg had left in Ādharbāydjān found his authority disputed on several sides. Tabrīz was temporarily occupied by the Djalāyir Uways b. Ḥasan Buzurg who came from Baghdād. Hardly had he been driven out by Akhidjūḳ than the Muẓaffarid of Fārs, Mubāriz al-Dīn Muḥammad, quarrelling with Djānī Beg, who had called upon him to recognise his suzerainty, arrived from Shīrāz, defeated Akhidjūḳ at Miyāna and seized Tabrīz in 758/1357. After two years he retired before Uways, who soon afterwards reoccupied Tabrīz and slew Akhidjūḳ.

When the news of the death of Uways (776/1377) reached Fārs, the Muẓaffarid Shāh Shudjāʿ, who had succeeded Mubāriz al-Dīn, set out from Shīrāz to take Tabrīz. Ḥusayn, son of Uways, was defeated and Tabrīz occupied, but after a few months, a rebellion having broken out at Ūdjān, forced Shudjāʿ to evacuate the town which Ḥusayn reoccupied without striking a blow. Sulṭāniyya seems to have marked the limits of the lands of the Muẓaffarids in the north-west (*Taʾrīkh-i guzīda*, ed. Browne, 723-5). In 784/1382 Ḥusayn Djalāyir was slain at Tabrīz, and his brother Aḥmad succeeded him in Ādharbāydjān, but his rule was to be brief, for Tīmūr soon after appeared on the scene.

In spite of all the vicissitudes of their intermittent rule, the Djalāyirs were able to gain the sympathy of the people of Tabrīz. Their rights were implicitly recognised by the lords of Shīrwān and the Ḳara Ḳoyunlu. Among their buildings in Tabrīz are recorded their mausoleum Dimishḳiyya and a large building by Sultan Uways, which, according to Clavijo contained 20,000 chambers ("camaras apartadas é apartamientos") and was called Dawlat-khāna ("Tolbatgana... la casa de la ventura").

The period of Tīmūr. During his first invasion of Persia (786/1384), Tīmūr returned to Samarḳand after taking Sulṭāniyya. His great rival Toḳtamïsh Khān of the Golden Horde at once sent an expedition against Ādharbāydjān via Darband in 787/1385. The invaders took Tabrīz, which was badly defended by Amīr Walī (the former lord of Djurdjān driven out by Tīmūr) and the Khān of Khalkhāl, plundered the inhabitants, carried off prisoners (including the poet Kamāl Khudjandī) and returned to Darband (Yazdī, *Ẓafar-nāma*, i, 392; Browne, *LHP*, iii, 321).

Hardly had Sultan Aḥmad Djalāyir recovered Tabrīz than he was driven out again by Tīmūr (788/1386), who came on the pretext of protecting the Muslims. Tīmūr encamped at Shām-Ghāzān and levied an indemnity (*māl-i amān*) on the people of Tabrīz (see Yazdī, i, 326).

In 795/1392 the "fief of Hülegü" (*takht-i Hūlāgū*), consisting of Ādharbāydjān, al-Rayy, Gīlān, Shīrwān, Darband and the lands of Asia Minor, was granted to Mīrān Shāh (*ibid.*, ii, 623) and Tabrīz became the capital of this territory. Three years later, this prince became insane and committed a series of insensate actions (execution of innocent people, destruction of buildings; *ibid.*, ii, 200, 213, and Browne, *op. cit.*, iii, 71). Tīmūr immediately on his return from India set out for Ādharbāydjān in 802/1399-1400 and executed those who shared in Mīrān Shāh's debauches.

In 806/1403-4, Mīrzā ʿUmar, son of Mīrān Shāh, was placed at the head of the "fief of Hülegü" and the lands conquered by Tīmūr in the west. His father Mīran Shāh (in Arrān) and his brother Abū Bakr (in ʿIrāḳ) were placed under the authority of Mīrzā ʿUmar. After the death of Tīmūr, a long struggle began between ʿUmar and Abū Bakr. In 808/1405-6, Abū Bakr succeeded in levying on Tabrīz a tribute of 200 ʿIrāḳī *tūmāns*. ʿUmar returned to Tabrīz, but his Turkomans harassed the people and Abū Bakr regained the town. Hardly had he left Tabrīz than the Turkoman rebel Bisṭām Djāgīr entered it but hurriedly retreated on the approach of Shaykh Ibrāhīm of Shīrwān [*q.v.*]. In 809/1406-7 the latter handed over Tabrīz to Aḥmad Djalāyir as to its true sovereign and the inhabitants showed great joy on this occasion; see ʿAbd al-Razzāḳ Samarḳandī, *Maṭlaʿ al-saʿdayn*, tr. Quatremère, 109. On 8 Rabīʿ I, Abū Bakr was again at Shām-Ghāzān, but did not dare go into the city where the plague was raging.

A short time before these latter happenings, the Ambassador of Henry III of Castile, Clavijo, spent some time in Tabrīz (in 1404 and with intervals 1405, i.e. from the end of 806 to the beginning of 808 A.H.). In spite of the trials it had undergone, the town was very busy and conducted considerable trade. Clavijo speaks highly of the streets, markets and buildings of Tabrīz.

The Ḳara Ḳoyunlu [*q.v.*]. On 1 Djumādā I 809/ 14 October 1406, Ḳara Yūsuf, the Ḳara Ḳoyunlu Turkoman, inflicted a defeat on Abū Bakr, who in his retreat handed Tabrīz over to plunder, and nothing escaped the rapacity of his army (*Maṭlaʿ al-saʿdayn*, 110). Ḳara Yūsuf advanced as far as Sulṭāniyya and carried off the population of this town to Tabrīz, Ardabīl and Marāgha. Abū Bakr soon returned to Ādharbāydjān, but Ḳara Yūsuf assisted by Bisṭām defeated him at Sardarūd (5 miles south of Tabrīz). Mīrān Shāh fell in this battle and was buried at Tabrīz in the cemetery of Surkhāb.

Ḳara Yūsuf, remembering the agreements on the redistribution of the territory made with Sultan Aḥmad Djalāyir at the time when both were in exile in Egypt, had recourse to a stratagem. With great ceremony, he put on the throne of Tabrīz his son Pīr Budāḳ who was regarded as Aḥmad's adopted son (according to the *Maṭlaʿ al-saʿdayn*, Ḳara Yūsuf did not give the title of Khān to Pīr Budāḳ till 814/1411-12). Aḥmad to outward appearance resigned himself to this arrangement but, when Ḳara Yūsuf was absent in Armenia, he occupied Tabrīz. Aḥmad was finally defeated in battle (28 Rabīʿ II 813/30 August 1410). He was executed by Ḳara Yūsuf and buried in the Dimishḳiyya beside his father and mother. Once more the sympathies of the people of Tabrīz were with the last Djalāyir king; cf. Huart, *La fin de la dynastie des Ilkhaniens*, in *JA* [1876], 316-62.

Tabrīz is regularly mentioned as the centre from which Ḳara Yūsuf sent out his expeditions. The Tīmūrid Shāh Rukh, fearing the influence of Ḳara Yūsuf in 817/1414, undertook his first expedition against him but did not advance beyond al-Rayy (*Maṭlaʿ al-saʿdayn*, 238, 250). When in 823/1420 he was renewing his attempt, news reached him of the death of Ḳara Yūsuf (on 7 Dhu 'l-Ḳaʿda 823/12 November 1420). Anarchy broke out in the Turkoman camp, and a week later Mīrzā Baysunghur occupied Tabrīz. Shāh Rukh arrived there in the summer of 824/1421 after defeating in Armenia the sons of Ḳara Yūsuf. In 832/1429 Iskandar, son of Ḳara Yūsuf, seized Sulṭāniyya. Shāh Rukh again arrived at Shām-Ghāzān at the head of an army and inflicted a defeat on the Ḳara Ḳoyunlu at Salmās. In the winter of 833/1429-30 Ādharbāydjān was given to Abū Saʿīd b. Ḳara Yūsuf, who had come to pay homage to Shāh Rukh. In the following year he was slain by his brother Iskandar. In the winter of 838/1434, Shāh Rukh came to Ādharbāydjān for the third time. Iskandar thought it wiser to retire before him, but his brother Djahān Shāh hastened to join Shāh Rukh. The latter spent the summer of 839/1436 in Tabrīz, and on the approach of winter gave investiture to Djahān Shāh.

Thus began the career of the prince who made Tabrīz the capital of a kingdom stretching from Asia Minor to the Persian Gulf and to Harāt. The most remarkable building in Tabrīz, "the Blue Mosque" (*Gök masdjid*) is the work of Djahān Shāh (according to Berezin, of his wife Begum Khātūn). It is possible that the presence in Tabrīz in the Surkhāb and Čarandāb quarters of members of the Ahl-i Ḥaḳḳ sect [*q.v.*] dates from the time of Djahān Shāh, on whose heretical views see Münedjdjim Bashî, Tkish. tr., iii, 154.

The Aḳ Ḳoyunlu [*q.v.*]. On 12 Rabīʿ II 872/ 10 November 1467 Djahān Shāh was surprised in Armenia and slain by Uzun Ḥasan Bayandurī, chief of the Aḳ Ḳoyunlu Turkomans. The two daughters of Iskandar proclaimed at Tabrīz their dervish brother Ḥusayn ʿAlī, but Begum Khātūn, widow of Djahān Shāh, put a stop to this plan. Tabrīz was, however, occupied by Ḥusayn ʿAlī, the mad son of Djahān Shāh (by another wife), who put to death Begum Khātūn and her relatives (Münedjdjim Bashî).

In spite of the assistance which he had received from the Tīmūrid Abū Saʿīd, Ḥasan ʿAlī was defeated at Marand. Subsequent events led up to the death of Abū Saʿīd himself. In 873/1468 Uzun Ḥasan seized Tabrīz, which he made his capital (he announced this decision in a letter to the Ottoman sultan, see Ferīdūn Bey, *Münsheʾāt*).

The Venetian sources are of considerable value for the period of Uzun Ḥasan. Giosafa Barbaro, sent by the Republic in 1474, describes the animated life of Tabrīz, to which embassies came from all parts. Barbaro was received in a pavilion of the magnificent palace which he calls "Aptisti" (*Haft* + ?). The anonymous Venetian merchant who visited Tabrīz as late as 1514 (?) still speaks of the splendour of the reign of Uzun Ḥasan "who has so far not yet had an equal in Persia". Uzun Ḥasan died in 852/1477 and was buried in the Naṣriyya Madrasa which he had built and which was later to be used for the burial of his son Yaʿḳūb. During the twelve years of his comparatively peaceful reign (883-96/1478-90), the latter attracted to his court many men of letters (the Kurdish historian Idrīs was his secretary) and in 888/1483 built in the garden of Ṣāḥibābād the Hasht Bihisht palace. This palace (*Astibisti*) was also described by the Venetian merchant; on the ceiling of the great hall were represented all the great battles of Persia, embassies, etc. Beside the Hasht Bihisht there was a harem in which 1,000 women could be housed, a vast *maydān*, a mosque and a hospital to hold 1,000 patients (see also Ewliyā Čelebi, ii, 249).

The Ṣafawids and the Turco-Persian wars. Ismāʿīl I occupied Tabrīz in 906/1500 after his victory at Sharūr over Mīrzā Alwand Aḳ Ḳoyunlu. Of the 200-300,000 inhabitants of the town, two-thirds were reported to be Sunnī but the new ruler was not long in imposing Shīʿism upon them and took rigorous measures against those who objected (Iskandar Munshī, *ʿĀlam-ārā*, 31). In his hatred of the Aḳ Ḳoyunlu, Ismāʿīl had the remains of his predecessors exhumed and burned (G.M. Angiolello). The Venetian merchant speaks of the despair into which the debauches of the young prince had plunged several noble families. When Ismāʿīl set out for Arzindjān after Alwand, the latter succeeded in returning to Tabrīz and during his brief stay there "oppressed the rich" (*ʿĀlam-ārā*, 31).

The battle of Čaldirān [*q.v.*] (2 Radjab 920/23 August 1514) opened to the Ottomans the road to Tabrīz. Nine days later the city was occupied by the vizier Dukagin-oghlu and the *defterdār* Pīrī and on 6 September Sultan Selīm made his triumphal entry into it. In the town, the Turks conducted themselves with moderation (Browne, *LHP*, iv, 77) but seized the treasures amassed by the Persian sovereigns and carried off to Istanbul 1,000 skilled artisans. The sultan only stayed a week in Tabrīz, as he had to return to his own lands in consequence of the refusal of the Janissaries to continue the campaign (von Hammer, *GOR*^{2}, i, 720).

The events of 920/1514 were a grave warning to the Persians, and under Ṭahmāsp I, the capital was transferred much farther east to Ḳazwīn. According to the Venetian Ambassador Alessandri, Ṭahmāsp, as a result of his avarice, was not popular in the old capital of the Aḳ Ḳoyunlu.

At the suggestion of the renegade Ulāma (of the Turkoman tribe of Tekke) the troops of Süleymān I under the command of the Grand Vizier Ibrāhīm Pas̲h̲a, occupied Tabrīz in 941/13 July 1534 and went to the summer camp at Asadābād (Saʿīdābād?). Ibrāhīm Pas̲h̲a began to build a fortress at S̲h̲ām-G̲h̲āzān. The government of Ād̲h̲arbāyd̲j̲ān was entrusted to Ulāma, who had held the same post under Ṭahmāsp. On 27 September, Süleymān himself arrived in Tabrīz. A little later, he made a thrust as far as Sulṭāniyya and occupied Bag̲h̲dād. On his return to Tabrīz, he spent 14 days engaged in administrative business. The cold forced the Turkish army to retreat and the Persian troops at once advanced as far as Wān. Again in 955/28 July 1548, at the instigation of Alḳāṣ Mīrzā, brother of S̲h̲āh Ṭahmāsp, Süleymān occupied Tabrīz but only stayed five days there. The sultan refused Alḳāṣ Mīrzā's proposal that the inhabitants should all be massacred or carried off into captivity. M. d'Aramon, ambassador of Francis I, was an eye-witness of the occupation of Tabrīz and testifies to Süleymān's efforts to protect the town (*Voyage*, ed. Schefer, Paris 1887, 83). In 962/29 May 1555 there was signed at Amasiya the first treaty of peace between Turkey and Persia which lasted about 30 years (von Hammer, ii, 112, 120, 269; *ʿĀlam-ārā*, 49-59).

In 993/1585 the Grand Vizier of Murād III Özdemir-zāde ʿOt̲h̲mān Pas̲h̲a with 40,000 men undertook the recapture of Tabrīz. The governor of Wān, Čig̲h̲ala-zāde, joined him with 6,000 men. Going via Čaldirān and Ṣofiyān, the Turks arrived before S̲h̲ām-G̲h̲āzān. The Persian governor ʿAlī Ḳulī K̲h̲ān, after a bold sortie which cost Čig̲h̲ala-zāde 3,000 men, retired during the night. In September the Turks occupied the town. As a punishment for the murder of several soldiers, the Turks sacked the town and massacred its inhabitants for three days. The Persian chief minister Ḥamza Mīrzā operating around the city on several occasions inflicted heavy losses on the Ottoman troops. To defend Tabrīz, ʿOt̲h̲mān Pas̲h̲a built a square citadel, the walls of which were 12,700 ells long (Ewliyā Čelebi, *miʿmār-i mekki ars̲h̲unī*). This citadel, which was erected in 36 days, was inside the town. It was held by a garrison of 45,000 men. The eunuch D̲j̲aʿfer Pas̲h̲a was appointed governor of Tabrīz. On 29 October 1585, ʿOt̲h̲mān Pas̲h̲a died. Čig̲h̲ala-zāde, whom he had appointed on his deathbed to command the Ottoman troops, succeeded in defeating the Persians, but soon the latter were able to besiege the Turks within the town. Forty-eight encounters took place before Ferhād Pāshā definitely relieved the garrison (von Hammer, ii, 354). By the disastrous peace of 998/1590, S̲h̲āh ʿAbbās I had to cede to the Ottomans their conquests in Transcaucasia and the west of Persia. Henceforth, the Turks took their occupation of Tabrīz seriously. Their many buildings, especially those of D̲j̲aʿfer Pas̲h̲a, are mentioned by Ewliyā in Tabrīz and its vicinity. But the Persians were keeping a watchful eye on their old capital.

The troubles with the *sipāhīs* [*q.v.*] at the beginning of 1603 showed the weakness of Sultan Meḥemmed III. In the autumn, S̲h̲āh ʿAbbās left Iṣfahān unexpectedly and entered Tabrīz 12 days later. ʿAlī Pas̲h̲a was defeated at Ḥād̲j̲d̲j̲ī Ḥarāmī (2 farsak̲h̲s from the town), after which the citadel surrendered. S̲h̲āh ʿAbbās treated the defeated foe with generosity, but in a revival of S̲h̲īʿī fanaticism the inhabitants killed a large number of Turks in the town and neighbourhood without heed for any bonds of kinship or friendship that had been formed during the 20 years of Ottoman occupation. ʿAbbās I invited the people to do away with all traces of Turkish rule and "in a few days they had left no vestige of the citadel nor of any of [their] houses, buildings, dwellings, caravanserais, shops, baths etc." (*ʿĀlam-ārā*, 441, 451).

In 1019/1610, in the reign of the weak Sultan Aḥmed III, the Turks again tried to resume the offensive. The Grand Vizier Murād Pas̲h̲a unexpectedly appeared with an army in front of Tabrīz, but ʿAbbās I had had time to make his preparations. The town was defended by the governor Pīr Budaḳ K̲h̲ān. No fighting took place, but the Turks suffered greatly from want of provisions in the country which the Persians had laid waste. Five days later, the Turkish army was retracing its steps, while S̲h̲āh ʿAbbās and Murād Pas̲h̲a continued to exchange embassies. This Turkish invasion hastened the building of a new fortress at Tabrīz, which was built under the shadow of Surk̲h̲āb in the Rabʿ-i Ras̲h̲īdī quarter. The materials were taken from old ruins, particularly at S̲h̲ām-G̲h̲āzān (*ʿĀlam-ārā*, 584, 601). On the other hand, the unsuccessful invasion by Murād Pas̲h̲a led to the conclusion of a new treaty in 1022/1612 by which the Persians succeeded in restoring the status quo as it had existed in the time of S̲h̲āh Ṭahmāsp and Sultan Süleymān (*ʿĀlam-ārā*, 600, 611; von Hammer, ii, 736, 745).

In 1027/1618, at the instigation of some Tatar K̲h̲āns of the Crimea, the Ottoman troops (60,000 men) of Wān suddenly invaded Ād̲h̲arbāyd̲j̲ān. The Persians evacuated Tabrīz and Ardabīl. The Turks, who were short of supplies, revictualled at Tabrīz and advanced to Sarāb, where Ḳarčḳay K̲h̲ān, *sipāhsālār* of Tabrīz, won a brilliant victory over them. A new treaty was made confirming the conditions of that of 1022 (*ʿĀlam-ārā*, 656-61; von Hammer, ii, 773).

After the death of ʿAbbās I, the struggle between Turk and Persian was resumed on a great scale. In the reign of his successor S̲h̲āh Ṣafī, Sultan Murād IV invaded Ād̲h̲arbāyd̲j̲ān in 1045/1635 and entered Tabrīz on 12 September. The aim of this campaign was plunder rather than conquest. Murād ordered his soldiers to destroy the town. Having in this way "knocked down Tabrīz" (Ewliyā, *eyid̲j̲e örseleyip*), Murād, in view of the advance of the season, hastened to return to Wān. In the following spring, the Persians reoccupied their possessions as far as Eriwān and by the treaty of 1049/1639 secured for themselves the frontier which has survived in its main lines to the present day.

Ḥād̲j̲d̲j̲ī K̲h̲alīfa, who was an eye-witness of the campaign of 1045/1635, says that after the devastation wrought by Murād IV the old ramparts had completely disappeared and "only here and there could traces of old buildings be seen" (*D̲j̲ihān-numā*, 381). Even S̲h̲ām-G̲h̲āzān was not spared; the mosque of Uzun Ḥasan alone was left intact.

Such then was the state of the town, but a series of travellers who visited it a few years later say that it had undergone a splendid revival. The interesting story of Ewliyā Čelebi (in the reign of ʿAbbās II in 1057/1647) gives detailed statistics of Tabrīz, its *madrasas*, schools, caravanserais, houses of notables, dervish *tekiyyes*, gardens and animated public promenades. In the same period, Tavernier says that, in spite of the damage done by Murād IV, "the town is almost completely rebuilt". According to Chardin

(ii, 328), in 1673 under Shāh Sulaymān I, there were in Tabrīz 550,000 inhabitants (the figure seems exaggerated), 15,000 houses and 15,000 shops. It was "really a large and important town... There is plenty of all the necessaries of life and one can live very well and cheaply in it". There was a hospice of Capuchins at Tabrīz on which the authorities cast a kindly eye. The *beglerbegi* of Tabrīz had under his authority the Khāns of Ḳarṣ, Urmiya, Marāgha and Ardabīl and 20 *sulṭāns* (= local chiefs).

The end of the Ṣafawids and Nādir. The Afghān invasion of Persia resulted in a state of complete anarchy. The heir to the throne, Ṭahmāsp (II), who had fled from Iṣfahān arrived in Tabrīz where he was proclaimed king in 1135/1722. When by the treaty of 12 September 1723, Ṭahmāsp II ceded the Caspian provinces to Russia, Turkey announced that as a precautionary measure she would be forced to occupy the frontier districts between Tabrīz and Eriwān. After the fall of Eriwān, Nakhčiwān and Marand, the Turks under the *serʿasker* ʿAbd Allāh Pasha Köprülü arrived before Tabrīz in the autumn of 1137/1724. The Persians, who made Shām-Ghāzān their base, held out. The Turks had some success, but the advanced season of the year forced them to retreat before the end of the month. In the following spring, Köprülü returned at the head of 70,000 men. The siege only lasted four days, but the fighting in the seven fortified quarters was very desperate. The Persians lost 30,000 men and the Turks 20,000. The survivors of the Persian garrison, to the number of 7,000, withdrew without hindrance to Ardabīl (ʿAlī Ḥazīn, ed. Balfour, 153; Hanway, *The revolutions of Persia*, London 1754, ii, 229).

The treaty of 1140/1727 concluded with the Afghān Ashraf confirmed to the Ottomans the possession of northwestern Persia as far as Sulṭāniyya and Abhar. Two years later, Nādir defeated Muṣṭafā Pasha's army at Suhaylān (*vulgo* Sawalān or Sīnikh-köprü) near Tabrīz. He entered this city on 8 Muḥarram 1142/3 August 1729 and made prisoner Rüstem Pasha, governor of Hashtarūd.

Anxious to take advantage of the domestic troubles of Turkey, Shāh Ṭahmāsp resumed the offensive but lost the battle of Ḳuridjān (near Hamadān) and the *serʿasker* ʿAlī Pasha returned to Tabrīz in the winter of 1144/1731 and even built a mosque and *madrasa* there. By the treaty concluded a little later (16 January 1732), the Persians ceded to the Porte the lands north of the Araxes but kept Tabrīz and the western provinces. As Tabrīz had actually been occupied by ʿAlī Pasha, the Porte very reluctantly agreed to its restoration to Persia and the signing of the treaty resulted in the dismissal of the Grand Vizier (von Hammer, iv, 281). On the other hand, the cession of the Transcaucasian provinces to Turkey gave Nādir an excuse for deposing Ṭahmāsp II. After checking Nādir near Baghdād, the governor of Wān, Rüstem Pasha, re-occupied Tabrīz. In 1146/1734, Nādir set out for Tabrīz and as a result of his victories in Transcaucasia, the treaty of 1149/1736 re-established the status quo of 1049/1639.

Towards the end of the reign of Nādir, when anarchy was again beginning, the people of Tabrīz declared in favour of an obscure pretender who claimed to be Sām Mīrzā. The death of Nādir in 1160/1747 might have given the Porte an opportunity to intervene in Persian affairs especially as Riḍā Khān, son of Fatḥ ʿAlī Khān, *dīwān-begi* of Tabrīz, had come to Erzerūm to beg Turkish support for one of the candidates for the throne (a Nādirid; von Hammer, iv, 474), but Turkey maintained complete neutrality.

Nādir Shāh had entrusted Ādharbāydjān to his valiant cousin Amīr Arslān Khān, who had 30,000 men under him. After Nādir's death, this general aided Nādir's nephew Ibrāhīm Khān to defeat his brother ʿĀdil Shāh (Sulṭān ʿAlī Shāh), but Ibrāhīm at once turned on his ally, slew him and after collecting 120,000 men spent six months in Tabrīz where he had himself proclaimed king (*Taʾrīkh-i baʿd-Nādiriyya*, ed. O. Mann, 36-7). He was soon killed by Shāhrukh, grandson of Nādir.

The history of Ādharbāydjān during the rule of the dynasty of Karīm Khān Zand is still little known. The Afghān Āzād Khān was at first lord of the province. In 1170/1756 it was taken from him by Muḥammad Ḥusayn Khān Ḳādjār. Next year, Karīm Khān defeated Fatḥ ʿAlī Khān Afshar of Urmiya and conquered the greater part of Ādharbāydjān (Sir John Malcolm, *Hist. of Persia*). In 1194/1780 an earthquake did great damage in Tabrīz (see Ambraseys and Melville, *op. cit.*, 54-5).

The Ḳādjārs. Towards the end of 1205/1790, Āḳā Muḥammad, founder of the Ḳādjār dynasty, set out to occupy Ādharbāydjān. Among the governors who came to meet him was the hereditary lord of Khoy, Ḥusayn Khān Dumbulī. Āḳā Muḥammad added Tabrīz to his fief. After the assassination in 1211/1796 of the first Ḳādjār Shāh, troubles broke out in Ādharbāydjān. Ṣādiḳ Khān of the Shiḳāḳī tribe attempted to seize the supreme power, and appointed his brother Muḥammad ʿAlī Sulṭān to Tabrīz. The Dumbulī Khāns took an active part in suppressing the rising, and in return, Fatḥ ʿAlī Shāh confirmed Djaʿfar Ḳulī Khān Dumbulī in the governorship of Tabrīz. The latter as soon as he arrived in Tabrīz in 1213/1798 formed a coalition with Ṣādiḳ Khān, who had re-established himself in Sarāb, and the Afshār Khān of Urmiya, and shaking off "the dependence which was so slight that it really was absolute independence" drove out the Shāh's representatives. Troops were sent against Djaʿfar Khān who, with the help of the Kurds, held out for some time in Khoy; cf. Sir Harford Brydges, *The dynasty of the Kajars*, London 1833, 50, 84, etc. In 1214/1799 the heir to the throne of Persia, ʿAbbās Mīrzā, established himself in Tabrīz with Aḥmad Khān Muḳaddam (of Marāgha) as his *beglerbegi*. Djaʿfar Khān sought refuge in Russia [see SHAḲḲĪ], but for some time other members of the Dumbulī family continued to rule in Tabrīz.

After the incorporation of Georgia into Russia (1801), complications between Russia and Persia gradually increased and Tabrīz became the principal centre of Persian activities. ʿAbbās Mīrzā set himself the task of Europeanising the Persian army. An important English mission, including a number of very notable explorers of Persia (Ouseley, iii, 399; Ritter, ix, 876-80), made its headquarters in Tabrīz. The English and Russian diplomatic missions (the secretary and later head of the latter was the famous writer Griboyedov, later assassinated) also came to the court of ʿAbbās Mīrzā. The energetic heir to the throne built arsenals, cannon foundries, depots and workshops. After the trials it had undergone the town was, however, but a shadow of the splendid city of the time of Chardin. Tancoigne (1807) estimated its population at 50-60,000 including several Armenian families; Dupré (1809) at 40,000 with 50 Armenian families. Kinneir gives Tabrīz ("one of the most wretched cities") only 30,000 inhabitants. Morier, who in the account of his first journey (1809) had given the exaggerated figure of 50,000 houses with 250,000 inhabitants,

in his second journey confines himself to saying that Tabrīz had only a tenth of its pristine magnificence and that it had no public buildings of note.

The Russo-Persian wars filled the period to 1828. During the operations of 1827, the General Prince Eristov, with the help of certain discontented Khāns, entered Tabrīz with 3,000 soldiers on 3 Rabīʿ II 1243/24 October 1827. ʿAbbās Mīrzā was away and opinions in the town were divided. Allāhyār Khān Āṣaf al-Dawla was for continuing the struggle, but an important cleric, the Imām Mīrzā Fattāḥ, insisted on surrender and opened the gates of the town to the Russians. (After the peace, Mīrzā Fattāḥ had to leave Persia and take refuge in Transcaucasia.) The commander-in-chief Count Paskevič then came to Tabrīz and met ʿAbbās Mīrzā at Dih-Kharraḳān. An armistice was signed, but the court of Tehran did not approve of the terms. The Russians resumed the offensive and occupied Urmiya, Marāgha and Ardabīl. The peace of Turkman-čay 5 Shaʿbān 1243, 22 February 1828 [see TÜRKMEN ČAY[Ī]], which fixed the frontier on the Araxes, finally put an end to the Russian occupation (*uruslukh*).

After the time of ʿAbbās Mīrzā, Tabrīz became the official residence of the heir to the Persian throne. Down to the accession of Muḥammad Shāh in 1250/1834, the British and Russian diplomatic missions spent most of their time in Tabrīz (J.B. Fraser, *Travels in Koordistan*, ii, 247). Their transfer to Tehran marked the definite transference by the Ḳādjārs of the political capital to that city. Down to the end of the 19th century, little of general importance marked the life of Tabrīz. On 27 Shaʿbān 1286/8 July 1850, the Bāb [*q.v.*] was executed in Tabrīz at the entrance to the arsenal (*djaba-khāna*). In 1880, the approach of the Kurds under Shaykh ʿUbayd Allāh [see SHAMDĪNĀN] greatly disturbed the people of Tabrīz. Gates were put up between the quarters to isolate them if necessary, but the Kurds did not go beyond the Bināb.

The consolidation of Ḳādjār power secured peace for Ādharbāydjān, and Tabrīz gradually recovered. In spite of the terrible ravages of cholera and plague in 1830-1, the census made in Tabrīz in 1842 recorded 9,000 families or 100-120,000 people (Berezin). In 1895 the number of inhabitants was estimated at 150-200,000, of whom 3,000 were Armenians (S.G. Wilson, *Persian life and customs*, London 1896, 53). Twenty years later, the population was certainly over 200,000 and, in spite of the rudimentary nature of the municipal organisation, the town showed every sign of prosperity. The trade of Tabrīz, after a period of stagnation developed, especially between 1833 and 1836, but the too great excess of imports from Russia over exports from Persia produced a great crisis in 1837. The opening of the route by Transcaucasia (Poti-Baku) meant considerable competition for the parallel route Trebizond-Tabrīz.

Twentieth century. The history of Tabrīz in the opening years of the century was very stirring. The Turks of Tabrīz (who are the result of intermarriage of Persians with Ghuzz, Mongols, Turkomans, etc.), played a very important part in the Persian nationalist and revolutionary movement. Open rebellion broke out in Tabrīz on 23 June 1908, the day of the bombardment of the Parliament in Tehran. The names of Saṭṭār Khān, a former horse-dealer who became chief of the Amīr Khīz quarter, and his companion Bāḳir Khān, are closely associated with the brave defence of Tabrīz, but darker sides of their activity were noted by E.G. Browne, *The Persian Revolution of 1905-1909*, Cambridge 1910, 491-2. The government troops under Prince ʿAyn al-Dawla surrounded the town, and at the beginning of February 1909 blockaded it completely. On 20 April the Cabinets of London and St. Petersburg agreed to send to Tabrīz a Russian force "to facilitate the entrance into the town of the necessary provisions, to protect the consulates and foreign subjects, and to help those who so desired to leave the town". The Russian troops led by General Snarski entered Tabrīz on 30 April 1909 (Browne, *op. cit.*, 274). The negotiations for their withdrawal lasted till 1911, when the Russian ultimatum presented at Tehran on 29 November provoked a new agitation in the country. On 21 December the *fidāʾīs* of Tabrīz attacked the weak Russian detachment, distributed about the town, and inflicted considerable losses on them. This had the immediate result of the despatch to Tabrīz of a Russian brigade under Voropanov, which arrived on the eve of the new year. The Russian military tribunal pronounced several death sentences (including one on the Thiḳat al-Islām, an important member of the Shaykhī sect [see SHAYKHIYYA]). In October 1912 the Turkish detachments who occupied the "disputed" districts west of Ādharbāydjān were recalled, but the question of the Russo-Turkish frontier [see KURDS, KURDISTĀN] remained still undecided. The Russian troops therefore remained in Ādharbāydjān till 1914, when the First World War broke out [see further on the constitutional movement, DUSTŪR, iv. Īrān].

At the beginning of December, the Kurdish irregulars commanded by Ottoman officers began a movement from Sawdj-bulāḳ towards Marāgha and Tabrīz. At the same time, Enwer Pasha's raid on Sarï-ḳamïsh (south of Ḳarṣ) threatened the whole Russian army in the Caucasus. Orders were given to evacuate Ādharbāydjān. Between 17 December 1914 and 6 January 1915, the Russian troops and, following them, the bulk of the local Christian population, had left Tabrīz. On 8 January Aḥmad Mukhtār Bey Shamkhal, at the head of a body of Kurds, entered the town. The situation changed suddenly, and on 31 January the Russians, returning in force, re-occupied Tabrīz (see the details in the book by the former German consul in Tabrīz, W. Litten, *Persische Flitterwochen*, Berlin 1925, 8-127).

Since 1906, a paved road connecting Tabrīz with the Russian frontier (Djulfā, terminus of the Russian railway) had been constructed by the Russian government company, which had obtained the concession from the Persian government. The work of changing this road into a railway was now actively hurried on, and it was opened to traffic at the beginning of May 1916. The railway (80 miles long, with a branch line from Sofiyan to Lake Urmiya 25 miles long) was the first to be built on Persian territory [see SIKKAT AL-ḤADĪD].

The Russian army on the Persian frontier had become disorganised on the outbreak of the Revolution of 1917. Ādharbāydjān was evacuated at the beginning of 1918. The representatives of the Persian central government, and even the Crown Prince, had remained all this time at their places, but when the last Russian detachment left Tabrīz on 28 February 1918, the actual power passed into the hands of the local committee of the Democratic Party and its head Ismāʿīl Nawbarī.

Meanwhile, the Turks emerging from their inactivity, quickly occupied the frontiers abandoned by the Russians. On 18 June 1918, the Ottoman advance guard entered Tabrīz. On 8 July General ʿAlī Iḥsān Pasha arrived, and on 25 August Kāẓim Ḳara Bekir

Pas̲h̲a, who commanded the army corps. The Ottoman authorities banished Nawbarī and supported the appointment of Mad̲j̲d al-Salṭana as governor of Ād̲h̲arbāyd̲j̲ān. This troubled situation lasted for a year, and only with the arrival in Tabrīz of the new Governor-General *sipāhsālār* (June 1910) did affairs begin to resume their normal course. Complete order was only established under Riḍā K̲h̲ān [see RIḌĀ S̲H̲ĀH], who became first of all Minister of War and later ruler of Persia.

By the treaty of 26 February 1921, the Soviet government renounced all the old concessions in Persia, and the railway from Tabrīz to D̲j̲ulfā built at the expense of the Russian government thus became the property of the Persian state.

Tabrīz suffered after the Constitutional period from the decline of the transit trade from Turkey and Russia, and from a lack of favour by the Pahlawīs, suspicious of Azeri political and linguistic separatist feelings. From being in the 19th century the second city of Persia, in 1980 it was the fourth one, with a population of some 600,000, risen by 1991 to 1,088,985 (Preliminary results of the 1991 census, Statistical Centre of Iran, Population Division). After the Second World War, however, streets were widened and public gardens laid out. Local industries include the traditional one of carpet-weaving, plus textile manufacturing, leatherworking, agriculture and food processing, etc. A railway links Tabrīz via Zand̲j̲ān and Kazwīn with the Trans-Persian line at Tehran, whilst a westwards extension to Van in eastern Turkey has been constructed.

With the abdication of Riḍā S̲h̲āh in September 1941, Russian troops occupied Tabrīz and northwestern Persia for military and strategic reasons. Their control there enabled the Soviets to encourage and train pro-Communist elements there, so that, although British troops withdrew from southern Persia in March 1946, Russian troops remained. Tabrīz had meanwhile become the capital, proclaimed there on 10 December 1945, of an autonomous, potentially secessionist, régime of the Democrat Party in Ād̲h̲arbāyd̲j̲ān under a veteran Bolshevik leader, D̲j̲aʿfar Pīs̲h̲awarī. The régime was not wholly kept in power by Soviet manipulation, but expressed some genuine local grievances against Riḍā S̲h̲āh's centralisation policies and discrimination against the use of Azeri Turkish. It made a start on land reform and nationalisation of the larger banks, and a University of Tabrīz was inaugurated, but there was a real danger of complete secession and possible union with the Azerbaijan S.S.R. In fact, the diplomatic skills of the Prime Minister in Tehran, Aḥmad Ḳawām al-Salṭana, American pressure and unfavourable publicity for the Soviet Union in the United Nations Organisation, brought about a Soviet abandonment of their erstwhile protégés. The Imperial Persian army entered Tabrīz on 12 December 1946, and a purge began of pro-Communist elements, with Pīs̲h̲awarī fleeing to Baku. In the ensuing years, Tabrīz and Ād̲h̲arbāyd̲j̲ān in general suffered from the profound suspicions of the Tehran government regarding Ād̲h̲arbāyd̲j̲ānī secessionist sentiment, seen *inter alia* in a discouragement in schools, etc., of the majority Azeri Turkish language, an attitude which was only gradually relaxed somewhat by the 1970s.

(V. MINORSKY-[C.E. BOSWORTH])

2. Architecture.

In the early Islamic period, the city walls around Tabrīz enclosed a small urban area less than half a mile square on the south bank of the Mihrān River. Twelve gates led to bazaars surrounding the congregational mosque. When the Ilk̲h̲ānid ruler G̲h̲azan made Tabrīz his capital, the urban area was tripled within a perimeter wall 25,000 paces around. To judge from contemporary reports by historians and travellers, the city's bazaars were particularly flourishing at this time. The city also had two major suburbs. The one on the west known as S̲h̲ām (or S̲h̲anb)-i G̲h̲azan was centred on G̲h̲azan's dodecagonal tomb and included institutions of learning, a library, a hospital, and a mosque. The suburb on the east known as the Rabʿ-i Ras̲h̲īdī was centered on the tomb complex founded by the vizier Ras̲h̲īd al-Dīn in 709/1309. Although almost totally destroyed, it can be reconstructed from the text of its endowment deed (S.S. Blair, *Ilkhanid architecture and society. An analysis of the endowment deed of the Rabʿ-i Rashīdī*, in *Iran*, xxii [1984], 67-90). Surrounded by ramparts, the quarter had a monumental entrance leading to the founder's tomb complex, a hospice, a *k̲h̲ānaḳāh*, a hospital and service buildings. The endowment provided upkeep for the buildings, support for more than 300 employees and slaves, and for the copying of luxury manuscripts of the Ḳurʾān, *ḥadīt̲h̲* and Ras̲h̲īd al-Dīn's own works (eadem, *Patterns of production and patronage in Ilkhanid Iran. The case of Rashid al-din*, in *Oxford Studies in Islamic Art*, x, 1996).

The only monument to survive from Ilk̲h̲ānid Tabrīz is the congregational mosque founded *ca.* 710/1310 by the vizier Tād̲j̲ al-Dīn ʿAlīs̲h̲āh just outside the southern gate to the city. Now known as the Arg or fortress, it comprised a huge barrel-vaulted hall (30 × 65 m with walls 10 m thick), flanked by a *madrasa* and *zāwiya* and fronting on a large, lavishly-decorated courtyard with a pool (reconstruction in D. Wilber, *The architecture of Islamic Iran. The Il-Khānid period*, Princeton 1955, no. 51). The vault, meant to surpass the fabled Sasanian *īwān* at Ctesiphon, fell soon after its construction.

Tabrīz continued to be a major metropolis and artistic centre after the demise of the Ilk̲h̲ānids. The Dawlatk̲h̲āna, the palace built by the D̲j̲alāyirid sultan Uways (r. 757-76/1356-74), for example, was reported to have had 20,000 rooms decorated with paintings. After the Tīmūrids took the city several times, many of its public monuments were destroyed and its artisans carried off to Central Asia, but building was resumed under the Turkmen confederations of the Ḳara Ḳoyunlu and the Aḳ Ḳoyunlu, and the garden suburbs north of the river were developed. The most famous was the garden created by the Aḳ Ḳoyunlu ruler Uzun Ḥasan (r. 857-82/1453-78 [*q.v.*]), known from a lengthy description by a Venetian merchant who visited the city in the 1460s (summarised in L. Golombek and D. Wilber, *The Timurid architecture*

of Iran and Turan, Princeton 1988, 178-9). A vast area lined by populars, the garden centred on a large octagonal palace called Hasht Bihisht ("Eight Paradises"). Set on a raised marble plinth, it measured some 63 to 72 m in circumference and had a central domed hall surrounded by 32 rooms. Other amenities included an adjacent pool, a guest house with many rooms to the east and a covered hall overlooking the garden.

The best surviving example of the rich architectural patronage left by the Turkmens is the Blue Mosque or Masdjid-i kabūd, so-called because of the extraordinary blue tile revetment that covered both interior and exterior surfaces (F. Sarre, *Denkmäler persischer Baukunst*, Berlin 1901-10, 27-32; Dj.T. Ṭabāṭabā'ī, *Nakshhā va nigāshtihā-yi masdjid-i kabūd-i tabrīz*, Tabrīz 1348/1969; Golombek and Wilber, no. 214). Located outside the south-east entrance to the city, it was part of the complex erected in 870/1465 by Khātūn Djān, wife of the Ḳara Ḳoyunlu sultan Djahānshāh. According to an endowment deed dating from the previous year, the complex included a hospice for Ṣūfīs with two pools fed by a canal and was intended as a mausoleum for the queen and her family. The mosque has an unusual plan, with a domed square hall (diameter 16 m) enclosed on three sides by a U-shaped corridor covered with nine domes. Behind the square hall on the axis of the main entrance is a smaller domed hall containing a *miḥrāb*. The tile revetment is unequalled in variety and technical virtuosity and includes not only the standard floral and arabesque designs but also medallion-shaped panels set against a background of unglazed brick tiles. The hall with the *miḥrāb* was particularly lavishly decorated, with a white marble dado surmounted by a revetment of small purple-glazed hexagonal tiles accented with designs in gold leaf.

Wars between the Ṣafawids and Ottomans in the 16th century took their toll on the city's monuments, as did repeated earthquakes, but with the growing importance of the Russian frontier, Tabrīz again became of special interest under the Ḳādjārs. New boulevards were cut through the city core, and mosques and caravanserais were erected after the devastating earthquake of 7 January 1780, the strongest ever to hit the city. Large gardens, such as the Bagh-i Shimāl on the north, were added and became the stage for intriguing among foreigners.

TABRĪZĪ, the *nisba* normally to be expected from the name of the city in Ādharbāydjān of Tabrīz [*q.v.*]. This was, however, hypercorrected by early Arab writers to al-Tibrīzī. Hence in the *EI* early scholars writing in Arabic appear under this latter form, whereas those writing in Persian during later times or emanating from Tabrīz appear under *Tabrīzī*.

TABRĪZĪ, Aḥmad Kasrawī [see kasrawī tabrīzī].

TABSHĪR [see Suppl.].

TABŪK, a town of northwestern Arabia, now the centre of an *imāra* or province of Saudi Arabia (lat. 28° 22' N., long. 36° 32' E., altitude 6,500 m/2,250 feet), some 233 km/145 south-southeast of Maʿān and separated from the Red Sea and Gulf of ʿAkaba by the Ḥismā mountains.

It seems to be the Thapaua of Ptolemy, and formed part of the Roman *Provincia Arabia* set up in A.D. 106. It was in the tribal area of the Banū Kalb, and later had a Byzantine military post, in the environs of which lived Arabs of the Lakhm, ʿĀmila and Djudhām tribes [*q.vv.*]. In the summer of 9/630, the Prophet Muḥammad ordered preparations for a raid from Medina on Tabūk, where he had heard the Byzantines and Arab tribes were assembling., this being his second attempt in this direction after the abortive Mu'ta [*q.v.*] expedition of the previous year. However, many Muslims were reluctant to go on the expedition in the summer heat and during the harvest period, so that it was referred to as the *ghazwat al-ʿusra* "raid of hardship"; the laggards were denounced in Sūrat al-Tawba, IX, of the Ḳur'ān. The Prophet did not make contact with hostile forces at Tabūk, but received the submission of some local chiefs of the region and the Gulf of ʿAḳaba-Red Sea coastal region (sc. Midian [see madyan shuʿayb]). An expedition was sent out under Khālid b. al-Walīd against Ukaydir b. ʿAbd al-Malik al-Kindī, the Christian ruler of Dūmat al-Djandal [*q.v.*], who also submitted and agreed to pay the *djizya*. Muḥammad then appointed ʿAmr (or al-Ḥakam) b. al-ʿĀṣ to govern northwestern Arabia, with Muʿādh b. Djabal as collector (*djābī*) of the *ṣadaḳa*. In 98/716 the caliph ʿUmar b. ʿAbd al-ʿAzīz built a mosque at Tabūk, the Masdjid al-Tawba, on the spot where the Prophet had prayed, a mosque revered through the centuries by pilgrims passing through the town en route for Medina. This was several times repaired, with the present mosque built by King Fayṣal Āl Suʿūd in 1393/1973.

Tabūk's importance as a station of the Syrian *ḥadjdj* route was because of the availability of water in its well, which was blessed by the Prophet. Pilgrims and travellers used to encamp there to fill their water skins, and occasionally, as in 937/1530, marauding Arab tribes attacked the pilgrims and prevented them from reaching the water in Tabūk or elsewhere. The region has a great amount of underground water, which accounts for the notable agricultural schemes which have been implemented there. The well was well maintained by the Ottomans, who provided it with a pumping machine to keep the water clean, as part of their project to build the Ḥidjāz Railway [*q.v.*]. References in geographical texts indicate that there had been palm, olive, lemon, and grape trees at Tabūk; grapes from Tabūk were well-known in the Ḥidjāz.

Two years after Bedouin attacks against the Pilgrimage caravan in 965/1557, Sultan Süleymān the Magnificent ordered the construction of a number of fortresses along the pilgrimage routes, including one at Tabūk. A surviving inscription states that it was rebuilt in 1064/1653. It had a mosque and a well, and was flanked by two ponds. Tabūk enjoyed security because of the fortress, with its permanent garrison that was provided even with cannons. This explains the degree of prosperity that it enjoyed, as is reflected in the 17th century travellers' accounts;

Syrian merchants went at Tabūk to meet the pilgrims on their return and sell them provisions, sweets, and clothing.

Tabūk was visited by a number of European travellers, sc. Georg August Wallin (1850) and Charles Doughty (1877), who provided a grim picture of it as a place with few residents, while Charles Huber (1884) stated that it had been totally deserted by its inhabitants. This changed by the start of the 20th century as a result of the construction of the Ḥidjāz Railway, to which Tabūk was connected. It was selected as one of the workshop stations, a new suburb was built, and a hospital and medical quarantine were established. Eight buildings referred to as the Ḳalʿa, which are still extant, were constructed, and as noted above, water resources were managed and the mosque was rebuilt.

When the Kingdom of the Ḥidjāz was declared following the Arab Revolt, Tabūk was part of the new province of Maʿān that was created in 1432/1924 by King Ḥusayn b. ʿAlī. Two years after the Ḥidjāz was annexed by King ʿAbd al-ʿAzīz in 1344/1925, an *amīr* was appointed over Tabūk and took up residence in the fortress. A number of governors, mostly members of the Sudayrī family and the Suʿūdī royal family, succeeded to this office.

During the 19th century, the inhabitants of Tabūk were from the Ḥamīdāt clan, but with passage of time and its growth, people of diverse origins settled in the city, which was surrounded by a number of different tribes, *viz.* the ʿAṭiyya, Balī, Ḥuwayṭāt, and ʿAnaza. It has developed, thus, from a small settlement into an urban centre due to development schemes, and today it is the northern-western gateway of the Kingdom of Saudi Arabia.

ṬABŪR (t.) (a word which has passed into French in the form *tabor*), from Eastern Turkī *tapḳūr* and *ṭapḳūr*, denoting a pallisade formed of waggons arranged in a circle or square; a body of troops sent out for reconnaissance; a battalion; or a body of about 1,000 men commanded by a *biñbashî* (chief of a thousand).

In Morocco, from the mid-19th century, it denoted the first permanent military units. Under the French Protectorate, the term was applied to a group made up of several goums (*gūm*, an armed group of *ca.* 150 men commanded by officers of the Indigenous Affairs Department), hence parallel to a battalion. Several *ṭabūrs* could make up a regiment. The Moroccan *ṭabūrs* acquitted themselves gloriously in the Italian campaign (1944) and that of Indo-China (1945-54). Goums and tabors have formed the nucleus of the Royal Moroccan Army since Independence.

TADALLĪS, Tedellès, the town now known as Dellys on the Algerian coast in the *wilāya* of Tizi-Ouzou (lat. 36° 57' N., long. 3° 55' E.). It is 110 km/70 miles east of Algiers and 5 km/3 miles to the east of the mouth of the Sebaou (Wādī Sabāw), the main river of Kabylia, from which it is separated by a mountain massif.

1. Geographical situation.

The urban centre has developed on a slope towards the sea. It falls into three parts. In the north, the Arab-Kabyle town is the most densely populated and the only ancient quarter existing in Lower Kabylia; then, bordering on the ravine and developing to the south of that, is the town from colonial times; and to the east, there is the port quarter linked to the upper town by stairways or sinuous, very steep ways, as well as by the road which describes a hairpin bend to avoid the abrupt change of levels. Finally, the suburban zone of the gardens, attributed to the arrival of the Andalusians, has developed on the old, raised bank which looks northward; a centre for new development (dating from the War of Independence), the Garden City, has been formed with solid houses built within little patches of ground enclosed by reed hedges. As for the small blocks of apartments, these appeared after the years 1958-62 in order to accommodate an influx of rural population and as a result of the strengthening of the administrative infrastructure. The little port (designed by the colonial authorities with the aim of making Dellys both the administrative centre of Lower Kabylia, easy of access, and also an entrepôt and landing-place in case of troubles) is protected from the north-west winds by a promontory; hence is of a type of site for ports frequent along the Algerian coast.

Before 1860, Dellys was the only town of Lower Kabylia. In 1844 it had 1,150 inhabitants, in 1886, 3,900, and in 1968, 20,000. The people are of Kabyle Berber origin, but like the majority of tribes in the neighbourhood, speak only Arabic.

2. History.

The site of Dellys was occupied in the Roman period by the town of Rusucurru, a few traces of which have been discovered (remains of walls, cisterns, etc.). This town must have been destroyed at the Arab conquest, and for long the site remained uninhabited. Al-Bakrī (*Description de l'Afrique*, tr. de Slane, 135) does mention a port situated to the east of Marsā 'l-Ḥadjadj which he calls the town of the Banū Djannād.

The name itself under the form Tadellast, Tadellist ("the cottage") does not appear till the period when the Ḥammādid sovereigns [see ḥammādids] established their capital in Bougie. Owing to its position, which enabled relations to be easily established with the people of the valley of the Sebaou, this little town acquired a certain commercial and military importance; it even had a Ḥammādid governor. In 496/1102-3, the sultan al-Manṣūr gave this office to a prince of Almeria who had taken refuge in Africa. Al-Idrīsī (104) describes Tadāʾilis as a town on an eminence and surrounded by a strong wall. He mentions the fertility of the country around, the low cost of living, and the abun-

dance of cattle which were exported to the adjacent regions. After the fall of the Ḥammādid kingdoms, Dellys passed under the rule of the Almohads, was taken by Yaḥyā b. Isḥāḳ Ibn Ghāniya (622/1226-7), and then its possession was disputed among the Almohads, Zayyānids, Ḥafṣids and the Marīnids, who took it in 796/1394. In the 9th/15th century, according to Leo Africanus (bk. iv, tr. Schefer, iii, 69), Dellys shared the fate of Algiers. Like all the towns on the coast, it received a number of refugees from Spain who must have contributed to the economic and intellectual life of the town. Leo (*loc. cit.*) says that the inhabitants engaged in dyeing, traded successfully and were noted for their skill in playing the lute. As to their fashion of dress, he says it is like that of the people of al-Djazā'ir. When the Algerians had submitted to Spain (1510), the people of Dellys followed their example, but in 1517 it was retaken by ʿArūdj [*q.v.*]. The Turks put a garrison there and made the town a base of operations against the tribes of the valley of Sebaou. Although the inhabitants kept up a constant intercourse by sea with Algiers, Dellys only vegetated under Turkish rule. It was a wretched village when the French occupied it on 7 May 1844. A European quarter was established there two years later. The conquest of Kabylia, which was followed by the transfer of the military establishment to Tizi-Ouzou and Fort-National, arrested its development. In the course of the insurrection of 1871, Dellys was blockaded on the land side by the Kabyles (April-May), but maintained its own communication by sea so that it could not be taken by the rebels.

After that time, peace reigned, with only a little European colonisation developing on the town's outskirts.

Because of its tripartite nature, with three distinct nuclei, the town hardly possesses a centre, unless it be the square which, together with the municipal headquarters and the post office, forms the geometric centre of the three quarters. Most of the shops and commercial activity are aligned on the street which runs to the north-east of the square, in the direction of Algiers; others (and also some of the administrative services) are along the road which goes down towards the coast in a southwest direction, and also in the little street which one takes for going in the direction of the Djebel Bou Arbi. Finally, some businesses and cafés are grouped at the port, without any of these three poles being exclusive for these various activities; thus, e.g. some small booths can be found in the narrow streets of the old town. Some buildings are on the periphery, such as the technical high school and the collective apartments. Finally, some small units of production (shoes, food processing) are spread out within the whole urban area. Dellys nevertheless suffers from its position away from the main axes of development in contemporary Algeria; since the last century, the building of the Algiers-Tizi-Ouzou railway has strongly affected the commercial activities linked to the presence of the port.

In sum, Dellys forms an authentic small town, with firm roots and with a relative firm social coherence. Its original feature lies in the fact that it has an active population, anciently established, better educated and less agricultural in origin than in the other towns of Lower Kabylia.

(G. YVER-[J. BISSON])

TADBĪR (A.), *maṣdar* or verbal noun of form II of the root *d-b-r*.

1. In the sense of "direction, administration".

The Arabic lexicographers explain *dabbara* as a verb from the noun *dubur* "the hindmost, the end" (opposite, *ḳubul*), meaning "to consider the end, or result, of an affair" (see *LA*, *s.r.*, *an tanẓura ilā mā taʾūlu ilayhi ʿāḳibatuhū* "to heed what one attains at the end of the matter"; cf. Lane, 844), hence "to manage, or conduct the affairs (as of a country, *umūr al-bilād*)". But it is most likely a loanword from Aramaic, cf. Syriac *dabbar* "to run, govern, administer (something)", though strangely not listed in Fraenkel's *Die aramäischen Fremdwörter im Arabischen.*

As a technical term, *tadbīr* is used: (a) in the sense of "government, administration", synonymously with *siyāsa* [*q.v.*] (e.g. in the title of an ethical-political compendium by Ibn Abi 'l-Rabīʿ, *Sulūk al-mālik fī tadbīr al-mamālik*), and (b) in the phrase *tadbīr al-manzil* = οἰκονομία, "administration, management of a household". (This, in its turn, is called *al-siyāsa* in Ibn Sīnā's treatise on the subject, see below.) Thus for example, Ibn Khaldūn says in his *Muḳaddima* (ed. Quatremère, i, 62, cf. iii, 127, on *siyāsa madaniyya*, and tr. F. Rosenthal, *The Muqaddima*, i, 78): "Political government (*al-siyāsa al-madaniyya*) is the administration of a household or of a city (*tadbīr al-manzil aw al-madīna*) in accordance with the demands of ethics (*akhlāḳ*) and philosophy (*ḥikma*) for the purpose of directing the mass towards behaviour that will result in the preservation of the [human] species".

The *Tadbīr al-manzil* is one of the three subdivisions of practical philosophy in the Hellenistic tradition; ethics (*ʿilm al-akhlāḳ*), economics (*ʿilm tadbīr al-manzil*), and politics (*ʿilm al-siyāsa*); going back to Aristotle, *Nicomachean ethics*, VI 8-9, 1141b31-2, 1142a9-10, this tripartition is well attested in later Greek and Syriac introductions to philosophy. In Arabic classifications, it is regularly referred to from the late 4th/10th century onwards, as in e.g. the *Rasāʾil Ikhwān al-Ṣafāʾ* (Beirut 1957, i, 274: *ʿilm al-siyāsa al-khāṣṣiyya*), al-Khʷārazmī, *Mafātīḥ al-ʿulūm*, ed. van Vloten, 132, and in Ibn Sīnā's *Risāla fī aḳsām al-ʿulūm al-ʿaḳliyya* (in *Tisʿ rasāʾil*, Constantinople 1298/1881, 73, and ed. Ḥasan ʿĀṣī, Beirut 1986, 85).

The pseudo-Aristotelian *Œconomica*, dealing with the family household as a pre-political form of society, left few direct traces in the Arabic treatments of the topic. It is mentioned as a textbook by Abu 'l-Faradj Ibn al-Ṭayyib (d. 435/1043) in his prolegomena to Aristotelian philosophy, heavily dependent on Alexandrian Greek sources (*Tafsīr kitāb Ḳāṭīghūriyās*, ms. Cairo, Dār al-Kutub, Muṣṭafā Fāḍil *ḥikma* 1, fol. 5a3), and also by Ṣāʿid al-Andalusī, *Ṭabaḳāt al-umam* (ed. L. Cheikho, 39). Ibn al-Ṭayyib most probably wrote the epitome of *Œcon.* book 1, entitled *Thimār maḳālat Arisṭū fī tadbīr al-manzil*, extant in two mss. (Escurial[2] 888, among similar *thimār/istithmār* compendia by Ibn al-Ṭayyib, and Zaḥle (Lebanon), Maʿlūf collection, ed. ʿĪsā Iskandar al-Maʿlūf, in *RAAD*, i [1921], 377-85).

All other Arabic treatments of economics depend directly or indirectly upon the *Oikonomikos* of the neo-Pythagorean philosopher Bryson (2nd century A.D.?), a small work dealing in four chapters with the main topics set by ps.-Aristotle: 1. the necessity, acquisition, preservation and spending of property (*māl*), 2. the treatment of slaves, 3. the tasks of women in the household and the rôle of man and woman in mat-

rimony, and 4. the education of children—everything being regarded in view of attaining the greatest possible good fortune. The unique ms. of the original (4th/10th century?) Arabic version (*Kitāb Brsys fī tadbīr al-radjul li-manzilihī*, Cairo, Dār al-Kutub, Taymūr *akhlāk* 290, pp. 62-96) was edited by L. Cheikho (in *Machriq*, xix [1921], 161-81; idem, *Anciens traités arabes*, Beirut 1920-3, 13-33) and re-edited—with the mediaeval Hebrew and Latin versions and a German translation—by M. Plessner, *Der* Οἰκονομικός, 144-259. "Bryson" (*Burūsun*, also *Ubrūsun*, *Burūsīs* and other variants) is first quoted as the standard textbook of economics by Miskawayh (*Tahdhīb al-akhlāk*, ed. K. Zurayk, Beirut 1966, 55 ff.), and Ibn Sīnā (*R. fī aksām al-ʿulūm al-ʿakliyya*, in *Tisʿ rasāʾil, loc. cit.*), and then in many later encyclopaedias and classifications of the sciences, as by Ibn al-Akfānī (d. 749/1348), *Irshād al-kāṣid* (ed. J.J. Witkam, *De egyptische arts Ibn al-Akfānī en zijn indeling van de wetenschappen*, Leiden 1989, 64, 1, 845), followed by Ṭāshköprüzāde (d. 968/1561) in his *Miftāḥ al-saʿāda* (ed. Kāmil Bakrī and ʿAbd al-Wahhāb Abu 'l-Nūr, Cairo n.d., i, 407). Important excerpts are found in Miskawayh's *Tahdhīb* (*loc. cit.*), used also by al-Ghazālī (*Iḥyāʾ ʿulūm al-dīn*, books 12-14, see Plessner, 131 ff.), in the *K. al-Siyāsa* of Ibn Sīnā (ed. L. Maʿlūf, in *Machriq*, ix [1906] = idem, *Traités inédits d'anciens philosophes arabes*, Beirut 1911, 1-17), and in the *Ishāra ilā maḥāsin al-tidjāra*, a handbook on trade written between the end of the 4th/10th and the middle of the 5th/10th century by Djaʿfar b. ʿAlī al-Dimashkī (analysed by H. Ritter, *Handbuch der Handelswissenschaft*). Independent use of the same source was made by Naṣīr al-Dīn al-Ṭūsī in the second part of his *Akhlāk-i Nāṣirī*, expanded from other Muslim Arabic and Iranian sources (Plessner, 52-103). All later treatments of the subject—as in the ethical manuals of al-Īdjī, al-Āmulī, al-Dawānī, etc.—depend on al-Ṭūsī's exposition of economics.

(W. HEFFENING-[G. ENDRESS])

2. In the sense of "manumission of a slave".

This is a type of manumission which, however, only becomes operative after the death of the master. *Dabbara* is in this case a verb formed from the noun *dubur* "(life's) end", i.e. death, see *LʿA*, v, 358; al-Muṭarrizī, *Mughrib*, s.v. The manumitted slave (*mudabbar*) is in the same legal position as the *umm walad* [*q.v.*], except that, in the calculating of a dead man's estate for inheritance purposes, the cost of the manumission of an *umm walad* is to be debited wholly to the man's assets, but only one-third of the cost of manumitting a *mudabbar*.

(W. HEFFENING*)

TADHKIRA (A.), "memorandum" or "aide-mémoire". The word is considered a verbal noun of the form II verb *dhakkara* "to remind", but already in its nine occurrences in the Kurʾān it tends to mean a concrete "reminder" rather than a verbal "reminding".

1. In Arabic literature.

Tadhkira occurs not infrequently in the titles of books. From a closer scrutiny of these titles, two clusters of books emerge that represent two different "genres" of text presentation: (1) handbooks and (2) notebooks. It should be noted that, in most cases, the word is not yet used as a strict technical term, although in its second meaning it comes close to being such.

In the sense of "handbook", the term appears in the titles of books in a large variety of fields. Here are a few characteristic examples: (a) *adab* encyclopaedia: *al-Tadhkira al-Ḥamdūniyya* by Ibn Ḥamdūn (d. 562/1166 [*q.v.*]), ed. I. and B. ʿAbbās, Beirut 1996; (b) poetic anthology of the *Ḥamāsa* [*q.v.*] type: *al-Tadhkira al-Saʿdiyya fī 'l-ashʿār al-ʿarabiyya* by Muḥammad b. ʿAbd al-Raḥmān b. ʿAbd al-Madjīd al-ʿUbaydī (8th/14th century), [vol. i], ed. ʿA. al-Djubūrī, Baghdād 1391/1972; (c) *ḥadīth* transmission: *al-Tadhkira fī ʿulūm al-ḥadīth* by Ibn al-Mulakkin (d. 804/1401), ed. ʿA.Ḥ.ʿA. ʿAbd al-Ḥamīd, ʿAmmān 1988; (d) Kurʾān readings: *al-Tadhkira fī 'l-kirāʾāt* (title varies) by Ibn Ghalbūn (d. 389/999), ed. ʿA.B. Ibrāhīm, Cairo 1990; (e) theology: *al-Tadhkira fī 'l-djawāhir wa 'l-aʿrāḍ* by Ibn Mattawayh (5th/11th century [*q.v.* in Suppl.]), ed. S.N. Luṭf and F.B. ʿAwn, Cairo [1975]; (f) medicine: *Tadhkirat ulī 'l-albāb wa 'l-djāmiʿ li 'l-ʿadjab al-ʿudjāb* by Dāwūd al-Anṭākī (d. 1008/1599 [*q.v.*]); (g) ophthalmology: *Tadhkirat al-kaḥḥālīn* by ʿAlī b. ʿĪsā al-Kaḥḥāl (5th/11th century [*q.v.*]), ed. Ghawth Muḥyi 'l-Dīn al-Sharafī, Ḥaydarābād 1383/1964; (h) astronomy: *al-Tadhkira fī ʿilm al-hayʾa* by Naṣīr al-Dīn al-Ṭūsī (d. 672/1274 [*q.v.*]), ed. F.J. Ragep, New York 1993; (i) biography: *Tadhkirat al-ḥuffāẓ* by al-Dhahabī (d. 748/1348 [*q.v.*]) and *Tadhkirat al-nuḥāt* by Abū Ḥayyān (d. 745/1344 [*q.v.*]), ed. ʿA. ʿAbd al-Raḥmān, Beirut 1986. The Persian and Turkish use of the term for a biographical dictionary of poets (see below) is attested in Arabic too, but is probably due to Ottoman influence, thus *al-Tadhkira* by al-Fayyūmī (ʿAbd al-Barr b. ʿAbd al-Kādir, d. 1071/1660 in Istanbul, cf. Brockelmann, II[2], 377).

In its second meaning the word refers to, sometimes huge, collections of text snippets that the compiler found of interest to himself and gathered mainly for his own use. Some of these have been at least partially preserved, the best known perhaps being *al-Tadhkira al-Ṣalāḥiyya* of al-Ṣafadī (d. 764/1363 [*q.v.*]) in thirty volumes, of which a stray number is found in various libraries. The oblong book format of the *safīna* seems to be popular for these notebooks, in which case the word may appear in the title (cf. e.g. Brockelmann, II[2], 391, 558, S II, 55, 387, 402, 416, 912). These collections often contain valuable materials not found elsewhere. Thus the *Safīna* of ʿAlī b. Mubārakshāh (mid-9th/15th century) has yielded unknown *zadjals* by Ibn Kuzmān and others (see W. Hoenerbach and H. Ritter, *Neue Materialien zum Zacal. I*, in *Oriens*, iii (1950), 266-316, see 267).

Bibliography: Given in the article.

(W.P. HEINRICHS)

2. In Persian literature.

Although most often concerned with the lives of poets, some works called *tadhkira* deal with calligraphers, the Ahl al-Bayt, Ṣūfī *shaykhs* or other categories of memorable persons (see e.g. the variety of the

works mentioned by Storey). Actually, the oldest book carrying this term in its title is Farīd al-Dīn ʿAṭṭār's *Tadhkirat al-awliyāʾ* ("Memoirs of the saints"), a collection of hagiographies. The special connotation of a work on literary biography was derived from the *Tadhkirat al-shuʿarāʾ* ("Memoirs of the poets"), completed by Dawlatshāh [*q.v.*] in 892/1487, which set an authoritative example for future generations. Basic to the genre is the combination of biography and anthology, although the importance of the latter frequently outweighs that of the former. *Tadhkiras* have often been criticised on account of their unreliability, especially as far as datings are concerned, and accused of recording legend rather than historical fact. Whatever limitations they may have as historical sources, it cannot be denied that the *tadhkiras* constitute the only form of literary history created by the tradition itself.

If each of its two aspects is considered separately, Dawlatshāh's work cannot be regarded as a complete innovation. Already during the preceding centuries, anthologies had been assembled in many different forms [see MUKHTĀRĀT]. ʿAwfī's [*q.v.*] *Lubāb al-albāb* (composed at Lahore, 617/1220-1), a precursor of the *tadhkira*, is still predominantly an anthology, but a biographical interest can be found also in other mediaeval genres. In the *Čahār maḳāla* (written *ca.* 550/1155), Niẓāmī ʿArūḍī [*q.v.*] related anecdotes on a number of great poets, which typify different sides of court poetry. Ḥamd Allāh Mustawfī [*q.v.*] added a separate chapter on the poets to his *Taʾrīkh-i guzīda* (tr. E.G. Browne, in *JRAS* [1900], 721-62 and [1901], 1-32), and other historiographers equally paid attention to the lives of poets. Short biographies of poets who were the pride of their native towns can be found in the geography *Āthār al-bilād wa-akhbār al-ʿibād* by Zakariyyāʾ al-Ḳazwīnī [*q.v.*]. The most important Ṣūfī poets were dealt with separately by Djāmī [*q.v.*] at the end of his hagiographical work *Nafaḥāt al-uns*, and he inserted a section on poets into the elegant prose work *Bahāristān*.

The genre of the *tadhkira* proliferated in the 10th/16th century and afterwards. A rough distinction can be made between general works, surveying the entire history of Persian poetry up to the time of the author, and those which are focussed on a specific period (usually the compiler's own), a region or a special kind of poetry; among the latter there are, e.g., works devoted to women poets only. General *tadhkiras* are often chronologically divided into sections on poets of the early period (*mutaḳaddimīn*), of the middle period (*mutawassiṭīn*) and recent times (*mutaʾakhkhirīn*). The information concerning older poets tends to be handed down cumulatively from one *tadhkira* to another, but even in a 19th century work like the comprehensive *Madjmaʿ al-fuṣaḥāʾ* by Riḍā-Ḳulī Khān Hidāyat [*q.v.*] there are data not to be found in earlier works still extant. The most valuable data are, of course, those which refer to the author's contemporaries. (For further details on the history of the *tadhkiras*, see MUKHTĀRĀT.)

The *tadhkiras* have been drawn upon by modern writers on the history of Persian literature ever since Joseph von Hammer-Purgstall chose Dawlatshāh's work as the main source for *Die schönen Redekünste Persiens* (Vienna 1818). Nathaniel Bland introduced to Orientalist scholarship ʿAwfī's *Lubāb al-albāb*, as well as many other *tadhkiras*. This new material stimulated the study of the beginnings of Persian poetry, pursued notably by Hermann Ethé in a great number of articles. The *tadhkiras* have further provided a wealth of factual information to the authors of catalogues of Persian manuscripts.

Bibliography: The most comprehensive survey of Persian *tadhkiras* is A. Gulčīn-i Maʿānī, *Tārīkh-i tadhkirahā-yi fārsī*, 2 vols., Tehran 1348-50 *Sh.*/1969-71. See further N. Bland, *On the earliest Persian biography of poets, . . . and some other works of the class called Tazkirat ul Shuârá*, in *JRAS*, ix (1848), 111-76; H. Ethé, in *GIPh*, ii, 213-7 ("Übersicht über die Quellen"); E.G. Browne, *The sources of Dawlatsháh . . .*, in *JRAS* (1899), 37-60; Storey, i/2, 781-922; F. Tauer, in J. Rypka *et alii*, *History of Iranian literature*, Dordrecht 1968, 453 ff.

(J.T.P. DE BRUIJN)

3. In Turkish literature.

The first Turkic biography of poets was produced by Mīr ʿAlī Shīr Nawāʾī in the Čaghatay dialect in 897/1491-2. His *Madjālis al-nafāʾis*, along with two Persian works of this genre, Djāmī's *Bahāristān* (883/1478) and Dawlat Shāh's *Tadhkirat al-shuʿarāʾ* (892/1487) were known to, and used as models by, the first Ottoman biographer of poets, Sehī of Edirne (d. 955/1548 [*q.v.*]) who composed his *Hesht bihisht* in Ottoman Turkish and finished it in 945/1538. There are, altogether, twenty-four of these collections of biographies of note. The last one was completed in 1930 by İbnülemin Mahmud Kemal. Generally referred to as *Tedhkere-yi shuʿarāʾ* by the Ottomans, this uninterrupted series has contributed considerable detail to the history of Ottoman literature.

The compilers were mostly members of the *ʿulemāʾ* class and reflected the mentality, interests and tastes of this class. The *tedhkeres* themselves constitute the chief source of biographical detail on the biographers. Nearly all the biographers were poets in their own rights, and as such were featured in the works of colleagues who were their contemporaries or continuators. Biographical matter on the poets included in the *tedhkeres* was generally obtained from previous *tedhkeres*, secondary documentary sources and oral sources of one kind or another. The biographers, like the historians, demonstrate a desire to satisfy the need for an unbroken chain of recorded facts placed in works that could be serialised by means of *dheyls*. The poetic citations that were invariably added to the end of the biographies were acquired mainly from *dīwāns* and *medjmūʿas*.

The arrangement and length of individual notices vary between a few words to identify the poet to several folios. Each entry is identified most frequently by the *nom-de-plume* or *makhlaṣ* or, in the case of sultans, statesmen or administrators, by the given name. This is followed by the name of the town where they originated or the one in which they reside. There is little information given about ancestry and date of birth, but more information is supplied on the date of death. Generally, details concerning the education and training of poets are restricted to the *ʿulemāʾ*, and citations pertaining to careers and professions range from single words like "judge" and "janissary", to much longer descriptions of the careers of better-known poets. There is hardly any reference to character or appearance, but the longer *tedhkeres* sometimes include additional biographical, anecdotal and incidental material.

The Ottoman Turkish biographies of poets, like their Arabic and Persian counterparts, felt the need to tabulate, serialise, describe and preserve the best of the literary enterprises of the Ottomans for the benefit of posterity. As far as the compilers themselves were concerned, it may be suggested that a second reason for and an objective of compiling these biographical dictionaries was to create opportunities

for the compilers to exercise their very mild critical prowess as well as to praise the creativity of their fellow-bards. The following are the twenty-four major *tedhkeres*, listed in chronological order: (1) Sehī (of Edirne), d. 1548; *Hesht bihisht*, comp. 1538; covers *ca.* 1400-1538. (2) Laṭīfī (ʿAbd ul-Laṭīf of Kastamonu), d. *ca.* 1582; *Tedhkere-yi shuʿarāʾ*, comp. 1546; covers *ca.* 1400-1546. (3) ʿAhdī (Aḥmed of Baghdād), d. *ca.* 1593; *Gülshen-i shuʿarāʾ*, comp. 1563; covers *ca.* 1520-63. (4) ʿĀshiḳ Čelebi (Pīr Meḥmed of Prizrin), b. 1519, d. 1571; *Meshāʿir ül-shuʿarāʾ*, comp. 1569; covers *ca.* 1400-1569. (5) Ḳinalīzāde (Ḥasan Čelebi of Bursa), b. 1546, d. 1603; *Tedhkere-yi shuʿarāʾ*, comp. 1585; covers *ca.* 1400-1585. (6) Beyānī (Muṣṭafā of Rusčuk), d. 1597; *Tedhkere-yi shuʿarāʾ*, comp. *ca.* 1595; covers *ca.* 1400-1585. (7) Riyāḍī (Meḥmed of Istanbul), b. 1572, d. 1644; *Riyāḍ al-shuʿarāʾ*, comp. 1609; covers *ca.* 1400-1609. (8) Rīḍā (Zehīr-i Mārzāde Seyyid Meḥmed of Edirne), d. 1671; *Tedhkere-yi shuʿarāʾ*, comp. 1640; covers 1591-1640. (9) Yümnī (Meḥmed Ṣāliḥ of Istanbul), d. 1662; *Tedhkere-yi shuʿarāʾ*, comp *ca.* 1662; covers *ca.* 1600-62. (10) Güftī (ʿAlī of Edirne), d. 1677; *Teshrīfāt ul-shuʿarāʾ*, comp. *ca.* 1669; covers *ca.* 1600-69. (11) Müdjīb (Muṣṭafā), b. 1671, d. 1726; *Tedhkere-yi shuʿarāʾ*, comp. 1710; covers 1609-1710. (12) Ṣafāʾī (Muṣṭafā of Istanbul), d. 1725; *Tedhkere-yi shuʿarāʾ*, comp. 1719; covers 1640-1719. (13) Sālim (Mīrzā-zāde Meḥmed Emīn of Istanbul), b. 1687, d. 1743; *Tedhkere-yi shuʿarāʾ*, comp. 1721; covers 1687-1720. (14) Belīgh (Seyyid Ismāʿīl of Bursa), b. 1668, d. 1729; *Nukhbet ül-āthār li-dheyl-i Zübdet ül-ashʿar*, comp. 1726; covers 1620-1726. (15) Rāmiz (Ḥüseyin of Istanbul), d. *ca.* 1785; *Ādāb-i ẓurafāʾ*, comp. second half of 18th century; covers 1721-84. (16) Esrār Dede (Seyyid Meḥmed of Istanbul), d. 1796; *Tedhkere-yi shuʿarā-yi Mewlewiyye*, comp. 1796; covers *ca.* 1400-1790. (17) Shefḳat (ʿAbd ül-Fettāḥ of Baghdād), d. 1826; *Tedhkere-yi shuʿarāʾ*, comp. 1813; covers *ca.* 1730-1813. (18) ʿĀkif (Meḥmed), d. *ca.* 1796; *Mirʾāt-i shiʿr*, comp. 1796; covers his contemporaries. (19) Esʿad (Meḥmed of Istanbul), b. 1786, d. 1847; *Bāghče-yi ṣafā-endūz*, comp. 1835; covers 1722-1835. (20) ʿĀrif Ḥikmet (Seyyid Aḥmed of Istanbul), b. 1786, d. 1858; *Tedhkere-yi shuʿarāʾ*, comp. *ca.* 1836; covers 1589-1836. (21) Faṭīn (Dāwūd of Drama), b. 1814, d. 1867; *Khātimet ül-eshʿār*, comp. 1852; covers 1722-1852. (22) Tewfīḳ (Meḥmed of Istanbul), b. 1843, d. 1893; *Ḳāfile-yi shuʿarāʾ*, comp. 1873; incomplete. (23) ʿAlī Emīrī (of Diyarbakır), b. 1857, d. 1923; *Tedhkere-yi shuʿarāʾ-yi Āmid*, *ca.* 1878; covers the principal poets of Diyarbakır. (24) Inal (İbnülemin Mahmud Kemal), b. 1870, d. 1957; *Son asır türk şairleri*, comp. 1930; covers 1852-1930.

(J. STEWART-ROBINSON)

AL-TAʿDĪL (A.), in planetary astronomy the correction or equation (corresponding to medieval Latin *aequatio*) applied to mean positions of the sun, moon and planets to derive the true positions [see ḲAMAR; SHAMS. I.; TAḲWĪM; ZĪDJ]. Muslim astronomers generally tabulated these functions in the same way as Ptolemy had done in the *Almagest* [see BAṬLAMIYŪS] but occasionally introduced more extensive sets of tables to facilitate the tedious application of more than one equation (as in the case of the moon and planets).

Bibliography: E.S. Kennedy, *Solar and lunar tables in early Islamic astronomy*, in *JAOS*, lxxxvii (1967), 492-7, and M. Tichenor, *Late medieval two-argument tables for planetary longitudes*, in *JNES*, xxvi (1967), 126-8, both repr. in Kennedy *et alii*, *Studies in the Islamic exact sciences*, Beirut 1983, 108-13 and 122-4; D.A. King, *A double-argument table for the lunar equation attributed to Ibn Yūnus*, in *Centaurus*, xviii (1974), 129-46, repr. in *idem*, *Islamic mathematical astronomy*, London 1986, [2]Aldershot 1993, V; G. Saliba, *The double-argument lunar tables of Cyriacus*, in *Jnal. for the Hist. of Astronomy*, vii (1976), 41-6, and *idem*, *The planetary tables of Cyriacus*, in *Jnal. of the Hist. of Arabic Science*, ii (1978), 53-65; and B. van Dalen, *A table for the true solar longitude in the* Jāmiʿ Zīj, in A. von Gotstedter, (ed.), *Ad radices. Aldershot 1993, X), especially 354-7, for a highly sophisticated double-order procedure advocated by Ibn Yūnus *ca.* 400/1010, and J.-P. Hogendijk, *The Qibla table in the* Ashrafī Zīj, in A. von Gotstedter (ed.), *Ad radices. Festband zum fünfzigjährigen Bestehen des Instituts für Geschichte der Naturwissenschaften Frankfurt am Main*, Stuttgart 1994, 81-94, for an example of a 8th/14th-century table where the interpolation has gone awry.

(D.A. KING)

TAʿDĪL AL-ZAMĀN (A.), or *taʿdīl al-ayyām bi-layālīhā*, the equation of time, a fundamental notion in mathematical astronomy. Times derived from observations of the sun [see MĪḲĀT] need to be corrected by a function which takes into consideration the fact that the true sun does not move on the celestial equator but on the ecliptic [see MINṬAḲAT AL-BURŪDJ] and the fact that its motion on the ecliptic is not uniform. This correction, which varies throughout the year, is the equation of time, and it was tabulated in Islamic astronomical handbooks [see ZĪDJ]. Since tables of this function are dependent on three different parameters (the obliquity of the ecliptic [see MAYL] and the solar apogee and eccentricity [see SHAMS. I.]), they present a particular challenge to modern investigators.

(D.A. KING)

AL-TĀDILĪ, IBRĀHĪM B. MUḤAMMAD b. ʿAbd al-Ḳādir al-Ribāṭī (1242-1311/1827-94), scholar from Tadla, in particular, in the field of music. He was descended from Sīdī Djābir, whose mausoleum is on the left bank of the Umm al-Rabīʿ and who was of Djusham Arab origin, a group which had been established in that region since the 7th/13th century. For generations, his ancestors had lived in Rabat, which confirms the belief that they had emigrated in the course of the 17th century, fleeing the troubles which shook Tadla after the death of Sultan Mawlāy Ismāʿīl.

The Tādilīs of Rabat were renowned for their knowledge, their dignity and their distinction, and they were among the most illustrious families in the town; they were put on the same footing as those who were originally from al-Andalus.

Ibrāhīm al-Tādilī was unique among his contemporaries for his encyclopaedic mind and his familiarity with European and oriental languages. Having finished the basic cycle of education which was usual for that period, he went to Fās to continue his studies. For fifteen years he attended courses in the Ḳarawiyyīn [*q.v.*]. Among his teachers he had illustrious scholars such as al-Walīd al-ʿIrāḳī, Aḥmad Bennānī, Ḥamdūn b. Ḥādjdj al-Sulamī, and several others.

As well as following the linguistic and Islamic disciplines, together with a few other students he applied himself to studying the rational disciplines, which were generally passed over and were no longer offered for study except in smaller mosques or in particular places, including, mathematics, astronomy, equations, astrology, medicine and logic, with music also included. In his writings he reserves a place for the teachers of music at Fās, whom the biographers have totally neglected, such as Ḥādjdj Ḥaddu Bendjellūn, Rashīd Djamal and his brother al-Ghālī Djamal, Muḥammad al-Ṣabbān and al-Makkī Maḥrūsh. Al-Tādilī was therefore the only one to have recorded first-hand the facts of music teaching at Fās in the second half of the 19th century.

On his return journey he stopped off several times at Meknès, and then derived learning from the local *ʿulamāʾ* of Marrākush. When he reached Rabat again, he busied himself with his tasks as a teacher. But feeling that he had not yet learned enough he decided to travel and hear the *ʿulamāʾ* of the East, once in 1862, and again in 1867.

At the Azhar he deepened his knowledge of the disciplines of *tafsīr* and *ḥadīth* with the *shaykh* ʿUllaysh. At Mecca, he studied law according to the different schools: Mālikī, with which he had already familiarised himself in Morocco; Ḥanafī, with the *shaykh* Djamāl al-Dīn al-Hindī; and Shāfiʿī, with the *shaykh* al-Ḥamzāwī. He also put his stay in Mecca to good use by following other courses on different specialities with the *shaykh*s Ṣiddīḳ Ḥasan Khān al-Kannawdjī [see NAWWĀB SAYYID ṢIDDĪḲ ḤASAN KHĀN] and al-Naḥrāwī, and finally with a Moroccan scholar who was resident in the Holy City, *shaykh* Muḥammad b. Daḥḥu al-Zāmmūrī, who issued him with an *idjāza* which sanctioned his transmission of the most authentic *ḥadīth*s. On his return to his homeland, he taught at Rabat for three decades, delivering five to eight lectures daily.

His works number more than 120, and can be divided into three categories. First, there are the didactic materials, which group together his commentaries on old texts and his own lectures. Most of these were unfinished for lack of time, and today quite a number of them are known only by their titles. Then there are books on current Muslim disciplines. To his work on Mālikī *fiḳh* he added commentaries on Shāfiʿī *fiḳh*. Finally, there are the books on subjects which appeared to be new for that period, such as geography, astronomy, medicine, etc. The titles of three of these works are *Zīnat al-naḥr fī ʿulūm al-baḥr*, in which he deals with the technique of navigating sailing boats and steam boats; *Ḥisān al-ḥaḳāʾiḳ wa ʾl-raḳāʾiḳ fī ḥisāb al-duradj wa ʾl-daḳāʾiḳ*, which deals with the mathematical measurement of spheres, constellations, latitude and longitude; and *Aghānī al-siḳā wa-maʿānī al-mūsīḳā* or *al-Irtiḳāʾ ilā ʿilm al-mūsīḳā*. The subject of this third book, music, which formed an important aspect in the life of the author, did not attract any particular attention from his biographers.

In fact, *Aghānī al-siḳā* was finished in 1891, and it appeared at a time when Tetuan was experiencing a resurgence of musical activity. This was crowned in 1885 by the compilation of *Kunnāsh al-ḥāʾik*, which grouped together the eleven *nawbāt* of Andalusian music still in use today. All this suggests that al-Tādilī contributed to the composition of the Tetuan booklet, for in fact the origin of these eleven *nawbāt*, their time patterns, their cadences as well as the methods of playing and singing them based on the Fās model are set out in *Aghānī al-siḳā* in ch. iv and those which follow in that book. His music courses in Rabat were to produce several musicians, such as Muḥammad al-Rṭal the singer, al-Ḥadjdj Ḳāsim b. ʿAsīla the player of the *ḳānūn*, and the lute player Makkī al-Figīgī.

In Rabat, al-Tādilī led a peaceful life. But his prestige and his audiences earned him jealousy from his enemies; no-one understood what were the prime motives behind his incarceration, when ʿAbd al-Raḥmān al-Brībrī, the *ḳāḍī* of Rabat, intervened. His biographers all bear witness to his courage in denouncing iniquity, so it was not surprising that in the course of his lectures, in which some members of the *makhzan* were present, he became indignant about the illegal imposition of the *maks*, an unpopular tax which had been levied for a long time in Morocco when products of commercial value were brought into the towns.

He was fearless, too, when he declined, for health reasons, the invitation from the king to participate in the religious evening at the Great Mosque in Rabat on the occasion of the night of 27 Ramaḍān 1302. What is more, he seized the opportunity to ask the chamberlain to beg Sultan Ḥasan I to abolish the *maks*. Five months later, in the *ẓahīr* of 13 Rabīʿ I, 1303/20 December 1885, this tax was abolished.

In 1886 al-Tādilī undertook a third voyage to the East, but this time with a political aim. He went to Turkey in an attempt to bring together the Ottoman *khalīfa* and the Sharīfī *khalīfa*, and was warmly received in Istanbul. For him this was a chance to meet politicians and Muslim scholars and to appreciate the progress in modernisation and development that had been made by the Turks. From there he went on to Beirut, where he met Muḥammad ʿAbduh [*q.v.*], who was in exile and whose reformist ideas had aroused his admiration, and then to Palestine, where he lectured at the al-Aḳṣā mosque.

He died in Rabat on the night of Thursday and Friday 18 Dhu ʾl-Ḥidjdja 1311/15 June 1894.

Bibliography: Several of al-Tādilī's own works remain in ms., but see Ibn Sūda, *Dalīl muʾarrikh al-Maghrib al-Aḳṣā*, Casablanca 1960; ʿAbbās b. Ibrāhīm, *al-Iʿlām*, i, Rabat 1974; ʿAbd al-ʿAzīz Ben ʿAbd Allāh, in *Encyclopédie marocaine*, Fédala 1975, s.v.; ʿAbd al-Wahhāb Ben Manṣūr, *Aʿlām al-Maghrib al-ʿarabī*, i, Rabat 1979; ʿAbd Allāh al-Djirārī, *Abū Isḥāḳ al-Tādilī*, Casablanca 1980; Muḥammad Lamnūnī, *Maẓāhir yaḳẓat al-Maghrib al-ḥadīth*, Beirut 1985; Mohammad Hajji, *Catalogue de la Bibliothèque sbīhiyya*, Kuwait 1985; Muḥammad Larbi al-Khaṭṭābī, *Catalogue de la Bibliothèque Royale* (*Hasaniyya*), iv, Rabat 1985; Muḥammad Dinyā, *Madjālis al-inbisāt*, Rabat 1986; Muḥammad Bū Djāndār, *al-Ightibāṭ*, Rabat 1987; ʿAbd al-Ilāh al-Fāsī, art. *al-Tādilī, Ibrāhīm*, in *Encyclopédie du Maroc*, Salā 1992; ʿAbd al-Raḥmān Lahrīshī, *Catalogue abrégé des mss. de la Fondation ʿAllāl al-Fāsī*, i, Casablanca 1991; ʿAbd al-Salām b. Sūda, *Itḥāf al-muṭāliʿ*, Beirut 1996.

(MOHAMMAD HAJJI)

AL-TĀDILĪ, YŪSUF B. YAḤYĀ, IBN AL-ZAYYĀT [see IBN AL-ZAYYĀT].

TĀDJ (A.), crown, a Persian loanword in Arabic going back to the Old Persian **tag*; cf. Armenian *tʿag*, Aramaic *tāgā*. From it are formed in Arabic the broken plural *tīdjān* and the corresponding verb *t-w-dj*, forms II "to crown", V "to be crowned", and *tāʾidj*, "crowned" (Horn, *Grundriss der neupersischen Etymologie*, Strassburg 1893, 81; Siddiqi, *Studien über die persischen Fremdwörter im klassischen Arabisch*, Göttingen 1919, 74, 84, Fraenkel, *Die aramäischen Fremdwörter im Arabischen*, Leiden 1886, 62). Like the name, the object itself comes from old Persia. The form of the crowns of the old Persian kings, which we know best from their coins, was not unknown in Arabic literature. Al-Masʿūdī, for example, tells us he had seen an old book with coloured pictures of Persian kings wearing their crowns, which was translated into Arabic for the Umayyad Hishām b. ʿAbd al-Malik b. Marwān (*Tanbīh*, 106). A whole series of books now lost with titles like *Kitāb Siyar al-mulūk* and *Kitāb al-Tādj* seem to have been of similar content. The *Kitāb al-Tādj* edited by Aḥmad Zakī Pasha (Cairo 1332/1914) is a compilation of Arab and especially Sāsānid Persian traditions; its translator, Ch. Pellat (*Le livre de la couronne*, Paris 1954, Introd.), thought that its author was an Arabised Persian, conceivably Muḥammad b. al-Ḥārith al-Taghlibī/al-Thaʿlabī, but certainly not al-Djāḥiẓ (see also Brockelmann, S I, 246; NAṢĪḤAT AL-MULŪK; and AL-THAʿLABĪ). It is presumably on such sources that are based the statements on the Persian crown in Ḥamza al-Iṣfahānī, *Taʾrīkh Sinī mulūk al-arḍ wa ʾl-anbiyāʾ* (Berlin, Kaviani Press, 17, 24-5, 32, 35 ff.), and the Persian *Mudjmil al-tawārīkh* which utilises him and the statements in al-Ṭabarī also (on the relation of their sources, cf. Nöldeke, *Geschichte der Perser und Araber*, Leiden 1879, Introd. (on the crown among the Persians, cf. especially, 95, 221, 304, 385, 453); A. Christensen, *L'empire des Sasanides*, Copenhagen 1907, 14, 89 ff., 106; idem, *Le règne du roi Kawadh I et le communisme mazdakite*, Copenhagen 1925, 22 ff.). In the Arabic *Awāʾil* [*q.v.*] literature, we are told that the first to wear a crown was al-Ḍaḥḥāk (see al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, i, 415).

On Islamic miniatures which depict the old Persian kings, the latter wear regular crowns, but their form is, of course, in no way authentic. On the miniatures, crowns are also worn by the angels, and notably by the Prophet Muḥammad and Burāḳ in the *Miʿrādj* (see the miniature in the edition of the Uyghur *Miʿrādj-nāme*, ed. Pavet de Courteille, Paris 1882).

The Arabs made their first acquaintance with crowns before Islam, for the Persian kings occasionally gave their Arab vassal kings crowns as a token of their rank, e.g. to the Lakhmid Imruʾ al-Ḳays (d. 328 A.D. (if *tg* in the Namāra inscription really equals *tādj*, which is by no means certain); cf. Clermont-Ganneau, *Recueil d'Archéol. Or.*, vi, 307: *Le roi de "tous les Arabes"* and vii, 176: *Le Tâdj-dâr Imrou 'l-Qais et la royauté générale des Arabes*; U. Monneret de Villard, *Il Tāǧ di Imruʾ l-Qais*, in *RCAL*, Cl. di Sc. morali, storiche e filologiche, viii [1953], 224-9; Irfan Shahîd, *Byzantium and the Arabs in the fourth century*, Washington D.C. 1984, 36-7, 413-14; Lidzbarski, *Ephemeris*, ii, 35, 375: also on the difference between *iklīl* and *tādj*; the latter seems to mean a simple chaplet only), and to the Lakhmid Nuʿmān III (see G. Rothstein, *Die Dynastie der Laḫmiden in al-Ḥîra*, Berlin 1899, 128) and to the *Dhu ʾl-Tādj* Hawdha b. ʿAlī, the Christian ruler of Yamāma in the time of Muḥammad, to whom the Prophet is said also to have sent a demand to become converted to Islam (Ibn Hishām, ed. Wüstenfeld, 971; al-Ḳalḳashandī, vi, 379; Fraenkel, 62; al-Ṭabarī, i, 985; Nöldeke, *Gesch. d. Perser u. Araber*, 258). Crowns and bearers of crowns were often celebrated by the poets (see Siddiqi, 84; al-Mubarrad, *Kāmil*, 289-90, where the crown is said to be a peculiarity of the Yemen, possibly a reminiscence of the old relations between Yemen and the Abyssinians; on the crown of the latter, cf. Nöldeke, *Geschichte*, 225, 233).

The celebrated crown of Khusraw II Aparwīz was among the booty which the Arabs took at Ctesiphon (Christensen, *L'Empire*, 106). But the crown continued to be something foreign and rare among the Arabs. There is a *ḥadīth* which says *al-ʿamāʾim tīdjān al-ʿArab*, "the turbans are the crowns of the Arabs", i.e. according to the usual explanation in the *Lisān al-ʿArab* and elsewhere, turbans are as rare amongst them as crowns, for most Bedouins do not wear turbans but only *ḳalānis* (caps, see KALANSUWA) or no headdress at all.

Islam knows no regular royal crown or coronation in our sense as a symbol of regal power. When we find mention of crowns, the reference is to foreign rulers like those of the old Persian Great Kings, of Christian rulers, etc. The *tādj al-Bābā* is the tiara of the Pope and the *tādj al-usḳuf* the mitre of a bishop. Only in the case of the so-called *tādj al-khalīfa* do we seem at first sight to have a Muslim ruler's crown. This crown of the caliph, which is included among the insignia (*ālāt al-mulūkiyya*) of sovereignty, is not found till the ʿAbbāsid period, and it has been suggested that this dynasty imitated the Persian tradition in deliberate contrast to the early caliphs and Umayyads (Nöldeke, *Geschichte*, 453). The caliph wore this *tādj* on ceremonial occasions (*mawākib* [*q.v.*]) on the great feast-days. Al-Ḳalḳashandī (iii, 472, 484 = Wüstenfeld, *Calcaschandi*, 172, 182) describes the *tādj* of the Fāṭimid caliph of Egypt. It is evident from him that it was not a proper crown but a turban richly studded with gems, including a particularly large one called *al-yatīma*, weighing seven dirhams, of the colour of the Fāṭimids, namely white, for the elaborate winding of which (*shadd al-tādj al-sharīf*) a special official (the *shadd*, later called *laffāf*) was appointed (cf. Inostrantsev, *The ceremonial procession of the Fāṭimid caliphs* [in Russian], St. Petersburg 1905, 64; Ibn al-Ṣayrafī, *Ḳānūn dīwān al-rasāʾil*, ed. Bahdjat, 27[1]). The Ḥafṣid sultan, too, wore a *tādj* on his *mawākibs* (see Ibn Faḍl Allāh, *Masālik al-abṣār*, extract, *Waṣf Ifrīḳiya wa ʾl-Andalus*, ed. Ḥasan Ḥusnī ʿAbd al-Wahhāb, Tunis [*ca.* 1922], 23, no. 2).

Among the robes of honour which the caliph or the sultan used to send to governors, ambassadors, etc., there was usually a *tādj*, as is often expressly mentioned. Thus according to al-Ḳalḳashandī, viii, 375, on his accession the caliph presents a crown set with jewels (*tādj muraṣṣaʿ*; cf. also Wüstenfeld, *Statthalter*, iii, 38). A similar *tādj* seems also to appear as an emblem on the arms of *amīrs* of the Mamlūk period [see RANK].

The name *tādj* was also given to the headdress of the Ottoman sultans. Even ʿOthmān I is said to have worn a *tādj-i Khurāsānī* (d'Ohsson, ii, 135). We know exactly the kind of headdress worn by the conqueror of Constantinople from the paintings by Bellini. He wears a large turban, and the *tādj*; the inner cap of this turban is in the shape of a truncated cone and is usually red and rippled (? stitched). Round this is wound the turban proper (*ṣarīḳ*) of thin cloth. The form of the turban of Meḥemmed Fātiḥ found on his paintings is also shown on the medals. When we find, on the reverse of a medal, three regular crowns, which

are believed to represent the three kingdoms of Asia, Greece and Trebizond united under Ottoman rule, the explanation probably is simply that the medal was designed and executed by a European artist (cf. G.F. Hill, in *NC* [1926], 287-98 and pl. xiv). Karabacek has dealt fully with the *tādj* of the Ottoman sultans. According to him, the Perso-Turkish *tādj* corresponds to the *ṭarṭūr* of Arabic-speaking lands, a rather high cap which is found represented as early as a papyrus of the 7th century A.D., and assumed many varying forms in the course of time. In remarkable agreement with these forms are the headdresses (*hen*[*n*]*in*) of the 14th-16th centuries of ladies in France and Spain, which according to Karabacek came direct from the east (the name, Arabic *ḥanīnī*, as well as the object itself). Particular forms of this headdress have survived on women to the present day, e.g. among the Druses of the Lebanon and in Algeria and Tunis. In modern Egypt, there has developed from this the *ḳurṣ* as a woman's headdress. This is a plate-like ornament of gold and gems, which is sewn on the crown of a rather high cap and is sometimes of considerable weight. This *ḳurṣ* is put on the top (*shāhid*) of the bier of dead women, as is done with the turban in the case of men (cf. Lane, *Manners and customs of the modern Egyptians*, Appendix A; idem, *Arabian society in the Middle Ages*, 218, 234). The use of a special crown for brides, which is found all over the world, is also sometimes found in the Muslim world (Lane, *The thousand and one nights*, i, 424; Lagarde, *Arabes mitrati*, in *Nachrichten... Göttingen* [1891], 160 ff.; and the title of the well-known dictionary *Tādj al-ʿarūs*; cf. for Eastern Turkestan, Brockelmann, in *Asia Major*, ii, 122).

The *tādj* was given a special religious significance as a headdress among the dervishes. The assumption of the *tādj* was an essential part of the *shadd* [*q.v.*]. The different dervish orders each had their *tādj* of distinct form and colour, frequently with 12 seams (*terk*) from the number of the Imāms, or with 9, 7 etc., and there were numerous names and symbolical interpretations associated with them (see Aḥmed Rifʿat, *Mirʾāt al-maḳāṣid*, Istanbul 1293, 212-15; Brown, *The Darvishes*, 148 ff.; pictures in d'Ohsson, ii, 292; there is also a large coloured table of the 14 most important dervish orders with pictures of their *tādj* and accounts of the *silsile* of their founders, printed in the Istanbul press of Maḥmūd Bey, publ. by the *Ṣanāʾiʿ-i nefīse resim-khānesi* of Ẓiyā Bey, dated 15 Shaʿbān 1314). In Persia, under Shaykh Ḥaydar [*q.v.*; whence *Tādj-i Ḥaydarī*] and Shāh Ismāʿīl [*q.v.*], we find the Ṣūfī *tādj* as a kind of official headdress for the king, the court, the army and the officials, granted with a special ceremonial, but it probably existed before them (see Karabacek, *op. cit.*, 87; and ḲIZIL-BĀSH).

We find *tādj* used in many ways with a metaphorical application. Names of honour (*alḳāb*) combined with *tādj* are very common in later times, and were probably most popular in the Mamlūk period. At first they were content with simple epithets like *Tādj al-Dīn* for soldiers (al-Ḳalḳashandī, v, 488) or *Tādj al-Dawla* for Christian secretaries (*ibid.*, v, 487); then we get double epithets like *ʿAḍud al-Dawla wa-Tādj al-Milla* (v, 492), *Tādj al-ʿUlamāʾ wa ʾl-Ḥukkām* for *ḳāḍīs* (vi, 41) and many others. For infidel kings, forms of address like *Baḳiyyat Abnāʾ al-Tukhūt wa ʾl-Tīdjān* (vi, 85), *Mukhawwil al-Tukhūt wa ʾl-Tīdjān* (vi, 175), *Wārith al-Asirra wa ʾl-Tīdjān* (vi, 177) were used. Perhaps the custom, of which there are countless examples, of giving books titles in the form of *Tādj* with a genitive is connected with this.

In astronomy, *Tādj-i Saʿdān* = Saturn [see ZUḤAL]; *Tādj al-Djabbār* = a star near Orion. *Tādj ʿamūd* is the capital of a column (see Sarre-Herzfeld, *Archaeol. Reise*, ii, 185); *tādj* is also the name given to the comb of a cock and similar birds. A famous palace of the caliphs was called *Ḳaṣr al-Tādj*. It was built under the caliphs al-Muʿtaḍid and al-Muktafī out of the ruins of a palace in al-Madāʾin, one of the seven wonders of the world, burnt down in 549/1154 after being struck by lightning, rebuilt but not finished, and completely destroyed in 574/1178-9 (Yāḳūt, i, 806-9, tr. in *ZDMG*, xviii, 403-6; Sacy, *Chrestomathie*, i, 74; von Kremer, *Kulturgeschichte*, ii, 54; Sarre-Herzfeld, i, 92, ii, 63, 148). Among the pleasure houses (*manāẓir*) of the caliphs in Cairo there was one called *Manẓarat al-Tādj*, built by Badr al-Djamālī [*q.v.*], which was in ruins by the time of al-Maḳrīzī (al-Maḳrīzī, i, 481, ii, 129; Yāḳūt, suppl., v, 15; Sacy, *Chrestomathie*, i, 224, 228).

Bibliography: In addition to the particular works mentioned in the text, see in general: Dozy, *Dictionnaire des vêtements*, s.v. *Tādj*; *Hastings' Encyclopaedia of Religion and Ethics*, s.v. *Crown*; Karabacek, *Abendländische Künstler in Konstantinopel im 15. u. 16. Jahrhundert, I. Italienische Künstler am Hofe Muhammeds II. des Eroberers 1451-1481*, in *Denkschriften d. k. Akad. d. Wiss. Wien*, lxii/1 (1918). See also ḲIZIL-BĀSH and LIBĀS and their Bibls. (W. BJÖRKMAN*)

TĀDJ MAḤALL, the mausoleum which the Mughal emperor Shāh Djahān [*q.v.*] (r. 1037-68/1628-58) built for his favourite wife Mumtāz Maḥall at Āgra [*q.v.*]. This is the grandest in a series of monumental dynastic mausoleums that have become synonyms of Mughal architecture. Mughal imperial tombs are the most spectacular exponents of a funerary tradition which creatively synthesised and developed ideas of its Tīmūrid heritage and local Indian building conventions.

The architecture. The success of the Tādj Maḥall lies not only in its aesthetic, romantic and symbolic appeal but in the fact that it expresses in a canonical form the architectural principles of the period. The Mughals had no written architectural theory; it was laid down here in a built form: (1) A rational and strict geometry brought about by modular planning using grid systems based on the Shāhdjahānī *gaz* (varying in length between 80 and 82 cm or *ca.* 32 inches) (see R.A. Barraud, *Modular gaz planning of the Taj Mahal, Agra*, unpubl. ms. 1995; Begley's and Desai's grids [*Taj Mahal*, figs. 13, 17] are not correct); (2) Consistent symmetrical planning with emphasis on bilateral symmetry on both sides of a central axis (*ḳarīna*) into which are integrated centralised schemes; (3) A hierarchical grading of material, forms and colour down to the most minute ornamental detail; and (4) A sophisticated symbolism in the architectural programme.

The mausoleum is set at the northern end of the main axis of a vast oblong walled-in complex (*ca.* 1,114.5 × 373 *gaz*) formed of three units: the tomb and its garden with elaborate water works (Fig. 3, A, B, E), and two courtyard complexes to its south with subsidiary structures (C, D), only one of which survives. The preserved Tādj complex measures *ca.* 561 m × 300 m (690 × 313 *gaz*). In its layout the tomb garden (A and B) is the monumentalised version of the Shāhdjahānī expression of the waterfront garden, a type specific to Mughal architecture (Koch, *The Mughal water front garden*, in A. Petruccioli (ed.), *Theory and design of gardens during the times of the great Muslim empires*, Leiden 1997). The plan shows the characteristic configuration of a raised rectangular terrace (*kursī*,

A) on which are placed the main buildings and a lower centrally planned four-part garden (*čahār bāgh*) (B); its square, measuring 368 × 368 *gaz*/296.31 × 296.31 m, formed the basis for developing the grid of the plan. The two complexes with the subsidiary structures are arranged according to the same compositional scheme of a rectangle (C) combined with a centrally-planned unit (D) but here the buildings consist of open courtyards formed of narrow wings and arcades, typical of the residential and utilitarian architecture of the period (for the function of the buildings see MUGHALS. 7. ARCHITECTURE, at Vol. VII, 332). The courtyard complex adjoining the tomb garden contains also subsidiary tombs for other women of Shāh Djahān's *zanāna*. These tombs are set in miniature replicas of the main garden (C, 9a, b). (Their form revives an older Sultanate type of a domed octagon surrounded by arcades, translated into the lighter architectural vocabulary of the period; see MUTHAMMAN; Koch, *Mughal architecture*, 101, and figs. 34, 35.) Outside the walled enclosure is another small tomb complex varying this pattern (9c) and a tomb and a mosque (11, 12).

The income of the *bāzārs* and the *karwānsarā'īs* of the subsidiary complexes (8, 10)—together with that of thirty villages from the district of Āgra—was devoted by imperial command to the upkeep of the mausoleum.

In the tomb garden, emphasis is on the features on the central axis: the grandiose group of the mausoleum (*rawḍa*) (1) and its four minarets, flanked by a mosque (2) and a "guest house" (*mihmān-khāna*), rather an assembly hall (3), set the main accent. Radial symmetry is observed in the gatehouse (*darwāza*, 5) and the tomb proper. Both follow the ninefold plan (Fig. 4), the favourite plan of Mughal architecture with Tīmūrid antecedents (L. Golombek, *From Tamerlane to the Taj Mahal*, in *Islamic art and architecture. Essays in Islamic art and architecture in honor of Katharina Otto-Dorn*, ed. A. Daneshvari, Malibu 1981, i, 43-50; E. Koch, *Mughal architecture*, 44-50, 80-1, 99-100). The plan of the mausoleum is inscribed in a square with chamfered corners or irregular octagon, described in the contemporary texts as *muthamman* [*q.v.*] *baghdādī*. The elevation follows—in the interior—the Tīmūrid concept of two super-imposed tomb chambers surmounted by a high double dome (Fig. 2). The exterior—composed of monumental *pīshṭāks* [*q.v.*] flanked by double-storey niches—brings the cubical tomb of the Dihlī tradition enhanced by Deccani features (bulbous profile of the dome) to a formal apotheosis of unparalleled elegance and harmony (Fig. 1). The balanced proportions are highlighted by the sophisticated facing of the brick structure: the white marble inlaid with *pietre dure* reacts to atmospheric changes and enhances the mystical and mythical aura of the building. All the subsidiary structures of the Tādj complex are faced with red sandstone; special features, such as domes may be clad in white marble. This hierarchically graded colour dualism—generally characteristic of imperial Mughal architecture but here explored with unparalled sophistication—connects with ancient Indian *śāstric* traditions, laid down in the *Viṣṇudharmottara* (8th century?) (tr. P. Shah, Ahmedabad 1990, 268, 271) where white-coloured stones are assigned to *brāhmaṇs* and red ones to *kṣatriyas*. The marble for the Tādj was brought from Makrāna in Rādjasthān and the sandstone from the quarries of the Vindhyan system in the region of Fatḥpūr Sīkrī and Rūpbās.

The architectural decoration with naturalistic flowers and plants executed in relief (Fig. 5) and in the famous Italianate inlay with semi-precious stones (*pietre dure*, Mughal *parčīn kārī* [*q.v.*]) (Koch, *Shah Jahan and Orpheus*, Graz 1988, esp. 15-22, 39 n. 24) finds its richest and most artistic expression in the central chamber of the tomb (Fig. 6). It symbolises eternal bloom and supports thus the architectural programme of the building as an earthly replica of the abode of the pardoned Mumtāz in the gardens of heavenly Paradise. The elaborate Ḳur'ānic inscriptions designed by Amānat Khān al-Shīrāzī focus accordingly on the Day of Resurrection, Last Judgement, and the Reward of the Faithful.

The architect. The question about the identity of the architect of the building has as yet not been entirely solved, since contemporary sources minimise the role of the architects and emphasise the involvement of the patron. Mīr ʿAbd al-Karīm, Djahāngīr's leading architect and the Mughal official Makramat Khān are named as overseers of the construction; Ustād Aḥmad Lāhawrī is also reported to have been connected with the building (Begley and Desai, *Taj Mahal*, pp. xli-xliii, 260-86). The craftsmen made their contribution known with numerous mason marks, which still await systematic study.

History. Mumtāz died on 17 Dhu 'l-Ḳaʿda 1040/17 June 1631 in Burhānpūr [*q.v.*] and was temporarily buried there. The construction on the Tādj started in Djumādā II 1041/January 1632 after the takeover of the site had been negotiated with its then owner, Rādjā Djai Singh Kačhwaha of Amber. The body of Mumtāz was brought in December 1631 from Burhānpūr to Āgra and temporarily reburied in January 1632 on the construction site. In June 1632 Shāh Djahān commemorated the first death anniversary (*ʿurs*) in the *ṣaḥn* (courtyard [*djilaw khāna*]?) of the building with rites aimed at obtaining divine pardon for the deceased. The second *ʿurs* in May of the following year was already held on the monumental platform (*čabūtra*) on the terrace (*kursī*) raised over the third and final burial place of Mumtāz; the place of the tombstone was on this occasion surrounded by a screen of enamelled gold, the work of the imperial goldsmiths' department supervised by Bībadal Khān (replaced in 1643 by the present inlaid marble screen). At this time, the domed tomb structure had not as yet been raised. According to two inscriptions in the interior of the mausoleum and one in the portal of the west façade, the main mausoleum was completed in 1048/1638-9. The histories report that the entire complex was finished in 1052/1643 but—according to an inscription on the garden façade of the main gateway—work on the decoration went on at least until 1057/1647. Muḥammad Ṣāliḥ Kanbō even reports that the entire complex took twenty years to be completed. The cost amounted to 50 lakhs (4 to 5 millions) rupees (see S. Moosvi, *Expenditure on buildings under Shahjahan—a chapter of imperial financial history*, in *Procs. of the Indian History Congress, 46th session Amritsar, 1985*, 285-99).

The *ʿurs* celebrations are mentioned intermittently until the fourteenth death anniversary. Of particular importance was the 12th *ʿurs* on 17 Dhu 'l Ḳaʿda 1052/6 February 1643, when the tomb was officially reported as being complete, on which occasion Lāhawrī and Kanbō provided detailed descriptions of the entire complex which—with regard to exactitude, detail and consistent terminology—are unparalleled in all of Mughal writing on architecture. After the 14th *ʿurs*, Shāh Djahān spent over two years in the north of his empire and moved his capital in 1648 to the newly-constructed Shāhdjahānabād at Dihlī. The last documented imperial visit to the Tādj is that of Ṣafar

1065/December 1654. When Shāh Djahān died in 1076/1666, after having spent the last years of his life in captivity at Āgra, he was buried in the tomb at the side of his wife.

After Shāh Djahān's burial little is known about the mausoleum until the later 18th century when it began to enter the awareness of the west through the depictions and descriptions of British visitors to India in search of the picturesque (Pal, 199 ff.). In 1803 the British conquered Āgra and the tomb became the focus of their selective restoration of monuments, which was put on a more systematic basis at the beginning of the 20th century when the Archaeological Survey of India (founded in 1860) also took on the agenda of conservation. Today, the Tādj Maḥall is included in the Monuments of World Heritage in India and also, sadly, appeared on the 1996 list of the world's hundred most endangered historic sites, according to World Monuments Watch (tourism and uncontrolled industrial growth in its surroundings). Despite India's uneasiness with its Islamic past, the Tādj Maḥall has become India's national symbol, advertising in particular tourism.

Bibliography (including references given above): 1. Original sources. All known 17th century sources—Mughal and Western—related to the Tādj Maḥall have been compiled and translated by W.E. Begley and Z.A. Desai, *Taj Mahal: the illumined tomb*, Cambridge, Mass. 1989; the work includes also a detailed photographic documentation.

2. Studies. The vast literature on the Tādj Maḥall comprises surprisingly few serious scholarly studies. There is as yet no monograph dedicated to its architecture; J.A. Hodgson's plan (1828) published in *Memoir on the length of the Illahee guz, or imperial land measure of Hindostan*, in *JRAS*, vii (1843), 42-63, remained until recently the most accurate survey of the Tādj complex and the basis of all later plans. A new plan based on measurements taken in 1995 by R.A. Barraud and E. Koch is published here as Pl. IV. Pioneering studies are M. Moin-ud-Din, *The history of the Taj and the buildings in its vicinity*, Agra 1905; and M.A. Chaghtai, *Le Tādj Maḥal d'Agra (Inde): histoire et description*, Brussels 1938. In addition to the works mentioned in the text, see R. Nath, *The immortal Taj Mahal. The evolution of the tomb in Mughal architecture*, Bombay 1972; R.A. Jairazbhoy, *The Taj Mahal in the context of East and West: a study in the comparative method*, in *Jnal. of the Warburg and Courtauld Institutes*, xxiv (1961), 59-88; Begley, *Amānat Khān and the calligraphy on the Taj Mahal*, in *Kunst des Orients*, xii (1978-9), 5-39; idem, *The myth of the Taj Mahal and a new theory of its symbolic meaning*, in *The Art Bulletin*, lxi (1979), 7-37; P. Pal, J. Leoshko *et alii*, *Romance of the Taj Mahal*, Los Angeles and London 1989; and for excellent photographs, see J.L. Nou, A. Okada and M.C. Joshi, *Taj Mahal*, Paris and New York 1993. For the most recent treatment in the context of Mughal architecture, see Ebba Koch, *Mughal architecture: an outline of its history and development (1526-1858)*, Munich 1991, and C.B. Asher, *Architecture of Mughal India*, Cambridge 1992. See also the bibls. to ĀGRA and MUGHALS. 7. Architecture.

(EBBA KOCH)

TĀDJ AL-DAWLA [see TUTUSH].

TĀDJ AL-DĪN [see AL-SUBKĪ].

TĀDJ AL-DĪN YILDIZ MUʿIZZĪ, Turkish slave commander of the Ghūrid sultan Muʿizz or Shihāb al-Dīn Muḥammad, who after that ruler's death in 602/1206, made himself, with the support of a group of other Turkish soldiers, independent in Ghazna in eastern Afghānistān. Muʿizz al-Dīn's successor at Fīrūzkūh [*q.v.*], Maḥmūd b. Ghiyāth al-Dīn Muḥammad, had to manumit Yildiz and recognise him as governor in Ghazna. During his nine years' rule there, Yildiz treated another Muʿizzī slave commander Iltutmish [*q.v.*], who had established himself in northern India, as his subordinate. But in the end, Yildiz was driven out of Ghazna in 611/1215 by the Khwārazmian forces of Djalāl al-Dīn; he fled to India, but was defeated there in battle by Iltutmish and executed.

TĀDJ AL-MULŪK [see BŪRIDS].

TADJALLĪ (A.), a *maṣdar* formation from form V of the root *dj-l-w*, which means "to appear, to come to light, to be clear or brilliant". Rabāḥ b. ʿAmr al-Ḳaysī (d. *ca.* 180/796) of ʿIrāḳ seems to have been the first to use this term to designate the manifestation of God to a person at the time of the Judgement and then in Paradise (L. Massignon, *Essai sur les origines du lexique technique de la mystique musulmane*, Paris 1922, 217).

Sahl al-Tustarī (d. 283/896) introduced it into Ṣūfism, giving it a meaning which is reproduced in the manuals of the 10th and 11th centuries (G. Böwering, *The mystical vision of existence in classical Islam*, 172-5 and index s.v. *tağallī*; al-Kalābādhī, *al-Taʿarruf li-madhhab ahl al-taṣawwuf*, Damascus 1986, 121-2; al-Ḳushayrī, *Risāla*, Damascus 1988, 74; al-Sarrādj, *al-Lumaʿ fi 'l-taṣawwuf*, ed. Nicholson, Leiden 1914, 362, etc.). The *tadjallī* consists of *mukāshafa*, an "unveiling", which allows divine light to "irradiate" the heart of the meditator; it therefore releases human nature from its darkness in the same way that the sun chases away gloom (cf. Ḳurʾān, XCII, 2).

The influence of al-Tustarī is also equally noticeable in the Sālimiyya, a spiritual movement which grew from him, as in his disciple al-Ḥallādj (L. Massignon, *Passion*, ²Paris 1975, i, 432, 568, 621, iii, 181-2; but note that Massignon has a tendency to "Christianise" the word *tadjallī* by translating it as "transfiguration", and in fact Christian Arabs use this same term to denote the Transfiguration of Christ).

Later mystics retain the meaning of "unveiling" in the term (cf. Ibn al-ʿArabī, *Iṣṭilāḥ al-ṣūfiyya*, in *Rasāʾil*, Ḥaydarābād 1948, 9, and this is often taken up again by other authors) while also exploring its range of meaning for initiation. *Tadjallī* reveals divine knowledge which is in the heart of man, thus opening to him the pathway to gnosis. Such theophany is so powerful (according to Ḳurʾān, VII, 143, it reduced Mount Sinai to dust before the eyes of Moses) that it made the human ego volatile. Mystics then experiment by attempting to annihilate the "Sinai of the soul", according to the formula of Kubrawī Ṣūfīs (cf. the introduction of H. Landolt to N. Isfararayini, *Révélateur des mystères*, Lagrasse 1986, 106; and see also M. de Miras, *La méthode spirituelle d'un maître du Soufisme iranien, Nur Ali-Shah*, Paris 1973, 295, 322). Therefore a person can only tolerate theophanies of divine attributes, names and acts, and these paradoxically form "so many protective veils between the divine essential being and the creature".

The term *tadjallī* also has a metaphysical and a cosmogonic meaning; as the correlative of the first, it

appears in Ṣūfism, especially from Ibn al-ʿArabī onwards. The Arab philosophers were already using *tadjallī* in such a perspective. For Ibn Sīnā, souls and the tangible world flow by "irradiation" from the actuating intellect, which itself comes from God, the supreme light (L. Gardet, *La pensée religieuse d'Avicenne*, Paris 1951, 52, 166). In the work of the *falāsifa*, as in that of the later mystics, the notion of *tadjallī* shows affinities with that of *fayḍ*, the theory of "emanation", borrowed from Plotinus.

Ibn al-ʿArabī, who distinguishes the two terms, made the first one of them the foundation for his metaphysical doctrine. Ibn Khaldūn puts *tadjallī* elsewhere as a characteristic tenet of the major representatives of "the school of theophany" (*ahl* or *aṣḥāb al-tadjallī*) which in his opinion represents the major current of thought in "modern" Ṣūfism (*Shifāʾ al-sāʾil li-tahdhīb al-masāʾil*, Tunis 1991, 212; *Muḳaddima*, tr. V. Monteil, *Discours sur l'Histoire universelle*, Beirut 1968, 1017-22; however, the poet Ibn al-Fāriḍ, who is also included in this changing hierarchy, favours the term *fayḍ*). According to Ibn al-ʿArabī, multiplicity extends gradually outwards from unity, through a long unbroken line of theophanies, which assume countless different forms; the world continues to exist thanks to "perpetual creation" (*khalḳ djadīd*). By the "irradiation" of the Divine Essence on them, creatures pass from nothingness to existence, or from virtual existence to effective existence. Everything or every being is therefore a "theophanic locus" (*maẓhar, madjlā*), a receptacle (*ḳābil*) which receives this "irradiation" according to its predispositions (*istiʿdād*). Consequently, man sees only his own image in the divine mirror.

Elsewhere, most of the masters deny that God is revealed to objects in His Essence (*tadjallī dhātī*; cf., e.g. Ibn al-ʿArabī, *al-Futūḥāt al-makkiyya*, Cairo 1329, ii, 606). For Tādj al-Dīn al-Subkī (*Ṭabaḳāt al-shāfiʿiyya al-kubrā*, Cairo 1964, ii, 312), an author as early as al-Ḳushayrī had this perception of *tadjallī*, but he was afraid to divulge its esoteric implications in his *Risāla* (*loc. cit.*).

Ibn al-ʿArabī develops the metaphysics of *tadjallī* in many passages of his works (in particular the *Fuṣūṣ al-ḥikam* and the *K. al-Tadjalliyāt*; for this last work, use the edition of O. Yahia in *al-Mashriḳ* [1966-7]). This doctrine has clearly diffused mainly into the school of Ibn al-ʿArabī (Ḳāshānī, Djīlī, Ḳayṣarī, etc.) but also into more orthodoxly Sunnī Ṣūfism (cf. for example *K. al-Tadjalliyāt* of the Shādhilī Ibn Zaghdān, ms. Berlin We II, 1505), Imāmite gnosis (cf. *La philosophie shiʿite*, texts by H. Amoli, ed. H. Corbin and O. Yahia, Paris-Tehran 1969), and also to Ismāʿīlī gnosis (ʿAzīz-i Nasafī, *Le livre de l'homme parfait*, ed. M. Molé, Paris-Tehran 1962; H. Corbin, *Trilogie ismaélienne*, Paris-Tehran 1961); the Ismāʿīlīs already professed the doctrine of the cycles of occulation (*satr*) and of manifestation (*tadjallī*).

Bibliography: The occurrences of the term *tadjallī* in mystical literature, particularly in that which is later than Ibn al-ʿArabī, are too numerous to be recorded here. But a discussion of the teaching of the master on this subject is presented by Suʿād al-Ḥakīm, *al-Muʿdjam al-ṣūfī*, Beirut 1981, 257-69; similarly see H. Corbin, *L'imagination créatrice dans le soufisme d'Ibn ʿArabī*, Paris 1958, 324 (index); G. Böwering, *The mystical vision of existence in Classical Islam. The Qurʾānic hermeneutics of the Ṣūfī Sahl At-Tustarī* (d. 283/896), Berlin and New York 1980; W.C. Chittick *et alii*, *Les Illuminations de la Mecque, The Meccan Illuminations*, Paris 1988, 501 n. 7 (with copious references to passages on *tadjallī* in *al-Futūḥāt al-Makkiyya* of Ibn al-ʿArabī); Chittick, *The Sufi path of knowledge*, Albany 1989, index s.v. *jilwa*.

(E. Geoffroy)

TADJDĪD (A.) "renewal", verbal noun of the form II verb *djaddada* "to renew", a term of both classical and modern Islamic politico-religio-social vocabulary.

A well-known tradition preserved in Abū Dāwūd's *ḥadīth* collection (Wensinck, *Concordance*, i, 364) reports how the Prophet predicted that at the beginning of each century, God will send someone who will renew the religion of that century: *ʿalā raʾsi kulli miʾati sanat^in man yudjaddidu lahā dīnahā*.

The title of *mudjaddid* [*q.v.*] "renewer" has been bestowed, amongst others, on the Umayyad caliph ʿUmar II (*r.* 717-20) and the famous theologian al-Ghazālī (d. 1111). The great writer al-Suyūṭī (d. 911/1505) expected his contemporaries to recognise him as the renewer of the 10th/16th century [see further, MUDJADDID].

In modern times, the idea of a renewer for each century of the Muslim era has remained alive. It may be more a part of popular Islam than of the High Islam of the established official *ʿulamāʾ*. The first day of the first month of the Muslim year 1400 fell on 21-2 November 1979. On the eve of the 15th century A.H., a number of candidates for the title of Renewer of the century were under discussion.

One of these was Rūḥ Allāh al-Khumaynī, who had come to power in Iran earlier that year. But the Egyptian Muslim reformer and cult leader Shukrī Muṣṭafā (b. 1942, executed March 1978 for his involvement in an assassination which had taken place in July 1977) was, earlier in the 1970s, seen by many as, possibly, the Renewer of Islam of the 15th century.

Also, the word *tadjdīd* is repeatedly used in the title of books about the renewal of the Arab Muslim world in its confrontation with the West. One of the most famous of such books is *Tadjdīd al-fikr al-ʿarabī* (1971) by the Egyptian neopositivist philosopher Zakī Nadjīb Maḥmūd (1905-93). This book argues that every culture is a collection of techniques, values, beliefs, utensils, etc., and that modern Arab culture should not simply imitate the West but has carefully to select the elements which it wants to take over from the West in order to create a new, cohesive culture that is truly both modern and Arab at the same time.

The tension between High and Low Islam, it has been repeatedly pointed out, especially eloquently and convincingly in the writings of Ernest Gellner (d. 1995), has been responsible for the frequent launching of internal purification and renewal movements. Periodically, High Islam would attempt to impose itself on the whole of society. In the long run, this could not be successful, so that the resulting pattern has been one that might be called cyclical reformation.

In the confrontation with the West, this state of affairs has created a particular development. Should Muslim countries, it was now asked, emulate those with whom they wished to be equal in power (thereby spurning their own tradition), or should they, on the contrary, affirm the values of their own tradition, even at the price of material and military weakness?

The dominant and persuasive answer did not recommend emulation of the West, nor idealisation of some folk virtue and wisdom. It commended a return to, or a more rigorous observance of, High Islam. Self-renewal did, in this case, not have to go outside the society. Society could find self-renewal in its own perfectly genuine and real Higher Culture which had

been recognised, though not implemented, as a valid norm by the rest of Muslim society.

It is this vision which is now conquering the Muslim world. The many books and articles about renewal of the Muslim world which are written and published in the Middle East often do not do much more than present a version of this view. In the West, since the seventies, such views, especially when violent, are usually called "fundamentalist".

(J.J.G. Jansen)

TĀDJĪK, the later form of a word Tāzīk or Tāžīk used in the Iranian and Turkish worlds. In Islamic usage, it eventually came to designate the Persians, as opposed to the Turks.

1. Etymology and early linguistic development of the term.

The traditional explanation of the term goes back at least to E. Quatremère, *Histoire des sultans mamelouks de l'Egypte*, ii/2, Paris 1845, 154-5, and was set forth, e.g., in Barthold's *EI*[1] art. This derives Tāzīk, etc./Tādjīk from the name of the Arab tribe of Ṭayyiʾ [*q.v.*], Syriac Ṭayyāyē, meaning "Arabs", said to have been the first Arab tribe encountered by the Persians in pre-Islamic times (this would presumably be from contacts with the Lakhmids [*q.v.*] of al-Ḥīra, who used the Ṭayyiʾ as frontier guards in ʿIrāḳ, with Iyās b. Ḳabīṣa al-Ṭāʾī in A.D. 602 actually taking over the wardenship of the marches from the Lakhmids), so that the Persians then applied it to the Arabs in general. The usage of the term may, however, be older than the 6th century. It spread eastwards with the Arab advance through Persia in the 7th century A.D., and when Arab troops reached Transoxania and first encountered members of the Western Turkish empire, the latter gradually took over the term, at first applying it to all Muslims (between whose component ethnic groups they did not as yet distinguish) but subsequently to the Iranian peoples of Transoxania and then Persia proper, as the Muslim people with whom they were, by that time, most in contact. From the Turkish side, the Turks' nomadic, steppe background led them to use Tāzīk, etc., as applied essentially to sedentary agriculturists and town dwellers, somewhat disparagingly (for similar processes at work here with other terms from the same milieu and period, see SART and TĀT). However, it also begins to be used by the Persians themselves. In the mid-11th century, the Ghaznawid historian Abu 'l-Faḍl Bayhaḳī in his *Taʾrīkh-i Masʿūdī*, ed. Ghanī and Fayyāḍ, Tehran 1324/1945, 594 ult., has a Persian official at the court speaking of his people as "we *tāzīkān*", i.e. it was by then a self-designation of the Persians in their relations with the Turkish ruling and military classes.

In a thoroughgoing study of more than half-a-century ago, H.H. Schaeder examined the origins and development of the terms Tāt and Tādjīk. He noted the MP form *tāčīk* (and the Armenian one *tačik*), which would normally yield in NP **tāzīg*. The transition is visible in languages of the Further East, where the term begins to be borrowed from MP: Old Turkish *täzik*, twice appearing in the Orkhon [*q.v.*] inscriptions of the first half of the 8th century to denote non-Turkish peoples of Central Asia, such as Transoxania; Chinese *ta-she*; and Tibetan *stag-gzig* = *ta-zig*. Hence when New Persian evolved, Tāzīk appears from the first half of the 11th century, and especially from the Mongol period, e.g. in the contrasting pair of terms *Turk u Tāzīk*. The Old Turkish form *täzik* must come not from NP but from MP *tāčīk* > *tažik* > *tazik* (*tāžīk* in Maḥmūd Kāshgharī, and forms with *ž* in the Cairo ms. of the *Kutadghu bilig* [*q.v.*]). At the side of *tāzīk* we have in NP the word *tāzī* for the Arabs (hence Firdawsī speaks of *tāziyānī*, i.e. Arab, horses, see Ph. Wolff, *Glossar zu Firdosis Schahname*, Berlin 1935, s.v.). Here, the process of development from the name of the Arab tribe Ṭayyiʾ seems clear, and Schaeder felt that *tāzī* and *tāzīk* could only spring from a common origin.

The form Tādjīk would thus be a later development, but seems to have become the standard one by the 15th century; the oldest citation for it which Schaeder could find was in verses of Djālāl al-Dīn Rūmī (13th century [*q.v.*]). He suggested that the transition *tāzīk* > *tādjīk* first took place in western Persia via an intermediary form *tāžīk*.

The topic has since been taken up by V.A. Livshits and Werner Sundermann. The implication now is that NP *tāzī* "Arab" goes back to a MP **tāzīk/g* and Middle Parthian **tāžīk/g* which was an Iranian calque on Ṭayyāyē arising quite early in the Christian era (possibly on analogy with MP *rāzīk/g* as the ethnic adjective from the city of al-Rayy, rhyming closely with Ṭayyiʾ, and especially with its truncated form Ṭayy). Thus coined in western Persia to denote "Arab", the term would then have been carried by Persians and Parthians, traders and others, into various parts of Central Asia, but more probably by Parthians, the western neighbours of Sogdia, given the Sogdian spelling *t'zyk* = *tāžīk/g*. When, on the other hand, Arabs or Muslims in Central Asia are referred to, in the sources from the 8th century onwards, as Tāzīk with *z*, it must have been Persians who introduced the name or confirmed it by then established Persian pronunciation with *z*. The majority of Persian invaders of Transoxania in early Islamic times were, however, no less Muslim than their Arab commanders, to whom they, for ethnic and not for religious distinction from themselves, referred as Tāzīk/g. Hence Barthold and Schaeder thought it possible that the name Tādjīk, as today applied to and used by native speakers of the form of Persian language current in what is now the former Tādjīkistān SSR, finds its ultimate explanation in a restriction to the meaning "Persian", by the still un-Islamised Turks of Inner Asia, of a term originally meaning "Arab", which they had come to use in the sense of "Muslim".

There is, however, a complication in that popular speech in the western province of Fārs was at the end of the 19th century using the term *tādjīk* (not with *z* or *ž*) to designate the everyday Persian koine spoken there, in order to show its distinctiveness from the true Iranian dialects of Fārs (see O. Mann, *Die Tâjîk-Mundarten der Provinz Fârs. Kurdisch-persische Forschungen*, Abt. 1., Berlin 1909, p. XXVIII). This peculiar usage may go back as far as Sāsānid times. W. Henning (cited in M. Muʿin's ed. of the *Burhān-i ḳāṭiʿ*, Tehran, i, 455) therefore concluded that *tādjīk* in the sense of "Persian" has nothing to do with MP *tāzīk/g* and MParth *tāžīk/g*, which exclusively mean "Arab", and convincingly postulated an origin for *tādjīk* in **Tāt-čīk*, originally **Tād-čīk*. Persians migrating from Fārs to Transoxania would have brought with them their own name for themselves and their language, a name quite distinct from Tāzīk and Tāžīk, names by which the Persians and Parthians respectively called the Arabs.

In later centuries of the Islamic period, as with the term Sart [*q.v.*], Tādjīk became for some Turkish peoples of Inner Eurasia especially associated with the Iranians in their role as traders. Thus amongst the Volga Tatars, Tādjīk/Täzik came to be used as a common noun "merchant, trader"; according to one of the original sources for the Russian conquest of Ḳāzān [*q.v.*] in 1552 (Prince Kurbskiy's account), the citadel of Ḳāzān was defended by the "ditch of the Tezik" (*tezitskiy/teshitskiy rov*), with Tezik explained as meaning "merchant".

By the 19th century, Tādjīk was sometimes used to denote the Eastern Iranian peoples of Khurāsān and Transoxania, as distinct from the Persians proper of central and western Persia; hence its particular usage during the 20th century in the designation of the Tādjīkistān Autonomous SSR, set up in 1924 (in 1929 a SSSR), the present independent Tadzhikistan Republic, and the language used there [see below, TĀDJĪKĪ 1.; and TĀDJĪKISTĀN].

2. Historical development of the term from Tīmūrid times onwards.

In the usage of early Islamised Turks in Central Asia (Maḥmūd Kāshgharī, *Dīwān lughāt al-turk*, and in the *Ḳutadghu bilig* [*q.v.*]) the word *Težīk* (alongside *Tāt*) appears as a designation for the "Persians". In Persian documents up to the 19th century (in historiographical works since Bayhaḳī) the word appears regularly with the meaning of "Persians", almost always in a delimiting or contrastive combination with *Turk*. In this context, the comprehensive term *Turk u Tādjīk* may mean something like "the totality of the subjects", the focus here being on social rather then ethnic differentiations. This situation becomes particularly clear in Tīmūrid times (9th/15th century). According to the stereotypical imaginations typically formulated in this period, the following was generally accepted: The *Turk* are the warriors (*ahl-i sayf*), organised in tribes and being conscious of their tribal affiliations; the *Tādjīk* are free of all tribal connections and are sedentary (peasants or urban dwellers); in the expectations of others they are not warriors, but rather tradesmen and, most particularly, merchants and bureaucrats (*ahl-i ḳalam*). The use of Persian is no differentiating criterion: at least those Turks that belonged to the élite were just as well in command of it as were the Tādjīk. They had, however, one linguistic advantage: they spoke, in addition to Persian, their own Turkish vernacular which the Tādjīk learned only in exceptional circumstances. At least, this is the way the contrast appeared to the Turk politician and poet Mīr ʿAlī Shīr Nawāʾī [*q.v.*] in the courtly society of the late Tīmūrid state; he belonged to the class of the *amīrs*, i.e. the *ahl-i sayf*, although he himself was no active military man. The functional segregation of *Turk* and *Tādjīk* was explicitly regulated in the government and court of the Tīmūrids: there were two princely councils (*dīwān*), the "Turkish Dīwān" (in Persian *dīwān-i umarāʾ*, in Turkish *Türk dīwānî*) for the tribal and military leaders, and the "Persian Dīwān" of the bureaucrats (in Persian *dīwān-i tādjīkān*, in Turkish *sart dīwānî*; see Roemer, *Staatsschreiben*, 169 ff.). *Sart* [*q.v.*] was a further designation of the Tādjīk, taken from Turkish usage, originally having the explicit meaning of "trader", "merchant" (for the semantic development of the term *Sart* see Baldauf, 79 ff.).

Thus from the time of the Tīmūrids onward (and in Persia proper and Central Asia certainly up to the 19th century) the term *Tādjīk* was used, first and foremost, in the contrastive pair *Turk* vs. *Tādjīk*, without any specific regional correlation. The two terms had, if at all, only partially an ethnolinguistic semantic component. *Turk* implied also military prowess, tribal nobility, and other such attributes, whereas *Tādjīk* (with its synonym *Sart*) denoted, alongside the use of Persian, also sedentariness, lack of tribal affiliation, and often an urban way of life and the occupation of merchant (Bregel, *Turko-Mongol influences*, 63). Members of Persian-speaking tribes were never called *Tādjīk*.

This state of affairs changed with Russia's colonial rule over Central Asia. During the repeated censuses of the Russian colonial administration, observations of ethnographers were used as statistical categories throughout the empire. Thus it became current among the Russian bureaucrats to use *Tādjīk* for those inhabitants of Transoxania, Farghāna, and the Pamirs who spoke Iranian languages and dialects, while sedentary people living in towns and rural areas and speaking predominantly Turkish (often, however, being bilingual) were statistically assigned the term *Sart*. This was based to a large extent on a misunderstanding, given that until then the two terms had denoted the same type of inhabitants. Even the fact that the major part of the urban Sart/Tādjīk of the Zarafshān [*q.v.*] valley (Samarḳand, Bukhārā) and of the Farghāna valley had become bilingual during the last three hundred years, had not been taken into account with this new terminology. During Russian rule, *Sart* and *Tādjīk* were considered to be designations for two ethnolinguistic groups that were conceived of as quite distinct.

In the early Soviet period, this differentiation was further developed. Literati like Ṣadr al-Dīn ʿAynī (Bečka, *Sadriddin Ayni, passim*) and the "regionalist" and Turkestanist ʿAbd al-Raʾūf Fiṭrat (Bečka, *Tajik literature*, following Bertel's) [see TĀDJĪKĪ. 2. Literature] superimposed the notion of *Tādjīk* on to the linguistic term *Tādjīkī* (*todjikī*), which denoted a modernised form of the Persian literary language as adapted to the colloquial language of the inhabitants of Bukhārā and Samarḳand. ʿAynī was also representative of a tendency favoured by the Soviets, to separate the Tādjīk as a Persian-(Tādjīkī-)speaking nation from the Uzbeks, who were conceived as Turkophone. The term *Uzbek*, up to that time a tribal name, from now on also covered the Russian colonial term *Sart*. With the founding of the Soviet Republic of Tādjīkistān (Todjikiston) in 1929, *Tādjīk* finally became the official name of a Soviet titular nation and, since 1991, that of the majority nation of an independent republic [see TĀDJĪKISTĀN]. In Uzbekistan, *Tādjīk* indicates the minority of Persian-(Tādjīkī-)speakers in Bukhārā, Samarḳand, the Ḳashḳa Daryā region and in parts of Farghāna, which are mostly bilingual (Uzbek, Tādjīk). Since the "national delimitation" of Central Asia in 1924, the Tādjīk of the Uzbek part of the Zarafshān valley have been exposed to an extensive process of Uzbekisation. Following the usage of Russian colonial times, speakers of non-Persian Iranian languages and dialects were also called *Tādjīk*, a fact which led to further confusion (Bregel, *Notes*, 15). For the sake of differentiation, terms like "Mountain Tādjīks" (a synonym of *Galča*) were introduced; these were all foreign des-

ignations, which were, however, adopted by the peoples concerned under the influence of colonial, later Soviet, language regulation.

In the People's Republic of China, *Tādjīk* today almost exclusively means speakers of Iranian Pamir languages in Xinjiang (Sinkiang [*q.v.*]), in particular, speakers of Sarikulī. In Afghānistān, to the present day, it is the Persian-speaking, traditionally sedentary, and in no way tribally-bound population that is called *Tādjīk*. As a self-designation this term, which earlier on had been more or less pejorative, has become acceptable during the last twenty years, particularly as a conscious and comprehensive delimitation of Persian-speaking Afghāns. The self-designation of Persian-speakers in Afghānistān had been for a long time most commonly *Fārsīwān, Fārsībān*, or *Fārsī-gū*(*y*). However, even today *Tādjīk* does not comprise all Persian-speaking groups in Afghānistān; it has obviously preserved a socio-cultural semantic component. The Uzbeks in northern Afghānistān, mostly bilingual and thus also Persian-speaking, consider themselves, as can be expected, clearly distinct from the Tādjīk, and so do the Persian-speaking Shī'ī Hazāra [see HAZĀRAS, in Suppl.] and some other tribes.

Until today, under the influence of the ethnographers, a meaning of the term *Tādjīk* has been preserved in scholarly literature on regions outside the Republic of Tajikistan, one which corresponds closely to the concept of the Russian colonial administration. This may be helpful as a convention among scholars, but has little to do with the historical and the modern meanings of the term and the self-understanding of the Tādjīk.

(B.G. FRAGNER)

TĀDJĪKĪ.

1. Language.

Tādjīkī is the name of an Iranian (Irano-Aryan) language commonly applied to the official language of Tādjīkistān (formerly a republic of the Soviet Union which declared its independence on 8 September 1991). Closely-related varieties of the spoken language called Tādjīkī are used by different ethnic groups (not necessarily sometimes identifying themselves Tādjīks) in many places over Central Asia, northern Afghānistān, Pakistan and the Sinkiang-Uygur province of China. All these genetically South-Western Iranic dialects go back to the classical New Persian language of the 9th-16th centuries, the common ancestor of modern Persian, Tādjīkī and modern Darī of Afghānistān. In Tādjīkistān, South-Western forms of Iranian supplanted indigenous Eastern Iranian languages (Bactrian, Sogdian and others) over a long period of time, mainly after Islamisation of the area (8th-9th centuries) [see further, ĪRĀN. 3. Languages, in Suppl.].

The total number of speakers can be estimated at about 7-8 millions (over 3 millions in Tādjīkistān). In Central Asia, dialectically differentiated are so-called groups of "northern" (Bukhārā, Samarkand, Khudjand, Farghāna), "central" (Zarafshān, Ḥiṣār, Dushanbe), "southeastern" (Badakhshān, Darwāz) and "southwestern" (Kulyāb—Khatlān) dialects.

The first indications of Tādjīkī grammatical peculiarities may be traced in literary texts originating in Central Asia and written in Arabo-Persian script from the 16th century onwards. After the introduction in 1929 of a Latinised alphabet into Tādjīkistān, the phonetical features of Tādjīkī became obvious. This Latinised alphabet was replaced in 1940 by the Cyrillic (Russian) one, with 6 additional letters. Appeals for the restoration of the Arabo-Persian script are now being mooted.

The written variety of Tādjīkī is characterised by a phonetic system of 6 vowels and 24 consonants (compared to the modern Persian 8 vowels—6 monophthongs and 2 diphthongs—and 23 consonants' system). In morphological structure, Tādjīkī is differentiated from Persian by the existence of a developed system of verb formation, including several specific forms for definite tenses (such as *xonda istoda-ast* "he is reading now", *xonda istoda bud* "he was reading at some definite time in the past"), subjunctive participles in *-gī* (*xondagī-st* "he is supposed to have read"), composite verbal aspectual formations of various types (*xonda mond* "he finished reading") and also other peculiar verbal constructions (auditive, i.e. "non-obvious" perfect and other forms).

Written Central Asian Tādjīkī is clearly orientated more to the spoken dialect variety of the "northern" group. Some dialects of this group are strongly under Turkic influence, and intermediate Uzbek-Tādjīk vernaculars exist in the region of active Uzbek-Tādjīk bilingualism where Uzbek is supplanting Tādjīkī in all spheres of life (not only in the bazaars but also amongst families at home). In the south, on the contrary, the process of Tādjīkī's supplanting local Eastern Iranic (i.e. Pamir) languages continues (especially as Tādjīkī till recently remained the only written language of the Western Pamir area).

Naturally, there is much Russian influence and a great amount of loanwords and Russian loanword-formations in the sphere of official and journalistic language; but attempts are now being made to substitute

for Russian loanwords Persian ones (sometimes, ones coming from other European languages).

The dialectal spoken varieties of Tādjīkī become closer to Persian ones as one goes towards the south-west (sc. towards Khurāsān). Among the Turkicised varieties of the north, some can be classified as Turkic by morphology, but lacking such Turkic features as vowel harmony (together with some Iranised Uzbek dialects).

The authors of important works on Tādjīkī and its dialects include the Russian scholars M.S. Andreyev, A.A. Semenov, I.I. Zarubin, V.S. Rastorgueva and A.Z. Rosenfeld, and the Tādjīk scholars M. Shukurov, Sh. Rustamov and R. Ghafforov.

(I. Steblin-Kamensky)

2. Literature.

Tādjīkī is an indivisible part of Persian literature [see Īrān. vii], but its thousand-year existence and its historical circumstances justify treating it as a separate entity. In the Central Asia where the Tādjīks live, there originated, in the 10th and 11th centuries, the first Persian poets, whence the oldest style of Persian literature is called *sabk-i turkistānī*, but until the 15th century at least, Persian literature was homogeneous, and the classic works of Saʿdī, Niẓāmī, Ḥāfiẓ, and Rūmī [*q.vv.*] have always been considered a part of the literature of the Tādjīks in Central Asia.

From the 16th century onwards, a certain separation in culture from Shīʿī Persia and Central Asia began. Some authors used local dialects at times, and the influence of the large Turkī population was also felt. Literary production was more and more influenced by the so-called Indian style, *sabk-i hindī* [*q.v.*]. From the region sprang authors like Hilālī, Wāṣifī, Bannāʾī [*q.v.*] and ʿAbd al-Raḥmān Mushfiḳī (932-94/1525-85 [*q.v.*]), author of several *mathnawīs* and a *dīwān-i mutāʿibāt*, which won him place among the popular jesters. Mīr Ābīd Sayyidā Nasafī, was the representative of the so-called artisanal poetry, author of the often-imitated *dāstān*, the *Bahāriyyāt* or *Ḥaywānāt-nāma*. Central Asian literature in Persian was completely taken over by the style of the Indo-Persian author Bīdil [*q.v.*], unknown at that period in Western Persia, and from the 18th century onwards, there was no poet or writer in Central Asia or in Afghānistān who did not imitate him. A prominent representative of derwish poetry was Ṣūfī Allāhyār Kattaḳurghānī (d. 1136/1723), who, in verse written in Persian and Turkī, preached the renunciation of the earthly life. In the 19th century were notable the Bukhāran poets ʿAbd al-Ḳādir Khʷādja Sawdā (1239-90/1823-73) and Muḥammad Shams al-Dīn Shāhīn (1274-1312/1857-94), the author of a *dīwān* and of the *mathnawī Laylā wa Madjnūn*, the *Tuḥfat-i dūstān* and the prose work *Badāʾiʿ al-ṣanāʾiʿ*. A new spirit was brought into the poetry by Tāshkhūdja Asīrī of Khodjand (1261-1315/1864-1916), and new ideas are discernible in Aḥmad Dānish Kalla (1242-1315/1827-97) [see Āzādī, in Suppl., at 109], author of the prose work *Nawādir al-waḳāʾiʿ* containing new opinions on education, culture and technology. His *Risāla* contains a condemnation of the Bukhāran ruling dynasty. Dānish was a predecessor of the so-called Djadīd or Young Bukhāran movement, whose theoretician then became ʿAbd al-Raʾūf Fiṭrat [*q.v.*]. An important follower of theirs was a pupil from the *madrasas* of Bukhārā, Ṣadr al-Dīn ʿAynī (1878-1954 [*q.v.*]), who was, for his reformist educational methods (*maktab-i uṣūl-i djadīd*), condemned to 75 strokes of the cane in 1917 and narrowly escaped death.

Tādjīkī literature takes a new path after the Bukhāran revolution in 1920. ʿAynī, Fiṭrat and others welcomed in their verse the fall of the amirate; its backwardness was described by ʿAynī in his story *Ādīna* about the life of a poor Tādjīk boy, the first truly realist piece of prose in the Tādjīk language.

In 1926 ʿAynī's *Namūna-yi adabiyyāt-i tādjīk* was published, a traditional-type *tadhkira* that brought together samples of and short notices about 500 Central Asian poets and several writers, such as the Persian Lāhūtī [*q.v.*], who participated prominently in the formation of post-revolutionary Tādjīk poetry. In the poetry of the 1920s, the leading place belongs to the innovator Payraw Sulaymānī (1899-1933).

A serious estrangement from the mainstream of Persian literature was caused by the substitution of a Latin script for the Arabic-Persian one in 1929 and later, 1940, a Cyrillic alphabet. In these years ʿAynī and the Tādjīk language scholars were fixing the norms of their language, which showed differences in phonology, morphology, syntax and vocabulary from the Persian of Iran and Afghānistān; these differences are above all evident in works of prose, especially in journalistic language.

ʿAynī's novels *Dokhunda* (1930) (a transcription from the Tādjīk Cyrillic script is used from here onwards) and *Ghulomon* (1934) form, together with *Odina*, a trilogy about the destiny of the Tādjīk nation. It was followed by the successful satirical novel *Margi sudkhūr* (1939, new version 1953). Tādjīk poetry is marked by the arrival of poets brought up in post-revolution schools, who published poetry which, in a less traditional form, praises the liberation of women, the growth of education, victory over the Basmačis [*q.v.*] and the so-called success of the Soviet development, including eulogies of Lenin and Stalin. As everywhere in the Soviet Union, so in Tādjīkistān there were in the 1930s repressions; some writers were imprisoned, exiled or even lost their lives, and ʿAynī himself was persecuted. He then, in the 1940s and early 1950s, wrote his fundamental work, a book of recollections, *Yoddoshtho*, a chronicle of the Bukhāran society at the turn of the 19th century. ʿAynī's followers are younger writers like Djalol Ikromī (1909-93), with a short novel *Tirmor* (1939), an autobiographic novel *Subhi djavonii mo* (1954) and others works, and also several plays for the theatre on historical and contemporary subjects. The 1960s brought a certain détente. In poetry, the leading place belongs to Mirzo Tursunzoda (1911-77), who was for a long time President of the Tādjīk Writers Union. He published several books of poetry denouncing colonialism, stressing the brotherhood between the eastern nations, and also some intimate lyrics. There are series of lyrical epic poems (*dostons*) about the changes in Tādjīk life: *Hasani arobakash* (1954), *Az Gang to Kreml*, about the journey of Raja Pratap to Moscow, or *Čaroghi abadī* (1958), in honour of Sadriddin Ayni. Mirsaid Mirshakar (1911-93) published collections of poems as well as poetry for children or *dostons* like *Ḳishloḳi tilloī* (1944) a legend from the Pamir region, and others, as well as his memoires

Yordi yori mehrubon (1979). Muʿmin Ḳanoat (b. 1932) wrote *Korvoni nur*, and the *dostons Surudi Stalingrad, Gahvorai Ibni Sino*, etc. To the distinguished poets of this time belong Ghaffor Mirzo, Abdudjabbor Ḳahhorī, the poetess Gulrukhsor Safiyeva, Loiḳ Sheralī, Bozor Sobir and others.

Although poetry was dominant, Tādjīk prose is now gaining more prominence. Ikromī published his novel on contemporary themes *Zoghhoi badmur* (1977), and the crimes against humanity during the Stalinist era are treated in his short story *Duvozdah kilometr* (1967), published only in 1988. Ulughzoda published historical works such as Firdusī (1978); Rahim Djalil (1909-89) wrote about the formation of socialism, and Foteh Niyozī (1914-91) treated mostly of war events. An author of some promise was Fazliddin Muhammadiyev (1928-91), with his novel *Palatai kundjakī* ("The corner room") showing a more liberal civil standpoint. Contemporary life is the theme of authors like Yusufdjon Akobirov, Muhiddin Khodjayev, Amindjon Shukūhī or Djumʿa Odina, whose novel *Guzashti ayyom* (1978) was prohibited because of its critical attitude to a Communist party functionary; and there are many other authors, like Ūrun Kūhzod, Sorbon, Bahrom Firuz, Adash Istad, etc. The plays of Ghanī Abdullo (1912-84) and those of authors like Ulughzoda, Ikromī, Shukūhi, Muhammadiyev, including the poets Mirshakar and Fayzullo Ansorī, have been staged in Tādjīkistān theatres.

In 1989 the Tādjīkistān Parliament accepted a law about the priority of the "*todjikī* (*forsī*)" language, which is expected to mean a return to the traditional script, but this has not so far been implemented. At the University of Dushanbe there has been created a department for the study of *adabiyoti navini forsii todjik*. Political liberation at the end of the 1980s resulted in an outpouring of patriotic poetry, verses praising the mother-tongue, the national traditions, including Islam, and condemning the Soviet régime, the losses of Bukhārā and Samarḳand, etc. After civil war broke out in 1991, a quarter of a million Tādjīks, mostly intelligentsia, left the country, and from Russia, Persia and other countries are now resounding proclamations and verses of protest: *doston* Muʿmin Ḳanoat's *Hamosai dod* (1994), the verses of Bozor Sobir, the collection of sorrowful poems *Zodruzi dard* (Moscow 1994) by the poetess Gulrukhsor, and others.

TĀDJĪKISTĀN (*Djumhurii Todjikiston*), a modern republic in Central Asia bordering on China (frontier of 430 km), Afghānistān (1,030 km), Uzbekistān (950 km), and Kirgizstān (590 km). 93% of its territory (in total 143,000 km^2) is covered by mountains, almost half of them higher than 3,000 m/9,840 feet above sea level. Its capital is Dushanbe, renamed 1929-61 Stalinābād. The state language is, according to the constitution of 1994, Tādjīkī (under Soviet rule officially promoted as a distinct Iranian language, nowadays generally regarded as a variant of New Persian) [see TĀDJĪKĪ. 1.], and besides that, Russian for "international relations". The population amounts to *ca.* 5.5 million consisting, according to the last census (1989), of 62.3% Tādjīks, 23.5% Uzbeks, 7.6% Russians, and others (these figures may partly have changed due to developments connected with the civil war of 1992).

As already the topography of the country suggests, the titular nation of the Tādjīks is of a regionally rather diverse character. It ranges between, on the one hand, a population of mixed Turkic-Iranian extraction (prior to the 1920s, in the Russian sphere of influence usually referred to as Sarts [*q.v.*]), not seldom bilingual in Turkic and Persian, and originating in the densely-populated agricultural regions and urban centres of the lowland; and, on the other hand, population remnants of Eastern Iranian elements, which have survived in the refuge areas of remote high mountain valleys, and have in part preserved their archaic languages (such as Yaghnābī, Yazghulāmī, Shughnī and Wakhī). Even though certain popular traditions and religious practices were more or less radically suppressed in Soviet times, the local population, especially the rural one, to a certain extent kept up their customs and beliefs (predominantly Sunnī of the Ḥanafī law school, with an Ismāʿīlī community in Gorno-Badakhshān).

The creation of the state of Tādjīkistān was brought forth under Soviet auspicies by the so-called national-territorial delimitation of Central Asia in 1924. The Tādjīk Autonomous Soviet Socialist Republic (ASSR), functioning as a part of the Uzbek SSR, was made up of Eastern Bukhārā—till then belonging to the Bukharan People's Republic (removed by the above-mentioned delimitation; until September 1920 the Emirate of Bukhārā); a part of the Pāmīrs [*q.v.*] (since 1895 under Russian dominion), and twelve districts (*volost'*) of the Turkestan ASSR (also removed by the delimitation of 1924; until 1917, a governor-generalship of Russia). In October 1929 the province and city of Khudjand [*q.v.*] (renamed Leninābād) was added to the territory of Tādjīkistān, which at the same time received the status of a Union Republic (SSR).

Tādjīkistān was included in the general development schemes of the Soviet Union (collectivisation, industrialisation, etc.) and became subject to various campaigns—all of them, more or less extensively, for the first time launched from 1927-8—such as the elimination of illiteracy, the changeover to the Latin then to the Cyrillic alphabet [see TĀDJĪKĪ. 1], the unveiling and liberation of women, the promotion of atheism, resettlement operations and political purges. During the first decade of these policies, there were waves of emigration (mainly to Afghānistān) and anti-Soviet, traditionalist, armed resistance by the Basmačis [*q.v.*]; one of the most prominent Basmači leaders was Ibrāhīm Bēg (arrested 1931, executed 1932).

In the decades following World War II, Tādjīkistān, although continuing to be considered as the poorest republic of the Soviet Union, in a technical sense represented a relatively developed country, with a certain amount of industrial and agricultural production, a basic infrastructure, and broad networks of public health and education. At the breakdown of the Soviet Union (August 1991), Tādjīkistān declared itself independent but soon fell into a precarious situation. Regional animosities and political quarrels led to a civil war (1992). These conflicts and their manifold consequences are not yet (1996) finally resolved. The economy, apart from its having been a integral and therefore heavily dependent part of the centralised

economy of the USSR, has almost come to a halt, thereby fostering further social disruption.

Bibliography: There exists an ample amount of biased Soviet literature on Tādjīkistān. For general information see, e.g., *Istoriya Tadzhikistana* (*Ukazatel' sovetskoy literaturi 1917-1983*), i ff., Dushanbe 1986 ff.; *Tadzhikskaya Sovetskaya Socialističeskaya Respublika*, Dushanbe 1974. For a post-Soviet assessment of the recent situation, see *Respublika Tadzhikistan. Otčet po čelovečeskomu razvitiyu 1995*, Bishkek 1995. Well-informed, comprehensive Western studies are not available. For certain aspects, see T. Rakowska-Harmstone, *Russia and nationalism in Central Asia. The case of Tadzhikistan*, Baltimore and London 1970; M. Atkin, *The subtlest battle. Islam in Soviet Tajikistan*, Philadelphia 1989; *Le Tadjikistan, existe-t-il? Destins politiques d'une "nation imparfaite"* (*Cahiers d'Études sur la Méditerranée Orientale et le Monde Turco-Iranien*, no. 18, 1994). (R. Eisener)

TĀDJIR (A.), merchant, trader, further defined by Arabic authors as a person engaged in the buying and selling of commodities. The etymology of the term and the attitude towards merchants and trading in early Islamic society, with the evidence from the Ḳur'ān and from *Ḥadīth* and then from subsequent writers, is considered below in TIDJĀRA. 2. Hence here will be given only some few comments on the role of the merchant; for an extended treatment, see TIDJĀRA.

The trader was certainly a well-known figure in the urban societies of pre-Islamic Arabia and Arabia at the time of the Prophet, even if some aspects of the significance of trading within the global society of Arabia and its Near Eastern environment are matters for controversy (see Patricia Crone, *Meccan trade and the rise of Islam*, Princeton 1987). Muḥammad himself acted as a trader in the earlier part of his life, and Companions such as Abū Bakr, 'Uthmān b. 'Affān, 'Abd al-Raḥmān b. 'Awf, Ṭalḥa b. 'Ubayd Allāh and 'Amr b. al-'Āṣ [*q.vv.*] likewise followed this avocation.

Yet, as Islamic society developed, traders often had something of an ambivalent status within it. There was a hierarchy within them, with perfume sellers and clothiers somewhere near the top, and the customary prescriptions of *kafā'a*, social compatibility for marriage, meant that e.g. a weaver was not regarded as the equal of a jeweller (*djawharī*) or money-changer (*ṣayrafī*). Senior government officials were considered to be higher in status than traders. Abū Ḥayyān al-Tawḥīdī [*q.v.*] was probably voicing public opinion of his time when he said that these last lacked refinement (*adab*) and moral virtue (*muruwwa*), so that they ranked below the élite or *khāṣṣa* of the ruler and his courtiers (*al-Imtā' wa 'l-mu'ānasa*, Cairo 1944, iii, 60-1). A proverbial saying echoed such beliefs, that traders were like wolves beneath their outward clothing (*ahl al-sūḳ dhi'āb taḥt al-thiyāb*).

The cognomen of *al-Tādjir* was known for merchants who traded outside their own towns or lands on a large scale (cf. al-Sam'ānī, *Ansāb*, facs. ed. fol. 102a-b = ed. Ḥaydarābād, iii, 2-4), such as the trader with the Far East cited by Ibn al-Faḳīh, 11, Sulaymān al-Tādjir.

Bibliography: This is substantially given in TIDJĀRA, but see also S.D. Goitein, *The rise of the Near Eastern bourgeoisie in early Islamic times*, in *Jnal. of World Hist.*, iii (1957), 596-604; M.A.J. Beg, *Social mobility in Islamic civilization*, Kuala Lumpur 1981, 28-30. (M.A.J. Beg)

TADJMĪR (A.), the verbal noun of form II of *dj-m-r* meaning basically "to come together".

In early Islamic military and administrative usage, *djammara* had the meaning of "to keep the troops quartered on distant frontiers, far away from their families" (see *LA*[1], v, 217). The caliph 'Umar is said to have disapproved of this, as leading to discontent and rebelliousness amongst the Arab warriors. But once the initial phase of the Arab conquests was over, the *muḳātila* found themselves fighting in distant, climatically and topographically difficult environments like Central Asia and Afghānistān, so that complaints grew. It was discontent at al-Ḥadjdjādj's [*q.v.*] policy in the late 690s of stationing troops on the far eastern frontiers in permanent garrisons (*tadjmīr al-bu'ūth*) which sparked off the revolt of the "Peacock Army" under 'Abd al-Raḥmān b. al-Ash'ath in 82/701 and almost toppled the Umayyad caliphate (see IBN AL-ASH'ATH and C.E. Bosworth, *'Ubaidallāh b. Abī Bakra and the "Army of Destruction" in Zābulistān (79/698)*, in *Isl.*, l [1973], 268-83).

Bibliography: Given in the article. (C.E. Bosworth)

TADJNĪS (A.), a technical term for a rhetorical figure (alternative names, all from the same root, are *djinās* [very common], *mudjānasa*, *mudjānas*, and *tadjānus*), variously translated as paronomasia, pun, homonymy, and alliteration. The last two terms, however, do not cover all the types that have traditionally been subsumed under this heading, while "pun" has also been used to render *tawriya* [*q.v.*], the difference being that *tawriya* is a one-term pun (*double entendre*). A general definition of *tadjnīs* would be: a pair of utterances (mostly, but not necessarily single words), within a line or colon, which are semantically different but phonetically, either completely or partially, identical. The alternative "completeness or lack of such" is the basis for distinguishing the various subtypes that the rhetoricians have discovered. Since words that are only partially identical are very likely to be semantically different anyway, it becomes clear that two notions have merged in the *tadjnīs* concept: a narrow one which covers only the case of complete phonetic identity (this is the *tadjnīs tāmm*, which some say, or imply, is the original and "correct" meaning of the term), and a broader one in which the two terms of the *tadjnīs* show any kind of lesser degrees of assonance, down to root-repetition (*ishtiḳāḳ*, *figura etymologica*). Some authors deny that *ishtiḳāḳ* is a subtype of *tadjnīs*.

I. Literary history

Tadjnīs is without doubt one of the most popular and sought-after rhetorical figures, especially in later Arabic poetry and ornate prose, whence it became also a favourite in other Islamic literatures. Word plays are, of course, universal in all languages and literatures. In world-views that consider names not to be arbitrary, puns are used to discover and express hidden relationships between similarly named things, while those who do not believe in "natural" names, may still use puns the same way, though tongue in cheek, or else employ them to create witty and unexpected connections. However, Arabic, as a Semitic language, has particularly ample possibilities here due to its root-and-pattern structure. Different derivations from the same root play an important role even in everyday syntax, as shown by such constructions as the cognate accusative (e.g. *ḳāla ḳawl^an^*), the participial expression of an indefinite subject (e.g. *ḳāla ḳā'il^un^*), and the strengthening of a noun with an etymologically related but *per se* meaningless adjective (e.g. *layl^un^ lā'il^un^/alyal^u^; laylat^un^ laylā'u*) (see Reckendorf and Grünert, in *Bibl.*). This kind of repetition (*figura etymologica* in Classical terms, and *ishtiḳāḳ* in the later rhetorical taxonomy,

but see below) thus comes naturally to artisans of the language and is made the starting-point for other more artistic uses of root-derivations. Examples collected by the rhetoricians from early, pre-"modern" poetry show that this particular type is moderately well attested. Particularly rich are the Umayyad *radjaz* poets: Ru'ba [*q.v.*] has more than 1,200 cases in his *Dīwān* (ed. Ahlwardt, p. xciii; and see the specimens, pp. xciv-xcvii). One specific use of this figure is to extract "meaning" from a personal or geographic name, a method that remains popular also in later poetry (cf. Djarīr [*q.v.*], *Dīwān*, ed. al-Ṣāwī, 326, l. 6: *fa-mā zāla ma'ḳūl^an 'Iḳālun 'ani 'l-ulā—wa-mā zāla maḥbūs^an 'ani 'l-madjdi Ḥābisu*, a closure line in a *hidjā'* against al-Farazdaḳ that resounds with its two malicious name games). Apart from root repetition, there are also other, less extended, phonetic repetitions that were clearly intended by the poets, but which find their way into the later *tadjnīs* category only in part (see Renate Jacobi, *Studien zur Poetik der altarabischen Qaṣide*, Wiesbaden 1971, 183-93; Th. Bauer, *Altarabische Dichtkunst*, Wiesbaden 1992, i, 163-71). Word repetition is not uncommon in early poetry (*ibid.*), but rarely has the second word a different meaning; thus the repetition does not constitute a *tadjnīs* in the later taxonomies. The rhetoricians who can be trusted to have looked very hard cannot muster more than four or five examples of *tadjnīs tāmm* in ancient poetry (e.g. al-Afwah al-Awdī [*q.v.*] *apud* Ibn Rashīḳ, *al-'Umda*, i, 322: *wa-aḳṭa'u 'l-hawdjala musta'nis^an—bi-hawdjal^in 'ayrānat^in 'ayṭamūs* "I cut through the pathless desert [*hawdjal*] taking comfort—in an onager-like magnificent fleet camel mare [*hawdjal*]").

With the rise of the "modern" poetry of the 'Abbāsid era, *tadjnīs* became a bone of contention, as it was one of the phenomena in the centre of the *badī'* controversy. As Ibn al-Mu'tazz (d. 296/908 [*q.v.*]) correctly explains (*Badī'*, 1), poets like Abū Tammām (d. 231/845 or 232/846 [*q.v.*]), who was the focus of the debate, "exaggerated" the use of this and other figures of speech and thus shifted the character of these figures from being a means of poetic style to becoming an essential part of the poetic endeavour. For a study of *tadjnīs* in this period in general, see J.E. Bencheikh, *Poétique arabe. Précedée de Essai sur un discours critique*, Paris 1989, 186-202 (who deals only with the *ishtiḳāḳ* variety), and for individual poets, see E. Wagner, *Abū Nuwās. Eine Studie zur arabischen Literatur der frühen 'Abbāsidenzeit*, Wiesbaden 1965, 432-36; Magda M. al-Nowaihi, *The poetry of Ibn Khafāja. A literary analysis*, Leiden 1993, 71-96; and, on al-Ma'arrī, S. Sperl, *Mannerism in Arabic poetry*, Cambridge 1989, 142-51 (who includes phonetic repetition). Although the *figura etymologica* can probably claim the lion's share, the *tadjnīs tāmm* and, in particular, its *murakkab* variety gain much in popularity and soon have their own specialists, such as Abu 'l-Fatḥ al-Bustī (d. 400/1010 or later [*q.v.*]). His friend, the arch-*adīb* al-Tha'ālibī (d. 429/1038 [*q.v.*]), declared the *tadjnīs murakkab* to be the crowning achievement in this field and he compiled a sizable anthology of thematically arranged verse displaying this particular variety of punning (*Anīs*, see *Bibl.*), in which al-Bustī figures prominently (e.g. *Anīs*, 452: *ḳad tafā'altu bi 'l-arāki fa-lammā—an ra'aytu 'l-arāka ḳultu arāki—khā'ifan min ṣalāḥihī li-siwākin—an yakūna 'lladhī arāhu siwāki* "I took the arak-tree [*arāki*] for a good omen and when—I saw the arak-tree, I said: I shall see you [*arā-ki*],—(though) fearing that, due to its being good for (the making of) tooth-sticks [*siwāki(n)*],—the one I shall see will be someone other than you [*siwā-ki*]."). Actually, the *Anīs* contains also a number of instances of *tadjnīs tāmm*. One particular use made of both varieties is homonymous rhyme. Examples of this artifice, which retained a certain popularity through the centuries, are already attested for the 3rd/9th century (an *inshād* of Tha'lab [*q.v.*] quoted by Abū Hilāl al-'Askarī, *K. al-Ṣinā'atayn*, 438-40, with eleven instances of the rhyme-word *khālī*). What is remarkable here is the fact that the *tadjnīs* stretches over more than one line.

In another work (*K. al-Mutashābih*, see *Bibl.*), al-Tha'ālibī devotes a large part to the *tadjnīs muṣaḥḥaf*, for which he adduces numerous examples, this time not only from poetry but also from prose, mostly cola from ornate epistles of well-known people of eloquence. A poetic example is the following verse by Ibn al-Rūmī: *lā asriḳu 'l-shi'ra wa-ghayrī ḳālah—yakfīniya 'ntikhāluhū 'ntiḥālah* "I do not steal poetry, when another has said it;—sifting it prevents me from lifting it" (*Mutashābih*, 22), i.e. it is not good enough for me. The popularity, among the scribes, of this ingenious artifice is easy to understand. Al-Tha'ālibī does, however, express his dislike for texts that consist exclusively of pairs of *tadjnīs muṣaḥḥaf*, such as *gharraka 'izzuka fa-ṣāra ḳuṣāru dhālika dhullaka* . . . (*Mutashābih*, 24, and see below, II. Terminology, B, 1-2), where in every pair the words exhibit the same *rasm*. Nonetheless, even this odd self-imposed hardship found its adherents and reached its apogee in *al-Risāla al-taw'amiyya*, the "Twin Epistle," of Ṣafī al-Dīn al-Ḥillī (d. *ca.* 749/1348 [*q.v.*]).

In post-classical poetry, the *tadjnīs*, together with its cousin, the *tawriya* [*q.v.*], becomes ever more central. Al-Ṣafadī (d. 764/1362 [*q.v.*]) wrote independent studies on both figures of speech and, in the *Djinān al-djinās*, included as its third part an anthology of his own *djinās* poetry. Studies are, however, still few. For Ayyūbid poetry, see the few remarks in J. Rikabi, *La poésie profane sous les Ayyūbides et ses principaux représentants*, Paris 1949, 264-8; on Mamlūk poetry, see Muḥammad Zaghlūl Salām, *al-Adab fi 'l-'aṣr al-mamlūkī*, 2 vols., Cairo n.d. [1971], index of technical terms, s.vv. *tadjnīs* and *djinās*. Salām makes the point that the Syrians were more interested in *tadjnīs*, while the Egyptian poets concentrated their efforts on the *tawriya* (*op. cit.*, ii, 126).

It is interesting to note that the *tadjnīs*, which is often taken as a symbol of the late artificial, ossified state of pre-Modern Arabic poetry, also made it into many genres of folk poetry, particularly the *mawāliyā* [*q.v.*], where it often is a feature of the rhyme scheme. This is to some extent already attested in pre-Modern sources (cf. a *mawāliyā* by al-Shihāb al-Ḥidjāzī with a *tadjnīs murakkab* rhyme "*kallām*", *apud* al-Suyūṭī [d. 911/1505], *Djanā*, 141). In modern Egyptian *mawwāls*, the rhyme paronomasia is generally achieved by wilfully distorting the words; this feature is called *zahr* "flowers" (see MAWĀLIYĀ, and P. Cachia, *Popular narrative ballads of modern Egypt*, Oxford 1989, see index s.vv. "paronomasia" and "*zahr*").

II. Terminology

Whether the early poets had terminological ways of talking about paronomasia is unclear. The earliest attestations from late Umayyad times onward show various terms, some of which do not find acceptance in the later terminology. Thus al-'Adjdjādj [*q.v.*], in an argument with his son Ru'ba [*q.v.*], emphatically tells him that he, al-'Adjdjādj, taught him *'aṭf al-radjaz*, and as an example he adduces a line with triple paronomasia (*apud* Ibn Rashīḳ, *'Umda*, i, 331, and cf. G. Kanazi, *Studies in the Kitāb aṣ-Ṣinā'atayn*, 64). It is not certain, but very likely, that the enigmatic *'aṭf* (in

the sense of "folding back" or "adding on"?) meant "paronomasia." Similarly, ʿUmāra b. ʿAḳīl, great-grandson of the Umayyad poet Djarīr [*q.v.*], compared Abū Tammām's paronomasias to those of his famous forebear and called them *raddāt* "echos" (?). The first term seems to be taken up again in the term *taʿaṭṭuf* of Abū Hilāl al-ʿAskarī (d. 395/1005 [*q.v.*]) (*Sināʿatayn*, 438-40; see below), whereas *raddāt* may have metamorphosed into the later term *tardīd*, which however refers to a repetition of the same word with the same meaning in different syntactic contexts to create a contrast and is thus not a paronomasia.

The first theorists are less than homogeneous in their technical language. Thaʿlab (d. 291/904) uses the term *muṭābaḳ*, and although he defines it as the repetition of the same word with a different meaning, he includes a fair amount of *figura etymologica* cases (*Ḳawāʿid*, 64-7). Interestingly, his one-time disciple Ḳudāma (d. 337/948 [*q.v.*]) takes up this term but combines it with *mudjānas* and assigns the meaning of "pun" to the former and the meaning of "*figura etymologica*" to the latter. Thus, although he considers both as one phenomenon, he seems to feel uneasy in lumping the two subcategories together. At about the same time, Ibn al-Muʿtazz uses the term *tadjnīs*; whether he introduced the term (some say he "invented" it) is unclear. Abū Hilāl al-ʿAskarī, who as a compiler is, of course, very much dependent on his predecessors, nonetheless veers off by using *tadjnīs* for the *figura etymologica* and excluding the word-repetition, which he says is called *taʿaṭṭuf* (see above, on *ʿaṭf*). But the later theorists *grosso modo* understand *tadjnīs*, or the equally frequent *djinās*, as covering both phenomena. There are numerous subcategories with a plethora of synonymous technical terms. The most important subcategories are the following, taking al-Khaṭīb al-Ḳazwīnī (d. 734/1338 [*q.v.*]) as the basis:

A. *Tāmm*, complete agreement in nature, number, and arrangement of consonants and vowels between two words of different meaning.

1. *Mufrad*, either term is one word.

(a) *mumāthil*, both words belong to the same word class, as in *zāʾiru ʾl-sulṭāni ʾl-djāʾiri ka-zāʾiri ʾl-laythi ʾl-zāʾiri* "who visits an unjust ruler is like someone visiting a roaring lion" (*zāʾir* "visiting" from root *z-w-r*, "roaring" from root *z-ʾ-r*).

(b) *mustawfā*, the two words belong to different word classes, as in *mā māta min karami ʾl-zamāni fa-innahū yaḥyā ladā Yaḥyā bni ʿAbdi llāhi* (Abū Tammām) "whatever dies of the nobility of Time, that lives on with Yaḥyā b. ʿAbd Allāh" (*yaḥyā* verb and *Yaḥyā* proper name).

2. *Murakkab*, one term is a composite.

(a) *malfūf*, the composite term consists of two independent words.

(b) *marfūw*, the composite term consists of one word and a fragment of another. An additional consideration is the question whether the two terms are spelled the same way (*mutashābih*) or differently (*mafrūḳ*).

Example of *malfūf mutashābih*:

Idhā malikᵘⁿ lam yakun dhā hibah—fa-daʿhu fa-dawlatuhū dhāhibah (al-Bustī)

"When a king is not generous (lit. one of gift), leave him, for his rule is transient".

Example of *malfūf mafrūḳ*:

kullukum ḳad akhadha ʾl-djāma wa-lā djāma lanā—mā lladhī ḍarra mudīra ʾl-djāmi law djāmalanā (al-Bustī)

"Each of you has received the goblet, but there is none for us—what harm would have been done to the one who makes the goblet go around, if he had been friendly to us?"

Example of *marfūw mafrūḳ*:

wa-lā talhu ʿan tadhkāri dhanbika wa-ʾbkihī—bi-damʿin yuḥākī ʾl-muzna ḥāla maṣābihī—wa-maththil li-ʿaynayka ʾl-ḥimāma wa-waḳʿahū—wa-rawʿata malḳāhu wa-maṭʿama ṣābihī (al-Ḥarīrī)

"Don't fail to be mindful of your sins and mourn them with tears that are like the rainclouds at the time of a downpour—and put before your eyes the fall of death, the terror of its encounter and its bitterroot taste".

3. *Mulaffaḳ*, both terms are composites, as in *Ilā ḥatfī saʿā ḳadamī—arā ḳadamī arāḳa damī* (al-Bustī) "Toward my ruin ran my foot: I see my foot having spilled my blood".

B. "Imperfect" paronomasia (there is no generally accepted cover term for this), which means lack of agreement (1) in the pronunciation of the consonants, (2) in their number, (3) in their arrangement, and (4) in individual consonants of the two terms.

1. *Muḥarraf*, difference in vocalisation, as in *al-daynu shaynu ʾl-dīn* "debt is a blemish on religion".

2. *Muṣaḥḥaf* (or *djinās al-khaṭṭ*), difference in diacritics, as in *idhā ẓahara ʾl-zinā wa-ʾl-ribā fī ḳaryatⁱⁿ adhina ʾllāhu fī halākihā* "when fornication and usury appear in a town, God will permit its ruin".

Often both types are mixed, systematically, e.g. in the following pairing of terms: *gharraka ʿizzuka fa-ṣāra ḳuṣāru dhālika dhullaka fa-khsha fāḥisha fiʿlika fa-ʿallaka tuhdā bi-hādhā wa ʾl-salām* (from an alleged letter of ʿAlī to Muʿāwiya). "Your might has deluded you, so the outcome of that became your humiliation. Fear therefore your abominable deeds, perhaps you will be guided by that. Peace".

3. *Nāḳiṣ*, one term incomplete by one or two letters, which may be at the beginning or end or in the middle of the term.

Example for incompleteness at the end of the word: *yamuddūna min aydⁱⁿ ʿawāṣⁱⁿ ʿawāṣimⁱⁿ—taṣūlu bi-asyāfⁱⁿ ḳawāḍⁱⁿ ḳawāḍibi* (Abū Tammām) "they stretch out hands that attack and defend, which wield cutting sharp swords".

If several letters are "appended" to one term, the *tadjnīs* is called *mudhayyal*, as in *inna ʾl-bukāʾa huwa ʾl-shifāʾu mina ʾl-djawā bayna ʾl-djawāniḥ* (al-Khansāʾ) "crying is the medicine against love passion between the ribs".

4. *Djinās al-ḳalb*, difference in the arrangement of the letters, as in *ḥusāmuka fīhi li ʾl-aḥbābi fatḥᵘⁿ—wa-rumḥuka fīhi li ʾl-aʿdāʾi ḥatfu* (al-Aḥnaf) "Your sword carries victory for your friends, your lance carries death for your enemies".

If the distribution of the two terms is the beginning and the end of a verse, it is called *mudjannaḥ*, as in *lāḥa anwāru ʾl-nadā min—kaffihī fī kulli ḥāli* "the rays of generosity shone from his hand in every situation".

5. One divergent consonant.

(a) *muḍāriʿ*, homorganic, i.e. similar articulation area, as in *baynī wa-bayna kinnī laylᵘⁿ dāmisᵘⁿ wa-ṭarīḳᵘⁿ ṭāmis*(ᵘⁿ) (*Maḳāmāt al-Ḥarīrī*) "Between me and my inn is a dark night and an effaced road".

(b) *lāḥiḳ*, non-homorganic, as in *waylᵘⁿ li-kulli humazatⁱⁿ lumazah* "woe unto every calumniator and libeller"

6. Terms are derivations of the same root (or seemingly the same root) (*figura etymologica*) [*tadjnīs al-ishtiḳāḳ*], as in *fa-aḳim wadjhaka li ʾl-dīni ʾl-ḳayyim* "so turn your face toward the straight religion".

(W.P. Heinrichs)

TĀDJUH, the Tagus river, *wādī Tādjuh* (Port. Tejo, Span. Tajo), together with the Ebro [see IBRUH], the Douro and the Guadalquivir (*al-wādī al-kabīr*), one of the great rivers of the Iberian peninsula. Rising in the Serranía of Cuenca in Aragon, its course of over 1,000 km/600 miles, crosses the Castilian Meseta and Estremadura and then enters Portugal, to debouch into the Atlantic in the Bay of Lisbon.

It is mentioned by Arabic geographers essentially in passages dealing with the towns of Toledo (Ṭulayṭula), Talavera (Ṭalabīra), Santarem (Shantarīn) and Lisbon (Ushbūna [*q.vv.*]). Most of them mention a bridge dating from Antiquity, crossing it downstream from Toledo, probably that of Alcántara (al-Ḳanṭara). Al-Ḥimyarī alone, taking up al-Rāzī, devotes a complete notice, though brief, to the river in his *K. al-Rawḍ al-miʿṭār*. He compares the Tagus to the Nile for its floods and the alluvium which it deposits on the plain of Santarem. Al-Idrīsī mentions mills along its course as well as a piece of hydraulic machinery meant to draw water to an aqueduct.

With the Muslim conquest in the early 8th century, the Tagus came within the *dār al-Islām*. For two centuries, the neighbouring regions were characterised by the implantation of numerous Berber tribesmen in the mountainous regions along its upper and middle zones (Maṣmūda, Nafza, Hawwāra, Miknāsa, etc.). At the end of this period, the territory effectively occupied by the Muslims must have begun more or less with the line of sierras separating the Tagus from the Douro basin. But there was probably hardly any stable,

dense population before the Tagus valley itself, where the line of fortresses of the Middle and Lower Marches were established to defend the Muslim territory: Santarem, Alcántara, Nafza and above all Talavera and Toledo [see AL-THUGHŪR. 2]. Other places, recently revealed by archaeological excavations, reinforced this line: e.g. the town of Vascos (the Nafza of the Arabic texts?) not far from Talavera de la Reina, whose ruins stretch over more than 6 ha and are enclosed by an imposing wall of dressed stone, but there were also a certain number of fortifications in the rural districts along the Tagus (Castros, Alija, Espejel, etc.) whose architecture suggests a probable Berber occupation.

Further to the north, between the Tagus and the sierras, some advanced points like Coria must have controlled a land where there was no-one but a few, fairly widely-spaced Berber tribesmen, perhaps still semi-nomadic. Against the image sketched out by Lévi-Provençal in his *Hist. Esp. mus.* of marches strongly controlled from Cordova and having a well-defined administrative status, recent historians like Eduardo Manzano have opposed that of a mosaic of Berber or indigenous populations who were for most of the time outside the authority of the Asturian-Leonese kings and the *amīrs* of Cordova. These territories comparatively independent of the central power were in practice governed by local families, often Berber like the Dhu 'l-Nūnids and the Banū Razīn [*q.vv.*], whose authority Cordova simply recognised rather than formally entrusting it to them.

Toledo was the capital of the Middle March until the Umayyad caliph ʿAbd al-Raḥmān III al-Nāṣir decided to transfer its functions nearer to the scene of operations at Medinaceli. But after Alfonso VI of Castile's capture of Toledo in 1085, it was along the approaches to the Tagus that the Christian and Muslim positions finally became stabilised. In the western part, the river remained within Islamic territory. In the modern Portugal and in Estremadura, Muslim Santarem faced Christian Leiria and Coria faced Salamanca, but each side had bridgeheads on the other bank. On the other hand, upstream from Toledo, after half-a-century of fierce fighting to control the course of the Tagus or to defend it, this last really did separate Muslims from Christians. The Christian victory at Las Navas de Tolosa (*al-ʿIḳāb* [*q.v.*]) in 1212 marks the definitive conquest of the river's course by the Christian kingdoms, the opening-up of the gates of Andalusia to their armies and the fixing of the frontier in the southern parts of the Peninsula.

(P. Buresi)

TADJURRA, in English conventionally Tadjura; in French, Tadjoura; in Italian, Tagiura; etc., a small coastal port on the gulf of the same name in the Republic of Djibouti and residence of the *dardar* ("sultan") of Tadjura, one of the traditional ʿAfar chieftains.

The Arabic name Tadjurra is itself a corruption of the name given to the locality by its inhabitants in their own ʿAfar dialect, sc. Tagorri. This last name is derived from *tagor*, pl. of *tagra* (a leather bucket for drawing water). The town is thus "*tagor [le ʿeela]*", meaning "[the well] with buckets", "the place of abundant water". Tadjura is, in fact, primarily an oasis.

Flanked by a palm-grove to the west and overshadowed by the Goda mountains from which it is separated by a plain traversed by wadis, the settlement is located on an impressive site. It consists of solidly built, single-storey white houses, interspersed with shacks constructed from vegetal material.

Islam has a long history in Tadjura and is well entrenched, even if the practice of it is hardly conspicuous. A degree of revival is, however, perceptible and non-Islamic practices are in decline. The last sacrifice to the genies of the sea (*baddi maskin*), for example, is said to date back to 1973. Ḳurʾānic education depends on women and on men, some of whom have left an indelible mark, such as Ḥajji Kaamil who was active during the 1970s. Tadjura is traditionally known as "the town of the seven mosques", a substantial number by the standards of the region; in fact Tadjura had nine of them (almost all endowed with a short and square minaret), including the Khoroojib mosque and the Djaamiʿ mosque, but the ʿIdi mosque was replaced in 1987 by a landing strip. The town possesses a *ḳāḍī*. Ṣūfī brotherhoods seem to be non-existent.

The *walī*s or saints revered in the region are: *shaykh* Gonduruḥmaan, *shaykh* Abazeed, also known as Abū Yazīd al-Bisṭāmī and *shaykh* Muḥammad Ibrāhīm al-Zarben. The first is reckoned to have arrived from Sudan around 1880. Having died once at Balo in Ethiopia, he came to Ambabbo, some 10 km to the west of Tadjura, where he was betrothed to a Ḥasooba girl, but finally died for the second time before marrying. His tomb is the object of a *siyyaara* on 27 Ramaḍān. The second, who allegedly lived from 188 to 261 A.H., is honoured on the peak of Barraʿbarré in the Goda mountains, where his tomb (or his cenotaph?) attracts pilgrims not only from the surrounding region but also from Yemen and Somalia. The third, doubtless of Arab origin, threw his spear from Zaylaʿ (Saylac) towards Tadjura. The place where it fell, at Marsaaki, is marked by a heap of dry stones. The inhabitants of Tadjura come to this place to appeal to the saint for prosperity and fertility.

The "sultanate" of Tadjura which is defined as "the area [subject to] the *dardar* of Tadjura" (*Tagorri dardarih ḍeddar*) is the only ʿAfar chiefdom, the territory of which is entirely enclosed within the frontiers of the Republic of Djibouti. It occupies part of the northern shore of the eponymous gulf and is bordered by the ʿAfar sultanates of Raḥayto (which has in the past grown at its expense) to the north and east, of the Awsa to the north and west, and of Goobaʿad to the south-west.

The ʿAfar clans occupying the territory are the Adʿali, the Ḥasooba, the ʿAble (the most numerous?), the Ayrolasso, the Songo Goda, the Maʿandiyta, the Seeka and the Mafa. ʿAfar society recognises transversal associations, the *fiʿma*, which counterbalance tribal divisions. In Tadjura there are four, the two male being Ḍiinekala and Farrada, the two female Amrisa and Maḥaysa.

It is very difficult to construct a continuous history of Tadjura and of the sultanate. The first mention of the town would seem to be in the writings of al-Idrīsī, and it is shown on the earliest Portuguese maps. Arab and European travellers mentioned it regularly.

The Adʿali, for their part, trace their origin from the miraculous appearance in the tree overshadowing the wells of ʿAdaylu, 30 km to the north of Tadjura, of Ḥadalmaaḥis, "he who was in contact with (i.e. "on", "under" "beside", etc.) the tree in the morning". This individual, traditionally regarded as being of Arab origin, established himself in this place and married there. The Adʿali are descended from his second son, Adaaʿal. Calculations based on the study of genealogies make it possible to locate the event towards the end of the 8th/14th century. In fact, it is known that at about this time there was an Adʿali chiefdom in the upper Weeʿima which soon extended its power to Tadjura, expelling *ca.* 1600 from the place another ʿAfar group, the Ankaala.

The Adʿali constitute the majority of the ʿAdohyammara (the "Whites"), a major grouping of families rivalling another assemblage, that of the ʿAsahyammara (the "Reds"), of whom numerous elements, the Moodayto of Awsa and the Dammohoyta of Bidu, for example, nevertheless also claim descent from Ḥadalmaaḥis.

The sultanate's connections with France date back to 1705, in which year Bretons on their way towards Mokha arrived, as a result of navigational error, in the gulf of "Tagora" and made contact with the sultan Muḥammad b. Dini. In the following century, after first contemplating competition on the Arabian shore of the Gulf with Great Britain, which had occupied Aden since 1839, France began to take an interest in the African shore. On 11 March 1862, the sultans of Tadjura, Raḥayto and Goobaʿad agreed to a convention acknowledging French possession of Obock (Oboki, in ʿAfar: Ḥayyu), an anchorage which was not effectively occupied until the summer of 1884. It was then that Léonce Lagarde, newly-appointed governor of Obock, signed protectorate treaties: on 9 August with the sultan of Goobaʿad, and on 21 September with the sultan of Tadjura, Aḥmad b. Muḥammad. In 1896 these ʿAfar chiefdoms were joined to Somali territory to form a new colony, misleadingly called the French Coast of the Somalis. In March 1949, Tadjura became the provincial capital of an administrative division of 13,000 km², currently one of the five districts of the Republic of Djibouti. Since the 19th century and until independence (1977), the population—always difficult to estimate—has varied around the 3,000 mark. At present (1997), it may reach 10,000 (70,000 for the district). Tadjura is, in any case, the most important town of the northern shore of the gulf, ahead of Obock and of the ʿAfar region of Djibouti.

Tadjura has always benefited by its position as a transit centre. On the landward side, the town is a point of convergence and a bartering site for nomads. It is also the point of arrival and departure of caravans heading towards Shoa, and in this capacity it was for many years the regional bridgehead for the traffic in slaves. This trade was still active after the First World War, supplying in particular the market in Djedda. The sultan himself was implicated, as were his counterparts in Awsa and Goobaʿad. It was as a result of a press campaign launched in 1922, and of abolitionist edicts issued by the Täfäri *ras* with the aim of easing Ethiopia's admission to the League of Nations (1923) that this resource of the inhabitants of Tadjura steadily dwindled before finally disappearing.

On the seaward side, Tadjura is a cabotage-port linked to Djibouti (by a ferry of often dubious reliability), as well as to ports on the Arabian and African shores of the Red Sea. There is also a small-scale boat-building operation, managed by expatriates from Yemen.

Today, the community subsists on coastal fishing, various trades (including the traffic in *ḳāt* [*q.v.*]) and supplies and posts for various local officials.

The *dardar*, whose title, mis-translated as "sultan", derives from the Arabo-Persian *sardār*, is assisted by a *banoyta* (or "vizier"). These two functions alternate within two clans, the Burhanto and the Diinite; when the *dardar* is a Burhanto, the *banoyta* is a Diinite and vice-versa. At one time, the *dardar* ruled over a vast domain. Today his power is much reduced and his control is confined to his personal property.

After the year of traditional mourning which followed the death of the Diinite *dardar* Habib Ahmed (enthroned in 1964), the *dardar* Abdoulkader Houmed and the *banoyta* Chehem Ahmed were enthroned on 8 April 1985 in the presence of 40,000 persons and the significant absence of the Somali President of the Republic, Hassan Gouled. When unrest erupted in 1991, Abdoulkader was asked by the government to intervene with the aim of obtaining the surrender of 3,000 mutinous soldiers. He refused vehemently, thus regaining some of the prestige which he had earlier forfeited as a result of his obsequious appeasement of the authorities.

Bibliography: In addition to the titles cited below, information regarding Tadjura and its population is to be found in works relating to the ʿAfar and to the territory of Djibouti, as well as in the accounts of travellers who made their way by caravan from the coast to the Ethiopian plateau or who navigated the southern reaches of the Red Sea. On these subjects, the existing bibliographies may be consulted, with the addition of useful and recently-published titles such as D. Morin, *Le Ginnili*, Paris 1991, and idem, *Des paroles douces comme la soie*, Paris 1995. But a monograph on Tadjura which would lead to progress in ʿAfar studies has yet to be written.

(A. Rouaud)

TADJWĪD (a.), verbal noun from *djawwada*, literally means "to make better" in the sense of *taḥsīn* "to embellish, beautify", but has come to be understood generally as the art of reciting the Ḳurʾān, known as *ʿilm al-tadjwīd*. The term does not occur in the Ḳurʾān, but it was used early. For example, ʿAlī b. Abī Ṭālib, son-in-law of the Prophet and fourth caliph, is reported to have replied in answer to a question about the meaning of the Ḳurʾānic phrase in sūra LXXIII, 4, *wa-rattili ʾl-ḳurʾāna tartīl*[an] ("and recite the Ḳurʾān by means of *tartīl*") that it means *tadjwīd al-ḥurūf wa-maʿrifat al-wuḳūf* ("excellent rendering of the consonant sounds and knowledge of the pauses"). In this terse definition we see the importance of both the phonetics and the semantics of Ḳurʾānic recitation: giving each letter its due and knowing where to pause in the recitation, which also

entails knowing where to resume it. This latter aspect came to be known as *al-wakf* ("pause", pl. *wukūf*) *wa 'l-ibtidā'* ("and beginning, resumption"), and occupies an important place in *'ilm al-tadjwīd*. Modern copies of the Arabic text of the Ḳur'ān contain symbols indicating the pauses and their several kinds, as well as whether they are obligatory or optional.

Although *tadjwīd* is principally concerned with the rules and skills of the oral performance of recitation, it also extends to knowledge and practices that are not strictly phonetic in nature. For example, in addition to the semantically and syntactically-oriented pause and beginning (*al-wakf wa 'l-ibtidā'*) is the etiquette of recitation (*ādāb al-tilāwa*), covered in many *tadjwīd* manuals as an important part of the piety if not strictly the performance practices of recitation.

1. Other terms. Another term for Ḳur'ānic recitation is *ḳirā'a*, lit. "recitation, recital", in the general sense of reciting passages during the prayer or reciting the entire Ḳur'ān, as well as "reading", i.e. among variants. In this last sense, the discourse has to do not with the rules of recitation—its manner—but with the text itself—its matter—which from earliest times admitted of variation in a largely oral culture before the Arabic script had reached maturity. The "science of readings" (*'ilm al-ḳirā'āt* [see ḲIRĀ'A] became an important, complex discourse with first seven, then ten, and later fourteen canonical readings of the Ḳur'ānic text, although it is the seven which remain important. The multiplicity of readings does not mean that there are different versions of the Ḳur'ān, but that there are variant readings—most very minor—of the same basic text. The question of whether reciters should mix variant readings in recitation performance has been much discussed, with a general tendency toward not doing so in the presence of listeners unfamiliar with these matters, whose confidence in the revealed text might thereby be endangered through confusion.

The teacher of "readings and recitation" (*al-ḳirā'āt wa 'l-ḳirā'a*) is known as a *muḳri'* (pl. *muḳri'ūn*), and a reciter of the Ḳur'ān is called a *ḳāri'* (pl. *ḳurrā'*). The former is a member of a relatively small professional élite, whereas the latter is a much more common performer, albeit highly respected for mastery of *tadjwīd* and, often, full memorisation of the Ḳur'ān as a *ḥāfiẓ*. Every *muḳri'* must be a *ḳāri'*, but only rarely is a *ḳāri'* also a *muḳri'* in the strict sense of being a certified expert in the science of readings and recitation.

Probably the most generic term for recitation of the Ḳur'ān is *tilāwa* "to follow, to read/read out loud, to recite". The term, like *tartīl*, is Ḳur'ānic (II, 121, "those unto whom We have given the Scripture, who read it [*yatlūnahu*] with the right reading [*ḥaḳḳa tilāwatihi*], those believe in it"). But *tilāwa* does not specify anything concerning performance; that is the domain of *tadjwīd* and, to a lesser extent, *ḳirā'a*. Abū Ḥāmid Muḥammad al-Ghazālī's gloss of *tilāwa* (from his *Iḥyā'*, as cited in 'Āmir b. al-Sayyid 'Uthmān, *Kayfa yutlā 'l-Ḳur'ān*, Cairo 1394/1974, 9), contextualises Ḳur'ānic recitation within scriptural piety rather than merely skilled technical oral performance: "[The Ḳur'ān's] true recitation (*tilāwa*) is that the tongue, the intellect and the heart share in it. The portion of the tongue is to render the consonants authentic by *tartīl*, the portion of the intellect is the explanation of the meaning, and the portion of the heart is admonishment". The lexical meanings of *tilāwa* convey the double senses of reading and being obedient to—"following"—the message.

2. Selected technical aspects of *tadjwīd*. The typical handbook quickly gets right into the technical matters of the phonetics of Ḳur'ānic recitation, most of which require demonstrations to comprehend fully. First the letters of the Arabic alphabet are discussed, along with their places of articulation (*makhāridj al-ḥurūf*) in the human vocal anatomy and their manners of articulation (*ṣifāt al-ḥurūf*). With respect to *makhāridj al-ḥurūf*, modern manuals sometimes contain illustrations of the mouth, throat, teeth and lips with indications of precisely where each letter's utterance originates. One influential Indonesian manual has lessons with thoughtfully arranged sequences of juxtaposed sounds—using nonsense patterns—so that the non-Arabic speaking student will be able to master the difficult muscular and auditory skills of Arabic pronunciation. The *ṣifāt al-ḥurūf* treat groups of the alphabet in pairs of opposites, according to their characteristics as pronounced (some examples follow): whether they are gently uttered (e.g. *thā', khā', sīn, ḳāf, hā'*) or fully voiced (e.g. *bā', dāl, rā', zā', 'ayn, ḳāf, lām, mīm, wāw, yā'*), whether the letters are pronounced with confidence in their place of origin (e.g. *djīm, dāl, ḳāf, tā'*) or with some lack of confidence in the exact point (e.g. *thā', fā', wāw, hā'*), whether they are pronounced with tongue elevated (*khā', ṣād, ḍād, ghayn, ṭā', ḳāf, ẓā'*) or lowered (the remainder) in the mouth, whether they are "covered" (*ṣād, ḍād, ṭā', ẓā'*) or "opened" (the remainder) with respect to the tongue being closely covered by contact with the hard palate, and whether the pronunciation is light—coming from the tip of the tongue and lips (*fā', rā', mīm, nūn, lām, bā'*) or hard (the remainder). Some fine points under *ṣifāt* include *ḳalḳala*, strong pronunciation of certain letters when they are quiet (*sākin*), e.g. *ḳāf, ṭā', dāl*); *takrīr*, trilling the *rā'* at certain times; and *istiṭāla* "stretching" the sound from one side of the tongue to the other when pronouncing *ḍād*.

The manuals then proceed to treat a number of additional matters pertaining to *tadjwīd*: *ghunna*, nasal sound of certain letters in excess of ordinary speech; assimilation (*idghām* [*q.v.*]) of certain letter sounds, for example, silent *nūn* and *tanwīn* when followed by *tanwīn* and *rā'*, as in II, 5, where *'alā huda^n min rabbihim* is rendered *'alā hudammirrabihim; madd* "extending" the duration of a syllable; *iḳlāb* "alteration" of a letter's sound, as in quiescent *nūn* followed by *bā'*, where the phrase *min ba'd* becomes *mim ba'd*; and others.

3. Styles of recitation. Recitation style is determined in some degree by the pace of performance, ranging from very slow to rapid. The ideal form, which has dominated the discourse since earliest times, is called *tartīl*, after the Ḳur'ānic passage quoted above. A contemporary manual defines *tartīl* as "recitation . . . done at a slow pace . . . and the *ḳāri'* observes with great care the clarity in pronunciation of each letter from its *makhradj*, place of origin, strictly follows all the rules of *al-tadjwīd*, uses a melodious voice, exercises pauses and enables the listeners to comprehend each letter and meaning of the words for their reflection . . . ." (Muh. I.H.I. Surty, *A course in the science of reciting the Qur'ān*, Leicester 1988, 197).

Another term for slow recitation is *taḥḳīḳ* "meticulousness". It is in the class of *tartīl* but slower than ordinary *tartīl*, and used principally in learning and practising *tadjwīd*. Medium-paced recitation is known as *tadwīr*, whereas rapid recitation is called *ḥadr*. The latter is generally reserved for private use, as when the reciter wishes to maintain the text in memory through frequent repetition. One reciter in East Java informed the present writer that he profitably and pleasantly passes the time on the slow train from

Surabaya to Yogyakarta by reciting the whole Ḳur'ān in *ḥadr* style. All the styles are strictly governed by the rules of *tadjwīd*.

Certain kinds of recitation are considered as detestable and others are unlawful. An example of the first is lengthening the short vowels and then stretching the elongated (*madd*) vowels even more, and one of the second is transforming the recitation into singing (other examples, together with a table of words whose mispronunciation will change the meaning of the text and lead the reciter into unbelief, are in Surty, *op. cit.*, 201-2).

4. Melodic recitation of the Ḳur'ān. There is an ancient, absorbing and continuing discourse concerning the place and propriety of musical performance in Ḳur'ānic and other types of pious recitation in Islam, such as the *dhikr* and *samā'* practices of Ṣūfī orders. We do not know what the earliest Ḳur'ānic recitation sounded like, so far as melodies and modes are concerned. A famous prophetic *ḥadīth* is: "He is not one of us who does not chant the Ḳur'ān" (al-Bukhārī). The word translated as "chant" is *yataghannā*, which can also mean "sing", although some commentators prefer "be content with" (*yastaghnī*). Muḥammad enjoyed listening to the Ḳur'ānic recitation of others and declared, according to another *ḥadīth*, that Abū Mūsā al-Ash'arī's recitation was like "a flute of the people of David", where al-Nawawī glosses "flute" (*mizmār*) as "beautiful voice" (*al-ṣawt al-ḥasan*) (*Ṣaḥīḥ Muslim, bi-sharḥ al-Nawawī*, Cairo 1964, vi, 80). Ibn Khaldūn's interpretation (tr. Rosenthal, ii, 401) is that it "does not refer to cadence and melodious music, but... to a beautiful voice, a clear pronunciation", that is, to strict *tadjwīd*. There are reports in early Muslim history of recitation of the Ḳur'ān using popular melodies (*alḥān*), but the influence of art song on the practice seems to have been relatively short-lived. It came under the severe censure of the *'ulamā'* quite early.

Although the musical dimension of Ḳur'ānic recitation is a diverse, complex discourse, sustained over many centuries, the practice of *tadjwīd* came universally to be independent of any kind of popular singing, with set melodies. In contemporary Egypt, which has great influence on recitation everywhere, the word *tadjwīd* may be understood to designate melodic and highly embellished Ḳur'ānic recitation as well its more generic meaning, discussed above. A more precise term for melodic recitation is *mudjawwad* style, as distinguished from *murattal* style (from *tartīl*). It employs musical modes/pitches (*maḳām*, pl. *maḳāmāt*) and largely improvised melodic chants (*naghamāt*). But even *mudjawwad* recitation should ideally be spontaneous, without set melodies, and obeying the rules of *tadjwīd* (see the detailed exposition by Kristina Nelson, *The art of reciting the Qur'ān*, Austin 1985, 32-51, 101-35 and *passim*).

Sound recordings of Ḳur'ānic recitation have become important means for learning the art, as well as for enjoying its many expressions. Two influential reciters of this century were the Egyptians Shaykh 'Abd al-Bāsiṭ 'Abd al-Ṣamad, renowned for his *mudjawwad* performances, and Shaykh Maḥmūd Khalīl al-Ḥuṣarī, whose recitation in *murattal* style was greatly admired. A respected contemporary woman reciter is the East Javanese reciter Mariya Ulfa, who is active in Ḳur'ān recitation educational affairs, including the famous biennial *Musabaqah Tilawatil Qur'an* ("Contest in the Recitation of the Ḳur'ān") in Indonesia. Performance recordings of all three reciters, and many more besides, are widely available.

5. Other performance matters and examples of the etiquette of recitation. Recitation of any portion of the Ḳur'ān should be preceded by *ta'awwudh* [*q.v.*] "seeking protection" by saying the formula *a'ūdhu billāhi min al-shayṭān al-radjīm* "I seek refuge in God from the accursed Satan". After seeking refuge, the reciter utters the *basmala* (regardless of whether the recitation begins at the beginning of or within a sūra), "In the Name of God, the Merciful, the Compassionate". Then the portion to be recited is commenced. At the end of recitation is said *ṣadaḳa 'llāhu 'l-'aẓīm* "God the Mighty has spoken truthfully".

Another matter is weeping during recitation, which is recommended both by the Ḳur'ān (XVII, 109) and in *ḥadīth*. One should induce weeping if it does not come spontaneously, because thereby it brings more forcefully to mind, as al-Ghazālī wrote, the "threats, warnings, covenants and promises... in the Ḳur'ān", noting that the "greatest of all misfortunes" is a "lack of grief and tears" for which, if nothing else, a person should weep (M.A. Quasem, *The recitation and interpretation of the Qur'ān: al-Ghazālī's theory*, Kuala Lumpur 1979, 44).

The best context for recitation is generally agreed to be while standing at the *ṣalāt* worship service. In any event, one should recite facing the *ḳibla* in a clean location and, if handling a Ḳur'ān copy (*muṣḥaf*), be ritually pure. It is permissible to recite the Ḳur'ān from memory without first performing *wuḍū'*, whether sitting, standing, reclining or walking. At certain points in the text prostration (*sadjda*), as in the *ṣalāt*, is observed after reciting an *āya* such as VII, 206, "They celebrate His praises, and bow down before Him". The classical Sunnī *madhhabs* recognise 11 to 15 obligatory *sadjda* verses, and most printed copies contain a rubric designating each prostration verse. In addition to prostrations are various uttered words and phrases at certain points in the text, e.g. *Subḥān Allāh* "Praise God!" when a verse glorifying Him is recited.

Opinions vary as to the amount to be recited at one time. Some people recite the entire Ḳur'ān in one night, but it is more common for the text to be recited in its entirety over three days, a week, or a month. In an oft-quoted *ḥadīth*, the Prophet declared that one who completes a recitation of the Ḳur'ān in less than three days does not understand it (e.g. Ibn Mādja, *Sunan*, al-Riyāḍ 1404/1984, i, 244-5, "Iḳāma", no. 1341). Ḳur'ān copies have marginal indications for divisions and subdivisions of the text into equal portions for weekly or monthly completions. It is common for a group of reciters to perform by taking turns, completing the entire Ḳur'ān according to differing time-frames, which depend in part on whether the style adopted is *tartīl* or the much slower-paced *mudjawwad*, and to what extent the session is also for training, with sufficient time for correction and commentary. In any recitation, both reciters and listeners have the duty to stop the proceedings for correction when an error is noticed.

A completion of the recitation of the entire text is called a *khatma*, whereupon it is recommended immediately to recite sūra I "*al-Fātiḥa*", and the first five verses of sūra II "al-Baḳara", ending with *ulā'ika humu 'l-mufliḥūn* "these are the successful". It is common at this point to recite appropriate litanies and supplications (*du'ā'* [*q.v.*]), for which there is an established literature.

TĀDLĀ, a vast region of central Morocco. It is a landscape of plains, foothills and mountains. In the east it starts at the sources of the Umm al-Rabīʿ (Wansifane) and the Moulouya, and in the Middle-Atlas (Fazāz) it follows the upper course of the former river to its confluence with the Wād al-ʿAbīd. From there the plains of the Tādlā stretch on both sides of the two rivers until they reach the fields of phosphates in the north; then they skirt the sills of the Srāghna and the Shāwiya in the west. Southwards, Tādlā thrusts towards the slopes of the High Atlas (Drane). It has a Mediterranean type climate, semi-arid to dry with an average precipitation of 350 mm, except in the foothills where humidity is more noticeable. The geological evolution of the region has endowed Tādlā with an alluvial plain which is particularly rich in water resources and highly fertile.

There are still divided opinions about how this vocable should be written (Tādlā, Tādila, Tidle, etc.) and what it means. The Amazigh language of Morocco, Algeria, and the Touareg includes terms derived from the root *t-d-l* which indicate the colour "black" or "dark green". The morphological parallel which may exist between the vocables Tādilā and Dilāʾ, denoting the mountainous zone in the north-east with the famous Zāwiya of Dilāʾ, has already been emphasised elsewhere by the present writer, and can also be found in the writings of historians such as ʿAbd al-ʿAzīz al-Fishtālī (d. 1031/1622-1) in *Manāhil al-ṣafāʾ*, and Abū al-Ḳāsim al-Zayyānī (d. 1241/1883) in *al-Bustān al-ẓarīf*. The word Tādlā, as it is pronounced locally, means "a sheaf of corn", which fits in well with the preponderant agricultural realities of the region. In Classical Arabic the ethnic name is *tādilī*, and in dialect it is *tādlāwī*.

The ancient inhabitants of the Tādlā were Berbers, with the Zenāta agriculturalists in the plains, and the Haskūra-Ṣnāga shepherds in the mountains. The first contact the Tādlā had with the Arabs was when ʿUḳba b. Nāfiʿ (d. 63/683 [*q.v.*]) passed through on his way back from Sūs. But when Idrīs I conquered Tādlā in 172/789 he found only a small number of Muslims; the majority of the population were either Jews or Christians. In 202/818 the Andalusian Arabs on their flight from Spain after the revolt of the Rabaḍ at Cordova settled in Tādlā. Some years later, other Arabs from Fās followed them when an Idrīsid amīrate was created in that region. However, the main Arab migration took place only at the end of the 6th/12th century, when the Almohads decided to make the Arab Bedouin of the Banū Hilāl and Sulaym, who had settled in Tunisia, move towards Morocco. The Arabs then spread out within the country. On this subject Ibn Khaldūn wrote that "the immigrant Arabs of the Djusham and Riyāḥ have made their home in the plains and Morocco is being submerged by countless clans".

After the assassination of the Almohad Yaḥyā b. Nāṣir in 633/1236, the Banū Djābir, another group of the Djusham, flocked to Tādlā and settled in the foothills neighbouring the Ṣnāga, who were established in the hilltops and the plains. Sometimes the Banū Djābir risked going to the plains but when they learned of danger coming from the central power or a ruthless leader they withdrew to the mountains to their Berber allies. The Saʿdians, in their turn, brought in the Maʿḳil Arabs who originally came from the Yemen to Tādlā.

In time, a heterogeneous Arabo-Berber population grew up. Because of its strategic situation between the north and the south, and its control of the road linking the two imperial cities, Fās and Marrākush, and its natural resources, Tādlā has been the object of constant interest on the part of all the dynasties of Morocco, and each has tried to strengthen its hold there by nominating representatives from it to high levels of power.

Nevertheless, conflicts affected the region badly; some towns were destroyed and rebuilt, but others just disappeared and new ones were built on their ruins. That is how, in the Middle Ages, the town of Tādlā was a metropolis which gave its name to the whole province; al-Ḥimyarī wrote in his *al-Rawḍ al-miʿṭār* that "it is an ancient town where relics of ancient times can be found". Al-Idrīsī adds that "the city of Tādlā held a prime position for the production of cotton and exported large quantities of it in all directions; it was the principal raw material used in the production of cotton fabric in the Maghrib al-Aḳṣā".

Only the town of Dāy at the foot of the mountain could be compared to it. Al-Bakrī, calling it *ḥiṣn*, a stronghold, describes a lively trade there, with traders from Fās, Baṣra and Sidjilmāsa. Al-Idrīsī noted that Dāy had an advantage over the town of Tādlā in its

rich mineral resources, above all, its mine of pure copper. This was probably the reason why the Idrīsids chose Dāy as the chief town of their amīrate and prince Yaḥyā (or Aḥmād), the son of Idrīs II, settled there when the sultan of Fās, Muḥammad b. Idrīs, shared out the provinces of Morocco among his brothers in 213/829. The Idrīsids had been very successful in penetrating into the mountains of Tādlā and setting up there several mints, at Wazeḳḳūr, Mrirt, Wawāhna and Tāgarāg.

When the Banū Yafran, the Zenāta Berber princes governing Salā and Shālla, had hounded the Idrīsids from power, they seized the province of Tādlā, which they held until it was wrested from them by the Almoravids. It would seem that Dāy suffered enormously from these events and that the Almoravids did so much restoration work that it looked like a newly-created town. They also built the fortress of Tāgrārt in the neighbourhood. Scarcely a century later, the Almohads ousted the Almoravids from Dāy and Tāgrārt, and completely razed the two cities to the ground. At the same time, the city of Tādlā perished, never to rise again; perhaps this was because of the opposition of the population to such tendencies of the Almohads as Mahdism and the impeccability of their Imām.

When he visited the province of Tādlā at the beginning of the 16th century Leo Africanus (who called it Tidle) spoke of new towns built at a high altitude. He mentions "Tafza, the chief town, built on the mountain side about five leagues away from the plains; the town of Afza, two leagues from the previous town; between them flows the Wādī Darna. The town of Ayt ʿItab, to the south-west of that place, was approximately forty leagues distant. Finally there is the town of Ayt ʿIyat, built on a small mountain in the Atlas range". These towns all disappeared in their turn as a consequence of the many military actions on the battlefields of Tādlā, in which the Waṭṭāsids were engaged against the Saʿdians.

When the Saʿdī prince Zaydān was named viceroy of Tādlā by his father Aḥmad al-Manṣūr al-Dhahabī in 1584, he had a *ḳaṣba* built on the left bank of the Umm al-Rabīʿ, where he settled and which bore the name of Ḳaṣba Zaydāniyya. It was also destroyed, during the military operations which took place between the sons of Aḥmad al-Manṣūr after the death of their father. However, the remains of this *ḳaṣba* are still standing.

One of the objectives in the political strategy of the ʿAlawī sultan Mawlay Ismāʿīl was the establishment of law and order. He therefore had fortified *ḳaṣbas* built all across Morocco. He built one on the right bank of the Umm al-Rabīʿ in 1688, and garrisoned it with about 1,000 cavalrymen conscripted from the *ʿAbīd*. Then in 1700 he named his heir-presumptive Aḥmad al-Dhahabī to act as his governor of Tādlā, gave him 3,000 soldiers and ordered him to undertake the extension of the precincts of the *ḳaṣba*. He built another *ḳaṣba*, in addition to the *ḳaṣba* of his father, within the precincts of which he built a palace for himself. The two fortifications together bore the name Ḳaṣba-Tādlā, and they played important political and military roles in the course of the 18th and 19th centuries; several times they changed masters and would pass from the hands of dissidents to the hands of refugees or conquerors, before being totally abandoned.

Charles de Foucauld visited Ḳaṣba-Tādlā on 17 September 1883 and gave a detailed description of it, but without mentioning the *ḳaṣba* of Mawlay Ismāʿīl, indicating that there was no trace of it at that time. As for the *ḳaṣba* of Aḥmad al-Dhahabī, de Foucauld only found the walls, the doors, the towers, the mosque and the palace of the *Makhzan*. Everything was deserted and devastated. In the suburbs people had set up homes in dwellings with mud walls, whilst others were living in tents and huts.

Early in its history, Tādlā witnessed much cultural and mystical activity, possibly because of its contacts with the great intellectual centres from Sabta/Ceuta and Fās to Aghmāt and Marrākush on the one hand, and on the other hand because of their constant confrontation with their heretical neighbours, the Barghawāṭa [*q.v.*], who dominated the plains of the Tamasna.

This cultural and mystical activity was reflected in the 6th/12th century by the work of Ibn al-Zayyāt al-Tādilī, *al-Tashawwuf*, which comprises more than twenty biographies of Ṣūfīs originating from Tādlā, ranking first among whom was Abū Yaʿzā Yalannūr al-Haskūrī (d. 573/1177). His qualities and his miracles gave rise to important literary works, and his mausoleum, otherwise known as Mawlāy Bū ʿAzza, still receives a constant stream of pilgrims and visitors.

There are some *zāwiyas* scattered across Tādlā, six of which are very important: the Zāwiya Aḥanṣāl, on the banks of Assif Aḥanṣāl, one of the tributaries of the Wādī al-ʿAbīd, was founded in the 7th/13th century by the *shaykh* Saʿīd Aḥanṣāl the Great; the Zāwiyat al-Ṣawmaʿa was erected on the ruins of the town of Dāy, near the minaret of the Almoravid mosque, which had been spared; this *zāwiya* remained until the beginning of the century as a centre of learning and mystical exercises; the Zāwiya of Dilāʾ [*q.v.* in Suppl.] was a religious and cultural influence on the whole of Morocco for about a hundred years, before it was devastated in 1668 by the young ʿAlawī sultan Mawlāy Rashīd; the Zāwiya of Bū Djaʿd, called the Zāwiya al-Sharḳāwiyya, still enjoys great esteem throughout the Tādlā; the Zāwiya of Tamadjdjūt, about 30 km to the east of the town of Bani-Mellāl, was founded by the *shaykh* ʿAlī b. ʿAbd al-Raḥmān al-Darʿī (d. 1091/1680); it was destroyed but was later reconstructed, and a *mawsim* is organised there every summer; finally, there is the Zāwiyat al-Shaykh, the foundation of which was encouraged by Mawlāy Ismāʿīl with the aim of counteracting the influence of the Zāwiya Bū Djaʿd, a branch from the Zāwiyya Nāṣiriyya of Tamgrūt, in the Darʿa.

Most of the scholars and Ṣūfīs bore the ethnic name of al-Tādilī, whilst some of them were known by an appellation like al-Ṣawmaʿī, al-Dilāʾī, al-Sharḳāwī, al-Djābirī, al-Bzīwī, al-ʿUtābī, al-ʿUmayrī, al-Maʿdānī, etc., according to which *zāwiya* or with which tribe of the region they were associated. Others belonged to part of a tribe or some forgotten corner of the region, so that their origin can only be discovered by reading biographical and genealogical works. Such is the case for Abu ʾl-ʿAbbās al-Garrāwī (d. 609/1212), for example, the famous poet of the Almohad court, who at the request of Yaʿḳūb al-Manṣūr composed *Ṣafwat al-adab wa-dīwān al-ʿArab*, an example of heroic Maghribī poetry distinct from the heroic poetry of the East.

In the 20th century, the plain of Tādlā has undergone an important agricultural revolution, principally due to the introduction of a modern irrigation system. As a result of the construction of the Ḳaṣba-Tādlā barrage in 1929, the Umm al-Rabīʿ was able to irrigate 34,500 ha of the territory of the Banī ʿĀmir on its right bank; and in 1953 the Bīn al-Wīdān barrage on the Wādī al-ʿAbīd irrigated 69,500

ha of the land of the Banī Mūsā on the left bank of the Umm al-Rabīʿ; in all a total of some 104,000 ha. After the independence of Morocco, interest in irrigation grew, so that the total surface area under irrigation increased to 120,000 ha. As a result there has been economic and social development, as well as a growth in the network of urban centres which have been created to absorb and organise the flow of emigrants from the different regions.

The decree of 19 December 1955 announcing the first administrative divisions of independent Morocco promised thirteen provinces, one of which was the province of Banī-Mellāl, to be made up of most of the territories in Tādlā, plains and mountains. But in 1974, this vast province was divided, and the province of Banī-Mellāl, which would encompass only the plains, was separated from the province of Āzilāl, which was to include the mountainous regions throughout Tādlā.

The province of Banī Mellāl actually includes ten urban centres, the majority of which bear the names of the tribes who live there. The chief town of the province is Banī-Mellāl with 130,000 inhabitants (in 1988); the others are Fḳīh ben Ṣālaḥ, Ḳaṣba-Tādlā, Sebt Ulād al-Namma, Ulād ʿIyyād, Ulād Mbārek, Dār Wald Zidūh, Ulād Yaʿis̲h̲, Ḥad al-Brādya and Sīdī D̲j̲āber.

The province of Āzilāl has six urban centres; Āzilāl is the chief town, and the others are Demnāt, Āfurār, Wāwizag̲h̲t, Fum al-D̲j̲umuʿa and Bzū.

There are other tribes or parts of tribes not mentioned above which also live in the two provinces. In the plains are the Banī S̲h̲āgdal, Ayt al-Rbaʿ, Banī Maʿdān, Gtāya, Semkat, Ulād Ḥamdān, Ulād Saʿīd, and the Ulād Gnāw; and in the mountains are the Berber Ayt ʿItāb, Ayt Mḥammad, Iḥanṣālane, Faṭwāka, Ayt ʿAṭṭā-u-Malu, Ayt Būzīd, Ayt Utfarkāl, Ayt Bugummāz, and the Ayt ʿAbbās.

TADLĪS (a.), a term of Islamic law, verbal noun from Form II verb *dallasa* which means, according to *LʿA*, "to conceal a fault in a commodity", with a not obviously related noun form *dalas* "darkness".

1. In the law of sale and contract.

According to a generally-accepted view, found e.g. in Coulson, the term stems from the Byzantine Greek word *dolos* (< Latin *dolus*) with the idea of fraudulent concealment of defects in merchandise. Ryner points out that both *tadlīs* and *tag̲h̲rīr* [*q.v.*] appear to be almost synonymous and used interchangeably by classical authors. *Tadlīs* is the term adopted by the Mālikī school for the concept of *tag̲h̲rīr*, although this school represents only a part of the Medinan law, and the main term used for fraud, *tag̲h̲rīr*, is a native Arabic word. *Tadlīs* is quoted by Ryner as parallel to the English legal term of "misrepresentation", as used in Bahrain law (article 20). The difference between *tag̲h̲rīr* and *tadlīs* remains subtle, and perhaps one can trace it in the nature of the action contained in each word. Although both refer to fraudulent actions, *tadlīs* is more concerned with the object of the contract, *maḥall al-ʿaḳd*, whereas *tag̲h̲rīr* is a fraudulent action that takes place against a second person who buys or enters into the contract. *Tadlīs*, according to S̲h̲ayk̲h̲ al-Dardīr, occurs "when the buyer does not explain a fault that he is aware of in his commodity". The distinction between the two might be less ambiguous when we observe their other usage in Arabic; *tadlīs* often seems to be used to describe abstract concepts like a weak *ḥadīt̲h̲* (see 2. below), while *tag̲h̲rīr* is used to describe a physical action like deception in marriage. Although *tadlīs* is not found in the primary Islamic sources (e.g. the Ḳurʾān) or frequently mentioned in early texts, the *LʿA* quotes Saʿīd b. al-Musayyab as having used a word of the same root to describe temporary marriage as a cause that leads to the evil of fornication, *d̲h̲arīʿat al-zinā*. Saʿīd b. al-Musayyab used the term *dawlasī* instead of *d̲h̲arīʿa*, the means of evil. This can be seen as one of the instances that views evil from a positive angle [see further sadd al-d̲h̲arāʾiʿ].

2. In the science of *ḥadīt̲h̲*.

Here, *tadlīs* is a generic term indicating a number of deceitful methods used by *ḥadīt̲h̲* transmitters to make *isnāds* [*q.v.*], with which traditions had to be authenticated, acceptable.

The term used in a *ḥadīt̲h̲* context developed out of the original connotation of deceit, e.g. of a man who pretends that he is a free-born but is in reality a slave (al-Kulaynī, *Kāfī*, ed. G̲h̲ifārī, v, 405, l. 1, 410). Goldziher (*Muh. Stud.*, ii, 48) states that the word is connected etymologically with *dolus*. By general consensus, this tampering with *isnāds* was considered a kind of fraud but less objectionable than outright mendacity (= *kad̲h̲ib*). In mediaeval Muslim *ḥadīt̲h̲* sources, it is recorded that *tadlīs* was already resorted to among the second earliest generation of *ḥadīt̲h̲* transmitters, that of the Successors. Examples of such Successors mentioned are al-Ḥasan al-Baṣrī (d. 110/728 [*q.v.*]) and Ḳatāda b. Diʿāma (d. 117/735 [*q.v.*]) among many others. In fact, all through the first two and a half centuries after the *Hid̲j̲ra*, during which time traditions were transmitted that eventually found a place in the canonical collections, *tadlīs* was practised on varying scales of deceitfulness by very many transmitters whose activities, however, hardly ever escaped detection, if the large number of cases recorded is anything to go by. Apparently the first *ḥadīt̲h̲* scholar to catalogue the diverse *tadlīs* methods used was al-Ḥākim al-Naysābūrī (d. 405/1014 [*q.v.*]), cf. his *Maʿrifat*

ʿulūm al-ḥadīth, ed. Muʿazzam Ḥusayn, Ḥaydarābād-Cairo 1937, 103-12. He distinguished six categories. Several of these showed up so much overlap in the eyes of the mediaeval *ḥadīth* expert Ibn al-Ṣalāḥ al-Shahrazūrī (d. 643/1245 [*q.v.*]) that he summarised those six under only two headings: (1) *tadlīs* in the *isnād* amounting to mentioning an informant but without adding that between that informant and oneself there were one, two or more other transmitters left unmentioned; and (2) *tadlīs* in the identification of one's informant in an *isnād* by deliberately using a name, patronymic or agnomen by which the person was generally not known in order that he might not be recognised. The first category became the more severely criticised of the two, even prompting Shuʿba b. al-Ḥadjdjādj [*q.v.*] to label it "the brother of mendacity". It eventually gave rise to some casuistry on how to deal with such *tadlīs*-affected traditions. The second category was seen to be less infamous, and qualifying this form as *tadlīs* depended on the overall measure of (un)reliability of the transmitter once that man's identity was denuded of mystification. Possibly the earliest collection solely devoted to *ridjāl* [*q.v.*] accused or suspected of *tadlīs* is the *Kitāb al-Mudallisīn* of Ḥusayn b. ʿAlī al-Karābīsī (d. 245/859 or 248/862 [*q.v.*], cf. Sezgin, *GAS*, i, 599-600), which is preserved in some fragments in later works, but the *Fihrist* of Ibn al-Nadīm also mentions a similar collection ascribed to ʿAlī Ibn al-Madīnī (d. 234/849) of which there does not seem to be a trace. In all the later *ridjāl* lexicons, the term shows up frequently.

Bibliography: Ibn Abī Ḥātim, *K. al-Madjrūḥīn*, Ḥaydarābād 1970, 77, lists some famous *thikāt* [*q.v.*] among the *mudallisūn*; al-Khaṭīb al-Baghdādī, *K. al-Kifāya fī ʿilm al-riwāya*, Ḥaydarābād 1357, 355-71; Ibn al-Ṣalāḥ al-Shahrazūrī, *Mukaddima* [*fī ʿilm al-ḥadīth*], ed. ʿĀʾisha ʿAbd al-Raḥmān Bint al-Shāṭiʾ, Cairo 1974, 165-72; Ibn Radjab, *Sharḥ ʿilal al-Tirmidhī*, ed. al-Sayyid Ṣubḥī Djāsim al-Ḥumaydī, Baghdād 1396, 264-8; Suyūṭī, *Tadrīb al-rāwī fī sharḥ Takrīb al-Nawāwī*, ed. ʿAbd al-Wahhāb ʿAbd al-Laṭīf, [2]Cairo 1966, i, 223-31; G.H.A. (G.H.A. JUYNBOLL)

TĀDMAKKAT (also Tadmakkat, Tādmakka, Tādimakka, and Tādmāk, in Arabic transcription; Tadmăkkăt in modern Tămashăḳ), name of a mediaeval urban crossroads between Black Africa and North Africa and al-Andalus. According to Ibn Ḥawḳal (i, 84, 105), the Tādmakkat area was ruled by Muslim Berbers of the Banū Tānmāk. Yāḳūt (ii, 938), probably borrowing from the lost work of al-Muhallabī (d. 380/990), mentions "Zakrām" (possibly a textual corruption of *Akrām, from the Berber *aghrem* "settlement") as the capital of the "kingdom of Tādmāk". Since al-Bakrī (460/1067-8), the name "Tādmakkat" has been glossed as "The likeness of Mecca", or "This is Mecca", on account of the town's topography and role as Islamic centre.

Tādmakkat's ruins and cemeteries, rich in Arabic inscriptions, are in the Adagh-n-Ifoghas, Mali, at lat. 18° 46' N., long. 1° 11' E., at the site called Ɛssuk in Tămashăḳ (possibly from the Arabic *al-sūḳ* "The Market") which also displays rock engravings and inscriptions in Tifīnagh [*q.v.*, and see BERBERS. vi]. The earliest Arabic inscription so far published dates from 404/1013-4. But trans-Saharan contacts started much earlier. Ɛssuk is on an ancient chariot route from the Fazzān. Later, from the late 2nd/8th century to the late 5th/11th century, Tādmakkat was frequented by Ibāḍiyya [*q.v.*] Maghribī traders coming from Tāhart (until its fall in 296/909), the Djabal Nafūsa, Sadrāta and Warglān. The military intervention by Ghāna and the Murābiṭūn [*q.vv.*] in 476/1083-4 or 503/1109-10 was a setback to Ibāḍī influence in Tādmakkat. But even before this, the town's Maghribī contacts had been not only with Ibāḍī centres but also with Ḳayrawān and Tripoli. Its principal sources of slaves, gold, and ivory were Găwgăw (Kawkaw or Djawdjaw), i.e. Gao on the Niger, and Ghāna.

By 737-8/1337-8 al-ʿUmarī mentions Tādmakkat no longer as a major trans-Saharan crossroads but in the context of a mainly pastoralist economy. However, this perhaps reflected a temporary situation. Two confused passages in Ibn Khaldūn, *ʿIbar* vi, 202, vii, 51-2, dating from 754-76/1353-75, purportedly about Takadda (Təgədda, in the Ahīr/Ayər area), are likelier to refer in part to Tādmakkat. If so, they suggest a renewal of this town's long-distance contacts—with the Mali empire and Ibāḍī and other areas of the Maghrib. In any case, Ɛssuk/Tādmakkat remained on the caravan route transporting Saharan salt to Gao, and up to the mid-11th/17th century retained a degree of urban life though perhaps not without interruptions. The 19th-century writings of the Kăl-Ɛssuk Tuareg depict the town as a seminal centre of dispersion of Ṣūfī (Ḳādirī) mystics in the Sahel in the late 9th/15th and the 10th/16th centuries, following ruinous attacks by Songhay armies. It was finally abandoned after the Moroccan conquest of Songhay (999/1591) downgraded the route to Gao, and following the 11th/17th-century droughts and conflicts in the Adagh-n-Ifoghas.

(P.F. DE MORAES FARIAS)

TAḌMĪN (A.), quotation, enjambment, implication.

This term ("inclusion") has a number of different senses in Arabic poetics and stylistics. It is used for the incorporation in a poem of a line, or part of a line, by another poet by way of quotation rather than plagiarism [see SARIḲA. In literature, in Suppl.]. Felicitous quotation was included by Ibn al-Muʿtazz [*q.v.*] in his seminal *K. al-Badīʿ* among the "beauties of speech" and was therefore adopted by many later authors, who often discuss it together with related phenomena such as the literary quotation of Ḳurʾān or Tradition [see IḲTIBĀS]. Related terms are *istiʿāna* ("seeking help") and *īdāʿ* ("depositing"), sometimes as synonyms of *taḍmīn* in order to avoid confusion with other senses of the term. It was par-

ticularly appreciated if a different twist was given to the quoted part in its new context. Witty quotations are found already in Abū Nuwās [*q.v.*]; extensive use of *taḍmīn* is found in parody. The *khardja* of the *muwashshaḥ* normally poses as a quotation, which it often is.

Taḍmīn meaning enjambment, the syntactical dependence of a line on a following line, is usually condemned by the prosodists, especially the more extreme forms (the standard example is al-Nābigha al-Dhubyānī's *innī/shahidtu* "I/have witnessed", a phrase that straddles two consecutive lines). The same restrictions were sometimes made to apply to *sadj*ʿ [*q.v.*]. Some forms were, however, condoned and even appreciated, such as the structure exemplified by the same poet in *mā 'l-Furātu... bi-adjwada minhu* ("The Euphrates... is not more generous than he"), with several lines intervening, a structure often found. The short lines of some metres from ʿAbbāsid times and strophic forms such as *muwashshaḥ* and *zadjal* [*q.vv.*] brought about a relaxation of the strict rules of the prosodists. Ignoring the caesura between hemistichs (*idrādj* or *tadwīr*) is not condemned; in some metres (e.g. *khafīf*), words often straddle the two halves of a line.

Taḍmīn meaning "implication" is listed in *al-Nukat fī iʿdjāz al-Ḳur'ān* by al-Rummānī [*q.v.*] as one of the ten elements of Ḳur'ānic eloquence; it is explained as either a form of brevity (*īdjāz*, also separately listed among the ten elements) or the connotation of word or expression (e.g. *muḥdath* "created" implying a *muḥdith* "creator"). This sense was rarely taken over by writers on stylistics and rhetoric.

TADMUR, Tadmor, the ancient name, and that of modern Arabic usage, for the city of Palmyra. It lies in the Syrian Desert some 145 km/90 miles east of Ḥimṣ and 240 km/150 miles west of the middle Euphrates (lat. 34° 36' N., long. 38° 15' E., altitude 407 m/1,336 feet).

From early times, Tadmur must have been a station on the caravan route connecting Mesopotamia with Syria, since the road on which it lay could pass through a gap in the southwest to northeastwards-running chain of hills: to the southwest of Tadmur, the Djabal al-Khanāzir, and to the north and north-east, the Djabal Abū Radjmayn running on to the Djabal al-Bishrī and the Euphrates. It was clearly of importance in the late second millennium B.C., when letters from Mari record that Tiglath-Pileser I (1116-1076) defeated men from Tadmur in the land of Amurru, and it was significant enough for the Old Testament author of II Chron. viii. 4 to attribute its building to King Solomon.

Under the Romans, the place was of international significance because of its position facing the lands of the Romans' enemies, the Parthians and the Sāsānid Persians. In the troubled 3rd century A.D., the city-state of Palmyra was able to develop a wide-ranging policy and become a military power of significance under its energetic prince Septimius Odenathus II (Udhayna b. Hayrān b. Wahb Allāt), who drove the Persian emperor Shāpūr I [*q.v.*] back as far as his capital Ctesiphon and who acquired from the Roman emperor the title *corrector totius orientis* "governor of all the East". After Odenathus's assassination in 267 or 268, his widow Zenobia (Zaynab) and her son Vaballathus (Wahb Allāt) continued Odenathus's activist policy, but in 272 Palmyra had to open its gates to the emperor Aurelian and Roman control. Zenobia, famed equally for her beauty and her intellect, entered later Arabic folklore under the name of al-Zabbā; *inter alia*, she was said to have enticed and then killed the king of al-Ḥīra, predecessor there of the Lakhmids, Djadhīma al-Abrash [*q.v.*] (al-Ṭabarī, i, 757-61; al-Masʿūdī, *Murūdj*, iii, 189-99 = §§ 1046-57; cf. R.A. Nicholson, *A literary history of the Arabs*, London 1907, 35-7). Palmyra subsequently became a legionary station on the *strata Diocletiana* linking Damascus with the Euphrates. In 325 its bishop, Marinus (who could conceivably be, in the surmise of Irfan Shahîd, an Arab, since we know of a famous Arab clan in al-Ḥīra, the Banū Marīnā; see his *Byzantium and the Arabs in the fourth century*, Washington D.C. 1984, 345), attended the Council of Nicaea, and Justinian later built a church there.

Its great days ended with the Arab overrunning of Syria. In the 630s, it surrendered *ṣulḥ*ᵃⁿ to Khālid b. al-Walīd but later rebelled and had to be conquered *ʿanwat*ᵃⁿ (al-Balādhurī, *Futūḥ*, 111-12; Yāḳūt, *Buldān*, ed. Beirut, ii, 18-19). It now became a settlement of the Kalb, who dominated central Syria under the Umayyads. It was one of the towns which, under the claimant Sulaymān b. Hishām, rebelled against Marwān II al-Ḥimār in 127/744-5 (al-Ṭabarī, ii, 1896, 1912), and according to Ibn al-Faḳīh, 110, cf. Yāḳūt, ii, 17, Marwān had part of Tadmur's walls pulled down. Soon afterwards, its people were involved in the pro-Sufyānid, anti-ʿAbbāsid movement in Syria of Abu 'l-Ward al-Kilābī (al-Ṭabarī, iii, 53).

The town suffered in later times from earthquakes, especially that of 552/1157, and Benjamin of Tudela's assertion, only sixteen years later, that there were 2,000 Jews at Tadmur seems unlikely. It now sank to the status of a miserable village amongst the extensive ruins of ancient Palmyra. It was rediscovered by the West when in 1678 two traders from the English Levant Company's factory at Aleppo visited the site, and this last was explored in detail by Robert Wood in 1751 and splendidly described and illustrated by him in his *The ruins of Palmyra, otherwise Tedmor, in the desert*, London 1753. The town has now revived in the 20th century through its position during the inter-War period and the post-Second World War years on the Iraq Petroleum Company's Kirkuk-Tripoli oil pipeline and through the growing tourist trade; it is now a town of over 30,000 inhabitants in the *muḥāfaẓa* or governorate of Ḥimṣ.

Palmyra was of significance in the development of early Arabic culture. Although the inscriptions, numbering almost 2,000, found at Palmyra include many in what is a continuation of Imperial Aramaic and although Greek must also have been a language of cultural prestige, the everyday language of the townspeople in the early Christian centuries was probably Arabic and the people themselves ethnically Arab.

This is shown by the Arab names of its rulers during the period of its florescence in the 3rd century A.D. and the fact that over half the personal names occurring in the inscriptions (naturally, from the class of notables and leading merchants) can be explained etymologically as Arabic; they include, e.g. many theophoric names with the god Arṣu and the pan-Arab goddess Allāt [see AL-LĀT]. As well as Arṣu, whose name is an adaptation of Ar. Ruḍā "the Favourable, Benevolent One", and Allāt, other Arab deities are prominent, such as Maʿn, ʿAzīzu, Saʿr or Saʿd, Salmān and Raḥīm. The whole region of Palmyrene, passing under the control of the Lakhmids of al-Ḥīra, must have become substantially Arabised; in 328, at al-Namāra [*q.v.*] some 220 km/140 miles to the south-southwest of Palmyra, the king Imruʾ al-Ḳays b. ʿAmr's funerary inscription was written not in Aramaic but in Arabic language with the Nabataean alphabet (see F. Briquel-Chatonnet, in *L'Arabie antique de Karib'îl à Mahomet. Nouvelles données sur l'histoire des Arabes grâce aux inscriptions*, ed. Ch. Robin = *RMMM*, no. 61 [1991-3], 40-3).

(C.E. BOSWORTH)

TADRĪS (A.), the *maṣdar* of the form II Arabic verb *darrasa* "to teach". One who teaches is known as a *mudarris*. In contemporary usage, the term is an unfocussed one, referring to instruction of different varieties. The term *mudarris* thus indicates a "teacher" in its most general sense, although it can also have a more specific meaning: in the hierarchy of modern Egyptian universities, for example, a *mudarris* is an instructor holding the Ph.D., but ranking below an *ustādh* and *ustādh musāʿid*—roughly analogous, therefore, to an assistant professor in an American university.

In the classical and mediaeval periods, the term *tadrīs*, as well as various other technical terms derived from the same root, had more precise connotations. *Tadrīs* usually referred specifically to the teaching of the religious law, that is, *fiḳh* [*q.v.*], and in this was distinct from other terms used to describe the transmission of knowledge: the relatively uncommon *taṣdīr*, for instance, when used to mean instruction, had a more general application, while *taʿlīm*, which also indicated teaching, usually referred to instruction at a more basic level (hence *muʿallim*, a primary school instructor or Ḳurʾān teacher). The term *tadrīs* could be used with regard to instruction in other subjects, especially when it was combined with a qualifying phrase; thus, for example, *tadrīs al-tafsīr* ("teaching Ḳurʾānic exegesis"), or even *tadrīs al-ṭibb* ("teaching medicine").

The methodology of instruction in the law has been thoroughly studied in a number of works by G. Makdisi, and discussed more fully in other entries of this Encyclopaedia [see esp. MADRASA]. After an invocation, a class (*dars*, pl. *durūs*) consisted of lecture and dictation, with the instructor providing an exegesis of the text or question under discussion. At more advanced levels, instruction focused on disputation (*munāẓara*), in which the *mudarris* explored fine points of legal doctrine with his students and probed their understanding of the issues and their ability to solve difficult legal problems. As in all the traditional Islamic sciences (as, indeed, in pre-modern education more generally), memorisation played an important role. As the purpose of instruction in the law was the training of qualified jurists and professors, legal education culminated in the issuing to the student of an *idjāza* [*q.v.*] (the term was borrowed from the conventions for the transmission of *ḥadīth* [*q.v.*]) acknowledging his qualifications to teach the law himself (*idjāza li 'l-tadrīs*) or to issue *fatwās* (*idjāza li 'l-iftāʾ*), or sometimes one encompassing both practices (*idjāzat al-iftāʾ wa 'l-tadrīs*) (examples in al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, xiv, 322 ff.).

The establishment of institutions devoted principally or exclusively to higher education (both mosques with endowments supporting organised classes, and, from the 5th/11th century, *madrasas*) had little effect on the process of *tadrīs* itself. Methods of instruction remained the same, as did the measure of a pupil's success (the *idjāza*, usually awarded by his teacher or teachers): no system of institutional degrees took root before the modern period. But the spread of educational institutions, and of the endowments which supported them, did have a profound impact on the social context in which *tadrīs* took place. Most importantly, *tadrīs* came to signify not merely an activity but an office, in effect, a professorship, one to which a learned individual could be appointed, and from which he might derive valuable emoluments. The reification of *tadrīs* is reflected in the appearance in the sources of a plural form, *tadārīs*, which was used to indicate the separate "professorships" in different fields (*fiḳh*, *ḥadīth*, *tafsīr*, Arabic grammar, etc.) which an institution might support, or the multiple teaching posts held by a single individual (al-Ḳalḳashandī, *Ṣubḥ*, iv, 39).

The social and even political consequences of this process of reification were enormous. Many of the new schools and endowed mosques were the creation of the ruling élite, and the founders might retain control of appointments to their institutions' professorships. So, for example, when Niẓām al-Mulk called Abū Ḥāmid al-Ghazālī to Baghdād and appointed him to the *tadrīs* of Shāfiʿī *fiḳh* in the Niẓāmiyya *madrasa*, bestowing on him the honorifics "Zayn al-Dīn" and "Sharaf al-Aʾimma" (Ibn al-Djawzī, *al-Muntaẓam*, ix, 55), his action was as much a political statement as an expression of personal piety. Sultans in Mamlūk Cairo routinely interfered in the appointment process, naming scholars to professorships not only in *madrasas* which they themselves had founded but in older institutions as well.

From the standpoint of academic instruction, a more important issue concerned the way in which scholars themselves learned to control and manipulate professorial posts. On one level, of course, the academic élite benefited from the proliferation of endowed professorships. Not only were they guaranteed a stipend for their instructional efforts, but a respected scholar might acquire and hold multiple positions simultaneously. In the mid 8th/14th century, Taḳī al-Dīn al-Subkī held professorships in *fiḳh* in several institutions

in Cairo, which he then passed on to his son Bahā' al-Dīn (Ibn Ḥadjar al-ʿAsḳalānī, *al-Durar al-kāmina*, Cairo 1966-7, i, 225-6; Ibn Taghrībirdī, *al-Manhal al-ṣāfī*, Cairo 1984, i, 409)—indicating that scholars, as well as sultans and viziers, had learned how to play the game of patronage. Another member of the Subkī family, Tādj al-Dīn ʿAbd al-Wahhāb, was critical of scholars holding professorships in two or more schools (*Muʿīd al-niʿam wa-mubīd al-niḳam*, ed. D.N. Myhrman, London 1908, 164), but in fact the practice was common, and led to the frequent appointment of substitutes to fulfill the duties of an absent or over-burdened *mudarris*. Alternatively, a lucrative professorship might be divided among several different scholars; the sources frequently report that some individual "held half the professorship" (*lahu niṣf al-tadrīs*) in a given institution. Moreover, the financial lure of a well-paid *tadrīs* could be deleterious to the quality of instruction by attracting unqualified individuals. Tādj al-Dīn al-Subkī worried about lazy professors who would simply memorise two or three lines of a text, deliver them to the assembled class, and leave; such individuals, he said, were "not fit for a professorship [of law]" (*ghayr ṣāliḥ li 'l-tadrīs*) and did not deserve a professor's stipend (*ibid.*, 153). Such problems did not necessarily pose a serious threat to the transmission of knowledge in mediaeval Islamic societies, but they did result from the transformation of *tadrīs* into an institutionalised and remunerative office.

Bibliography: G. Makdisi, *The rise of colleges. Institutions of learning in Islam and the West*, Edinburgh 1981; J. Berkey, *The transmission of knowledge in medieval Cairo. A social history of Islamic education*, Princeton 1992.

TADWĪN (a.), the verbal noun from *dawwana* "to register", most probably a denominal verb from the Persian noun *dīwān* [*q.v.*]. For *tadwīn* in the connotation of "drawing up lists for military and administrative purposes", see dīwān. For its use as "gathering poetry of a certain poet or tribe", see shiʿr.

In the science of *ḥadīth*, the term indicates the collecting of traditions in writing in order to derive legal precepts from them and not as a mere memory aid, for which rather the terms *kitābat al-ʿilm* or *k. al-ḥadīth* were used. The period of *tadwīn al-ḥadīth* is generally assumed to have started at the end of the 1st/7th century with the order issued by the Umayyad caliph ʿUmar b. ʿAbd al-ʿAzīz to Ibn Shihāb al-Zuhrī (d. 124/742) to repair to Medina and collect all the traditions he could lay his hands on. Another person receiving a similar order is Abū Bakr b. Muḥammad b. ʿAmr b. Ḥazm (d. sometime between 110/728 and 120/738), cf. Ibn Ḥadjar, *Tahdhīb al-tahdhīb*, Ḥaydarābād 1327, xii, 39, Suyūṭī, *al-Wasā'il fī musāmarat al-awā'il*, ed. M.S.B. Zaghlūl, Beirut 1986, 100. This resulted in as yet unstructured collections which differed from those made during the *kitāba* stage in that they aimed at completeness. The Meccan traditionist ʿAbd al-Malik b. ʿAbd al-ʿAzīz Ibn Djuraydj (d. 150/767) is also mentioned as one of the first to collect *ʿilm* in this manner. Out of *tadwīn* there arose the *tabwīb*: there we see the first attempts at bringing the material together in chapters (Ar. *bāb*, pl. *abwāb*) under certain subject headings of gradually increasing detail and sophistication. Alongside this we find the first structural division of *ḥadīth*s into collections ascribed to certain ancient individuals, Companions or Successors, which resulted in the first *musnad* [*q.v.*] collections, while the *tabwīb* gave rise to the first *muṣannaf* [*q.v.*] works.

TAFARNUDJ (a.), from Ifrandj [*q.v.*], lit. "adopting, imitating or aping the manners and customs of the Franks, i.e. the Europeans". The term was used by the pioneer journalist Khalīl al-Khūrī in his satirical novella *Way idhan lastu bi-Ifrandjī* ("Alas then, I am not a European"), published in the magazine *Ḥadīḳat al-Akhbār* in 1860, and may be older. The Turkish *alafranga*[*lik*], from Italian *alla franca*, and the Persian *gharbzada*[*gī*], literally "West-struck[ness]", convey the same meaning. The latter term has been variously rendered as "Westosis" and "Westoxication".

During the 19th century, Muslims in significant numbers became aware of the culture, as well as of the political, military and commercial power of Europe, and reacted to it in various ways. Some responded eagerly, learning a European language, reading and even translating European books, and sometimes even adopting European dress and some European social usages. Others responded negatively, and called for the rejection of these alien and infidel innovations. *Tafarnudj*, with its equivalents in other Islamic languages, was a term used by the latter to designate—and denigrate—the former. The first European language to be widely used in the Middle East was Italian, followed by French and finally English. The stages of cultural penetration can be traced in the sequence and distribution of loanwords. Senate and Parliament in Ottoman Turkish are *Senato* and *Parlamento*, because it was in Italian that the Ottomans first heard of these physically and culturally remote institutions. It was not until late that Turks met senators, and that reports of parliaments reached the Arab provinces—hence Turkish *senatör* and Arabic *barlamān*. By that time, French had replaced Italian as the European *lingua franca* of the Levant. In the late 20th century, both were being replaced by English, usually in its American form.

Like the Frenchified fop in English, German and other European literatures in the period of French cultural ascendancy, the imitator of European ways became a figure of fun in Arabic, Persian and Turkish literature. Sometimes the attack is directed against any and every form of Western influence or borrowing. More often, in modern literature, it is concerned with the mindless imitation of everything Western, good, bad and indifferent alike.

Metraux and F. Crouzet (eds.), *The new Asia. Readings in the history of mankind*, New York and London 1965, 31-59.

(B. Lewis)

TAFḌĪL (a.), literally "superiority, the act of raising something to a higher level or degree". In grammar, it is the raising of a quality to a degree combining both the "comparative" and "superlative" functions of European adjectives, hence usually translated as "elative". Formally, the elative has the patterns *afʿal*^{u} (masc.) and *fuʿlā* (fem.) with sound plurals (also *afāʿil*^{u} and *fuʿal*^{u} respectively), in an obvious but still unexplained parallelism with the colour and defect adjective patterns *afʿal*^{u} and *faʿlāʾ*^{u}. The origins of the patterns remain obscure: Wehr, 598 ff. (summarised in Fleisch, 409 ff.) provides some circumstantial evidence to connect *afʿal*^{u} with exclamatory formulae; Bravmann, 34, speculates, with no evidence at all, that *aḥsan* is a variant of *ḥasan* produced by a different resolution of the initial consonant cluster in **ḥsan* which would underlie both forms. However, no theories can account for the feminine forms, still less for the syntax and possible links with the *fiʿl al-taʿad̲j̲d̲j̲ub* or "verb of surprise", which also has the form *afʿal* (in *mā afʿalahu*, or *afʿil* in *afʿil bihi*).

The comparative and superlative senses are distinguished only syntactically, broadly a distributive structure (*afʿal*^{u} *min*) for our comparative, and annexation (*afʿal*^{u} *s̲h̲ayʾ*^{in}, *afʿal*^{u} *ʾl-s̲h̲ayʾ*^{i}, *afʿal*^{u} *ʾl-as̲h̲yāʾ*^{i}) for the superlative (see Wehr, 572, and reference grammars for details), which is thus seen to have the same syntax as *kull* "all" and *ayy* "which". Wehr, 612, makes the important point that *afʿal*^{u} forms are derived not only from simple "positive" adjectives but from any kind of word, even a verb.

The semantic and rhetorical features of the elative, as in other languages, are most complex. An interesting case is the occurrence of *afʿal*^{u} in isolation, of which the best known example is *Allāh*^{u} *akbar*^{u}; Sībawayhi's [*q.v.*] "comparative" paraphrase *akbar*^{u} *min kull*^{i} *s̲h̲ayʾ*^{in} (*Kitāb*, ed. Būlāḳ, i, 233, ed. Derenbourg, i, 199) clearly reflects the intuitive understanding of this expression, but is remarkable also for the way it delicately avoids the heresy implicit in a "superlative" paraphrase *akbar*^{u} *s̲h̲ayʾ*^{in}/*ʾl-as̲h̲yāʾ*^{i}, even though logically the two formulations might appear synonymous (*wa ʾllāh*^{u} *aʿlam*). Nor was Sībawayhi unaware of syntactical problems caused by comparing a thing with itself, as in *mā raʾayt*^{u} *rad̲j̲ul*^{an} *aḥsan*$^{u/a}$ *fī ʿaynihi ʾl-kuḥl*^{u} *minhu fī ʿayn*^{i} *zayd*^{in} (*ibid.*, i, 232/i, 199), a topic which detached itself as the "Kuḥl question" (*masʾalat al-kuḥl*) in later literature (see al-Mubarrad [*q.v.*], *al-Muḳtaḍab* iii, 248 ff., where there are also further references).

(M.G. Carter)

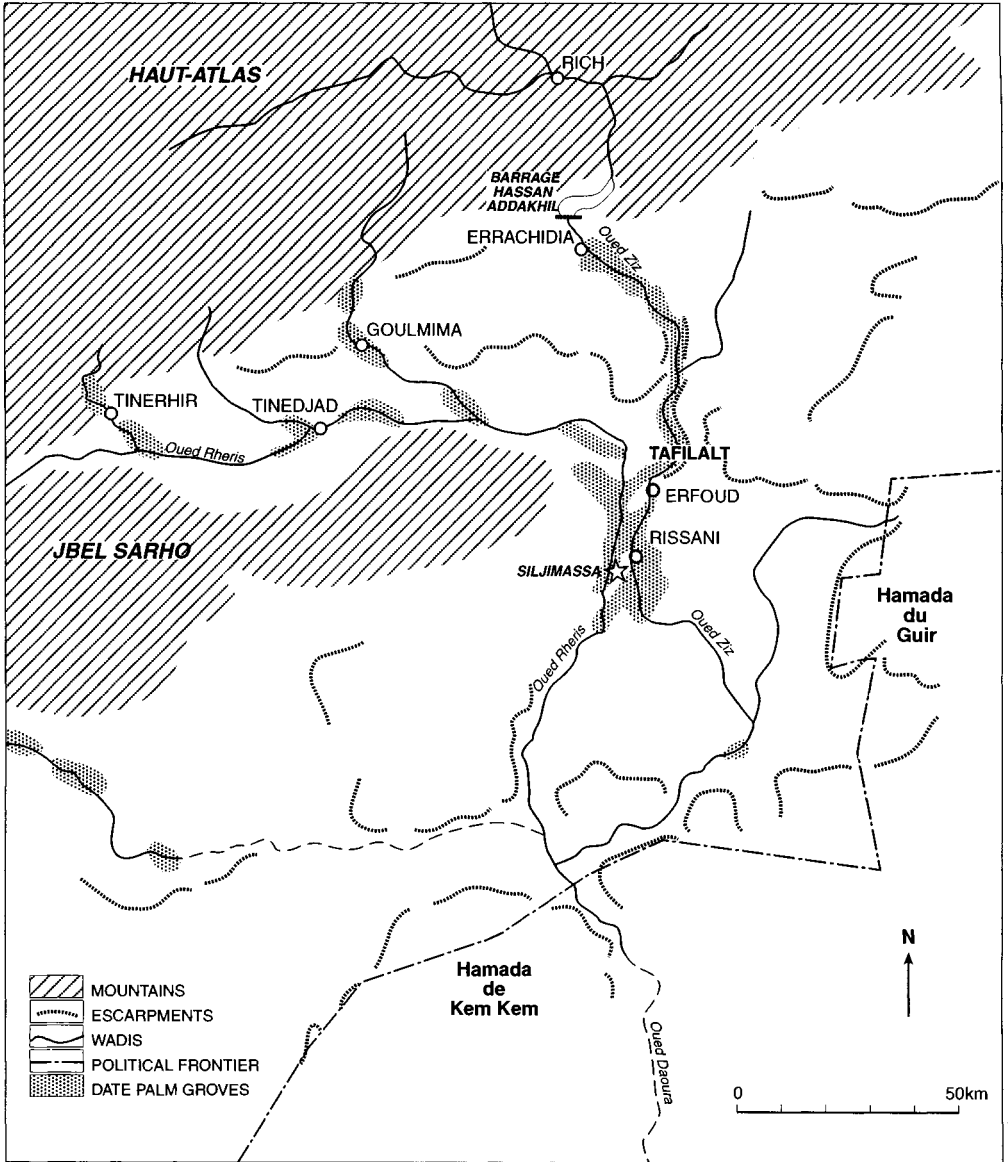
al-**ṬAFF**, the desert region that lies west of Kūfa along the alluvial plain of the Euphrates. It is higher than the low-lying ground by the river and forms the transition to the central Arabian plateau. According to the authorities quoted by Yāḳūt, *Buldān*, iii, 359, *al-ṭaff* means an area raised above the surrounding country or fringe, edge, bank; the name is not found after the 13th century. The district contains a number of springs, the waters of which run southwest (cf. Ibn al-Faḳīh, 187). The best known of these wells was al-ʿUd̲h̲ayr. From its geographical position al-Ṭaff was the scene of the first encounter between the Arabs and Persians (al-Ṭabarī, i, 2210, 2247; Ibn al-At̲h̲īr, iii, 345, 351). The Sāsānid kings had stationed there feudal guardians of the frontier which was defended by forts (*maṣlaḥa*) and a great ditch (*k̲h̲andaḳ*) which began at Hīt (Ibn Rosta, 107). On al-Ṭaff lay al-Ḳādisiyya [*q.v.*] and also Karbalāʾ [*q.v.*], famous as the scene of the death of al-Ḥusayn (Yāḳūt, *loc. cit.*, and Bakrī, *Muʿd̲j̲am*, ii, 456). The latter is accordingly referred to as *al-Maḳtūl bi ʾl-Ṭaff* (cf. al-Muk̲h̲tār, in Ibn al-At̲h̲īr, iv, 140; cf. also the poem quoted by Yāḳūt, *loc. cit.*, and Ibn al-At̲h̲īr, iv, 267). In later centuries, al-Ṭaff is rarely mentioned (e.g. in Ibn al-At̲h̲īr, vii, 379 in connection with the Ḳarmaṭian troubles), and the majority of the Arab geographers make no mention of it.

Bibliography: Given in the article; see also A. Musil, *The Middle Euphrates, a topographical itinerary*, New York 1927, 48, 351. (J.H. Kramers)

TĀFĪLĀLT, with the *nisba* Filālī, pl. Filāla, the name of a district of southeastern Morocco, essentially comprising the broad basin of the Wādī Zīz, which runs into the fringes of the Sahara Desert (roughly between lats. 31° and 32° N. and longs. 3° 30' and 4° W.).

It consists of an alluvial plain 20 km/12 miles long and 16 km/10 miles broad, over which are scattered 200 *ḳṣūr* (or fortified dwellings of clay) surrounded by gardens and cultivated fields. Where irrigation from wells is possible, the soil is wonderfully fertile. The chief product of Tafīlālt is the palm-tree, of which there are several hundred thousand, and the most developed industry is the preparation of goat-skins by the use of the bark of the mimosa which yields a tanning gall. Filālī leather is famous and sought after throughout all North Africa. The population is dense, in the *ḳṣūr* of Tāfīlālt it was estimated in 1920 at 150-200,000. The historical capital of Tāfīlālt was Sid̲j̲ilmāsa ([*q.v.*] for the pre-modern political history of Tāfīlālt). Here one may simply state that the district was the cradle of the dynasty of the ʿAlawī or Filālī S̲h̲arīfs, who have ruled Morocco from 1041/1631 and the time of Mawlāy Maḥammad I al-S̲h̲arīf up to the present day [see ʿalawīs]. Many of these S̲h̲arīfs after the accession of their family to the throne remained in or returned to settle in Tāfīlālt, where they may be counted by thousands. A *k̲h̲alīfa* of the Moroccan sultan traditionally represented the authority of the *mak̲h̲zen* among them and in the valley of the Zīz.

After the establishment of the French Protectorate over Morocco, a French mission arrived at Tīg̲h̲mart, which has defences built at the end of the 19th century by Mawlāy al-Ḥasan; but its presence was immediately challenged by the local Ayt Atta confederation of Berbers under a claimant to power, al-Semlālī. The district was not re-occupied, by troops under Col. Giraud, till 1932.

The main urban centres of Tāfīlālt are the administrative chef-lieu, Er-Rachida (al-Rās̲h̲ida), formerly Ksar Es-Souk (Ḳṣar al-Sūḳ) and, to its south, Erfoud, both now linked by a road across the High Atlas and Middle Atlas to Azrou (Azrū) and then Fès (Fās) and Meknès (Miknās). At 15 km/10 miles south of Erzou is Rissani, a *ḳṣar* built in the 18th century by Mawlāy Ismāʿīl and an ancient centre for the caravan trade between southern Morocco and the Sahara and Western Sudan. In its environs are a large market, Bū ʿĀmm; the *zāwiya* of Mawlāy ʿAlī al-S̲h̲arīf, ancestor of the


Filālī ruling house (*ca.* 1050/1640); and the ruinous site of Sidjilmāsa, whose *kaṣba* was finally destroyed by the Ayt Atta in 1818.

Bibliography: See those to ʿALAWĪS and SIDJILMĀSA, and also P. Ricard, revised Ch. Bacquet, *Guide Bleue. Maroc*, 8th ed. Paris 1954, 424-31 and map at p. 416.

(E. LÉVI-PROVENÇAL*)

TAFKHĪM (A.), the verbal noun from *fakhkhama* meaning "to make thick, to emphasise or to make grand". In Arabic, it is a phonetic phenomenon involving the pronunciation of the emphatic consonants, *mufakhkhama* (sing. *mufakhkham*), /ṭ ط, ḍ ض, ṣ ص, ð̣ ظ/and also includes the marginal emphatics /ṛ, ḷ/. Ḳurʾānic orthoepists used the term *tafkhīm* to describe certain variants of /r/ when it occurs next to low and back vowels; however, they designated the term *taghlīẓ*, thickening, which they used synonymously with *tafkhīm*, for the description of certain variants of /l/. The /ḷ/, as an emphatic variant, has a limited environment and is primarily used with the word *Allāh* when not preceded by /i, ī/.

The earliest occurrence of the term *tafkhīm* was when Sībawayhi used it to describe what he called *alif al-tafkhīm* and he considered it as a variant, not a phoneme. According to him, *alif al-tafkhīm* is found in a limited number of words such as *ṣalāt*, prayers; *zakāt*, the giving of alms to the poor; and *ḥayāt*, life, especially in the dialect of Ḥidjāz (*al-Kitāb*, iv, 432). The four primary emphatic consonants /ṣ, ḍ, ṭ ð̣ / are not referred to by Sībawayhi as *mufakhkhama* but as *muṭbaḳa* (sing. *muṭbaḳ*), a tradition followed by Arab grammarians and Ḳurʾānic orthoepists. The verbal noun *iṭbāḳ* "act of covering or putting on a lid", is used to describe the position of the tongue in the pronunciation of the *muṭbaḳa*. The *muṭbaḳa*, along with the velar/uvular group /x خ, γ غ, q ق/, are referred to by the generic term *mustaʿliya*, high or raised. The *mustaʿliya* consonants are described as preventing the occurrence of *imāla* [*q.v.*], "inclination" of /a/ towards /i/.

Contemporary Arabists and linguists use the term *tafkhīm* to describe the emphatic consonants, *mufakhkhama*, /ṭ, ḍ, ṣ, ð̣ / and the marginal emphatics /ṛ and ḷ/. *Tafkhīm* is often characterised by pharyngealisation or velarisation, but the *mufakhkhama* consonants are best characterised by the phonetic feature of retraction which involves moving the tongue up and further back toward the velum and upper pharynx. *Tafkhīm* is not restricted to the environment of the emphatics, but rather spreads to any adjacent vowel or consonant making it emphatic. It is this feature of retraction that makes this group of consonants opaque [see ṢAWTIYYA].

(SALMAN H. AL-ANI)

ṬAFRA (A.), lit., "leap or impulsive movement", from *ṭafara* "to jump, leap", a term of Islamic philosophy, which became an important part of anti-atomistic theories brought into play during the controversies of the Baṣra Muʿtazilī cosmology, and which is attributed in particular to Ibrāhīm b. Sayyār al-Naẓẓām (and also to Hishām b. al-Ḥakam). Al-Naẓẓām [*q.v.*] is taken to have argued that it is possible to move over a distance without going through all the parts of the distance, by leaping over those parts. Although this theory came in for a lot of criticism by those sympathetic to atomism, al-Naẓẓām was successful in pointing to difficulties in the minimal parts discrete geometry of the atomists. This is a version of the paradoxes which Zeno first discussed in connection with the existence of indivisible magnitudes. The paradox of the flying arrow is that every thing which is moving is really resting at each stage of the movement. The movement itself is hidden in the substance and only appears when the substance itself is moving. Hishām al-Fuwaṭī (*fl.* early 3rd/9th century) is said to have abandoned the theory of leaps once he realised that, if it is valid, then a creature which had dipped its legs in ink would produce a discontinuous rather than a continuous track when it covered a particular distance (see Ibn Mattawayh, 169). This sort of example played a large part in contemporary disputes over the plausibility of atomism and its alternatives as a theory of the nature of physical reality.

(O.N.H. LEAMAN)

TAFSĪR (A.), pl. *tafāsīr* "interpretation" (as a process and a literary genre), generally, but not always, of the Ḳurʾān. The word is used for commentaries on Greek scientific and philosophical works, being equivalent to *sharḥ* [*q.v.*]; the term is applied to the Greek and Arabic commentaries on the works of Aristotle, for example. Jews and Christians writing in Arabic also use the word in the context of translations and commentaries on the Bible, as some of the works of Saadia Gaon demonstrate. The most significant usage of the word, however, and the focus of this article, is its reference to the branch of Islamic learning concerned with the Ḳurʾān. An essential part of *madrasa* training, the study of *tafāsīr* of the Ḳurʾān stands alongside the study of *ḥadīth* and *fiḳh* as elements of the traditional curriculum.

The emergence of the word *tafsīr* as a technical term is unclear. It is used once in the Ḳurʾān at XXV, 33, "They [the unbelievers] bring not to thee [Muḥammad] any similitude [*mathal*] but that We bring thee the truth and the best *tafsīr*". This follows on a verse which states, "The unbelievers say, 'Why has the Ḳurʾān not been sent down all at once?' Even so, that We may strengthen thy heart thereby, and We have chanted it very distinctly". The idea would appear to be that God has provided an explanation, *tafsīr*, of why the Ḳurʾān is being revealed piece-by-piece. Of course, other technical terms in Muslim religious thinking frequently have no special status within the Ḳurʾān, so the lack of a firm reference point for the

term *tafsīr* is not particularly surprising (see J. Wansbrough, *Quranic studies. Sources and methods of scriptural interpretation*, Oxford 1977, 154-8). For the first three Islamic centuries, there appears to be no consistent differentiation between *tafsīr, ta'wīl* [*q.v.*] and *ma'nā* [*q.v.*, section 1] when used in titles of books or as a technical term within works of *tafsīr* (and, indeed, this is the attitude of the lexicographers: see Lane, i, 2397; for the ambiguities of the differentiation between the terms in early times, see N. Kinberg, *A lexicon of al-Farrā''s terminology in his Qur'ān commentary*, Leiden 1996, 40-2, 503-27, 563-6). After some time, *tafsīr* was distinguished from *ta'wīl* by the latter being considered the product of research and investigation, the former dependent upon transmission from Muḥammad and his companions. In its developed sense, *ta'wīl* became limited to interpretation which leaves the "obvious" (*ẓāhir*) sense and delves into more speculative levels of language (*bāṭin*). *Ma'nā*, on the other hand, became more constrained and limited primarily to lexicographical aspects of interpretation.

A *tafsīr* of the Ḳur'ān is a work which provides an interpretation of the Arabic text of the scripture. There are formal characteristics of such works which help to define the literary genre further. In most cases, a work entitled *Tafsīr* will follow the text of the Ḳur'ān from the beginning to the end, and will provide an interpretation (*tafsīr*) of segments of the text (word-by-word, phrase-by-phrase, or verse-by-verse) as a running commentary. The major exceptions to this fundamental characteristic are to be found in the formative and the contemporary periods of Islam; in the formative period, one finds works of *tafsīr* which cover only isolated segments of the text, and in the contemporary period, thematic (*mawḍū'ī*) *tafāsīr* have become quite popular (see J.J.G. Jansen, *The interpretation of the Koran in modern Egypt*, Leiden 1974, 13-4). But the presence of scriptural text and commentary as two elements interplaying remains. A number of sub-disciplines are often included within the broad scholarly enterprise itself and these have resulted in books which concentrate on *asbāb al-nuzūl, gharīb al-Ḳur'ān, ḳiṣaṣ al-anbiyā', ḳirā'āt, marsūm al-khaṭṭ, al-nāsikh wa 'l-mansūkh, al-waḳf wa 'l-ibtidā'* and *al-wudjūh wa 'l-naẓā'ir*. These works are best understood as a part of the overall *'ulūm al-Ḳur'ān* (to which books are devoted as summaries of the various sub-disciplines, e.g., al-Zarkashī (d. 794/1392 [*q.v.*]), *al-Burhān fī 'ulūm al-Ḳur'ān*, and Djalāl al-Dīn al-Suyūṭī (d. 911/1505 [*q.v.*]), *al-Itḳān fī 'ulūm al-Ḳur'ān*). However, the contents of these books have often been derived from the major works of *tafsīr* (and then subsequently have acted as a source for them in many instances), so, in that sense, such works are a part of the intellectual discipline while not formally being a part of the literary genre.

Within the genre attempts have been made to classify the various books. Attempts to describe the "method" of the books predominate in Muslim discussions, and such classifications have also found their way into scholarly works (e.g., I. Goldziher, *Die Richtungen der islamischen Koranauslegung*, Leiden 1920). The basic separation between *tafsīr bi 'l-ma'thūr* (or *riwāya*) and *tafsīr bi 'l-ra'y* (or *dirāya*), with the occasional addition of *tafsīr bi 'l-ishāra*, reflects a tension which runs throughout the Muslim community and its intellectual disciplines, that of the authority of the community (*ma'thūr*) versus that of the intellect (*ra'y*) (*ishāra* being the speculative "hint" or "allusion" generally connected to Ṣūfism and outside these two main classifications). This separation does not, however, provide a sufficient analytical tool by which one may characterise the wide variety of books and approaches which are contained within the broadly-defined genre of *tafsīr*, since it concentrates on a superficial understanding of the form of the works with little attention to their underlying substance.

Recent scholarly attempts to define the genre have concentrated on isolating the variety of elements which come together within a given text in varying proportions (see N. Calder, *Tafsīr from Ṭabarī to Ibn Kathīr: problems in the description of a genre, illustrated with reference to the story of Abraham*, in G.R. Hawting and A.-K.A. Shareef (eds.), *Approaches to the Qur'ān*, London 1993, 101-40; P. Heath, *Creative hermeneutics: a comparative analysis of three Islamic approaches*, in *Arabica*, xxxvi [1989], 173-210). Different *mufassirūn* have different concerns and goals, and this is reflected in the relative weight they put upon elements such as history, grammar, semantics, law, theology, or folklore. All commentators are concerned with the process of analysing the text in light of the "external world", however that be defined for the individual author, with the aim of resolving any apparent conflict and making the text "clear". Each element that comes into play within a text of *tafsīr* acts both to prompt exegesis (in the sense that a conflict is perceived between the world and the text) and to characterise the emphasis of a given interpretative approach.

Pride of place in the tools used in the interpretative process has been given to grammar (including elements of lexicography and orthography). As an implement for asserting the scholar's status and authority, arguments over grammar have had no rival (see M.G. Carter, *Language control as people control in medieval Islam: the aims of the grammarians in their cultural context*, in *Al-Abḥāth*, xxxi [1983], 65-84). Grammar became a specialisation within *tafsīr*, producing works such as *Ma'ānī 'l-Ḳur'ān wa i'rābuhu* by al-Zadjdjādj (d. 311/923; see *GAS*, viii, 99-101), *I'rāb al-Ḳur'ān* by al-Naḥḥās (d. 338/950; see *GAS*, ix, 207-9) and *Mushkil i'rāb al-Ḳur'ān* by Makkī al-Ḳaysī (d. 437/1045 [*q.v.*]). The historical origins of grammar and lexicographical comparison within the framework of *tafsīr* have become a matter of scholarly controversy in light of Wansbrough's arguments for the relatively late introduction of both aspects (see *Quranic studies*, 216-27); for example, C.H.M. Versteegh, *Arabic grammar and Qur'ānic exegesis in early Islam*, Leiden 1993, and M. Muranyi, *Neue Materialien zur tafsīr-Forschung in der Moscheebibliothek von Qairawān*, in S. Wild (ed.), *The Qur'an as text*, Leiden 1996, 225-55, both argue against Wansbrough's point, citing grammar and poetical references in texts understood to be early in date. Much of the dispute depends upon dating of texts (see A. Rippin, *Studying early tafsīr texts*, in *Isl.*, lxxii [1995], 310-23).

Rivalling grammar but yet itself often thought of as dependent upon it, the framework of legal analysis emerges quite clearly in some works, achieving a status reflected in titles such as the *Aḥkām al-Ḳur'ān* written by the Ḥanafī al-Djaṣṣāṣ (d. 370/981 [*q.v.*]), the Mālikī Ibn al-'Arabī (d. 543/1148 [*q.v.*]) and the Mālikī al-Ḳurṭubī (d. 671/1272 [*q.v.*]). Aiming to demonstrate that the body of Islamic law may be derived in the first instance from the Ḳur'ān, such works include, out of necessity, grammatical and historical elements within interpretation in order to argue their legal points.

Theology, on the other hand, frequently remained subsumed within the overall contents of *tafsīr*, although certain works attributed to prominent theologians (e.g. the *Ḥaḳā'iḳ al-ta'wīl fī mutashābih al-tanzīl* by al-Sharīf

al-Raḍī, d. 406/1016 [*q.v*]) tend to provide a thorough-going emphasis on a certain theological perspective. The famous work of al-Zamakhsharī (d. 538/1144 [*q.v.*]), renowned for its Muʿtazilī perspective, is distinctive primarily for its special outlook and not for the presence of an overall theological argument *per se*, nor for the quantity of such argumentation. Other works, especially those from Shīʿī writers such as al-Ṭūsī (d. 460/1067) and al-Ṭabrisī (d. 548/1153), provide more detailed and thorough-going examples of the Muʿtazilī tendency, as does the work only available in "reconstructed" form from al-Djubbāʾī (d. 303/915 [*q.v.*]) (see D. Gimaret, *Une lecture muʿtazilite du Coran. Le* tafsīr *d'Abū ʿAlī al-Djubbāʾī* [*m. 303/915*], Louvain-Paris 1994). All other major works of *tafsīr* have a theological perspective as well (see e.g. C. Gilliot, *Exégèse, langue, et théologie en Islam. L'exégèse coranique de Tabari* (*m. 311/923*), Paris 1990, 207-78) but are not so "distinctive" as to gain a reputation in that regard. The observation regarding al-Zamakhsharī's distinctiveness (but not uniqueness) is confirmed by the frequent use of that book within the *madrasa* context, regardless of its theological perspective.

The genius of Muslim *tafsīr* is perhaps best seen in its historicisation of the text through the general tools of narrative provided by prophetic history, both of the distant past as found in the *ḳiṣaṣ al-anbiyāʾ*, and of the contemporary as found in the *sīra* of Muḥammad. Designed both to prove the fact of revelation and to embody an interpretation that would relate the text to a context (see Rippin, *The function of asbāb al-nuzūl in Qurʾānic exegesis*, in *BSOAS*, li [1988], 1-20), historicisation grounded the text in the day-to-day life of the Muslim community. In that manner, the extraction of law was facilitated, the sense of moral guidance was emphasised and the "foreign" made Islamic. Whether this was a matter of filling in the details on the life of the former prophets with incidents to which Muslims could relate (see e.g. J. Lassner, *Demonizing the Queen of Sheba. Boundaries of gender and culture in post-biblical Judaism and medieval Islam*, Chicago 1993), a concern with identifying the unknown within the context of the life of Muḥammad (*taʿyīn al-mubham*) (see U. Rubin, *The eye of the beholder: the life of Muḥammad as viewed by the early Muslims: a textual analysis*, Princeton 1995), or a polemical impulse from the context of Sunnī-Shīʿī interaction (see e.g. U. Rubin, *Prophets and progenitors in the early Shīʿa tradition*, in *JSAI*, i [1979], 41-65), historicisation of the text was comprehensive and compelling. Of course, this is not the history of contemporary historians, but a history which is both controlled by, and productive of, the meaning of the text of the Ḳurʾān.

It is in the flight from the constraints of sacred history, however, that symbol, allegory and inspiration gained their status, especially in *tafsīr* from within the context of Ṣūfism, but by no means limited to that area. The appreciation of the literary qualities of the text of the Ḳurʾān in terms of literary figures and general stylistic concerns may well have led, over the course of time, to more wide-ranging symbolic and allegorical readings of the text. In the hands of Ṣūfīs, such readings became supported by notions of insight derived from mystical experience; this is reflected in the text of their *tafāsīr* in the way in which a passage of the Ḳurʾān can be the jumping-off point (a "keynote") for a meditation on a topic seemingly unconnected to the text itself but derived from images contained within the personal experience of the individual Ṣūfī (on Ṣūfī interpretation, see P. Nwyia, *Exégèse coranique et langue mystique*, Beirut 1970).

Within all these aspects and procedures, there are changing emphases over time. Variability in the matter of citation of authorities is one such factor, and the one which Muslims seized upon in their efforts at classification, as noted above. Expansion and contraction in the number of meanings provided is another, independent variable which appears to vary over time. It is perhaps one of the ironies (but also one of an author's celebrations) that the reliance on the citation of authorities tended, in some hands at least, to proliferate meanings. There was a continual building upon the past which was being accumulated for future generations within these works. Al-Ḳurṭubī, for example, exemplifies the tendency towards multiplicity of meanings with little indication of what is to be preferred. The Ḳurʾān, it is being suggested, incorporates all these potentialities. Named authorities are an important element within this proliferation of alternatives. But even then, it needs to be remembered that all this is done within a certain framework of the author, his concerns and allegiances (e.g. his concept of what "Sunnī" Islam encompasses). The citations are always subject to choice, the authorities subject to selection. Time, location, sectarian and popular beliefs will all have affected the selections and choices. The selection of material is precisely what defines the tradition within which an author is working (and thus for the purposes of this overview of *tafsīr* as a genre, distinctions such as Sunnī versus Shīʿī are irrelevant; on the specific characteristics of the latter, see G. Monnot, *Islam: exégèse coranique*, in *Annuaire EPHE, V^e^ section*, xci [1982-3], 309-17).

Another such variable may be seen in the expansion and contraction in the amount of supplementary material provided within a *tafsīr*. This is especially so in the contemporary context, but it is a tendency which has roots in the mature stage of Muslim *tafsīr* for a variety of reasons. Some authors clearly aimed their works at more popular (although not necessarily less learned) audiences with the result of producing concise works suitable for easy copying and detailed study. Such works (e.g. Djalāl al-Dīn al-Maḥallī, d. 864/1459 [*q.v.*] and Djalāl al-Dīn al-Suyūṭī [d. 911/1505], *Tafsīr al-Djalālayn*) end up being technical and presumptive of a great deal of knowledge in areas of grammar and the like. Other authors, however, reacted to the accumulation of exegetical material with a more negative attitude, feeling that much of it was "getting away" from the meaning of the Ḳurʾān. Categories of material emerged which were deemed to be extraneous and were to be censured: the movement against *Isrāʾīliyyāt* [*q.v.*], a technical term within *tafsīr* apparently first employed as such by Ibn Taymiyya (d. 728/1328 [*q.v.*]), serves as the prime example of this tendency. Rigorous *isnād* criticism and a prioritising of knowledge by its proximity in time to Muḥammad also provided criteria by which the treasure trove of material from the generations of past exegetes was whittled down to produce more limited ranges of meaning.

In tracing the historical developments of the genre, it is possible to separate out four periods of expression: formative, classical, mature and contemporary. The separation is artificial, particularly fuzzy at the edges and certainly in need of refinement. It does, however, provide a means by which to summarise the contents of the genre by its highlights.

A debate has raged for a century now in scholarly literature concerning the origins of *tafsīr* as a procedure and as written works. To some extent, this is a continuation of a debate within Islam itself concern-

ing authority in *tafsīr*: did Muḥammad authorise interpreting the Ḳur'ān? If so, then interpretations from him and his closest companions might be thought to be of the highest importance in establishing what the text means. It may be observed in passing that such an argument tends to be a restraining one, suggesting a limited range of legitimate meanings; these arguments become closely associated in mediaeval times with Ibn Taymiyya and Ibn Kat̲h̲īr (d. 774/1373 [*q.v.*]). On the other hand, an early reluctance to interpret the Ḳur'ān is to be noted, especially associated with statements attributed to the caliph ʿUmar b. al-K̲h̲aṭṭāb [*q.v.*]. An attempt to reconcile these two ideas is found in the notion that ʿUmar was only against interpretation of "unclear" verses. The lack of documentary evidence makes the debate a difficult one to adjudicate, and the debate among the views of Goldziher, *Richtungen*; H. Birkeland, *Old Muslim opposition against the interpretation of the Koran*, Oslo 1955; N. Abbott, *Studies in Arabic literary papyri: Qur'ānic commentary and tradition*, Chicago 1967; and Wansbrough, *Quranic studies*, remains unresolved (see Gilliot, *Les débuts de l'exégèse coranique*, in *RMMM*, lviii. 4 [1990], 82-100).

One response to this uncertain historical situation has been the attempt on the part of a number of contemporary editors to reconstruct texts on the basis of attributions found in later texts. Such "books" are historically said to have existed (as Sezgin documents in *GAS*, i, 6-8, 25-35 esp.) but are no longer found in manuscript copies. Thus the only choice has been to reconstruct them. Such publications have recently proliferated and a number of examples can be cited: al-Ḥasan al-Baṣrī (d. 110/728 [*q.v.*] and see Gilliot, *Textes arabes anciens édités en Egypte au cours des années 1992 à 1994*, in *MIDEO*, xxii [1994], 295-6, no. 36); Ibn Abī Ṭalḥa (d. 120/737; see Gilliot, *Textes arabes anciens édités en Egypte au cours des années 1990 à 1992*, in *MIDEO*, xxi [1993], 439-40, no. 78); al-Suddī (d. 128/745; see Gilliot, *Textes arabes anciens édités en Egypte au cours des années 1992 à 1994*, 296, no. 37, and E. Kohlberg, *A medieval Muslim scholar at work. Ibn Ṭāwūs and his library*, Leiden 1992, 348, no. 574); and Sufyān b. ʿUyayna (d. 196/811 [*q.v.*], and see Gilliot, *Les débuts de l'exégèse coranique*, 89-90). In some senses, these reconstructions may be no different from the supposedly early works found in late manuscript form ascribed to Mud̲j̲āhid b. D̲j̲abr (d. *ca.* 100-4/718-22 [*q.v.*], and see Gilliot, *Textes arabes anciens édités en Egypte au cours des années 1990 à 1992*, 440, no. 79) and Sufyān al-T̲h̲awrī (d. 161/778 [*q.v.*], and see Gilliot, *Les débuts de l'exégèse coranique*, 89). A fundamental issue exists regarding the fragmentary nature of these books: should it be interpreted as evidence of the fragmentary nature of early *tafsīr per se*, or as evidence of a mediaeval attempt to extract these books from later works? On this, see Rippin, *Al-Zuhrī, naskh al-Qur'ān and the problem of early tafsīr texts*, in *BSOAS*, xlvii (1985), 22-43.

We are on somewhat firmer ground for discussion of the formative period of *tafsīr* with a series of books the character of which is more cohesive and thus more likely to be authentic, although certainly not free of later interpolation, reformulation and editorial intrusion. Works ascribed to Muḳātil b. Sulaymān (d. 150/767 [*q.v.*]), al-Farrā' (d. 207/822 [*q.v.*]), ʿAbd al-Razzāḳ al-Sanʿānī (d. 211/827; see *GAS*, i, 99), and al-Ak̲h̲fas̲h̲ al-Awsaṭ (d. 215/830; see Gilliot, *Textes arabes anciens édités en Egypte au cours des années 1990 à 1992*, 441-2, no. 81) may all be thought to fit into this category. However, the work ascribed to al-Kalbī (d. 146/763 [*q.v.*])—and at the same time ascribed to ʿAbd Allāh b. al-ʿAbbās (d. *ca.* 68/687 [*q.v.*]) and al-Fīrūzābādī (d. 817/1415 [*q.v.*])—indicates the difficulty in accepting an ascription without detailed examination and comparison; in this particular case, the work is more likely attributed to the 4th/10th century (see Rippin, *Tafsīr Ibn ʿAbbās and criteria for dating early tafsīr texts*, in *JSAI*, xviii [1994], 38-83). It should be noted that the fragmentary nature of the works ascribed to Ibn Wahb (d. 197/812 [*q.v.*]) has been argued by Muranyi, *ʿAbd Allāh b. Wahb (125/743-197/812). al-Ǧāmiʿ. Tafsīr al-Qur'ān (Die Koranexegese)*, Wiesbaden 1993-5, i, 2, to be evidence that this formative stage of *tafsīr* is not as uniform as the above summary may suggest, but the nagging question of assessing the date of all these early texts still remains.

The classical period of *tafsīr* is often considered to come into existence with the *D̲j̲āmiʿ al-bayān ʿan ta'wīl āy al-Ḳur'ān* of Abū D̲j̲aʿfar al-Ṭabarī (d. 311/923 [*q.v.*]). Al-Ṭabarī's work, the focus of a series of studies by Gilliot (esp. *Exégèse, langue et théologie en Islam*), is a vast compendium of traditions and analysis in which grammar plays its role as the major arbitrator between rival meanings. However, this period was clearly one of intense development of works of *tafsīr*, and several significant works from authors who lived roughly in the same period as al-Ṭabarī still exist and need to be viewed as a part of this expression of classical *tafsīr*. Notably, a number of other works that express differing theological viewpoints need close attention, especially when viewed in light of the polemical aspects of al-Ṭabarī: Hūd b. Muḥkim (d. towards the end of the 3rd/9th century; see *GAS*, i, 41), *Tafsīr*, an Ibāḍī work; Furāt b. Furāt al-Kūfī (d. *ca.* 310/922; see *GAS*, i, 539), *Tafsīr*, S̲h̲īʿī; al-ʿAyyās̲h̲ī (d. *ca.* 320/932 [*q.v.*]), *Tafsīr al-ʿAyyās̲h̲ī*, S̲h̲īʿī; al-Ḳummī (d. end 4th/10th century; see *GAS*, i 45-6), *Tafsīr al-Ḳur'ān*, a brief and markedly S̲h̲īʿī work; al-Tustarī (d. 283/896; see *GAS*, i, 647, and G. Böwering, *The mystical vision of existence in classical Islam. The Qur'ānic hermeneutics of the Ṣūfī Sahl al-Tustarī (d. 283/896)*, Berlin 1980), *Tafsīr*. More subtle in its theological variance but significant none the less is al-Māturīdī (d. 333/944 [*q.v.*]), *Ta'wīlāt ahl al-sunna* (only vol. i published).

Within the mature phase of *tafsīr* there is an abundant number of works, the full dimensions of which have not been fully catalogued. Among the most famous are al-T̲h̲aʿlabī (d. 427/1035 [*q.v.*]), *al-Kas̲h̲f wa 'l-bayān ʿan tafsīr al-Ḳur'ān* (unpublished except for its bibliographic introduction, ed. I. Goldfeld, Acre 1984), a vast compendium of material whose interests are partially reflected in the author's work, *ʿArā'is al-mad̲j̲ālis fī ḳiṣaṣ al-anbiyā'*; al-Sulamī (d. 412/1021; see *GAS*, i, 671-4, and G. Böwering, *The Qur'ān commentary of al-Sulamī*, in W.B. Hallaq and D.P. Little (eds.), *Islamic studies presented to Charles J. Adams*, Leiden 1991, 41-56), *Ḥaḳā'iḳ al-tafsīr*, a work characterised by Ṣūfī interpretations (al-Sulamī's *Ziyādāt ḥaḳā'iḳ al-tafsīr* has now been published, ed. Böwering, Beirut 1995); al-Māwardī (d. 450/1058 [*q.v.*], and see Gilliot, *Textes arabes anciens édités en Egypte au cours des années 1992 à 1994*, 296-7, no. 38), *al-Nukat wa 'l-ʿuyūn*; al-Ṭūsī (d. 460/1067 [*q.v.*]), *al-Tibyan fī tafsīr al-Ḳur'ān*, a significant S̲h̲īʿī expression; al-Zamak̲h̲s̲h̲arī, *al-Kas̲h̲s̲h̲āf ʿan ḥaḳā'iḳ g̲h̲awāmiḍ al-tanzīl*; al-Ṭabrisī (d. 548/1153 [*q.v.*], and also see M.O.A. Abdul, *The Qur'an: Shaykh Tabarsi's commentary*, Lahore 1977), *Mad̲j̲maʿ al-bayān li-ʿulūm al-Ḳur'ān*, a moderate S̲h̲īʿī work; Ibn al-D̲j̲awzī (d. 597/1201 [*q.v.*], and see Jane McAuliffe, *Ibn al-Jawzī's exegetical propaedeutic: introduction and translation*, in *Alif. Journal of Comparative Poetics*, viii [1988], 101-13), Fak̲h̲r al-Dīn al-Rāzī (d. 606/1209

[*q.v.*], *Kitāb zād al-masīr fī ʿilm al-tafsīr,* and also see the studies by J. Jomier, *Les mafatih al-ghayb de l'imam Fakhr al-Din al-Razi: quelques dates, lieux, manuscrits,* in *MIDEO*, xiii [1977], 253-90 and *Fakhr al-Dīn al-Rāzī (m. 606 H./1210) et les commentaires du Coran plus anciens,* in *ibid.*, xv [1982], 145-72), *Mafātīḥ al-ghayb*, a work generally cited for its vast coverage and philosophical depth; al-Ḳurṭubī (d. 671/1273 [*q.v.*]), *al-Djāmiʿ li-aḥkām al-Ḳurʾān*, one of the most masterly compendia of interpretational material; al-Bayḍāwī (d. between 685-716/1286-1316; [*q.v.*]), *Anwār al-tanzīl wa-asrār al-taʾwīl*, a work usually understood as an epitomisation of that of al-Zamakhsharī, minus the Muʿtazilī theological slant; ʿAbd al-Razzāḳ al-Kāshānī (d. 731/1330 [*q.v.*], see also P. Lory, *Les commentaires ésotériques du Coran d'après ʿAbd ar-Razzāq al-Qāshānī*, Paris 1980), usually known under the title *Tafsīr Ibn al-ʿArabī*, a Ṣūfī *tafsīr*, reflecting al-Kāshānī's mystical forebear Ibn al-ʿArabī (d. 628/1240 [*q.v.*]); Abū Ḥayyān al-Gharnāṭī (d. 745/1344 [*q.v.*]), *al-Baḥr al-muḥīṭ*; Ibn Kathīr, *Tafsīr al-Ḳurʾān al-ʿaẓīm*; al-Maḥallī and al-Suyūṭī, *Tafsīr al-Djalālayn*; al-Suyūṭī also wrote his own larger work, *al-Durr al-manthūr fī ʾl-tafsīr bi ʾl-maʾthūr*. This summary of titles only takes into account some of the major published works readily available; many more works exist, both published and unpublished, especially from the later centuries, of which only a small portion has been examined with scholarly eyes.

It is in this mature phase that substantial debates rage within the discipline and have their affect upon the works produced. Ibn Taymiyya's *al-Muḳaddima fī uṣūl al-tafsīr* is one of the most strident and polemical of all such presentations and the effect of these ideas on Ibn Kathīr and many contemporary *mufassirūn* is noticeable. Fundamentally antagonistic to intellectual speculation of all types, whether legal or exegetical, Ibn Taymiyya and Ibn Kathīr stand in contrast to the general tendency in *tafsīr* to allow for diversity. The latter champions dogmatism in his attempt to juxtapose and reconcile the Ḳurʾān and the *sunna*, both understood as revealed books (see Calder, *Tafsīr from Ṭabarī to Ibn Kathīr*, 130; McAuliffe, *Quranic hermeneutics: the views of al-Ṭabarī and Ibn Kathīr*, in Rippin, *Approaches to the history of the interpretation of the Qurʾān*, Oxford 1988, 46-62).

In a manner which may well be unique amongst the world's religions, Muslims continue down to the present day to produce *tafāsīr* of the classical form, while also taking the enterprise into new literary regions. The contemporary phase of *tafsīr*, then, is an important one. The impetus behind much of the writing of *tafāsīr* from the 19th century on has been an attempt to simplify the content of the texts, making them more accessible to an increasingly literate but not necessarily formally religiously-trained population. As well, there has been the desire to spread religious and social ideas associated with the various contemporary platforms of reform, and an effective vehicle for doing this has been *tafsīr* (overviews of the subject are provided by J.M.S. Baljon, *Modern Muslim Koran interpretation (1880-1960)*, Leiden 1968, and J.J.G. Jansen, *The interpretation of the Koran in modern Egypt*).

One can, then, point to a series of *tafāsīr* written in the 19th and 20th centuries that, in basic form, follow the classical literary genre. It is in their authors' conceptions of the world around them that the texts differ so markedly from their classical counterparts. This has especially led to a displacement of the exegetical tools of grammar and to an emphasis on theology and law but with those two disciplines defined to a large extent outside of their classical modes. Thus the *Tafsīr al-Manār* of Muḥammad ʿAbduh (d. 1905 [*q.v.*]) and Rashīd Riḍā (d. 1935 [*q.v.*]) places an emphasis on law but sees this in general terms of moral guidance on the practical and social planes. Perhaps the most famous and influential of all contemporary *tafāsīr*, *Fī ẓilāl al-Ḳurʾān* of Sayyid Ḳuṭb (d. 1966 [*q.v.*]), is an eloquent statement constructing an Islamic vision of the world that is, at times, brilliant in its ability to relate the Ḳurʾānic text to the contemporary situation often through the tools of allegory and symbolism (see e.g. A.H. Johns, *Let my people go! Sayyid Quṭb and the vocation of Moses*, in *Islam and Christian-Muslim relations*, i [1990], 143-70, and O. Carré, *Mystique et politique. Lecture revolutionnaire du Coran par Sayyid Quṭb, frère musulman radical*, Paris 1984). Likewise, works known as *tafsīr ʿilmī* (for example, Ṭanṭāwī Djawharī (d. 1940 [see DJAWHARĪ, ṬANṬĀWĪ]), *al-Djawāhir fī tafsīr al-Ḳurʾān al-karīm*) are characterised by an emphasis upon the "scientific" elements of the Ḳurʾān and could be said to introduce a new tool for interpretation, that of the discipline of science.

As well, there has been a tendency among contemporary writers to leave the form of classical *tafsīr* and compose works more limited in scope but embracing particular methods of approach. ʿĀʾisha ʿAbd al-Raḥmān (b. 1913) has written (under the pseudonym Bint al-Shāṭiʾ) *al-Tafsīr al-bayānī li ʾl-Ḳurʾān al-Karīm*, a study of 14 short *sūras* which focusses on lexical matters and "original meanings" of individual words within a framework of attention to Ḳurʾānic stylistic usage. Naṣr Ḥāmid Abū Zayd, *Mafhūm al-naṣṣ. Dirāsa fī ʿulūm al-Ḳurʾān*, is another recent example in quite a different vein, for it is a book which raises methodological issues (severely challenged by some) about the understanding of the Ḳurʾān within contemporary times, in a form structured along the lines of classical introductions to *tafsīr* (see R. Wielandt, *Wurzeln der Schwierigkeit innerislamischen Gesprächs über neue hermeneutische Zugänge zum Korantext*, in Wild (ed.), *The Qurʾan as text*, 257-82).

The other important approach in contemporary times has been thematic (*mawḍūʿī*), a form that has no direct classical counterpart and breaks significantly from the description of the literary genre since, in the main, it leaves the principle of following the order of the scriptural text. The *tafsīr* of Maḥmūd Shaltūt [*q.v.*], for example, does follow the Ḳurʾān *sūra*-by-*sūra*, but emphasises the themes which emerge from a given *sūra* and then brings that theme into conjunction with all other passages dealing with the same theme. The treatment of each *sūra* thus ends up being organised by theme rather than verse order (see K. Zebiri, *Maḥmūd Shaltūt and Islamic modernism*, Oxford 1993). As a technique of interpretation, this does not move far from Ibn Taymiyya's emphasis on the first source of interpretation being the Ḳurʾān itself. Nor, upon close analysis, is it significantly different methodologically from the classical exegetes' well-established willingness to adduce other passages from elsewhere in the Ḳurʾān which would help in the elucidation of a problematic verse (al-Ṭabarī, for example, provides many such instances of referring the reader back to earlier discussions of a given point of dispute). It is thus the form in which the commentary appears that gives the contemporary works their distinctiveness. The popularity of this method has also led to the publication of vast numbers of monographs dealing explicitly with single themes within the Ḳurʾān (e.g. Maḥmūd Shaltūt, *Min hudā ʾl-Ḳurʾān*, which contains a number of individual monographs).

It is important to observe as well that in contem-

porary times, the writing of *tafāsīr* in languages other than Arabic has become more significant. While classical examples of such books exist in languages from Persian to Malay, such works were frequently (although not always; cf. the Persian *tafsīr* of al-Maybudī, d. 6th/12th century [*q.v.*], *Kashf al-asrār wa-ʿuddat al-abrār*) based around translations from Arabic. In contemporary times there has been a recognition of the need to express an interpretation of the Ḳur'ān in local languages and to raise interpretational issues of local concern. The extent of the material, as reflected in the example of Indonesia (see H. Federspiel, *Popular Indonesian literature on the Qur'an*, Ithaca 1994), indicates that this will be a significant field of study in the future. *Tafsīr* has also been an important vehicle for new religious expressions, notably in the case of the Bābī and Bahā'ī faiths, once again indicating an increasing flexibility in the genre within the contemporary period.

Bibliography: Largely given in the text. C. Gilliot, *Exégèse, langue et théologie en Islam*, contains a significant bibliography of the subject. For further bibliographies, see A. Rippin, *The present status of tafsīr studies*, in *MW*, lxxii [1982], 224-38; A. Neuwirth, *Koran*, in H. Gätje (ed.), *Grundriss der arabischen Philologie*, Band II, *Literaturwissenschaft*, Wiesbaden 1987, 119-35 (sections 3.7 and 3.8) and Band III, *Supplement* (W. Fischer, ed.), Wiesbaden 1992, 262-4. Still valuable as an overview of the subject is T. Nöldeke and F. Schwally, *Geschichte des Qorāns*, ii, *Die Sammlung des Qorāns*, Leipzig 1919, 163-92. Muḥammad Ḥusayn al-Dhahabī, *al-Tafsīr wa 'l-mufassirūn*, ²Cairo 1967, surveys the major *tafāsīr* in a useful manner.

(A. RIPPIN)

TĀFTA (P.), a type and weave of fabric used mainly in dress in Persia and Turkey from the 16th century onwards. Since the verb *tāftan* has many meanings, e.g. to twist, turn, be woven, be shining, be sparkling, there has been much ambiguity and confusion of identification; the term has been used indiscriminately for both silk cloth and linen garments. The safest definition is based on technique, and here the meanings "twisted" and "shining" are important. *Tāfta* is a silk cloth of technically simple plain or tabby weave. Fine horizontal silk weft threads pass over and under single alternating vertical silk warp threads of equal weight and thickness to produce a firm textured, but supple and versatile, fabric. *Tāfta* was usually dyed in one colour only, and has a soft shimmering appearance, in contrast to the highly-polished surface of satin.

Tāfta was woven in large quantities in Persia during the Ṣafawid period as a light silk garment fabric. The best surviving examples are coats of 17th century date, with tight bodices, long sleeves and full bell-shaped skirts which were all probably woven in Iṣfahān, with Yazd and Kirmān as important secondary centres of manufacture. Background colours include light blue, orange and golden yellow. Variations in the basic *tāfta* weave depend on the twist of the silk, which produces a more or less pronounced ribbed effect. *Tāfta* can be decorated with stamped geometric motifs or with sprays of flowers woven in supplementary brocade weave in coloured silks and gold and silver wire. *Tāfta* production continued into the 18th and 19th centuries, brocaded with small repeated floral motifs. *Tāfta* was used in Turkey from the 16th century onwards, mainly as a plain fabric decorated with stamped designs. Here it was used as linings and facings in contrasting colours to the long, formal *kaftan* and *entari* robes made of velvet or heavy silk brocade.

Tāfta passed into Europe as Italian *taffeta*, German *Taft*, where, although possibly represented in 16th century paintings, it is best known as a light silk fabric in fresh colours—blue, green, pink—made into women's fashionable dresses of the late 17th to 18th centuries. The *tāfta* weave survives today but it is machine-woven in synthetic fibres.

(JENNIFER M. SCARCE)

AL-TAFTĀZĀNĪ, SAʿD AL-DĪN MASʿŪD B. ʿUMAR b. ʿAbd Allāh, renowned scholar and author on grammar, rhetoric, theology, logic, law and Ḳur'ān exegesis, born in Ṣafar 722/February-March 1322 in Taftāzān, a village near Nasā in Khurāsān, d. 793/1390 (on the form of this place-name, see al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, iii, 61-2; Yāḳūt, *Buldān*, ed. Beirut, ii, 35).

His family seems to have been distinguished in scholarship for several generations, and his grandfather Fakhr al-Dīn ʿUmar was a *ḳāḍī*. Nothing certain is known about his education. Ibn Ḥadjar al-ʿAskalānī in his unreliable biographical notice in his *Inbā'* describes him as a pupil of ʿAḍud al-Dīn al-Īdjī and Ḳuṭb al-Dīn al-Rāzī without specifying a time or place for his alleged studies with them. It is, in fact, unlikely that al-Īdjī ever taught him. In his commentary on al-Īdjī's *Sharḥ al-Mukhtaṣar fi 'l-uṣūl*, al-Taftāzānī praises him highly without referring to him as his teacher. A story reported by Ibn al-ʿImād about al-Taftāzānī's having at first been the most stupid among al-Īdjī's pupils is entirely fictitious. According to Ibn ʿArabshāh, al-Taftāzānī and Ḳuṭb al-Dīn al-Rāzī were both among the scholars active at the court of the Khāns of the Golden Horde in Saray. If they were there at the same time, al-Taftāzānī may have benefited from Ḳuṭb al-Dīn's learning in philosophy. He was, however, already an established scholar at that time. More reliable is perhaps a note in Ibn Ḥadjar's biography of Ḍiyā' al-Dīn ʿAbd Allāh b. Saʿd Allāh al-Ḳazwīnī al-Ḳirimī that al-Taftāzānī was among his pupils. Al-Taftāzānī's fields of learning, especially his expertise in both Ḥanafī and Shāfiʿī law and *uṣūl*, closely matched those of Ḍiyā' al-Dīn. Al-Taftāzānī, in any case, completed his earliest book, a commentary on *al-Taṣrīf al-ʿIzzī* by al-Zandjānī on Arabic morphology, in 738/1338 at the age of sixteen, according to Faṣīḥ al-Khʷāfī in Faryūmad.

His further peregrinations are better known from the dates and places of completion of his works. In 742/1342 he was in Djurdjāniyya in Khʷārazm. Then he became attached to the ruler of Harāt, Muʿizz al-Dīn Kart, to whom he dedicated his *Sharḥ al-Talkhīṣ al-muṭawwal* in 748/1347. In 752/1351 he was in Djām. Next, he joined Djānī Beg, Khān of the Golden Horde, to whom he dedicated his *Mukhtaṣar al-maʿānī*, completed at Ghudjduwān in 756/1355. Two years later he was in "Gülistān of Turkistān". Gülistān is known as a mint of the Golden Horde; its exact location is uncertain, but it has been thought to be near New Saray. Al-Taftāzānī departed, presumably because of the troubles following the death of Djānī Beg, and was back in Harāt in 759/1358. He completed books in Khʷārazm in 768/1367, 770/1369, and 778/1367-8 and was evidently attached during this period

to Ḥusayn Ṣūfī, independent ruler of Khwārazm. When Tīmūr seized Khwārazm in 781/1379, Mu'izz al-Dīn Kart's son Malik Muḥammad, ruler of Sarakhs, asked his nephew, Pīr Muḥammad b. Ghiyāth al-Dīn, who was in the suite of Tīmūr, to obtain the latter's permission for al-Taftāzānī to join him in Sarakhs. Al-Taftāzānī thus was in Sarakhs in 782/1380. Subsequently, learning of his eminence in scholarship, Tīmūr insisted that he come to Samarḳand. He was there in 784/1382 and, after returning to Sarakhs in 785-6/1383-4, stayed in Samarḳand permanently from 787/1385 until his death on 22 Muḥarram 793/30 December 1390. Tīmūr at first treated him with great honour. A scholarly rivalry, however, arose between him and the much younger al-Sharīf al-Djurdjānī, whom Tīmūr brought to Samarḳand after his conquest of Shīrāz in 789/1387. (The assertion of some modern scholars that Sa'd al-Dīn al-Taftāzānī had earlier introduced al-Djurdjānī to Shāh Shudjā', the Muẓaffarid ruler of Fārs, is based on a confusion with another Sa'd al-Dīn.) A public debate about al-Zamakhsharī's exegesis of Ḳur'ān, II, 5, took place between them in the presence of Tīmūr. The Mu'tazilī scholar Nu'mān al-Dīn al-Khwārazmī judged in favour of al-Djurdjānī, and Tīmūr backed him. Al-Taftāzānī's severe grief about this defeat is said to have hastened his end. His body was carried to Sarakhs where he was buried.

Al-Taftāzānī's fame rests mainly on his commentaries on well-known works in various fields of learning, which came to be widely used in teaching at *madrasas* until modern times. Many of them received supercommentaries by later scholars. His own original works are few, such as *al-Maḳāṣid* on theology, *al-Miftāḥ* on Shāfi'ī law, a collection of Ḥanafī *fatwās*, and a Persian commentary on the Ḳur'ān entitled *Kashf al-asrār wa-'uddat al-abrār*. Noteworthy are also a Turkish versified translation of Sa'dī's *Būstān* composed in 755/1354 (Gibb, *HOP*, i, 202-3) and a polemical refutation of Ibn al-'Arabī's *Fuṣūṣ al-ḥikam*. Al-Taftāzānī wrote on both Ḥanafī and Shāfi'ī law, and is described in some of his biographies as a Shāfi'ī. From remarks in his *al-Talwīḥ* it seems evident, however, that he personally adhered to the Ḥanafī school. In theology he sometimes, especially in his commentary on the *'Aḳā'id* of the Māturīdī scholar Nadjm al-Dīn al-Nasafī, upheld Māturīdī positions against Ash'arī criticism, but he also often endorsed Ash'arī doctrine. Altogether, he backed a broad, though anti-Mu'tazilī Sunnism, which was in accord with later concepts of Sunnī orthodoxy. In later literature, he is often quoted simply as "al-'Allāma".

(W. MADELUNG)

TAGHĀZA, a Saharan salt pan (*sabkha* [*q.v.*]), situated in lat. 23° 26' N., long. 4° 59' W. (hence now in southern Algeria), and a major source of rock salt for West Africa down to the mid-sixteenth century. It is possible that it is to be identified with the Tātantāl of al-Bakrī (*K. al-Masālik wa 'l-mamālik*, ed. de Slane, Algiers 1857, 171), which is described as a mine twenty days from Sidjilmāsa [*q.v.*], from which huge quantities of salt are sent to Sidjilmāsa and to *bilād al-sūdān*. Salt blocks also formed the local building material. Al-Ḳazwīnī (*'Adjā'ib al-makhlūḳāt*, ed. Wüstenfeld, ii, 16), the first author to mention Taghāza by name (for Taghāra *read* Taghāza) also notes this feature, and says the salt was mined by slaves of the Masūfa. Ibn Baṭṭūṭa (iv, 377-8, tr. Gibb and Beckingham, iv, 947), whose journey from Sidjilmāsa to Taghāza took twenty-five days, remarked on the large amounts of gold dust traded there for the salt. This salt was then carried to Walāta and on to Mali [*q.v.*] where it was sold at great profit. He also notes the use of this salt, cut in pieces, as currency, as it was also in Gao (al-Bakrī, 183).

At what point Taghāza came under the control of Songhay [*q.v.*] is not clear, but already by *ca.* 946/1539-40 the Sa'dian sultan Aḥmad al-A'radj was laying claim to it with Askiya Isḥāḳ I. Later, in 964/1556-7, Mawlāy Muḥammad al-Shaykh attempted to install his own representative there. The mine was abandoned in favour of another called Taghāza al-ghizlān. On his accession in 986/1578, Mawlāy al-Manṣūr demanded that Songhay hand over to him the tax revenue from this mine. Askiya Dāwūd responded with a generous gift, but in 994/1586 a small Sa'dian force occupied this Taghāza and exploitation was moved to a site probably to be identified with Taoudeni (at lat. 22° 40' N. long. 3° 59' W.). A new Sa'dian demand to be paid the salt tax revenue in Ṣafar 998/December 1589-January 1590 was met with defiance from Askiya Isḥāḳ II. This provided the pretext for the Sa'dian conquest of Songhay in 1000/1591.

Although the original mines of Taghāza were abandoned, the site was used as an occasional caravan station. As late as 1828 René Caillié found Tādjakant nomads there clearing out wells and saw the ruins of houses made of salt slabs (*Journal d'un voyage à Tombouctou et à Jenné*, Paris 1830, ii, 471-8). Several superficial archaeological excavations have been carried out there, revealing two villages, one to the south-east and one to the north-west of the salt pan. In each, the remains of a mosque was found and, in the north-westerly one, traces of a fort. Mauny estimates that their total population may have reached 1,200-1,800. Salt is still being mined at Taoudeni and carried to Timbuktu on camel-back (see J. Skolle, *The road to Timbuctoo*, London 1956).

(J.O. HUNWICK)

TAGHLIB B. WĀ'IL (also Taghlib Wā'il), an important, mostly nomadic, tribe of the Rabī'a b. Nizār group [see RABĪ'A and MUḌAR; NIZĀR B. MA'ADD]. A member of this tribe was called Taghlabī or Taghlibī (for the plural Taghāliba, see al-Tha'ālibī, *Thimār al-ḳulūb*, ed. Ibrāhīm, Cairo 1384/1965, 130). The tribe's pedigree is Taghlib/Dithār b. Wā'il b. Ḳāsiṭ b. Hinb b. Afṣā b. Du'mī b. Djadīla b. Asad b. Rabī'a b. Nizār b. Ma'add b. 'Adnān.

Until the Basūs [*q.v.*] war which they fought against their brother-tribe, Bakr b. Wā'il [*q.v.*], the Taghlib

lived in Nadjd [*q.v.*]. Following their defeat in the battle known as Yawm Taḥlāḳ al-Limam ("the day of the shaving off of the hair that descends below the lobe of the ear", also called Yawm al-Taḥāluḳ), which took place after the death of Kulayb b. Rabīʿa [*q.v.*; and see ḤIMĀ], the Taghlib dispersed (*fa-tafarraḳū*; Yāḳūt, s.v. *Ḳiḍa*) and settled, together with their "paternal uncles", the Namir b. Ḳāsiṭ and Ghufayla b. Ḳāsiṭ, on the lower Euphrates, where some of them may have settled earlier. After ʿAmr b. Kulthūm [*q.v.*] had in 569-70 assassinated the king of al-Ḥīra [*q.v.*], ʿAmr b. Hind [*q.v.*], they migrated further up the river to al-Djazīra [*q.v.*].

Before Islam the Taghlib were within the sphere of influence of the Sāsānids [*q.v.*] and their client-kings, the Lakhmids [*q.v.*] of al-Ḥīra. Already in the 4th century A.D. Shāpūr [*q.v.*] II transferred Taghlibī captives to Baḥrayn, more precisely to Dārīn, "the name of which is Haydj"(!), and al-Khaṭṭ (al-Ṭabarī, i, 839, cf. 845; Nöldeke, *Gesch. d. Perser*, 56-7, cf. 67). But the place-name "Haydj" owes its existence to a scribal error: instead of *Dārīn wa-ʾsmuhā h.y.dj*, read: *Dārīn wa-Samāhīdj* (Ibn al-ʿAdīm, *Bughyat al-ṭalab*..., facs. ed. Frankfurt a. M. 1986 ff., ix, 290; for the later history of the Taghlib in Baḥrayn, see al-Ḳalkashandī, *Ṣubḥ al-aʿshā*, ed. Shams al-Dīn, Beirut 1407/1987, i, 395-6). The poet Djābir b. Ḥunayy al-Taghlibī complained about the practices of a tax-collector sent by the king of al-Ḥīra and the customs imposed on trade at the markets of ʿIrāḳ (*Mufaḍḍaliyyāt*, ed. Lyall, no. xlii). The Taghlib were at some stage part of the *ridāfa* institution (M.J. Kister, *Al-Ḥīra: some notes on its relations with Arabia*, in *Arabica*, xv [1968], 143-69, at 149, 166, repr. in idem, *Studies in Jāhiliyya and Early Islam*, Variorum Reprints, London 1980, no. III).

For several decades in the second half of the 5th century and the first half of the 6th, Taghlib's fortunes were connected to the rise of Kinda [*q.v.*] in central and northern Arabia. After a major Taghlibī defeat in the war against the Bakr and the retirement of their leader, Muhalhil, several tribes, including the Taghlib and Bakr, agreed to subject themselves to king al-Ḥārith b. ʿAmr b. Ḥudjr/Ākil al-Murār al-Kindī. There followed a short interregnum of Kinda [*q.v.*] in al-Ḥīra in the twenties of the 6th century [see SĀSĀNIDS, vol. IX, at 77a]. After the king's death two of his sons, Shuraḥbīl and Salama, fought against each other at al-Kulāb (after 530; it was the First Day of al-Kulāb, or the Kulāb of the Rabīʿa; on Wādī ʾl-Kulāb (modern Wādī ʾl-Shaʿrā'), see *al-ʿArab* [Riyāḍ] xiii/1-2 [July-Aug. 1978], 14-29). The two brother-tribes returned to their feud; the Bakr fought on Shuraḥbīl's side while the Taghlib and Namir were with Salama. The latter's cavalry was led by the Taghlibī warrior al-Saffāḥ (Salama b. Khālid) (Abū ʿUbayda, *al-Dībādj*, ed. al-Djarbūʿ and al-ʿUthaymīn, Cairo 1411/1991, 100). Shuraḥbīl was killed by ʿAmr b. Kulthūm's cousin, Abū Ḥanash ʿUṣ(u)m b. al-Nuʿmān. The war between the Taghlib and Bakr came to an end [see BAKR B. WĀ'IL] around the middle of the 6th century with the signing of a peace treaty at the market of Dhu ʾl-Madjāz near Mecca.

When the Lakhmids regained control of al-Ḥīra, they could count on Taghlib's support. Al-Wazīr al-Maghribī (d. 418/1027; see AL-MAGHRIBĪ, vol. V, at 1211b; Sezgin, *GAS*, viii, 245-6; Ibn al-ʿAdīm, *Bughya*, vi, 27 ff.) corrects a common error with regard to the famous visit of Imruʾ al-Ḳays b. Ḥudjr [*q.v.*] to Byzantium. It was not against the Asad [*q.v.*], who had killed his father, that Imruʾ al-Ḳays wanted the Byzantines to support him, but against the king of al-Ḥīra, al-Mundhir III (b. Māʾ al-Samāʾ, *ca.* 505-54). Upon his return to the throne in al-Ḥīra, al-Mundhir sent an army of the Taghlib and Bakr to hunt down Kinda's leading family, the Banū Ākil al-Murār (Ibn al-ʿAdīm, *Bughya*, iv, 567, confirming the reading "Taghlib" in *Aghānī*[1], viii, 64, l. 17; cf. G. Olinder, *The kings of Kinda*, Lunds Universitets Årsskrift, Nova Series xxiii/1 [1927], 1-118, at 66-7; Caussin de Perceval, *Essai*, ii, 85, n. 5).

In the Islamic period, there were Taghlibīs in the Farasān [*q.v.*] island(s) in the Red Sea near the Yemeni coast. The name Farasān originally belonged to a tribal group of the Taghlib which emigrated from Syria to the Mawzaʿ area (Aḥmad b. Muḥammad al-Ḳurṭubī, *al-Taʿrīf fī ʾl-ansāb*..., ed. Ẓalām, Cairo [1407/1986], 119-22; cf. Ḥamad al-Djāsir, in *al-ʿArab* [Riyāḍ] xxvi/3-4 [March-April 1991], 258-67, xxxvi/5-6 [May-June 1991], 390).

The genealogical literature records the name of al-Akhzar b. Suhayma, an early Taghlibī genealogist (*nassāba*) who transmitted at least part of the information on his tribe available to later scholars (cf. W. Caskel and G. Strenziok, *Ǧamharat an-Nasab*, i, 45-7). Between al-Akhzar's generation and that of the great philologists of the 2nd Islamic century there were intermediaries who in most cases remained anonymous. Yet we know that one of Abū ʿUbayda's [*q.v.*] informants on the Yawm Irāb was the Taghlibī Abū Khayra Affār b. Laḳīṭ (*Naḳāʾiḍ Djarīr wa-l-Farazdak*, ed. A.A. Bevan, Cambridge 1905, i, 473, l. 11, ii, 703, l. 4; his *nisba*, al-ʿAdawī, shows that he belonged to the ʿAdī Taghlib, i.e. ʿAdī b. Usāma b. Mālik b. Bakr). But expertise in Taghlibī history and genealogy was not an exclusive Taghlibī domain. Ibn al-Kalbī's informant about the First Day of al-Kulāb, and about ʿAmr b. Kulthūm, was Khirāsh b. Ismāʿīl al-ʿIdjlī [cf. ʿIDJL] *al-rāwiya* (on Khirāsh, see Ibn al-Kalbī, *Djamharat al-nasab*, ed. Ḥasan, Beirut 1407/1986, 551; cf. *op. cit.*, 544-5, 547; *GAS*, ii, 40). Khirāsh also gave information about the battle of Ṣiffīn (M. Hinds, *The banners and battle cries of the Arabs at Ṣiffīn (657 A.D.)*, in *al-Abḥāth*, xxiv [1971], 3-42, at 6, 20), which indicates that his scholarly interests included both the pre-Islamic and early Islamic periods. Interestingly, a passage from Abū ʿUbayda's *K. al-Ayyām* (taken either from his *K. al-Ayyām al-ṣaghīr* or *K. al-Ayyām al-kabīr*), which deals with the killing of ʿUmayr b. al-Ḥubāb al-Sulamī in the war between the Taghlib and the Ḳays ʿAylān [*q.v.*], demonstrates that Abū ʿUbayda's *K. al-Ayyām* (at least in its longer version) included not only pre-Islamic *Ayyām* but also battles of the early Islamic period (Bakrī, *Muʿdjam mā ʾstaʿdjama*, ed. al-Saḳḳā, Cairo 1364/1945 ff., i, 216, iv, 1362).

Ibn al-Kalbī's interest in the Taghlib is reflected in the titles of two of his monographs, *K. Akhbār Rabīʿa wa ʾl-Basūs wa-ḥurūb Taghlib wa-Bakr* and *K. Akhbār banī Taghlib wa-ayyāmihim wa-ansābihim* (al-Nadjāshī, *Ridjāl*, ed. al-Nāʾīnī, Beirut 1408/1988, ii, 400).

The 2nd/8th century scholar ʿAllān al-Shuʿūbī compiled *K. Nasab Taghlib b. Wāʾil* and Abu ʾl-Faradj al-Iṣfahānī compiled *Nasab banī Taghlib* (Yāḳūt, *Udabāʾ*[2], ed. ʿAbbās, Beirut 1993, iv, 1631, 1709). Other early collections of reports about the Taghlib were entitled *Ashʿār [Banī] Taghlib* (see Sezgin, *GAS*, ii, *passim*; I. Goldziher, *Some notes on the Dīwāns of the Arabic tribes*, in *JRAS* [1897], 325-34, at 331, repr. in idem, *Gesammelte Schriften*, iv, 119-28). Beside poetry, these monographs also included reports about the historical background of the verses (cf., e.g., *Khizānat al-adab*, ed. Hārūn, Cairo 1387/1967 ff., ii, 173-4, viii, 557-60).

From Taghlib are descended three sons: Ghanm, al-Aws and ʿImrān. But the genealogical literature, keeping to the essentials, deals almost exclusively with the descendants of Ghanm b. Taghlib. The six sons of Bakr b. Ḥubayb b. ʿAmr b. Ghanm formed a group called al-Arāḳim (pl. of al-Arḳam, a certain speckled serpent). All six were eponyms of tribes (*ḳabāʾil*), the most numerous and prestigious being the Djusham. Two of the Arāḳim tribes, the Djusham and the Mālik, were referred to as *al-rawḳānⁱ* ("the two horns" or "the two numerous and strong companies"). Bakr's other sons were ʿAmr, Thaʿlaba, al-Ḥārith and Muʿāwiya. The Arāḳim were the most important group among the Taghlib; nearly all the information about the Taghlib in the genealogy books relates to them.

Among the Djusham b. Bakr, the Zuhayr b. Djusham had a *nisba* of their own, al-Zuhayrī. The Zuhayr included several separate groups, the most important being the ʿAttāb b. Saʿd b. Zuhayr. One of the ʿAttāb was the *muʿallaḳāt* [*q.v.*] poet ʿAmr b. Kulthūm. Also, the poet and epistle writer Abū ʿAmr Kulthūm b. ʿAmr [*q.v.*] al-Ḳinnasrīnī, who lived at the time of al-Maʾmūn and Hārūn al-Rashīd, belonged to the ʿAttāb (Yāḳūt, *Udabāʾ*[2], v, 2243-6). The ʿAttāb kept their leading position in Islamic times. When the Taghlib-Ḳays war began, the Taghlib were led by ʿAmr b. Kulthūm's great-great-grandson (*Aghānī*[1], xx, 128, l. 4). The ʿAttāb and their brother-clans, ʿUtba and ʿItbān, formed a group called al-ʿUtab. The other descendants of Saʿd b. Zuhayr, namely the offspring of ʿAwf and Kaʿb, were called Banu 'l-Waḥad or al-Awḥād.

Still within the Zuhayr b. Djusham, but along the genealogical line of al-Ḥārith b. Zuhayr, we find Kulayb b. Rabīʿa and his brother, the poet and leader Muhalhil. Kulayb was a *djarrār*, i.e. one who commanded 1,000 men, and the same was said of his father Rabīʿa.

The other component of the *rawḳānⁱ*, namely the Mālik b. Bakr, included the Djāhilī warrior al-Saffāḥ, whose descendants, like those of ʿAmr b. Kulthūm, were prominent in the Islamic period.

There were among the Taghlib at least five more tribal groups (*aṣnāf*) known by a tribal appellation. Most of them belonged to the Mālik b. Bakr: al-Ḳamāḳim, al-Lahāzim (probably the ʿAwf b. Mālik b. Bakr), al-Abnāʾ (the Rabīʿa, ʿĀʾidh and Imruʾ al-Ḳays, sons of Taym b. Usāma; J. Barth, *Dīwān des ʿUmeir ibn Schujeim al-Quṭāmī*, Leiden 1902, no. 31, 1), al-Ḳuʿūr (the Mālik b. Mālik b. Bakr and al-Ḥārith b. Mālik b. Bakr) and Rīsh al-Ḥubārā (the Ḳuʿayn b. Mālik b. Bakr). The ʿAmr b. Bakr were nicknamed al-Nakhābiḳa.

Rich evidence about Taghlib's tribal divisions in the Umayyad period is derived from the reports about the Taghlib-Ḳays war. Particularly detailed is the description of the battle of al-Ḥashshāk. Having been fatally wounded, their commander, Ḥanẓala b. Ḳays b. Hawbar al-Kinānī (of the Kināna b. Taym) was replaced by al-Marrār b. ʿAlḳama al-Zuhayrī, who organised the Taghlibī units under their tribal banners (*rāyāt*) and ordered each clan (*banū ab*) to place the women behind them. They were set in war disposition by a member of al-Abnāʾ. The Mālik b. Bakr had a banner of their own and one of their groups, the ʿAdī Taghlib, was at the centre of the army (*Shiʿr al-Akhṭal*, ed. Ḳabāwa, Aleppo 1390/1970, i, 75-6).

Before Islam, Taghlib was one of the strongest and most numerous nomadic tribes. The Taghlibīs were involved in some of the largest battles of pre-Islamic Arabia and often fought in large military formations. This indicates a high degree of solidarity among their subdivisions. Out of the eleven Rabīʿa leaders listed as *djarrārūn*, four belonged to the Taghlib (Ibn Ḥabīb, *Muḥabbar*, ed. I. Lichtenstädter, Ḥaydarābād 1361/1942, 249-50; for a fifth *djarrār*, al-Saffāḥ, see Ibn Durayd, *Ishtiḳāḳ*, ed. Hārūn, Cairo 1378/1958, 337). This is also true of Islamic times: in the category of those who held the command (*riʾāsa*) over whole tribes or groups of tribes, the following are mentioned in connection with the Taghlib-Ḳays war: Ḥanẓala [b. Ḳays] b. Hawbar, Shuʿayth b. Mulayl and Marrār b. ʿAlḳama al-Zuhayrī (*Muḥabbar*, 255-6).

However, after the advent of Islam, Taghlib's political importance declined. In the battle of Dhū Ḳār [*q.v.*] around 605, the Taghlib and Namir (under al-Nuʿmān b. Zurʿa, a descendant of al-Saffāḥ) fought on the Sāsānid side. Since the Taghlib lived far from the birthplace of Islam, they could not have played a central role in Islamic history during the Prophet's life. Only four Taghlibīs were found in the biographical dictionaries dedicated to the Prophet's Companions: 1. ʿAṭiyya b. Ḥiṣn, said to have visited the Prophet; 2. The poet ʿUtba b. al-Waghl; 3. A member of al-Akhṭal's [*q.v.*] clan, the Banū Fadawkas, called Ḳabīṣa b. Wāliḳ, a Kūfan *sharīf* and one of al-Ḥadjdjādj b. Yūsuf's [*q.v.*] generals; and 4. Khawla bt. al-Hudhayl b. Hubayra, a niece of the Companion Diḥya b. Khalīfa al-Kalbī and probably a Christian, was reportedly given in marriage to the Prophet but died on the way from Syria to Medina.

The Taghlib took part in the *ridda*. The false prophetess Sadjāḥ [*q.v.*], and her Tamīmī clan were clients of the Taghlib in the Djazīra, to whom her mother belonged. It was among the Taghlib that she began her career. One of her followers was al-Hudhayl b. ʿImrān, a former Christian who led the Taghlibī unit in an army made of "mixed sorts of men from Rabīʿa" (*afnāʾ Rabīʿa*) which followed her into Arabia. Al-Hudhayl, who was one of the *djarrārūn*, was later involved in fighting against the conquering Muslims at ʿAyn al-Tamr and elsewhere.

Some wrongly assumed that al-Hudhayl b. ʿImrān was identical to Khawla's father, al-Hudhayl b. Hubayra of the Thaʿlaba b. Bakr (or rather, the Ḥurfa b. Thaʿlaba), who was also one of the *djarrārūn*. Now in order to differentiate between the two famous al-Hudhayls, al-Hudhayl b. ʿImrān was called *al-aṣghar* or "the younger" (Djarīr, *Dīwān*, ed. Ṭāhā, Cairo [1969-71], i, 253), while al-Hudhayl b. Hubayra was called *al-akbar* or "the older" (*Naḳāʾiḍ Djarīr wa 'l-Farazdaḳ*, i, 473, l. 9). Indeed, whereas "the older" was connected to the pre-Islamic *ayyām*, "the younger" was linked to the conquests and was still alive at the time of ʿUthmān.

The Taghlib fought against the conquering Muslim armies in western ʿIrāḳ and the Djazīra. The ʿUtba b. Saʿd b. Zuhayr are specifically known to have taken part in the fighting. Al-Ṣahbāʾ Umm Ḥabīb, the daughter of the Taghlibī leader, Rabīʿa b. Budjayr of the ʿUtba, was taken captive at al-Thanī and sent to Medina where she was bought by ʿAlī b. Abī Ṭālib [*q.v.*]. She bore ʿAlī twins, a boy and a girl, ʿUmar *al-akbar* (Ibn al-Taghlibiyya) and Ruḳayya.

Yet at some stage during the conquests, Taghlibī troops fought with the Muslims. The most prominent person among them was ʿUtba b. al-Waghl (mentioned above as a Companion) of the Saʿd b. Djusham b. Bakr. At the time of ʿUthmān he was a political activist in Kūfa, where the Taghlibī troops had settled. Taghlib's limited support in the conquests and

ʿUmar b. al-Khaṭṭāb's *Realpolitik* guaranteed for Taghlib a special status with regard to taxation.

In the battle of the Camel [see AL-DJAMAL], the Rabīʿa (including the Taghlib) and Kinda fought under the same banner on ʿAlī's side (Abū ʿUbayda, *al-Dībādj*, 153-4). In connection with Ṣiffīn [*q.v.*], we hear of the joint *riʾāsa* of Kinda and Rabīʿa. Among the Rabīʿa who fought with ʿAlī at Ṣiffīn there were also Taghlibīs who had their own banner (Hinds, *op. cit.*, 21), and the Arāḳim are specified in a verse (Naṣr b. Muzāḥim, *Waḳʿat Ṣiffīn*, ed. Hārūn, Cairo 1401/1981, 486, l. 13). The Arāḳim were also involved in the Taghlib-Ḳays war (see e.g., Yāḳūt, s.v. *al-Raḥūb*). At Ṣiffīn there were Taghlibīs on Muʿāwiya's side as well. One of them was "Muʿāwiya's poet", Kaʿb b. Djuʿayl (*Waḳʿat Ṣiffīn*, 549). ʿAlī's reported hostile attitude towards the Taghlib (al-Balādhurī, *Futūḥ*, 183, l. 2; *ʿIḳd*, Cairo 1384/1965, vi, 248, l. 15) may suggest that they were not an insignificant factor in the Umayyad force (cf. Yaʿḳūbī, ii, 218).

A crucial reconciliation between the Taghlib and Bakr (who at Dhū Ḳār still fought on opposite sides) was affected by the pro-Umayyad Hammām b. Muṭarrif, described as the first leader (*awwal man sāda*) of the Taghlib in Islam. He guaranteed (*taḥammala*) the payment of the pending blood money (reportedly, for 1,000 men), giving 200 of his own camels, and paid the dowers of 500 women from each tribe who married men from the other tribe (al-Ḳurṭubī, *Taʿrīf*, 118; the figures are no doubt exaggerated). The reconciliation was presumably brought about by the Taghlib-Ḳays war (cf. Barth, *Dīwān . . . al-Quṭāmī*, no. 25, 34-5). With the backing of both the Taghlib and Bakr, the leader of the former, ʿAbd Yasūʿ, addressed the caliph ʿAbd al-Malik as a representative of both sons of Wāʾil (Ibn al-Kalbī, *Djamharat al-nasab*, 567).

At the beginning of the rebellion of ʿAbd Allāh b. al-Zubayr [*q.v.*], the Taghlib supported the Ḳays, who were led by Zufar b. al-Ḥārith al-Kilābī and ʿUmayr b. al-Ḥubāb al-Sulamī (on the latter, cf. M. Lecker, *The Banū Sulaym*, Jerusalem 1989, index) in their fight against the Kalb b. Wabara [*q.v.*]. Then a series of battles (*maghāzī*; *Aghānī*[1], xi, 59, l. 12) took place between the Taghlib, often together with the Namir, and the Ḳays which continued for some time after Ibn al-Zubayr's defeat (al-Balādhurī, *Ansāb*, v, 308-9, 313-31). The Taghlibī forces in the battle known as Yawm al-Ḥashshāk, in which ʿUmayr b. al-Ḥubāb was killed, are of particular interest. First, not only Taghlib's nomads (*bādiya*) took part in it but also their settled (*ḥāḍira*). Second, Taghlib's forces included 2,000 cavalrymen from their *muhādjirūn* [*q.v.*] (*sic*) equipped with heavy armour who had been called in from Ādharbaydjān (*Aghānī*[1], xi, 62, l. 3).

The settled members among the Taghlib of the Djazīra were few. Reportedly, the Taghlib were *badw* and included no *ḥāḍira* at all, but this statement must be qualified. In early Islam, the Taghlib, while owning no estates (*amwāl*), had fields (*ḥurūth*) as well as cattle (Abū ʿUbayd, *al-Amwāl*, ed. Harrās, Cairo 1396/1976, 37; note also the small villages (*ḳurayyāt*) along the Khābūr inhabited by the Taghlib in the Umayyad period; *Aghānī*[1], xx, 127, l. 9).

The Taghlib-Ḳays war was merely an episode in the struggle between ʿAbd al-Malik and ʿAbd Allāh b. al-Zubayr. The Taghlib were pro-Umayyad. Ibn al-Zubayr's governor in al-Mawṣil [see AL-MUHALLAB B. ABĪ ṢUFRA] threatened to raid them if they did not pledge their allegiance to Ibn al-Zubayr, but was dismissed before he could carry this out. ʿUmayr b. al-Ḥubāb asked Ibn al-Zubayr's brother and governor of ʿIrāḳ, Muṣʿab b. al-Zubayr [*q.v.*], to appoint him as Taghlib's tax-collector (*Aghānī*[1], xx, 127, l. 23). Moreover, Muṣʿab killed the brother of a Bakr b. Wāʾil leader who headed from ʿIrāḳ to the Djazīra with reinforcements for the Taghlib. (The military aid must have followed the Taghlib-Bakr reconciliation.) The Taghlib are said to have complained to a leader of the Rabīʿa, whose support they sought, about the official support given to their enemies: "You know that there is Christianity among us and that the Muḍar are the Muḍar. They are the government (*sulṭān*) and we cannot combat the government's stable or treasury". ʿUmayr b. al-Ḥubāb's head was reportedly sent in 70/689-90 to ʿAbd al-Malik, who welcomed the killing of Ibn al-Zubayr's ally.

The conversion of the Taghlib already began in the early days of Islam. "Muʿāwiya's poet", Kaʿb b. Djuʿayl, was a Muslim and the same was true of the small Taghlibī community in Kūfa. The Umayyad poet al-Ḳuṭāmī [*q.v.*] (ʿUmayr b. Shiyaym or Shuyaym) was a convert to Islam. Among the Taghlibīs living in Ḳinnasrīn [*q.v.*] there were early converts to Islam (see entries on two *ḥadīth* transmitters, a father and a son, in al-Mizzī, *Tahdhīb al-kamāl*, ed. Maʿrūf, Beirut 1405/1985 ff., iv, 141-4, xxiv, 5-6).

But the number of converts during the Umayyad and early ʿAbbāsid periods was small. At that time the Taghlib, mostly Christian and living near the boundary of a hostile Christian empire, were not given high positions in the Muslim state. The Taghlib probably did not take part in expeditions against Byzantium, and the participation of the poet known as Aʿshā Banī Taghlib in one such expedition (Ibn al-ʿAdīm, *Bughya*, viii, 114) does not indicate the contrary. Yet they did not lose their military prowess or they would not have kept so tenaciously to their faith and their vast territories, constantly threatened by massive military pressure from immigrating Arabian tribes.

Under the last Umayyad caliph Marwān II, Hishām b. ʿAmr b. Bisṭām al-Taghlibī (a descendant of al-Saffāḥ) was governor of al-Mawṣil and the Djazīra. (He had a partner who was in charge of the *kharādj* [*q.v.*].) At the time of al-Manṣūr, Hishām was governor of Sind. Under al-Mahdī, Bisṭām b. ʿAmr al-Taghlibī (perhaps Hishām b. ʿAmr's brother) was governor of Sind and later of Ādharbaydjān.

Both Hishām and Bisṭām were no doubt Muslims. The summer expedition against Byzantium of 177/793 was led by ʿAbd al-Razzāḳ b. ʿAbd al-Ḥamīd al-Taghlibī (al-Ṭabarī, iii, 629) whose forces must have included many Muslims from his own tribe.

Later in the ʿAbbāsid period, the Taghlib became increasingly Muslim as well as more and more prominent in the government of their own territory. In 197/813 al-Amīn appointed al-Ḥasan b. ʿUmar b. al-Khaṭṭāb al-ʿAdawī (of the ʿAdī Taghlib) governor of al-Mawṣil. Al-Ḥasan took the old town of Adhrama from its owner, built in it a castle and fortified it.

In the 3rd/9th century there rose a powerful family in the Djazīra linked through marriage to that of the above-mentioned al-Ḥasan b. ʿUmar. Ṭawḳ b. Mālik (d. 216/831) of the ʿAttāb, who was a descendant of ʿAmr b. Kulthūm, officiated at the time of al-Maʾmūn as governor of Diyār Rabīʿa [*q.v.*] or the eastern Djazīra (in al-Muʿāfā b. Zakariyyāʾ, *al-Djalīs al-ṣāliḥ*, ed. al-Khūlī and I. ʿAbbās, Beirut 1407/1987 ff., iv, 100, instead of *al-d.bār*, read *al-Diyār*).

The former's son, the above-mentioned Mālik b. Ṭawḳ b. Mālik (d. 260/874; sometimes the sources confuse the two), was governor of Damascus and al-Urdunn under al-Wāthiḳ and al-Mutawakkil (*Mukhtaṣar taʾrīkh*

Dimashḳ li-Ibn ʿAsākir, ed. al-Naḥḥās *et alii*, Damascus 1404/1984 ff., xxiv, 50-4). More importantly, Mālik founded the town of al-Raḥba [*q.v.*] or Raḥbat Mālik b. Ṭawḳ (modern al-Mayādīn; cf. Th. Bianquis, *Raḥba et les tribus arabes avant les croisades*, in *BÉt. Or.*, xli-xlii [1989-90], 23-53, at 27-8). There is yet another case of building activity carried out by Taghlibīs in the same area. The offspring of Abū Rimtha al-Taghlibī (of the ʿAttāb, a descendant of ʿAbd Yasūʿ) settled in the ancient castle of Kafartūthā, fortified it and turned it into a *madīna* (*fa-maddanūhā*). In 261/874-5 Khiḍr b. Aḥmad al-Taghlibī was appointed by al-Muʿtamid governor of al-Mawṣil [see AL-MAWṢIL, vol. VI, at 900a].

The Ḥamdānids who in the 4th/10th century controlled both al-Mawṣil and Aleppo, were reportedly of the ʿAdī Taghlib. However, some claimed that they were *mawālī Taghlib* (cf. Canard, *H'amdanides*, 287-9). Further evidence on this matter goes back to al-Wazīr al-Maghribī, whose father and grandfather were secretaries of Sayf al-Dawla al-Ḥamdānī. Al-Wazīr remarks that one of those who were envious of the Ḥamdānids accused them of having made a false claim regarding their pedigree (*daʿwa*). This unspecified person said that they were in fact the *mawālī* of Isḥāḳ b. Ayyūb al-Taghlibī (on whom, see al-Ṭabarī, index). Al-Wazīr refutes this, and his defence of the Ḥamdānids seems to provide us with valuable evidence concerning a presumed major conversion to Islam among the Taghlib in the latter half of the 3rd/9th century: simply, al-Wazīr says, many of them converted to Islam "at the hands of" [see MAWLĀ, vol. VI, at 876a] Isḥāḳ (Ibn al-ʿAdīm, *Bughya*, vi, 527-9). Roughly in the same period, Mālik b. Ṭawḳ convinced al-Akhṭal's great-grandson, Sahl b. Bishr b. Mālik b. al-Akhṭal, to convert to Islam together with the rest of al-Akhṭal's offspring (*Mukhtaṣar taʾrīkh Dimashḳ*, xxiv, 52 (see AL-AKHṬAL, where it is wrongly stated that the famous poet left no offspring).

(M. Lecker)

TAGHRĪR (A.) a term of Islamic law normally meaning "deception". Its root is commonly used to refer to personal deceptive attributes of a person, while *maghrūr* is a person who is self-deceived and an inexperienced person is called *ghirr*. This perspective into the variety of the word's uses may help to distinguish it from *tadlīs* [*q.v.*], a word often used synonymously for deception in contracts.

The *Madjalla* [see MEDJELLE] encapsulates the Islamic legal definition of *taghrīr* (art. 164) to refer to deception (*ghishsh*). The example given is when the vendor offers the purchaser his commodity for a certain amount, telling him that he will be gaining, since it is worth more than that. The *Madjalla* permits a sale contract if it contains excessive undervaluing (*ghabn fāḥish*) providing it contains no deception (*taghrīr*). This clearly reflects a tendency towards a free market economy, which gives the vendor the right to sell at any price he sees fit. The exception to this rule is when the buyer is an orphan, or when the buying party is a religious endowment (*waḳf*), or the treasury which represents a public interest (art. 356). This provision has also been adopted by the Promulgated Civil Code of United Arab Emirates in article 191. By taking this view on *taghrīr*, the *Madjalla* follows the standard Ottoman Ḥanafī view which divides *taghrīr* into *ḳawlī*, verbal (see above), and *fiʿlī*, positive action of fraudulence, which takes place by deceiving the purchaser by misrepresenting the commodity's appearance or nature. The classical example of *taghrīr fiʿlī* is when a substandard part of the merchandise is placed below the good, giving the impression that the whole is good. *Taghrīr* can be seen as a prism that reflects the differences between the personal nature of *bayʿ* [*q.v.*] or sale in Muslim society and the formal nature of marriage [see SAWM]. *Taghrīr* in marriage is unlike *taghrīr* in *bayʿ* [*q.v.*] or sale because, once it has taken place, the contract may be terminated by either party, as it is not a matter of personal economic gain but rather involves a formal contract that is seen to affect society. Accordingly, if the man is led to believe that a woman is beautiful or a virgin when she is not, the contract can be nullified with *ghirra* compensation to be given by the person who caused such a deception, the *ghārr*. Similar rules apply to a woman deceived in marriage.

ṬĀGHŪT (A.).

1. In pre- and early Islamic usage.

The root *ṭ-gh-w* yields several forms with the general meaning of "to go beyond the measure, be very lofty, overflow, be tyrannical, rebellious, oppressive, proud, etc.", from which two may be noted here: *ṭaghw*, designating a height or mountain summit, and *ṭāghūt*, pl. *ṭawāghīt*, meaning the great pre-Islamic Arabian deities like al-Lāt at Ṭāʾif and al-ʿUzzā at Mecca. The term was then applied to Satan, sorcerer and rebel, and to any power opposed to that of Islam. One may also cite *ṭaghwa* "excess of injustice, impiety", as opposed to the *sharīʿa* and legitimate authority. This usage connects with usages and customs of various tribes in Yemen at variance with the *sharīʿa* (see further for this sense, below, 2.).

In the Ḳurʾān, *ṭāghūt* is considered as a plural when it denotes the idols (II, 256-7; V, 60; XVI, 36; XXXIX, 17) and as a singular when it is the equivalent of *shayṭān* [*q.v.*] (IV, 60, 67) or diviner and magician (IV, 51) with, however, a collective sense. The sing. ought to be *ṭaghw* which, according to al-Djawharī, ii, 620, means "mountain peak" and "any high place". Thus *ṭawāghīt* are the high places and sanctuaries taking their place there and the divinities worshipped there. But, by assimilation to the Aramaic root *ṭ-ʿ-w* (= Ar. *ṭ-gh-w*; *TʿA*, x, 225), found once in

the Bible (Ezek. xii. 10) and meaning essentially "to lead into error" (not to be confused with *ṭ-ʿ-y*, Ar. *ṭ-gh-y*; *TʿA*, x, 224), whose basic sense is "to be excessive in everything, be despotic", *ṭāghūt* designates, according to the exegetes and lexicographers, "everything which leads astray and turns aside from the cult of Allāh" (*ibid.*, x, 225). Cf. however, Eth. *ṭāʿōt* "idols", in Nöldeke, *Neue Beiträge zur semitischen Sprachwissenschaft*, 470, and see this also for *al-djibt* "idol, magician, impious person", named with *ṭāghūt* in Ḳurʾān, IV, 51, and *ʾamlak gebt*, θεὸς πρόσφατος. See on this W. Atallah, *Ǧibt et Ṭāġūt dans le Coran*, in *Arabica*, xvii (1970), 69-82.

In *Ḥadīth*, the epithet *ṭāghiya* is given to Dhu 'l-Khalaṣa, *ṭāghiyat Daws* (al-Bukhārī, *fitan*, 23), to Manāt (*ibid.*, *hadjdj*, 79, and Muslim, *hadjdj*, 261) and al-Lāt (Abū Dāwūd, *ṣalāt*, 12; Ibn Mādja, *masādjid*, 3). One tradition distinguishes between a simple idol (*wathan*, see ṢANAM) and a leading deity (*ṭāghiya*) (Ibn Ḥanbal, vi, 6, 366). Faith in Allāh presupposes the rejection of the cult of *ṭawāghīt* (al-Bukhārī, *adhān*, 129, *tawḥīd*, 24, *riḳāḳ*, 52; Muslim, *īmān*, 299; Ibn Ḥanbal, ii, 275, 293, 524; al-Dārimī, *waṣiyya*, 4) and refusal to resort to them for their arbitration (al-Bukhārī, *īmān*, 5; Muslim, *īmān*, 6; al-Nasāʾī, *īmān*, 10; Ibn Mādja, *kaffārāt*, 2; Ibn Ḥanbal, v, 62).

The cult of the *ṭawāghīt*, largely similar to that of the Kaʿba, was made up of worshipping stones, bloody sacrifices and ritual processions (Ibn Hishām, *Sīra*, 54-5). In origin, it must have had in it various, complementary divine mythologies, given shape in different rituals, whose fusion into two rituals, that of the *hadjdj* on one hand and that of the *ʿumra* on the other, makes these last two incomprehensible through their composite and fragmentary character.

The hegemony of Mecca ended the ancient rivalry of the cults outside that of the Kaʿba. An example of resistance to that hegemony has been studied by Iḥsān ʿAbbās in his *Two unpublished texts on pre-Islamic religion*, in *Signification du bas moyen âge dans l'histoire et la culture du monde musulman*, Aix-en-Provence 1987, 7-16.

Bibliography: The core of this article is to be found in T. Fahd, *Le panthéon de l'Arabie Centrale à la veille de l'hégire*, Paris 1968, 240. See, especially, H. Lammens, *Les sanctuaires préislamites dans l'Arabie Occidentale*, in *MUSJ*, xi (1926), 39-169; M. Gaudefroy-Demombynes, *Mahomet, l'homme et son message*, Paris 1957, 548 (he was hoping, in vain, that excavations carried out at Masdjid al-Khayf (see Yāḳūt, i, 507-8) and at Minā would reveal the foundations of ancient temples). (T. FAHD)

2. As a legal term in Yemen.

Here, the term was commonly used by the learned to refer to the customary law of the tribes, e.g. al-Shawkānī, 73-4 (18th century), Sayyid Muṣṭafā Sālim, 209 (decree of the Imām Yaḥyā issued in 1910). This usage was apparently also known elsewhere in Arabia (Rossi, 11; Serjeant, *Studies*, no. III, 41). For the learned, the term was one of opprobrium; but it has been implied that some tribespeople in their ordinary speech employed the word *ṭāghūt* to refer to the customary law, presumably without opprobrium, and furthermore that the word was used to refer to the arbitrator in customary law not only in Yemen (Landberg, *Daṯînah*, 815n.; Serjeant, *Customary and shariʿah law*, no. III, 45) but also (opprobriously) in Saudi Arabia (al-ʿAzzāwī, i, 403). More certainly, colloquial terms that can be used to refer to tribal law include *ʿurf* or *aʿrāf al-ḳabāʾil*; *sunna*; *sharʿ*; *shurūʿ al-ḳabāʾil al-sābiḳa*; *silf (al-ḳabāʾil)*; *salaf* and *aḥkām al-aslāf*; and in the south, *sibl* "custom", *sawābil* "precedents", and perhaps *sāriḥa*.

The word *manʿ(a)* is used in literary sources to refer to the customary law, and *ḥukm al-manʿ* and *sharʿ al-manʿ* are also attested in the colloquial (Obermeyer, 367). The term probably came into use because much of the law is concerned with the protection (*manʿ*, cf. Landberg, *Glossaire*, s.v.; Adra, 164-5) of those to whom the tribesman has special obligations, e.g. the *djār* or *manīʿ* "one who seeks refuge" and the *rafīḳ* "travelling companion". Educated Yemenis are reported to have distinguished between *sharʿ al-manʿ*, customary tribal law that was compatible with the *sharīʿa* even though not part of it, and *ṭāghūt*, customary tribal law that was in contradiction to the *sharīʿa*.

The belief that the *al-manʿ* is consistent with the *sharīʿa* is expressed in more than one Yemenite treatise concerning the *manʿ* (Rossi, 33; Serjeant, *Materials*, 591). No doubt it was this belief that allowed learned men to write what were in effect brief codes of customary law. Several works of this kind—the oldest dating back several hundred years—are to be found among the mss. bequeathed by R.B. Serjeant to the library of the University of Edinburgh. Rossi, 18-29, offers an invaluable summary of two of these treatises. Another code of the *manʿ*, entitled *Ḳāʿidat al-sabʿīn*, has been published in the form of a photocopy of a damaged and incomplete manuscript (Abū Ghānim, 361-84).

Codes of customary law, which must often have included matter incompatible with the *sharīʿa*, were also sometimes produced at the behest of the tribesmen themselves. Those found in the possession of such codes were severely punished by the government of the Imām Yaḥyā (1904-48). Nevertheless, some have survived. One such, from an area not controlled by the Imām Yaḥyā, is the *sharʿ* agreed upon between the Sultan and the tribesmen of the ʿAwdhalī sultanate; it was published in a "free translation" by R.B. Serjeant (Naval Intelligence Division, *Western Arabia and the Red Sea*, 587-9; Serjeant, *Customary and shariʿah law*, no. IV, 91). Another is a code agreed on in the 18th century by the tribes of the Baraṭ area (text with commentary in ʿUlaymī, 118-41; a modern ms. of a fuller version is photographically reproduced in Abū Ghānim, 387-400; see also Dresch, 73 n. 23, 352).

The laws of the Yemeni tribes resemble in their main features the laws of the tribal Arabs of other parts of Arabia and the Fertile Crescent. See further ʿURF.

ṬĀHĀ, ʿALĪ MAḤMŪD (1902-49), Egyptian poet, very popular in the 1930s and 1940s. He was born into a well-to-do family in al-Manṣūra and educated there at a technical school, the *Madrasat al-Funūn wa 'l-Ṣanāʾiʿ*. After he graduated in 1924, he became a government employee as an architect. He began writing poetry in 1918 and made the acquaintance of the town's poets, later to earn fame like him, such as Ibrāhīm Nādjī [*q.v.*], Muḥammad ʿAbd al-Muʿṭī al-Hamsharī and Ṣāliḥ Djawdat. He published his poems in Egyptian periodicals, including *al-Risāla* and *Apollo* of Cairo. In the 1930s, he moved to Cairo, where he held posts at the Ministry of Commerce and in the Secretariat of the Egyptian parliament, and joined the Apollo Group of poets. His first collection of poetry, *al-Mallāḥ al-tāʾih*, appeared in Cairo in 1934 and received immediate acclaim. Following a first summer visit to Europe in 1938 and a second in 1939, he published *Layālī 'l-mallāḥ al-tāʾih* in 1940, mostly reflecting his frolicking and amatory exploits in Europe, including a gondola tour in Venice during a carnival described in his poem "Ughniyat al-Djundūl", which was set to music and sung by Muḥammad ʿAbd al-Wahhāb, adding to his popularity.

Ṭāhā published five other books of poetry and a book of essays and of translated English and French verse. His wide popularity rested on his first two books and a few poems from the others, and was basically engendered by his Romantic view of life and hedonistic love relations, his strong nationalist feeling, and his alluring musical use of polished Arabic in his poems. His popularity faded after mid-century with the rise of the free verse movement and changes in Arab poetic sensibility.

(I.J. Boullata)

ṬĀHĀ ḤUSAYN (1889-1973): Egyptian critic, essayist, novelist, short story writer, historian, literary and political journalist, translator, editor, publisher and educator.

(1) *His formation*.

He was born in ʿIzbat al-Kīlū near Maghāgha in the governorate of Minyā, the seventh of thirteen children in a family of modest condition. At the age of two, he lost his eyesight. Local educational resources equipped him with little more than the memorisation of the Ḳurʾān. In 1902 he was sent to al-Azhar University under the care of an elder brother who was a disciple of its rector, Muḥammad ʿAbduh [*q.v.*]. Ṭāhā heard the reformer's last two lectures and attended the literature courses of one of his protégés, al-Sayyid al-Marṣafī (d. 1931); but he antagonised the conservative professors, and in 1912 he was denied a degree. He had, however, already transferred his loyalty to the modern Egyptian University (later renamed Fuʾād I, then Cairo University) from its inception, greatly admiring its Orientalist professors, especially Carlo Alfonso Nallino; and on presenting a doctoral dissertation on al-Maʿarrī [*q.v.*] in 1914, he became its first graduate.

A scholarship to the University of Paris at the Sorbonne brought him under the influence of such scholars as Gustave Lanson, but his doctoral work was on Ibn Khaldūn [*q.v.*]. He graduated in 1918 and obtained the *Doctorat d'État* in 1919. He also married the French lady who had been his reader.

Since early in his student-days, he had made his mark as a sharp contributor to the press on literary and social issues, and was particularly associated with the circle of Aḥmad Luṭfī al-Sayyid [*q.v.*]. Now, enamoured both with classical Arabic literature and with all aspects of French culture, he was soon to emerge as a leading modernist who held that the application of Western standards to the Arab-Islamic heritage was a process not of innovation but of renovation, sometimes even arguing—perhaps reflecting Duhamel—that Egypt had always been not an Oriental but a Mediterranean country. A bold and hard-hitting polemicist, he was often to be at odds with both the political and the religious establishments, as well as with some of his fellow-writers.

(2) *His public career*.

On his return from France, his *alma mater* appointed him first Professor of Ancient History in 1919, then of Arabic Literature in 1925. The following year, however, his *Fī 'l-shiʿr al-djāhilī* "On pre-Islamic poetry", which argued that the bulk of this highly-prized corpus had been forged, roused fierce controversy, especially as it adduced religious considerations among the motives for the fraud. He was accused—but not convicted—of heresy, and the book was banned, only to reappear in superficially emended form and under a slightly altered title.

The University, headed by Aḥmad Luṭfī al-Sayyid stood by him, and in 1930 he was the first Egyptian to become Dean of its Faculty of Arts; but it was now a State institution, and in 1932 his political writings led to a revival of the controversy and his dismissal from all government service. He did later hold a variety of educational posts, but he lived largely by his pen. Between 1945 and 1948 he was a very active director of a publishing house and of its journal, both called *al-Kātib al-Miṣrī* "The Egyptian Scribe". He was at the time viewed as vaguely "leftist" because of the stress he laid on the plight of the poor, but his creed was a paternalistic one, relying on the good will of a liberal élite for the realisation of social justice, as was confirmed in his later polemic against the doctrinnaire socialists of the middle 1950s.

He reached the peak of his career as Minister of Education in the last Wafdist Cabinet, which lasted two years from January 1950. In this capacity, he not only gave effect to the policy he had long advocated of abolishing fees in State schools but also did much to extend higher education and cultural representation abroad.

He remained active in journalism until the middle 1960s; and despite ill-health, he was faithful to the end to the concerns of the Academy of the Arabic

Language, to the presidency of which he had succeeded Aḥmad Luṭfī al-Sayyid in 1963.

(3) *His writings.*

In common with many intellectuals of his generation, Ṭāhā Ḥusayn wrote profusely and on a wide variety of subjects. He is credited with 1,481 articles and 61 volumes of original writings (not a few of which are collected articles). In addition, he edited eight texts, translated eleven books and thirty articles, contributed substantially to twenty-one other books, and wrote introductions to another thirty-six.

In his youth, he wrote some poetry which he later discounted. On the other hand, not a small contributor to his popularity was his prose style, for he was a master of the classical language and a defender of its purity, while adapting it to new purposes with a deceptive suppleness and fluency.

It was as a critic that he was most celebrated, for he produced some major studies and a multitude of articles covering virtually every period and most major aspects of classical and modern Arabic literature, excluding only folk compositions, for he considered the colloquial forms of the language as corruptions unworthy of artistic recognition. His aesthetic creed was never systematically expounded, but the progress of his thinking can be traced from the early studies, which claimed scientific rigour and ascribed to social and psychological factors considerable deterministic power, leading to an eventual recognition of the critics's complete subjectivity. And in this respect, Ṭāhā Ḥusayn was decidedly romantic, prizing the evocation of emotion as the supreme touchstone of literary worth.

He broke into the narrative field by retelling tales from early Islamic sources, but not without planting into them some modernistic seeds, and later wrote short stories and sketches mainly bearing on contemporary social ills. A more signal achievement was the first volume of his fictionalised autobiography, *al-Ayyām* "The Days", serialised in *al-Hilāl* "The Crescent" in 1926-7. This was the first modern Arabic literary work to receive international recognition, being translated into a number of foreign languages. He followed this up between 1935 and 1944, with six novels, and started another in 1946, *Mā warā' al-nahr* "Beyond the river", which was published posthumously in its incomplete form. Although he was not at his best in sustaining a well-integrated plot, he was characteristically bold in his choice of themes, *Du'ā' al-karawān* "The call of the [mythical bird] Karawān", being a rare attempt at dealing with the code of honour that requires the slaughtering of a woman who offends against sexual mores, and *Aḥlām S̲h̲ahrazād* "The dreams of Scheherezade", being an early exploitation of the *Arabian Nights* to convey a political message.

His output includes substantial historical studies of the first four caliphs and a slighter but revealing early work, *Ḳādat al-fikr* "Leaders of thought", which celebrates the ascendancy of the Western over the Oriental mind.

Finally, in his lesser writings and his translations— which give a good deal of attention to the theatre— one may detect an effort to fill gaps in the Arab literary experience and in his own creative work.

(4) *His standing.*

He was a charismatic figure in his own time, his bold initiatives at the cutting edge of intellectual progress earning him the unofficial title of Dean of Arabic Letters. The next generation—more self-assertive towards the West, more rigorous in its critical perceptions and imbued with socialist doctrines— has been somewhat less appreciative of his attainments, though they had opened the way to further development.

Under the Egyptian monarchy, he was awarded the title of Bey, then that of Pas̲h̲a. The Republic, having abolished titles, awarded him the Order of the Nile in 1965. Internationally, he received countless honorary doctorates and the French Légion d'Honneur. In 1949, mainly on the initiative of André Gide, he was nominated for the Nobel Prize. Finally, the United Nations' Rights of Man prize was delivered to him on his deathbed.

ṬĀHĀ, MAḤMŪD MUḤAMMAD, free-thinking Islamic reform theorist, founder and spiritual leader of the religio-political lay movement al-Ik̲h̲wān al-D̲j̲umhūriyyūn in Sudan. Born about 1909 in Rufā'a on the Blue Nile, he grew up in a traditionally mystic-religious environment. Following graduation as a hydraulics engineer in 1936 from the Gordon Memorial College in al-K̲h̲urṭūm (Khartoum) [*q.v.*], Ṭāhā worked until 1941 for the Sudan Railway Company in 'Aṭbara.

Ṭāhā's thinking was clearly formed by both the religious nature of his home background and the intellectual confrontation with European thinking at the British colonial college and in 'Aṭbara. In addition to the traditional literature of his Islamic heritage, particularly al-G̲h̲azālī, Ibn al-'Arabī and al-Ḥallād̲j̲, he also read sociological texts by Benjamin Kid, Auguste Comte and Herbert Spencer, as well as works by European philosophers of the schools of enlightenment, logic and dialectic, from Hegel to Marx and his successors.

Since the beginning of the Sudanese nationalist movement in the 1930s, Ṭāhā played an active part in fighting for Sudanese independence. However, his objective was neither Sudan under British rule, as advocated by the Umma Party, nor administrative and political unity with Egypt, as advocated by the As̲h̲ikkā' Party, so that together with a few other intellectuals, he founded his own party in 1945, al-Ḥizb al-D̲j̲umhūrī, and became party chairman. The objective of this party was an independent, federal republic of Sudan, where "democratic socialism" would guarantee individual freedom and perfect social justice.

In 1946, an anti-British leaflet brought Ṭāhā into prison for the first time, accused of anti-government propaganda. Released prematurely after 50 days, he was arrested again during the same year and sentenced to two years' imprisonment for public incitement and sedition, after preaching a sermon to the population of Rufā'a in which he incited them to use violence to free a woman from prison who had had her daughter circumcised. His followers, the D̲j̲umhūriyyūn, see this event as the turning point in their history.

During his imprisonment and subsequent two-year period of voluntary isolation, *k̲h̲alwa*, Ṭāhā subjected

himself to stringent Ṣūfī practices of fasting, prayer and meditation, re-appearing in public in 1951 with a new understanding of Islam instead of a political programme. Since recommencing their activities in 1951, the Djumhūriyyūn considered themselves to be more an instructive movement spreading an anti-legalistic, humanitarian understanding of Islam, rather than a political party. After the ban on parties following the bloodless coup of Djaʿfar al-Numayrī in 1968, they changed their name to al-Ikhwān al-Djumhūriyyūn. They nevertheless retained their political objectives, integrating them in their purely Islamic ideological approach. They propagated their views in lectures, public discussions, newspaper articles and publications of their own.

The core of Ṭāhā's teaching—the result of divine inspiration received during personal worship, according to Ṭāhā—is the opinion that the Ḳur'ān contains two main messages. The first, reversing the revelation chronology, consists of the laws of Medina (*furūʿ*), which is the foundation among others for the traditional *sharīʿa*. By contrast, the second message, proclaimed in Mecca, contains the basic spiritual principles (*uṣūl*) of the Islamic religion: individual liberty and religious freedom, equality regardless of sex, race or religion, and equal rights to property (i.e. socialism). Ṭāhā taught that the first message had only limited validity for the Islamic society in its status during the 1st/7th century, and should be replaced today by abrogation, *naskh* [*q.v.*], by the second, eternally valid message, in order to create forms of Islamic living and society which are in line with the changed realities of the 20th century. In this context, the focal demands of the Djumhūriyyūn were for an individual, spiritualised religion, together with further development of the *sharīʿa* to assume ethical dimensions.

Since the 1960s, Ṭāhā's reforms have repeatedly met with protest and resistance from the institutional orthodox Islamic religion in Sudan and on an international dimension, and from the Sudanese Ikhwān al-Muslimūn, who are based on implementing the *sharīʿa* as focal aspect of their ideology and as legitimation of their claims to political power. Ṭāhā was twice accused of committing apostasy: in 1968 without legal consequences, then in 1985 the proceedings were followed by his execution on 18 January, 1985, with posthumous annulment of the sentence because of numerous discrepancies. On the death of their leader, the Djumhūriyyūn ceased all public involvement.

Bibliography: The main titles of Ṭāhā's extensive works, most of which have disappeared from the market through being banned and destroyed, include: *al-Risāla al-thāniya min al-Islām*, Umm Durman 1967, Eng. tr. with introd. by Abdullahi Ahmed an-Na'im, *The Second Message of Islam*, Syracuse-New York 1987; *Ṭarīḳ Muḥammad*, Umm Durman 1966; and *Risālat al-Ṣalāt*, Umm Durman 1966. (Annette Oevermann)

TAHADJDJUD (a.), verbal noun of form V from the root *h-dj-d*, which is one of the roots with opposed meanings (*aḍdād* [*q.v.*]), as it signifies "sleep" and also "to be awake", "to keep a vigil", "to perform the night *ṣalāt* or the nightly recitation of the Ḳur'ān". The latter two meanings have become the usual ones in Islam. The word occurs only once in the Ḳur'ān, sūra XVII, 81: "And in a part of the night, perform a *ṣalāt* as a voluntary effort", etc., but the thing itself is often referred to. We are told of the pious (LI, 17) that they sleep little by night and pray to God for forgiveness at dawn. In XXV, 65, there is a reference to those who spend the night prostrating themselves and standing before their Lord.

From the Ḳur'ān it may be deduced that the old practice in Mecca was to observe two *ṣalāts*, one by day and one by night (XVII, 80-1); LXXVI, 25: "And mention the name of thy Lord in the morning and in the evening [26] and in the night prostrate thyself before Him and praise Him the livelong night"; XI, 116: "And perform the *ṣalāt* at both ends of the day and in the last part of the night". Tradition is able to tell us that for a shorter or longer period (mention is actually made of a "period of ten years", al-Ṭabarī, *Tafsīr*, XXIX, 68), vigils were so ardently observed that Muḥammad and his companions began to suffer from swollen feet. The old practice is said to be based on LXXIII, 1. "O thou enfolded one, 2. stand up during the night, except a small portion of it, 3. the half or rather less, 4. or rather more and recite the Ḳur'ān with accuracy"; but its origin cannot be dissociated from the example of Christian ascetics. In the end, however, this form of asceticism became too much for Muḥammad's companions. The revelation of LXXIII, 20 ff., brought an alleviation: "See, thy Lord knoweth that thou standest praying about two-thirds, or the half or a third of the night, thou and a part of thy companions. But God measureth the night and the day; he knoweth that ye are not able for this; therefore he turneth mercifully to you with permission to recite as much of the Ḳur'ān as is convenient for you". By the institution of the five daily *ṣalāts*, the obligatory character of the *tahadjdjud* was then abolished (cf. Abū Dāwūd, *Taṭawwuʿ*, *bāb* 17, and al-Bayḍāwī on LXXIII, 20).

Nevertheless, Muḥammad is said not to have abandoned the vigils (Abū Dāwūd, *Taṭawwuʿ*, *bāb* 18b); in *ḥadīth* and *fiḳh* this is considered blameworthy for those who were wont to perform these *ṣalāts* (Muslim, *Ṣiyām*, trad. 185; al-Nasā'ī, *Ḳiyām al-layl*, *bāb* 59; al-Bādjūrī, *Ḥāshiya*, i, 165). The performance is in general regarded as *sunna*. David is said to have spent a third of the night in these exercises (Muslim, *Ṣiyām*, trad. 189; Abū Dāwūd, *Ṣawm*, *bāb* 67); another reason given in justification of it is that the *tahadjdjud* loosens one of the knots which Satan ties in the hair of a sleeper (Abū Dāwūd, *Taṭawwuʿ*, *bāb* 18). The *tahadjdjud* is particularly meritorious in Ramaḍān and in the night before each of the two feasts (Ibn Mādja, *Ṣiyām*, *bāb* 68: al-Nasā'ī, *Ḳiyām al-layl*, *bāb* 17, where the term *iḥyā' al-layl* is used [see also TARĀWĪḤ]).

Even at the present day, the *mu'adhdhin* in some lands summons to a night *ṣalāt* (consisting of an even number of *rakʿa*s and therefore called *shafʿ*; see WITR) shortly after midnight by an *adhān* to which special formulae are added (Lane, *Manners and customs*, ch. iii "Religion and Laws"; cf. Snouck Hurgronje, *Mekka*; Juynboll, *Handleiding*, 74).

al-TAHĀNAWĪ, Muḥammad Aʿlā ('Alā' or 'Alī are not correct) b. *shaykh* 'Alī b. *ḳāḍī* Muḥammad Ḥāmid b. Mawlānā *atkā 'l-ʿulamā'* Muḥammad Ṣābir al-Fārūḳī al-Sunnī al-Ḥanafī al-Tahānawī, originating from Tohāna, a place at about 170 km/105 miles to the northwest of Dihlī, philologist, especially lexicologist, and *ḳāḍī*. The years of his birth and death are unknown; we only know that he finished the draft of his main work, *Kashshāf*, in the year 1158/1745. His tomb in his native town is visited until today, including with the purpose to spend in his presence days and even weeks in studying scholarly works, in the expectation to be enlightened by the *shaykh*.

Among the three works which have come down to us, is the well-known and often quoted large *Kashshāf iṣṭilāḥāt al-funūn*, a thesaurus of technical terms compiled from good sources. Because of the numerous interpolations and parts in Persian, this extensive work has proved its value for the study of Islamic scholasticism, especially in India. Under the superintendence of Aloys Sprenger and William Nassau Lees, and by order of the Asiatic Society, Bengal, the work was published in altogether 17 fascicules from 1848 onwards) by the Mawlawīs Moḥammad Wajíh, 'Abd al-Ḥaqq and Gholám K/Qádir, Calcutta 1862, 2 vols., the English title being *A dictionary of the technical terms used in the sciences of the Musalmans* (Bibliotheca Indica). In an Appendix, which had already been issued in 1854, Sprenger published the compendium of Nadjm al-Dīn al-Kātibī's *Logic*, called *al-Risāla al-Shamsiyya fi 'l-ḳawāʿid al-manṭiḳiyya*, popular in India and repeatedly published [see al-kātibī, nadjm al-dīn], together with an English translation, *The logic of the Arabians* (cf. C. Ralfs, in *ZDMG*, ix [1855], 868 f.). The edition of the *Kashshāf* (*Kashf* is incorrect) is based on two manuscripts, which were both copied from one and the same of the three autographs of the author which are available. A first, substantial, part was printed anew in Istanbul 1317-18/1899-1900. There is a new edition in four small volumes: i-iv ed. Luṭfī 'Abd al-Badīʿ, the Persian sections having been translated into Arabic by Amīn al-Naʿīm Muḥammad Ḥasanayn, and i-ii revised by Amīn al-Khūlī, Cairo 1382/1963, 1969, 1972 and 1977. The editor starts from the author's draft, with its corrections and additions, always taking the two prints into consideration. Most recently, a new edition by Rafīḳ al-ʿAdjam has appeared, 2 vols. Beirut 1996.

Of the second work, *Aḥkām al-arāḍī*, a treatise on the principles of the *sharʿ* regarding the ownership and taxation of the land, with special reference to India (some parts are explained in Persian), there is a manuscript in the Library of the India Office, London (R. Levy, *Catalogue*, ii, 3 [Fiqh], London 1937, no. 1730).—What exactly is hidden behind the title of the third work, *Sabḳ al-ghāyāt fī nasḳ al-āyāt*, which could not be traced, remains uncertain. According to Sarkīs, *Muʿdjam al-maṭbūʿāt*, i, 645, it was printed in 1316/1898 in India (Hind).

(R. Sellheim)

TAḤANNUTH (a.), verbal noun, and *taḥannatha*, verb, are words found in some of the accounts of Muḥammad's first prophetic experience. Already in the earliest texts which are available to us, they are accompanied by variant interpretative glosses and explanations, and their significance has been debated in both traditional and modern scholarship.

In Ibn Hishām's *Sīra* (151-2), Ibn Isḥāḳ reports that Muḥammad used to spend one month each year making *djiwār* [*q.v.*] at Ḥirā'—"that was a part of the *taḥannuth* of Ḳuraysh (*mimmā taḥannatha bihi Ḳuraysh*) in the *Djāhiliyya*". *Taḥannuth* is immediately glossed as *tabarrur* ("abstaining from sin"?): *wa 'l-taḥannuth al-tabarrur*. Ibn Hishām then intervenes in the text to explain that "the Arabs" customarily pronounced *f* as *th* and that *taḥannuth*, therefore, is the same as *taḥannuf*. Thus he links the expression with the pristine monotheism of the Ḥanīfs [*q.v.*] and the religion of Abraham. Another report in the *Sīra* (151), which does not use either the verb or the noun, tells us that as part of his preparation for prophethood Muḥammad had been caused by God to love solitude. In Ibn Saʿd's version (i/1, 129) the report goes on to say that he would go alone to the cave of Ḥirā' where he would make *taḥannuth* (*yataḥannathu fīhi*) on certain nights (*al-layālī dhawāt al-ʿadad*) and then would go back to Khadīdja to obtain provisions for a similar period (*li-mithlihā*). It was while he was in the cave doing this that the revelation came to him. In some of al-Bukhārī's versions of the tradition (see A.J. Wensinck *et alii*, *Concordance*, s.v. *taḥannatha* for references), *taḥannuth* is glossed by *taʿabbud* ("devoting oneself to the worship of God").

Other and later traditionists and commentators provide further interpretative additions. The most extensive survey of the material was made by M.J. Kister ("*Al-taḥannuth*: an enquiry into the meaning of a term", in *BSOAS*, xxxi [1968], 223-36). As well as with *tabarrur* and *taʿabbud*, *taḥannuth* was equated with such things as *tafakkur* (meditation), *taḥawwub* (abstaining from sin), and *taʾalluh* (devotion to God). Solitude, (religious) retreat and withdrawal, devotional practices, gazing towards the Kaʿba, and feeding the poor are also mentioned. Since this was before the revelation made to the Prophet, speculation involved the question which body of law (*sharīʿa*) he followed at the time. *Taḥannuth* is said to have been practised also by other individuals: Khālid b. al-Ḥārith of Kināna, the Ḥanīf Zayd b. 'Amr, Ḥakīm b. Ḥizām and others. The traditions about these individuals supply further material for speculation regarding the content of *taḥannuth*.

After his survey of traditional and modern scholarship, Kister concluded that *taḥannuth* was indeed an ancient custom of Ḳuraysh and that essentially it consisted of veneration of the Kaʿba and works of charity while being withdrawn on Mount Ḥirā'. Others, such as Caetani (*Annali*, i, 222, "Introduzione", section 208, n. 2), have suspected that the word was not used in Mecca in the time of the Prophet. N. Calder has argued that the word reflects the ideas and practices of the 2nd century A.H. ("*Ḥinth, birr, tabarrur, taḥannuth*: an inquiry into the Arabic vocabulary of vows", in

BSOAS, li [1988], 214-39). He has suggested that *taḥannuth* refers to the condition which, in *fiḳh*, one assumes by making a binding vow—one becomes "liable" (*ḥānith*) to fulfil the vow. (*Ḥanīth* also means "breaking a vow" and *ḥinth* means "perjury".) In the traditions about the Prophet, the word would reflect the idea that he had made a vow to enter a period of retreat (*iʿtikāf* [*q.v.*]), a practice of early Muslim times which was becoming less widespread as a result of juristic disapproval of asceticism. It was because the practice was in decline that the word was such a puzzle for later generations.

H. Hirschfeld (*New researches into the composition and exegesis of the Qoran*, London 1902, 19, n. 94), saw *taḥannuth*, not as a genuine Arabic noun form, but as an arabisation of Hebrew *tʿḥinnōth* "prayers or voluntary devotions apart from the official liturgy". His suggestion was rejected by S.D. Goitein (*Studies in Islamic history and institutions*, Leiden 1966, 93, n. 2) on the grounds that that plural form is known in Hebrew with that technical sense only at a significantly later time (Goitein did not adduce his evidence). It may be noted, however, that the hithpael form of the Hebrew verb *ḥānan* with the meaning "to seek favour" (frequently, but not exclusively, from God), and the noun form *tʿḥinnā* with the meaning "supplication" or "cry for favour" is relatively well attested in the Hebrew Bible and at Qumran (G.J. Botterwick and H. Ringgren (eds.), *Theological dictionary of the Old Testament*, Eng. tr., Grand Rapids, Michigan 1986, v, 22 ff.).

Bibliography: Given in the article.

(G.R. Hawting)

ṬAHĀRA (A.), a *maṣdar* signifying cleanliness or freedom from disgusting matter. Some dictionaries suggest as a fundamental meaning the notion of cleanliness (e.g. Abu 'l-Baḳāʾ, *al-Kulliyyāt*, iii, 154) but the existence of the word in Syriac and Hebrew with a ritual meaning suggests that from its first usage in the Ḳurʾān it is a technical term (perhaps for the cleansing of menstrual blood flow; *LʿA*, iv, 505, s.v. *ṭ-h-r*, quoting Ibn ʿAbbās). The root may perhaps have to do with distinction, setting aside through cleansing (e.g. Ḳurʾān, III, 42).

Ṭahāra is the rubric under which ritual order and purity are discussed in manuals of *fiḳh*. The word itself seems to have two aspects: material and formal. The material one would encompass foods and other substances to be avoided or removed—e.g. pork, faeces, blood, carcasses—and the means of their removal—the number of washings, the characteristics of the water used in washing, and the like.

In general, substances connected with death, most—but not all—substances from within the body—blood, urine, semen, etc.—items associated with carrion or inedible animals—dogs, or pigs, for instances—must be avoided, and if they cannot be avoided, they must be removed in an appropriate manner [see NADJAS]. To reinstate *ṭahāra*, the test of whether something has been successfully removed is its imperceptibility in taste, smell or colour.

Formal aspects of *ṭahāra* concern the fitness of persons to carry out ritual practices and duties. Menstruation (*ḥayḍ*) and childbirth (*nifās*), sexual excitement and consummation, defecation and urination, and various sorts of loss of control—sleep while reclining, according to some, quarrelling, violent laughter, etc.—require appropriate ritual cleansings—ablution (*wuḍūʾ* [*q.v.*]) for "minor or transient events" (*ḥadath* [*q.v.*])—urination, defecation, breaking wind—the more total lustration (*ghusl* [*q.v.*]) for events that preclude one from religious community (*djanāba* [*q.v.*]), such as sexual activity or menstruation. Despite the claims of certain apologists, the issue here is not cleanliness in the hygienic sense but in the formal and ritual sense.

Madhhab differences are too various to be detailed here. In general, however, Imāmī and Zaydī purity rules are more rigorous and they are more likely to see the *nadjas* thing or *djunub* person as contiguously impure. The Shīʿīs likewise refuse to accept *kitābīs* as butchers and food providers.

(A.K. Reinhart)

TĀHART (or Tīhart, Tāhert) known as al-Ḥadītha (the New), as opposed to al-Ḳadīma (the Old), situated 9 km/5 miles to the north-east, becoming Tagdemt in Berber, the ancient Tingartia, a town of Algeria, founded by the Rustamids [*q.v.*]—according to a custom frequent in the mediaeval Muslim world—and capital of their kingdom. In Berber, Tāhart is said to signify "lioness" or "tambourine" (*daff*), taking the word in its first signification a reference to its location: a wooded plateau formerly inhabited by wild beasts which had, mysteriously, abandoned the place, a miracle borrowed from the foundation of Kairouan or Ḳayrawān [*q.v.*].

The beginnings of Tāhart were modest. The anecdote which tells of the founding Imām busily engaged in building his house with the aid of a slave, even if false—which is not necessarily the case—reveals the initial puritanism and principled egalitarianism of the Ibāḍīs [see IBĀḌIYYA]. In their choice of site, the Rustamids were guided by several considerations: the region was populated by tribes—Lamāya, Lawāta, Hawwāra, Maghīla, Zuwāgha, Maṭmāṭa and Miknāsa Zanāta—committed to Ibāḍism; the site benefited by the proximity of an existing ancient urban centre, with fortifications which often provided refuge during the disorders which affected New Tāhart; water was abundant there, channelled towards homes and orchards, and the soil fertile; finally, and perhaps

decisively, the land "belonged to the defenceless people (*li-ḳawm mustaḍʿafīn*) of the Marāsa" (al-Bakrī, *Masālik*, ed. A. Leuven and A. Ferré, Tunis 1992, ii, 736). Construction of the town was, however, a laborious business: everything built by the founders during the daytime was destroyed at night. A compromise was eventually found when the ancient proprietors, the Lamāya, were offered a share of the *kharādj*.

According to the anonymous author of the *K. al-Istibṣār* (ed. Saʿd Zaghlūl ʿAbd al-Ḥamīd, Alexandria 1958, 178) the town was initially a rectangle of approximately 1,100 m by 800 m, traversed from east to west by a long thoroughfare—*cardo maximus*?—and enclosed within a perimeter wall of stone, breached by four gates at the four cardinal points, creating a chequered layout irresistibly reminiscent of Roman urban planning, the "islands" (*insulae*) thus constituted being distributed according to ethnic groups. In fact, all the contemporary geographers stress the segregation of the population of Tāhart by tribal or regional origin.

The town, which was financially supported at the outset by the Ibāḍī community of Baṣra, grew very rapidly, to such an extent that within a short space of time it became literally unrecognisable. The Baṣran benefactors failed to recognise the place on their second visit and were obliged, allegedly, to return home with their donations intact. Tāhart soon became a powerful magnet for people and an important commercial centre. For the indigenous population, it played an important role in terms of sedentarisation, and its magnetic appeal extended as far as the Orient; so much so that it was dubbed "the ʿIrāḳ of the Maghrib" (al-Yaʿḳūbī (d. *ca.* 284/897), *Buldān*, tr. G. Wiet, *Les Pays*, Cairo 1937, 217).

Towards the end of the Rustamid dynasty, the town had completely changed its appearance, exchanging its initial puritanism and simplicity for hedonism and opulence. Although still dominant, Ibāḍism ceased to be the faith of the majority. The town became affluent and elegant: twelve *ḥammāms*, numerous *sūḳs*, parks and gardens, sumptuous residences etc. "Highways connected it to the Sūdān and to all the lands of East and West for the purposes of trade and the exchange of all kinds of commodities" (Ibn al-Ṣaghīr, *Akhbār al-aʾimma al-rustamiyyīn*, in *CT*, xci-xcii [1975], 325). The road from the Sūdān was the source of gold and of slaves, which accounts for the particular interest taken in it: the Imām Aflaḥ (208-58/824-72) had sent an ambassador to the king of Sūdān with lavish gifts (*ibid.*, 340). Jews, subsequently established in Kairouan, were actively engaged in commerce (S.D. Goitein, *A Mediterranean society*, Berkeley, etc., i, 1967, iii, 1978; idem, *Letters of medieval Jewish traders*, Princeton 1974, index, s.v. Taherti). Wealthy merchants flaunted their riches ostentatiously and were accompanied in their travels by considerable entourages, composed principally of slaves. Predictably, cosmopolitanism and affluence encouraged moral laxity. "The town was corrupted (*fasadat*), as were its inhabitants", notes Ibn al-Ṣaghīr (*op. cit.*, 363), citing as evidence the consumption of intoxicating liquor (*al-muskir*), and pederasty (*ghilmān*). Abū Ḥātim (281-2/894-5) reacted vigorously, but not for long; it was in fact his rigorous moral stance which led to his deposition. As to whether he was equally intransigent during his second reign (286-94/897-907), the sources are eloquently silent. The end of the dynasty was approaching, and it was soon to be swept away by the Fāṭimid tide (296/909). The more fervent Ibāḍīs emigrated towards the south and established themselves in the oasis of Sadrāta [*q.v.*] some 8 km to the south-west of Wārdjilān [*q.v.*], currently Ouargla, and finally at Mzāb [*q.v.*], where their community still upholds the ancient traditions.

The prosperity of Tāhart was maintained for some time. Al-Iṣṭakhrī, writing at the time of the foundation of al-Mahdiyya (308/920), noted that Tāhart was "a large town, surrounded by an extensive fertile plain with abundant supplies of water", and that Ibāḍīs were still "the dominant force there" (Cairo 1961, 34). Ibn Ḥawḳal, who visited Sidjilmāsa in 340/951, also depicted it as a prosperous town deriving its wealth from agriculture, arboriculture, apiculture and stock-breeding (*Ṣūrat al-arḍ*, Beirut n.d., 84, 93). Al-Muḳaddasī noted that the "district (*kūra*) of Tāhart" comprised no less than thirty-three towns (*madīna*) including Oran. The town, we are told, "disappears amid gardens ... a great and very rich city ... of wondrous appearance ... It is reckoned superior to Damascus", and also to Cordova, although he does not personally share this opinion (*Description de l'Occident musulman* ... Arabic text and tr. Ch. Pellat, Algiers 1959, 5, 7, 23). A century and a half later, al-Idrīsī says of the place: "the city of Tāhart was, in times past (*kānat fī-mā salafa min al-zamān*), composed of two large towns ..." (*Nuzhat al-mushtāḳ*, Naples-Rome 1972, as *Opus geographicum*, iii, 255-6). Al-ʿAbdarī, who crossed the whole width of the Maghrib on the Pilgrimage route, does not mention it in his *Riḥla* (ed. M. al-Fāsī, Rabat 1968). *Ca.* 1526, al-Ḥasan b. Muḥammad al-Wazzān al-Zayyātī (i.e. Leo Africanus, d. after 1550) had only vague impressions of it. He could only have discovered ruins there, "those of the town founded by the Romans, according to some" he says. Furthermore, he does not refer to Tāhart, but to Tagdemt "which was a very civilised town", formerly ruled by the Idrīsids (*al-Adārisa, sic*). He adds that wars have taken their toll, "so much so that the visitor can see there only the remnants of the foundations, as I have myself observed" (*Waṣf Ifrīḳiya*, tr. Muḥammad Ḥādjdjī and Muḥammad al-Akhḍar, Beirut 1983, ii, 40-1). The mediocre vestiges revealed by excavations (G. Marçais and A. Dessus-Lamare, *Tihert-Tagdemt*, in *R. Afr.*, xc [1946], 24-54), which have not been pursued further, definitely do not reflect the state of the city at the height of its prosperity.

Tāhart suffered greatly as a result of the wars which raged throughout the central Maghrib following the accession of the Fāṭimids. The ability to move rapidly with tents and livestock was essential; nomadism became the sole means of survival. In 297/910, 312/924, 320/932, 358-60/968-71, the town was constantly subjected to successive assaults. In 360/971, in the process of avenging his father Zīrī, Būluggīn carried out a massacre there of the Zanāta, on whose bodies "the muezzins climbed to proclaim the call to prayer" (Idrīs, *Zīrides*, Paris 1962, i, 37). In Ramaḍān 362/June 973, he took Tāhart by storm. "He massacred the men, reduced women and children to slavery, pillaged and burned the city" (*ibid.*, i, 48). In 374/984 the Zīrid al-Manṣūr quelled a rebellion there "with slaughter and pillage" (*ibid.*, i, 79). In 390/998 the city was again the scene of carnage. From 408/1017 onwards it was part of the Ḥammādid kingdom. The *amīr* ʿAbd al-Ḳādir [*q.v.*] established his capital at Tagdemt (1835-43). It was there that in 1863, General La Moricière founded the modern Tihert, currently provincial capital of the *wilāya*, i.e. on the site of Roman Tingartia. The Tāhart of the Rustamids does not survive.

AL-ṬAḤĀWĪ, Aḥmad b. Muḥammad b. Salāma b. ʿAbd al-Malik al-Azdī al-Ḥadjrī Abū Djaʿfar, a Ḥanafī jurist (d. 321/933). He spent most of his life in Egypt, with only one brief trip to Syria. His fame depends on his writings which include works of *fiḳh*, works on technical legal and judicial matters, *ḥadīth* criticism, and a famous and enduring statement of the Muslim creed.

Life. Basic biographical details are provided in the Ḥanafī biographical tradition represented by Ibn Ḳutlūbughā, al-Ḳurashī and al-Laknawī. The last of these works incorporates most of the detail of the earlier ones, as well as extensive reference to the broader biographical tradition. Four different years of birth are given: 229/844, 230/845, 238/852 and 239/853. The last of these dates is given in a report attributed to al-Ṭaḥāwī himself, the genealogist al-Samʿānī prefers 229, and Ibn Khallikān prefers 238. His early training was with his maternal uncle al-Muzanī (Ismāʿīl b. Yaḥyā d. 264/878 [*q.v.*]), a pupil of al-Shāfiʿī [*q.v.*], but he subsequently transferred to the Ḥanafī *madhhab* and trained with Aḥmad b. Abī ʿImrān Mūsā b. ʿĪsā. He went to Syria in 268/882, where he worked for the *ḳāḍī* Abū Khāzim ʿAbd al-Ḥamīd b. Djaʿfar (d. 292/905). He returned to Egypt after a brief stay and worked again with a *ḳāḍī*, namely Abū Bakra Bakkār b. Ḳutayba (d. 270/883 [*q.v.*]). He continued to advance his training in the Ḥanafī *madhhab*, gradually acquiring prominence as an administrator in the judicial sphere and as a teacher. The lists of his pupils include a number of names, none of them very famous, but, perhaps significantly, including two or three figures identified as judges (*ḳāḍīs*) and one who was both a *ḳāḍī* and leader of the Ẓāhirīs in his time. He produced many books. The most important of these relate to three broad areas of study: 1. the propagation of the Ḥanafī *madhhab*; 2. a specialist interest in practical judicial activity; 3. *ḥadīth* criticism. He also produced his enduring statement of the Muslim creed, and a history, now lost (*al-Taʾrīkh al-kabīr*, possibly a biographical work). Further details of his role in the administrative and judicial spheres of Egyptian society can be gleaned from scattered reports in al-Kindī's *Wulāt Miṣr*. Secular biographies show a number of characteristic expansions, al-Samʿānī focusing on genealogy, Ibn Khallikān on the narrative of the split between al-Ṭaḥāwī and al-Muzanī (most of it incorporated into al-Laknawī). Specialists in the science of *ḥadīth* tend to criticise him: Ibn ʿAsākir and Ibn al-Djawzī described him as deficient (*naḳaṣa*) (cit. in Ibn Ḳutlūbughā), and Ibn Taymiyya said that his knowledge of *isnāds* was not like that of specialists in the field (cit. in al-Laknawī, who comments that Ibn Taymiyya was exaggerating as usual). Most of the material of the biographical tradition is gathered into the modern biography by al-Kawtharī, *al-Ḥāwī fī sīrat al-imām Abī Djaʿfar al-Ṭaḥāwī*.

Works.

1. The *madhhab*. Al-Ṭaḥāwī's work on the propagation and continuation of the Ḥanafī *madhhab* is represented by his commentaries on al-Shaybānī's *al-Djāmiʿ al-kabīr* and *al-Djāmiʿ al-ṣaghīr* (both lost). Still extant are his *Mukhtaṣar fi 'l-fiḳh* and his *Ikhtilāf al-fuḳahāʾ*. Both have been published. The *Mukhtaṣar* follows the usual pattern of such works and attracted a number of commentaries, notably those of al-Djaṣṣāṣ (Aḥmad b. ʿAlī al-Rāzī, d. 370/980 [*q.v.*]) and al-Sarakhsī (d. *ca.* 490/1097 [*q.v.*]). The *Ikhtilāf* has been preserved only partially, and possibly only in a redaction by al-Djaṣṣāṣ (see Sezgin; also Maʿṣūmī, in al-Ṭaḥāwī, *Ikhtilāf*, ed. Maʿṣūmī).

2. Practical judicial works. Al-Ṭaḥāwī's most enduring contribution in this area is represented by his works on formularies, of which three are mentioned, *al-Shurūṭ al-kabīr*, *al-Shurūṭ al-awsaṭ* and *al-Shurūṭ al-ṣaghīr*. A number of treatises are mentioned in the biographical tradition on topics like *maḥāḍir, sidjillāt, waṣāyā* and *farāʾiḍ*, but these are in fact sections within the *shurūṭ* works. Much of the material from these works was incorporated into later works of the Ḥanafī *madhhab*, notably the *Hidāya* of al-Marghīnānī [*q.v.*] and the *Fatāwā ʿĀlamgīriyya*. The *K. al-Shurūṭ al-ṣaghīr* is preserved in full, the *K. al-Shurūṭ al-kabīr* only in part, the *Awsaṭ* not at all. Some fragments of the *K. al-Shurūṭ al-kabīr* were published by Joseph Schacht in the 1920s and a major section, the *Kitāb al-buyūʿ*, in 1972, by Jeanette A. Wakin in a work which incorporates a bibliography and introduction. The whole of the *Shurūṭ al-ṣaghīr* together with all extant fragments of the *Shurūṭ al-kabīr* were published in 1974 in ʿIrāḳ (ed. Rūḥī Ūzdjān), independently of the Western editions.

3. *Ḥadīth* criticism. Al-Ṭaḥāwī produced two important works in this area, one of which, the *Bayān mushkil al-ḥadīth* (or *Mushkil al-āthār*, or *Sharḥ mushkil al-āthār*) was influential and widely admired; the other, the *K. Maʿānī 'l-āthār*, also admired in the Ḥanafī tradition, was more problematic. The *Mushkil al-āthār* corresponds in aims and structure to the *Taʾwīl mukhtalif al-ḥadīth* of Ibn Ḳutayba [*q.v.*], which was clearly an influence. It is a catalogue of problem cases arising out of apparent discord between two or more *ḥadīth* and/or between *ḥadīth* and the Ḳurʾān. It is not well-structured, but individual problems are dealt with by appeal to a variety of hermeneutical arguments, some of which are notably elegant or skilful. An abridged version was produced by Abu 'l-Walīd Muḥammad b. Aḥmad Ibn Rushd (grandfather of the philosopher) called a *mukhtaṣar*, incorporating criticisms. This in turn was edited by Yūsuf b. Mūsā al-Ḥanafī (d. 803/1401) in his *al-Muʿtaṣar min al-Mukhtaṣar*. (The printed version of this work identifies the intermediate author as Abu 'l-Walīd Sulaymān b. Khalaf al-Bādjī, whose *nisba* is in fact mentioned in the author's introduction, but this is certainly an error.) The *Maʿānī 'l-āthār* is organised under the normal topics of a work of *fiḳh*. It presents Prophetic *ḥadīth* which are problematic in so far as they conflict with each other or with the Ḥanafī *madhhab*. Al-Ṭaḥāwī's commentary and analysis tend to offer arguments that promote harmony between *ḥadīth* and *madhhab*. It is this work that provoked the negative appreciation of al-Ṭaḥāwī amongst *ḥadīth* experts of a later date, though it also generated defensive commentaries within the Ḥanafī tradition, notably that of al-ʿAynī (Maḥmūd b. ʿAlī, d. 855/1451 [*q.v.*]). (*The Mushkil al-āthār* and the *Maʿānī 'l-āthār* are discussed in Calder, *Studies*, ch. 9.)

4. Creed. Al-Ṭaḥāwī's presentation of the Muslim

creed has always been and still is popular; and has generated important commentaries.

(N. CALDER)

ṬAḤḤĀN (A.), miller; owner and operator of mills to grind wheat, and other grains to produce flour.

There were no millers (*ṭaḥḥān*) and bread-makers or sellers (*khabbāz*) in the Islamic society of Medina during the era of the Prophet. Instead, every family used to buy grain, grind and make bread for daily meals (Kattānī, *Tarātīb*, ii, 108-9). Some wives of the Prophet used to grind grains in hand-mills. A favourite illustration of this practice was the example of the Prophet's daughter, Fāṭima, who used to grind grain for her own family.

In early Islam, some seasonal farm labourers of Baṣra were employed to grind grain, as did some slave-women of Indian origin. A popular anecdote from the Umayyad period, repeated by many Arab writers and historians, speaks of a Damascene miller who hung a bell (*djuldjul*) on the neck of a donkey working in the mill so that he could know from a distance whether the animal was at work or whether it had stopped and was resting.

During the 'Abbāsid period, there were a variety of mills; for these, see ṬĀḤŪN.

Some millers were wealthy. During the attack of the Zandj slaves on Baṣra in 257/871, a wealthy miller, al-'Abbās b. al-Faradj al-Riyāshī, was killed for his wealth. Millers' income depended on good or bad seasonal harvests, which also affected price of grains and flour. In Fāṭimid Egypt, when the price of flour rose high, the government imposed price control measures, including lashing grain-merchants and millers, to bring down the price.

A strong influence of Shī'ism was detected among some millers of Baghdād's Karkh district (Ibn al-Djawzī, *al-Muntaẓam*, x, 267). On the other hand, there were millers who were strongly Sunnī and who became well-known as reliable transmitters of traditions (*aḥādīth*). Many of them were known by their *laḳab* of al-Ṭaḥḥān, although it was not uncommon for some friends of millers to share the same surname, as was the case with Khālid al-Wāsiṭī al-Ṭaḥḥān.

(M.A.J. BEG)

ṬĀHIR B. AḤMAD B. BĀBASHĀDH, Abu 'l-Ḥasan, al-Naḥwī al-Miṣrī, the most important Egyptian grammarian of his time, usually referred to as IBN BĀBASHĀDH, d. 469/1077. Of Daylamī origins, his father or grandfather set up in Cairo, where, after an interlude in 'Irāḳ trading in precious stones, Ibn Bābashādh found well-paid employment as a *kātib* in the *Dīwān al-inshā'*, as well as presiding over Ḳur'ān recitation at the mosque of 'Amr. He died in a fall from the minaret of this mosque, in which he had secluded himself for some time in a pious abandonment of his secular livelihood (he may have been a Ṣūfī as well as a Shī'ī: Haarmann, 167).

Only two of his works survive. Among those lost are a commentary on the *K. al-Uṣūl* of Ibn al-Sarrādj [*q.v.*] and a large treatise of some fifteen volumes known as *Ta'līḳ al-ghurfa*, after the room in the mosque where it was composed. It passed through the hands of several of his pupils and subsequently attracted the admiration of the Ayyūbid Sultan al-Malik al-Kāmil [*q.v.*], but it proved impossible to edit after his death and has disappeared. An unpublished and highly regarded commentary on the *Djumal* of al-Zadjdjādjī [*q.v.*] survives in several copies, though the foreshadowed edition (Sezgin, *GAS*, ix, 90) has not appeared.

His best known work is the *Muḳaddima*, on which he also wrote his own commentary. The *Muḳaddima* (see Haarmann, 166, 168, for editions) is conspicuous for its arbitrary and rigid arrangement of topics into four sections over ten chapters, in which the principle of classification is not so much the natural features of language as the urge for complete logical systematisation, probably to serve as a text book in the *madrasa* [*q.v.*]. It seems to have enjoyed considerable favour in the Yemen, being memorised by the Rasūlid ruler al-Mu'ayyad (Carter, 179). The arrangement also attracted imitators: we read of a certain al-Fā'ishī (d. 697/1296) that he composed a grammar "in the Bābashādhī style" (*ibid*).

ṬĀHIR B. AL-**ḤUSAYN** b. Muṣʿab b. Ruzayḳ, called Dhu 'l-Yamīnayn (? "the ambidextrous"), b. 159/776, d. 207/822, the founder of a short line of governors in Khurāsān during the high ʿAbbāsid period, the Ṭāhirids [*q.v.*]. His forebears had the aristocratic Arabic *nisba* of "al-Khuzāʿī", but were almost certainly of eastern Persian *mawlā* stock, Muṣʿab having played a part in the ʿAbbāsid Revolution as secretary to the *dāʿī* Sulaymān b. Kathīr [*q.v.*]. He and his son al-Ḥusayn were rewarded with the governorship of Pūshang [see BŪSHANDJ], and Muṣʿab at least apparently governed Harāt also.

Ṭāhir likewise entered the ʿAbbāsids' service, and took part under Harthama b. Aʿyan in operations against the rebel in Transoxania Rāfiʿ b. al-Layth [*q.v.*] (194/810). In the civil warfare between the two sons of Hārūn al-Rashīd, al-Amīn and al-Ma'mūn [*q.vv.*], Ṭāhir led an army of the latter's and defeated al-Amīn's general ʿAlī b. ʿĪsā b. Māhān at Hamadhān in 195/811, pressing on to Baghdād, where his soldiers killed the captive al-Amīn (198/813). He then became governor of the western provinces, with his base at Hārūn's old capital of al-Raḳḳa [*q.v.*] on the Euphrates, and also became *ṣāḥib al-shurṭa* [see SHURṬA] in Baghdād, the basis of the extensive wealth and power which the Ṭāhirid family was to acquire in ʿIrāḳ. In 205/821 he became governor of Khurāsān and the East. Soon after his arrival there, he began omitting the caliph's name from the *khuṭba*, and certain coins minted by him in 206/821-2 omit al-Ma'mūn's name; both these actions were virtually declarations of independence from Baghdād, but at this point, in 207/822, Ṭāhir died at Marw. Because of this abrupt end, we do not know what Ṭāhir's motives were or how events might have turned out; but the ʿAbbāsids did not hesitate to appoint Ṭāhir's sons and later descendants to high office in Khurāsān and ʿIrāḳ.

Ṭāhir is said to have been well educated in Arabic as well as his native Persian, and his epistle to his son ʿAbd Allāh on the latter's appointment to his own old office at al-Raḳḳa in 206/821-2 (text preserved in Ibn Abī Ṭāhir Ṭayfūr and thence in al-Ṭabarī) became famed as a model of Arabic eloquence.

ṬĀHIR B. **MUḤAMMAD** b. ʿAbd Allāh b. Muḥammad b. Mūsā b. Ibrāhīm, Abu 'l-ʿAbbās, AL-MUHANNAD AL-BAGHDĀDĪ, poet and letter-writer (one biographer mentions interesting ones, *rasā'il ʿadjība*), born in Baghdād in Ramaḍān 315/November 927. In 340/951, in his mid-twenties, al-Muhannad left Baghdād for Cordova in search of fame and patronage, both of which he found as panegyrist and companion to the ʿĀmirid ruler al-Manṣūr b. Abī ʿĀmir [*q.v.*]. His biographers are consequently Andalusian. The earliest notice occurs in Ibn al-Faraḍī (d. 403/1013 [*q.v.*]), *Ta'rīkh ʿUlamā' al-Andalus*, ed. al-Abyārī, Cairo-Beirut 1983, i, 361, in a section devoted to foreign scholars (*ʿulamā'*) in Spain.

Ibn al-Faraḍī provides details such as al-Muhannad's full name, his date and place of birth, the date of his departure for Cordova, and the date of his death in his adoptive city in Muḥarram 390/December 999. However, he makes no mention of the assertion made by al-Ḥumaydī (d. 488/1095 [*q.v.*]), *Djadhwat al-muḳtabis fī ta'rīkh ʿulamā' al-Andalus*, ed. al-Abyārī, Cairo-Beirut n.d., i, 383, no. 516, that al-Muhannad was a descendant of Ibn Abī Ṭāhir Ṭayfūr [*q.v.*], "the author of *Ta'rīkh Baghdād* [sic]". Ibn al-Faraḍī either simply does not record the connection or is unaware of it, though he is otherwise very informed about al-Muhannad. Ibn Abī Ṭāhir and his *K. Baghdād* would no doubt have reached Ibn al-Faraḍī's attention, if through nothing else but the history of Cordova by al-Rāzī (d. 340/955 [*q.v.*]), said to be modelled on that work. The genealogy in Ibn al-Faraḍī does argue against descent but the fact that al-Ḥumaydī claims to have composed his work entirely from memory in Baghdād lends some credence to the assertion. Al-Ḥumaydī's contemporary, Ibn Ḥayyān al-Ḳurṭubī (388-469/987-1076 [*q.v.*]), records al-Muhannad in *al-Muḳtabis*, ed. al-Ḥadjdjī, Beirut 1983, 31, 120, 156 ff., but, like Ibn al-Faraḍī, does not tie him to Ibn Abī Ṭāhir. The al-Ḥumaydī notice is quoted verbatim by the much later al-Ḍabbī (d. 599/1202-3 [*q.v.*]), *Bughyat al-multamis fī ta'rīkh ridjāl ahl al-Andalus*, Cairo 1968, 326, no. 859.

The biographers remark that reports (*akhbār*) are told about al-Muhannad's spiritual contemplations and how his espousal of the ways of the "heretic" mystic al-Ḥallādj led people to have a low opinion of him. As these stories are uncorroborated (*ḥukiyat ʿanhu*), al-Ḥumaydī adds that "God knows best!"

ṬĀHIR SAYF AL-**DĪN**, Abū Muḥammad, 51st *dāʿī al-muṭlak*, or absolute *dāʿī* (addressed as *Bāwa Ṣāḥib* and *Sayyidnā*), vicegerent of the 21st Imām's (al-Ṭayyib) descendants, and leader of the small, predominantly Gudjarātī, Ismāʿīlī merchant community of Dāwūdī Bohorās [*q.v.*]. He was born in Bombay in 1304/1886, assumed headship of the *dawat* (= *daʿwa*) from ʿAbd Allāh Badr al-Dīn in 1330/1912, and ruled till his death in Matheran in 1384/1965, when he was succeeded by his son, Muḥammad Burhān al-Dīn (b. 1334/1915). He is buried in the "Rawḍat Ṭāhira" mausoleum built by his son, now a *ziyāra* site for Bohorās.

Though he is not a descendant, recent Bohorā literature identifies Ṭāhir Sayf al-Dīn's ancestors as "the Fāṭimī Imāms" and describes the Bohorās as "Fāṭimī". This re-establishment of links with the Fāṭimids was important to Ṭāhir Sayf al-Dīn and was underscored by his successful negotiation with the Egyptian government for stewardship of the Mosque of al-Ḥākim bi-Amr Allāh [*q.v.*] in Cairo. Indeed, his active cultivation of diplomatic contacts with heads of state brought to the office of *dāʿī* the bearing of a princeship it had not hitherto enjoyed.

Ṭāhir Sayf al-Dīn came under much criticism from Bohorā reformist elements about management of *dawat* funds, but Privy Council decisions guaranteed him the

right to manage "as sole trustee with wide discretionary powers". The reformers are right that the *dāʿī al-duʿāt* (chief *dāʿī*), his Fāṭimid analogue, did not have similar sweeping powers—but that was before the Occultation of the Imām. The *dāʿī*'s right to excommunicate, frequently and prominently exercised in India as elsewhere (e.g. in Tanzania), also provoked outcry and judicial intervention.

Ṭāhir Sayf al-Dīn was responsible for the expansion of the *al-Djāmiʿa al-Sayfiyya* in Sūrat [*q.v.*] into a large-scale Academy for the training of *ʿāmils* (the modern successors to the Fāṭimid regional *dāʿīs*) in Arabic and religious matters. It is said to be inspired by the Dār al-Ḥikma [*q.v.*] of the Fāṭimid caliph al-Ḥākim and by al-Azhar [*q.v.*].

(SHAWKAT M. TOORAWA)

ṬĀHIR WAḤĪD, MĪRZĀ MUḤAMMAD, Persian poet, court historian, epistle writer and state dignitary, born during the beginning of the 11th/17th century, and died most probably in 1110/1698-9.

He was born at Ḳazwīn into a family whose members had served in the state chancery. His father, Mīrzā Ḥusayn Khān, was a prominent citizen of Ḳazwīn. Ṭāhir Waḥīd learned the traditional subjects taught during his time, and acquired a good training in accountancy and secretarial work. He served as secretary to two successive prime ministers, Mīrzā Taḳī al-Dīn Muḥammad, called Iʿtimād al-Dawla, and Sayyid ʿAlī al-Dīn Khalīfa Sulṭān. Through the intervention of the latter he was appointed official chronicler in the administration of Shāh ʿAbbās II (r. 1052-77/1642-66), and in 1055/1645-6 he became the court historian of that ruler. In 1101/1689-90, after a temporary lay-off, he was recalled to fill the post of prime minister under Shāh Sulaymān I (r. 1077-1105/1666-96), and received the title of ʿImād al-Dawla. He held that position till the early years of Shāh Sulṭān Ḥusayn's reign (1105-35/1694-1722), when he resigned because of old age or, according to some writers, as a result of official censure. He died soon afterwards at the advanced age of nearly one hundred years.

Ṭāhir Waḥīd's intellectual activity covered poetry, letter-writing and historiography. His verse production is estimated at some 50,000 couplets (see Dhabīḥ Allāh Ṣafā, *Tārīkh-i adabiyyāt dar Īrān*, v/2, Tehran 1372/1993-4, 1348). It includes, besides *ḳaṣīdas*, *ghazals* and *rubāʿīs*, a number of long and short *mathnawīs* such as *Khalwat-i rāz* "The secret solitude"; *Nāz u niyāz* "Pride and humility"; *Sāḳī-nāma* "Book of the cup-bearer"; *ʿĀshiḳ u maʿshūḳ* "Lover and beloved"; *Fatḥ-i Ḳandahār* "Conquest of Ḳandahār"; and *Gulzār-i ʿAbbāsī* "The garden of ʿAbbās". The poet has been judged favourably by most literary historians, with the significant exceptions of Riḍā-ḳulī Khān Hidāyat and Luṭf ʿAlī Beg Ādhar, who expressed their disapproval in no uncertain terms.

Ṭāhir Waḥīd's prose output is represented by his collection of letters, written in the name of Shāh ʿAbbās II, and his history of the same ruler, published in 1329/1951, under the title *ʿAbbās-nāma*. The letters were collected by the author himself and have been published from Calcutta in 1243/1826 and again from Lakhnaw in 1260/1844. The historical work was composed in response to the command of Shāh ʿAbbās II, and the published version covers the first twenty-two years of the monarch's reign ending with the year 1073/1662-3.

(MUNIBUR RAHMAN)

ṬĀHIRIDS, the name of three dynasties of mediaeval Islam.

1. A line of governors for the ʿAbbāsid caliphs in Khurāsān and the holders of high offices in ʿIrāḳ, who flourished in the 3rd/9th century (205-78/821-91).

The founder of the line was the Persian commander, of *mawlā* origin, Ṭāhir (I) b. al-Ḥusayn Dhu 'l-Yamīnayn [*q.v.*], who became governor of Khurāsān in 205/821 but who died almost immediately afterwards, after showing signs of asserting his independence of Baghdād. Nevertheless, the caliph—possibly being unable to find anyone else with the requisite prestige and military capability to govern these distant and potentially difficult regions—appointed first his son Ṭalḥa (207-13/822-8), who is a somewhat shadowy figure in the sources, and then another son ʿAbd Allāh, who left a strong imprint on the history and culture of his age and who was probably the greatest of the Ṭāhirids (213-30/828-45 [*q.v.*]). ʿAbd Allāh had achieved great military successes for the caliphate whilst governor of the western provinces, securing the surrender of the rebel in al-Djazīra Naṣr b. Shabath [*q.v.*] and suppressing a longstanding rebellion in Egypt. With his local capital at Nīshāpūr, ʿAbd Allāh managed to retain the caliphs' favour, although he prudently stayed in Khurāsān and never visited the caliphal courts in Baghdād and Sāmarrāʾ. His territories extended as far as Transoxania, where his deputy governors included members of the rising Sāmānid family [see SĀMĀNIDS]. For details of his governorship, see the article on him.

ʿAbd Allāh's son Ṭāhir (II) was eventually appointed governor after his father's death (230-48/845-59), and like his father, received glowing praises from the historians for his benevolent and just rule in Khurāsān, although they have little specific to say about the events of his time. But we know that it was during his governorship that direct Ṭāhirid control over Sīstān, hitherto an administrative dependency of Khurāsān, was lost to local *ʿayyār* leaders, paving the way for the ultimate triumph in 247/861 of Yaʿḳūb b. al-Layth and the indigenous Ṣaffārid dynasty [*q.v.*] there.

Ṭāhir (II)'s successor at Nīshāpūr was his son Muḥammad [see MUḤAMMAD B. ṬĀHIR]. Perhaps because of his ultimate failure, the sources view him as weak and pleasure-loving, inferior to his predecessors. He was unfortunate in that Ṭāhirid rule in the East was challenged by the Zaydī Shīʿī rebellion in the Caspian provinces under al-Ḥasan b. Zayd, called *al-Dāʿī al-Kabīr*, an outbreak provoked by Ṭāhirid financial oppression in the region. The downfall of Ṭāhirid authority came, however, from the opposite quarter of Sīstān, where Yaʿḳūb b. al-Layth [*q.v.*] speedily made himself strong enough to challenge the Ṭāhirids. In 259/873 he entered Nīshāpūr without a blow being struck, imprisoned Muḥammad and effectively ended Ṭāhirid authority in the East, although various local military adventurers in Khurāsān subsequently claimed to be acting in the name of Muḥammad (who, after escaping from Ṣaffārid captivity, was once more appointed governor of Khurāsān but who never dared to take up the office).

The fortunes of the Ṭāhirids in ʿIrāḳ were more enduring, based as they were on the immense property and wealth built up by them in Baghdād, epitomised in the *Ḥarīm al-Ṭāhir* in Baghdād, where the Ṭāhirid commanders of the police guard (*shurṭa* [*q.v.*]) and governors of ʿIrāḳ resided, and which enjoyed quasi-regal administrative and legal status (whence *Ḥarīm* = "Sanctuary"). The offices in ʿIrāḳ were held by members of both the line of Ṭāhir (I) and of his cousin Isḥāḳ b. Ibrāhīm b. Muṣʿab. Such governors as Isḥāḳ (207-35/822-49) and then the sons of ʿAbd Allāh b. Ṭāhir (I), Muḥammad, Sulaymān and ʿUbayd Allāh, gained great reputations not only as effective military commanders at a time when there was intense civic and ethnic violence enveloping the caliphate but also as patrons of literature and such arts as music, and as creative artists themselves; ʿUbayd Allāh b. ʿAbd Allāh [*q.v.*] was himself the author of a work on music and singing. Some Ṭāhirids held intermittent power in ʿIrāḳ at the end of the 3rd/opening of the 10th century, but the family then lapsed into obscurity; only al-Thaʿālibī mentions a scion of Ṭāhir II who resided at the Sāmānid court in Bukhārā on estates granted to him by the Amīrs and who was a littérateur.

Earlier orientalists often regarded the Ṭāhirids of Khurāsān as the first provincial dynasty to arise out of the enfeebled condition of the ʿAbbāsid caliphate in the mid-3rd/9th century, but it is doubtful whether we should think of them thus. With the single exception, an apparent aberration, of Ṭāhir (I)'s action at the end of his life, the Ṭāhirid governors faithfully acknowledged and fulfilled the constitutional rights of their overlords the caliphs. Their coins were little different from those of other provincial governors, and some coins were minted in places definitely under Ṭāhirid control without mentioning them at all. The Ṭāhirids seem to have been retained in Khurāsān by the ʿAbbāsids because they were able to provide firm government for an important sector of the empire at a time when the caliphs themselves were increasingly constricted in their own power.

On literary and cultural aspects, see Bosworth, *The Ṭāhirids and Arabic culture*, in *JSS*, xiv (1969), 45-79; idem, *The Ṭāhirids and Persian literature*, in *Iran, JBIPS*, vii (1969), 103-6. For a list of the governors, see idem, *The New Islamic dynasties, a chronological and genealogical manual*, Edinburgh 1996, no. 82. (C.E. BOSWORTH)

2. A minor dynasty of Al-Andalus.

The Banū Ṭāhir belonged to one of the most influential families of Mursiya (currently Murcia), in the *Sharḳ al-Andalus*, of Arab origin (Ḳays ʿAylān) and celebrated by Arab authors for its wealth and social status. They were major landowners; the name of the *ḳaryat Banī Ṭāhir*, near Murcia, is attested in the second half of the 4th/10th century, and they added to their possessions in the course of the following century. Some of the Banū Ṭāhir distinguished themselves in literature and the sciences, while simultaneously playing a major role in the administration of the city. Also, during the periods of disintegration of the central power (first and second *ṭāʾifas*), members of this family were the heads of regional government.

The first of the Banū Ṭāhir to take power was Abū Bakr Aḥmad b. Isḥāḳ b. Zayd b. Ṭāhir al-Ḳaysī (d. 455/1063), chosen by the ruler of Almeria, the slave Zuhayr, who wanted to rid himself of the representative of another eminent family, the Banū Khaṭṭāb. After the death of Zuhayr, Ibn Ṭāhir recognised the nominal authority of the prince of Valencia, the ʿĀmirid ʿAbd al-ʿAzīz, grandson of al-Manṣūr. Until his death, which occurred at a very advanced age, Ibn Ṭāhir proved capable of maintaining peace in his domains, taking responsibility for payment of the *djund* applied to the region and keeping fiscal control of the territory. His son Abū ʿAbd al-Raḥmān Muḥammad, who had held the post of *ṣāḥib al-maẓālim*, continued the policies of Abū Bakr, and his reign is unanimously commended by Arab historians. However, he was unable to resist attacks on the part of the *wazīr* of Seville Ibn ʿAmmār, who succeeded in making alliances among the nobility of Murcia and ultimately conquered the city. Imprisoned in the castle of Monteagudo, near Murcia, Muḥammad subsequently managed to make his way to Valencia, where he participated in the events which led to the conquest of the city by the Cid. Imprisoned again in 488/1095, he died in Valencia in 507/1113-14 and was buried in Murcia. In addition to his political activities, Muḥammad b. Aḥmad was a respected man of letters. He was the author of numerous *rasāʾil* collected by Ibn Bassām in a book entitled *Silk al-djawāhir min tarsīl Ibn Ṭāhir*, and reproduced partially in his *Dhakhīra*. Arabic sources liken the literary output of Muḥammad b. Aḥmad to that of al-Ṣāḥib Ibn ʿAbbād and convey anecdotes illustrating his wit and his encyclopedic knowledge.

In Rabīʿ I 540/September 1145, during the period of the second *ṭāʾifas* which followed the Almoravid collapse, the people of Murcia united in offering power to Abū ʿAbd al-Raḥmān Muḥammad b. ʿAbd al-Raḥmān b. Aḥmad b. ʿAbd al-Raḥmān b. Ṭāhir. Once installed in the *ḳaṣr*, this Ibn Ṭāhir at first accepted the sovereignty of Ibn Hūd [see HŪDIDS], but he was soon to declare himself independent ruler of Murcia, entrusting command of the cavalry to his brother Abū Bakr. However, a *coup* mounted by the *ḳāʾid* Ibn ʿIyāḍ put an end to the reign of Ibn Ṭāhir fifty days after his seizure of power. Subsequently, he became increasingly estranged from the new master of the *S̲h̲arḳ*, Ibn Mardanīs̲h̲ [*q.v.*], who was presenting active resistance to the Almohads. In fact, Ibn Ṭāhir became an ardent supporter of the Almohad doctrine, and died in Marrākus̲h̲ in 574/1178-9, having travelled to the Moroccan capital to present to the caliph his *risāla* entitled *Al-Kāfiya fī barāhīn al-imām al-Mahdī raḍiya Allāhu taʿālā ʿanhu ʿaḳlan wa-naḳlan* (reproduced by Ibn al-Ḳaṭṭān, *Naẓm*, 101-22). Ibn Ṭāhir's personal interests were far removed from the political activity in which he was a reluctant participant. After studying *fiḳh* in Murcia and in Cordova, he devoted himself to the "sciences of the ancients" (*ʿulūm al-awāʾil*), in which he became an authority acknowledged by the specialists in these branches of knowledge; he also lectured in philosophy. Married to Amat al-Raḥmān, daughter of the *ḳāḍī* Abū Muḥammad ʿAbd al-Ḥaḳḳ b. G̲h̲ālib b. ʿAṭiyya (himself a member of an important Granadan family), he had a son (d. 598/1201) who took the name and *kunya* of his maternal grandfather and was a poet and an expert in the judicial sciences.

As for those members of the Banū Ṭāhir who had no involvement in public affairs, the biographical dictionaries cite several names, among which the most important is undoubtedly that of Muḥammad b. Ṭāhir Abi 'l-Ḥusām b. Muḥammad b. Ṭāhir al-Ḳaysī al-S̲h̲ahīd (d. 378/988-9), a scholar of ascetic inclination who spent eight years in Mecca perfecting his spiritual development. After his return to al-Andalus in 366 or 367/976-8, he led a life dedicated to piety and to the practice of residence in a *ribāṭ*, initially in the vicinity of Murcia and then in the frontier zone. He also involved himself actively in the practice of *d̲j̲ihād* and participated in al-Manṣūr's expeditions against Zamora and Coimbra; he was only 42 years old when he died in the course of the Astorga campaign (377/988). Muḥammad b. Ṭāhir is described by the sources as a Ṣūfī, and as a performer of miracles during the time of his residence in the Mas̲h̲riḳ; a book entitled *K. al-Id̲j̲ābāt wa 'l-karāmāt* is attributed to him.

(MANUELA MARÍN)

3. A Sunnī dynasty of South Arabia.

They ruled, as direct successors of the Rasūlids [*q.v.*], over the southern highlands of the Yemen and Tihāma [*q.v.*] between the years 858-923/1454-1517. They take their name from one Ṭāhir b. Maʿūḍa, the father of the first Ṭāhirid ruler, who found favour with the Rasūlids in the early 9th/15th century (see Schuman, pull-out family tree after p. 142). They were *mas̲h̲āyik̲h̲*, originating from the area of D̲j̲uban and al-Miḳrāna, some 80 km/50 miles south of Radāʿ.

1. *History*. The Ṭāhirids had taken Laḥd̲j̲, just north of Aden, in 847/1443, as the Rasūlids declined in the midst of internecine squabbles. Their capture of the chief port in 858/1454 marks the beginning of their period of rule. There were four sultans: al-Ẓāfir ʿĀmir [*q.v.*] and al-Mud̲j̲āhid ʿAlī, a dual sovereignty until 864/1460, when the former relinquished his power; al-Manṣūr ʿAbd al-Wahhāb, 883-94/1478-89 and finally al-Ẓāfir ʿĀmir II, 894-923/1517.

The Ṭāhirids were certainly less interested in expanding their territory in Ṣanʿāʾ [*q.v.*] and into the north of the Yemen than their predecessors had been (see Smith, *Some observations, passim*). After initial consolidation of territory in the southern highlands and Tihāma, the Ṭāhirids settled down to a regular pattern of government: their summers were spent in D̲j̲uban and al-Miḳrāna, with their easy access to the southern highlands, and their winters in Zabīd [*q.v.*] in Tihāma. The latter in part returned to its previous role as intellectual and educational capital of the Yemen and a major seat of learning in the Islamic world. The primary sources indicate much more political and military activity in Tihāma than in the southern highlands. The history of the period, in fact, is largely taken up with Ṭāhirid efforts to quell the uprising of recalcitrant Tihāma tribes and the punishment often dealt out to them.

The destruction of the Ṭāhirids was due indirectly to the activities of the Mamlūks of Egypt, whose fleet in 921/1515 arrived off Kamarān, an island in the Red Sea off the Yemeni coast. The despatch of the fleet into the Red Sea was part of the Mamlūk strategy to combat the increasing Portuguese threat to the eastern trade route. The Ṭāhirid sultan, al-Ẓāfir ʿĀmir, refused to provision the ships, but was defeated in battle near Zabīd by a combined force of Mamlūks and Zaydīs from the north. The Mamlūks were able to capture the Ṭāhirid treasure house at al-Miḳrāna and killed al-Ẓāfir ʿĀmir near Ṣanʿāʾ in 923/1517, thus in effect putting an end to Ṭāhirid rule.

2. *Monuments*. Although their architectural legacy is undoubtedly less imposing than the Rasūlids', Ṭāhirid monuments are impressive, and some of them can still be seen and appreciated to this day. Perhaps the most famous is the ʿĀmiriyya *madrasa* in Radāʿ built in 910/1504. Other outstanding architectural examples can be found in both D̲j̲uban and al-Miḳrāna, in Zabīd and elsewhere.

Bibliography: 1. History. The history of the Ṭāhirids can be approached in the primary sources from three sides: (1) the pro-Ṭāhirid Sunnī sources,

mainly those of their historian, Ibn al-Daybaʿ; (2) the Zaydī ones; and (3) at least one Ismāʿīlī source. Most are listed and discussed in G. Rex Smith, *The Ṭāhirid sultans of the Yemen (858-923/1454-1517) and their historian Ibn al-Daybaʿ*, in *JSS*, xxix/1 (1984), 141-54, but add Ibn al-Daybaʿ, *Bughyat al-mustafīd fī tārīkh madīnat Zabīd*, and idem, *al-Faḍl al-mazīd ʿalā Bughyat al-mustafīd*, both ed. J. Chelhod, Ṣanʿāʾ 1983. See also L.O. Schuman, *Political history of the Yemen at the beginning of the 16th century*, Groningen 1960; G.R. Smith, *Some observations on the Ṭāhirids and their activities in and around Ṣanʿāʾ (858-923/1454-1517)*, in Ihsan Abbas *et alii* (eds.), *Studies in history and literature in honour of Nicola Ziadeh*..., London 1992, 29-37; Venetia Porter, *The history and monuments of the Ṭāhirid dynasty of the Yemen—858-923/1454-1517*, unpublished Ph.D. diss. University of Durham 1992, 2 vols. (an excellent work); C.E. Bosworth, *The New Islamic dynasties*, Edinburgh 1996, no. 50.

2. Monuments. See Porter, *History and monuments*, in particular chs. 7 and 8 of i, and ii, *passim*.

(G.R. Smith)

TAḤKĪM (a.), arbitration (the *maṣdar* of the form II verb *ḥakkama*. It denotes the action of making an appeal to arbitration by someone involved with another in a conflict or in some affair of a conflicting nature by mutual agreement. It also designates someone fulfilling the role of an agent with the power of attorney, or an authorised agent (with full powers to act) in a different or clear matter. This person should be qualified as a *muḥakkam*, a person who is solicited for arbitration. The ancient Arabs preferred to use the word *ḥakam*, arbitrator, from the verb *ḥakama*, to judge (form I), from which the noun of action is *ḥukm* or *ḥukūma*, a decision, verdict or judgement, and in modern Arabic is also used to mean power, government (cf. Ḳurʾān, IV, 35; *LʿA*, xii, 142, s.v. *ḥakama*; *TʿA*, Cairo 1888, viii, 252 ff.; Kazimirski, *Dictionnaire arabe-français*, Paris 1960, i, 470; ʿA. Hārūn *et alii*, *al-Muʿdjam al-wasīṭ*, Cairo 1960, i, 189).

Historically, the term *taḥkīm* designated the arbitration which took place between the fourth caliph ʿAlī b. Abī Ṭālib and the Umayyad Muʿāwiya b. Abī Sufyān [*q.vv.*] with the intention of effecting a solution to the grave conflict which had broken out between the two men.

The advent of ʿAlī in the year 35/656, following the assassination of ʿUthmān, certainly took place under conditions which were, to say the very least, difficult and complex. The new caliph had immediately to confront two opposition movements, contesting his legitimacy and accusing him of being involved, directly or indirectly, in the murder of the deceased caliph, and also of protecting the assassins. The first group was led by ʿĀʾisha, widow of the Prophet, who nevertheless had been an adversary of ʿUthmān during his lifetime, with the support of Zubayr b. al-ʿAwwām and of Ṭalḥa b. ʿUbayd Allāh, two illustrious companions of the Prophet. The second group was led by the redoubtable Muʿāwiya, with the support of his ally ʿAmr b. al-ʿĀṣ, who was rightly and suitably nicknamed *Dāhiyat al-ʿArab*, "the supremely shrewd one of the Arabs", by reason of his intelligence and skill in political matters.

For the events which followed, involving the Battle of the Camel and the Battle of Ṣiffīn, see ʿAlī b. Abī Ṭālib; al-Djamal; Ṣiffīn. This last series of skirmishes on the banks of the Euphrates in what is now north-eastern Syria in 36-7/656-7 ended with a final and most bloody confrontation on the *laylat al-harīr* "night of clamour", Thursday-Friday Ṣafar 37/27-8 July 658. After many exchanges of emissaries and mediators, the two opponents came to an agreement to cease fighting and designated an arbitrator in each camp, hoping thus to bring the conflict to a reasonable solution, following the principles of the Ḳurʾān. ʿAlī in no way wanted this agreement. He wished to continue in combat and to defeat once and for all the forces of his adversary. However, the *ḳurrāʾ* [*q.v.*], the readers of the Ḳurʾān, who allegedly numbered some 20,000 men of his army although the number sounds vastly inflated, made him accept the cease-fire.

The Syrians easily made their choice; they designated ʿAmr b. al-ʿĀṣ. Then ʿAlī, once more under pressure from the *ḳurrāʾ*, was constrained to accept as his representative Abū Mūsā al-Ashʿarī, whom the Arab authors all depict as an honest though naïve man. It seems ʿAlī would have preferred his cousin ʿAbd Allāh b. ʿAbbās or failing that, al-Ashtar.

Other voices were again raised in protest among the supporters of ʿAlī, chanting the famous formula *lā ḥakam^a illā llāh, wa-lā ḥukm^a illā li-llāh*, meaning literally "there is no judge but God and there is no acceptable judgement but His". They assembled around ʿAbd Allāh al-Rāsibī and were designated as the *muḥakkima al-ūlā*, the first group to have proclaimed the spoken formula *lā ḥukm^a illā li-llāh*. It was they who initiated one of the first schismatic movements in Islam, known a little later by the name of *Khawāridj* [see Khāridjites], the dissidents, or those coming from the ranks of the camp of ʿAlī. While awaiting arbitration, the antagonists left Ṣiffīn and returned to their bases, the Umayyads to Damascus and the followers of ʿAlī to Kūfa.

The Arbitration (*al-taḥkīm*). There is near total confusion surrounding the role of the two arbitrators (*ḥakam*), as well as the location for the arbitration. Concerning the place, Arab authors sometimes cite Dūmat al-Djandal (present-day al-Djawf), an intermediate town between Syria and ʿIrāḳ, and sometimes Adhruḥ, situated between Maʿān and Petra. H. Lammens, referring to a poem by al-Akhṭal (*Dīwān*, Beirut 1309/1891, i, 79) maintained that the meeting took place in the latter town (*EI*[1], vol. I, 135-6, art. Adhroḥ). But many other poets mention Dūmat al-Djandal on different occasions as the place of arbitration (see below). L. Veccia Vaglieri thought that the arbitrators held two meetings, one at Dūmat al-Djandal and the other at Adhruḥ (*EI*[2] vol. I, 384, art. ʿAlī b. Abī Ṭālib). In all probability there were indeed two meetings for arbitration, but one would have taken place at the end of the combat, on the spot, at Ṣiffīn; the other would have been held during the following year in a place half-way between Syria and ʿIrāḳ. Finally, the choice was fixed on Dūmat al-Djandal.

Ibn Muzāḥim al-Minḳarī (d. 212/827), a specialist in ʿAlid affairs and one of the oldest to have devoted a work to the battle of Ṣiffīn (*Waḳʿat Ṣiffīn*), asserted authoritatively that several poems support this. For him the place in question was well and truly Dūmat al-Djandal (see *Waḳʿat Ṣiffīn*, esp. 616-17 and *passim*; cf. Ibn Abi ʾl-Ḥadīd, *Sharḥ*, iv, 248-9, 253, 256 and *passim*; see also al-Yaʿḳūbī, *Taʾrīkh*, Beirut 1379/1960 ii, 190; al-Ṭabarī, Cairo 1384/1964, iv, 56-8, 66-7; al-Masʿūdī, *Murūdj*, ed. Pellat, iii, 145; Ibn Kathīr, *Bidāya*, vii, 282, etc.).

Accompanied by eminent men from each camp, the two arbitrators held their first talks. This was a sort of preliminary meeting which led, after numerous attempts, to a treaty drawn up and signed, very

probably on Wednesday, 13 Ṣafar 37 in the same year/31 July 657 (cf. al-Ṭabarī iv, 57; Ibn al-Athīr, ed. Beirut, iii, 321. While guaranteeing the safety of the arbitrators, the text invited the belligerents to observe a truce for one year to comply with the verdict of the arbitration which was based strictly on Ḳur'ānic precepts.

In Ramaḍān 38/February 658, the two arbitrators met again, each escorted by 400 cavalrymen from their camp. The two adversaries had to be present. But only Mu'āwiya responded to the appeal. 'Alī had his cousin 'Abd Allāh b. 'Abbās represent him. It was 'Amr b. al-'Āṣ who according to the accepted version of pro-'Abbāsid and pro-Shī'ī historians, manipulated the negotiations. He began by rejecting all the propositions of the other speaker. Then methodically and with great skill, he managed to draw him into undermining the caliph and accepting the removal from power of both adversaries, 'Alī and Mu'āwiya, in order to give a free hand to the Muslim community to designate the leader of their choice.

At the end of their work, both arbitrators had each in turn to appear in public and announce their decision, agreed by common assent. 'Amr feigned a great respect for Abū Mūsā on the pretext that he had been a Companion of the Prophet and was the older man, and he let him speak first. He hastened to pronounce the verdict. 'Amr followed him to the rostrum, and to the great surprise of all, declared: "As far as I am concerned, I confirm the decision of Abū Mūsā about the demotion of his friend ['Alī] but I am supporting mine [Mu'āwiya]". Thus silenced, al-Ash'arī set off for Mecca and remained there for the rest of his days. When this news was announced at Kūfa, 'Alī contested the outcome of the arbitration, considering it contrary to the Ḳur'ān and the *sunna*. He took the decision to fight Mu'āwiya again, mobilised his forces and left immediately to conquer Syria.

The ensuing events, the secession of the Khāridjites and 'Alī's crushing of the dissidents on the banks of the Nahr al-Nahrawān on 9 Safar 38/17 July 658, the continued intransigence of the schismatics and the final assassination of 'Alī by the Khāridjite 'Abd al-Raḥmān b. Muldjam in the great mosque at Kūfa on 17 Ramaḍān 40/24 January 661, may be followed in the articles 'ALĪ B. ABĪ ṬĀLIB; IBN MULDJAM; KHĀRIDJITES.

Bibliography: See the extensive bibls. in the articles named above and in ṢIFFĪN, to which should be added G.R. Hawting, *The significance of the slogan* lā ḥukma illā li'llāh *and the references to the* ḥudūd *in the traditions about the Fitna and the murder of 'Uthmān*, in *BSOAS*, xli (1978), 453-63; idem, *The first dynasty of Islam. The Umayyad caliphate A.D. 661-750*, London and Sydney 1986, 24-33; H. Kennedy, *The Prophet and the age of the caliphates*, London and New York 1986. (MOKTAR DJEBLI)

TAHLĪL (A.), the verbal noun from *hallala*, form II verb, with two differing etymologies and meanings.

(1) From *hilāl*, the new moon, meaning "jubilation or excitement at seeing the new moon" [see HILĀL. i; TALBIYA].

(2) From the formula *lā ilāha illā 'llāh*, the first and main element of the Islamic profession of faith or *shahāda* [*q.v.*]. The verbal form is here obtained by the so-called procedure of *naḥt* "cutting out, carving out". The *tahlīl* then denotes the pronouncing, in a high and intelligible voice, of the formula in question, which implies formal and basic recognition of the divine unity.

Bibliography: See *L'A*, ed. Beirut 1375/1956, 705; also the *Bibls.* to ALLĀH; HILĀL; TAWḤĪD. (ED.)

ṬAHMĀN B. 'AMR AL-KILĀBĪ, minor Arab poet of the middle Umayyad period, whose exact dates are unknown. As the *akhbār* on Ṭahmān's biography in his *dīwān* (ed. al-Mu'aybid, 39, 42, 50, 52-5, related at length in *EI*[1], IV, 665-6) cannot be corroborated from his poems, but on the contrary are possibly read into them, his poetry remains the only reliable source for his life. A laudatory poem on the Umayyad caliph al-Walīd (no. 5) probably refers to al-Walīd b. 'Abd al-Malik (cf. no. 8, l. 7); hence Ṭahmān was alive at some time between the years 86 and 96/705 and 715. Other lines are indicative of difficult living conditions: in no. 1, ll. 15 and 19, prison and shackles are mentioned (cf. no. 15, l. 4, only in ed. al-Mu'aybid), in no. 14 he complains of an enforced stay in the deserted al-Yamāma, in no. 15, l. 10, only in ed. al-Mu'aybid, he calls himself a stranger in the lands of the Southern Arabian tribe of Madhḥidj. Comparatively well known is poem no. 8, addressed to an Umayyad caliph from the Marwānid line and containing a complaint about an amputated right hand; on details such as the identity of the addressee, the reason for the punishment and the question as to whether he was punished at all, the *akhbār* contradict each other. His *dīwān*, preserved only in a Leiden manuscript and containing 14 poems, seems to be a fragment of al-Sukkarī's (d. 275/888 [*q.v.*]) otherwise lost *Ash'ār* (or *Akhbār*) *al-luṣūṣ* (Sezgin, *GAS*, ii, 63). Besides the poems nos. 5 and 8 (see above), three *ḳaṣīdas* (nos. 1, 3 and 12), an elegy on a deceased comrade (no. 7), a poem about the killing of an enemy (no. 13) and two *hidjā'* pieces (nos. 9 and 10) are worth mentioning.

Bibliography: *Dīwān*, ed. W. Wright, *Opuscula arabica*, Leiden 1859, 76-95; ed. M. Dj. al-Mu'aybid, Baghdād 1968 (same sequence of poems, with an additional poem from other sources); for four additional lines, cf. *RIMA* (Kuwayt), xxxi/2 (1987), 445; German tr. of Wright's edn. by O. Rescher, in *Orientalistische Miszellen*, Istanbul 1925, 180-93. (T. SEIDENSTICKER)

ṬAHMĀSP (Ṭahmāsb), the name of two Shāhs of the Ṣafawid dynasty [*q.v.*] in Persia.

1. ṬAHMĀSP I, Abu 'l-Fatḥ, eldest son of Shāh Ismā'īl [see ISMĀ'ĪL I], born at Shāhābād in the district of Iṣfahān on Wednesday, 26 Dhu 'l-Ḥidjdja 919/22 February 1514 (Ḥasan-i Rūmlū, *Aḥsan al-tawārīkh* (ed. C.N. Seddon, Baroda 1931, 142), died Monday, 15 Ṣafar 984/14 May 1576 (*Aḥsan al-tawārīkh*, 464), second ruler of the Ṣafawid dynasty [see ṢAFAWIDS. I].

Following the early Ṣafawid practice of appointing princes of the blood royal to be nominal governors of provinces, in the care of a *Ḳizilbāsh* [*q.v.*] *amīr* who was their *atabeg*/*lala* (tutor/guardian), in 921/1515 the infant Ṭahmāsp was appointed governor of Khurāsān in the care of Amīr Khān Turkmān (*Aḥsan al-tawārīkh*, 154).

1. *The Ḳizilbāsh interregnum (930-40/1524-33).*

On the death of Shāh Ismā'īl I, Ṭahmāsp acceded to the throne on Monday, 19 Radjab 930/23 May 1524 at the age of ten. His extreme youth enabled the *Ḳizilbāsh amīrs*, led by Dīw Sulṭān Rūmlū who, by virtue of the testamentary disposition of the late *shāh* had become the *atabeg* of Ṭahmāsp and *amīr al-umarā'* [see *EIr*, art., *Amīr al-Omarā'*. ii. Ṣafavid usage], to seize power and make themselves *de facto* rulers of the state. Civil war ensued as rival *Ḳizilbāsh* tribes fought for power, and Ṭahmāsp did not succeed in

asserting his authority over the rebellious *amīrs* until 940/1533 (for details, see R.M. Savory, *Studies on the history of Ṣafawid Iran*, Variorum Reprints, London 1987, no. V, 65-71).

The Özbegs, led by the powerful chief ʿUbayd (Allāh) Khān [*q.v.*], took advantage of this Ṣafawid military weakness to lay siege to Harāt (three times) and to capture it (twice) between 931/1524 and 940/1533. The signal victory won by Ṭahmāsp over the Özbegs at the battle of Djām on 11 Muḥarram 935/25 September 1528 gave the Ṣafawids a brief respite, but did not remove the Özbeg threat to the north-east frontier of the Ṣafawid state (for full details, see M.B. Dickson, *Shah Ṭahmāsp and the Uzbegs: the duel for Khurāsān with ʿUbayd Khān*, unpubl. Ph.D. thesis, University of Michigan 1958).

2. *Shāh Ṭahmāsp in command (940-982/1533-1574).*

For over forty years, Ṭahmāsp reigned without further challenge to his authority from the *Ḳizilbāsh amīrs*. External forces, however, continued to threaten the very existence of the Ṣafawid state. The death of ʿUbayd Khān in 946/1539 for a while reduced the threat in the north-east, but the threat from the Ottomans in the west and north-west increased after the accession of Sultan Süleymān Ḳānūnī [*q.v.*], who launched four full-scale invasions of Persia between 940/1533 and 961/1553-4. In these campaigns, the Ottomans were aided by *Ḳizilbāsh* renegades [see ṬAKKALŪS] and also by the Shāh's perfidious brother Alḳāṣ [see ALḲĀṢ MĪRZĀ].

As a military commander, Ṭahmāsp was at a constant disadvantage, in that the armies at his disposal were numerically inferior to those of his principal enemies, the Ottomans and the Özbegs. He was therefore rarely able to take the offensive or risk a pitched battle, but was forced to adopt scorched-earth tactics to blunt the impact of the Ottoman invasions. For example, on the occasion of Süleymān's third invasion in 955/1548, and again in 960/1553, Ṭahmāsp laid waste the entire region between Tabrīz and the Ottoman frontier, and the inhabitants of Tabrīz blocked the underground irrigation channels [see ḲANĀT]. As a result, the Ottoman armies, denied supplies of food and water, were unable to effect a permanent occupation of the area, and Ṣafawid forces moved back into it when the Ottomans withdrew to winter quarters in Anatolia. However, in recognition of the vulnerability of Tabrīz to Ottoman attack, in 955/1548 Ṭahmāsp transferred the capital to Ḳazwīn [*q.v.*].

The Treaty of Amasya (962/1555) gave Persia a twenty-year respite from the hostilities with the Ottomans which had gone on intermittently for forty years. Under the terms of the Treaty, Georgia was divided into "spheres of influence" between the two parties, and the Ottoman-Ṣafawid frontier in the north-west was demarcated without the cession by the Ṣafawids of large areas of territory. These terms, in the circumstances favourable to the Ṣafawids, are clear evidence of the frustration felt by the Ottoman sultan at his inability to inflict a decisive defeat on the Ṣafawids. The success of Ṭahmāsp in preserving the Ṣafawid state, beset as he was by powerful enemies on two fronts and plagued by treachery both among the *Ḳizilbāsh amīrs* and in his own family, must be seen as a remarkable achievement. D'Alessandri's accusation that Ṭahmāsp "never had inclination for war" and was "a man of very little courage" (*Narrative of the Most Noble Vincentio d'Alessandri, ambassador to the King of Persia for the Most Illustrious Republic of Venice*, in *A Narrative of Italian Travels in Persia in the fifteenth and sixteenth centuries*, Hakluyt Society, London 1873, 216) should be disregarded. When only fourteen years of age, Ṭahmāsp commanded the Ṣafawid centre at the battle of Djām, and it was his heroism that turned defeat into victory after most of his men had fled the field (Dickson, *op. cit.*, 134 ff.).

The reassertion of royal authority in 940/1533 had its effect on the principal offices of state. The office of *amīr al-umarāʾ*, denoting the commander-in-chief of the *Ḳizilbāsh* troops, virtually disappeared from the scene, and the office is not recorded in the list of appointments made by ʿAbbās I [*q.v.*; see also *EIr*, art. *ʿAbbās I*] on his accession (Iskandar Beg Munshī, *Tārīkh-i ʿĀlam-ārā-yi ʿAbbāsī*, ed. Iradj Afshār, 2 vols., Iṣfahān 1334-5 A.H.S/1955-6, text i, 384, tr. Savory, ii, 554). Instead, the title *ḳūrčībāshī* [see ḲŪRČĪ] was increasingly used. The title *wakīl*, in the sense of the *alter ego* of the Shāh with both temporal and spiritual authority, also fell into disuse. As a direct result of the lessening of *Ḳizilbāsh* influence in government, the head of the bureaucracy, the *wazīr*, gained greatly in power, as is demonstrated by the career of Ḳāḍī Djahān Ḳazwīnī, who was appointed by Ṭahmāsp in 942/1535-6 and held office until about 957/1550-1 (see Savory, *Studies*, no. V, 73 ff.; on allegations that Ḳāḍī Djahān was a crypto-Sunnī, see Dickson, *op. cit.*, 191 ff.). Until about midway through the 10th/16th century, the Ṣafawid state constituted essentially a Turco-Persian condominium. Between 947/1540-1 and 961/1553-4, however, Ṭahmāsp conducted a series of campaigns in Georgia, from each of which he brought back to Persia large numbers of prisoners, mainly women and children. From the 961/1553-4 campaign alone he brought back more than 30,000 prisoners, including a number of Georgian nobles (*aznāwurān*) (*Aḥsan al-tawārīkh*, 382). In addition, Armenians and Circassians were brought back to Persia from Ṣafawid campaigns in the southern Caucasus. These prisoners, and their offspring, introduced new ethnic elements into Persia which collectively constituted a "third force" in the Ṣafawid bureaucracy and army which in time altered the whole balance of power in the Ṣafawid state (see Savory, *Iran under the Safavids*, Cambridge 1980, 67 ff.). The influence of this "third force" was amply demonstrated in 982/1574, when Ṭahmāsp fell seriously ill of a fever (*tab-i muḥriḳ*; possibly typhoid) for two months, and discord and strife once again broke out among the *amīrs* (*Aḥsan al-tawārīkh*, 458). With the imminence of Ṭahmāsp's death, ambitious Georgian and Circassian mothers of princes of the blood royal intrigued with the aim of securing the succession of their respective sons. Their scheming increased in intensity after the death of Ṭahmāsp in 984/1576.

3. *Character of Ṭahmāsp.*

No comprehensive biography of Shāh Ṭahmāsp exists, and what evidence we have as to his character is often of a disparaging nature and to some extent contradictory. Neither Persian nor Western sources seem willing to credit him with any significant skills in either the arts of peace or of war. He is portrayed as miserly and avaricious; as a religious bigot; as puritanical or alternatively as a voluptuary; and as a man capable of great cruelty. The charge of avarice seems to be well attested (see Sharaf al-Dīn Bidlīsī, *Sharaf-nāma*, ed. Véliaminof-Zernof, St. Petersburg 1860-2, ii, 251-2; *A chronicle of the Carmelites in Persia*, 2 vols., London 1939, i, 47-8). The evidence also indicates that Ṭahmāsp was an Ithnā ʿAsharī zealot. The story of his reception of the Englishman Anthony Jenkinson, who had made his way to the Ṣafawid court in

970/1562 by the extremely hazardous route north of Scandinavia to Archangel, and thence via Astrakhan, the Caspian Sea and Shīrwān, bearing a letter from Queen Elizabeth I to Ṭahmāsp which sought to promote trade between England and Persia, clearly indicates the Shāh's attitude toward infidels (*Early voyages and travels to Russia and Persia*, Hakluyt Society, 1st Series, nos. LXXII and LXXIII, London 1886, vol. I, 147). In 951/1544, when the Mughal Emperor Humāyūn came to Persia as a fugitive, Ṭahmāsp forced him to embrace Ithnā ʿAsharī Shīʿism as the price of sanctuary in Persia and of Ṣafawid military aid (see Riazul Islam, *Indo-Persian relations. A study of the political and diplomatic relations between the Mughul Empire and Iran*, Tehran 1970, 28 ff., and Appendix C, *Humayun's conversion to Shīʿism*, 196-7; see also HUMĀYŪN). In 939/1532-3 Ṭahmāsp performed his celebrated act of repentance (*tawba*) from all "forbidden acts" (*manāhī*). In 963/1555-6 the great *amīr*s and courtiers were obliged to follow suit, and their example was said to have been followed by the populace at large (*Aḥsan al-tawārīkh*, 246, 396; *Tārīkh-i ʿĀlam-ārā-yi ʿAbbāsī*, text, i, 122, tr. i, 203). This puritanical posture in later life influenced his attitude toward poets in two ways: he regarded them as wine-bibbers, and no longer considered them to be God-fearing persons. Consequently, they fell from royal favour. Secondly, if they wrote occasional poems (*kiṭʿa*) or odes (*kaṣīda*) eulogising the Shāh or other members of the royal family, Ṭahmāsp told them they should devote their time to writing eulogies of the Imāms (*Tārīkh-i ʿĀlam-ārā-yi ʿAbbāsī*, text, i, 178, tr. i, 274-5; for an excellent account of Ṣafawid literature as a whole, see ṢAFAWIDS. III. Literature).

When Ṭahmāsp died in 984/1576, his reign was just nine days short of fifty-two (solar) years; no other Persian king had reigned for longer, with the exception of the Sāsānid ruler Shāpur II (A.D. 309-79). H.R. Roemer, in *CHIran*, vi, 248, says that Ṭahmāsp died "as a result of poison"... "whether this was by accident or design has never been established". The *Aḥsan al-tawārīkh*, 464, says that because one of the attending physicians, Abū Naṣr (Gīlānī), had been guilty of treachery (*khiyānat*) in the course of the treatment, he was put to death. The *Tārīkh-i ʿĀlam-ārā-yi ʿAbbāsī*, text, i, 168, tr. I, 264, says that Abū Naṣr Gīlānī had a good reputation at court as a physician whose prescriptions were mostly successful. When Ṭahmāsp fell ill, he attended him night and day, but "he unwisely sought recognition of his superior status vis-à-vis the other physicians; as a result, when Ṭahmāsp died, Abū Naṣr was accused of treachery (*khiyānat*) in the treatment he had prescribed, and he was put to death within the palace by members of the royal bodyguard".

Ṭahmāsp had thirteen sons: Muḥammad (later Sultan Muḥammad Shāh: 985-96/1578-88); Ismāʿīl [see ISMĀʿĪL II]; Ḥaydar; Sulaymān; Muṣṭafā; Djunayd; Maḥmūd; Imām Ḳulī; ʿAlī; Aḥmad; Murād; Zayn al-ʿĀbidīn; and Mūsā, and probably thirteen daughters (the eight named in the sources are: Gawhar Sulṭān Begum; Parī Khān Khānum; Khadīdja Sulṭān Begum; Zaynab Begum; Maryam Sulṭān Begum; Fāṭima Sulṭān Begum; Shuhra Bānū Begum; and Khānish Begum.

Bibliography: In addition to references in the text, see *CHIran*, vi, 233-50; *Tadhkira-yi Shāh Ṭahmāsp*, ed. Phillott, Calcutta 1912 (for mss. of the work, see Storey, i, 305, 1279). For an annotated bibliography of the sources for the period of Ṭahmāsp, see Dickson, *op. cit.*, Appendix II.

(R.M. SAVORY)

2. ṬAHMĀSP II, one of the last rulers of the dynasty, ruled 1135-45/1722-32.

Born in 1116/1704, the third son of Shāh Ḥusayn I, he was appointed by his father as crown prince and heir to the throne during the siege of Iṣfahān in 1134/1722 by the Afghāns. He broke out of Iṣfahān, and with Ḥusayn's relinquishment of the throne of Persia to the Ghilzay leader Maḥmūd, had himself proclaimed Shāh at Ḳazwīn (Muḥarram 1135/November 1722), issuing his own coins and decrees. He was to reign, more or less nominally, for some ten years, until 1145/1732, when the infant ʿAbbās III was placed on the throne by Nādir Khān, whose son Riḍā Ḳulī had Ṭahmāsp executed in 1151/1739.

The events of Ṭahmāsp's reign are bound up with the career of Nādir Khān, who became Ṭahmāsp's *wakīl al-dawla* and in 1139/1726 received from him the title of Ṭahmāsp Ḳulī "slave of Ṭahmāsp". For the course of these events, see NĀDIR SHĀH AFSHĀR.

Bibliography: See that to the above-mentioned article, to whose *Bibl.* should be added H.R. Roemer, in *Camb. hist. of Iran*, vii, 326-8, and C.E. Bosworth, *The New Islamic dynasties*, no. 148. Cf. also *EI*[1] art. *Ṭahmāsp* (Cl. Huart).

(C.E. BOSWORTH)

ṬAHMŪRATH, generally accounted the second king of the Pīshdādid dynasty [*q.v.*] in legendary Iranian epic history, coming after the first world-king Kayūmarth or Gayōmard and the founder of the Pīshdādids, Hūshang [*q.v.*]. Certain Islamic sources make him the first king of his line, and the length of the reign attributed to him—such figures as an entire millennium or 600 years are given—shows the importance attached to him. His name appears in the Avesta as *Takhmō urupa azinavča*, with the first element *takhma*, meaning "strong, courageous" (cf. the name Rustam/Rustahm) and *urupi.azinavant*, meaning (as recognised by K. Hoffmann, *Aufsätze zur Indo-iranistik*, Wiesbaden 1976, 487-9) "equipped with a fox-skin" (originally a goat-skin), so that the whole name should be rendered as "the strong/brave one in the fox-skin". The Pahlavi spelling, in the *Bundahishn* and elsewhere, is *thmulp* or *tʾhmwrp*, usually read as *Tahmōrup*. There is no plausible phonetic reason why the final sound became rendered in the Arabic script as *th* except through the erroneous pointing of manuscripts, but this form was popularised in the *Shāh-nāma* and became universal. A. Christensen put forward the suggestion that Hūshang and Ṭahmūrath were adopted into Iranian national lore from the Scythians of the Eurasian steppes.

Various features of the ancient Iranian Ṭahmūrath are taken up in the Islamic sources. Thus his epithet in the *Shāh-nāma* of *dīwband* comes from his subduing of the demons, from whom he extorted knowledge of the various kinds of writing (Firdawsī mentions six by name: the *rūmī*, the *tāzī*, the *pārsī*, the *soghdī*, the *čīnī* and the *pahlawī* (*Shāh-nāma*, ed. Vullers, i, 20-2, ed. Khāliḳī-Muṭlaḳ, i, 35-7; cf. Ph. Wolff, *Glossar zu Firdosis Schahname*, Berlin 1935, 593); this may preserve the memory of the Iranian tribes entering the land from Inner Asia and acquiring a knowledge of writing from the original inhabitants there. It is further said that it was Ṭahmūrath who initiated the domestication of wild animals, the use of horses for riding, the weaving of woollen and hair cloth for clothing and for carpets, the use of birds of prey for hunting, etc. (see al-Ṭabarī, i, 175-61; Balʿamī, *Taʾrīkh*, ed. M.S. Bahār, Tehran 1341/1962, 129; al-Thaʿālibī, *Ghurar akhbār mulūk al-Furs*, ed. and tr. Zotenberg, 8-10; *Shāh-nāma*, *loc. cit.*). There was also an attempt to insert

Ṭahmūrath, with his predecessors Kayūmarth and Hūshang, into the genealogy of the Biblical prophets, with e.g. Adam as the first man, and Ṭahmūrath being equated with Noah, and to locate his residence at Sābūr in Fārs (see al-Masʿūdī, *Murūdj*, ii, 111, iii, 252 = §§ 535, 1116).

Unlike other royal names from the Iranian national epic, such as Rustam, Shahriyār, Hūshang, etc., Ṭahmūrath did not become popular within Muslim Persian and Persian-influenced onomastic. However, it does appear amongst the later line of Shīrwān Shāhs [*q.v.*] as the name of the brother of the Shāh Ibrāhīm b. Muḥammad b. Kay Kubādh (780-821/1378-1418) (see C.E. Bosworth, *The New Islamic dynasties, a chronological and genealogical manual*, Edinburgh 1996, no. 62). Also, it was probably these Shāhs' fondness for Iranian epic names that made the Christian kings of Georgia (not infrequently allied with the Shāhs by marriage) adopt thc name under the form Tʿeimuraz.

Christensen, *Les types du premier homme et du premier roi dans l'histoire légendaire des Iraniens*, Stockholm 1917, i, 182-216 (interpretations largely speculative and now untenable); E. Yarshater, *Iranian national history*, in *Camb. hist. Iran*, iii, 422; V. Minorsky, *EI*[1] art. s.v. (C.E. Bosworth)

TAḤNĪṬ (A.), the verbal noun of *ḥannaṭa* "to prepare a corpse for burial with embalming substances" (see Lane, i, 657a). For this process, and the substances used, see ḤINĀṬA.

TAḤRĪF (A.), change, alteration, forgery; used with regard to words, and more specifically with regard to what Jews and Christians are supposed to have done to their respective Scriptures (*yuḥarrifūna 'l-kalima ʿan mawāḍiʿhi*, sūra IV, 46, V, 13; see also II, 75), in the sense of perverting the language through altering words from their proper meaning, changing words in form or substituting words or letters for others. Such substitution is also termed *tabdīl*, a wider term, used also in other contexts, but in the Ḳurʾān and later literature practically synonymous with *taḥrīf* (see II, 59, VII, 162, and the commentary of Mudjāhid b. Djabr [*q.v.*] to IV, 46, where he explains *ḥarrafa* by *baddala*).

The Ḳurʾān accepts the *Tawrāt* and *Indjīl* [*q.vv.*] as genuine divine revelations taken from the same Guarded Tablets as the Ḳurʾān itself and brought by true messengers to both Jews and Christians respectively. Those, however, did not adhere to their Law, but tampered with their own Scriptures (III, 78, with the verb *lawā*; V, 15, 45). The Ḳurʾān does not state explicitly how this was done and when, but later commentaries give various explanations. Some relate it to the times of Moses (see commentaries to II, 58-9, wherein the Banū Isrāʾīl are accused of having changed (orally?) the word *ḥiṭṭa*). Later authors accuse Israelite Kings or Priests, especially Ezra the Scribe (see below) or Byzantine rulers, etc. The accusation that Jewish contemporaries of Muḥammad concealed (*kitmān*) Biblical material, e.g. the punishment (stoning) for adultery or the Biblical prediction of Muḥammad's prophecy (see the commentaries on V, 42-9, and Ibn Hishām, ii, 382 ff., 393-5) is also considered to be *taḥrīf*.

The accusation of forgery was a widespread polemical motif, already in pre-Islamic times used by pagan, Samaritan and Christian authors to discredit their opponents and Scriptures. In the Medinan sūras it is a central theme, apparently used to explain away the contradictions between the Bible and the Ḳurʾān and to establish that the coming of the Prophet and the rise of Islam had indeed been predicted in the "true" Bible.

In the first centuries of Islam, *taḥrīf* was not a central theme, though well-known. *Ḥadīth* and early commentaries filled out the gaps left by the relevant Ḳurʾānic verses. Mudjāhid explained that those who hide and distort Biblical verses are the Jewish *ʿulamāʾ* (see al-Ṭabarī on the above verses). Others stated explicitly that the Jews do so in order to hide the fact that Muḥammad was predicted in their Torah (Muḳātil b. Sulaymān, *Tafsīr*, Cairo 1979, i, 118, to II, 76, see also 461). Some explained that *taḥrīf* means that the Jews "made the lawful forbidden and the forbidden lawful, and took the truth as falsehood and the falsehood as truth" (al-Ṭabarī, on II, 59).

Muslim authors understood the falsification as either *taḥrīf al-maʿnā*, distortion of the meaning of the text, or *taḥrīf al-naṣṣ*, falsification of the text itself (see the *Risāla* of the 3rd/9th century writer Ibn al-Layth, in A.Z. Ṣafwat, *Djamharat rasāʾil al-ʿArab*, iii, Cairo 1356/1937, 296 ff., who seems to know both meanings and defends the Ḳurʾān against the counter-argument of having also been altered). Early Christian authors already defend themselves and their Scriptures against both accusations (S.H. Griffith, *ʿAmmār al-Baṣrī's Kitāb al-Burhān. Christian kalām in the first Abbasid century*, in *Le Muséon*, xlvi [1983], 165-8). Some Muslim authors take *taḥrīf* to mean only the distortion of meaning of the text, notably al-Ḳāsim b. Ibrāhīm (d. 246/860; see I. Di Matteo, *Confutazione contro i Christiani dello Zaydita al-Qāsim b. Ibrāhīm*, in *RSO*, ix [1922], 319) and Ibn Khaldūn, who rejects the idea of actual falsification of Jewish or Christian Scriptures "since custom prevents people who have a (revealed) religion from dealing with their divine Scripture in such a manner" (*Muḳaddima*, ed. Quatrèmere, i, 12-13, tr. F. Rosenthal i, 20-1; most printed editions omit this remark).

The more common understanding, however, of *taḥrīf* among Muslim authors, especially from the 5th/11th century up to modern times, has been the one which accused Jews and Christians of having deliberately falsified the text of their own respective Scriptures. Jewish oral tradition, seen as an unauthorised addition to Scripture, is also considered to be part of this falsification. So is Christian canon and other law. In this context, Muslim authors stressed the differences between the "three Bibles": the Hebrew Bible of the Jews; the Samaritan Bible; and the "Greek Bible" (i.e. the Septuagint) of the Christians (al-Masʿūdī, *Murūdj*, i, 118-19 = § 115; al-Bīrūnī, *al-Āthār al-bāḳiya*, 20-1, tr. Sachau, 24; Ibn Ḥazm, *al-Faṣl fi 'l-milal*, i, 117, 198, ii, 7-10) as proof of the falsification.

The argument of *taḥrīf* is refuted already in an early polemical text attributed to the Byzantine Emperor Leo III (A. Jeffery, *Ghevond's text of the correspondence between ʿUmar II and Leo III*, in *Harvard Theol. Review*, xxxvii [1944], 269-321) with the statement that Jews and Christians share the same, widely-known divine text, and that Ezra, who redacted the Bible, was a pious, reliable person. The same arguments appear in later Jewish writings (see Ibn Kammūna [*q.v.*], *Tanḳīḥ al-abḥāth li 'l-milal al-thalāth*, ed. and tr. M. Perlmann, Berkeley 1971, 1967, ch. 2). The personality of Ezra-ʿUzayr [*q.v.*] becomes very involved in this discussion in the 4th/10th century, and especially with Ibn Ḥazm [*q.v.*], who in his *Faṣl* explicitly accused "ʿAzrā" of having falsified and added interpolations into the Biblical text. He also arranged systematically and in scholarly detail the arguments against the authenticity of the Biblical text in the first (Hebrew Bible) and second part (New Testa-

ment) of his book: chronological and geographical inaccuracies and contradictions; theological impossibilities (anthropomorphic expressions, stories of fornication and whoredom, and the attributing of sins to prophets), as well as lack of reliable transmission (*tawātur*) of the text. He explains how the falsification of the Pentateuch could have taken place while there existed only one copy of the Pentateuch kept by the Aaronid priests in the Temple in Jerusalem. Ibn Ḥazm's impact on later Muslim polemics was great, and the themes which he raised with regard to *taḥrīf* and other polemical ideas—updated only slightly by some later authors, such as the Jewish convert to Islam al-Samaw'al al-Maghribī (d. 570/1175) in his *Ifḥām al-Yahūd* (ed. and tr. M. Perlmann, PAAJR, 32, 1964)—became the standard themes of later Muslim polemical literature against both Jews and Christians (see, e.g., al-Ḳarāfī's (d. 684/1285) *al-Adjwiba al-fākhira ʿan al-asʾila al-fādjira*; Ibn Taymiyya; and Ibn Ḳayyim al-Djawziyya).

Modern European Bible criticism is taken by some Muslim authors as a vindication of the theory of *taḥrīf* (see Raḥmat Allāh al-Hindī's (1818-91) *Iẓhār al-ḥaḳḳ*; cf. C. Schirrmacher, *Mit den Waffen des Gegners, Christlich-muslimische Kontroversen im 19 u. 20 Jahrhundert*, Berlin 1992, and M. Khalīfa Ḥasan Aḥmad, *ʿAlāḳāt al-Islām bi 'l-Yahūdiyya. Ruʾya Islāmiyya fī maṣādir al-Tawrāt al-ḥāliyya*, Cairo 1986).

In Sunnī-Shīʿī polemics, the problem of *taḥrīf* arose with regard to the text of the Ḳur'ān. Sunnī authors accused the Shīʿa of believing that the Ḳur'ān had been falsified. Early Shīʿī material on this topic seems to be lost; apparently only some Shīʿī authors held this view mainly with regard to omissions (of Ḳur'ānic references to ʿAlī and his family) and some minor changes in Ḳur'ānic verses. Although the Shīʿīs practically accepted the existing Ḳur'ānic text, these accusations have been raised sporadically up to modern times (E. Kohlberg, *Some notes on the Imāmite attitude to the Qur'ān*, in *Islamic philosophy and the Classical tradition. For R. Walzer*, Oxford 1972, 209-24).

(Hava Lazarus-Yafeh)

TAḤRĪR (a.), a technical term of Ottoman administration.

Derived from an Arabic verb which denotes "writing", this word is at times used in the same sense in Ottoman Turkish as well. But as a technical term, *taḥrīr* has come to denote the Ottoman tax registers for the most part compiled during the 9th-10th/15th-16th centuries (*Başbakanlık Osmanlı arşivi rehberi*, Ankara 1992, 186-228, records them under this term, a synonym being *tapu taḥrīr defterleri*). This is one of the best-known series of the Ottoman archives, which in turn can be subdivided into *defter-i mufaṣṣal*, *defter-i idjmāl* and *defter-i ewkāf*. In principle, these registers were to be compiled about once every thirty years; but in reality, distances in time between different *taḥrīrs* covering a given region varied widely.

The *taḥrīrs* were mainly designed to keep track of that part of Ottoman state revenue which did not reach the central treasury, but was assigned locally, to *tīmār* [*q.v.*] holders, garrison soldiers, *waḳf* administrators, or even owners of private property (*mülk*); the latter might be required to furnish soldiers (*eshkindji*) in return for the privilege of official recognition. The *taḥrīrs* also recorded the revenues accruing to the central treasury (*khāṣṣ* [*q.v.*]) and assigned to the sultan himself, members of his family or provincial governors. From the late 10th/16th century, a tax of variable level, known as the *ʿawāriḍ* [*q.v.*], came to occupy a central place in Ottoman finance. As a result, the expense of preparing a *taḥrīr* must have no longer seemed justified, particularly since an increasing number of revenues was now farmed out to the highest bidder. Tax registers were no longer compiled in coherent series after the reign of Murād III. However, individual registers were occasionally prepared both in the 11th/17th and 12th/18th centuries, and a whole group of Anatolian *taḥrīrs* survives from the 1040s/1630s.

The most extensive form of *taḥrīr* is the *defter-i mufaṣṣal*, which contains an enumeration of taxpayers, listed by settlement. Muslims precede non-Muslims. At the end of each settlement, the *defter-i mufaṣṣal* records certain taxes due from the inhabitants, such as the tithes (*ʿöshür*), farm taxes (*resm-i čift*, *resm-i bennāk*, *ispendje*), and, where applicable, the *djizye*. Individual settlements were grouped by *nāḥiye* and *ḳaḍā*, and *ḳaḍās* by *sandjaḳ*. The largest unit, namely the *wilāyet*, on account of its size does not often occur in the *mufaṣṣal*; but we possess *idjmāls* covering one or even several *wilāyets*. However, this terminology was subject to considerable variation. Some *mufaṣṣals* do not distinguish between *ḳaḍā* and *nāḥiye*, while, especially in 9th/15th century registers, the term *wilāyet* was used for small units consisting of no more than a few villages. After mentioning the name of the settlement to be described, but before enumerating the taxpayers, the scribes often provided some information on the tax history of the town or village in question. Sometimes this consisted of a simple note to the effect

that a given village was the *tīmār* of a certain personage, or that this or that town formed part of the *khāṣṣ-i hümāyūn*. In other instances, the *defter* might record that a given village had been *wakf*, that it had been converted into a *tīmār* by Meḥemmed II, and that it recently had reverted to its previous status. On the first pages of the *defter-i mufaṣṣal* we often find a *ḳānūnnāme*, which contained mainly the rules for taxation to be applied in the area, but in some instances also specified the punishments to be administered in the case of crimes and misdemeanours.

To facilitate the distribution of tax revenues to *tīmār*-holders and other recipients, the data contained in the *mufaṣṣal* were summarised in the *idjmāl*. Here taxpayers were not enumerated individually, but merely the total taxpaying population was recorded for each settlement. However, many *idjmāls* contain information on the taxpayers resident in a given *ḳaḍā* who possessed a special tax status, such as unmarried men (*müdjerred*), garrison soldiers, people enjoying tax exemptions in return for services to the Ottoman administration (*ṭuzdju, derbenddji, yuwadjī*, etc.). For a published version, see *438 numaralı muhasebe-i vilâyet-i Anadolu defteri (937/1530)*, i-ii, Ankara 1993-4.

As the amount of land recognised as *wakf* in most rural areas was fairly limited, *wakf* registers are often short, and may simply form an appendix to the *idjmāls*. But some of the oldest surviving registers happen to concern *wakf*. Particularly notable is the document describing the province of Ḳaramān shortly after this principality had finally been incorporated into the Ottoman domain (881/1476; published by Feridun Nafiz Uzluk, *Fatih devrinde Karaman eyâleti vakıfları fihristi, Tapu ve Kadastro Umum Müdürlüğü arşivindeki deftere göre*, Ankara 1958). Moreover, in and around major cities, such as Bursa or Istanbul, the number of *wakfs* was considerable, resulting in voluminous documents (Ömer Lütfi Barkan and Ekrem Hakkı Ayverdi (eds.), *953 (1546) tarihli İstanbul vakıfları tahrir defteri*, Istanbul 1970).

(Suraiya Faroqhi)

TAḤṢĪL (a.), the verbal noun of the form II verb *ḥaṣṣala* "to collect together, acquire". In Indo-Muslim usage, this term—taken over from previous régimes—denoted in the British Indian provinces of Bombay, Madras and the United Provinces the collection of revenue and, thence, the administrative area from which this taxation was collected. Thus in the above-mentioned provinces, the *taḥṣīl* was a subdivision of a District (*taʿalluḳa*, corruptly, *tālūk*) with an area of up to 600 square miles. Hence in size, a *taḥṣīl* came between the *pargana* [*q.v.*] and the *sarkār* of the Mughal empire [see mughals. 3.]. The official in charge of it was called the *taḥṣīldār*, and was responsible to such superior officials as the District Magistrate and the Collector.

TAḤSĪN, Mīr Muḥammad Ḥusayn ʿAṭā Khān, pioneer in Urdu prose-writing, who lived somewhere in the middle of the 18th century. He was a native of Etawah (Iṭāwa) in present-day Uttar Pradesh, and came from a middle-class family of *sayyids*. His ancestors reportedly migrated from Gardīz in what is now eastern Afghānistān, and settled in Kaŕa Mānikpūr. His father, Mīr Muḥammad Bāḳir, moved to Dihlī at an early age and was employed as commander of 3,000 (*sih hazārī*) in Awrangzīb's administration; he is said to have been a poet writing under the pen-name Shawḳ. During the turbulent times that followed the death of Awrangzīb, Taḥsīn left Dihlī and served for many years under the Mughal viceroys of Bengal. Later, he was one of the first Indians to be employed in the service of the East India Company at Calcutta. He also served as secretary for a British army officer who is mentioned by him only as General Smith. When the latter returned to England around 1769, Taḥsīn took up employment in Patna. After some time he proceeded to Fayḍābād where he gained access to the court of Shudjāʿ al-Dawla, Nawāb of Awadh, being still employed there in 1775 when the latter died and was succeeded by his son Āṣaf al-Dawla (d. 1797).

Taḥsīn is known chiefly for his *Naw ṭarz-i muraṣṣaʿ*: "A new gold-embroidered style", which has been characterised as the first book of Urdu prose literature produced in northern India (see Nūr al-Ḥasan Hāshimī's introd. to it, 23). It was completed around 1775, and contains the stories of four dervishes; it is believed to be a translation of a Persian book, *Čahār darwīsh*, wrongly attributed to Amīr Khusraw [*q.v.*]. It is written in an ornate style, with an artificial diction. Notwithstanding these drawbacks, one cannot overlook its importance, if only because it was used by other writers to pen their own versions of the narrative, most notable among them being Mīr Amān's [see amān, mīr] *Bāgh o bahār* which, completed in 1217/1802, became the first classic of Urdu prose.

Apart from *Naw ṭarz-i muraṣṣaʿ*, Taḥsīn claims to have written other works as well, some of which were in Persian, and are now known only by name. He is also mentioned as a poet writing in both Persian and Urdu and as a master calligrapher, whose skill in fine writing had earned him the title of *muraṣṣaʿ raḳam* "golden penmanship".

(MUNIBUR RAHMAN)

TAḤSĪN WA-**TAḲBĪḤ** (A.), "determining something to be good or repellent", a phrase referring in shorthand fashion to the controversy over the sources of the moral assessment of acts. Some argued for an assessment of things according to the dictates of common sense (*ʿaḳl*) or utility (*nafʿ*), and this led some to hold that the *ḥusn* or *ḳubḥ* of an act was part of its ontology as an accident of essence or as an aspect (*wadjh*) of the thing itself. Others argued that it is only the deontic divine command (*sharʿ*) that gives moral value to acts.

The "sources" of this discussion are impossible to establish; certainly, the rudiments of the problem are already found in Plato's *Euthyphro* but the problem is common to all of the Revelational religions, whose Scripture does not reach in literal form to all possible acts. For Muslims, who had come by the 4th/10th century to believe that the Ḳurʾān contained an assessment (*ḥukm*) for every act, the problem took a particularly acute form. The Muʿtazila, in particular, for whom God's goodness required that He require only what was best (*al-aṣlaḥ*) for His bondsmen, the immediate pointlessness of ritual also constituted an incentive toward the consideration of this problem. There were consequently two Muʿtazilī positions on the question. The Baghdādīs, especially al-Kaʿbī [*q.v.*], took the position that the *ʿaḳl* could assess acts, but they were in fact proscribed (*maḥẓūr*) before Revelation came to give mankind permission to perform them. The Baṣrans urged that acts could be assessed, and that they were, in default of some *ʿaḳlī* indication to the contrary, permitted (*mubāḥ*). Of course, at issue was the category of acts which were not mentioned in revelation.

Despite the attempts of later biographical and heresiographical sources to conceal early diversity, it is clear that Sunnī school positions for theological/legal schools did not begin to form until the 5th/11th century, with Ḥanbalīs, for example, defending "Muʿtazilī" positions into the 6th/12th century (e.g. Abu 'l-Khaṭṭāb Maḥfūẓ al-Kalwadhānī, d. 510/1117). By the 7th/13th century, the matter had sorted itself out so that Shāfiʿīs and Ḥanbalīs generally took the Ashʿarī position that the intellect could not assess the moral value of acts, and Ḥanafīs/Māturīdīs took an intermediate position that gave common sense the ability to assess acts, with-out that assessment having soteriological significance. Imāmī and Zaydī Shīʿīs embraced the Baṣran Muʿtazilī position that the performance of useful acts, in default of revelation, was permitted.

(A.K. REINHART)

ṬĀḤŪN (A.), mill. Lane (s.v. *ṭ-ḥ-n*) also offers the readings *ṭāḥūna* as the general word for mill, as well as watermill, and *ṭaḥḥāna* meaning an animal-powered mill. Contemporary Egyptian usage for the noun *ṭaḥūna* is given variously as grist mill, windmill and, in the expression *ṭaḥūnit bunn*, coffee grinder; *ṭaḥḥāna* is also the word for grinder and, as in the expression *ṭaḥḥāna filfil*, a pepper mill (Hinds and Badawi, *A dictionary of Egyptian Arabic*, Beirut 1986). The root of the word, meaning crushing or grinding, had instrumental use both in large scale commercial enterprises and in the preparation of food in the domestic kitchen. In the latter case, for example, the term *ṭāḥūn* is found, albeit but once, in a culinary manual. This occurs in a recipe called *zuhriyya* containing sandal, anbar and dried flower petals which are ground or milled (*ṭaḥana*) together in a *ṭāḥūn* with cardamon, cloves and sugar (*Kanz*, 235). The employment of a small, domestic mill or hand rotary quern appears in contrast to the far more commonly used (in the urban household at least) mortar (*hāwūn*), where the ingredients were pounded (*daḳḳa*) with a pestle. It may be assumed, however, that in instances where the verb *ṭaḥana* is used in recipes without mention of the specific instrument being employed, a domestic grinding mill is intended.

Mediaeval commercial enterprises, whether private or government controlled, powered their mills by exploiting the natural forces of water and wind (in addition to animals), depending upon which was more easily or consistently available and cheaper to harness in any given area; there also existed many different types of mill. Water-powered mills using either the undershot, overshot or horizontal type of wheel existed in pre-Islamic times and were employed throughout the mediaeval period, while wind-powered mills appear to have been first used in Islamic Persia in regions where water was scarcer (see H.E. Wulff, *The traditional crafts of Persia. Their development, technology, and influence on Eastern and Western civilizations*, Cambridge, Mass. 1966, 277-89; M. Harverson, *Watermills in Iran*, in *Iran JBIPS*, xxxi [1993], 149-77). Ship-mills of the undershot wheel type, were found moored in mid-stream of the Tigris and Euphrates rivers, while tidal mills are noted in use at Baṣra (A. Mez, *The renaissance of Islam*, Patna 1937, 466-7). Mills of the water-driven trip-hammer type were used in the manufacture of paper and for husking rice, while others processed sugar cane, in addition to their primary purpose of providing adequate supplies of cereal flour for the major urban centres and even villages of the Middle East; a milling stage was also involved in the dressing of metal ore. Regardless of the mill type, the principles of operation were the same, the grinding being accomplished by means of a stone rotating on top of a fixed one. Traditional techniques have continued down to modern times where other sources of energy, such as fossil fuels, have not replaced those of water and wind.

AL-ṬĀʾIʿ LI-AMR ALLĀH (or LI ʾLLĀH), ʿAbd al-Karīm b. al-Faḍl, fainéant ʿAbbāsid caliph (363-81/974-91).

His father was the caliph al-Muṭīʿ [*q.v.*], after whose deposition on 13 Dhu ʾl-Ḳaʿda 363/5 August 974 he was proclaimed Commander of the Faithful. His mother, who survived him, was called ʿUtb. As Ibn al-Athīr justly observes (ix, 56), al-Ṭāʾiʿ during his reign had not sufficient authority to be able to associate himself with any enterprises worthy of mention. He is only mentioned in history, one may safely say, in connection with certificates of appointment to office, letters of condolence and such-like formalities, and his most remarkable feature seems to have been his extraordinary physical strength. The real rulers were at first the Būyids [see BUWAYHIDS] but after the most important of them, ʿAḍud al-Dawla [*q.v.*] who was the caliph's father-in-law, had died in Shawwāl 372/March 983, his sons began to quarrel among themselves. In Shaʿbān 381/Oct.-Nov. 991 Bahāʾ al-Dawla [*q.v.* in Suppl.], who was in financial difficulties and could not pay his troops, was persuaded by his influential adviser Abu ʾl-Ḥasan Ibn al-Muʿallim to overthrow the caliph and seize his treasury. At an audience at which the Būyid appeared with a large retinue, the unsuspecting al-Ṭāʾiʿ was torn from his throne by Bahāʾ al-Dawla's orders and taken to the latter's house, where he was kept a prisoner. He was succeeded as caliph by his cousin Abu ʾl-ʿAbbās Aḥmad, who took the name al-Ḳādir [*q.v.*]. In Radjab 382/September 992 the ex-caliph was allowed to come to al-Ḳādir's palace, where he was well treated. He died on 1 Shawwāl 393/3 August 1003.

The eastern Islamic dynasty of the Sāmānids [*q.v.*], and their vassals in Khurāsān, Sebüktigin and Maḥmūd of Ghazna, refused to acknowledge the accession of al-Ḳādir, regarding him as the tool of the Būyids; on their coins the Sāmānids continued to their end to recognise al-Ṭāʾiʿ as caliph, and he likewise appears on the coins of Maḥmūd till 389/999.

(K.V. ZETTERSTÉEN-[C.E. BOSWORTH])

AL-ṬĀʾIF, a town in Arabia to the south-east of Mecca which in the early days of Islam belonged to the Thaḳīf [*q.v.*] tribe. Today it is the fourth largest town in Saudi Arabia, located at a road junction on the way from Mecca to al-Riyāḍ [*q.v.*]. In former times it took two or three days to go from Mecca to al-Ṭāʾif, depending on the route. Al-Ṭāʾif is in the Sarāt [*q.v.*] mountains, 1,680 m/5,500 feet above sea level. Some locate it in Nadjd [*q.v.*], while others argue that it is in Ḥidjāz [*q.v.*]. Its pleasant climate during the summer has made it the summer capital of western Arabia.

Al-Ṭāʾif is surrounded by valleys, the most important being the one in which it is situated, Wadjdj, which gave it its pre-Islamic name (see *al-ʿArab* [Riyāḍ] ix/7-8 [Feb.-March 1975], 514-31; for up-to-date information see *ibid.*, xxiv/9-10 [Oct.-Nov. 1989], 604-16). A clause in the agreement between the Prophet and the Thaḳīf declared the valley a *ḥaram* or sacred territory.

On the eve of Islam, a brick wall was built around al-Ṭāʾif. The initiative and financing reportedly came from a merchant who had immigrated to al-Ṭāʾif from Ḥaḍramawt [*q.v.*]. Pre-Islamic al-Ṭāʾif also had fortresses, the origin of which is disputed. Following a joint Thaḳafī-Ḳurashī trade expedition to Persia in which Ghaylān b. Salama al-Thaḳafī and Abū Sufyān [*q.v.*] took part, Khusraw sent, with the former, someone (i.e. a skilled constructor) who built for him the first fortress of al-Ṭāʾif. This construction is variously referred to as an *uṭum* and *ḥiṣn*. This is supposed to have taken place on the eve of Islam, since both Ghaylān and Abū Sufyān became Companions of the Prophet. Another claim for "firstness" points to an earlier generation by linking the first fortress to Masʿūd b. Muʿattib, who was the father of the Prophet's Companion ʿUrwa b. Masʿūd. Both Ghaylān and Masʿūd were members of the Thaḳīf branch called al-Aḥlāf (moreover, they belonged to the same clan, the Muʿattib). There was fighting between the Aḥlāf and the Mālik, who were a rival branch of Thaḳīf. At some stage, Masʿūd sought military aid from a friend in Yathrib, Uḥayḥa b. al-Djulāḥ. Instead, Uḥayḥa sent with him a slave, a skilled builder of *uṭums*, who built for him the first *uṭum* of al-Ṭāʾif (cf. G.R.D. King, *Creswell's appreciation of Arabian architecture*, in *Muqarnas* viii [1991], 94-102, at 98b-99a).

The combination of fertile land and abundant water supply turned the valleys around al-Ṭāʾif into a prosperous agricultural area which grew wheat and various fruits and vegetables. One *ḥadīth* has it that al-Ṭāʾif was originally a tract of land in Filasṭīn transferred by God to Arabia following Abraham's prayer (Ḳurʾān, XIV, 37). Many dams were constructed around al-Ṭāʾif, among them one placed some 32 km/20 miles north-east of al-Ṭāʾif which was built by Muʿāwiya I. A Kūfic inscription dates its construction to 58/677-8 (G.C. Miles, *Early Islamic inscriptions near Tāʾif in the Ḥijāz*, in *JNES*, vii [1948], 236-42; A. Grohmann, *Arabic inscriptions*, Louvain 1962, 56-8; M. Khan and A. Al-Mughannam, *Ancient dams in the Tāʾif area 1981 (1401)*, in *Atlal*, vi [1982], 125-35, at 129-31). The dam, in the construction of which no mortar or mud were used, is still in good condition.

The Ṭāʾif area produced excellent honey, and the Liyya valley was famous for its pomegranates. But grapes were probably the most important product of the local economy. These figure prominently in the myth about the eponym of the Thaḳīf. He was adopted by an old Jewess in Wādī al-Ḳurā [*q.v.*], who gave him vine twigs which he later planted in the Wadjdj valley. Naturally, there developed in al-Ṭāʾif a wine industry. A list of tavern-keepers in Ibn al-Kalbī's *K. al-Mathālib* includes two Ṭāʾifīs who had partners from the Ḳurashī Banū Umayya. One of them was Abū Maryam al-Salūlī [see SALŪL, at vol. VIII, 1004b]. Being a tavern-keeper, Abū Maryam had links with women of ill-repute [cf. BIGHĀʾ, in Suppl.] and at the time of Muʿāwiya he testified that Abū Sufyān fornicated with Sumayya. The testimony was given in support of the claim that Ziyād b. Abīhi [*q.v.*] (as he was pejoratively called after the Umayyad period) was Abū Sufyān's son (cf. U. Rubin, *al-Walad li-l-firāsh: on the Islamic campaign against "zinā"*, in *SI*, lxxviii [1993], 5-26, at 13-15).

Al-Ṭāʾif supplied, and still supplies, most of Mecca's

demand in fruit, hence it was called "the orchard of the *ḥaram*" (i.e. of Mecca). Rich Ḳurashīs developed, already before Islam, large estates in the valleys surrounding al-Ṭā'if. Their water supply was possibly based on underground irrigation canals [see ḲANĀT]. Among the Ḳurashī properties in the vicinity of al-Ṭā'if, the best known is al-Waht, which is located in the Wadjdj valley. ʿAmr b. al-ʿĀṣ's [*q.v.*] father already owned this estate before Islam. ʿAmr himself further developed it and it remained a source of fabulous revenues for his offspring. At the time of Muʿāwiya, the governor of al-Ṭā'if, who was the caliph's brother, tried to seize this estate from ʿAmr's son, ʿAbd Allāh (M. Lecker, *The estates of ʿAmr b. al-ʿĀṣ in Palestine: notes on a new Negev Arabic inscription*, in *BSOAS*, lii [1989], 24-37, at 25-6).

Al-Ṭā'if used to have a famous tanning industry and the Ṭā'ifī shoes, for example, were known for their quality.

Beside the Thaḳīf, al-Ṭā'if was also inhabited by members of other tribes, mainly tribes of the Ḳays ʿAylān [*q.v.*] (for an up-to-date report on the tribes in al-Ṭā'if and its vicinity, see *al-ʿArab* [Riyāḍ], xiv/1-2 [June-July 1979], 42-73).

Most of al-Ṭā'if's inhabitants before Islam were idol worshippers and one of the major deities of pre-Islamic Arabia, al-Lāt [*q.v.*], was situated there. Some of al-Ṭā'if's inhabitants were Christians. Those who considered the famous physician, al-Ḥārith b. Kalada [*q.v.* in Suppl.], a Dhimmī (cf. G. Hawting, *The development of the biography of al-Ḥārith ibn Kalada...*, in *The Islamic World... essays in honor of Bernard Lewis*, ed. C.E. Bosworth *et alii*, Princeton 1989, 127-40, at 128), probably had in mind Christianity. In the first decades of the Islamic era, the Ṭā'if district (*mikhlāf*) was inhabited by Jews who had been expelled from the Yemen and Yathrib. Muʿāwiya bought his estates in al-Ṭā'if from one of them.

The high standard of living enjoyed by the Ṭā'ifīs before Islam and during its early period was accompanied by a level of literacy which was no lower than that found in Mecca. Consequently, many literate Ṭā'ifīs could easily be recruited by the administration. The self-evident link between literacy (including arithmetic skills) and administration can be demonstrated by details from the biographies of the two most famous ex-Ṭā'ifīs, Ziyād b. Abīhi and al-Ḥadjdjādj b. Yūsuf [*q.v.*]. The former, whose mother was a slavegirl, was nevertheless educated in the *kuttāb* [*q.v.*] of Djubayr b. Ḥayya. Djubayr became a *dīwān* secretary in ʿIrāḳ and then his ex-pupil, Ziyād, made him governor of Iṣfahān. As to al-Ḥadjdjādj, he was a former teacher, a shortcoming which his enemies did not fail to mention.

Schweizer, *Taif. Entwicklung, Struktur und traditionelle Architektur einer arabischen Stadt im Umbruch*, Wiesbaden 1993. (M. LECKER)

ṬĀ'IFA (A.), pl. *ṭawā'if*, means in general "a group, party, company of men", as in Ḳur'ān, XXIV, 2; in later usage, often "a professional or trade group, corporation", the equivalent of *ṣinf* [*q.v.*]; and in later mediaeval and modern usage, "a religious or sectarian group", whence *ṭā'ifiyya* [*q.v.*] "sectarianism, confessionalism". Here, the extended usage from "group" to its sense in Ṣūfī mysticism will be considered, since Ṣūfīs used the term in contexts conformable to the words basic meaning of "group", *djamāʿa*, or "part of a whole", *djuz'* (see *LʿA*, Beirut 1988, viii, 223).

From the 3rd/9th century, Muslim religious spirits affirmed their specificity by calling themselves by the all-encompassing term *al-ṭā'ifa*, abbreviated from *ṭā'ifat al-ḳawm* "the group of the men of God" or "community of spiritual persons". The term *ṭā'ifa* is in this context often preceded by the demonstrative *hādhihi* (see e.g. al-Ḳushayrī, *Risāla*, Damascus 1988, 36; al-Hudjwīrī, *Kashf al-maḥdjūb*, Ar. tr. Beirut 1980, *passim*). Sometimes, *al-ḳawm* is found *tout court*. These expressions certainly reflect an allusive style favoured by Ṣūfīs, but their usage can also be explained by the fact that these persons were not yet differentiated into separate ways. Moreover, in certain regions, they were only to designate themselves as *Ṣūfīs* quite late. The Baghdād master al-Djunayd (d. 298/911) thus received a nickname which was never to leave him, sc. *sayyid al-ṭā'ifa* "master of the Muslim religious spirits" (see e.g. al-Ḳushayrī, 430; al-Hudjwīrī, 419). It was with this generic sense in view that Ibn al-ʿArabī used the term *ṭā'ifa* preceded by the definite article *al-* (*al-Futūḥāt al-makkiyya*, ed. O. Yahia, e.g. iv, 55, 85, 190, 319). On the other hand, the use of the indefinite form goes back, in his usage, to the most common meaning of the word, that of religious community or group (*op. cit.*, iv, 191-2, 276, etc.). Ṣūfīs continued to view themselves as and to be called *al-ṭā'ifa* in later times (cf. Ibn Khaldūn, *Shifā' al-sā'il li-tahdhīb al-masā'il*, Tunis 1991, 183; Ibn Ḥadjar al-Haytamī, d. 974/1566, *al-Fatāwā al-ḥadīthiyya*, Beirut n.d., 53).

In the 6th/12th and 7th/13th centuries, the emergence of spiritual lines claiming spiritual descent from the eponymous masters brought into being a second usage of the term, which eventually supplanted the first one, sc. that of a particular Ṣūfī order, distinct from the others, or also, in a similar fashion, one of the professional guilds of the *futuwwa* [*q.v.*]. This partitive sense appears in the expression *al-ṭā'ifa min al-fuḳarā'* "groups of those poor for God's sake" used by Ibn Khallikān in regard to the Rifāʿī dervishes (ed. ʿAbbās, i, 171). Already, al-Hudjwīrī (d. 465/1072) had used the term to distinguish several groups of mystics by their attitude over agreement to the divine will (*al-riḍā*), but here it is a question merely of spiritual modalities (*Kashf*, 405). In future, *ṭā'ifa* was to incarnate the organic dimension of Ṣūfism. In the sources, it is used concurrently with *ṭarīḳa* [*q.v.*], with the two terms often being used indifferently; but the second one had nevertheless a wider signification.

In later Ṣūfism—in general, from the beginning of the 8th/14th century—the term was used in a concrete sense for every branch issuing through ramification from a mother-*ṭarīḳa*. This branch would assume its own autonomy, or this was accorded by the *shaykh* of the original *ṭarīḳa*; it likewise acquired a specific name from its initiator. In general, the *ṭā'ifa*s formed small-sized orders with a local or regional basis, this being notably true for the Arab East (L. Pouzet, *Damas au VII^e/XIII^e siècle*, Beirut 1988, 209, 229; E. Geoffroy, *Le soufisme en Egypte et en Syrie sous les derniers Mamelouks et les premiers Ottomans*, Damascus 1995, 276-7) and for the Ṣūfī communities of the Moroccan South (M. Kably, *Société, pouvoir et religion au Maroc à la fin du Moyen-Age*, Paris 1986) or al-Andalus (see the introd. by R. Pérez to Ibn Khaldūn, *La voie et la loi*, Paris 1991, 26). A *ṭā'ifa* which prospered could in turn give birth to a "sub-branch" and so on. In order to establish their legitimacy, these branches sometimes placed the name of the original order in their form of identity.

For J.S. Trimingham, the *ṭā'ifa* is characteristic of the third and last stage of Ṣūfism, during which the mystical orders provided themselves with a fairly elaborate organisation; he dates this phase from the 9th/15th century, when the Ottoman empire was constituted (*The Sufi orders in Islam*, Oxford 1971, 67, 103). But this idea of things, adopted by researchers working on the brotherhoods at the present time (see e.g. *Les ordres mystiques dans l'Islam*, ed. G. Veinstein and A. Popovic, Paris 1986, 8, 167, 300), corresponds only partially to reality. In practice, the material structure of Ṣūfism in many cases only comes about from the beginning of the 12th/18th century.

(E. GEOFFROY)

ṬĀ'IFIYYA (A.) "confessionalism" (also translated "sectarianism" by opponents), the system of proportional political power-sharing between different religious groups (*ṭawā'if*, sing. *ṭā'ifa*) practiced in the Republic of Lebanon since the French mandate (1922-43). According to Art. 95 of the Lebanese constitution of 1926, it was designed as "a temporary measure to assure a just representation of all Lebanese sects [the most important being Sunnī, Twelver Shī'ī and Druze Muslims and Maronite, Greek Orthodox and Greek Catholic Christians] in public offices and in the formation of cabinets". Its precursors in Ottoman *Djabal Lubnān* have been councils representing the six major sects during the régime of the double *ḳā'im-maḳāmas* (1843-60) and the *mutaṣarrifiyya* (1861-1915) [see LUBNĀN].

Proportional representation of the sects in parliament was not mentioned in the constitution prior to 1990. From independence (1943) to the last pre-civil-war elections (1972), a ratio of six to five in favour of the Christian sects was maintained in different electoral laws. The reservation of key-offices for members of specific sects (Maronite head of state, Sunnī prime minister, Shī'ī president of parliament and other stipulations) has been based on unwritten agreements since the 1930s and confirmed in the unwritten National Pact of 1943. Their validity has been increasingly challenged by both Muslim and leftist or Arab nationalist Christian political groups since the late 1960s, many of them demanding the complete abolishment of political confessionalism. The refusal of Maronite political leaders to consider a reform of the confessionalist system was one of the causes for the outbreak of the Lebanese civil war (1975-90).

Following the Ṭā'if Accord adopted by the remaining members of the 1972 Lebanese parliament on 22 October 1989, Art. 95 of the constitution was amended with validity from 21 September 1990. It henceforth stipulates a gradual abolishment of political confessionalism, starting with the lower echelon of the civil service and the armed forces, while representation of Muslims and Christians in the parliament and in cabinets must remain equal during an unspecified interim period. New electoral laws in 1992 and 1996 have both maintained the principle of confessional proportionality (64 Christians, i.e. 34 Maronites, 15 Greek Orthodox, 7 Greek Catholic, 6 Armenians, 2 members of other Christian minorities; 64 Muslims, i.e. 27 Sunnīs, 27 Shī'īs, 8 Druzes, 2 'Alawīs).

(A. RIECK)

AL-**ṬĀ'IR**, AL-**ṬAYR** (A.), any being or thing which is able to live or to fly above the ground level, either as a matter of function or for finding sustenance. Hence immense numbers of insects and birds are covered by the doublet *ṭā'ir/ṭayr* (pls. *ṭuyūr*, *aṭyār*). Moreover, with the advent of modern inventions, the root is also used for any machine or contrivance for flying (*ṭayarān*), and the flight of such contrivances as aeroplanes and airships (*ṭayyāra*, *ṭā'ira*), space ships and rockets and planetary satellites launched from an airfield (*maṭār*). By analogy, *ṭayyāra* can also denote a swiftly-running ship.

Amongst the birds, certain ones are formed by *ṭayr* plus an annexed complement. Thus amongst the most current, one finds *ṭ. al-mā'* for waterfowl; *ṭ. al-timsāḥ* "crocodile bird" for the Egyptian plover (*Plavianus aegyptius*) which finds its food between the teeth of the saurian; *ṭ. al-'arāḳib* for all birds of bad omen, such as the green woodpecker, *sharaḳraḳ* (*Picus viridis*); *ṭ. al-djamal* "camel bird", for the ostrich; *ṭ. al-layl* "night bird" for the screech-owl; and *ṭ. al-ḥarrāth* "tiller's bird" for the lapwing and seagull. As for the *ṭ. al-abābīl* mentioned in Ḳur'ān, CV, 3, as having pelted the army of Abraha when it was attacking Mecca [see MAKKA. 1], there are various views: some take them to be swifts (*Apus apus*) or swallows (*Hirundo rustica*), and others, bats. One might finally mention the *ṭ. Sulaymān* "Solomon's bird", which is considered to be the hoopoe (*Upupa epops*).

Amongst Arabic writers on natural history, it is really only al-Djāḥiẓ who treated at length of birds and everything connected with ornithology and hunting with birds, in his *K. al-Ḥayawān* (see *Bibl.*). Amongst the winged tribe, he distinguishes three categories: (a) the *bahā'im al-ṭayr*, plant and seed eaters; (b) the *sibā' al-ṭayr*, carnivorous raptors, including the *ṭayr ḥurr* "noble birds" (falcon, goshawk, sparrow hawk), trained for hunting by flight [see BAYZARA]; and (c) the *murakkab* and *mushtarak*, omnivorous birds like sparrows (*Ḥayawān*, i, 28-9, v, 205-7).

Based on Ḳur'ānic prescriptions, only game which is winged (the pheasant, partridge, quail) and farmyard birds are lawful for human consumption.

In ichthyology, the *ṭayra* or *murdjān* is the *Myripristis*, a small fish of the Mediterranean and Red Sea.

The diminutive *ṭuwayr* "small bird" can also be applied to butterflies, and the *ṭuyūrī* "bird seller" deals in small cage birds (canaries, etc.).

Finally, in astronomy, *al-Ṭā'ir* denotes (a) the Swan, the 20th northern constellation, and (b) the star Altaïr (from *al-Nasr al-ṭā'ir* "the flying vulture", sc. α *Aquilae*, mg. 0.9, of the 17th northern constellation of Aquila.

TA'IZZ, now the main town in the southern highlands of the Yemen, some 195 km/120 miles south, slightly west, of Ṣan'ā' [*q.v.*] and about 140 km/88 miles north-west of Aden [see 'ADAN]. It is situated at the foot of Djabal Ṣabir which rises to a height of about 3,000 m/9,600 feet. Although the town is mentioned during the Ayyūbid period of Yemeni history (569-626/1173-1228) [see AYYŪBIDS], its main development came under the Rasūlids (628-845/1230-1441 [*q.v.*]), who made the town their capital. It seems that Ta'izz was originally a settlement in the region of al-Djanad, the seat of the early Islamic governors in the area, possibly until its rise and growth in the Rasūlid era, and that thereafter right down to the present day al-Djanad was a settlement in the region of Ta'izz.

Our knowledge of Ayyūbid Ta'izz comes in the main from Ibn al-Mudjāwir, a traveller from the east who wrote in the early years of the 7th/13th century (*Ta'rīkh al-Mustabṣir*, ed. O. Löfgren, Leiden 1951-4). He comments (144-5) that the coffers (*khizāna*) of the port of Aden were taken up each year to the fortress of Ta'izz, four of them in all, containing the income of the ships arriving in Aden from India, that from the entry of madder (*fuwwa*) into the port, that of the export of horses to India and that of the ships travelling to India. Each one contained approximately 150,000 dīnārs. This practice came to an end in 625/1227. The fortress itself is described by Ibn al-Mudjāwir on p. 156. It was strong, built of gypsum and stones and with firm gates and walls. It was a stronghold placed between two towns, al-Maghriba and 'Udayna, the latter at the foot of Ṣabir. A plan of Ta'izz follows the description on p. 157 of Löfgren's edition. Ibn al-Mudjāwir also mentions the water supply of Ta'izz (159) which came down from Djabal Ṣabir.

The first Rasūlid ruler to enlarge and develop Ta'izz was al-Malik al-Muẓaffar Yūsuf, the second sultan of the dynasty, who in 653/1255 made the town the Rasūlid capital. With the expansion of the town, the Rasūlid rulers over the years built in particular fine mosques and *madrasas*, many of which can still be seen to this day. In particular, the Djāmi' al-Muẓaffar (the founder dying in 694/1295) and the Ashrafiyya dating from al-Ashraf, regn. 778-803/1377-1401, are the most imposing and dominate the view over the town. Ismā'īl al-Akwa' (*al-Madāris al-Islāmiyya fi 'l-Yaman*, Ṣan'ā' 1980) provides some good descriptions of a number of such Rasūlid monuments in Ta'izz and traces also their historical background.

Ta'izz was visited during the Rasūlid period in 779/1377 by Ibn Baṭṭūṭa (*Travels*, ii, tr. H.A.R. Gibb, Hakluyt Society, Cambridge 1962, 369 ff.) and described in some detail. He found the inhabitants "... overbearing, insolent and rude", though perhaps no more so than is usual in capital cities! He further mentions three quarters: [al-Maghriba], where was the residence of the sultan, and where his courtiers and civil servants live; 'Udayna, where the sultan's *amīrs* and troops live; and al-Maḥālib, where the common people live and where the market is situated. He says much about the ceremonial of the Rasūlid court. Other later visitors to Ta'izz included Niebuhr in 1763, Glaser in the late 19th century and Hugh Scott in 1937.

In the Rasūlid context, it should perhaps be mentioned that the small village of Tha'bāt on the slopes of Ṣabir provided a peaceful retreat for a number of the sultans (see G.R. Smith, *The Yemenite settlement of Tha'bāt: historical, numismatic and epigraphic notes*, in *Arabian Studies*, i [1974], 119-35).

In 1948, Imām Aḥmad Ḥamīd al-Dīn left the previous capital, Ṣan'ā', and moved to Ta'izz. All foreign missions and consulates were also established in the town. It was not until 1962, the time of the revolution in northern Yemen, that Ṣan'ā' regained her old position as capital of the Yemen Arab Republic which replaced the Mutawakkilī kingdom under the Ḥamīd al-Dīns. The importance of Ta'izz, however, as the chief town of the southern highlands of the Yemen (perhaps because of its geographical position in relation to the ports of Mocha and Aden and to the capital of the country, Ṣan'ā') and the capital of Shāfi'ī north Yemen, has continued to this day.

AL-**TĀKA** [see KASALA].

TAḲBAYLIT, a dialect of Tamazight or Berber. It is spoken in Kabylia, one of the four Berberophone areas of Algeria, and a mountainous region at about 30 km from Algiers and comprehending roughly the area between Thénia and Collo along the Mediterranean sea to the Jurjura Mountains in the south. The numerical percentage of Berber-speaking people in Algeria has not been properly established, but there is a general agreement to estimate the Tamazight-speaking people to be about 20% of the population (see Chaker 1989). The Taḳbaylit speakers should number in the region of three million, a moderate figure taking into account the high rate of emigrants from Kabylia in Algiers and France.

The denomination Taḳbaylit probably derives from the Arabic *ḳabā'il* "tribes" [see ḲABĪLA], but it is difficult to trace whether, and if so when, the people in the area now called Kabylia adopted a common name for the whole region. Today, the terms *Leḳbayel* ("Kabyles") and *Taḳbaylit, Imazighen* ("Free men") and *Tamazight* are used by the people to define themselves and their language. This is linked to the development of a sense of community which, previously based on a village or a confederation of villages, now comes to include all the Kabyle region with an extension to the other Tamazight-speaking areas.

The general description of the Berber language [see BERBERS] applies to Taḳbaylit notwithstanding some specific traits of this dialect. Phonetically, Taḳbaylit is characterised by the presence of affricatives and by the spirantisation of the short occlusives. The long-term contiguity with Arabic-speaking areas has affected the Taḳbaylit lexicon, which has about 35% of borrowings from Arabic (see Chaker 1984, 82, 216-29). Until the last century, Taḳbaylit was a spoken language while Arabic script was used by a limited number of religious literates. A system for writing Taḳbaylit was developed in Latin script during the French colonisation of Algeria. The colonial school, however, did not stimulate the acquisition of literacy in Kabyle.

Similarly, Berber did not find a place in the compulsory education system of independent Algeria, where Arabic and French were taught. The present diffusion of literacy in Taḳbaylit has resulted from academic and associated activities that have found logistic and cultural support in the lands of Kabyle emigration, i.e. France, Canada, Belgium and the United States. The recent creation of the High Commission for "Amazigh-ness" (1995), after years of demonstrations and demands of recognition for Taḳbaylit in particular and Tamazight in general, has marked a change in the Algerian language policy.

The literary production in Taḳbaylit comprises oral, written and "audio-visual" genres. Historical changes have modified the social and cultural functions of the oral production, but the oral genres are still appreciated in Kabylia and in Kabyle emigrant circles. A prestigious genre is the *asefru*, a sonnet of nine verses grouped in three strophes rhyming according to the scheme AAB. Beautiful examples of this genre are the *isefra* (pl. form) of the famous poet Si Mohand ou Mhand (see Boulifa 1904). Another poetic genre is the so-called *izli*, a song of two or three couplets in rhyme. The production of this genre is anonymous (see Yacine 1988). The lyric genres usually give voice to individual desires and hopes, while a normative discourse is expressed in the narrative genres. For example, the *tiqsiḍin* are long narratives in verse recounting the adventures of Muslim heroes and saints, the *tidyanin* are aetiological legends about animals, while the *timucuha* narrate the adventures of heroes and heroines who assert the moral and symbolic organisation of the conventional Kabyle society (see Lacoste-Dujardin 1970).

Turning to the written production, texts in Taḳbaylit were written by Si Amar ou Saïd Boulifa already at the begin of the century, while in the 1940s some nationalist Kabyle songs had a written origin. *Les cahiers de Belaïd* by Belaïd Ait Ali (1963) is, however, considered to be the first literary work written in Kabyle. This work includes the author's personal versions of *timucuha* and narratives spanning the folk story, the novel and the autobiography. Since the 1970s, many collections of poems written in Kabyle have been published, and six novels in Kabyle have appeared, the first being *Asfel* or "Ritual sacrifice" by Rachid Aliche (Lyon, Fédérop, 1981).

Genres produced in the "audio-visual" mode, i.e. supported by technical means of recording, are also newcomers on the scene. The so-called "modern song" is the most important genre as to the amount of production and public acclaim. The continuity between "modern songs" and oral poetry is indubitable, but modifications in music and themes are also remarkable. The assertion of Kabyle identity is a pivotal element of the "modern songs", but singers such as Aït Manguellet, Idir and Djura are also radical in their criticism of social norms and values.

The language used in the recent production is characterised by lexical borrowings from French and by neologisms derived from other Berber dialects. Syntactic interactions between Kabyle and French occur in the written genres (see Abrous 1991). Conversely, the Kabyle mother tongue punctuates novels and poems written in French by authors such as Taos and Jean Amrouche, Tahar Djaoud, Nabile Farès, Mouloud Mammeri and many others. Taking into consideration the process of literacy acquisition in Kabylia, the works produced in Kabyle and those written in French by Kabyle authors should be seen in the framework of an encompassing Kabyle literary space (see Merolla 1995).

TAKBĪR (a.), verbal noun of form II from the root *k-b-r* in the denominative sense, to pronounce the formula *Allāhu akbar*. It is already used in this sense in the Ḳurʾān (e.g. LXXIV, 3; XVII, 111 with God as the object). On the different explanations of the elative *akbar* in this formula, see *LʿA*, s.v., and the Ḳurʾānic elative *akram* also applied to God (XCVI, 3) and *aʿlā* (XCII, 20; LXXXVII, 1).

The formula, as the briefest expression of the absolute superiority of the One God, is used in Muslim life in different circumstances, in which the idea of God, His greatness and goodness is suggested. When Muḥammad had learned by supernatural means of the death of the Nadjāshī in Abyssinia, he proclaimed the news to those around him, arranged them in rows on the Muṣallā and had a *takbīr* pronounced four times (al-Bukhārī, *Djanāʾiz*, *bāb*s 4, 55, 61). On other occasions also, Muḥammad is said to have called the *takbīr* four or five times over a funeral bier (Muslim, *Djanāʾiz*, trad. 72). The fourfold *takbīr* remained or became usual at the *ṣalāt* for the dead (al-Shīrāzī, *Kitāb al-Tanbīh*, ed. A.W.T. Juynboll, 47). The *adhān* [*q.v.*] is also opened with a fourfold *takbīr*.

The Prophet is said to have uttered very frequently the *takbīr* during the Ḥadjdj, at the beginning (Aḥmad b. Ḥanbal, *Musnad*, ii, 144), during (al-Bukhārī, *Djihād*, *bāb*s 132, 133; but not too loudly, *bāb* 131) and at the end of the journey (Ibn Ḥanbal, ii, 5), at the sight of the Kaʿba (*ibid.*, iii, 320), at the Black Stone (*ibid.*, i, 264), between Minā and ʿArafa (al-Bukhārī, *Ḥadjdj*, *bāb*, 86), on Ṣafā and Marwa (Ibn Ḥanbal, iii, 320), etc.

The *takbīr* is prescribed by the law at the beginning of the *ṣalāt* (the so-called *takbīrat al-iḥrām*); during the *ṣalāt* it is five times repeated.

TAḲDĪR (a.), verbal noun of the form II verb *ḳaddara*, used variously as a technical term.

1. Grammatical usages.

(a) The predominant meaning of *taḳdīr* is "the imaginary utterance which the speaker intends as if he were saying it, when expressing a given literal utterance". This definition needs some elucidation.

In this meaning, *taḳdīr* is a grammatical technical term belonging to the terminology of one of the main theories of Arabic grammar, which we may call here "the theory of *taḳdīr*". Since Arabic texts on grammar do not include any systematic discussion of this theory, its principles and notions, as well as the sense of its terminology, must be inferred from the data found in these texts.

The theory of *taḳdīr* is based on the notion of al-

Khalīl, Sībawayhi's teacher, that, when pronouncing given utterances, the speaker simultaneously intends that it is as if he were expressing another utterance, differing in construction, but not in its intended meaning from his literal utterance (see Sībawayhi, ii, 137, ll. 8-15). Thus, when the speaker expresses a given literal utterance, a corresponding imaginary utterance exists in his mind. If we mark the literal utterance by X and its corresponding imaginary utterance by Y, we can say that the main notion of the theory of *taḳdīr* is that the speaker intends, or imagines, that when he says X it is as if he were saying Y. For example, the grammarians hold that when saying *Zayd*^{un} *fi 'l-dāri* (= X) "Zayd is in the house", the speaker intends that it is as if he were saying *Zayd*^{un} *istaḳarra fi 'l-dāri* (= Y) lit. "Zayd has made his abode in the house". The imaginary utterance *Zayd*^{un} *istaḳarra fi 'l-dāri* is given the name *taḳdīr*.

The notion of *taḳdīr* was created by the grammarians in order to solve a theoretical difficulty, and they apply it when they find that the literal construction of a given utterance does not accord with one of their theories. E.g. the later grammarians, from the 10th century onwards, believe that the prepositions called *ḥurūf al-djarr* are connective particles which can only connect a verb or a participle with a noun, as in the example *inṣaraftu ʿan Zayd*^{in} "I went away from Zayd" (see Levin, in *JSAI*, x, 359-60). Since the literal construction of the utterance *Zayd*^{un} *fi 'l-dāri* does not include a verb, the particle *fī* apparently connects a noun with another noun. Hence the grammarians assume that when the speaker says *Zayd*^{un} *fi 'l-dāri*, he intends to say *Zayd*^{un} *istaḳarra fi 'l-dāri*. In this imaginary utterance, the particle *fī* connects the unexpressed verb *istaḳarra* with the noun *al-dār*, thus bringing the construction of the imaginary utterance called *taḳdīr* into line with the theory that *ḥurūf al-djarr* can only connect a verb or a participle with a noun.

It can be inferred from the sources that, in the grammarians' view, the relevant construction as far as grammatical analysis is concerned is that of the imaginary utterance (= *al-taḳdīr*) and not that of the literal one (= *al-lafẓ*), since it is the construction of the former which exists in the speaker's mind. This notion led the grammarians to believe that an imaginary construction, which accords with their theories, enables the occurrence of a non-according literal utterance.

(b) It can be inferred that the grammarians assume *taḳdīr* to exist in the speaker's mind in the following four cases:

(i) When they hold that a given part of the sentence is unexpressed by the speaker since it is "concealed" in his mind. In the grammarians' terminology, the unexpressed part of the sentence is usually called *muḍmar* "concealed in the mind" (see e.g. Sībawayhi, i, 32, l. 2; 42, l. 9), but sometimes it is denoted by the full form of the term, which is *muḍmar fi 'l-niyya* "concealed in the mind [of the speaker]" (see e.g. *ibid.*, i, 106, ll. 12-14), *muḍmar fī niyyatika* (i, 131, ll. 12-14), and *muḍmar fī nafsika* "concealed in your mind" (Ibn Djinnī, *al-Khaṣā'iṣ*, i, 103, ll. 11-12). It is also called *muḳaddar* "intended [in the mind of the speaker]" (see e.g. Ibn Yaʿīsh, i, 820, l. 8), and rarely also *muḳaddar fi 'l-niyya* "intended in the mind" (al-Djurdjānī, i, 275, l. 3), and *muḳaddar fī ḳalbika*, lit. "intended in your heart" (al-Sīrāfī, according to Jahn, i, 2, 74, n. 7).

The considerations leading the grammarians to hold that a given part of the sentence is concealed in the speaker's mind are usually grammatical, but sometimes they are both grammatical and semantic. Frequently, they say that a given part of the sentence is unexpressed in the literal construction since the latter does not include a word which can serve as an *ʿāmil*, i.e. as a factor producing the case-ending of a given noun, or a mood-ending of an imperfect verb. Thus, e.g., Ibn Yaʿīsh says concerning the sentence *Zayd*^{an} *ḍarabtuhu* "Zayd (acc.) I hit him": *wa-taḳdīruhu ḍarabtu Zayd*^{an} *ḍarabtuhu* "That which the speaker intends [when saying *Zayd*^{an} *ḍarabtuhu*] is *ḍarabtu Zayd*^{an} *ḍarabtuhu* (lit. "I hit Zayd, I hit him)" (Ibn Yaʿīsh, i, 199, 6). The form *ḍarabtu*, occurring at the beginning of the *taḳdīr* construction, is unnecessary for understanding the literal utterance *Zayd*^{an} *ḍarabtuhu*, but grammatically it is indispensable, since it is considered as the *ʿāmil* producing the accusative in *Zayd*^{an}.

(ii) The grammarians believe that there are given utterances that include a "superfluous" part. In this case they assume that a corresponding imaginary utterance (= *taḳdīr*) which does not include this "superfluous" part, exists in the speaker's mind. E.g. some grammarians hold the view that in a sentence containing a *badal*, the noun which is "replaced" by the *badal* (= *al-mubdal minhu*) does not occur in the *taḳdīr* construction. E.g. in the sentence *mā djā'anī aḥad*^{un} *illā Zayd*^{un} "Nobody came to me except Zayd", *Zayd*^{un} is the *badal* of *aḥad*^{un}. In referring to this example, al-Mubarrad says: *fa-yaṣīru 'l-taḳdīru mā djā'anī illā Zayd*^{un} "the *taḳdīr* [construction] [of the above utterance] is *mā djā'anī illā Zayd*^{un} (al-Mubarrad, iv, 394, ll. 5-6). Al-Mubarrad's illustration of this *taḳdīr* derives from the notion that each verb can produce the nominative in one subject only. Since in the literal construction of *mā djā'anī aḥad*^{un} *illā Zayd*^{un}, the verb *djā'a* is supposed to produce the nominative both in *aḥad*^{un} and in *Zayd*^{un}, al-Mubarrad assumes that, when expressing this utterance, the speaker intends that it is as if he were saying *mā djā'anī illā Zayd*^{un}. Thus the *taḳdīr* construction contains only one nominative (*Zayd*^{un}) which is affected by the verb *djā'a*. Note that in this case the *taḳdīr* construction is shorter than the literal one.

(iii) The grammarians further believe that, in certain syntactic constructions, the literal word-order of the utterance differs from that intended by the speaker. This view is usually expressed when the literal word-order does not accord with one of the principles of the theory of the 3rd person pronoun. E.g. in referring to the Bedouin proverb *fī baytihi yu'tā 'l-ḥakamu* "The arbitrator must be met in his home", Ibn al-Sarrādj says that this utterance is grammatically permissible *li-anna 'l-taḳdīr yu'tā 'l-ḥakamu fī baytihi* "because what the speaker intends [when saying *fī baytihi yu'tā 'l-ḥakamu*] is *yu'tā 'l-ḥakamu fī baytihi* (Ibn al-Sarrādj, ii, 238, l. 17-239, l. 1). He expresses this view since the word-order of the literal utterance contradicts one of the main principles of the theory of the 3rd person pronoun, namely, that this pronoun cannot precede its antecedent (see Levin, in *JSAI*, xii, 40-3). However, in *fī baytihi yu'tā 'l-ḥakamu* the pronoun *-hi* precedes its antecedent *al-ḥakamu*. This theoretical difficulty is solved by contending that the *taḳdīr* of this utterance is *yu'tā 'l-ḥakamu fī baytihi*. Since in the *taḳdīr* construction existing in the speaker's mind, the pronoun *-hi* does not precede its antecedent, its word-order accords with the grammarians' theory of the 3rd person pronoun.

(iv) The grammarians also believe that, when uttering given utterances, the speaker intends to express another utterance, corresponding in sense to his literal utterance. This view is held when the literal construction does not accord with one of the grammarians' theories, or when it needs some theoretical elucida-

tion. E.g. in his discussion of the syntactic construction of utterances expressing wonder, known as *taʿadjdjub*, al-Mubarrad says about the example *mā aḥsana Zaydan* "How good is Zayd!": *fa-taḳdīruhu shayʾun aḥsana Zaydan* "The utterance the speaker intends [when saying *mā aḥsana Zaydan*] is *shayʾun aḥsana Zaydan* (lit. "something made Zayd [to be] good") (al-Mubarrad, iv, 173, ll. 5-9). In al-Mubarrad's view, this *taḳdīr* construction provides evidence that *aḥsana* is a past tense verb form according to the pattern *afʿala*, and not an accusative elative form on this pattern, as was held by the grammarians of al-Kūfa. The significance of al-Mubarrad's assumption, that *mā* in the literal construction is regarded by the speaker as equivalent to *shayʾ*, is that *mā*, like *shayʾ*, is here a complete noun which does not need any complement (= *ṣila*), as opposed to *mā* occurring in certain syntactic constructions as a relative pronoun which needs a complement. Since in al-Mubarrad's view *mā* is a complete noun, he determines in his syntactic analysis of *mā aḥsana Zaydan* that *mā* is virtually a nominative, occurring as a subject (= *mubtadaʾ*), *aḥsana* a verb, predicate of *mā*, and *Zaydan* the direct object of *aḥsana* (see iv, 173, ll. 7-8).

The grammarians also apply the theory of *taḳdīr* in the domains of phonetics and morphology. They assume that certain vowels which do not occur in the literal form of given words are intended in the speaker's mind. The most salient example illustrating this notion is that of nouns which cannot take the case-ending vowels because of their phonetic construction. Here the grammarians hold that the final sound of the pausal form of the noun, which is an *alif* (= *ā*) includes an implicit vowel which the speaker intends that it is as if he were saying it. Thus the final *alif* of the form *fatā* "a youngster" includes an implicit case-ending vowel, which is either a *ḍamma*, a *fatḥa* or a *kasra*, according to the effect of its *ʿāmil* (see Ibn Djinnī, *Sirr*, ii, 607, ll. 3-7; cf. al-Djurdjānī, i, 106, ll. 2-15; Ibn Yaʿīsh, i, 66, ll. 7-15).

2. The sense of the term *taḳdīr*.

The following aspects confirm the definition of the term *taḳdīr* given at the beginning of this article: (a) The literal sense of *taḳdīr* is "that which somebody intends". In this meaning, *taḳdīr* is a verbal noun in the sense of a passive participle of the verb *ḳaddara* in the sense of "he intended" (for *ḳaddara* in this sense, see *Tahdhīb*, ix, 24A, ll. 8-10; *LʿA*, v, 76B, ll. 10-12. For verbal nouns denoting the meaning of an active or a passive participle, see Sībawayhi, ii, 242, ll. 3-6; Ibn Yaʿīsh, i, 810, ll. 7-9). This literal sense of the term *taḳdīr* is attested by the grammatical sources. Thus the great scholar Abū Ḥayyān al-Gharnāṭī (d. 1344) notes that in grammatical terminology the sense of *taḳdīr* is the same as that of *al-niyya* (Abū Ḥayyān, 147, ll. 5-6). This remark is confirmed by many texts where the forms *taḳdīr* and *niyya* correspond to each other. Similarly, a correspondence is frequently found between other technical terms and phrases derived from the roots *ḳ-d-r* and *n-w-y*.

(b) It can also be inferred that the technical phrase *ka-annahu ḳāla* "it is as if he [i.e. the speaker] were saying" corresponds to *taḳdīr* (compare Ibn Yaʿīsh, i, 199, l. 6, and Sībawayhi, i, 32, l. 1).

(c) A combination of the expressions *taḳdīr* and *ka-annahu ḳāla* sometimes occurs in the texts, as in the example *taḳdīruhu ka-annahu ḳāla li 'l-sāmiʿ* "That which he [i.e. the poet] intended is as if he were saying to the hearer..." (al-Djurdjānī, *Dalāʾil*, 190, l. 6, which is a source dealing with rhetoric). It seems safe to assume that the expressions *taḳdīr* and *ka-annahu ḳāla* are in fact elliptical ways of expressing the rare combination *al-taḳdīr... ka-annahu ḳāla*. Hence, in grammatical terminology, *taḳdīr* and *ka-annahu ḳāla* have the same meaning.

The data in the grammatical texts show Wansbrough's conclusion that the term *taḳdīr* "signifies reconstruction or restoration..., namely, of a scriptual context or passage" to be incorrect (see Wansbrough, in *BSOAS*, xxxiii [1970], 247, ll. 17-21; see also 248, ll. 3-5, 259, ll. 21-5).

3. The process of inferring the *taḳdīr* construction.

The *taḳdīr* construction intended by the speaker is inferred by the grammarians from the literal construction expressed by him. The *taḳdīr* of certain elliptical sentences can be inferred from the circumstances under which these sentences are expressed (see Ibn Djinnī, *al-Khaṣāʾiṣ*, i, 284, l. 12-285, l. 6).

The process of inferring the *taḳdīr* is based on the following principles: (a) the sense of the *taḳdīr* construction must accord with that of the literal one; (b) the *taḳdīr* construction must agree with the principles of Arabic grammatical theory; and (c) the *taḳdīr* construction can be an imaginary one, which never occurs in speech (see *ibid.*, ii, 408, l. 16-409, l. 8).

This survey of the term *taḳdīr* is based on data gathered from grammatical texts. The study of the term in texts from other domains such as rhetoric, Ḳurʾān exegesis and commentaries on poetry needs further investigation.

4. The terminology of the theory of *taḳdīr*.

The terminology of the theory of *taḳdīr* consists of technical terms and phrases mainly derived from the roots *ḳ-d-r* and *n-w-y*. However, it also includes terms and phrases derived from the roots *r-w-d*, *m-th-l*, *ʿ-n-y*, *ḍ-m-r*, and *ʾ-w-l*. Phrases derived from the roots *w-h-m*, *kh-y-l* and *ṣ-w-r* also appear, if rarely. The technical terms and phrases derived from the above roots are discussed in detail in Levin, al-Taḳdīr. *Studies in Arabic grammatical thought and terminology*.

5. Finally, it should be noted that Arabic grammatical terminology includes some technical terms and phrases derived from the root *ḳ-d-r* which do not refer to the theory of *taḳdīr* (some of these are denoted by the form *taḳdīr* itself). The sense of these is completely different from that of their homonyms used in association with this theory. For details see the above-mentioned forthcoming book.

(A. Levin)

2. As a term in land management and taxation.

Here it is used for the process of estimating the amount or value of a crop for taxation purposes, hence the equivalent of *takhmīn*; in the Arabic-Spanish *Vocabulista* of Pedro de Alcala, *apodar, apreciar.* See Dozy, *Supplément*, ii, 312-13, and MISĀḤA. 1. (ED.)

TAKFĪR (A.), the verbal noun from the form II verb *kaffara* "to declare someone a *kāfir* or unbeliever".

1. General definition.

From earliest Islamic times onwards, this was an accusation hurled at opponents by sectarians and zealots, such as the Khāridjites [*q.v.*]; but a theologian like al-Ghazālī [*q.v.*] held that, since the adoption of *kufr* was the equivalent here of apostasy, entailing the death penalty [see MURTADD], it should not be lightly made (*Fayṣal al-tafrika bayn al-Islam wa 'l-zandaka*, quoted in B. Lewis, *The political language of Islam*, Chicago-London 1988, 85-6). It has nevertheless continued to be used into modern times, and forms part of the vocabulary of abuse of modern Islamic fundamentalist groups, such as the Egyptian *al-Takfīr wa 'l-hidjra* group [*q.v.*].

Bibliography: See that to KĀFIR. (ED.)

2. In West Africa.

The doctrine of *takfīr* was first enunciated in the West African context by Muḥammad b. ʿAbd al-Karīm al-Maghīlī [*q.v.*] of Tlemcen, who answered questions for Askiya *al-ḥādjdj* Muḥammad b. Abī Bakr [*q.v.*] of Songhay *ca.* 1498. Called on to make a judgment on the previous ruler Sunni ʿAlī Bēr, he gave a three-part definition of *kufr*: holding a belief which is itself *kufr*, such as disavowal of the Creator or an attribute of His without which He would not be Creator, or the denial of prophecy; doing that which is only done by an unbeliever even though the act itself is not itself *kufr*, such as declaring wine-drinking and adultery to be lawful; or uttering something which it is known would only emanate from one who does not know God. On this latter point he admits there has been difference of opinion, notably about the status of the Muʿtazila and other innovators (*ahl al-bidʿa*). These positions are evidently based on the views of the *kāḍī* ʿIyāḍ b. Mūsā of Ceuta [*q.v.*] (d. 1149), as stated in his *K. al-Shifāʾ*. In his treatise on the status of the Jews of Tuwāt and their synagogue (see *Miṣbāḥ al-arwāḥ fī uṣūl al-falāḥ*, ed. Rābiḥ Būnār, Algiers, 1968, 103), he also pronounces *takfīr* against those who befriend the Jews and encourage or condone their "rebellion against the laws", based on a restrictive interpretation of Ḳurʾān, V, 51.

Around the same time, another treatise was written for Askiya *al-Ḥādjdj* Muḥammad by al-ʿĀḳib al-Anuṣammanī of Takidda [*q.v.*] which, to judge by the surviving fragment, also dealt extensively with *takfīr*. He classifies Muslims into several groups based on the quality of their belief, of which the first four probably correspond to perpetrators of the types of *kufr* which he cites from the commentary of al-Kirmānī on the *Ṣaḥīḥ* of al-Bukhārī: the *kufr* of unawareness (*al-inkār*), of denial (*al-djuḥūd*), of obduracy (*al-muʿānada*), and of hypocrisy (*al-nifāk*) [see KĀFIR].

In the 19th century, the Fulani *mudjaddid* ʿUthmān b. Muḥammad Fodiye (Fūdī) (d. 1232/1817 [*q.v.*]) accused the Hausa sultans of *kufr*, using the arguments of al-Maghīlī to show that they ruled in such a way as to give proof that they were unbelievers, and that a *djihād* to overthrow them was incumbent. These views are expounded in several of his works, most notably *Taʿlīm al-ikhwān bi 'l-umūr allatī kaffarnā bihā mulūk al-sūdān* (tr. B.G. Martin, in *MES*, iv/1 [1967], 50-97). He and his son Muḥammad Bello [*q.v.*] also accused Muḥammad al-Amīn al-Kānemī, Shehu [Shaykh] of Bornū [*q.v.*] similarly, in a lengthy correspondence included in Bello's *Infāḳ al-maysūr* (ed. C.J. Whitting, London 1951, 124-74). All of these arguments were known to *al-ḥādjdj* ʿUmar b. Saʿīd al-Fūtī (d. 1280/1864), who used them against Aḥmad Lobbo, ruler of Māsina, his most damaging criticism being that the latter had come to the aid of the unbelieving ruler of Segu [*q.v.*] against *al-ḥādjdj* ʿUmar.

In the 1970s in Nigeria, a general *takfīr* was pronounced against Ṣūfīs, and especially adherents of the Tidjāniyya *ṭarīka*, by the former Grand *Ḳāḍī* of Northern Nigeria Abū Bakr b. Maḥmūd Gumi (d. 1992), on the grounds that Ṣūfī beliefs and practices as a whole are innovations tantamount to *kufr*. This evoked many scholarly responses, the most detailed of which is *al-Takfīr akhṭar bidʿa tuhaddid al-Islām wa 'l-waḥda bayn al-muslimīn* by Shaykh Sharīf Ibrāhīm Ṣāliḥ of Maiduguri (publ. Cairo 1986).

AL-**TAKFĪR** WA 'L-**HIDJRA** (A.), the name of one of several militant Islamic groups which appeared in Egypt from the early 1970s onwards, against the background of a material and spiritual crisis. The name, literally meaning "charging [Muslims] with unbelief, and emigration [from an un-Islamically ruled state]" (reflecting two pillars of the group's ideology), was given to it by the media, while its own members called it *djamāʿat al-muslimīn* "The Society of Muslims".

Al-Takfīr wa 'l-Hidjra was founded in 1971 by Shukrī Muṣṭafā, a former Muslim Brotherhood [see AL-IKHWĀN AL-MUSLIMŪN] activist disenchanted with the Brotherhood's "moderation". Muṣṭafā recruited mostly young men and (a unique feature of this group) women, of rural or urban lower middle-class background, managing to attract as many as 2,000 to 3,000 adherents by 1977. They were organised in a network throughout the country's major cities and the countryside, with a hierarchy of command and rigid rules of loyalty and discipline. Regarding Egyptian society as corrupt and even atheist, the group sought to detach itself from it, its members secluding themselves from family, friends and society's institutions and moving to reside in communes. The authorities at first considered them harmless, but arrested some of them in 1976 and early 1977. In July 1977 the group abducted the former Minister of *Awkāf* Muḥammad al-Dhahabī in order to gain the release of detained members, then killed him when their demands were not met. This led to a clampdown on the group, including the arrest and subsequent execution of Shukrī Muṣṭafā and four other leaders, which devastated the organisation.

The ideology of *al-Takfīr wa 'l-Hidjra* comprised elements drawn from the teachings of Sayyid Ḳuṭb [*q.v.*] and, through them, the Khawāridj [*q.v.*]. Central to it was the idea of *takfīr*, namely, the idea that Islamic

society as a whole had reverted to a state of unbelief or djāhiliyya (other groups professing takfīr applied it to the government only). Since society was beyond redemption, the group advocated hidjra, to wit, distancing itself from society as much as possible—from its mosques, its gathering places, its habits and customs. Ultimately, the group would emigrate to another country, establish a purified community there, then return and conquer the unbelieving society through djihād (this modern concept of hidjra seems, again, to have been unique to this organisation). The group also professed idjtihād, that is, independent judgement in matters of religious law, permitted its members to pray only behind its own imāms and released them from some of the conventional religious duties.

After the death of Muṣṭafā, the organisation disintegrated. Some of its former members may have joined successor groups advocating similar ideas in the 1980s and 1990s.

TAKHALLUṢ (A.), literally, "freeing oneself, escaping from (something)", a technical term of literary usage.

1. In literary form.

Here, it is the transition from the introduction [see NASĪB] of the polythematic *ḳaṣīda* [*q.v.*] to subsequent themes, esp. the panegyric section. Often called *khurūdj* "exit", it may be abrupt, without any attempt at preparing what follows, or effected brusquely with formulas such as *daʿ dhā* "leave this (and speak on something else)". From ʿAbbāsid times onwards, poets and critics favoured transitions by means of one or a few lines serving as a hinge between the two sections. In a quasi-narrative *takhalluṣ*, the poet may turn away from barren desert or hopeless love to kind and generous patron. Very often the *takhalluṣ* is effected by means of a simile or metaphor involving a comparison of the patron with a phenomenon described in the preceding, e.g. ["He kissed me all night . . . until] Morning appeared with a blaze as bright as the caliph's face when he is praised", a line by Muḥammad b. Wuhayb often given as an example of *ḥusn al-takhalluṣ*. Critics from the time of Abū ʿUbayda [*q.v.*] onwards have studied the *takhalluṣ*; numerous works on *badīʿ* discuss *ḥusn al-takhallus* or *ḥusn al-khurūdj*. The school of al-Sakkākī and Djalāl al-Dīn al-Ḳazwīnī [*q.vv.*] considers it, with the beginning and the end of the poem [see IBTIDĀʾ and INTIHĀʾ], as one of three places meriting particular attention.

(G.J.H. VAN GELDER)

2. In the sense of pen-name.

In Persian literature a different meaning became attached to *takhalluṣ* and the synonymous *makhlaṣ*, viz. that of a pen-name as it was adopted in particular by poets and used as a rhetorical device in poetry. Pen-names were an element of the poetical tradition from the very beginning, but the semantic change in the term *takhalluṣ* must have taken place at a comparatively late date. The Persian rhetoricians only knew it in the sense of a "transition" in a poem, commonly found in Arabic textbooks. In the anthology *Lubāb al-albāb*, compiled in 1220, ʿAwfī [*q.v.*] uses phrases like *al-mulaḳḳab bi-* whenever he refers to a pen-name. This indicates that they were regarded as no more than a special case of the *laḳab* [*q.v.*], which still lacked a proper appellation of its own. Only in the Tīmūrid period does the semantic change appear to be fully completed, as it is attested, for instance, by the use of *takhalluṣ* in Dawlatshāh's *Tadhkirat al-shuʿarāʾ*.

One of the rare reports on the actual adoption of a pen-name is an anecdote telling how the Saldjūḳ sultan Malik Shāh [*q.v.*] showed his appreciation for a clever improvisation by permitting the poet Muʿizzī [*q.v.*] to choose a pen-name based on one of his *laḳab*s (Niẓāmī-yi ʿArūḍī, *Čahār maḳāla*, ed. Tehran 1957, 65-9). Such a derivation from the name of a patron must have been quite common, even if it has only seldom been recorded. However, other references can also be detected in pen-names. Very often they relate to abstract concepts, images or motifs which were considered to be particularly poetic. On the other hand, there are also names indicating geographical origin, trades or religious affiliations. Sometimes poets changed their names in the course of their careers or used different names in poems written in different languages.

The application of pen-names to poetry is best known from its use in the concluding passages of the classical Persian *ghazal* [*q.v.*]. In the early 6th/12th century, however, this convention was not yet fully established. In the poetry of Sanāʾī [*q.v.*], for instance, it only occurs in less than one-third of the *ghazals*, whereas pen-names are used with much greater frequency in the *ḳaṣīdas*. At that time, apparently, references to the poet's own name were still a free rhetorical device which could be applied to any form of poetry, either to mark a transition in a poem or to add a personal touch to the poetical statement. An instance of each of these functions can be found in the poem *Mādar-i may* by Rūdakī [*q.v.*], the oldest complete *ḳaṣīda* in Persian which has survived. As this example shows, the device was already well known to early court poets. This refutes the attempts (e.g. by E.E. Bertel's and A. Ateş) to seek its origin in the rise of Ṣūfī poetry. Pen-names were also used as structural elements in didactical *mathnawīs*, of which the convention introduced by Niẓāmī [*q.v.*] to conclude each *maḳāla* of his poem *Makhzan al-asrār* with a *takhalluṣ* provides a clear example.

(J.T.P. DE BRUIJN)

TAKHMĪS (A., pl. *takhāmīs*), a special kind of amplification of poetry which flourished as a genre from the 7/13th century until the modern era. In the literary canon before this period, the term normally referred to the process of composing *mukhammasāt* (pentastichic, stanzaic poems by a *single author* of which the earliest surviving example is attributed to Abū Nuwās [see MUSAMMAṬ]). It is essential to understand a distinction between *takhmīs*, when referring to an amplified poem, and *mukhammas* (though the terms are sometimes used interchangeably without rigour).

Takhmīs involves the addition of three hemistichs

to each *bayt* of a given poem; the rhyme letter of the added hemistichs is determined by the first hemistich of each successive *bayt*. This extra material usually precedes the original *bayt*; however, less commonly the *bayt* may be split and filled (see Cairo, *Fihris*, iii, 49)—a process normally referred to as *tash̲ṭīr*. (The number of added hemistichs may in fact be more or less than three, in which case the term for the poem is variously *tarbīʿ* [2 added hemistichs], *tasbīʿ* [5 added hemistichs], etc.)

The stanzas of a *tak̲h̲mīs* can be arranged on the page in one of two ways (upper case letters represent the rhyme words of the original hemistich; schemata are to be read from left to right):

(i)
xxxxxxa
xxxxxxa
xxxxxxa
xxxxxxA xxxxxxA

xxxxxxb
xxxxxxb
xxxxxxb
xxxxxxB xxxxxxA

(ii)
xxxxxxa xxxxxxa
xxxxxxa xxxxxxA
xxxxxxA

xxxxxxb xxxxxxb
xxxxxxb xxxxxxB
xxxxxxA

(Also to be found in some mss. is the following patterning:
xxxxxxa xxxxxxa xxxxxxa
xxxxxxA
xxxxxxA etc.)

Mediaeval scribes tended to favour (i); modern printed texts prefer (ii). The essential point is that the genre is given to visual manipulation, an aspect of the poetry especially important in the calligraphic celebration of al-Būṣīrī's *Burda* ode (see below) and other religious poems.

Literary value. *Tak̲h̲mīs* may be viewed, in some measure, as a logical and natural development in the post-classical period of the poetic phenomena of *taḍmīn* (quotation) and *muʿāraḍa/naẓīra* (imitation), and of the pre-existent *muk̲h̲ammas* form. *Tak̲h̲mīs* also feeds off a tendency towards explication (*s̲h̲arḥ*) in the reception and diffusion of the poetic tradition (this fact is illustrated by the titles often given to these amplifications, e.g. al-Āt̲h̲ārī's (d. 828/1425) *Nayl al-murād fī tak̲h̲mīs Bānat Suʿād* evokes the title of a straightforward exegesis of Kaʿb's original poem, viz. D̲j̲alāl ad-Dīn al-Suyūṭī's (d. 911/1505) *Kunh al-murād fī s̲h̲arḥ Bānat Suʿād* (Sezgin, ii, 232-4); some *tak̲h̲āmīs* themselves spawn a *s̲h̲arḥ*—thus several layers of literature cloak the original (e.g. Mach 4094). With regard to the Mamlūk era, in which period religious *tak̲h̲āmīs* flourished, we must understand that genre in the same light as other poetic developments fomented largely by the culture which celebrated the Prophet (broadly the same religio-literary culture which gave rise to *tad̲h̲yīl*, *naʿtiyya*, and *badīʿiyya* poetry, see Schimmel, *And Muhammad is His messenger*). A recent aesthetic judgment—one which explains the dearth of scholarly attention paid to this literary genre—is as follows: "The procedure is interesting from a technical point of view, but it has the drawback that it compels the amplifier to expound in five (or seven or however many) lines what the original poet has said quite satisfactorily in two. It is thus no surprise that these poetic expansions have, as a rule, slight literary merit and that they are quite frequently copied without indication of their author..." (de Blois). It is, however, worth drawing a distinction here between secular and religious poems, two categories which explain differing levels (or functions) of creativity.

There are seven non-religious amplifications in the *dīwān* of Ṣafī al-Dīn al-Ḥillī (d. *ca.* 752/1351 [*q.v.*]), which include glosses on the work of Ḳaṭarī b. al-Fud̲j̲āʾa and Ibn Zaydūn (Vajda further notes the ascription to him of a *tak̲h̲mīs* of a poem by Waḍḍāḥ al-Yaman). It is, in particular, al-Ḥillī's treatment of Ibn Zaydūn's *Nūniyya* which illustrates well the possibilities of poetic creativity; for he develops quite artfully the antitheses built into the original poem.

In the religious sphere, one must mention Ibn al-ʿArabī's (d. 638/1240 [*q.v.*]) *tak̲h̲mīs* upon a 22-line Ṣūfī poem (*ḳaṣīda*) by Abū Madyan (d. 594/1197). His amplification (which is a *s̲h̲arḥ* of sorts) enhances the meaning and function of the original which sets out the etiquette of self-effacement and obedience within the Ṣūfī *ṭarīḳa*. Certain stanzas are especially sensitive, and in some cases constitute clever syntactic insertions. Noteworthy is the way Ibn al-ʿArabī refers to the very process of *tak̲h̲mīs* in the last verse, suggesting thereby the established nature and function of the genre (*wa ʾdʿu li-man k̲h̲ammasa ʾl-aṣla ʾllad̲h̲ī ḥasunā*). In subsequent periods, examples of the genre reflect Ṣūfī practice, belief and sensitivity more generally, notably in the feature of devotional repetition (i.e. there is a striking reminiscence of the *d̲h̲ikr* in Mingana 473: "Every stanza begins with the word *Allāh*...").

An earlier *tak̲h̲mīs* is one of several that survive of Kaʿb b. Zuhayr's *Bānat Suʿād* or "Burda" (see Sezgin, ii, 234-5), ascribed to S̲h̲ihāb al-Dīn Yaḥyā al-Suhrawardī (d. 587/1191 [*q.v.*]). However, it is the later "Burda" (also known as *al-Kawākib al-durriyya fī madḥ k̲h̲ayr al-bariyya*) of al-Būṣīrī (d. 694/1296 [*q.v.* in Suppl.]) which has been the most amplified in this way (Brockelmann, S I, 467-70); over 80 *tak̲h̲āmīs* of this poem survive, 69 of them in a single collection containing some of the most recent examples (see Cairo, *Fihris*, iii, 49-57).

Many *tak̲h̲āmīs* of the "Burda" are prefaced in mss. by a version of the anecdote contained in al-Kutubī's *Fawāt al-Wafayāt* (ed. ʿAbd al-Ḥamīd, Cairo 1951, ii, 418-19) which describes the first realisation of the poem's healing powers. The point to note is that the ms. makes no reference to the *tak̲h̲mīs* itself, as illustrated symptomatically by the *explicit* to a copy of al-Fayyūmī's *tak̲h̲mīs* (Khalili 563): *tammat al-burda al-muʿazzama al-mubad̲j̲d̲j̲ala bi-ḥamdi ʾllāh taʿālā wa-mannihi.* Thus in the web of individuals which form the culture of this poem's celebration only the poet (al-Būṣīrī) and the text of the "Burda" itself are constant; even the dedicatee of a given ms. has been known to change with time. The motive is always pious and self-effacing: the preface in ms. Loth 1044 to Abū Bakr b. Ramaḍān b. Mūk's *tak̲h̲mīs* explains the deliverance he experienced through the writing of his "gloss" (*fa-raʾaytu ʾl-farad̲j̲a fī at̲h̲nāʾihi*). The same sentiments underpin a whole tradition in the subjection of Ibn al-Naḥwī's (d. 513/1119) invocational *al-Ḳaṣīda al-munfarid̲j̲a* to numerous *tak̲h̲āmīs* (see Mach 4078-80).

Examination of the Cairo inventory and other samples of the *Burda* shows that amplifications tend to rework the lexicon of the individual *bayt*; hence collectively *tak̲h̲āmīs* constitute, as one would expect,

variations on a theme. The *Djamʿ al-takhāmīs* by Aytmish al-Khiḍarī al-Ẓāhirī (d. 846/1442) (which in the Chester Beatty ms. (4215) of the 10th/16th century provides a good example of the potential of calligraphic creativity and variety) offers an excellent sample: a vocabulary seems to be established for each stanza (or section of the *Burda*); sometimes shared lexical formulae and conventions appear to have been established that are in fact independent of the language of the *bayt* (and illustrate the exegetical tradition for the particular section or *bayt*). For example, the *bayt* beginning *wa'nsub ilā dhātihī mā shi'ta min sharaf*[in] (in the section of the poem describing the *Isrā'* has inspired a number of *takhāmīs* (dating back to the 14th century), all of which articulate the role of the Prophet in the *ṣuḥuf* (or text of the Ḳur'ān).

The same collection—in the very manner of its calligraphic arrangement—further illustrates the essential subordination of the amplification to the *Burda* (and the virtual anonymity of the glossator in such collective presentations); and, conversely, that certain *takhāmīs* (from various periods) were favourites and had a wide diffusion: for in the Aytmish collection we find the three *takhāmīs* contained in the Khalili collection (mss. 563, 223 and 79), notably those of one Nāṣir al-Dīn Muḥammad b. ʿAbd al-Ṣamad al-Fayyūmī (mid-14th century) and the better-known Abū Bakr b. Ḥidjdja al-Ḥamawī (d. 837/1434; see Brockelmann, II[2], 16-20, S II, 8-9).

The great reverence which the poem enjoyed in the pre-modern period led to the composition of *takhāmīs* with Turkish and Persian intralineation, and to "variations in the non-Arabic countries like India" (Schimmel, *As through a veil*, 187).

Vajda, *Index général des manuscrits arabes musulmans de la Bibliothèque Nationale de Paris*, iv, Paris 1953. [Some *errata*: The *al-Warda al-dhakiyya fī takhmīs al-Burda al-zakiyya* by Abū Bakr b. Ramaḍān b. Mūk (London, India Office, Loth 1044, ff. 279-301), identified in Sezgin (ii, 234) as a *takhmīs* of Kaʿb b. Zuhayr's *Bānat Suʿād*, is in fact yet another amplification of al-Būṣīrī's *Burda*; further, the amplification of Ibn Zaydūn's *Nūniyya* listed as anonymous in Mach 4058 appears to be a copy of the *takhmīs* by Ṣafī al-Dīn al-Ḥillī.] (P.F. Kennedy)

TAKHT-I DJAMSHĪD [see iṣṭakhr].

TAKHT-I ṬĀWŪS (p.), the Peacock Throne, a name given to various highly-decorated and much bejewelled royal thrones in the eastern Islamic world, in particular, to that constructed for the Mughal Emperor Shāh Djahān (1037-68/1628-57 [*q.v.*]).

There are relevant accounts in the contemporary Indo-Muslim sources, e.g. in ʿAbd al-Ḥamīd Lāhawrī's *Bādshāh-nāma* and Muḥammad Ṣāliḥ's *ʿAmal-i Ṣāliḥ*, and in the accounts of European travellers who claimed to have seen the throne, such as Tavernier, Bernier and Manucci. These last authorities, however, contain serious discrepancies in their accounts of the throne, which are hard to reconcile with the facts, leading one to wonder if they really did see it properly.

The first *darbār* at which the Peacock Throne was used seems to have been when Shāh Djahān celebrated the ʿĪd al-Fiṭr and Nawrūz together at Āgra in Shawwāl 1044/March 1635, and thereafter, the sources make frequent mention of its use by the Mughals. A contemporary painting from a royal album of Shāh Djahān's shows the Emperor on a gold-enamelled and jewel-encrusted throne which has four legs and four columns supporting a rectangular domed canopy with a projecting cornice and two peacocks perched above. According to Bernier, the peacocks were made by a French craftsman, possibly Austin of Bordeaux (see Victoria and Albert Museum, *The Indian heritage. Court life and arts under Mughal rule*, London 1982, no. 57; there are other, similar paintings in existence). Later Mughal emperors, including the penultimate one, Muʿīn al-Dīn Akbar II b. Shāh ʿĀlam II (1221-53/1806-37), are said to have had less costly replicas made of the Peacock Throne.

Shāh Djahān's throne was carried off when Nādir Shāh [*q.v.*] sacked Dihlī in 1151-2/1739. One eyewitness account of the event, Ṭihrānī's *Nādir-nāma*, records that the Persian conqueror had 17 thrones amongst his spoils. Much of the throne, including its columns and bevelled roof, could have been dismantled at Ḳandahār, during Nādir's return journey, when many of the plundered Indian jewels were sewn on to the Shāh's tents as symbols of royal authority.

Since then, there has been considerable confusion regarding thrones to be found in the Persian capital Tehran. Displayed in the Gulistān Palace of the Ḳādjārs, and seen in the 19th century by various European travellers such as Curzon, were the so-called "Marble Throne", Takht-i Marmar, of Karīm Khān Zand, and the "Peacock Throne", actually made for Fatḥ ʿAlī Shāh [*q.v.*] by the Ṣadr of Iṣfahān Muḥammad Ḥusayn Khān when the Shāh married an Iṣfahānī wife known as Ṭāwūs Khānum. Both of these are platform thrones of typical Indo-Persian style. Now in the Bank Melli vaults, with the Persian crown jewels, is the "Nādir Throne", which is of the chair type and has no connection with the great conqueror (the name to be interpreted as *nādir* "remarkable"?) and cannot be older than Fatḥ ʿAlī Shāh's time, probably younger in its present form. See G.N. Curzon, *Persia and the Persian question*, London 1892, i, 317-22, with illustration; V.B. Meen and A.D. Tushingham, *Crown jewels of Iran*, Toronto 1968, 54-7 (for the "Nadir Throne").

Bibliography (in addition to references in the article): Abdul Aziz, *Thrones, tents and their furniture used by the Indian Mughuls*, Lahore n.d. [1940s], 35-73; K.R.N. Swamy and Meera Ravi, *The Peacock Thrones of the world. A reference authority*, Bombay 1993.

(C.E. Bosworth)

TAKHTADJĪ (t.), literally "one who works in woods and forests, woodcutter, sawyer" (< *takhta* "wood"), the name of one of the Turkish nomadic groups of Anatolia which had a special legal status in Ottoman times, defined by their nomadic

way of life, their specialisation within that group and their confessional religious connections.

Thus we have Türkmen [*q.v.*], less an ethnonym denoting tribes of Og̲h̲uz [see G̲H̲UZZ] origin than a legal status within the Ottoman empire, paying the *Türkmen muḳāṭaʿasî* to the Ottoman ruling house (*k̲h̲āṣṣ*). The Tak̲h̲tad̲j̲îs enjoyed this *k̲h̲āṣṣ* status also in return for specialised services to the state of work in woods and forests, just as the Čepni were concerned with the transport for the troops and the Yayd̲j̲î Bedir for bow-making. Yörük, for its part, denoted, and still denotes, a nomad in general (> *yürümek* "to travel about, journey"). Many tribal groups were and are of ʿAlewī/Bektās̲h̲ī/Ḳîzîlbās̲h̲ religious confession, for historical reasons (Ottoman-Persian rivalry) or for structural ones (the systems of lineage and of internal organisation of the religious community merging and supporting each other mutually). The Tak̲h̲tad̲j̲îs illustrate this principle of the complexity of multiple designations, being Türkmen, though not of the 14 component clans of the Og̲h̲uz and of the above religious affiliation, though this may be—in principle—held in secret, through *taḳiyya* [*q.v.*].

A relatively sure criterion of distinctiveness, however, allows one to bring some system into this, sc. choice of spouse and marriage relations. Amongst the Tak̲h̲tad̲j̲îs, ʿAlewī belief is the prime condition for any marriage. However, some ʿAlewī nomadic groups and some non-nomad ones (e.g. the Kurds of Dersim) refuse to exchange daughters with them; whilst the Čepni, ʿAlewī Türkmens of Og̲h̲uz origin and pastoral nomads, will accept Tak̲h̲tad̲j̲î wives but not give to the latter their own daughters, whilst admitting the possibility. It is probably for this reason that there exists a certain opposition of the two complementary groups, each for instance accusing the other of being "cattle thieves".

In the early 20th century, Hasluck considered the "Ḳîzîlbās̲h̲ Tak̲h̲tad̲j̲î" to be numerous in Lycia. Von Luschan now locates their centre at Elmalı. Each tribal group is divided into *obas* (the basic segment in the Turco-Mongol tribal scheme denoting, according to historical context, a clan, lineage or local segment of a clan) of some ten to thirty families, led by a *keye* (< *kâhya*). However reduced in size, the tribal group has its own *baba* or *dede* for religious matters. According to Ülkütaşır (1968), the group is said to be made up of 20,000 hearths representing *ca.* 100,000 persons. Two main sections (*ʿas̲h̲īret/aşiret*) are distinguished: the Čaylaklar or "kites" and the Aydınlılar in the province of Aydın.

The former occupy essentially the western zone, the Karaman plain, Mut, Finike and Fethiye, with three sub-groups (the Üstürgeli, Samaslı and Cingözler). However, because of the dynamics of the system of *obas*, with new names appearing with each new division, so that the mother-*oba* often co-exists with the daughter-*oba*, one may add other important sub-groups such as the Gökçeli, Danabaş, Eşeli, Kabakçı, Çavlak, Kardeşli and Enseli for the western group (Roux, 1970). The Aydınlılar also have sub-groups such as the Agăčeri (an old name for the Tak̲h̲tad̲j̲îs meaning "tree men") and Karakaya. They live in the east in the Adana-Mersin region, at Antalya and around Izmir in the west.

Thus the Tak̲h̲tad̲j̲îs occupy the forest zones of the Taurus chain in the south as well as the Aegean zone in the west. Their ancient connection with service to the state persists to some extent through their connections with the National Dept. for Forests which looks after the state forestry resources.

Certain communities have become definitely sedentarised like those of the districts of Çanakkale and Balıkesir, where their arrival coincided with the Crimean War of the mid-19th century and the vastly-increased investment in forestry required for shipbuilding purposes during that war.

(ALTAN GOKALP)

TAK̲H̲ṬĪṬ AL-ḤUDŪD (A.), lit. "delimiting boundaries or frontiers", in modern Arabic usage.

International boundaries reflect the historical moments in the life of a state, when its limits were made according to its force and ability at that time. Thus today's boundaries are relics from the past and might be changed in the future. States have acquired their boundaries in a variety of ways: in some cases they marked the territorial limit of a phase of political expansion and conquest; in other cases, they have been imposed by external powers, either through acts of conquest or through negotiation. They function as barriers to the social and economic process, which would otherwise transgress the lines without interference, as well as holding economic significance through their association with tariff and quota restrictions. The latter convert an otherwise open world economic network into series of partially closed economic systems.

Boundaries appear on maps as thin lines between adjacent state territories, marking the limits of state sovereignties. The lines can be effective with regard to underground resources, marking the limits of ore, water and oil deposits, as well as above the ground, guarding the individual states' air space. In the past, they were drawn for defensive purposes; as cultural divisions; according to economic factors; for legal and administrative purposes; or on ideological bases. Sometimes they were drawn through essentially unoccupied territories, although they were usually superimposed on existing cultural patterns, disturbing the lives of the people living in the border areas.

Of the many criteria for establishing a boundary line the ethnic criteria are those applied most often in modern times. Accordingly, boundaries have been drawn to separate culturally uniform peoples so that a minimum of stress is placed upon them. The heterogeneous world population, however, cannot define

boundaries that completely and exactly separate peoples of different character, and as a result, there are ethnic minorities in almost every state. The definition of peoples, according to race, language or religion, has been used in several cases to delimit a state boundary. Other political boundaries lie along prominent physical features in the landscape. Such physiographic political boundaries, following rivers, mountain ranges or escarpments, sometimes termed "natural boundaries", seem to be especially acceptable criteria as such pronounced physical features often also separate culturally distinct areas. In the early days of boundary establishment, physiographic features were useful as they were generally known and could be visually recognised. However, many of the boundary lines that were based on such physiographic features have subsequently created major difficulties between states. Rivers tend to shift their course, leading to countless disputes over whether the boundary should be along one of the river banks, along the *thalweg* (main navigation channel), through the median line of the water's surface or somewhere else [see e.g. SHAṬṬ AL-ʿARAB]. Any mountain range has recognised crest lines; but they rarely coincide with the region's watershed. The placing of boundaries along crest lines in mountainous areas has therefore led to water disputes concerning the use of rivers near their sources.

Most of today's political boundaries, even those in Islamic regions, have been created by European nations. In fact, it is difficult to identify any international boundary that has not directly involved a European state at some stage of its evolution. The allocation of territory was usually determined by straight lines connecting known points or by features of the physical landscape, generally solving immediate territorial conflicts. The need for delimitation of the boundaries emerged when the allocated borderland proved to have economic value or when disputes arose in the area. The delimitation of a boundary, which has usually been decided by agreement between two states or at a post-war conference, has generally been a full definition and has served as a guide-line for the demarcation team. Today, when many states are energetically seeking to fix and demarcate their boundaries, which were not accurately defined in the past, there are still a great many (over 100) boundary and territorial disputes around the world.

In contrast to modern Western ideas of boundaries, Islamic constitutional theory is concerned only with community and not with territory. It is for this reason that, traditionally, the Islamic world has not been overly concerned with precise boundary delimitation or with territorial sovereignty. As far as territorial control has been concerned, this tends to be a local or administrative matter. The issue of boundaries has only acquired importance in the context of delegated authority within larger political entities; yet they were only relevant for administrative convenience and were subject to frequent relocation. Spheres of different political authority were usually separated by border areas, rather than by precise boundary lines. It was only with the explicit introduction of the concept of the nation-state that concepts of territorial sovereignty and boundaries began to emerge in the Islamic areas. The boundaries between most of the Islamic states and between them and the outside world were mainly established, not by local rulers, but rather by external forces which shaped the world during the late 19th and early 20th centuries. As most lines were demarcated for the needs of colonial and imperial powers, they often cut through peoples, tribes, etc. and have left legacies of boundary conflicts for successor and newly-established states. Some examples of these are given here.

The present boundary between Afghanistan and Pakistan, the Durand Line, represents such an example. Its establishment in the late 19th century was the climax of a lengthy process of negotiations over the extent of British influence in India and Central Asia. Two Afghan-British wars, and the threat of negotiations between the Imperial Russian government and the Afghan rulers, prompted Britain to dispatch Sir Mortimer Durand to Kābul to negotiate a permanent boundary line. A treaty signed on 12 November 1893 was re-affirmed in 1905; a Treaty of Peace was concluded between the Government of India and Afghanistan, after the Third Afghan War, on 8 August 1919, and a final treaty was signed on 22 November 1921. In 1947 Pakistan inherited the Durand Line as its western boundary with Afghanistan. Successive Afghan governments questioned the line's legitimacy, claiming that its sanctions had lapsed with the transfer of sovereignty from Britain to Pakistan; for the history of these Afghan-Pakistan disputes, see PASHTŪNISTĀN. In 1950 and again in 1956 the United Kingdom declared that it regarded the Durand Line as the international boundary, while Pakistan has repeatedly stated that it has no dispute with Afghanistan over the exact location of the line; at present the Line remains under quiet dispute.

The division of the Arab lands of the Ottoman empire after the First World War, eventually creating the Middle Eastern countries of ʿIrāḳ, Syria, Lebanon, Jordan and Israel, had its origin in the secret Sykes-Picot-Sazanov Agreement of 1916 to create belts of British and French territory with two nominally independent Arab states while in 1917 Britain issued the Balfour Declaration concerning a Jewish national home in Palestine. By the Treaty of Sèvres (10 August 1920), the British and French effectively enacted the Sykes-Picot Agreement in that France established a Mandate over Syria and Lebanon while the British established the Mandates of Palestine and Mesopotamia (which later became ʿIrāḳ) [see MANDATES]. In 1922 Britain created the Emirate of Trans-Jordan in order to fulfil an obligation to their Arab ally. The boundaries of the newly-created territories were drawn by British and French officials, and they served as the basic boundaries of the subsequently independent Middle Eastern countries, although there have been and still are numerous disputes concerning those lines, especially where there are mixed populations. Such has been the case over the former Ottoman *wilāyet* of Mawṣil, between Turkey and newly-mandated ʿIrāḳ, only settled in 1926 after a League of Nations enquiry awarded it to ʿIrāḳ [see AL-MAWṢIL. 2]; over the so-called Sanjak of Alexandretta, the later Turkish Hatay, which Turkey, in a calculated move when the Mandatary power France's priorities were elsewhere, managed to acquire in 1939 [see ISKANDARŪN]; and above all, over the boundaries and very existence of the newly-created state of Israel and its Arab neighbours since 1948.

The modern Iran-ʿIrāḳ boundary line has a history of some three centuries. Here the local Muslim powers, Ottoman Turkey, the predecessor of ʿIrāḳ and Ṣafawid Persia, were involved in the early stages of delimitation, but the final line was demarcated by a British-Russian delegation in 1914. The boundary line is 1,458 km long and reaches from the Shaṭṭ al-ʿArab at the head of the Persian Gulf to the boundary tripoint with Turkey on the Kūh-i-Dalanpar. It is one

of the oldest established boundaries of the world, but its exact course is still unsettled. In the 1639 Zohāb peace treaty, the Ottomans and Ṣafawids delimited a boundary in the territory between the Zagros mountains and the Tigris River. Although this was disputed during the Turkish invasion of Persia in 1724, a peace treaty of 1746 reaffirmed the 1639 boundary. The Treaty of Erzerum of 1847, following the Persian-Turkish War of 1821-22, stipulated that the 1746 boundary was valid. However, it also delimited a boundary in the Sh̲aṭṭ al-ʿArab for the first time, determining the boundary on the eastern bank of the Gulf, leaving the waterway under Turkish sovereignty, but allowing freedom of navigation. Work on the boundary went forward during 1848-52, and by 1860 a collaborative map (*Carte identique*) was produced to illustrate the boundary. By the turn of the century, in an effort at stabilisation, Britain and Russia urged Persia and Turkey to agree to a detailed delimitation, which was completed in 1911. The so-called Constantinople Protocol of 1913 then provided for a further detailed delimitation of the entire boundary by a commission, which demarcated it in 1914. The protocol specifically stated that the Sh̲aṭṭ al-ʿArab, with the exception of certain islands, was to come under Turkish sovereignty; the demarcated boundary was to follow the low watermark on the Persian bank of the Sh̲aṭṭ, except for the area around K̲h̲urramsh̲ahr, where the line was to follow the *thalweg*. For the subsequent course of the Perso-ʿIrāḳī dispute, see SH̲AṬṬ AL-ʿARAB. The outstanding issues of the alignment of the international boundary between Iran and ʿIrāḳ, the control of lands adjacent to the border, and the status of the Sh̲aṭṭ al-ʿArab remain unsettled today, so that the border question persists.

The boundaries of the states and amirates of the Arabian peninsula (most of these political units having emerged only in the last century or so) have been fruitful causes of dispute, given the facts that the peninsula has no perennial rivers or other natural boundaries and that much of the sparse population was in the past nomadic, hence with little or no regard for political frontiers. The ʿIrāḳī invasion of Kuwayt [*q.v.*] in 1990 has been the most violent outbreak, in this case a legacy of uncertainty over the extent of Ottoman sovereignty in the Upper Gulf coastal region; but there have also been, and in some cases remain, frontier disputes between the former North and South Yemens, between Yemen and Saudi Arabia over the Nad̲j̲rān [*q.v.*] region, between the Sultanate of Oman and the former PDRSY over Dhofar (Ẓufār [*q.v.*]), and between Saudi Arabia on the one side, and Britain on behalf of the Sultanate of Oman and Abu Dhabi on the other, over the oasis of al-Buraymī [*q.v.*], not resolved till the late 1950s.

The boundaries between Afghanistan and the newly-emerged Muslim Republics of Central Asia (Turkmenistan, Tajikistan and Uzbekistan) are also a European creation. The history of those boundaries dates back to the second half of the 19th century. At that time, the British and Russian empires contended for control in Central Asia, especially as Russia in 1865 extended her frontier in Central Asia towards British India. In 1869 Britain and Russia decided to create a buffer zone between their Asian territories. Britain, which wanted an Afg̲h̲ānistān within the British sphere of influence, wished Russia to remain at a distance, while the Russians wished to secure a safe route from the Caspian Sea to Central Asia along the Oxus or Āmū Daryā River. The British proposed that the middle and upper Oxus, south of Buk̲h̲ārā, should serve as the boundary between the Russian Empire and Afg̲h̲ānistān. The proposal was accepted, but the western terminus of the line was not clear and the K̲h̲ānate of Buk̲h̲ārā, which was under Russian control, owned territory south of the river. In 1872, after lengthy debate between the two countries, it was agreed that Afg̲h̲ānistān be regarded as neutral territory between the empires, and in 1873 the Oxus was established as the northern boundary of Afg̲h̲ānistān, south of the Russian region of Samarḳand and of Buk̲h̲ārā. The boundary line left the river at the town of K̲h̲ʷād̲j̲a Sālār, and this enabled Buk̲h̲ārā to maintain its control over its area south of the river. Between 1882 and 1884 there were further negotiations between Britain and Russia concerning the western section of the boundary up to the Harī Rūd River which forms the eastern boundary with Persia. A demarcation commission tried to place the boundary in the ground but found it difficult to establish the exact line, as it was agreed to leave some local Turkmen tribes within Russia although their land was irrigated by canals originating in Afg̲h̲ān territory. Not until 1888 was the boundary line finally demarcated and from then onwards, despite all the political changes, the boundary line has remained where it was established.

Africa also has boundaries created by the Europeans between Islamic countries. The boundary between Egypt and Libya extends southward from the Gulf of Salum on the Mediterranean to the Sudan-Egypt-Libya tripoint at Jebel Uweinat, about 1,100 km/690 miles south of the Sea. The current line dates from 1841, when the Ottomans confirmed Muḥammed ʿAlī [*q.v.*] as hereditary governer of Egypt. On a map accompanying the London Treaty of 1841, a line along the 29th meridian marked the boundary between Egypt and the Ottoman province of Libya. Britain established itself in Egypt in 1882, while Libya was occupied by Italy in 1912; in that same year Egyptian forces captured the coastal town of Salum. Attempts to formalise the boundary between British Egypt and Italian Libya first reached fruition in 1919, when the two countries signed an agreement placing the oasis of al-D̲j̲ag̲h̲būb in Libya. An agreement concerning the remainder of the line was signed on 6 December 1925. A chain of permanent beacons was erected in the northern sector of the boundary in 1938. From then onwards, despite some objections by both Egypt and Libya, the boundary line has not changed.

Most other boundaries in Muslim Africa were also established by colonial régimes, mainly those of the French, which established the boundaries of Tunisia, Algeria, Morocco, Chad, Niger, Mauritania, etc. In most cases, local needs and history were not involved in the delimitation process, but the results of this still dominate the boundaries of the African continent with disputes at times reaching a state of warfare, as with Morocco and the so-called Polisario Front over the Spanish Sahara, and between Libya and Chad.

TAKHYĪL (A.), lit. "creating an image, or an illusion (*khayāl*)", a technical term with various meanings but all broadly in the field of hermeneutics. It occurs in (a) theory of imagery, (b) philosophical poetics, (c) Ḳur'ānic exegesis, and (d) among rhetorical figures. Whether any or all of these usages have a common root remains to be seen. It should be noted that, like any *maṣdar, takhyīl* can also act as a verbal noun of the passive. Since in everyday language the verb was predominantly used in the passive (*khuyyila ilayhi* "an illusion was created for him [that such-and-such was the case]", often in the context of magic), some dictionaries use *wahm* as a synonym of *takhyīl* (cf. *LʿA*, xi, 231a, bottom). However, as shown by the syntax of the verb *khayyala*, the term *takhyīl* in its technical use mostly (always?) implies the active meaning and as such is sometimes equated with the causative verbal noun *īhām* (see below).

1. In the discussions of poetic imagery the term *takhyīl* was first employed by ʿAbd al-Ḳāhir al-Djurdjānī (d. 471/1078 or 474/1081 [*q.v.* in Suppl.]), who was also the first to identify the literary phenomenon designated by this term. Briefly put, it consists in a kind of make-believe in the form of giving, to a fact stated in the poem, a fantastic interpretive twist which on the surface explains and supports that fact, but on closer inspection turns out to be an illusion. Thus in the line by Ibrāhīm al-Ṣūlī (d. 243/857): "The wind is jealous of me because of you—I had not presumed it among my enemies—; when I intended a kiss, it blew the wrap back over [your] face" (*Asrār*, § 16/13), the simple fact of the wind blowing the garment over the beloved's face is "explained" by attributing a motivation to the wind and in the process personifying it. Al-Djurdjānī mentions (*Asrār*, § 16/10) that the procedures producing *takhyīl* are so varied and manifold that an enumeration and classification of all its subtypes would be impossible. Instead, he proceeds to a series of case studies. The most common techniques are mock etiologies (i.e. ascribing a fantastic cause to a natural phenomenon, as in the example quoted) and mock analogies (i.e. proving a point with the help of a non-pertinent analogy, as in al-Buḥturī's (d. 284/897 [*q.v.*]) line: "and the whiteness of the falcon is of a truer beauty, if you consider it, than the raven's blackness", said to "prove" that the white hair of old age is preferable to the black hair of youth [*Asrār*, § 16/3]). Most of these conceits, though by no means all (see first example), presuppose a literary history of the motif at hand, including its figurative expression; of central importance here is the phenomenon of the metaphor understood literally, or as al-Djurdjānī calls it, the *tanāsī* of the metaphor, i.e. pretending to be oblivious of its metaphoricalness. This may result in the specific conceits known as *taʿadjdjub* "wonderment" and *tadjāhul al-ʿārif* "feigned ignorance", as when the metaphorisation of the beloved as a "sun" is used by the poet to allege not one but two real suns and, consequently, "wondering" how this might be possible or "protesting ignorance" as to which of the two suns is the real thing.

Al-Djurdjānī contrasts these phantasmagorical poetic notions (*maʿānī takhyīliyya*) with the realistic commonsensical ones (*maʿānī ʿaḳliyya*), which, he insists, can also be poetically expressive (e.g. gnomic verse). Given that *takhyīl* is a kind of irreality—al-Djurdjānī applies to it the traditional maxim *khayr al-shiʿri akdhabuh* "the best poetry is that which 'lies' the most"—it cannot possibly occur in the Ḳur'ān, a fact that forces our author to assign greater value to the *maʿānī ʿaḳliyya*. But his enthusiastic characterisation of *takhyīlī* poetry as verbal alchemy leaves no doubt where his aesthetic preferences lay.

It should be noted that *takhyīl* is not the only type of the "fantastic" in ʿAbbāsid poetry. Another kind, pointed out by G.E. von Grunebaum (*Kritik und Dichtkunst*, Wiesbaden 1955, 47-50), is the composite simile that results in an artificial construct, as in al-Ṣanawbarī's (d. 334/945 [*q.v.*]) line: "The red anemones, when they bend down and up again, are like banners of ruby unfurled on lances of chrysolith" (*Asrār*, § 10/1).

Considering that al-Djurdjānī identified an all-important trend in ʿAbbāsid poetry, which he proceeded to name, to describe in generative and in classificatory terms, and to characterise in its overall meaning, it is surprising to see that those who used his work as the basis for their own elaborations of *ʿilm al-bayān* [see BAYĀN] had no use for the notion of *takhyīl*. The probable reason for this failure is the fact that Fakhr al-Dīn al-Rāzī (d. 606/1209 [*q.v.*]) and al-Sakkākī (d. 626/1229 [*q.v.*]) wrote their works (*Nihāyat al-īdjāz fī dirāyat al-iʿdjāz* and *Miftāḥ al-ʿulūm*, respectively) as systematic contributions to the discussion of *iʿdjāz al-Ḳur'ān* [*q.v.*], in which poetry *per se* did not play a role.

The term *takhyīl* in its *nisba* form is, indeed, used in al-Rāzī and al-Sakkākī to denote a specific type of metaphor [see ISTIʿĀRA]. The *istiʿāra takhyīliyya* is characterised by the lack of a substratum, as in "the claws of Death", where the metaphor "claws" is not tied, as other metaphors often are, by an underlying simile to a part of death, because death does not have any part that could be likened to claws. But the metaphor creates an illusion that there is such a part. The technical term *takhyīlī* is thus apt, but it has little to do with al-Djurdjānī's notion.

The dialectic of truthfulness and untruthfulness in medieval Arabic literary criticism*, Washington, D.C. 1988, 87-100 (where rendering *takhyīl* as "imagination" is potentially misleading); Margaret Larkin, *The theology of meaning. ʿAbd al-Qāhir al-Jurjānī's theory of discourse*, New Haven, Conn. 1995, 132-63.

2. In philosophical parlance, *takhyīl* is, first and foremost, a logical term, the meaning of which may be circumscribed as the "evocation of images of things in the minds of listeners by means of figurative language". As such it is the central notion of poetics as a branch of logic, denoting, as it does, the differentiating quality of poetic utterances (*aḳāwīl shiʿriyya*) as logical constructs. The whole idea of poetics as part of logic resulted from the late Alexandrian inclusion of the *Rhetoric* and *Poetics* among Aristotle's logical writings, the result of which was an Organon of nine books including Porphyry's *Eisagoge* (see Walzer, in *Bibl.*). While among the Neo-Platonic Alexandrian commentators on Aristotle the inclusion is still a matter of debate as to whether it was legitimate and, if so, on what grounds, in the Arabic tradition it is a *fait accompli*. Among the various justificatory schemes establishing the systematic structure of the "new" Organon the two predominant ones were (a) one pairing the logical arts with truth-values (ὕλαι, *mawādd*), where

"poetry" equals "entirely false premises", and (b) another pairing them with man's internal faculties (τὰ γνωστικὰ τῆς ψυχῆς μόρια, *al-ḥawāss al-bāṭina*), in which "poetry" is somehow connected with the Aristotelian "imagination." For details see Heinrichs, *Arabische Dichtung*, 150-2, and especially Deborah L. Black, *Logic*, 37-41, 43-4. While the truth-value idea lingered on for a while (esp. in al-Fārābī, *Taʿallum al-falsafa*, ed. F. Dieterici, *Abhandlungen*, [text] 52; [tr.] 87, and *Ḳawānīn*, 267, ll. 10-15), it was soon replaced by the more satisfactory correlation of the logical arts with the internal faculties, and it is here that "poetry" was paired with *takhyīl*, the "creation of mental images (*khayālāt*) by the poet for the 'imagination' (φαντασία, *al-ḳuwwa al-mutakhayyila*) of the listener." As there is no exact forerunner to this coupling in the Greek texts, though similar attempts can be pointed out, it may possibly have been an Arabic innovation (see Black, *Logic*, 44).

While the term *takhyīl* thus originated in the discussions of the "logical" character of Aristotle's *Poetics*, rather than in the book itself, the other key term, *muḥākāt*, is clearly a descendent of Aristotle's μίμησις "imitation". But the meaning has drastically changed: *muḥākāt* refers to imitative, i.e. figurative, language which presents one thing by means of another in the way of similes and metaphors (this semantic change may have occurred in the context of the "inclusion" debate, see G. Schoeler, *Syllogismus*, 87 and n. 207). It should be noted that, in al-Fārābī (d. 339/950 [*q.v.*]), the term *muḥākāt* is also used in a wider sense to cover "imitation" in the other arts: he mentions sculpture and painting as parallels in his writings on poetics, and he uses both this term and *takhyīl* to characterise aspects of music (see his *K. al-Mūsīḳā 'l-kabīr*, ed. Gh.ʿA. Khashaba, Cairo n.d., 62-3, 66 [*al-alḥān al-mukhayyila*], 67-9, 71, 73).

The three terms "poetry", "evocation of mental representations", and "imitation" occur together for the first time in al-Fārābī's *Shiʿr*; his *Ḳawānīn* does not (yet?) contain the term *takhyīl* and may thus be an early work. The poetic theory based on these terms states the following: The poetic text uses imitation toward its topic and evocation of mental images toward its recipient. I.e. it "imitates" its topic, whether thing or fact, by using a similar thing or fact to serve as simile, metaphor, and/or analogy, this similitude being either attractive or repulsive; it thus produces, in the mind of the recipient, images that prompt the recipient to aspire to, or recoil from, what is being described, without first forming an assent (*taṣdīḳ*) to the proposition offered (the truth or falseness of the poetic statement being irrelevant). The *takhyīl* mechanism in poetic utterances thus takes the place of *taṣdīḳ* in all other utterances; both produce action in the addressee. It is important to stress that poetic utterances, like all non-demonstrative propositions formed according to the various logical arts, are directed to a listener who is meant to be influenced by them. Consequently, al-Fārābī calls the various branches of logic altogether *al-ṣanāʾiʿ al-ḳiyāsiyya wa-aṣnāf al-mukhāṭabāt* "the syllogistic arts and the kinds of addresses" (*Iḥṣāʾ*, 45, ll. 4-5). This should be kept in mind when translating expressions like *al-aḳāwīl al-mukhayyila* "the image-evoking utterances"; misreading this term as *mukhayyala* and mistranslating it as "imaginative" has been all too common in works where these matters are only mentioned in passing by non-specialists.

Although poetics as a logical discipline is said to be a syllogistic art, none of the philosophers elaborates on this aspects, except Ibn Sīnā, who does exemplify the poetic syllogism (see Schoeler, *Syllogismus*; and Black, *Logic*, 209-41). With him it seems to be a metaphor-generating syllogism as in *So-and-so is handsome* (minor); *Everyone handsome is a moon* (major); *So-and-so is a moon* (conclusion). However, only the conclusion appears in the finished poem; the syllogism is thus an internal process of the poet, which in a way defeats the purpose of a syllogism of influencing the addressee. What is more, as appears from various passages in al-Fārābī, the *takhyīl* operation applies not only to propositions, arrived at as conclusions of syllogisms, but also to single concepts, arrived at as results of definitions. In other words, the *takhyīl* operates on the level of both *taṣawwur* "conception" and *taṣdīḳ* "assent", although it brings about no real *taṣawwur* but only a conception of the image of the thing intended, a *takhayyul*, nor does it produce real *taṣdīḳ*, but only the action that would flow from real assent.

Al-Fārābī's most audacious deed was to use a combination of logical poetics and rhetoric as a model to express his theory of religious language. In brief, he establishes a parallelism between philosophical *taṣawwur* and religious *takhayyul*, i.e. between concepts and images, thus making use of logical poetics, and another parallelism between the certain proof of philosophy and the persuasion (*iḳnāʿ*) of religion, thus drawing on logical rhetoric. Revelation is thus a language of images used in rhetorical, persuasive, proofs. Moving away from poetics on the level of proof was necessary because, as we have seen, the poetic utterances did not entail *taṣdīḳ*, which is, of course, a *sine qua non* of religion. The net result was that religion was an image of philosophy, as true and as untrue as the notion of "image" allowed. For details see Heinrichs, *Verknüpfung*; Black, *Logic*, index, s.v. "Religion"; and Lameer, 259-89.

While in al-Fārābī *muḥākāt* and *takhyīl* were strictly complementary, Ibn Sīnā (d. 428/1037 [*q.v.*]) tried to get out of the awkward consequence this theory entailed, to wit, the exclusive figurativeness of poetry, by considering "imitation" only one of the methods for "image-evocation". "Wonderment and pleasure" (*taʿadjdjub wa 'ltidhādh*), derived from the form of the poetic text, are equally capable of *takhyīl*. Various verbal and mental figures of speech, but also the sheer power of aptly expressed truth, have this emotive effect (see Schoeler, *Grundprobleme*, 57-73; idem, *Syllogismus*, 67-73). But thus making his theory more in tune with the existing poetry, he loses the clarity and neatness of al-Fārābī's system.

Abu 'l-Barakāt al-Baghdādī (d. after 560/1164-5 [*q.v.*]) very reasonably distinguishes between the poetry of his own time and place and the one that "Aristotle" (i.e. the Greek tradition, including the commentators) had in mind. Ibn Rushd (d. 595/1198 [*q.v.*]) returns to the Farabian model; he uses *muḥākāt* and *takhyīl* more or less as synonyms. Although he understands that many of the things described in Aristotle's *Poetics* are peculiarly Greek, he is convinced that the First Teacher wrote something of general validity for all poetry. He therefore tries to adduce examples from Arabic literature to clarify what he finds in the text.

In brief accounts of logic it is usually the term *takhyīl* (or *mukhayyil*) that survives as the key term of logical poetics, while *muḥākāt* seldom appears.

Whether logical poetics was also used to generate "poetic" texts rather than characterise existing ones needs further investigation. P. Heath has suggested that Ibn Sīnā, in writing his allegorical works (such as *Ḥayy b. Yaḳẓān* and *Risālat al-Ṭayr*), put to use the

method developed in logical poetics (see his *Allegory and philosophy in Avicenna*, Philadelphia 1992, 163). Since the allegorisation consists in one-to-one transmutations of abstract concepts into living beings, *takhyīl* on the level of *taṣawwur* (see above) seems to be at work here. Unfortunately, Ibn Sīnā himself, when discussing the symbolic mode of presentation, speaks of *rumūz* "symbols", and *amthāl/amthila* "images", rather than of *takhyīl* and *muḥākāt* (see D. Gutas, *Avicenna and the Aristotelian tradition*, Leiden 1988, 299-307).

Kemal, *The poetics of Alfarabi and Avicenna*, Leiden 1991; Ulfat K. al-Rūbī, *Naẓariyyat al-shiʿr ʿind al-falāsifa al-muslimīn*, Beirut 1983; J. Lameer, *Al-Fārābī and Aristotelian syllogistics. Greek theory and Islamic practice*, Leiden 1994, 259-89; S. Pines, *Studies in Abu 'l-Barakāt al-Baghdādī's poetics and metaphysics*, in *Scripta Hierosolymitana*, iv, *Studies in philosophy*, ed. S.H. Bergman, Jerusalem 1960, 120-98.

Logical poetics (and rhetoric) did not have much of an impact on indigenous poetics and literary theory. Most authors ignored it and Ibn al-Athīr, who became acquainted with Ibn Sīnā's theories, scorned it (*al-Mathal al-sāʾir*, ed. A. al-Ḥūfī and B. Ṭabāna, 3 vols., Cairo 1379-81/1959-62, ii, 5-6). This is certainly due *inter alia* to the sharp dividing line between indigenous and foreign disciplines. It also meant that, in most books on the division of the sciences, "poetry" appeared twice, once in the section on logic (of Greek origin) and again among the linguistic-literary disciplines (of Arab origin).

An exception to this rule is formed by a number of Maghribī authors from the 13th century and later, who all show an influence of logical poetics. Being very different in their respective approaches, they can hardly be called a school. It is only their common interest in philosophy that binds them together. The most articulate among them is Ḥāzim al-Ḳarṭādjannī (d. 684/1285 [*q.v.*]), who quotes al-Fārābī and Ibn Sīnā. He appropriates the notions *muḥākāt* and *takhyīl*, but in order to make them more easily applicable to Arabic poetry, he changes the meaning of *muḥākāt* from "figurative language" to "individually descriptive language". In other words, to "imitate" an object in poetry means to depict it through an artful enumeration of its properties and qualities. Within this general process, figurative language has its place as one particularly effective way of depicting the object. Ḥāzim also introduces "secondary imitations", by which he means the stylistic ornamentations which, he says, imitate the ornaments of other crafts, such as weaving, the goldsmith's art, etc. (as a matter of fact, most terms denoting figures of speech are taken from the vocabulary of such crafts).

Al-Sidjilmāsī (d. after 704/1304 [*q.v.*]) uses *takhyīl* as a general term for "imagery", thus differing greatly from Ḥāzim. Ibn ʿAmīra (d. 656/1258 or 658/1260 [*q.v.*]) and Ibn al-Bannāʾ (d. 721/1321 [*q.v.*]) both seem to cling closely to the philosophers in considering *takhyīl* the distinctive feature of poetry, but they make their remarks more in passing, so that not much can be deduced from them.

Bibliography: 1. Texts. Ibn ʿAmīra, *al-Tanbīhāt ʿalā mā fī 'l-Tibyān* (of Ibn al-Zamlakānī) *min al-tamwīhāt*, ed. M. Heinrichs, *Arabische Dichtung*, 173-262; Sidjilmāsī, *al-Manzaʿ al-badīʿ fī tadjnīs asālīb al-badīʿ*, ed. ʿAllāl al-Ghāzī, Rabat 1401/1980, 218-61; Ibn al-Bannāʾ al-Marrākushī, *al-Rawḍ al-marīʿ fī ṣināʿat al-badīʿ*, ed. R. Binshakrūn, Casablanca 1985, 103-4 (*takhayyul* and *muḥākāt*).

2. Studies. Heinrichs, *Arabische Dichtung*; Schoeler, *Grundprobleme* (see previous bibl.); S. Maṣlūḥ, *Ḥāzim al-Ḳarṭādjannī wa-naẓariyyat al-muḥākāt wa 'l-takhyīl fi 'l-shiʿr*, Cairo 1980; ʿA. Djabr, *Naẓariyyat al-shiʿr ʿinda Ḥāzim al-Ḳarṭādjannī*, Nazareth 1982.

3. In Ḳurʾānic exegesis, the term *takhyīl* was introduced by al-Zamakhsharī (d. 538/1144 [*q.v.*]) in his Ḳurʾānic commentary *al-Kashshāf*. The most explicit presentation of this notion occurs in his explanation of *Sūrat al-Zumar*, XXXIX, 67: "The earth altogether shall be His handful on the Day of Resurrection, and the heavens shall be rolled up in His right hand" (*al-Kashshāf*, ed. M. al-Ṣādiḳ Ḳamḥāwī, 4 vols., Cairo 1392/1972, iii, 408-9). This, he says, is a "depiction (*taṣwīr*) of His majesty and putting before our eyes the essence of His majesty and nothing else, without taking the 'handful' or the 'right hand' into the realm of the literal or that of the figurative". As a Muʿtazilī, al-Zamakhsharī could not let the stark anthropomorphism of this passage stand. So the literal understanding was out of the question, but to consider the "handful" and the "hand" metaphors would not solve the problem, either, because then the unanswerable question would arise: what do they stand for? Therefore, al-Zamakhsharī considers the image presented by the Ḳurʾānic verse holistically: *takhyīl* is a visualisation of an abstract notion such as God's majesty and omnipotence in a comprehensive picture, the parts of which cannot be individually connected back to the notion expressed.

The history of this hermeneutic tool after al-Zamakhsharī still needs to be studied; for some leads and references see Heinrichs, *"Takhyīl" and its traditions*, in Alma Giese and J. Chr. Bürgel (eds.), *Gott ist schön und Er liebt die Schönheit. Festschrift für Annemarie Schimmel*, Berne 1994, 227-47.

4. As a rhetorical figure, *takhyīl* is not very prominent nor very uniform. It occurs in Abū Hilāl al-ʿAskarī, *K. al-Ṣināʿatayn*, with the meaning of "giving the impression of praising while one is lampooning, and *vice versa*" (see G. Kanazi, *Studies in the Kitāb aṣ-Ṣināʿatayn of Abū Hilāl al-ʿAskarī*, Leiden 1989, 186-88; the passage is missing in the printed editions); in Ibn al-Zamlakānī, *al-Tibyān fī ʿilm al-bayān*, ed. A. Maṭlūb and Khadīdja al-Ḥadīthī, Baghdād 1383/1964, 178, with the meaning it has in al-Zamakhsharī (*taṣwīr ḥaḳīḳat al-shayʾ ḥattā yutawahham annahū dhū ṣūrat[in] tushāhad*). Finally, in Rashīd al-Dīn Waṭwāṭ (d. 578/1182-3 [*q.v.*]), *Ḥadāʾiḳ al-siḥr fī daḳāʾiḳ al-shiʿr*, ed. ʿA. Iḳbāl, Tehran 1339/1960, 39-42, it occurs alongside *īhām* to denote what is otherwise known as *tawriya* [*q.v.*] or "double entendre." Likewise, al-Nuwayrī, *Nihāyat al-arab fī funūn al-adab*, Cairo n.d., vii, 131-2, lists all three terms as synonymous. The discussions of *tawriya* are sometimes strangely permeated by al-Zamakhsharī's *takhyīl* explanations (on this see S.A. Bonebakker, *Some early definitions of the Tawriya*, The Hague 1966, 24-8). It seems that scholars with a more Ẓāhirī bent of mind explained the *takhyīl* passages as *tawriyas*, i.e. by the assumption of homonyms, as this would avoid splitting the meaning of the passages into an outer and an inner sense (see Heinrichs, in *Oriens*, xx [1968-9], 404-5). (W.P. HEINRICHS)

TAḲĪ AWḤADĪ, or Taḳī al-Dīn Muḥammad al-Ḥusaynī al-Awḥadī, Persian anthologist, lexicographer and poet. He was born at Iṣfahān on 3 Muḥarram 973/31 January 1565, into a family with a Ṣūfī tradition from Balyān in Fārs. One of his paternal ancestors was the 5th/11th-century Shaykh Abū ʿAlī al-Daḳḳāḳ. During his adolescence he studied in Shīrāz, where he presented his early poems to a circle of poets and was encouraged by ʿUrfī [*q.v.*]. Returning to Iṣfahān, he attracted the attention of the young Shāh ʿAbbās I and joined his entourage. In 1003/1594-5, Taḳī retired for six years to the *ʿatabāt*, the holy cities of the Shīʿīs in ʿIrāḳ. Like many Persian literati of his times, he left Persia, in Radjab 1015/November 1606, to seek a career at the Indian courts. After a short stay in Lahore, he went to the court of Djahāngīr [*q.v.*] at Āgra, but he also lived for many years at Aḥmadābād in Gudjarāt. The date of his death is not on record. He must have survived at least till 1042/1632-3, the latest year which he mentions in additions to his *tadhkira*.

During his journey to India, Taḳī Awḥadī compiled for his fellow-travellers an anthology of Persian poetry, entitled *Firdaws-i khayāl* ("The paradise of fantasy"). At Āgra he extended this into a full *tadhkira*, the *ʿArafāt al-ʿāshiḳīn wa-ʿaraṣāt al-ʿārifīn* ("The places of assembly for the lovers and the open spaces for the mystics"), completed between 1022/1613 and 1024/1615. This voluminous work contains more than 3,000 biographical entries, alphabetically arranged in 28 *ʿarṣas* (one for every letter of the alphabet), and surveys the entire range of Persian poetry. It is a valuable source, especially for the contemporary history of Persian letters in India. After its completion, Taḳī Awḥadī continued to add dates and other pieces of information to manuscripts of his work, many of which are based on personal knowledge. At the request of the Emperor Djahāngīr, he prepared in 1036/1626 an abridged version, under the title *Kaʿba-yi ʿirfān*, ("The Kaʿba of mysticism").

Taḳī Awḥadi was a prolific writer. His learned prose includes *Surma-yi Sulaymānī* ("Solomon's collyrium"), a dictionary of rare Persian words, and treatises on the theory of rhyme and Ṣūfism. Of his poetry, which comprised seven *mathnawīs* and several *dīwāns* with *ḳaṣīdas* on the Imāms, satires and *ghazals*, little has remained.

TAḲĪ AL-DĪN [see AL-MUẒAFFAR].

TAḲĪ AL-DĪN b. Muḥammad b. Maʿrūf, sometimes given the *nisbas* al-Dimashḳī, al-Ṣahyūnī or al-Miṣrī, the most important astronomer of Ottoman Turkey, b. Cairo or Damascus in 927/1520-1 or 932/1525 (the sources are not consistent), d. Istanbul, 993/1585. He studied theology in Cairo, served as *ḳāḍī* in Nābulus, and in 979/1571 was appointed *münedjdjim bāshî* in Istanbul. He was largely responsible for persuading the Ottoman Sultan Murād III to build an observatory in Istanbul. This was achieved in 987/1579. However, the building was pulled down a few months later in 987/1580 as a result of Taḳī al-Dīn's incorrect prediction of an Ottoman victory over the Ṣafawids following the appearance of the famous comet of 1577.

Taḳī al-Dīn wrote two astronomical handbooks with tables and explanatory text [see ZĪDJ] entitled *Kharīdat al-durar wa-djarīdat al-fikar*, completed 1893 Alexander (A.D. 1581-2), and *Sidrat muntahā 'l-afkār fī malakūt al-falak al-dawwār*; an extensive treatise on sundial theory [see MIZWALA] entitled *Rayḥānat al-rūḥ fī rasm al-sāʿāt ʿalā mustawī 'l-suṭūḥ*; a treatise on astrolabe construction [see ASṬURLĀB] entitled *Tasṭīḥ al-ukar* and full of tables; and various treatises on arithmetic and algebra. None of these has received the attention they deserve. His imposing treatise on optics [see MANĀẒIR] *Nūr ḥadaḳat al-ibṣār wa-nūr ḥadīḳat al-abṣār* is in the tradition of Kamāl al-Dīn al-Fārisī [*q.v.*]. His treatises on mechanical clocks entitled *al-Kawākib al-durriyya fī waḍʿ al-binkāmāt al-dawriyya* (compiled 966/1552) and *al-Ṭuruḳ al-saniyya fi 'l-ālāt al-rūḥāniyya* have been published and well illustrate the Ottoman reception of European notions and techniques in his time. He also compiled a set of tables for astronomical timekeeping serving the latitude of Istanbul, fully in the Islamic tradition [see MĪḲĀT]. The anonymous treatise on astronomical observational instruments entitled *Ālāt-i raṣadiyya li-Zīdj-i Shāhanshāhiyya* has been compared by S. Tekeli with the treatise of Tycho Brahe compiled in Denmark towards the end of the 16th century, and he has underlined the remarkable similarities.

The famous miniature of the Istanbul Observatory from the *Shāhanshāh-nāma* (Pl. 1) shows Taḳī al-Dīn with an assistant holding an astrolabe in front of a bookshelf. Many of his books are now in the University Library in Leiden, identifiable by his distinctive signature on the title folios (see Ünver, pl. 10-4). They are overseeing a group of astronomers involved in copying manuscripts and operating various instruments. The terrestrial globe, mechanical clock and the sand-glass are of European inspiration, but all other instruments are Islamic.

Symposium on the Observatories in Islam, 19-23 Sept. 1977*, Istanbul 1980, 245-69 (repr. in idem, *Islamic mathematical astronomy*, London 1986, XII), especially 248-9.

(D.A. KING)

TAḲĪ AL-DĪN MUḤAMMAD B. SHARAF AL-DĪN ʿALĪ al-Ḥusaynī al-Kāshānī, commonly called TAḲĪ KĀSHĪ, Persian scholar of the 10th-11th/16th-17th centuries. He was a pupil of the poet Muḥtasham Kāshī, whose *dīwān* he edited. His fame rests on his monumental compendium of Persian poetry *Khulāṣat al-ashʿār wa-zubdat al-afkār*, of which the first version was completed in 993/1585 and the enlarged second version in 1016/1607-8. It contains notices of well over 600 poets from the 5th/11th century up to the author's own contemporaries, each with a detailed biography, followed by an exceptionally generous selection of poems. Manuscripts of this gigantic work (some of which contain only the biographies) are rare and it remains unpublished. Taḳī's book is a valuable primary source for the literature of the early Ṣafawid period, but its main importance lies in the fact that it has preserved a very large number of poems by ancient authors which are not known from any independent source. In particular, it can be observed that all the surviving manuscripts of the *dīwāns* of such major poets as ʿUnṣurī, Manūčihrī, Farrukhī [*q.vv.*] and quite a few others, are not only later than Taḳī's compendium but in fact evidently derive from it. It is thus clear that Taḳī played a decisive role in collecting what in his time must already have been very rare works of early Persian poetry and in rescuing them for posterity.

The importance of the *Khulāṣat al-ashʿār* for the textual history of early Persian poetry has until now been neglected; at the same time, its value as a biographical source has been overrated. Taḳī's notices, like those in all the so-called biographical dictionaries of Persian poets, are a jumble of idle legends and largely scurrilous anecdotes. Taḳī had the particularly irritating habit of pretending to know the year when most of his poets died; many of these dates are manifestly wrong and it seems likely that virtually all of them were invented *ad hoc*. Unfortunately, these fictitious dates have been perpetuated by subsequent works, among them many of the entries in the present Encyclopaedia.

Osnabrück 1979), 13-46 (contains a list of all the poets discussed by Taḳī, with their supposed date of death); Storey, i, 803-5; A. Gulčīn-i Maʿānī, *Tārīkh-i tadhkirahā-yi fārsī*, i, Tehran 1348 *Sh.*/1969, 524-56 (with a list of mss.)

(F.C. DE BLOIS)

TAḲĪ AL-DĪN AL-NABHĀNĪ (1909-77), founder and chief ideologue of the Islamic Liberation Party (*ḥizb al-taḥrīr al-islāmī*), which has striven since its formation in 1952 to establish an Islamic state and has been particularly active in Jordan. Al-Nabhānī was born near Haifa, studied at al-Azhar and the *Dār al-ʿUlūm* in Cairo (1927-32), then returned to Palestine, where he taught religious sciences and worked in Islamic law courts. In 1952, he sought permission from the Jordanian Interior Ministry to form the Islamic Liberation Party as a legal political party, but the request was denied on the grounds that its platform contradicted Jordan's constitution. Government restrictions on al-Nabhānī's activities induced him to emigrate to Syria in 1953, and three years later he permanently resettled in Beirut.

In over two dozen works (listed in Mūsā Zayd al-Kaylānī, *al-Ḥarakāt al-islāmiyya fī 'l-Urdunn*, Amman 1990, 117), al-Nabhānī elaborated his arguments for the imperative to establish a universal Islamic state, the character of such a state, and the means to achieve it. He expresses many of the same concerns as other 20th century revivalists, but he stands out for his emphasis on the revolutionary role of a vanguard party that would revive true Islamic consciousness among the masses, guide them to overthrow existing régimes and safeguard the ideological purity of the Islamic state. Al-Nabhānī also laid down a detailed model constitution for such a state, and devoted separate works to his vision of the Islamic economy and society. While the Islamic Liberation Party never attracted a large following in the several Arab countries where it established cells, al-Nabhānī's works have become an important part of contemporary Islamist literature.

Bibliography: For analysis of al-Nabhānī's thought, see D. Commins, *Taqī al-Dīn al-Nabhānī and the Islamic Liberation Party*, in *MW*, lxxxi/3-4 (1991), 194-211; S. Taji-Farouki, *Islamic discourse and modern political methods: an analysis of al-Nabhānī's reading of the canonical textual sources of Islam*, in *American Journal of Islamic Social Science*, xi/3 (1994), 365-93.

(D. COMMINS)

TAḲĪ KHĀN AMĪR-I KABĪR [see AMĪR KABĪR, in Suppl.].

TAKIDDA or Takedda (Tamadjaḳ *tagidda* "saline spring, pool"), a name given by mediaeval Arab writers to one or more locations to the west of the Aïr massif in the south-central Sahara. Ibn Baṭṭūṭa (iv, 438-45, tr. Gibb, iv, 972-5) described Takidda as a place where copper was mined, smelted and forged into rods used locally as currency. The copper was also exported to Bornū and other places to the south of Aïr. Takidda, in his day, was a flourishing commercial centre trading with Egypt, and a key centre of the slave trade. It had its own *ḳāḍī* and a resident community of North Africans. It also had

a *sulṭān* who lived in a tented camp and was described by Ibn Baṭṭūṭa as a Berber.

Ibn Khaldūn describes Takidda as a meeting place for pilgrims from *bilād al-sūdān* and says that its sultan exchanged gifts with the *amīrs* of the Mzab and of Wargla (Hopkins and Levtzion, *Corpus*, 336, 338-9). His siting of Takidda (variously twenty or seventy days travel south and to the west of Warghla) indicates some confusion with Tādmakkat, a Berber town in Adrar-n-Iforas, some 250 km/150 miles north of Gao, though there is little doubt that his description of the place actually refers to Takidda.

Other sources portray Takidda as a haunt of scholars. Al-Saʿdī, *Taʾrīkh al-sūdān* (ed. O. Houdas, Paris 1898, 66), mentions it as a place where some scholars fled, *ca.* 875/1470-1, to escape the persecution of Sunni ʿAlī of Songhay. Aḥmad Bābā (*Nayl al-ibtihādj*, 330-2, 335, 348) records that al-Maghīlī [*q.v.*] taught there *ca.* 1490, and gives biographies of two 10th/16th-century scholars who bear the *nisba* "al-Takkidāwī": al-ʿĀḳib b. Muḥammad al-Anuṣammanī (d. 955/1548) and al-Nadjīb b. Muḥammad (d. after 1004/1595).

The precise location of Takidda has been a subject of dispute, not least because there are several locations which have "Tagidda" as an element of their names: Tagidda-n-Tsemt (or Tagidda-n-Tesoum "of the salt"), Tagidda-n-Tagait ("of the doum palms") and Tagidda-n-Adrār ("of the mountain"), all to the west of Agades. At the first of these salt is extracted on a regular basis, leading Lhote to suggest that Ibn Baṭṭūṭa's account of copper production should be read as salt production. More recently, it has been demonstrated that Azelik (sometimes referred to as Tagiddazzarai "the first Tagidda" according to Dj. Hamani, *op. cit.*, in *Bibl.*, 98), some 25 km/15 miles north-east of Tagidda-n-Tsemt, is a location near which copper was smelted over many centuries. It seems likely that Azelik was the location visited by Ibn Baṭṭūṭa, and that it was the principal settlement of a small Ṣanhādja polity, known to the external world simply as Tagidda. This general picture seems confirmed by the report of the Genoese merchant Malfante visiting Tuwāt in 1447, who mentioned "Thegida, which comprises one province and three ksour".

The history of Takidda is sketchy. Aḥmad Bābā (*Kifāyat al-muḥtādj*, in Muḥammad Bello, *Infāḳ al-maysūr*, London 1951, 15) says it was founded by Ṣanhādja, and these may well have been members of the Masūfa who settled in several Saharan fringe locations (Walāta, Timbuktu and perhaps Gao) in the 5th-6th/11th-12th centuries; their descendants would be the Inussūfan, now considered a Tuareg group. Mali probably exercised suzerainty over Takidda in the 8th/14th century (see Ibn Khaldūn in *Corpus*, 336, 339), governing it indirectly through its sultan. It was destroyed in a war with Agades in *ca.* 1561. For more than two centuries, however, it had played an important role in trade between North Africa and Hausaland, and between the Niger Bend and Egypt, and had supplied copper to Hausaland and Bornū, and perhaps to as far south as Ife (see R. Mauny, in *J. Hist. Soc. Nigeria*, ii/3 (1962), 393-5).

(J.O. Hunwick)

TAḲIYYA (A.), also *tuḳan*, *tuḳāt*, *taḳwā* and *ittiḳāʾ*, "prudence, fear" (see *LʿA*, s.v. *w-ḳ-y*, Beirut 1956, xv, 401-4; *TʿA*, x, 396-8), and also, from the root *k-t-m*, *kitmān* "action of covering, dissimulation", as opposed to *idhāʿa* "revealing, spreading information", denotes dispensing with the ordinances of religion in cases of constraint and when there is a possibility of harm.

The Ḳurʾān itself avoids the question of suffering in the cause of religion in dogmatics by adopting a Docetist solution (sūra IV, 156) and in everyday life by the *hidjra* and by allowing in case of need the denial of the faith (XVI, 108), friendship with unbelievers (III, 27) and the eating of forbidden foods (VI, 119; V, 5). This point of view is general in Islam. But, as Muḥammad at the same time asserted the proclamation of his mission to be a duty and held up the heroic example of the ancient saints and the prophets as a model (V, 71; III, 40; etc.), no definite general rule came to be laid down, not even with the separate sects. Minor questions, which are very fully discussed, are whether *taḳiyya* is simply a permitted alleviation through God's indulgence (*rukhṣa*) or a duty, if it is necessary in the interest of the community.

Taḳiyya was never rejected even by the extreme wing of the strict Khāridjites [*q.v.*] although among the Azraḳīs in the related question of divine worship when danger threatens (*ṣalāt al-khawf* [*q.v.*]), it is often given as an example that one should not interrupt the *ṣalāt* even if his horse or his money be stolen from him during it. The advice is already old: "God gave the believers freedom of movement (*wassaʿa*) by *taḳiyya*; therefore conceal thyself!" The principle adopted by the Ibāḍīs, however, was that "*taḳiyya* is a cloak for the believer: he has no religion who has no *taḳiyya*" (Djumayyil, *Ḳāmūs al-sharīʿa*, xiii, 127-8).

Among the Sunnī authorities the question was not such a burning one. Nevertheless, al-Ṭabarī says on sūra XVI, 108 (*Tafsīr*, Būlāḳ 1323, xxiv, 122): "If any one is compelled and professes unbelief with his tongue, while his heart contradicts him, in order to escape his enemies, no blame falls on him, because God takes his servants as their hearts believe". The reason for this verse is unanimously said to have been the case of ʿAmmār b. Yāsir [*q.v.*], whose conscience was set at rest by this revelation when he was worried about his forced worshipping of idols and objurgation of the Prophet. It is more in the nature of

theoretical speculation, when in this connection the question of *hidjra* is minutely investigated, that in certain circumstances, e.g. threat of death, a Muslim who cannot live openly professing his faith may have to migrate "since God's earth is wide". Women, children, invalids and those who are tied by considerations for them, are permitted *muwāfaka* ("connivance"); but an independent individual is not justified in *takiyya* nor bound to *hidjra*, if the compulsion remains within endurable limits, as in the case of temporary imprisonment or flogging which does not result in death. The endeavour, however, to represent *takiyya* as only at most permitted and not under all circumstances obligatory, as even some Sunnīs endeavour to hold on the basis of sūra II, 191, has resulted in the invention of admonitory traditions, e.g. *ra's al-fi'l al-mudārāt* "to be good friends with unbelievers is the beginning of actual unbelief". To prove that steadfast martyrdom is a noble thing, the story is told of the two Muslim prisoners of Musaylima [*q.v.*], one of whom allowed himself to be forced to acknowledge the anti-prophet, while the other died for the Prophet. The latter is reported to have said: "The dead man has departed in his righteousness and certainty of belief and has attained his glory, peace be with him! But God has given the other an alleviation, no punishment shall fall upon him".

Takiyya is above all of special significance for the Shī'a. Indeed, it is considered their distinguishing feature, not however always with justice, as Nāṣir al-Dīn al-Ṭūsī in the *Talkhīṣ al-Muḥaṣṣal* protests against al-Rāzī (see his commentary *Muḥaṣṣal afkār al-mutakaddimīn wa 'l-muta'akhkhirīn*, Cairo 1323/1905, 181-2). The peculiar fate of the Shī'a, that of a suppressed minority with occasional open but not always unheroic rebellions, gave them even more than the Khāridjites occasions and examples for extreme *takiyya* and its very opposite; even the Ismā'īlīs, usually masters in the art of disguising their creed, made the challenge to their leaders: "He who has 40 men at his disposal and does not seek his rights is no Imām". The Zaydīs give as among the number of helpers who remove the necessity of *takiyya* from the Imām, that of those who fought at Badr. It is a common polemical charge of the Sunnīs, quoted from the writings of the Shī'īs themselves, that the latter, as followers of fighting martyrs, are not justified in employing *takiyya*, while the Twelvers, in particular, while representing the Imāms as examples compelling one to resoluteness, appeal on the other hand to the conduct of 'Alī during the reign of the three first caliphs and to the *ghayba* of the Mahdī as examples of *takiyya*. Belief is expressed by heart, tongue and hand; a theory of probabilities, developed with considerable dialectic skill, calculates under what real or expected injuries, "the permitting of what is pleasing to God and the forbidding of what is displeasing to God" can be dispensed with. Observance with the heart is always absolutely necessary. But if it is considered as probable to anyone (*law ghalaba 'alā zannihi*) or if he is certain that an injury will befall him, his property or one of his co-religionists, then he is released from the obligation to fight for the faith with hand or tongue.

In Shī'ī biographies, concealment is a regular feature; we are told that the hero broke the laws of religion like the prohibition of wine under compulsion, and this is not always reported as excusable. But since for them also Muḥammad is the Prophet, and since as among the Sunnīs a prophet may not practice *takiyya* in matters of his office, because otherwise one could not be certain of the revelation, we have, in view of the double example of the Imāms, in the code of morals for the ordinary pious men of the Shī'a, the following sayings of 'Alī in juxtaposition: "It is the mark of belief to prefer to practise justice even if it injures you, rather than injustice when it is of use to you"; and as an explanation of sūra XLIX, 13: "He among you who is most honoured before God is the most fearful (of God)", that is, he who uses *takiyya* most (*atkākum* = *aktharukum takiyyat^an*); and it is also said "*Al-kitmān* is our *djihād*", but at the same time the chapters on *djihād* are to be read with the implied understanding that the fighting is primarily against other Muslims. It is also to be noted that the *takiyya* of the Shī'īs is not a voluntary ideal (cf. Khᵂānsārī, *Rawḍāt al-djannāt*, Tehran 1306/1888, iv, 66-7), but one should avoid a martyrdom that seems unnecessary and useless and preserve oneself for the faith and one's co-religionists.

In any case, because of their attachment to *takiyya*, the Shī'īs have devoted numerous works to it. Ṭihrānī, in *al-Dharī'a*, iv, 403-4 nos. 1769-83, gives a list of some 26 epistles and other works, including (1) the *R. fi 'l-takiyya wa 'l-idhā'a* of Abu 'l-Mufaḍḍal al-Shaybānī al-Kūfī (d. 387/997); (2) the *Takiyya* of 'Alī al-Bakrī (d. 940/1533), of which there is a ms. of 1100/1688 in the library of Sh. Dja'far Āl Baḥr al-'Ulūm in Nadjaf; (3) the *R. al-takiyya* of Āghā Muḥammad Bākir al-Bihbihānī (d. 1206/1791), also with a ms. at Nadjaf belonging to Sh. Mashkūr; (4) the *Takiyya*, in 600 verses, by Mu'izz al-Dīn Muḥammad al-Ḥillī (d. 1309/1891), of which there is a ms. in the library of Sh. Hibat al-Dīn al-Shahrastānī; etc.

In the last resort, *takiyya* is based on intention, so we continually find the appeal made to *niyya* in this connection. The validity of the profession of faith as an act of worship is not only settled by the correct formulation of the intention to do it, but this is the essential of it, so that it alone counts, if under compulsion a profession of unbelief is made with the lips or worship performed along with unbelievers. God's rights alone can be injured by *takiyya*. He has the power to punish the constrainer, and only in certain circumstances will a slight portion of the punishment fall upon the one constrained. The wiles used in this connection, especially in oaths with mental reservations give, however, ample opportunities to injure one's fellow-creatures.

The moral dangers of *takiyya* are considerable, but it may be compared with similar phenomena in other religions and even among the mystics. The ethical question whether such forced lies and denials of the faith are not still lies and denials of the faith, is not put at all by the one "who conceals his real views", as he is not in a state of confidence which would be broken by lies or denial.

(R. Strothmann-[Moktar Djebli])

TAKĪZĀDA, Sayyid Ḥasan (b. Tabrīz, 27 September 1878, d. Tehran, 28 January 1970), Persian politician and scholar of Iranian studies.

1. Life. The son of Sayyid Taḳī Urdūbādī, he received both a traditional Islamic and a modern education, including natural science and French and, to some extent, the English language. In Tabrīz he founded, with three like-minded friends, an ephemeral journal, *Gandjīna-yi funūn* (1903-4), and then travelled for a year in the Caucasus, Istanbul, Beirut and Egypt, returning with Western modernist ideas and sympathies. Moving to Tehran at the time of the Constitutional movement [see dustūr. iv], his reputation as one of the more radical, even revolutionary, activists secured him election to the first *Madjlis* as a representative for Ādharbaydjān, arousing the fear of Muḥammad 'Alī Shāh who plotted, as the sources all agree, to kill him and five other constitutionalists. Hence when the Shāh replied with his anti-constitutionalist coup of 1326/1906, Taḳīzāda took refuge in the British Legation and then made his way to Europe, to Paris and London; in the latter place, he worked with the Iran Committee there, and his friendship with the famous Persian scholar E.G. Browne dates from this time.

He returned to Tabrīz and then to Tehran, becoming a member of the provisional steering committee when Muḥammad 'Alī Shāh was deposed and a member of the second *Madjlis* for the Democrat Party (*ḥizb-i dimūkrāt*). But he had to leave Persia in 1910 after the murder of Sayyid 'Abd Allāh Bihbihānī, and after periods in Turkey, London and the United States, went in 1914 to Germany at the German government's suggestion to help organise an anti-British and anti-Russian "Committee of Iranian Nationalists", founding the journal *Kāwa*, first as a political but later as a cultural and literary journal also; he remained in Germany till 1921.

With the defeat of the Central Powers, the Committee was dissolved. Taḳīzāda returned to Persia and now filled various government positions, serving also as a deputy in the fifth and sixth *Madjlis*. He was opposed to changing the constitution to allow Riḍā Khān (Pahlawī) [*q.v.*] to assume power. During Riḍā Shāh's reign he filled such offices as governor of Khurāsān and ambassador in London, and as Minister of Finance was concerned in the negotiations of 1933 for the extension of the Anglo-Persian (after 1935 Anglo-Iranian) Oil Company's agreement. He was also ambassador in Paris, but becoming *persona non grata* to the Shāh, went to Berlin and then London, where he started teaching at London University. On the abdication of the Shāh (1941) he became ambassador to Britain.

Returning home in 1948, he became a member of the 15th *Madjlis* and a professor at Tehran University and in 1949 a senator, acting for a time as President of the Senate. Amongst his many cultural activities during the last two decades or so of his life was his involvement in the Society for National Monuments and, in conjunction with UNESCO, the Institute for Translation and Publication of Books (*Bungāh-i Tardjuma wa Nashr-i Kitāb*).

2. Literary work. Amongst his important works in Persian were his *Gāh-shumārī dar Īrān-i ḳadīm* (Tehran 1315/1937, repr. as vol. x of his collected works, see below); a study on Firdawsī, in *Kāwa*, N.S. i-ii (1920-1), and works on Nāṣir-i Khusraw and Mānī. His articles and other writings are collected in *Maḳālāt-i Taḳīzāda*, ed. I. Afshār, 10 vols. Tehran 1349-57/1970-8, of which vols. vi-viii contain his writings in European languages. His writings in European languages were partly political and partly in the field of Iranian studies. He had an interest in bibliography, and with W. Litten published *Persische Bibliographie*, Berlin 1920. For a complete bibliography, see his own autobiography *Zindigī-yi ṭūfānī*, [2]Tehran 1372/1993.

Bibliography: There are references to Taḳīzāda's constitutionalist activities in most of the books on the movement, e.g. E.G. Browne, *The Persian revolution of 1905-1909*, Cambridge 1910; Aḥmad Kasrawī, *Tārīkh-i mashrūṭa-yi Īrān*, [5]Tehran 1340/1961; Mahdī Malikzāda, *Tārīkh-i inḳilāb-i mashrūṭiyyat dar Īrān*, 7 vols. Tehran 1949-54. See also W.B. Henning and E. Yarshater, *A locust's leg. Studies in honour of S.H. Taqizadeh*, London 1962, esp. (Iradj Afshar)

TAKKALŪ (Täkkä-lü), the name of a group of Turcomans originating from the regions of Menteşe, Aydın, Saruhan, Hamit and Germiyan in southern Anatolia, an area known collectively as Tekeili [*q.v.*] (*Tārīkh-i Ḳizilbāshān*, ed. Mīr Hāshim Muḥaddith, Tehran 1361 AHS/1982, 27).

The Turcoman tribes of Anatolia were one of the primary targets of Ṣafawid propaganda (*da'wa*) [see bāyazīd ii; ṣafawids. i], and the Takkalūs responded early to this call and entered the service of the Ṣafawid *shaykhs* Djunayd and Ḥaydar [*q.v.*]. In 905/1499, when Ismā'īl [see ismā'īl i] summoned his supporters to rally to him at Erzindjān, a Takkalū contingent formed part of the force of 7,000 men who assembled there (R.M. Savory, *Studies on the history of Ṣafawid Iran*, Variorum Reprints, London 1987, no. I, 63). At the time of the establishment of the Ṣafawid state in 907/1501, the Takkalū tribe was listed among the "great tribes" (*büyük oymaklar*) of the *Ḳizilbāsh* [*q.v.*] (Faruk Sümer, *Osmanlı devletinin kuruluşu ve gelişmesinde Anadolu Türklerinin rolü*, Ankara 1976, 46-7), and the Takkalūs were classified as a tribe "of the right" (*maymana*), the Ṣafawids having adopted the old Turco-Mongol system of military organisation (Masashi Haneda, *Le Châh et les Qizilbāš. Le système militaire safavide*, Berlin 1987, 52). After the major revolt in Asia Minor led by Shāhḳulī Bābā Takkalū in 917/1511 had been crushed, a further 1,500 Takkalū tribesmen emigrated to Persia and joined Shāh Ismā'īl.

After the death of Ismā'īl I (930/1524), and the accession of the young Shāh Ṭahmāsp I [*q.v.*], civil war erupted between rival coalitions of *Ḳizilbāsh* tribes.

At first, the Takkalūs and other tribes acknowledged the leadership of Dīw Sulṭān Rūmlū (Ḥasan-i Rūmlū, *Aḥsan al-tawārīkh*, ed. C.N. Seddon, Baroda 1931, 187-8; Būdāḳ Munshī Ḳazwīnī, *Djawāhir al-akhbār*, Leningrad ms. Dorn 288, fol. 298b) as *amīr al-umarā'* [see art. *Amīr al-Omarā* ii. Safavid usage, in *EIr*, i, 970-1], but by 933/1527 a Takkalū *amīr*, Čūha Sulṭān, had become the virtual ruler of the state (Savory, *op. cit.*, no. V, 69 ff.). Many Takkalūs defected to the Ottomans and fought alongside Ottoman troops during Sultan Süleymān's various invasions of Persia (*Aḥsan al-tawārīkh*, 237, 247 ff.). As a result, the Takkalūs lost their prestigious position in the Ṣafawid state, and only three Takkalū *amīrs* appear in Iskandar Beg's list of leading *amīrs* at the time of the death of Ṭahmāsp (984/1576) *Tārīkh-i ʿĀlam-ārā-yi ʿAbbāsī*, text, ii, 1084-7, tr. Savory, ii, 1309-15). There was a brief revival of Takkalū fortunes under Shāh Ismāʿīl II [*q.v.*], but once more the tribe became embroiled in *Ḳizilbāsh* factionalism. Their *iḳṭāʿ*s [*q.v.*] in the Hamadān area were transferred to the Ustādjlū and Shāmlū tribes, and once again many Takkalūs took refuge with the Ottomans. From then on, they had the status in Persia of only a second-class tribe (Sümer, *op. cit.*, 144), and no Takkalū *amīrs* are listed by Iskandar Beg at the death of Shāh ʿAbbās I (1038/1629) (text, ii, 1084 ff., tr. ii, 1309 ff.).

(R.M. Savory)

TAḲLĪD (A.), from the verb *ḳallada* "to imitate, follow, obey s.o.", meaning acceptance of or submission to authority. The word, with this semantic range, is not found in the Ḳur'ān nor in *ḥadīth* literature (as covered by Wensinck's *Concordance*). It has an important role throughout the Muslim religious sciences where it has a predominantly negative meaning, implying unreasonable and thoughtless acceptance of authority. It was, however, capable of being rescued and given a positive orientation. Different degrees of positive orientation can be found in the technical analyses of authority that emerged in pre-modern Islamic thought in relation to both juristic authority and credal matters. In spite of these developments, the term retained a generally abusive implication and might be discovered, on any side, in any debate about authority and epistemology, from the earliest to the most recent articulations of Islamic belief. The term has been widely adopted into Orientalist discourse where it is almost invariably translated as "blind submission". The same is broadly true of modernist Islamic discourse. The absence of any positive assessment of this term in modern commentary tends to produce a negative view of more than 1,000 years of Islamic history.

Al-Muzanī (d. 264/878 [*q.v.*]), pupil of al-Shāfiʿī, attributes to his master a prohibition of *taḳlīd* either of himself or of others (*Mukhtaṣar*, 1). This implies that the learned should not simply accept al-Shāfiʿī's juristic rulings but should be aware also of his arguments and the *ḥadīth* they are based on. It does not mean that the illiterate or unlearned should work out juristic rules for themselves; in matters of law the unlearned were necessarily subject to the authority of the learned and the appropriate term for that submission was *taḳlīd*. Ibn Ḳutayba (d. 276/889), who did not believe that reason could lead to positive results in the sphere of credal beliefs, characterised the Muʿtazila (the *aṣḥāb al-kalām*) as achieving whatever unity they achieved as a result of *taḳlīd*, i.e. imitation and unthinking acceptance. The *aṣḥāb al-ḥadīth*, by contrast, achieved consensus on the basic principles of faith through revelation and submission to the acknowledged authorities of the past, the *ʿulamā'* and the *fuḳahā'* (this, apparently, was not *taḳlīd*) (*Ta'wīl*, 13-17). Al-Shāfiʿī's distrust of *taḳlīd* in juristic matters is echoed in the works of the Ẓāhirī Ibn Ḥazm (d. 456/1064). He argued that there should be a return to the evident (*ẓāhir*) meanings of *ḥadīth*, and all else (he meant the principles of authority and continuity that dominated the juristic schools of Sunnī Islam) was "stubbornness, ignorance, *taḳlīd* and sin" (*Iḥkām*, ii, 130). The Shāfiʿī jurist and Ashʿarī theologian al-Shīrāzī (d. 476/1083) defined the term *taḳlīd*, in a formula widely accepted, as "accepting the opinion of another without proof, *ḳabūl ḳawl al-ghayr min ghayr ḥudjdja*", while pointing out that prophets did not summon people to mere *taḳlīd* but rather offered evidence and/or miracles to justify acceptance of their message. Summarising a dominant view, he declared that *taḳlīd* was acceptable in juristic matters but not in *uṣūl al-dīn* (credal/theological matters) (*Ishāra*, 18). In the mystic sphere, it was possible to contrast the direct experience of God that was accessible to the Ṣūfīs with the mere acceptance and submission that characterised non-Ṣūfī belief. Ibn al-ʿArabī (d. 638/1240) said of himself, "We are not the people of *taḳlīd*; our affair comes ... from God; we have witnessed it directly, *shahidnā-hu ʿiyān*[an]" (cit. in Chittick, 73). Since the late 19th century, many western scholars and modernist Muslims have characterised the earlier Islamic tradition as dominated by *taḳlīd*, meaning blind imitation. This reflects lack of sympathy and understanding on the part of the Western scholars; on the part of Muslims, it reflects a desire for radical reform, usually associated with a return to the time before *taḳlīd* became established. The motive here is technically fundamentalist, though associated indifferently with liberal or conservative views.

Taḳlīd in juristic matters. The earliest articulations of a juristic theory of authority acknowledge that the unlearned masses are dependent for their knowledge of the law on the learned. The relationship is defined by the terms *mudjtahid* and *muftī* (designating the learned authority) and *ʿāmmī* or *muḳallid* (designating the follower). In so far as these terms refer to a synchronic relationship between the participants, no jurist ever doubted the legitimacy or necessity of *taḳlīd*. However, with the development of juristic schools (*madhāhib*), it was evident that the common people and the learned alike, in fact, and by universal practice, submitted to the principles of law that had been articulated by the founders of each *madhhab*. A Shāfiʿī scholar, like a Mālikī or Ḥanafī and, in time, a Ḥanbalī, followed the basic structures of the tradition (*madhhab*) within which he was educated. *Idjtihād* [*q.v.*], meaning direct creative confrontation with the texts of revelation, was—it became gradually more evident—not characteristic of Muslim jurists after the age of the great founders. The jurists accepted and submitted to the authority of the founders. But they did not thereby cease to explore and develop the juristic tradition they inherited. In elaborating a theory which described and accounted for the reality of historical development, the jurists distinguished between *idjtihād muṭlaḳ* (meaning the creative act of *idjtihād* through

which the founding imāms derived from the revealed sources a systematic structure of law) and *id̲j̲tihād fi 'l-mad̲h̲hab* (creative development of the law within the broad structures of the *mad̲h̲hab*, the characteristic achievement of Muslim jurists through the centuries). The latter type of *id̲j̲tihād* was associated with *taḳlīd*, which, in this context, means willing submission to the authority of the founder and the *mad̲h̲hab*—but not blind submission, for the principles which justified the deductions of the founder and the developments of later jurists were explored in the science of *uṣūl al-fiḳh*.

From a historian's point of view, the role attributed to the founding imāms is a myth, but an important one, which can be analysed as offering a dynamic orientation to the juristic traditions of Islam. The dominant traditions carry the names of the founding imāms (Ḥanafī, Mālikī, S̲h̲āfiʿī, Ḥanbalī) as signs of the human element in the articulation of divine law; and as marks of an acknowledged pluralism in the details of the law. Subsequent generations of jurists added to the meanings of the law and became a part of an expanding reticulation of authorities which defined the *mad̲h̲hab* for later generations. The minor traditions are characterised by terms that indicate their fundamentalist orientation (Ẓāhirī, Salafī, and, amongst the S̲h̲īʿa, Ak̲h̲bārī). *Taḳlīd* is the dominant term used to characterise the special loyalty to the founding imām which was the essential element in nearly all pre-modern articulations of *s̲h̲arīʿa*. Neither in theory nor in practice, in spite of the intimations of Orientalists and modernising Muslims, can it be recognised as essentially a principle of stasis. The detailed expression of a theory of authority that adequately accounted for continuity and loyalty in the *mad̲h̲āhib* varied, naturally, from time to time and from *mad̲h̲hab* to *mad̲h̲hab*, but it always involved careful manipulation of the terms *id̲j̲tihād* and *taḳlīd* in subtle structures of thought which are different from the frequently unsubtle descriptions of modern commentators.

Taḳlīd in credal matters. The view that *taḳlīd* was not acceptable in *uṣūl al-dīn* had been articulated by al-S̲h̲īrāzī, and remained, for a majority of theologians, the preferred view. The alternative view that *taḳlīd* was acceptable in this field was also articulated and maintained as part of the tradition. A late summary characterised the tradition in four brief clauses. 1. There are two views as to whether *taḳlīd* is permitted in *uṣūl al-dīn*. 2. It is said that intellectual exploration in this area is *ḥarām*. 3. There is a view reported from al-As̲h̲ʿarī that the faith of the masses is not valid, but this has been claimed to be a lie. 4. If it is not a lie, it is neccessary to distinguish between *taḳlīd* as indifferent submission and *taḳlīd* as positive commitment (*d̲j̲azm*). That schema of views was intended to generate commentary. In the commentary tradition, the dominant view (that *taḳlīd* is not permitted in *uṣūl al-dīn*) is justified on the grounds that personal intellectual effort is a pre-requisite for certainty in this area. The alternative view is justified by reference to Bedouin converts, whose faith was acknowledged by Muḥammad though they were incapable of rational investigation. This argument is qualified, for, though unsophisticated, the Bedouin were capable of forms of deduction appropriate to their standing. The view that intellectual speculation may be *ḥarām* is a reminder that theological debate can be dangerous, leading some people to error and disbelief. According to any of these three views, the faith of the masses is valid, even if, according to the first view, they may be in a state of sin. The rigorous opinion attributed to al-As̲h̲ʿarī is certainly to be qualified, either because it is a lying attribution, or because he intended a particular distinction between *taḳlīd* as indifference (not permitted) and *taḳlīd* as commitment (permitted) (al-Subkī, *D̲j̲amʿ*, ii, 401-4).

The scholastic format should not hide the nuanced position that is here being advocated. If the word *taḳlīd* can be used to characterise the traditional faith and loyalty of the masses, it is not to be understood as "blind submission". Precisely that is not permitted and renders faith invalid. The shifting patterns of *ik̲h̲tilāf* that are offered, managed, and ranked in the scholastic tradition, here and generally, evoke a more refined and sophisticated consideration than has been recognised in the various forms of modernist discourse.

TAḲLĪD-I SAYF [see MARĀSIM. 4].

TAKLĪF (A.), a term of the theological and legal vocabulary denoting the fact of an imposition on the part of God of obligations on his creatures, of subjecting them to a law. The corresponding passive participle *mukallaf* is used of someone who is governed by this law and in this connection, in legal language, it denotes every individual who has at his disposal the full and entire scope of the law (cf. J. Schacht, *An introduction to Islamic law*, Oxford 1964, 124).

The Ḳurʾānic origin of the term, though indirect, is beyond doubt. On six occasions (though differently expressed) the Ḳurʾān says that God only imposes on every man what he is capable of (*lā yukallifu llāhu nafs^{an} illā wusʿahā*, II, 286; cf. similarly II, 233; VI, 152; VII, 42; XXIII, 62; LXV, 7). Out of the various possible meanings of this root *k-l-f* the one which in this case is relevant is that which denotes the idea of a difficult task, requiring a great effort to perform. The *LʿA* defines *taklīf* as the fact of ordering someone to do something which is hard for him (*mā yas̲h̲uḳḳu ʿalayhi*). Al-D̲j̲uwaynī gives the same meaning and suggests *ilzām mā fīhi kulfa* (*al-Burhān fī uṣūl al-fiḳh*, Cairo 1400/1981, § 26).

From the theological point of view, the existence of *taklīf* principally raises three questions:

1. How do we know the obligations which God imposes on us? The Muʿtazilīs reply: in two ways, by our reason (*bi 'l-ʿaḳl*) and by revelation (*bi 'l-samʿ*, or *bi 'l-s̲h̲arʿ*). It is our reason which teaches us, for example, that we must be upright, pay back a deposit, be grateful to a benefactor. Revelation adds the specific obligations of the Islamic religion: the five daily prayers, the fast of Ramaḍān, etc. There are therefore, as ʿAbd al-D̲j̲abbār loves to say, two sorts of *taklīf*, a *taklīf ʿaḳlī* and a *taklīf samʿī* (cf. *Mug̲h̲nī*, xiv, 149, l. 13 and 150, ll. 2-3; Ps. ʿAbd al-D̲j̲abbār, *S̲h̲arḥ al-uṣūl al-k̲h̲amsa*, Cairo 1965, 70, l. 11; Ibn Mattawayh, *al-Mad̲j̲mūʿ fi 'l-Muḥīṭ*, i, Beirut 1965, 7, l. 3). From the Sunnī side, the Māturīdīs essentially maintain an identical point

of view. The As͟hʿarīs, on the other hand, affirm that no obligation is known by reason; the Law as revealed is the only foundation for good and evil.

2. Why does God impose obligation on us? The As͟hʿarīs refuse to answer this question, by virtue of their principle that we have not to look for motives (*ʿilal*) in any divine action. For the Muʿtazilīs the answer is simple: God acts in everything for the good of mankind and it is therefore also for their good that He imposes duties. The reason advanced by al-D̲j̲ubbāʾī [*q.v.*] and his disciples is that because of that, God has given man the power to reach the highest form of bliss. He certainly would have been able to create man directly in Paradise, but happiness which is granted directly is less keen than that which is preceded by pain and which is its recompense.

For al-D̲j̲ubbāʾī and his disciples, contrary to other Muʿtazilīs who submitted to the so-called *al-aṣlaḥ* thesis (from all points of view God is obliged to do whatever is most advantageous to man), God was not bound at the outset to impose a law on man. If He did that, it was purely out of favour (*tafaḍḍul*) towards them. But having done it, in this situation He set about the obligation of making for them *al-aṣlaḥ fī dīnihim*, that is to say, to provide them from now onwards with the means and all assistance necessary to help them discharge the duties to which He had subjected them, and thus to "remove every excuse" for their not doing so.

3. Can God oblige man to do the impossible? This is the most serious question, the so-called *taklīf mā lā yuṭāḳu. A priori* the answer should be consistently in the negative, seeing that there had appeared in the Ḳurʾān itself six times "God only asks of each one what he is capable of". This is certainly the Muʿtazilī point of view, on behalf of the principle of the divine justice (*ʿadl*), a cause which they champion. It is precisely this justice which lays the obligation on God, as mentioned above, of providing man with all the means to obey his commandments. The point of view of the Māturīdīs is also fundamentally in agreement with the Muʿtazilīs on this point. This, however, was not the view of al-As͟hʿarī and certain of his disciples for the following reasons.

Firstly, in favour of their thesis, there is the As͟hʿarī principle of absolute divine liberty. Al-As͟hʿarī said that no rule applied to God; he could do whatever He wanted; everything that He does is just and it would be equally just if He did the opposite. Nothing prevents Him, therefore, from compelling man to do the impossible, whether it be a matter of logical impossibility (*taklīf al-muḥāl*) like bringing together opposites, or a matter of physical impossibility (*taklīf al-ʿād̲j̲iz*) like commanding a lame man to walk.

Secondly, the way in which al-As͟hʿarī represents human power and its relation to action leads him to allow the principle of *taklīf mā lā yuṭāḳu* by using another expedient. Contrary to the Muʿtazilīs (for whom all power is necessarily the power of an action or its converse, and power therefore necessarily precedes the action), al-As͟hʿarī considers, as did al-Nad̲j̲d̲j̲ār before him, that all human power is contemporaneous with the action which corresponds to it; it is therefore only power for this action and not for its converse. The result of this is that just when the unbeliever produces an action of unbelief this has not the power of the converse of unbelief; nevertheless, at that very moment God commands him to believe, which is certainly compelling him to do the impossible. The impossibility under the circumstances would not be of the same order as the preceding hypothesis. Al-As͟hʿarī explains (here again following the theories of al-Nad̲j̲d̲j̲ār) that, if at the moment the unbeliever did not have the capacity to believe, it was because he had made a deliberate choice to have "no belief". It would be a question in the case of a *taklīf al-tārik* (*tark* meaning the fact of accomplishing the converse of a given act) as distinct from the *taklīf al-ʿād̲j̲iz*.

(It is worth noting that to avoid ending up with *taklīf mā lā yuṭāḳu*, certain theologians—one of whom is said to have been Abū Ḥanīfa—while supporting the thesis of the "non-anteriority" of the power in relation to the action, at the same time nevertheless maintained that identical power was a power of opposites, not simultaneously, but by the substitution of the one for the other. This thesis was called *al-badal.*)

Finally, there is the fact of eternal divine foreknowledge. God knows from time immemorial that this or that person will never believe. It is therefore for all time impossible that they will believe (unless the possibility was conceded that God could be mistaken), and yet God commands them to believe. In the same way, He did not stop commanding Abū Lahab to believe, even after having announced in Ḳurʾān, CXI, 1-3, that he would roast in Hell. One would imagine that, this time, even the Muʿtazilīs would have to recognise in this a situation with an obligation to do the impossible. However, this was not the case: according to al-As͟hʿarī (*Maḳālāt*, 2nd ed. Ritter, 243, ll. 14-15, and 561, ll. 14-15), all with just one exception were of the opinion that, in the matter of a man whom God knew would never believe, the order to believe was addressed to him as well, and he too had the power to believe.

(D. Gimaret)

TAḲRĪB (a.) "rapprochement", a term widely used to designate an ecumenical trend within modern Islam in general and a movement towards reconciliation between Sunnī and S͟hīʿī Muslims in particular. To a considerable extent, this trend is part of the ideology of Pan-Islamism [*q.v.*]. It found its expression at many pan-Islamic congresses [see mu'tamar], as well as in the activities of a number of movements and societies striving for a friendly dialogue, especially between Sunnīs and S͟hīʿīs. So far, the most important of these associations has been the *D̲j̲amāʿat al-Taḳrīb bayn al-Mad̲h̲āhib al-Islāmiyya*, a society founded in Cairo in 1947. With an Iranian divine, Muḥammad Taḳī Ḳummī, as its founder and secretary-general, it had the support of a number of promi-

nent Sunnī *'ulamā'* and intellectuals from Egypt and elsewhere, including two rectors of al-Azhar [*q.v.*], sc. 'Abd al-Madjīd Salīm (d. 1954) and Maḥmūd Shaltūt (d. 1963 [*q.v.*]). Until his assassination in 1949, Ḥasan al-Bannā' [*q.v.*], the leader of *al-Ikhwān al-Muslimūn* [*q.v.*], was in contact with the *Taḳrīb* society. On the part of the Shī'a, we find Āyatullāh Burūdjirdī [*q.v.* in Suppl.], Shaykh Muḥammad Ḥusayn Āl Kāshif al-Ghiṭā' (d. 1954) and Sayyid 'Abd al-Ḥusayn Sharaf al-Dīn [*q.v.*] among those lending their support.

The activities of the *Djamā'a* were directed by the *Dār al-Taḳrīb*, an institute which, among other things, served as a publishing house issuing classical Shī'ī works. The journal of the society, *Risālat al-Islām*, was founded in 1949. When, after several interruptions, it finally stopped publication in 1972, a total number of seventeen volumes had appeared. In the journal, both Sunnī and Shī'ī authors found an opportunity to voice their opinion in favour of *taḳrīb*. Nearly all of them, however, avoided touching on the most controversial issues dividing the two sides.

The greatest success of the *Djamā'a* was a statement, in 1959, by Maḥmūd Shaltūt to the effect that worship according to the doctrine of the Twelver Shī'a [see ITHNĀ 'ASHARIYYA] was valid and its *madhhab* fully recognised within Islam. The statement, originally part of a press interview, was given the form of a *fatwā* and distributed world-wide by the *Dār al-Taḳrīb*. It was greeted enthusiastically by the majority of the Shī'īs, but met with strong criticism on the part of many members of the Salafiyya [*q.v.*]. For them, the *Taḳrīb* society from its very beginning had been nothing but a Shī'ī missionary institution designed to make converts in Sunnī lands, and not an instrument of a real rapprochement (if that, in the opinion of those critics, was feasible at all).

Mainly for political reasons, the *Taḳrīb* society lost much of its momentum from 1960 onwards. After the Iranian revolution, Muḥammad Taḳī Ḳummī left Egypt for Europe, where he died in Paris in 1990. His son 'Abd Allāh tried to re-establish the *Taḳrīb* society in Egypt in 1992. In Iran, an association called *Madjma' al-Taḳrīb* was founded with government support in 1990 (see M. Kramer, *Iran's ecumenical Islam*, in *Middle East contemporary survey*, xvi, 1992, publ. Boulder, Colo. 1995, 202-4).

A number of congresses were held in Iran and elsewhere in the early 1990s with the aim of reviving the dialogue, including one sponsored by the *İslami İlimler Araştırma Vakfı* in Istanbul in 1993. For its proceedings, see *Milletlerarası tarihte ve günümüzde şiilik sempozyumu. Tebliğler ve Müzakereler*, ed. E.R. Fığlalı *et alii*, Istanbul 1993 (texts in Turkish and Arabic).

Bibliography: Contributions to *Risālat al-Islām* by both Sunnī and Shī'ī authors have been selected and reprinted in a number of volumes dedicated to the idea of *taḳrīb*, such as Muḥammad Muḥammad al-Madanī (ed.), *Da'wat al-taḳrīb min khilāl "Risālat al-Islām"*, Cairo 1966; 'Abd al-Karīm Bī Āzār al-Shīrāzī (ed.), *al-Waḥda al-islāmiyya aw al-taḳrīb bayn al-madhāhib al-sab'a*, Beirut 1975, [2]1992; idem, *Ā'īn-i hambastagī*, Tehran 1976; 'Abd Allāh Muḥammad Taḳī al-Ḳummī (ed.), *Da'wat al-taḳrīb, tārīkh wa-wathā'iḳ, bi-aḳlām ridjāl al-taḳrīb*, Cairo 1991; *Naḥwa mudjtama' islāmī muwaḥḥad, mas'alat al-taḳrīb . . ., bi-ḳalam 15 'allāma* (etc.), foreword by Shaykh 'Abd Allāh al-'Alāyilī, Beirut 1994; *Naḥwa mudjtama' islāmī muwaḥḥad, al-waḥda al-islāmiyya, mā lahā wa-mā 'alayhā*, foreword by Maḥmūd Ḥamdī Zaḳzūḳ, Beirut 1994; a number of interesting documents, photographs, etc., are to be found in Ṣāliḥ al-Wardānī, *al-Shī'a fī Miṣr, min al-imām 'Alī ḥattā 'l-imām al-Khumaynī*, Cairo 1993 (esp. 183 ff.).

For general surveys of the ecumenical trend in modern times (including the opposition to it), see, e.g., H. Enayat, *Modern Islamic political thought*, Austin 1982, 18-51, and W. Ende, *Sunniten und Schiiten im 20. Jahrhundert*, in *Saeculum*, xxxvi (1985), 187-200. For a comprehensive study of the Cairene *Djamā'at al-Taḳrīb*, see R. Brunner, *Annäherung und Distanz. Schia, Azhar und die islamische Ökumene im 20. Jahrhundert*, Berlin 1997 (with excellent bibl.).

(W. ENDE)

TAKRĪT (popular pronunciation TIKRĪT, cf. Yāḳūt), a town of 'Irāḳ on the right bank of the Tigris to the north of Sāmarrā' 100 miles from Baghdād divertly, and 143 by river, and at the foot of the range of the Djabal Ḥamrīn (lat. 34° 36' N., long. 43° 41' E., altitude 110 m/375 feet). Geographically, this is the northern frontier district of 'Irāḳ. The land is still somewhat undulating; the old town was built on a group of hills, on one of which beside the river, stands the modern town. To the north is a sandstone cliff 200 feet above the level of the river, on which still stand the ruins of the old citadel. The traces of the old town stretch to the west of these two hills in a large circle, which shows that Takrīt was once of considerable extent.

It has been suggested that the name may be recognised in a tablet of the time of Nebuchadnezzar (Strassmeyer, quoted by Streck, *Die alte Landschaft Babylonien*, ii, p. xiii) but the first certain mention is that of Ptolemy (v. 18, 19), who calls it Birtha (Yāḳūt, *Buldān*, i, 861, in giving the latitude and longitude also refers to Ptolemy). Ammianus Marcellinus calls it Virta. Indeed, the hill of the citadel is still known as Burtha. In Syriac literature the town is called Taghrīth. From the fourth century, it was the see of a Jacobite bishop until, in 1155, the diocese was combined with that of al-Mawṣil (Assemani, *Bibliotheca orientalis*, i, 174, 465). The Arab writers attribute its foundation to the Sāsānid king Sābūr [*q.v.*], son of Ardashīr; the town is said to have been called after a Christian woman named Takrīt bint Wā'il; several legends are connected with its foundation (Yāḳūt, *loc. cit.*; Abu 'l-Fidā', *Taḳwīm al-buldān*, ii, 288). Before Islam, the town was temporarily occupied by the Arab Christian tribe of the Iyād (al-Bakrī, *Mu'djam*, i, 46); they were driven from it, but the Iyād remained for a long time afterwards in the neighbourhood (al-Hamdānī, *Ṣifat djazīrat al-'Arab*, 180) and in the period of the conquest, the soldiers of the Iyād in the garrison of Takrīt secretly assisted the Arabs [see IYĀD]. The first Muslim capture of the town seems to have been effected in the year 16/637 by 'Abd Allāh b. al-Mu'tamm, who was sent out by Sa'd b. Abī Waḳḳāṣ. Then in 20/64, the town again surrendered by agreement; tradition ascribes this second occupation to al-Nuṣayr b. Daysam or to his deputy 'Uḳba b. Farḳad or to Mas'ūd b. Ḥurayth b. al-Abdjar. The last named was the first governor, and built the congregational mosque there (Yāḳūt, *loc. cit.*; al-Balādhurī, *Futūḥ*, 248-9).

Down to the middle of the 4th/10th century, the Arab geographers reckoned Takrīt as belonging administratively to al-Djazīra (Ibn Khurradādhbih, 94; Ibn Rusta, 106; Ibn al-Faḳīh, 129; Ḳudāma, 245, 250; al-Iṣṭakhrī, 72, 77; Ibn Ḥawḳal, ed. Kramers, 208-9, tr. 201-2; al-Mas'ūdī, *Tanbīh*, 36), but from the time of al-Muḳaddasī (54, 115), the town is more often regarded as belonging to 'Irāḳ (except by al-Idrīsī and al-Dimashḳī). In the early centuries of Islam, the town was almost exclusively Christian. Ibn Ḥawḳal and al-

Mas'ūdī (*op. cit.*, 155) mention the al-Khaḍrā' church there, and there is still a ruin of this name in the south of the town. There were also other Christian buildings (like the monastery of Sa'āba on the opposite bank (Yāḳūt, ii, 673) and the Dayr Mār Yuḥannā, Yāḳūt, ii, 701). The name of the great Muslim sanctuary of al-Arba'ī slightly west of the old town, seems to indicate that it was formerly the site of a Christian building. Two vaulted chambers decorated with stucco are still standing; the building goes back to the 7th/13th century. Takrīt was celebrated for its manufactures of woollen goods (al-Mukaddasī). In the 7th-8th/13th-14th centuries it is described as a large town (Ibn Djubayr, 223; Ibn Baṭṭūṭa, ii, 133). Ḥamd Allāh Mustawfī says it is a town of average size. Al-Idrīsī (tr. Jaubert, ii, 147) mentions the Dudjayl canal which ran from the Tigris near Takrīt and went on to Baghdād; this is probably identical with the Nahr al-Isḥāḳī, dug, according to Abu 'l-Fidā', in the reign of al-Mutawakkil (cf. also Ḥādjdjī Khalīfa, *Djihān-numā*, 434). Traces of this canal, which according to Ewliyā Čelebi was cleaned out by Murtaḍā Pasha in 1064/1654 (quoted by von Hammer, *Wiener Jahrbücher*, xiii [1821], 235), are still visible.

Takrīt never played an important part in history, but al-Sam'ānī names some scholars and traditionists from there (*Ansāb*, ed. Ḥaydarābād, iii, 64-5). However, it continued, until its devastation by Tīmūr in the late 8th/14th century (see below) to be a lively centre of Christian Arabic and Syriac scholarship, with a particular efflorescence in the period from the 9th to the 11th centuries A.D. Amongst its notable scholars were the Patriarch of Takrīt Cyriacus (Patriarch 793-817), the philosopher and theologian Abū Zakariyyā' Denḥā, with whom al-Mas'ūdī had discussions at Takrīt and Baghdād (*Tanbīh*, tr. Carra de Vaux, 213) and the great translator from Greek into Syriac and Arabic Yaḥyā b. 'Adī (d. 974 [*q.v.*]); see Fiey, *Tagrît*, 316-19.

In the 5th/11th century it belonged to almost independent lords until the Saldjūḳ Ṭoghrïl Beg took advantage of the death of its lord to seize it (Ibn al-Athīr, ix, 448). From 544/1149 the town was part of the territory of the Begtegīnids, and in 586/1190 it passed to the 'Abbāsid caliphs. It was the birthplace of Ṣalāḥ al-Dīn (Saladin), whose father Nadjm al-Dīn Ayyūb had been appointed commander of the town under the Saldjūḳs. When the conqueror Tīmūr took it, it was in the possession of Arab brigands (Sharaf al-Dīn Yazdī, *Ẓafar-nāma*, tr. Pétis de la Croix, ii, 141-54). In the following centuries, it remained a small place; Christians are mentioned in it for the last time by Tavernier (*Voyages*, ii, 87) in the 17th century. Under Turkish rule, Takrīt was a *sandjaḳ* in the *eyālet* of Raḳḳa (*Djihān-numā*, 434), but after the *Tanẓīmāt* [*q.v.*] reforms of the 19th century, it was reduced to a *nāḥiya* of the *ḳaḍā* of Sāmarrā' (in the *wilāyat* of Baghdād). In the 19th century the population was probably never more than 4,000-5,000 souls. All travellers up to the early 20th century were poorly impressed by it; the majority of the inhabitants until that time made their living by navigating inflated rafts or *keleks* [*q.v.*], which changed crews there.

During the First World War, Takrīt was the scene of a minor battle in November 1917 as the Turks retreated northwards before General Maude's Allied forces (S.H. Longrigg, *'Iraq 1900 to 1950*, London 1953, 90). It acquired a station on the standard-gauge northwards extension of the Baghdād-Sāmarrā' railway constructed by the British and Indian troops. In contemporary Republican 'Irāḳ, Takrīt is in the governorate of Sāmarrā'.

On the Arabic dialect of Takrīt, see O. Jastrow, *Tikrit Arabic verb morphology in a comparative perspective*, in *al-Abḥāth*, xxxi (1983) [1985], 99-110.

(J.H. Kramers-[C.E. Bosworth])

TAKRŪNA, a small village in Tunisia about 100 km/62 miles south of Tunis on the Tunis-Sousse road via Zaghouan, "perched on a gigantic rock rising up majestically from the midst of an infinitely-stretching plain".

It is divided into three quarters with, on the first level, on the northwestern side, the *Ḥūma*; on the second, on the southwestern side, *Dār al-Shūd*; and on the third level, *al-Blād*. At the summit of the rock is situated the mosque of the *zāwiya* of Sīdī 'Abd al-Ḳādir. Takrūna has at present 500 inhabitants spread over some hundred households. The oldest and most important families are the Gīga, who are said to be of Berber origin, the Gmāsh, descendants of the Lawāta Berber tribe and the Shūd, descendants of the Tripolitanian Maḥāmid.

The main activities of the village's people are sheep-rearing and agriculture, especially the cultivation of olive trees, but there also industrial activities, with a fairly important cement work. The village has a primary school, and both before and after independence in 1956, Takrūna has nurtured numerous leaders and high officials, teachers and persons of cultural significance, including painters and novelists.

However, it is probably through the problems raised by the elucidation of its name and its history that Takrūna has aroused so much interest. The name Takrūna (which should not be confused with Tākurunnā [*q.v.*], a place in the Spanish Sierra de Ronda) is not found in any old dictionaries or geographical works; it is found, however, from the 19th century onwards in "old legal enactments and official documents preserved in the archives of the Tunisian government". Also, as William Marçais and A. Guiga already remarked, the historian Ibn Abi 'l-Ḍiyāf (d. 1874) speaks of it incidentally in his *Itḥāf*. Numerous authors agree on the fact that the name is Berber, with the sense of "neck". At all events, the village, which as the two authors mentioned above wrote, "has no history", "is probably of Berber origin", built over Roman ruins at some undetermined date but in any case "in troubled times when living in the lowlands meant risking ruin or death". According to educated Takrūnīs, the village is said to date from six or seven generations back, i.e. about 200 years. One should note finally that the people of Takrūna have no memory of the Berber language which was presumably that of their ancestors. To conclude, the village of Berber origin which has so charmed travellers, and notably the French of the 19th and 20th centuries, now resembles, in its ways and people and language, all the

other villages of the Sahel extending in Tunisia from Enfideville to El-Djem.

(T. El Achèche)

TAKRŪR, a name given to a mediaeval town, kingdom and people of West Africa, and later more generally to parts or all of Muslim West Africa. In this last sense it is a well-known *nisba*, pluralised as Takārīr, or in popular speech in the Middle East as Takārna. The name Takrūr itself appears to be the arabised form of an African ethnonym, now pronounced as Tukulor (French Toucouleur, earlier Portuguese Tucuról), and referring to a people whose home is the Futa Toro region [*q.v.* in Suppl.] of the middle Senegal river. Although the Tukulor are composed of diverse ethnic elements, Fulbe [*q.v.*] comprise an important element, and the Tokolor as a whole describe themselves as speakers of Fulfulde (*hal pularen*); clans of theirs have migrated far and wide in West Africa [see TUKULOR].

The Fulbe themselves were early and important immigrants to the region, invading it from the Sahel region, perhaps *ca.* A.D. 800, and furnishing the first known dynasty, the Dya-Ogo. There were several subsequent invasions of Futa Toro over succeeding centuries. In the 12th and 13th centuries a Soninke dynasty known as the Manna ruled, and in the 14th century a Serer dynasty simply called the Tondyon (Malinke *ton dyon* "royal slave soldiers") took power, easing the way for Malian control of the region. As Mali weakened in the following century, a new Fulbe invasion accompanied by Soninke seized control of the region. In the early 16th century a new Fulbe dynasty was founded by a warrior called Koli, whose father Tengella (or Teniella) had been expelled from Diara in the Malian Sahel by forces sent by the Songhay ruler Askiya *al-Ḥādjdj* Muḥammad [*q.v.*]. This in turn was overthrown by an Islamic reformist régime whose first Almamy (*imām*) ʿAbd al-Ḳādir Kan founded in 1770 a dynasty that lasted until the French conquest of the region in 1891.

Arabic writers of the Mediterranean world of Islam knew of Takrūr from the 5th/11th century, both as a town (thought to be in the region of Podor), and as a kingdom of the same name. Al-Bakrī described Takrūr as two towns astride the "Nīl" whose inhabitants were converted to Islam by a ruler called Wār Djābī b. Rābīs who died in 432/1040-1 (*K. al-Masālik wa 'l-mamālik*, ed. de Slane, Algiers 1857, 172). Later, in 448/1056-7, his son Labbi came to the aid of the Almoravid commander Yaḥyā b. ʿUmar when he was besieged in the Djabal Lamtūna (*ibid.*, 73). Wār Djābī also exercised hegemony over the neighbouring kingdom of Silā, upstream from Takrūr, and is said to have converted its people to Islam. In the mid-6th/12th century al-Idrīsī portrays a well-organised kingdom integrated into trans-Saharan trade networks, with the town of Takrūr on the south bank of the "Nīl". North African merchants took wool, copper and beads there and brought back gold and slaves (*Opus geographicum*, ed. A. Bombaci *et al.*, fasc. prim., Neapoli-Romae, 1970, 18). In the late 7th/13th century al-Ḳazwīnī, basing himself on an account by a North African travelling *faḳīh* ʿAlī al-Djanaḥānī, reported that Takrūr was a great town without walls inhabited by both Muslims and pagans, and that giraffe and elephant were common in the area (*ʿAdjāʾib al-makhlūḳāt*, ed. Wüstenfeld, Göttingen 1848, 17). Al-Ḳazwīnī's contemporary Ibn Saʿīd says that the kingdom of Takrūr extended up the Senegal river to as far as Galambu near the confluence of the river Senegal and the Faleme, and that by his day Islam had entered all the towns along the river (*K. Basṭ al-arḍ fi 'l-ṭūl wa 'l-ʿarḍ*, ed. J. Vernet Ginés, Tetuan 1958, 24). For Ibn Khallikān, Takrūr is both the name of a land and of a "race" or "tribe" who are "cousins of the Kānim" (*Wafayāt al-aʿyān*, ed. ʿAbbās, vii, 14).

By the mid-8th/14th century, the name Takrūr was already being applied to a much greater area, and also often to the people who inhabit it, such conflation of towns, kingdoms and peoples being common in mediaeval Arabic sources. Al-ʿUmarī, describing the visit of Mansā Mūsā [*q.v.*] of Mali to Egypt, says he is known as the king of Takrūr, but "if he were to hear of this he would be disdainful, for Takrūr is but one of the provinces of his kingdom" (al-Munadjdjid, *Mamlakat Mālī*, 44). Ibn Khaldūn presents several different definitions of Takrūr, ignoring the contradictions. Relying on al-Idrīsī in his *Muḳaddima*, he places the town of Takrūr on the "Nīl". In the *K. al-ʿIbar* he first quotes Ibn Saʿīd, who seems to locate a people called Takrūr close to the Atlantic ocean (Cairo 1284/1867, vi, 199), and he calls Mansā Mūsā "king of al-Takrūr" (v, 433). But later he asserts that the nation (*umma*) called Takrūr live "beyond Kawkaw (Gao)" apparently in an easterly direction, and he quotes a "*faḳīh* of the people of Ghānā" who says that they call the Takrūr "Zaghay" (vi, 200), perhaps suggesting an identification with Songhay. In another passage (v, 433) the Takrūr are squarely placed between Kawkaw and Kānim. A century later, al-Suyūṭī clearly adopts the same usage, addressing a letter to the kings of al-Takrūr in general and specifically to the sultans of Agadès and Katsina. He answers a series of questions from an inquirer in "al-Takrūr", probably referring to this same general area (see his *al-Ḥāwī li 'l-fatāwī*, Cairo 1933, ii, 284-94).

From the 8th/14th century on, Arab writers, including those of West Africa, use the name al-Takrūr as a name for Muslim West Africa, either in part or in whole, and for its inhabitants. The extension of meaning of Takrūr was probably influenced by descriptions of Mansā Mūsā as "king of al-Takrūr". Al-Saʿdī, writing in Timbuktu in the mid-11th/17th century, seems to use it as the equivalent of the Songhay empire (*Taʾrīkh al-Sūdān*, ed. O. Houdas, Paris 1898, 38, 64, 73, 120). The long title of the contemporary *Taʾrīkh al-Fattāsh* (ed. Houdas, Paris 1913), also concerned with Songhay, includes reference to "the events of al-Takrūr". The Moroccan historian al-Ifrānī in his *Nuzhat al-hādī* (Fez n.d., 75), quoting the unidentified al-Imām al-Takrūrī, describes Askiya *al-Ḥādjdj* Muḥammad as being invested as the *khalīfa* of *bilād al-Takrūr*. In *ca.* 1800 al-Bartilī (or Barritaylī) describes al-Takrūr as "an extensive land, stretching eastwards to Adhghāgh (perhaps Adrār-n-Ifoṛas, north of Bourem), westwards to the river Senegal, southwards to Bīṭu (Begho in east-central Republic of Ghana), and northwards to Ādrār (the highlands of central Mauritania)" (*Fatḥ al-shakūr fī maʿrifat aʿyān ʿulamāʾ al-Takrūr*, ed. M.I. al-Kattānī and M. Ḥadjdjī, Beirut 1401/1981). Writing in 1227/1812, Muḥammad Bello [*q.v.*] defines al-Takrūr as "a name given to the western region of the Sudanic south. It is a name widely used in the Ḥaramayn, Egypt and al-Ḥabasha, but unknown in its homeland" (*Infāḳ al-maysūr fī taʾrīkh bilād al-Takrūr*, ed. Bahīdja al-Shādhilī, Rabat 1996, 47, ed. C.E.J. Whitting, London 1951, 3). He quotes an unspecified source as saying

that *bilād al-Takrūr* refers to the region around Timbuktu, whereas *bilād al-Sūdān* refers to Kano, Katsina and their adjacent lands. But for the purpose of his book he defines it as extending "from [Dār] Fūr to Fūta [Toro]".

The *nisba* Takrūrī (pls. Takārīr and Takārna) is used in the Nile valley and the Middle East to refer to persons or communities of West African Muslim origin. From the 8th/15th century, we have a number of entries in biographical works for persons with the *nisba* al-Takrūrī (Ibn Ḥadjar, *al-Durar al-kāmina*, Ḥaydarābād 1392-6/1972-6, ii, 362, Ṣabīḥ al-Kallawtātī, a former slave who later taught in Cairo and Damascus; al-Sakhāwī, *al-Ḍaw' al-lāmi'*, Cairo 1353-5/1934-6, iii, 173, Khāliṣ al-Takrūrī, who became chief eunuch under Ḳā'it Bāy, vii, 2, al-ʿIzz al-Takrūrī, a Cairene bookseller), while al-Maḳrīzī mentions a saintly man of Takrūr after whom the quarter known as Būlāḳ al-Takrūrī (nowadays al-Dakrūrī) was named (*Khiṭaṭ*, Cairo 1270/1853, ii, 326). West African pilgrims were known as Takrūrīs and their caravans as the Takrūr caravan (*rakb al-Takrūr*). In 1047/1637 ʿAbd al-Salām al-Laḳānī wrote his commentary *Itḥāf al-murīd* on his own *Djawharat al-tawḥīd* at the request of a Takrūrī student (Cairo 1368/1948, 5). In the 19th century there was a *riwāḳ al-Dakārina* at al-Azhar (J. Heyworth-Dunne, *Introduction to the history of education in modern Egypt*, London 1939, 25n.).

Certain communities of West African origin in the Republic of the Sudan have been referred to as Takārīr. The best known of these is the community at al-Ḳallābāt (al-Matamma [*q.v.*]) on the Ethiopian border. West African pilgrims are said to have established themselves there in the mid-18th century, and at the time of the Mahdiyya they were an important self-governing community that played a role in the Khalīfa's war with the Ethiopians in 1884-5. Their leader Ṣāliḥ b. Idrīs fought with the Ethiopians, while a cousin of his was appointed to succeed him as community head. In the 20th century, communities of West African origin in the Sudan are referred to as Fellāta (the Kanuri name for the Fulbe) rather than Takrūrī. By the riverain Sudanese both terms are applied to persons from anywhere west of (and sometimes including) Dār Fūr.

TAKRŪRĪ [see TAKRŪR].

TAḲSĪM (A.) (*taksim* in modern Turkish spelling), "division", "segmentation", also used in its plural form *taḳāsīm*, a term of urban art music in the eastern Arab countries and Turkey. It refers to the improvising presentation of a *maḳām* [*q.v.*], played on a melody instrument. The corresponding North African genre is called *istikhbār*. The *taḳsīm* serves generally as an introduction into a measured vocal or instrumental piece, but it has also developed into an independent solo piece. *Taḳsīm* performance has a declamatory character. Melodic segments of different length and intensity are followed by periods of silence. It is the elaboration of a basic modal structure, concretised and embellished by the instrumentalist according to his musical knowledge and technical skill. It starts and ends with the basic tonal group (tetrachord or pentachord) of the mode, and progresses from the lower to the higher register and back again. Transitions to related modes, considered essential in virtuoso varieties of *taḳsīm*, can be introduced in the course of the ascending movement. The rhythm is free and is not determined by musical metrics (*awzān, uṣūl*), but the soloist can occasionally be supported by a kind of rhythmic drone played on a percussion instrument. By reducing the actual performance of a *taḳsīm* to its basic structure, musicologists have abstracted simple tonal patterns similar to those described earlier by Arab theorists. Thus the initial segment of the mode *rāst* transcribed by E. Gerson-Kiwi and P. Rovsing Olsen, is identical with the first section (*shuʿba*) of the mode *rāst* described in the anonymous *al-Shadjara dhāt al-akmām al-ḥāwiya li-uṣūl al-anghām* (Cairo 1983, 53), and in other more recent Syrio-Egyptian sources.

The historical development of the *taḳsīm* has scarcely been investigated. In its modern signification the term occurs in the Turkish treatise by Dimitrie Cantemir (d. 1723), where an extensive instrumental *taḳsīm* is described which touches upon thirty other *maḳāms* before returning to the initial mode. Cantemir stresses the unmetred, improvised character of the piece (see Ḳanṭemiroğlu, *Kitāb-ı ʿIlmü'l-mūsıḳī ʿalā vechi'l-ḥurūfāt*, Istanbul 1976, 126-36, 172-3). This improvised instrumental *taḳsīm* is not mentioned in pre-Ottoman music literature, neither in Arabic, nor in Persian or Turkish sources. It first appears as an introductory part of the Turkish "concert suite" *faṣıl* (see *ibid.*, 186-7) that had superseded, in the 17th century, the traditional *nawba* [*q.v.*]. In the same function it occurs in the Egyptian *waṣla*, which combined elements of the earlier local *nawba* and the Turkish *faṣıl*.

In the earliest Ottoman art and court music of the 15th and 16th centuries, the name *taḳsīm* was given to the initial section of vocal forms of the *nawba* repertoire. From extant song-text collections we learn that the poetic text of these *taḳsīm* sections was "divided" or "segmented" by the duplication of syllables and by the introduction of other elongating word elements. Although a direct relation between the earlier vocal and the later instrumental *taḳsīm* can not be recognised, it may well be that the latter resulted from a borrowing process from the vocal sphere, comparable to the adaptation of other vocal forms to the Turkish instrumental repertoire in the 16th and 17th centuries.

Neubauer)

TAḲSĪṬ (a.), the verbal noun of a form II verb *ḳassaṭa* "to distribute", especially used as a term of early Islamic financial administration. It denoted the allocation or distribution amongst the tax-payers of the global amount of taxation due. The synonyms *ḳasṭ/ḳisṭ* are also found. The term could also denote the total amount of taxation due or the instalments by which it was paid. See the references given by F. Løkkegaard, *Islamic taxation in the classic period, with special reference to circumstances in Iraq*, Copenhagen 1950, 127, and also H.F. Amedroz, *Abbasid administration in its decay, from the Tajarib al-Umam*, in *JRAS* (1913), 883-4.

Bibliography: Given in the article.

(C.E. Bosworth)

ṬAḲṬŪḲA (pl. *ṭaḳāṭīḳ*), a form of strophic song in Egyptian colloquial Arabic. The semantic background of the term is vague. In the 11th and 12th centuries A.D., a certain manner of singing to the accompaniment of a wand (*ḳaḍīb*) was called *ṭaḳṭaḳa*, as attested by Ibn al-Ḳaysarānī (*Kitāb al-Samāʿ*, Cairo 1970, 63) and by Abu 'l-Ṣalt Umayya b. ʿAbd al-ʿAzīz (see *al-Mawsūʿa al-Taymūriyya*, Cairo 1961, 168). Similarly, a traditional Egyptian Bedouin song called *ṭagg* is accompanied "by the beating of two sticks on some hard surface" (see J.R. Smart, in *JSS*, xii [1967], 248). There is, however, no reference to any particular "beating" in early *ṭaḳṭūḳa* performances that would permit an explanation of the term based on its onomatopoeic connotation. The actual song form flourished in urban Egyptian society from the late 19th century to the 1940s. Being considered a basically female genre, it seems to have originated in the circle of the Egyptian singers called *ʿawālim* (sing. *ʿālima* [*q.v.*]). The popularity of the *ṭaḳṭūḳa* was stimulated by the local record industry. One of the prominent performers was Munīra al-Mahdiyya (d. 1965), but also Umm Kulthūm (d. 1975 [*q.v.*]) recorded *ṭaḳṭūḳa* songs in the twenties and early thirties. The fashionable genre was soon taken up by some well-known composers, such as ʿAbduh al-Ḥamūlī (d. 1901), Sayyid Darwīsh (d. 1923), and Zakariyyā Aḥmad (d. 1961), who refined the melodic structure, whereas the rhythm was generally based on simple musical metres (*uṣūl*).

TĀKURUNNĀ, the name of one of the provinces (*kuwar*) of al-Andalus from the 2nd/8th to the 4th-5th/10th-11th centuries, at least up to the formation of the Taifas. Somewhat curiously, the Arabic sources do not describe the boundaries of these *kuwar* with precision, hence we have to rely on approximations illuminated to varying extents by the geographers and historians of the time.

This is the case for the *kūra* of Tākurunnā, for the sources on this administrative division are vague. We know that its chef-lieu was Ronda [see runda], which was also one of its strongholds, although, according to Ibn Ghālib, Ronda was an *iḳlīm* or district of the *kūra* of Écija. In this regard one should recall that the Sierra de Ronda formed part, at varying times, of Écija, Cordova and Seville. In his *Mughrib*, Ibn Saʿīd states that the town of Tākurunnā "was the fortified centre of the *kūra*, later depopulated (or: destroyed)". Perhaps there was a fortified place in the first stages of the Muslim invasion, later abandoned through necessity or politico-military strategy or for some administrative restructuring. One should also remember that Ibn Saʿīd was writing in the 7th/13th century and that his descriptions may be based on anachronistic information.

The main fortresses of Tākurunnā included Bobastro [see barbashturu], the refuge of ʿUmar b. Ḥafṣūn [*q.v.*].

It seems certain that there was a *kūra* thus named where a *djund* or army group was established from 125/743, since, according to the anonymous *Dhikr bilād al-Andalus*, the lord of the province appeared some years later before ʿAbd al-Raḥmān I with his soldiers in order to give allegiance. After that, Tākurunnā is mentioned amongst the *kuwar* of al-Andalus, and Ibn Ḥayyān mentions the governors nominated or dismissed by ʿAbd al-Raḥmān III during his reign. In the 5th/11th century, Runda was the seat of the Berber Taifa of the Banū Īfran [*q.v.*], who belonged to the Zanāta recently arrived in the Peninsula. Once independent, the Banū Īfran occupied the territory of Tākurunnā after the death of the ruler of Malaga, Idrīs al-Muta'ayyid, in 431/1039-40, the year in which Hilāl b. Abī Ḳurra al-Yafranī rebelled, reigning in the first instance till 445/1053-4. Whilst he was imprisoned by al-Muʿtaḍid [*q.v.*] for four years in Seville, his son Bādīs succeeded him, but acted so tyrannically that, once his father was released in 449/1057-8, he resumed power and executed his son. He died soon afterwards, leaving the succession to another son, Abū Naṣr Fatūḥ. But on the rebellion of one of his commanders, in league with al-Muʿtaḍid, the principality passed to the Seville kingdom in 457/1065. The region fell into the hands of the Almoravids in 484/1091. In the last stage of this dynasty's power, as part of a process observable in other parts of al-Andalus, Abu 'l-Ḳāsim Akhyal b. Idrīs rebelled, according to Ibn al-Abbār and Ibn Saʿīd, but for only a short time, it seems, since the people of Tākurunnā subsequently returned Abu 'l-Ghamr b. al-Shā'ib b. Gharrūn to power. For the Almohad period, al-Baydaḳ affirms that their occupation took place peacefully.

Finally, the territory formed part of the Naṣrid kingdom of Granada and was conquered by the Catholic monarchs in 1485.

Within Tākurunnā society, the Berber element was of importance, and included the ʿAwsadja, probably arriving there at the time of the conquest, and the Zadjādjila from the Ittaft tribe, a part of the Nafza; during the amirate of Cordova, the Zadjādjila supplied high officers for the court. New Berber groups arrived in the region with the Īfran during the 5th/11th century (see above). There must have also been a significant Christian population at the time of the conquest, some of whom probably became *muwallad* converts, whilst those faithful to their religion would become Mozarabs. Such Christians included the ancestors of ʿUmar b. Ḥafṣūn, whose great-grandfather Djaʿfar settled at Torrecilla in the *kūra* of Reyyo (Malaga) in the time of al-Ḥakam I. Personages of Arabic origin were also known in Tākurunnā. Thus in the 5th/11th century the Lakhmid family of the Banu 'l-Ḥakīm left Seville for Ronda, as did others. The date of the appearance of the Azd Arab lineage there is uncertain; it included the famous *muḳriʾ* ʿUmar b. ʿAbd al-Madjīd al-Rundī (548-609/1153-1213). Also uncertain is the arrival date of the Djudhām, who included the famous judge and *ḥāfiẓ* Abu 'l-Ḥadjdjādj Yūsuf al-Djudhāmī al-Muntishāḳirī, the teacher of Ibn al-Khaṭīb [*q.v.*], who exercised his profession at Ronda and Marbella right into the 8th/14th century. Finally, one should mention a group of Jewish families, including that of the 6th/12th century physician Ilyās b. Ṣaddūd.

The author of the *Dhikr* states that Tākurunnā was very mountainous, with numerous inaccessible castles, and that Ronda was an ancient place, with fertile agriculture, good pastures and other advantages, including a much sought-after aromatic herb of the mountains called the mahaleb cherry tree.

(Fatima Roldán Castro)

TAḲWĀ [see Suppl.].

TAḲWĪM (a.), the verbal noun of the form II verb *ḳawwama* meaning "to correct, to rectify", in particular used by Muslim astronomers for determining the positions of the sun, the moon and the planets; hence, ephemeris or astronomical almanac.

1. Its use in astronomy.

For the computation of the *true* solar position [see al-shams], Muslim astronomers first calculated the *mean* solar position (*wasaṭ al-shams*). They then had to adjust or "correct" this by the amount of the equation of the sun (*taʿdīl al-shams*), and the result was the true solar position (*muḳawwam al-shams*). The determination of the true positions of the five naked-eye planets and the moon required more sophisticated calculations because of the more complicated underlying planetary models, but proceeded in an analogous way. The mean positions, the lunar nodes and the equations were determined by means of a *zīdj*, a handbook containing astronomical and mathematical tables (see al-zīdj, and E.S. Kennedy, *A survey of Islamic astronomical tables*, in *Trans. American Philosophical Society*, xlvi (1956), 123-77). The operations described above were then performed for the sun, moon and planets, at midday of each day of a period of, say, a year (lunar or solar Hidjra; for various years in use, see al-taʾrīkh) or by going in steps of a few days (usually five or ten). This information was organised in annual ephemerides (*taḳwīm*, pl. *taḳāwīm*), from which one could determine the position of the seven celestial bodies relative to each other. This was done e.g. for predicting eclipses of the sun and the moon (for eclipses, see al-kusūf) or to determine the horoscope for a given moment.

The principal part of most *taḳwīms* consists of 24 pages, one opening of two pages for every month of a given year (see the illustrations of a Yemeni specimen in ruʾyat al-hilāl). On the right-hand page the first columns give the current day expressed usually in several calendars (the Persian, Arabic, Syrian and Coptic calendars were used) and the day of the week. The right margin of the page was used for putting down annotations about the day in question, such as memorable historical events, religious feasts of Muslims, Jews and Christians, local events such as the beginning of shipping seasons, and the like. To the left of these columns is found the ephemeris for each day of the current month, consisting of one column each for the sun, moon, the planets in their usual order, and the ascending lunar node. To the left of these columns might be found columns for the daily solar altitude at noon, the length of daylight, and the solar altitude at the *ʿaṣr* prayer [see mīḳāt]. The left-hand page was devoted entirely to matters astrological. For each day, the occurrence of aspects of one planet with the others was recorded, giving the hour of the event and short astrological interpretations like "good", "bad" or "mixed". Because aspects of the moon were given particular importance, the moon had one column of its own while the other planets shared one together. Astronomical information about the time and location of conjunction and opposition of the sun and the moon were usually mentioned in a special row at the top and bottom of the pages. Because of its importance in eclipse predictions, the lunar latitude [see al-ḳamar] at these times was added. Further, since the Muslim month starts with the first visibility of the lunar crescent [see ruʾyat al-hilāl], the predicted time, location and condition of first visibility were noted.

At the beginning of the *taḳwīm*, the planetary positions at the time when the sun entered the sign of Aries (vernal equinox) were put down in a diagram, thus providing the horoscope for the given year, accompanied by astrological forecasts for the year. If eclipses were predicted for the year, then information about their time, location, duration and colour was recorded. Because eclipses were considered to be maleficent they were located in a separate part at the back of the *taḳwīm* for "... it is undesirable to have it at the beginning of the calendar ..." (al-Bīrūnī). Topics featured in additional chapters of the *taḳwīm* were more astrological in nature, but here no fixed convention existed. Of the wealth of possible topics, two were the most common. One of these was a table called

iḵẖtiyārāt (electiones) [see IKHTIYĀRĀT] showing days suitable for a given purpose, depending on the position of the moon in the zodiacal signs. Another was tables of the anwā' and the rising and setting times of the lunar mansions [see ANWĀ'; AL-MANĀZIL]; almanacal information relating to agriculture, weather and the like is often also found in taḳwīms.

The Islamic taḳwīms were developed from Hellenistic precursors dating from the 4th or 5th centuries A.D., which show the same arrangement of several calendars, ephemerides for the sun, moon and the planets, and astrological remarks for the actual day in monthly tables (see H. Gerstinger und O. Neugebauer, *Eine Ephemeride für das Jahr 348 oder 424 n.Chr.*, in *Sitzungsberichte der Österreichischen Akademie der Wissenschaften*, ccxl/2 [1962], 1-25). The first known mention of a *taḳwīm* was made by Thābit b. Ḳurra [q.v.], and he called it *daftar al-sana* (reported by Ibn Yūnus in his *Ḥākimī zīdj*, ed. and tr. C.A. Caussin de Perceval, in *Le livre de la grande table Hakémite*, in *Notices et extraits des manuscrits de la Bibliothèque nationale*, vii, Paris 1804, 98). A detailed description was presented by al-Bīrūnī [q.v.] in his *Tafhīm*, elucidating all essential parts of a *taḳwīm*. The same arrangement given by him was followed for centuries with little variation. Al-Bīrūnī reports that he knew *taḳwīms* from Eastern Persia to the north-west of India. In putting forward additional materials and minor modifications, Persian astronomers played a major role. Some fifty years after al-Bīrūnī, Shahmardān b. Abi 'l-Khayr Rāzī in his work *Rawḍat al-munadjdjimīn* proposed to add *iḵẖtiyārāt* tables to the basic ephemerides. In the 6th/12th century, *taḳwīms* are mentioned in the mediaeval literature for Syria and Egypt (see A. Sayılı, *The observatory in Islam and its place in the general history of the observatory*, Ankara 1960, repr. New York 1981, 167). To this period belong the extant fragments of *taḳwīms* which are Hebrew copies of Arabic contemporaneous originals found in the Cairo Geniza and which cover the period from 526/1131-2 to 553/1158-9. The *Sī faṣl* of Naṣīr al-Dīn al-Ṭūsī [q.v.] marks the culmination in sophistication of astronomical and astrological terminology used in the *taḳwīms*. Al-Ṭūsī considerably enlarged the tables by joining tables for the moon's motion through the mansions, tables for changes in planetary motions (direct motion, stationary points, retrograde motion), and visibility of the planets depending on their position relative to the sun. Some symmetric alignments of the planets had special meanings and were annotated in the ephemeris: e.g. when two planets were symmetrically positioned to the beginnings of Cancer and Capricorn (*tanāẓur-i zamānī*) and to the beginnings of Aries and Libra (*tanāẓur-i muṭallīʿ*). For the Yemen, we know of *taḳwīms* from the 8th/14th century onwards; two specimens for the years 727/1326-27 and 808/1405-06 are preserved intact. The importance given to agricultural lore is peculiar to Yemeni *taḳwīms*, thus reflecting the Yemeni tradition of agricultural almanacs (see further, below 2.). The treatise on the computation of *taḳwīm*, entitled *Bīst bāb* written by ʿAbd al-ʿAlī Niẓām al-Dīn b. Muḥammad Bīrdjandī (d. 934/1527-8) is very similar to *Sī faṣl*, differing from it by the inclusion of a section on prayer-times and the finding of the *ḳibla* [q.v.]. The widespread use of *Bīst bāb* was surpassed by a detailed commentary *Sharḥ-i Bīst bāb* written by Muẓaffar b. Muḥammad Ḳāsim-i Muẓaffar Djunābādī in 1005/1596-7. The extant *taḳwīms* which mainly originated in Persia and Turkey and date from 1800 onwards, commonly consist of the 24 ephemeris pages in the middle, an *iḵẖtiyārāt* table at the end, and at the beginning a horoscope using the usual zodiacal signs and a second one using the Turkish animal signs, thus showing Ottoman influence. In a small number of *taḳwīms* the astronomical tables are replaced by extended tables of memorable events (sometimes called *tawḳīʿāt*).

Bibliography: For descriptions of *taḳwīms* by Muslim authors, see Bīrūnī, *K. al-Tafhīm*, tr. R.R. Wright, London 1934, 186-91; Shahmardān b. Abi 'l-Khayr Rāzī, *Rawḍat al-munadjdjimīn*, facs., Tehran 1989, 15-33; Naṣīr al-Dīn al-Ṭūsī, *Sī faṣl*, Tehran, Iranian Parliament Library ms. 6998. For descriptions of extant *taḳwīms*, see M. Boutelle, *The almanac of Azarquiel*, in *Centaurus*, xii (1967), 12-19, and E.S. Kennedy, *A set of medieval tables for quick calculation of solar and lunar ephemerides*, in *Oriens*, xviii-xix (1967), 327-34, both repr. in D.A. King and M.H. Kennedy (eds.), *Studies in the Islamic sciences*, Beirut 1983; B.R. Goldstein and D. Pingree, *Astrological almanacs from the Cairo Geniza, Parts I + II*, in *JNES*, xxxviii (1979), 153-75, 231-56; B.R. Goldstein and D. Pingree, *Additional astrological almanacs from the Cairo Geniza*, in *JAOS*, ciii (1983), 673-90. On the way *taḳwīms* were compiled, see G. Saliba, *Computational techniques in a set of late medieval astronomical tables*, in *Jnal. for the Hist. of Arabic Science*, i (1977), 24-9; idem, *The double-argument lunar tables of Cyriacus*, in *Jnal. for the Hist. of Astronomy*, vii (1976), 41-6; D.A. King, *A double argument table for the lunar equation attributed to Ibn Yūnus*, in *Centaurus*, xviii (1974), 129-46, repr. in idem, *Islamic mathematical astronomy*, Variorum, London 1986; idem and E.S. Kennedy, *Ibn al-Majdī's tables for calculating ephemerides*, in *Jnal. for the Hist. of Arabic Science*, iv (1980), 48-68, repr. in King, *Islamic mathematical astronomy*. (M. HOFELICH)

2. Agricultural almanacs.

The almanac as a literary and scientific genre in Arabic provides seasonal information on astronomical events, weather periods, holidays, agriculture, and other activities. There is no single Arabic term that defines this genre. When almanac data are arranged in tabular form, the text is sometimes called *taḳwīm*. The terms *natīdja* and *ruz-nāma* (derived from Persian) are sometimes used to denote almanacs. The seasonal information in a tabular almanac is often referred to as *tawḳīʿāt* ("events"). Despite numerous claims to the contrary, the English term "almanac", as well as its cognates in Western languages, is not derived from the mediaeval and contemporary Arabic term *manākh* ("climate"), but is probably from the Greek αλμενιχιακα in reference to astrological calendars.

Most Arabic almanacs are arranged according to the solar calendar. In Egypt, this is the Coptic reckoning of twelve months of thirty days followed by an interstitial period of five days. Almanacs of the Arabian Peninsula, Levant and ʿIrāḳ cite the Syriac month names, sometimes referred to as *Rūmī* months, starting with *Tishrīn al-Awwal* (October). In North Africa and Spain, the Roman month names, starting with January, are simply Arabised. Since the Islamic *hidjrī* calendar is lunar, some eleven days shorter than the seasons. it must be correlated to a given solar year to be appropriate for seasonal activities. A few star calendars are also recorded as written almanacs, although these are more common in folklore (see D.M. Varisco, *The agricultural marker stars in Yemeni folklore*, in *Asian Folklore Studies*, lii [1993], 119-42). The Rasūlid sultan al-Malik al-Afḍal al-ʿAbbās compiled a unique perpetual almanac by the degree of the zodiac about 777/1375 for Taʿizz in Yemen.

Hundreds of almanac texts have survived, but only

a few have been studied or translated (idem, *The Arab almanac. A preliminary bibliography*, in *MME*, vii [1995], for a full bibliography of texts). Earlier almanacs are found in folk astronomical texts of the *anwāʾ* [*q.v.*] and *azmina* genres. They are also found in works on astronomy, agriculture, encyclopaedias, and, more recently, as independent documents. Almanac poems, such as that of the Yemeni Nas̲h̲wān b. Saʿīd al-Ḥimyarī (d. 573/1177), are quite common, although many are anonymous.

The earliest extant almanacs in Arabic date from the 3rd/9th century, including the texts of Abū Ḥanīfa Aḥmad al-Dīnawarī and the ʿIrāḳī Christian physician Ibn Māsawayh [*q.vv.*]. One of the most influential early almanacs was from the widely-quoted *al-Filāḥa al-Nabaṭiyya* attributed to Ibn Waḥs̲h̲iyya [*q.v.*]. Al-Bīrūnī (d. 440/1048) included excerpts relevant to Greece from an earlier almanac derived from Sinān b. T̲h̲ābit. The majority of surviving almanacs are Egyptian, including texts by al-Mak̲h̲zūmī (d. *ca.* 580/1185), Ibn Mammātī (d. 606/1209), al-Ḳalḳas̲h̲andī (d. 821/1418), and al-Maḳrīzī (d. 845/1442). Several almanacs have survived in Spain, the most famous being the 4th/10th century Calendar of Cordova, which was translated into Latin as *Liber Anoe*. The agricultural texts of Ibn Baṣṣāl (d. 499/1105) and Ibn al-ʿAwwām (7th/13th century) contain detailed almanacs with extensive agricultural coverage.

One of the best-preserved almanac traditions is in Yemen, where traditional almanacs are still compiled. The earliest extant agricultural almanac here is found in *al-Tabṣira fī ʿilm al-nud̲j̲ūm* of the Rasūlid sultan al-Malik al-As̲h̲raf ʿUmar (d. 696/1296). The text is arranged in tabular form, starting with *Tis̲h̲rīn al-Awwal* (October), which is correlated with the Ḥimyarite month name *D̲h̲ū Ṣirāb*. The subjects covered in the almanac include: zodiacal astronomy; timing of the sun's zenith (*samt al-raʾs* [see AL-SAMT]); amount of daylight and shadow lengths for the start and middle of each month; risings and settings of the twenty-eight lunar stations (*manāzil al-ḳamar*) [see AL-MANĀZIL] and fixed stars such as Altair, Canopus, Procyon, Sirius, six stars of Ursa Major, and Vega; weather periods of major rains, winds, heat, and cold; stages of the Nile and Euphrates rivers; fluctuation in water sources; appearance of certain natural plants and pasturage; appearance or disappearance of certain animals; health régimes for each season; humoral timing of sexual desires; sailing seasons from Aden to Egypt, Africa and the Indian Ocean; and agriculture. The agricultural information supplements the author's *Milḥ al-malāḥa fī maʿrifat al-filāḥa* (see M. D̲j̲āzm, in *al-Iklīl* (Ṣanʿāʾ), iii/1 (1985), 165-207). Al-Malik al-As̲h̲raf recorded ten distinct tax periods for Yemen as well as a major description of the agricultural cycle for the coastal Tihāma and the southern highlands. The crops mentioned include twenty-one varieties of sorghum and millet; ten local varieties of wheat; rice; sugar cane; over two dozen fruits, vegetables, and legumes; flax; cotton; and seven aromatic plants. At least seven almanac texts have survived from the Rasūlid era. Later Yemeni compilers often copied from these Rasūlid almanacs, at times introducing errors for crops or place names. From the 1940s up to the mid-1970s an annual almanac was published in Taʿizz by Muḥammad al-Ḥaydara.

The almanac tradition also survives in the Arabian Gulf. From 1957 until 1989 S̲h̲ayk̲h̲ ʿAbd Allāh Ibrāhīm al-Anṣārī published annually his *al-Taḳwīm al-Ḳaṭarī*. One of the primary sources for al-Anṣārī was a *taḳwīm* compiled by S̲h̲ayk̲h̲ ʿAbd Allāh ʿAbd al-ʿAzīz al-ʿUyūnī of Nad̲j̲d around 1324/1906. In Kuwait, Ṣāliḥ Muḥammad al-ʿUd̲j̲ayrī has published an annual almanac since the 1940s. During the 1980s, S̲h̲ayk̲h̲ ʿAbd al-D̲j̲abbār Muḥammad al-Mād̲j̲id compiled an annual almanac in Sharjah of the United Arab Emirates. The Gulf almanacs combine information on pastoralism in the eastern part of the peninsula with weather periods and sailing seasons for the Persian Gulf.

As a written text, the Arabic almanac throughout the Islamic period was aimed at a scholarly audience rather than as a practical guide for the farmer. Early almanacs in Arabic offer an example of applied science, i.e. the kinds of seasonal events in nature that were deemed relevant among scholars. This accounts for the attention paid to basic astronomical risings and settings in most almanac texts. Because the information provided is often cryptic and invariably unattributed to the sources consulted, study of the genre requires familiarisation with a variety of scientific texts and is enhanced when contemporary oral folklore contextualises the data.

TAKWĪN (A.) "to bring into being", more specifically used for the artificial generation of minerals, plants and animals; in the case of plants and animals, the process is often called *tawlīd*, and Ibn Waḥs̲h̲iyya also gives *taʿfīn*. Within the mediaeval Islamic cultural sphere, the idea that artificial generation was possible was widespread in less orthodox circles. The accepted notions concerning generation, including spontaneous generation [see TAWALLUD] made the idea less far-fetched than it may seem. In the occult sciences (alchemy and magic), the processes of artificial generation are discussed in various contexts; see especially Paul Kraus' ground-breaking study in *Jâbir ibn Ḥayyân. Contribution à l'histoire des idées scientifiques dans l'Islam*, Cairo 1943, ii, 97-134.

The main sources involved here are (a) the *D̲j̲ābir ibn Ḥayyān* [*q.v.*] corpus (especially the *K. al-Tad̲j̲mīʿ*; partly ed. by Kraus, *Jâbir ibn Ḥayyân. Textes choisis*, Cairo 1935, 341-91; full ed. being prepared by Pingree and Haq; also the *K. al-Ik̲h̲rād̲j̲*, see F. Rex, *Zur Theorie*

der Naturprozesse in der frühar abischen Wissenschaft; das "Kitāb al-iḥrāq", übersetzt und erklärt. Ein Beitrag zum alchemistischen Weltbild der Ǧābir-Schriften (8./10. Jahrhundert n. Chr.), Wiesbaden 1975, 58, 136-8). Sources mentioned by Djābir include an otherwise unknown work of Porphyry, the *K. al-Tawlīd*, and the pseudo-Platonic *K. al-Nawāmīs*, see below. (b) Various works connected with Ibn Waḥshiyya [*q.v.*], notably the *Filāḥa nabaṭiyya* (facs. ed. Frankfurt a/M. 1984, 7 vols.; currently being edited by Toufic Fahd, *L'Agriculture nabatéenne*, Damascus 1993-), and *K. Asrār al-Ḳamar* (only quotations extant; see Ullmann, *Naturwiss.*, 76). (c) The pseudo-Platonic *K. al-Nawāmīs* (only partly extant in Arabic, but known from its Latin translation, the *Liber Vacce*); the importance of this text was already pointed out by Kraus, 1943, 103-4, and, more recently, by Pingree (*Plato's hermetic* Book of the Cow, in P. Prini (ed.), *Il neoplatonismo nel rinascimento*, Rome 1993), who places its origin in 9th-century Ḥarrān. The article contains useful refs. to extant Arabic fragments, 435 n. 15. The possible relevance of the *K. al-Nawāmīs* for the mediaeval Jewish idea of the *golem*, an artificially-created human being, remains to be studied.

The influence of all these sources is widely traceable in Arabic literature, especially the occult, such as pseudo-Madjrīṭī's [*q.v.*] *Ghāyat al-ḥakīm* and—in the case of plant production—also in agricultural texts.

The idea that underlies the concept of artificial generation is that since nature [see ṬABĪʿA] can transform the four elements into minerals, plants and animals, it is possible for man to repeat this process by closely imitating nature's procedures. Added to this, especially with regard to theories about the artificial generation of higher forms of animal life, Neoplatonic ideas about the souls of the celestial bodies are of considerable importance, since these souls could possibly be induced to join with earthly matter (cf. the practices involved in making talismans). Given these ideas, it was not only of basic importance to compose the right mixture for creating a specific creature, but also to submit the matter to the right procedure. This involved not only processes such as heating and putrefaction (*taʿfīn*), but also various imitative techniques. These range from including parts of the creatures to be produced, or images of them, with the matter to be transformed (see Ibn Waḥshiyya 1984, vii, 32; Kraus 1943, ii, 110), to (Djābir, see Kraus) the use of elaborate equipment and techniques imitating the celestial bodies. Another recurring element is placing the matter to be transformed, which might contain a symbolic equivalent to semen or, as in the *Liber Vacce*, real semen of the type of animal that one intended to create, in a space or container functioning as a symbolic womb, or even putting it in the womb of a live animal (again in the *Liber Vacce*, see Pingree, *op. cit.*).

In the *K. al-Ikhrādj* (136), the production of living creatures is presented as the end result of science in Djābir's system, the "seventh science" in which the synthesis of the first six (the sciences of the Balance, talismans, engaging spiritual powers (*rūḥāniyyāt*), medicine, alchemy and the science of properties (*khawāṣṣ*)) took place. In the 12th section of the *Filāḥa nabaṭiyya*, Ibn Waḥshiyya also implies a culmination of theories unfolded earlier by referring to artificial generation as "the great advantage", *al-fāʾida al-kubrā* (on his theories, see *GAS*, iv, 141-2; also 352-6 of Fahd's synopsis of the *Filāḥa* in *Wirtschaftsgeschichte des Vorderen Orients in islamischer Zeit*, i, Leiden 1977).

While Djābir's methods involve not only putting together the right mixture but also complicated equipment and techniques to induce spiritual powers, Ibn Waḥshiyya (usually referring to "Adam", the author of the *K. Asrār al-ḳamar*) mainly concentrates on the transformation, by means of *taʿfīn* "putrefaction", of earth and water particles; the process is set in motion by the heat of the sun. Several methods for the production of plants are given on the authority of "Adam", as well as a number of recipes for producing specific species; see also the many refs. to the *K. Asrār al-ḳamar* in, for instance, al-Waṭwāṭ's section on plants in his *Mabāhidj al-fikar*. Ibn Waḥshiyya describes two different methods involving burying matter in the earth, and a third one that involves burning. Of the many recipes which he tried out, a considerable number turned out to be useless, for which he blames textual corruption, while others worked satisfactorily, especially those involving burying (*tadfīn*).

Artificial generation of animals was also considered possible. This went fairly undisputed where lower animals (wasps, scorpions, snakes) were concerned (see, for instance, a recipe in the *Ghāyat al-ḥakīm* (411); for refs. in the *K. al-Tadjmīʿ*, see Kraus 1943, ii, 103). The possibility of creating higher animals, and even human beings, however, is not excluded either. Ibn Waḥshiyya alludes to this (sheep, camels and such like), and tells about the sorcerer ʿAnkabūtā, who managed to produce a human being, who, however, did not possess the powers of reason and speech, and could not eat. He also mentions the clay of a certain mountain (Kraus 1943, ii, 112, obviously referring to the same tradition, mentions Makrān and Kirmān), which had the potential to spontaneously produce (lifeless) human bodies and was reportedly used by people to create (living) human beings; these, however, never lived longer than a day (1984, vii, 24-5).

In Djābir's *K. al-Tadjmīʿ*, the possibilities concerning the artificial generation of human beings seem virtually unlimited; his text seems to imply that even the highest possible kind of sub-lunar creature, a prophet (*ṣāḥib al-nāmūs*), may be generated artificially. The various possible interpretations of *nāmūs/nawāmīs* (which, among other things, may mean "spell", cf. *aṣḥāb al-ḥiyal wa 'l-nawāmīs*, Kraus 1943, ii, 104; Rex, *Zur Theorie*..., 96, 129) make this statement highly cryptic. Kraus also suggests that the idea of an artificially-created spokesman of the celestial world may have its origin in Egyptian-Greek theories about the bringing to life of the statues of deities.

It may be noted that the gender issue plays no part in discussions about these artificially-produced human beings; their sex is never mentioned. Implicitly, they seem to be male. That some of the hominoid creatures produced had the power of speech (another important issue in artificially-created human beings) is explicitly stated by Djābir (see Kraus 1943, ii, 117); see also Pingree, 1993, 441.

(REMKE KRUK)

ṬALAB AL-ʿILM [see ʿILM].

ṬALABA, ṬULLĀB, ṬULBA, ṬOLBA (A.), pls. of *ṭālib* "scholar, one who has studied, student".

In Morocco, the colloquial plural *ṭolba* denotes the students at *madrasas* (*medersas*) or at universities. The best-known are those of Fās (Fès), who stay in the *madrasas* of the town and who follow courses at the Ḳarawiyyīn [*q.v.*] University. Their spring festival, called "the festival of the *sulṭān* of the *ṭolba*" won for them a certain fame. In the second half of April, these *ṭolba* or students used to have the custom of gathering together on the open spaces bordering on the Wādī

Fās. In former times, after having sought the Sultan's authorisation through the intermediacy of the Grand Vizier (under the Protectorate, the request was equally transmitted by the French administration), the *ṭolba* would congregate in the main court of the Ḳarawiyyīn Mosque and would proceed to choose the "*ṣulṭān* of the *ṭolba*", an office which continued to be exercised all through the days of festivity, a little more than a week. On the Wednesday following the Sultan's reply, this office was put up for auction through the voice of the *dellāl*, the crier in the book market. After being proclaimed, the "*sulṭān* of the *ṭolba*" would organise his own *makhzan*, and the chosen *muḥtasib* would make a collection, levy taxes on the markets, check the weights and measures, etc. Even the notables of Fās would hand over taxes due to the ephemeral sultan. Two days later, dressed in the insignia of sovereignty lent by the real Sultan, and accompanied by his court, the "*sulṭān* of the *ṭolba*" would visit various holy places in the town, and, on the Saturday, would reach the open spaces along the Wādī Fās. An audience was given to a prince of the reigning dynasty, who brought a present, a *hediya* (*hadiyya*) for the "*sulṭān* of the *ṭolba*". Sometimes it was the Sultan in person who would come out to the students' encampment. The "*sulṭān* of the *ṭolba*" had at this time the privilege of asking the real Sultan for a favour.

In our own time, this festival of the "*sulṭān* of the *ṭolba*" has fallen into total disuse.

For theories on the origin of this festival, see SULṬĀN AL-ṬALABA.

Bibliography: See that to SULṬĀN AL-ṬALABA, and add F. Gaillard, *Une ville de l'slam. Fès*, Paris 1905; P. Ricard, *Le printemps à Fès, le sultan des ṭolba*, in *France-Maroc*, 15 June 1917.

(CH. DE LA VÉRONNE)

ṬALABĪRA, a place in al-Andalus corresponding to the modern Talavera de la Reina in the Spanish province of Toledo. It grew up on the site of the Roman Caesarobriga, near the Sierra de Gredos and on the banks of the Tagus [see TĀDJUH].

As far back as the 4th/10th century, al-Rāzī describes it as a town dependent on Toledo, well fortified, and adds that in 325/936, on the orders of the ruler ʿAbd al-Raḥmān III, a citadel for accommodating its governors was built. Al-Idrīsī (6th/12th century) also mentions its fortifications, adding that it was a fine town with considerable economic life there, surrounded by fertile lands and with numerous mills along the river. Ibn Ghālib and Yāḳūt, in the next century, drawing on al-Rāzī, state that Ṭalabīra was on the frontier between the Muslims and the infidels. According to the *Dhikr bilād al-Andalus* (8th-9th/14th-15th century), it was the *amīr* Muḥammad I who built the walls and populated the site known as Ṭalabīra.

Its Islamic history was linked, in its various stages, with that of the important centre of Toledo [see ṬULAYṬILA].

(FÁTIMA ROLDÁN CASTRO)

ṬALĀʾIʿ B. RUZZĪK, al-Malik al-Ṣāliḥ, vizier in Cairo from 549/1154 to 559/1161. He held office during the imāmate of the Fāṭimid caliph al-Fāʾiz, and also at the beginning of the imāmate of al-ʿĀḍid, with the full names Abu 'l-Gharāt Fāris al-Muslimīn al-Malik al-Ṣāliḥ Ṭalāʾiʿ b. Ruzzīk al-Ghassānī al-Armanī (for all the titles borne by him, see *RCEI*, ix, 3231; Ibn Muyassar, *al-Muntaḳā min akhbār Miṣr*, ed. Ayman F. Sayyid, Cairo 1982, 151; al-Maḳrīzī, *Ittiʿāẓ al-ḥunafāʾ*, ed. Muḥ. Ḥilmī Muḥ. Aḥmad, Cairo 1393/1973, iii, 218); coming after Badr al-Djamālī and al-Afḍal, he was the last Fāṭimid military grand vizier who attempted successfully to carry out an autonomous Fāṭimid political project in the Eastern Mediterranean. He derived his power from Upper Egypt, a rich province which controlled the route of the pilgrimage, including the supply of wheat to the holy cities, and the trade in spices and drugs with the Yemen and the Indian Ocean, as well as the trade with black Africa involving the import of slaves and gold dust.

There is just one source which gives him a Maghribī Berber origin; for although he bore the Arabic *nisba* of al-Ghassānī, most of the chronicles see him as an Armenian born in Egypt in 495/1101-2. His father is said to have been attached to the group of officers who came to Egypt for Badr al-Djamālī. Certain writers thought that he was born in Armenia (Muḥammad Ḥamdī al-Mināwī, *al-Wizāra wa 'l-wuzarāʾ fi 'l-ʿaṣr al-fāṭimī*, Cairo 1970, 285-7).

He probably sought his fortune in ʿIrāḳ, having been converted to Imāmite Shīʿism there, and always used to keep up a correspondence with Mawṣil, Kūfa and Ḥilla. He made his career in the army in Egypt. In 538, as governor of al-Buḥayra, he quelled a revolt of the Lawāta and won a decisive victory against Ibn Maṣāl (Ibn Muyassar, *Muntaḳā*, 142) for the future vizier al-ʿAbbās. In 549/1154, at the time of his accession to the vizierate, he was the governor of either Ushmūnayn and al-Bahnasā, or of Munyat Banī (or Ibn) al-Khaṣīb, or of Asyūṭ. In the interim he had been governor of Aswān and of Ḳūṣ, a town with which he kept close ties.

After he had become vizier, in 550/1155, he had the mosque there reconstructed, endowing it with a beautiful *miḥrāb* (J.-Cl. Garcin, in *AI*, ix [1970], 99-109; and idem, *Ḳūṣ*, 115). There is a very well-known account of the assassination of the caliph al-Ẓāfir by his lover Naṣr, the son of the vizier al-ʿAbbās, in Muḥarram 549/April 1154, and of the slaughter which resulted from this assassination, and of how the women of the palace cut off their hair and sent it to Ṭalāʾiʿ to urge him to come to the defence of the dynasty (see for example G. Wiet, *L'Égypte arabe*, Paris 1937, 284-8; Ayman F. Sayyid, *al-Dawla al-Fāṭimīyya fī Miṣr, tafsīr djadīd*, Cairo 1413/1992, 214-20). Ṭalāʾiʿ set out to attack Cairo, at the head of officers who had received the *iḳṭāʿ* of the region and preceded by allied tribal groups, the Djudhām, Sanbas, Ṭalḥa, Djaʿfar and Lawāta (al-Maḳrīzī, *Ittiʿāẓ*, iii, 217), and al-ʿAbbās attempted to negotiate with him while organising the defence of the capital. But there was popular active resistance in the city, and the imminent threat of the arrival of a powerful coalition made the situation untenable for al-ʿAbbās, so he left the city; he was accompanied by his son Naṣr, by Usāma b. Munḳidh, and by other important dignitaries, heading a convoy of 100 war horses, 200 mules and 400 camels, laden with the treasures taken from the Fāṭimid palace.

In Rabīʿ I 549/July 1154, Ṭalāʾiʿ, dressed in black, entered the city at the head of his soldiers, who were brandishing black standards and carrying on the points of their lances the hair of the women of the Fāṭimid family whom they had come to avenge. The chroniclers saw the abandoning of the white Fāṭimid standards as a premonition of what was to be a reinstallation

of the black ʿAbbāsid standards by Ṣalāh al-Dīn in 567/1171. Having given a decent burial to the bodies of the war dead, Ṭalāʾiʿ, once he was installed in the Dār al-Maʾmūn which Naṣr b. ʿAbbās had occupied, set about making general investigations among all the families of eminent civil and military persons who had collaborated with al-ʿAbbās. Executions ensued, as well as journeys into exile and flights to the Yemen.

Throughout his reign he displayed great keenness in financial matters, balancing the financial system, carrying out confiscations, speculating on the price of cereals as soon as a scarcity was announced. The wealth of property became apparent in an act of foundation of *waḳf* (Cl. Cahen, Muṣṭafā Ṭāhir and Yūsuf Rāghib, *L'achat et le waqf d'un grand domaine égyptien par le vizir fāṭimide Ṭalāʾiʿ b. Ruzzīk*, in *AI*, xiv [1978], 59-126). He used his wealth for pious aims; in 555/1160 he built a mosque outside the Bāb Zuwayla, which was destined to receive the head of al-Ḥusayn b. ʿAlī. In fact, this project was never fulfilled (G. Wiet, *Les mosques du Caire*, Paris 1966, 103), but this very elegant monument, the last built under the Fāṭimids, was fortified with a *badhandj* in the style of Upper Egypt; its decoration was carefully executed and, according to the original plan, it was built above a row of shops, and comprised a narthex-loggia dominating the road going south from Cairo (Caroline Williams, *Islamic monuments in Cairo*, Cairo 1993, 106-7).

The zeal for financial success shown by Ibn Ruzzīk is partly explained by the fact that the vizier al-ʿAbbās in his flight had taken away all the currency and moveable treasures which belonged to the dynasty; this collection of wealth was recovered by the Franks when they killed al-ʿAbbās in Palestine (Ibn al-Ḳalānisī, *Dhayl taʾrīkh Dimashḳ*, ed. H.F. Amedroz, Leiden 1908, 330). That is how the magnificent Fāṭimid aiguières made from rock crystal were rediscovered in the Holy Land, from where they were to be despatched to monasteries and to the collections of European royal palaces where they were displayed as relics. The young Naṣr was handed over to Ṭalāʾiʿ, who in turn handed him to the women of the palace; they put him to death.

Ṭalāʾiʿ was the first Fāṭimid vizier to bear a *laḳab* in *al-Malik*. This followed the example of his contemporary al-Malik al-ʿĀdil Nūr al-Dīn, but was probably chosen in memory of the Būyid rulers, who were Imāmīs like himself and protectors of the Sunnī ʿAbbāsid caliphs.

When the Sunnī Ṣalāḥ al-Dīn had reunited Egypt and Syria, he bore the title of *sulṭān* which was made popular by the Sunnī Saldjūḳs. It was a title which implied a status of total political autonomy (al-Subkī, *Ṭabaḳāt al-shāfiʿiyya al-kubrā*, ed. al-Ḥilū and al-Ṭannāḥī, Cairo 1388/1968, v, 314-16).

The chroniclers drew attention to his high Arabic culture (al-Wahrānī, *Manāmāt*, ed. Shaʿlān and Naʿsh, Cairo 1968, 33-4), his ability to compose verses, and the entourage of scholars (who often came from Upper Egypt where Imāmī Shīʿīs and Ismāʿīlīs were numerous) among whom he liked to live; they are listed in *Ittiʿāẓ*, iii, 219-20. The *ḳāḍī* al-Muhadhdhab al-Ḥasan b. ʿAlī Ibn al-Zubayr, from an eminent family in Aswān, and the *kātib* al-Djālis al-Mākin Ibn al-Ḥubāb, who directed the *dīwān al-inshāʾ* along with al-Muʾaffiḳ b. al-Ḥadjdjādj, are those most often cited.

It was probably under the vizierate of Ṭalāʾiʿ that the Sunnī *ḳāḍī* al-Fāḍil, the future minister of Ṣalāḥ al-Dīn, began his public career as *kātib* of the *dīwān* at Alexandria (Ibn Khallikān, *Wafayāt*, ed. ʿAbbās, Beirut 1970, iii, 158-63).

Having to exercise political and military authority in Upper Egypt involved taking a particular interest in the pilgrimage to the Holy Cities, and as governor he had to give the governor of Ḳūṣ the order to exempt pilgrims from taxes, to deliver wheat to Mecca, or to detain *ʿumarāʾ* arriving in Egypt from the city (Garcin, *Qūṣ*, 104 f.).

In 548/1153, Nāṣir al-Dawla Yāḳūt was governor of Ḳūṣ. He supported Ṭalāʾiʿ, in particular in 551/1156, at the time of the revolt of al-Awḥad Ibn Tamīm, the governor of Damietta. But in 552/1157, relying on the discontent of an aunt of the Imām with the intrusion of the vizier into palace administration, Yāḳūt prepared a revolt and was arrested in Cairo. ʿIzz al-Dīn Ṭarkhān succeeded him a short time later in Ḳūṣ; then he was replaced by Shāwar, a page of Ṭalāʾiʿ's, who was destined to play a top-ranking political role.

In Ṣafar 549/spring 1154, the Frankish fleet from Sicily had carried out a murderous attack on Tinnīs. Ṭalāʾiʿ wanted to obtain a truce with the Franks and to pay them a tribute financed by a tax levied on the *iḳṭāʿ*s. His officers were uneasy and, thanks to some Egyptian sailors who spoke "Frankish", they launched a bold commando-type operation against the port of Tyre. Their victory put an end to his project (Ibn al-Ḳalānisī, *Dhayl*, 331-2).

In Ṣafar 549/April 1154, three months after power was taken from Ṭalāʾiʿ at Cairo, Nūr al-Dīn b. Zangī took up residence in Damascus, which he made his capital, being committed to his project of reconquering the territories occupied by the Franks. The hostility of Ṭalāʾiʿ towards the Christians was well known (Sāwīrus Ibn al-Muḳaffaʿ, *Taʾrīkh baṭārikat al-kanīsa al-miṣriyya*, iii, 1, ed. A. Khater and Khs. Burmester, Cairo 1968, in English, 74-9, in Arabic, 46-7; S.M. Stern, *Faṭimid decrees*, London 1964, 76 f.), hence his humiliation after ʿAsḳalān fell into their hands in 548/1153. Abandoning his diplomatic overtures to the Kingdom of Jerusalem, he sent the *ḥādjib* Maḥmūd al-Muwallad to Damascus to propose a joint military action to Nūr al-Dīn, to whom he had paid a tribute (Ibn al-Ḳalānisī, *Dhayl*, 353, Ramaḍān 553/autumn 1158, 356, Ṣafar 554/January-February 1159). The Egyptian army was commanded by the *nāʾib al-Bāb* Ḍirghām, for whom the military corps of the Barḳiyya had been created. He led operations at Ghazza in 553/1158, then in the interior of Palestine and beyond Jordan. The Fāṭimid fleet attacked the Frankish coast, and Beirut specifically. As the military capacity of the Fāṭimid fleet was from now on recognised, in the months which followed, Ṭalāʾiʿ received a mission from Byzantium asking for his aid against the Normans of Sicily. The brother of the Count of Cyprus had been taken prisoner, so he was despatched to the Byzantine Basileus. Then the Frankish delegates, worried at the new Mediterranean situation, came in their turn to attempt to negotiate a truce. At the same time, a reconciliation was witnessed between the Byzantines and Nūr al-Dīn.

For the Arab chroniclers (Ibn Muyassar, *Muntaḳā*, 142) these costly operations gained some success but did more harm. N. Elisséeff, *Nūr al-Dīn*, Damascus 1967, ii, 496-565, has seen them as important operations but has attributed the passivity of Nūr al-Dīn to his distrust of the stability of the Egyptian régime. G. Wiet, *L'Égypte arabe*, 287-8, gives as a reason the faint-heartedness of the Prince of Damascus, who was ill during that period. J. Prawer, *Histoire du Royaume latin de Jérusalem*, Paris 1969, i, 413, has attached no real military impact to these actions, and he scarcely mentions them.

Prudently, Ṭalāʾiʿ fortified Bilbays to block the approach of any army coming from Syria against Cairo. In Radjab 555/July 1160, Abū Muḥammad ʿAbd Allāh b. Yūsuf al-ʿĀḍid li-Dīn Allāh [*q.v.*], born in Muḥarram 546/May 1151, succeeded his cousin, al-Fāʾiz, the child who witnessed the massacre of 549/1154, but died of illness. His father, the son of the caliph al-Ḥāfiẓ, had been killed on the day of the enthronement of al-Fāʾiz. Al-ʿĀḍid was chosen as Imām by al-Ṣāliḥ al-Ṭalāʾīʿ after the first choice had rested on an adult member of the Fāṭimid family (Ibn al-Athīr, *al-Kāmil*, ix, 255; al-Fāriḳī, cited in Ibn al-Ḳalānisī, *Dhayl*, 360-1). A child of eleven years old probably seemed more inclined to comply with the directives of Ṭalāʾiʿ, who had now governed Egypt for more than six years as an absolute monarch.

The vizier made the Imām his son-in-law; he would have liked to have a grandson as caliph, but he died, assassinated at the instigation of an aunt of al-ʿĀḍid, on 19 Ramaḍān 556/11 September 1161. He was attacked in the hallway of his palace, but during his long agony the vizier was able to obtain from the young caliph the death sentence for the instigator of the conspiracy and also for the three men who carried it out. Furthermore, he had his son Ruzzīk recognised as his successor, and it was to him that he confided his three regrets: the construction outside Bāb Zuwayla of a mosque which could offer an advance position to an assailant against Cairo, the excessive expenses involved in fortifying Bilbays [*q.v.*] without having the chance to make use of it for marching on Jerusalem, and the nomination of Shāwar as governor of Upper Egypt, which posed a threat to his power in Cairo.

Historians assess his exploits in diverse ways. On the one hand Ibn Ẓāfir, *Akhbār al-duwal al-munḳatiʿa*, ed. A. Ferré, Cairo 1972, 108-13, has strongly emphasised his rapacity and his violence. On the other hand, Ibn Saʿīd al-Andalusī, *al-Mughrib fī ḥulā al-Maghrib*, ed. Ḥusayn Naṣṣār, Cairo 1970, 91-3, 217-58, 332-6, ranked him alongside Ibn Killis and al-Afḍal b. Badr al-Djamālī, as one of the very great Fāṭimid viziers. Al-Maḳrīzī, *Ittiʿāẓ*, iii, 214-54, devoted a long account to him, passing a much more finely-shaded judgement on him. In any case, this was the last great man of the Fāṭimid state, who wanted to reconstruct a strong Egypt, which could carry out its own foreign policies. He was not an Ismāʿīlī, but this was not a danger.

His son Ruzzīk succeeded him. In 569/1174, three years after the fall of the Fāṭimid régime, a descendant of Ṭalāʾiʿ took part in a vain attempt to restore the dynasty against Ṣalāḥ al-Dīn (F. Daftary, *The Ismāʿīlīs, their history and doctrines*, Cambridge 1992, 274).

Bibliography: This is extensive, but the essential references are given in the text of the article.

(TH. BIANQUIS)

ṬALĀḲ (A.), repudiation of a wife by a husband, a form of divorce, effected by his pronouncing the words *anti ṭāliḳ*. The root idea of the verb *ṭalaḳa* is to be freed from a tether, etc. (of a camel), to be repudiated by a man (of a wife; in this sense also *ṭaluḳa*), hence *ṭallaḳa*, to release (a camel) from a tether, to repudiate (a wife); *ṭāliḳ* means a camel untethered or a woman repudiated by a man (see Lane, *Lexicon* s.v.).

I. In classical Islamic law.

1. The right to a one-sided dissolution of a marriage belonged to the man exclusively, among the pre-Islamic Arabs. Long before Muḥammad, this *ṭalāḳ* was in general use among the Arabs and meant the immediate definite abandonment by the man of all rights over his wife, which he could insist upon as a result of his marriage. See Th.W. Juynboll, *De mohammedaansche bruidsgave*, diss. Leiden, 42-64, who corrects the view held by W. Robertson Smith, *Kinship and marriage in early Arabia*, 112 ff., and J. Wellhausen, *Die Ehe bei den Arabern*, in *Nachrichten v.d. Königl. Ges. d. Wiss.*, Göttingen (1893), 452 ff.

2. The Ḳurʾān lays down regulations which go into *ṭalāḳ* with comparative thoroughness. From their fullness, and still more from the many admonitions to observe them exactly, it is evident that Muḥammad was here introducing new rules which had been previously quite unknown to his contemporaries. Muḥammad found particularly repulsive the apparently not uncommon exploitation in his milieu of the wife by the *walī* as well as by the husband, which took place especially in connection with *ṭalāḳ*. The first Muslim regulation about *ṭalāḳ* seems to be the prohibition to use it for extortions from the woman: sūra IV, 24 (of the years 3-5/624-7; on the whole chronology, which is here given in further detail, see Nöldeke-Schwally, *Geschichte des Qorans*; the preceding v. 23 is directed against encroachments by the relatives of the deceased and by the *walī*): "If ye be desirous of exchanging one wife for another and have given one of them a certain sum (as *mahr* [*q.v.*] or bridal gift) make no deduction from it; would ye take it by manifest slander and sin? (25) How could ye take it when ye have had intercourse together and they (the wives) have received a binding promise from you?" (Here Muḥammad recognises *ṭalāḳ* as such as legitimate.) The next passage which deals with *ṭalāḳ* introduces an important innovation by the Prophet, namely, the period of waiting (*ʿidda*), which is on the one hand intended to leave no doubt about the real paternity of a child born from the divorced woman, and on the other to give the man an opportunity of atoning for a too-hurried pronunciation of *ṭalāḳ* by withdrawing it; thus it is laid down in II, 228: "The women who have been given the *ṭalāḳ* shall wait three *ḳurūʾ* (this expression, which is variously explained, means in any case menstrual periods); it is not permitted to them to conceal what God creates in their bodies, if they believe in God and the Last Day; their husbands have the full right to take them back during this period, if they desire to make atonement; they have to demand the same good treatment to which they were bound but the men are a step above them; and God is powerful and wise" (the man is here given the right to take back the wife during the period of waiting, even against her will). But this right now given to the man for the first time was very soon abused; the wife was taken back near the end of the period of waiting and a new *ṭalāḳ* at once pronounced over her so that she was permanently in a state of waiting, in order to induce her to purchase her freedom by giving back the *mahr* or making some other financial sacrifice; v. 229 was therefore revealed: "If the man has twice pronounced the *ṭalāḳ*, he may still keep his wife if he treat her kindly or let her go in a seemly fashion; it is not permitted to you to take away anything of what ye have given them. . . . (in an interpolation, the *khulʿ*, the amicable purchase of her freedom by the woman in contrast to the extortions condemned above, is declared permitted). (230) If he pronounces the *ṭalāḳ* over her for the third time, it is not permitted for him to take her again unless she has married another husband; if the latter pronounces the *ṭalāḳ* over her, it is no sin for the two to return to one another if they think they can observe God's commands; these are the commands of God which

make clear to those who have knowledge" (it is probable that the second part of v. 230 was induced by a concrete case in which a thrice-divorced woman who had married another husband and received the *ṭalāḳ* from him also, desired to marry her first husband again). A further extension made necessary by the practice, which was intended to prevent abuses of the right of taking back the wife during the period of waiting, is given in v. 231: "If ye give women the *ṭalāḳ* and they reach their time, retain them with you kindly or let them go kindly; but do not keep them to harm them with hostile intent; he who does so only injures himself; make not a jest of God's words!" (Here it is forbidden to take back the wife under a show of reconciliation, and to keep her simply with the object of making her life uncomfortable and forcing her to purchase her release by the payment of a sum of money; the perhaps contemporary v. 232 contains warning admonitions to the *walīs* of divorced women.) Later than II, 228, which is presupposed, but still before the year 5/626-7 are the regulations of LXV, 1: "O Prophet, when ye pronounce the *ṭalāḳ* over women, do it with regard to their period of waiting (the meaning, not quite clear, of the Arabic expression seems to be that *ṭalāḳ* is to be pronounced in such a way that the period of waiting can be easily calculated, i.e. not during menstruation), and calculate the time exactly and fear God your Lord; put them not out of your houses and they are not to depart of their own accord, unless they have manifestly done something shameful (i.e. committed adultery); these are the commands of God, and whoso transgresseth them injureth himself alone; thou knowest not whether God after this may not bring about a change (in the attitude of the man to the woman so that he may take her back). (2) When they have reached their time, then either help them with kindness or separate from them with good feeling, and take upright people from among you as witnesses and bear witness before God. This is a caution for him who believes in God and the last day. (3) (further exhortations to observe the precepts). (4) If your wives can no longer expect a menstrual period or have not yet had one and ye are in doubt (as a result, about the period of their waiting), their period of waiting shall last three months, and if they are pregnant, the period shall be until they are delivered; God will make His commands easy to him that feareth him. (5) (further exhortations). (6) Let them live where ye live, in keeping with your means and oppress them not by making their lives unpleasant; if they are pregnant, maintain them till they are delivered . . ." (here follow rules for the divorced woman while she is nursing); (in these verses certain obligations are laid upon men regarding the housing and maintenance of their wives during the period of waiting; this completes the work of protecting the woman against financial exploitation by the man in connection with *ṭalāḳ*, which IV, 24 had begun). XXXIII, 48, belongs to the end of the year 5/626-7: "O believers! when ye marry believing women and then pronounce the *ṭalāḳ* over them before ye have consummated the marriage, ye have not to make them wait a period; provide for them and dismiss them in a suitable fashion." The general rule here given is stated more fully in II, 237: "It is no sin for you if ye pronounce the *ṭalāḳ* over your wives before ye have consummated the marriage or made a settlement (as bridal gift) upon them; provide fairly what is needful for them, the well-to-do according to his fortune and the impoverished according to his means; this is a duty for those who do what is right. (238) If ye pronounce the *ṭalāḳ* over them before ye have consummated the marriage, and have already made a settlement upon them (as *mahr*), ye shall give them half of what ye have settled unless they withdraw their claim, or he withdraws who has to decide about the contract of marriage (i.e. the husband); that you should withdraw your claim is nearer to the fear of God; forget not generosity to one another; God sees what ye do" (this rule also seems to owe its origin to a concrete case in which doubts had arisen; on the legal significance of the withdrawal from the promise of marriage, which here appears as a *ṭalāḳ* before consummation, see Juynboll, *op. cit.* 73).

In addition, there are XXXIII, 28 (of the end of the year 5) and LXVI, 5 (of the late Medinan period in which Muḥammad threatens his own wives with *ṭalāḳ*, as well as II, 226-7, where *ṭalāḳ* is mentioned in connection with *īlā'*.

3. *Ṭalāḳ* is treated hardly less fully in the *Ḥadīth* than in the Ḳur'ān. Besides numerous traditions which simply repeat the well-known precepts of the Ḳur'ān and therefore need not be dealt with here, there are also some which further develop the doctrine of *ṭalāḳ*. A group of *ḥadīths* which endeavour to limit as much as possible the *ṭalāḳ*, deserves particular attention: "Among permitted things, *ṭalāḳ* is the most hated by God"; two arbiters appear who are to negotiate between husband and wife; the wife cannot demand from the husband that he should pronounce the *ṭalāḳ* over another wife on her account; God punishes the woman who seeks *ṭalāḳ* from her husband without sufficient reason. LXV, I, is unanimously interpreted to mean that it is forbidden to pronounce the *ṭalāḳ* during the woman's period of menstruation; such a *ṭalāḳ* is regarded as a sin and error (*khaṭa'*, the opposite of *ṣawāb*) but its validity is not disputed; the man who has pronounced it should, however, withdraw it and, if he insists on a divorce, should pronounce a *ṭalāḳ* in keeping with the rules. A question not yet conceived in the Ḳur'ān is that of the effect of a *ṭalāḳ* pronounced three successive times. The traditions are divided regarding this; alongside the approval of such a thing, there is the strongest disapproval, sometimes it is even held to be invalid. In the same direction points the *ḥadīth* that, down to the caliphate of 'Umar such a *ṭalāḳ* was considered to be a single one, and that 'Umar was the first to introduce into jurisprudence his view that it was a threefold one, in order to restrain people by fear of the undesirable consequences of this abuse. The traditions further mention as a third requirement for the *ṭalāḳ* which is to be *sunna*, i.e. in keeping with the prescriptions of the Ḳur'ān and of the Prophet, that the man during the woman's period of purity in which he pronounces it must have had no intercourse with the woman. The so-called *taḥlīl*, which consists in marrying a thrice divorced woman and at once pronouncing the *ṭalāḳ* over her, simply with the object of enabling her to remarry her first husband (see II, 230) is strongly disapproved of and even cursed. In general, the woman is only considered "permitted" (*ḥalāl*) for the first husband when the second marriage is actually completed. To check frivolous pronunciation of *ṭalāḳ*, a *ṭalāḳ* pronounced in jest is considered legal and binding. As, on the other hand, *ṭalāḳ* means the dissolution of the marriage, a *ṭalāḳ* pronounced before the conclusion of the marriage is of no importance. Whether a woman who has thrice received *ṭalāḳ* has a claim during the period of waiting on her husband for lodging and maintenance is not evident from the Ḳur'ān; the earliest differences of opinion are enshrined in a group of

traditions, some of which completely deny any such claim, some of which recognise it only for lodging and some for maintenance also.

Ṭalāḳ between slaves is not regulated in the Ḳur'ān; the *ḥadīth* gives the slave also the right to *ṭalāḳ* but (in analogy with other legal enactments) only twice, and similarly puts the period of waiting of a slave-woman at two *ḳurū'* or menstrual periods. Anyone who becomes a convert to Islam and has more than four wives is bound to keep four and pronounce *ṭalāḳ* on the others. If he has married two sisters, he must pronounce *ṭalāḳ* on one of them. Finally, it should be mentioned that according to tradition, Muḥammad at once gave *ṭalāḳ* to women who took their refuge with God before him, and is said to have induced 'Abd Allāh b. 'Umar to separate from his wife by a *ṭalāḳ* out of consideration for his father's dislike of her.

4. The oldest jurists (down to the beginning of the formation of the *madhhabs* or law schools), some of whom go back to the time of the origin of the traditions, develop the doctrine of *ṭalāḳ* on the lines indicated above; the most important views to be mentioned here are the following. The doctrine of *ṭalāḳ al-sunna* and its three requirements is further developed. It is ascribed among others to 'Abd Allāh b. al-'Abbās, 'Abd Allāh b. Ma'sūd, 'Abd Allāh b. 'Umar, al-Ḍaḥḥāk, Ḥammād, Ibrāhīm al-Nakha'ī, 'Ikrima, Mudjāhid and Muḥammad b. Sīrīn (such attributions to the oldest authorities may possibly be regarded as unhistorical; they only become certainly historic with Ibrāhīm al-Nakha'ī; this is also true of what follows). It is even applied to the case when a woman is pregnant; for this, 'Abd Allāh b. Ma'sūd, Djābir b. 'Abd Allāh, Ḥammād, al-Ḥasan al-Baṣrī and Ibrāhīm al-Nakha'ī are given as authorities. *Ṭalāḳ* pronounced three times in immediate succession is considered a sin but as thrice valid by the overwhelming majority, including 'Abd Allāh b. al-'Abbās, 'Abd Allāh b. Mas'ūd, 'Abd Allāh b. 'Umar, Ḥammād, al-Ḥasan al-Baṣrī, Ibrāhīm al-Nakha'ī and al-Zuhrī. Sometimes the view is even described as the only prevailing one, against which no contradictory opinion exists; but at a somewhat later date there were nevertheless champions of the view that *ṭalāḳ* of this kind is to be considered as only once valid. While, according to the view of the majority, among whom are mentioned 'Abd Allāh b. al-'Abbās and al-Ḍaḥḥāk, the wife becomes *ḥarām* for the man after a threefold *ṭalāḳ* and can only marry him again after completing and dissolving a marriage with another man, these consequences come into force after a twofold *ṭalāḳ*, if the man does not withdraw it, but "allows the woman to go". That the second marriage must be actually consummated if the woman is to be *ḥalāl* again to the first man, is unanimously demanded, e.g. by 'Abd Allāh b. al-'Abbās, 'Abd Allāh b. al-Mubārak, 'Abd Allāh b. 'Umar, Ibrāhīm al-Nakha'ī, Sa'īd b. al-Musayyab and al-Zuhrī. The validity of *ṭalāḳ* pronounced in jest, is expressly affirmed by 'Abd Allāh b. Mas'ūd, Ḥammād, Ibrāhīm al-Nakha'ī and is regarded as generally recognised. The principle is unanimously affirmed that, in ambiguous expressions, the opinion of the speaker decides, but there is much difference of opinion as to whether certain expressions are to be considered ambiguous or not, and also whether the *ṭalāḳ* pronounced under pressure or under the influence of intoxication is valid or not. Here it is a question of the application of principles, important in other cases also, in a field which on account of its practical importance had a great influence on its development. The validity of the *ṭalāḳ* pronounced before the consummation of the marriage is denied, in agreement with the tradition of 'Abd Allāh b. al-'Abbās, 'Alī, 'Ikrima, Mudjāhid, Sa'īd b. al-Musayyab, etc. *Ṭalāḳ* pronounced on condition that the marriage is consummated (if I marry thee, thou art divorced) is, on the other hand, recognised as valid by 'Abd Allāh b. Mas'ūd, 'Abd Allāh b. 'Umar, Ibrāhīm al-Nakha'ī and al-Zuhrī, while others deny it. Any *ṭalāḳ* pronounced before the consummation of the marriage is irrevocable (see sūra II, 238; XXXIII, 48); authorities for this are 'Abd Allāh b. al-'Abbās, Ḥammād, Ibrāhīm al-Nakha'ī and al-Zuhrī, etc. (this rule is undoubtedly in the spirit of the Ḳur'ān; see XXXIII, 48). The different views found in the *Ḥadīth* regarding the claims of the thrice-divorced woman to lodging and maintenance are also found here: according to 'Abd Allāh b. al-'Abbās, al-Ḥasan al-Baṣrī and 'Ikrima, she has no claim at all, whilst according to al-Zuhrī (who, however, also appears among the advocates of the first view but probably wrongly) only to lodging. According to 'Abd Allāh b. Mas'ūd, Ḥammād, Ibrāhīm al-Nakha'ī and 'Umar, the claim is to lodging and maintenance. 'Abd Allāh b. 'Umar, Sa'īd b. al-Musayyab and al-Zuhrī allow the slave only the possibility of the twofold *ṭalāḳ*, whether in respect of a female slave or a free woman.

According to 'Abd Allāh b. Mas'ūd and Ibrāhīm al-Nakha'ī, on the other hand, the deciding factor is the status of the woman as a slave, so that every husband of a slave, whether slave or freeman, has only the possibility of a twofold *ṭalāḳ*. The Ḳur'ānic expression *ḳurū'* (228-9) is sometimes interpreted as menstruation and sometimes as the period of purity; among the representatives of this former view are 'Abd Allāh b. al-'Abbās, 'Abd Allāh b. Mas'ūd, al-Ḍaḥḥāk, Ḥammād, Ibrāhīm al-Nakha'ī, 'Ikrima, 'Umar and the 'Irāḳīs; as adherents of the latter view, 'Abd Allāh b. 'Umar, al-Zuhrī (the first view is also wrongly attributed to him) and the Medinans are mentioned; 'Alī and Sa'īd b. al-Musayyab appear in both groups. Less important differences of opinion are associated with the interpretation of different Ḳur'ānic expressions in II, 228, and LXV, I, 2, 4. There is unanimity on the point that the man has the right to withdraw *ṭalāḳ*, even against the will of the woman. This is expressly stated, e.g. by 'Abd Allāh b. al-'Abbās, al-Ḍaḥḥāk, al-Ḥasan al-Baṣrī, Ibrāhīm al-Nakha'ī, 'Ikrima and Mudjāhid.

5. The teachings of *fiḳh* on *ṭalāḳ*, which can be briefly summarised as follows, are based on the above. The husband has the right to pronounce the *ṭalāḳ* on his wife even without giving the reasons, but his pronouncing it without good grounds is considered *makrūh* (reprehensible), and by the Ḥanafīs even as *ḥarām* (forbidden); the *ṭalāḳ al-bid'a* also, i.e. one in which the requirements of the *ṭalāḳ al-sunna* (see above) are not observed, is regarded as *ḥarām*; however, the validity of the *ṭalāḳ* is not in any way affected thereby. To be able to pronounce *ṭalāḳ*, the husband must have attained his majority and be *compos mentis*; the *ṭalāḳ* of a minor is regarded as valid only by one tradition of Aḥmad b. Ḥanbal; the guardian acts for the legally-disqualified husband. *Ṭalāḳ* is a personal right which the husband must exercise in person or through a mandatory specially appointed by him; he may even entrust this mandate to his wife, who can then pronounce the *ṭalāḳ* on herself. *Ṭalāḳ* presupposes a valid marriage; *ṭalāḳ* pronounced on condition that the marriage is carried through (see above) is invalid according to the Shāfi'īs and Ḥanbalīs, but valid

according to the Ḥanafīs and Mālikīs (according to the latter, however, not if it is expressed in quite general terms, e.g. "every woman that I marry, is divorced").

Ṭalāḳ pronounced in delirium or by a lunatic is invalid. The *ṭalāḳ* of an intoxicated man has given rise to lively discussions in all the *madhāhib*; in the case of culpable intoxication, it is regarded as valid by the majority. *Ṭalāḳ* pronounced under pressure is valid according to the Ḥanafīs, but not according to the Mālikīs, Shāfiʿīs and Ḥanbalīs.

Words referring unambiguously and directly to *ṭalāḳ* bring it into operation, whatever may have been the intention of the speaker who uttered them; if the speaker uses unambiguous circumlocutions, the Ḥanbalīs, Ḥanafīs and Shāfiʿīs demand also a corresponding intention, while the Mālikīs pay no heed to the intention. In the case of ambiguous expressions or gestures, the intention of the speaker is the only deciding factor. There is a great difference of opinion among the *madhāhib* on all these questions when it comes to the individual case. The question of the validity of a conditionally pronounced *ṭalāḳ* (apart from the above-mentioned case) is also much disputed. The Ḥanafīs and Shāfiʿīs make such a *ṭalāḳ* come into operation on the fulfilment of the condition; the Mālikīs regard it, according to the nature of the condition, as sometimes at once effective and sometimes void.

The woman's period of waiting begins at once after *ṭalāḳ* unless it is a question of a *ṭalāḳ* before consummation of the marriage, which is always definite: in this case, the woman does not need to have a period of waiting and has only a claim to half the bridal gift if it was already fixed (if it was already paid, she has to pay back half of it) or to a gift at the discretion of the man, the so-called *mutʿa* [*q.v.*] (see sūra II, 237). A distinction has further to be made between a revocable and a definite *ṭalāḳ*. In the first case, the marriage is still considered legally in existence, with all its consequences, and the woman has a claim upon the man for lodging and maintenance for the whole period of waiting; on the other hand, the man has the right to revoke the *ṭalāḳ* throughout the period of waiting. If he allows the period to pass without exercising this right, the marriage is definitely dissolved at its expiry. If the bridal gift was not yet paid, it is now due unless some later date was agreed upon for its payment. If a reconciliation then takes place between the two parties and they wish to marry again, they must draw up a new contract of marriage with a new bridal gift.

With a definite *ṭalāḳ* on the other hand, the marriage is at once finally dissolved (with the single exception that a definite *ṭalāḳ* pronounced by a man during his mortal illness does not abolish the wife's rights of inheritance: thus the Ḥanafīs, Mālikīs and Ḥanbalīs, with *ikhtilāf* on details, while the Shāfiʿīs consider the opposite view the better). The woman has, however, in this case also to pass the period of waiting, during which she cannot conclude a new marriage; during this period, she has a claim on the husband for lodging but for maintenance only if she is pregnant. The husband's payment of the bridal gift is the same as in a revocable *ṭalāḳ*. The conclusion of a new contract of marriage between the former partners is impossible, unless the woman has in the meanwhile lived with another man in a regularly completed marriage (cf. II, 230); but even this way out is only open to them twice.

The third *ṭalāḳ* is considered definite among freemen (see II, 229-30) and the second among slaves; it is a matter of indifference whether the separate repudiations were announced in one marriage or in several, not separated by *taḥlīl*. In mixed marriages between freemen and slaves, the status of the man is decisive according to the Mālikīs, Shāfiʿīs and Ḥanbalīs, and of the woman according to the Ḥanafīs.

The period of waiting for a woman is three *ḳurūʾ* (see II, 228), i.e. according to the Mālikīs and Shāfiʿīs, three periods of purity, and according to the Ḥanafīs three menstruations; if she is pregnant, the period lasts till her confinement (*loc. cit.*). For a slave woman, the period of waiting is in the first case two *ḳurūʾ*, and in the second, a month and a half; if she is pregnant, the period of waiting again lasts till her confinement.

Sexual intercourse with a not definitely divorced woman during the period of waiting is not permitted according to the Ḥanafīs and the better-known view of the Mālikīs; according to the lesser-known view of the Mālikīs, Shāfiʿīs and the other Ḥanbalī view, it is forbidden. In keeping with the views of the first class, it is regarded by them as revoking *ṭalāḳ* in every case; according to the Mālikīs, only if the man intends to do so, while the Shāfiʿīs only regard an utterance by the man as revoking the *ṭalāḳ*.

6. The Shīʿa rules concerning *ṭalāḳ* only differ in unimportant details from the Sunnī ones with which we have so far dealt. In a more strict interpretation of sūra LXV, 2, the production of two legal witnesses is regarded as absolutely necessary for the validity of a *ṭalāḳ*, while the Sunnīs dispense with them. All circumlocutions, ambiguous expressions and gestures are neglected, whatever may have been the intention of the speaker.

7. As an institution of family law, *ṭalāḳ* has in practice to follow lines strongly dictated by the principles of Muslim law. The very frequent pronunciation of *ṭalāḳ*, often on the most worthless grounds and three times in succession, has brought about the following usage: if the couple wish to marry one another again after the third *ṭalāḳ*, they seek a suitable individual who is ready for a certain reward to go through the ceremony of marriage with the woman and at once repudiate her; the woman is then again *ḥalāl* for her first husband and he who undertakes this *taḥlīl* is therefore called *muḥallil*. For this purpose, a minor or a slave is used by preference. Nothing can be urged against the validity of such a procedure, providing that at the conclusion of the intervening marriage the word *taḥlīl* is not used; its permissibility is defended by the Ḥanafīs but disputed by the Mālikīs and Shāfiʿīs. The Ḥanbalī Ibn Taymiyya regarded the *taḥlīl* in general as invalid, and attacked it in a special work (see Brockelmann, II[2], 127, S II, 124), but he seems to be practically alone in this view.

The conditional pronunciation (*taʿlīḳ*) of the *ṭalāḳ* may have different objects: a man may pronounce such a *ṭalāḳ*, for example, to drive his wife or himself to something or to refrain from something by threatened separation, or to give force to some statement made by him. In India, Malaysia and a large portion of Indonesia, this *taʿlīḳ* of the *ṭalāḳ* has become a regular custom at the conclusion of a marriage; it is hardly ever omitted and serves to impose upon the man certain obligations towards his wife as a kind of pre-nuptial agreement, on the non-fulfilment of which the marriage is dissolved by the *ṭalāḳ*. Cf. Snouck Hurgronje, *De Atjèhers*, i, 382 ff.; idem, *Verspreide Geschriften*, iv/1, 300 ff., 370; Juynboll, *Handleiding tot de kennis van de mohammedaansche wet*[3], 207 ff.

On the practice of *ṭalāḳ* as it has developed in

different countries under the influence of the *Sharīʿa* and under native customary law, see e.g. for North Africa: Ubach and Rackow, *Sitte und Recht in Nordafrika*, 37, 97, 194, 277, 379; for Egypt: Lane, *Manners and customs of the modern Egyptians*, chs. iii, iv; for Transjordania: A. Jaussen, *Coutumes des Arabes au pays de Moab*, section 3; for Northwest Arabia: idem, *Coutumes des Fuquarâ*, section 4; for Indonesia, the literature quoted by Juynboll, *Handleiding*, 207, n. 3; and ethnological works and travels in general.

II. Reforms in the modern Middle East and North Africa.

1. *The impetus for reform*

Since the beginning of the 20th century, increasing dissatisfaction with traditional divorce law, against the background of changing social conditions, has spawned reforms motivated by the desire to enhance the status of women. The reforms aim to restrict the husband's right to repudiate his wife unilaterally and to provide her with grounds for judicial dissolution at her initiative.

A range of methods has provided the juristic basis for the reforms. Most important are the "eclectic" (*takhayyur*) expedient, extension of the court's discretion, administrative measures anchored in the doctrine of *siyāsa sharʿiyya*, penal sanctions, "modernistic" interpretation of the textual sources (neo-*idjtihād*), and the doctrine of public interest (*maṣlaḥa*) [see MAḤKAMA. 4. xiii, at VI, 40-1].

Relevant legislation: Algeria—Ordinance No. 59-2747, 1959; Decree No. 59-1082, 1959; Law of 29 June 1963; Family Code No. 84-11, 1984; Egypt—Law No. 25, 1920; Law No. 25, 1929; Law No. 44, 1979, replaced by Law No. 100, 1985; Iran—Family Protection Act, 1967, replaced by Family Protection Act, 1975 (repealed in 1979); ʿIrāḳ—Personal Status Law No. 188, 1959, amended by Act No. 11, 1963; Israel—[Ottoman] Family Rights Law, 1917 (OFRL), put into effect in 1919; Marriage Age Law, 1950, amended in 1960; Women's Equal Rights Law, 1951; Jordan—Law of Family Rights, No. 92, 1951, replaced by Law of Personal Status, No. 61, 1976; Kuwait—Law of Personal Status, 1980; Lebanon—OFRL, put into effect by Decree No. 241, 1942, reasserted in 1962; Libya—Law No. 112, Facilitation of Provision of *Sharʿī* Maintenance, 1971; Law No. 76, Protecting Some Rights of Women in Marriage, Divorce for Prejudice, and Consensual Divorce, 1972 (amended by Law No. 18, 1973), replaced by Law No. 10, Marriage and Divorce and their consequences, 1984; Morocco—Code of Personal Status, No. 1.57.379, 1957-58, amended by Law No. 1.93.347, 1993; The Sudan—Judicial Circulars: No. 17, *ca.* 1916, amended by No. 28, 1927; No. 41, 1936; No. 59, 1973; No. 60, 1973; No. 61, 1977; Law of Personal Status for Muslims, No. 1554, 1991; Syria—Decree No. 59, Law of Personal Status, 1953, amended by Law No. 34, 1975; Tunisia—Law of Personal Status, 1956, put into effect in 1957, amended in 1959; Turkey—Civil Code, 1926; Yemen (Republic)—Family Law No. 3, 1978, replaced by Law of Personal Status, No. 20, 1992; Yemen, South—Family Law, No. 1, 1974, replaced by 1992 Law.

2. *Curtailment of the husband's freedom of repudiation*

(a) Under OFRL (still applicable in Lebanon and Israel), in Egypt (1929), the Sudan (1936), Jordan, Syria, Morocco, ʿIrāḳ, Kuwait and Yemen, a divorce formula pronounced by a husband under compulsion, or in a state of intoxication or uncontrollable passion, etc., is no longer valid or binding.

(b) In Egypt (1929), the Sudan (1936, 1991), Jordan, Syria and Yemen, a formulaic oath to repudiate the wife pronounced merely to express determination in an unrelated matter, or as a threat to repudiate the wife with a view to inducing her to perform or abstain from some act with no intention to terminate the union, is no longer valid. In Morocco, ʿIrāḳ and Kuwait, conditional divorce is no longer valid under any circumstances. This applies also to a formula expressed in terms which need not necessarily imply divorce.

(c) In Morocco, if repudiation is pronounced during the wife's menstruation, the court shall force the husband to revoke repudiation.

(d) In some countries, more radical steps seek to make unilateral repudiation a judicial proceeding. In Tunisia, Algeria, Jordan, former South Yemen and Iran, no formula of divorce pronounced outside a court of law has any legal validity; it must be effected by judicial decree. In ʿIrāḳ, if it is not feasible for the husband to seek a court judgment he must register the repudiation during the waiting period. In Morocco (1993), repudiation may be registered only in the presence of the parties and after a *ḳāḍī*'s permission has been obtained. In Iran, both spouses were required to obtain a "certificate of impossibility of reconciliation" (see below) before a dissolution could be effected. In South Yemen, a divorce could be effected only after a "People's Committee" had failed to reconcile the spouses. In Libya (1984), repudiation can only be effected by mutual consent of the spouse, failing which the court will effect judicial divorce. In Israel (1951), divorcing one's wife against her will, unless permission to do so has been given (since 1959, prior to the divorce) by a religious court, entails a penal sanction; the divorce, however, is valid.

Turkey, with the introduction of a slightly amended form of the Swiss Civil Code in 1926, has totally abolished unilateral divorce. This applies also to Tunisia and Algeria (1984), where divorce can only be effected by a court.

3. *Judicial dissolution at the wife's initiative*

Far more radical progress has been made regarding dissolution of the marriage at the wife's (and in some countries also the husband's) initiative. A variety of Mālikī-inspired grounds have become available:

(a) Defects of body and mind, either incurable or curable only after a long period, which prevent the husband from consummating the marriage or which make married life dangerous, provided that the wife was unaware of them at the time of the marriage or, in a case where the husband was afflicted after the marriage, that she did not consent to live with him. With certain variations, such reforms have been introduced in OFRL, Egypt (1920), the Sudan (1927, 1991), Jordan, Syria, ʿIrāḳ, Algeria and former South Yemen. In Morocco, Kuwait, Libya (1984) and Yemen, this ground obtains also for the husband.

In Iran (1975), a "certificate of impossibility of reconciliation" (required for any divorce) could be obtained by either spouses on various grounds: insanity, sterility, inability or unwillingness to have normal sexual intercourse, affliction with specified diseases or with some "addiction" which is prejudicial to family

life, imprisonment, desertion of family, the commission of an offence "repugnant to family honour", etc.

(b) Non-provision of maintenance or non-payment of dower. In the Sudan (1916, 1991), Egypt (1920), Jordan, Syria, Tunisia, Morocco, ʿIrāḳ, Iran, former South Yemen, Yemen, Kuwait and Libya (1984), failure of the husband (present or absent) to provide the wife with maintenance is a ground for judicial revocable divorce (see below), provided (in some of the countries) that he has no property out of which maintenance can be collected and that a period of delay has been exhausted. In former South Yemen, either party was able to request a judicial divorce if he or she needed support and the other, who could provide it, failed to do so. In Algeria, the wife loses this option if she knew of her husband's insolvency at the time of the marriage.

In Jordan (1976), non-payment of dower due to the husband's insolvency constitutes independent grounds for dissolution.

(c) Deprivation of the husband's company. Countries vary as to the relevant period of deprivation, and as to the question of whether the husband's absence must be without legal justification, whether imprisonment is included, and whether or not the wife must expressly allege that she has suffered hardship or been exposed to the danger of unchastity. This remedy obtains in the Sudan (1916, 1927, 1991), Lebanon and Israel (under OFRL), Egypt (1929), Jordan, Syria, Morocco, ʿIrāḳ, Algeria, Iran (1975), former South Yemen (for either spouse), Kuwait, Libya (1984) and Yemen.

(d) Injury or marital discord. Countries vary as to whether and when a dissolution may be granted directly by the court or only on the recommendation of arbitrators (Mālikī law empowers them to dissolve the marriage at their discretion with no prior authorisation of the spouses), and as to the circumstances in which the wife must compensate her husband financially. This remedy obtains under OFRL, in Jordan, Syria, ʿIrāḳ, Egypt (1929, 1985), Morocco, Algeria, Libya (1972) (for the husband also), Kuwait, the Sudan (1991) and Yemen.

Lacking precise definition (except in ʿIrāḳ), injury may be regarded as a residuary ground. Thus marriage to another wife seems to fall under the heading of injury in some countries, and disputes between the spouses have been extended to cover also unequal treatment of the co-wives. With slight variations, this remedy obtains in the Sudan (1916), Lebanon and Israel (under OFRL), Jordan, Morocco, ʿIrāḳ and Iran (1975). In Egypt (1979), marriage to another wife without the consent of the first was simply deemed injurious to the latter, but from 1985 the wife must prove physical or mental injury. This option, available also to the new wife (provided she was unaware of the first marriage), expires one year from the date of the wife's learning of the polygamous marriage. In former South Yemen, this option obtained even if the second marriage had been permitted by a court. In Yemen, polygamous marriage is a ground for dissolution (available to all wives) if the husband fails to provide maintenance. The *ḳāḍī* will give the husband the choice to keep one of the wives and repudiate the others. If he refuses to do so, the *ḳāḍī* will dissolve the marriage of the wife who initiates the dissolution. In Libya (1984), if repudiation cannot be obtained by mutual consent of the spouses, the court will effect judicial divorce on grounds of injury after attempts by court and arbitrators to reconcile the spouses have been exhausted. The financial consequences of the dissolution will be determined in accordance with the spouses' responsibility for the injury.

(e) Other grounds. In the Sudan (1977, 1991), a recalcitrant wife is entitled to dissolution in return for ransom (*fidya*) after a specified period provided she proves injury and her husband refuses to divorce her. In Libya (1972), a court may impose *khulʿ* with compensation (which is a condition for its validity) where the husband vexatiously refuses to divorce his wife. In Yemen, addiction to wine, etc. and lack of equality between the spouses (*kafāʾa*) in terms of religion and morality are grounds for dissolution (the latter available for either spouse). In Tunisia, the wife may obtain dissolution for any or no reason provided she pays any compensation decided by the court.

In Israel (1950, 1960), marriage of a girl under 17 is a civil ground for dissolution by the religious court in accordance with the religious law applicable. If the husband divorces the wife, the (district) court will take this into account as a mitigating factor when deciding the penal sanction. In Kuwait, a Muslim wife's (unlike the husband's) apostasy is no longer grounds for dissolution.

4. *Legal and financial consequences*

(a) In Egypt (1929), the Sudan (1936, 1991), Jordan, Syria, Morocco, ʿIrāḳ, Kuwait and Yemen, a repudiation accompanied by a word or sign indicating a number pronounced on one and the same occasion, counts as only a single revocable repudiation provided that the marriage has been consummated, that the husband has no financial benefit (as in *khulʿ*) and that it was not preceded by two repudiations. In Yemen (1978), the reinstatement of the wife must take place before another repudiation is permitted.

(b) Divorce, after consummation, on grounds of non-provision of maintenance is a Mālikī-inspired judicial, and therefore revocable, divorce. The husband may reinstate his wife if he proves during the waiting period that he is willing and able to support her. If he fails to do so, the divorce becomes irrevocable when the waiting period expires. In Syria, dissolution on grounds of the husband's absence or imprisonment for more than three years (even if he has left property from which maintenance can be collected) counts as revocable. The husband may reinstate his wife on his return before the expiry of a waiting period. In Algeria (1984), the husband may reinstate his wife within three months enabling the court to reconcile the spouses before effecting the divorce. In former South Yemen, judicial divorce on any specified grounds was considered a single revocable divorce, while in Yemen it was irrevocable. In Kuwait, if the wife sues her husband more than twice for non-provision of maintenance, the court shall issue an irrevocable divorce on grounds of injury.

(c) In Tunisia, the husband is prohibited from remarrying his triply-divorced wife.

(d) In Jordan (1976) and Egypt (1985), non-registration of divorce entails penal sanction. In Egypt (1985), if the husband conceals the divorce from his wife, its financial consequences take effect only from the date of the wife's learning of it.

(e) In Egypt (1929) and Syria, waiting-period maintenance cannot be claimed for a period beyond one year from the date of the divorce. In several countries, the length of the waiting period has been modified.

(f) In several countries, if a man divorces his wife arbitrarily after consummation, the court may decide to award, in addition to waiting-period maintenance, compensation or a consolatory gift (*mutʿa*) not exceeding the amount of maintenance for one year (Syria, Jordan,

1976, Kuwait, Yemen), two years (Egypt, 1979, 1985), six months (Sudan, 1991), or until she marries (Iran, 1975), having regard to the husband's financial standing and the damage caused to the wife. In Algeria (1984), in addition to compensation due an arbitrarily divorced wife, each spouse may be compensated for damage caused following a divorce by the other spouse's departure from the conjugal home, and, in Tunisia, for any damage whatsoever sustained from the divorce. In Morocco (1993), Egypt (1929) and former South Yemen, the consolatory gift is determined in proportion to the husband's means and the wife's circumstances. In Israel, the High Court has ruled that a wife divorced against her will (see above) is entitled to prejudicial compensation on the grounds of violation of statutory obligation.

(g) In Algeria (1984), the husband must provide independent accommodation for his divorced wife and minor children until she remarries and, in Egypt (1985), during the waiting period; otherwise, they shall continue to occupy the conjugal home until the expiration of the period of custody.

(A. Layish)

ṬĀLAḲĀN, Ṭālḳān, the name of three places in the Iranian lands. The biographical and geographical dictionaries mention only two of these specifically (thus al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, ix, 8-13; Yāḳūt, *Buldān*, ed. Beirut, iv, 6-8: both distinguish just a Ṭālaḳān of Marw al-Rūd̲h̲ and a Ṭālaḳān of Ḳazwīn). These are nos. 1 and 2 below. There was, however, a further Ṭālaḳān in the Ṭuk̲h̲āristān-Badak̲h̲s̲h̲ān region; this is no. 3 below.

1. A town of mediaeval Gūzgān or D̲j̲ūzd̲j̲ān [*q.v.*], in what is now northern Afg̲h̲ānistān but adjacent to the frontier with the Turkmenistan Republic. The geographers al-Iṣṭak̲h̲rī and al-Muḳaddasī attach it administratively to Marw al-Rūd̲h̲ [*q.v.*], three stages away. The *Ḥudūd al-ʿālam*[2], Second series of addenda, tr. p. xxii and map at p. xxviii, and tr. 107, states definitely that it belongs to the ruler of Gūzgān, who at the time of this work's composition (372/982) belonged to the Farīg̲h̲ūnids [*q.v.*]. It clearly lay in the hills of the northern rim of the mountain range now known as the Band-i Turkistān, well-watered, with a pleasant climate, producing wine and woollen felts, and was large enough to have two congregational mosques. The exact site of the town is uncertain. Le Strange, *The lands of the Eastern Caliphate*, 423, associated ruins at Chachaktu with it, whilst Barthold located it on a small stream, that of Ḳalʿa-yi Wali (*An historical geography of Iran*, Princeton 1984, 35-7); it may, however, have been located either somewhere between modern Maymana [*q.v.*] and Dawlatābād, near mediaeval Faryāb, or else to the east of this, in the triangle Darzāb—Belčirāg̲h̲—Kūrčī.

It is quite often mentioned in the historical sources on the early Arab conquests of eastern K̲h̲urāsān and the Oxus lands, and in the years 90/709 and 116/734 there is mentioned a local ruler, called *Suhrab (al-Ṭabarī, ii, 1206, 1218, 1566). The K̲h̲ārid̲j̲ite rebel against the caliph al-Mahdī in *ca.* 160/777, Yūsuf al-Barm al-T̲h̲aḳafī, held it, together with Marw al-Rūd̲h̲ and Gūzgān (Gardīzī, *Zayn al-ak̲h̲bār*, ed. Ḥabībī, 126). A Ḥusaynid ʿAlid, Muḥammad b. al-Ḳāsim, rebelled at Ṭālaḳān in the caliphate of al-Muʿtaṣim (in 219/834: al-Ṭabarī, iii, 1165-6). In 617/1220 the Mongol Čingiz K̲h̲ān besieged its citadel, called in the sources Nuṣrat Kūh, for several months till it was captured; in the next year, the K̲h̲ān's son Toluy was using Ṭālaḳān as a base for operations against the cities of K̲h̲urāsān (see Barthold, *Turkestan down to the Mongol invasion*[3], 439, 446-7)

Bibliography: Given in the article.

2. A town of northwestern Persia, apparently in the southern part of the Elburz range, near one of the sources of the S̲h̲āh Rūd [*q.v.*], in mediaeval times called both Ṭālaḳān of al-Rayy and Ṭālaḳān of Ḳazwīn, and coming administratively in the province of D̲j̲ibāl. Although al-Muḳaddasī, 360, speaks of it as a substantial town, which might have been an administrative centre had it not been too close to the frontier (sc. with the turbulent region of Daylam), other sources seem to describe it more as a district with villages. Thus in the 8th/14th century, Mustawfī, *Nuzha*, 65, tr. 70, characterises it as a district, largely populated by Sunnīs but with some Ismāʿīlī elements.

Its chief fame in mediaeval times was as the birth place of the great Būyid vizier and littérateur, the Ṣāḥib Ismāʿīl b. ʿAbbād [see ibn ʿabbād], who consequently had the *nisba* of al-Ṭālaḳānī. The place later disappeared from history, and its exact site is not known, but the valley of Ṭālaḳān is still known and was the place of origin of the modern Āyatullāh Ṭālaḳānī [*q.v.*].

Bibliography: See also Le Strange, *The lands of the Eastern Caliphate*, 225; Schwarz, *Iran im Mittelalter*, 733-4; *Ḥudūd al-ʿālam*, tr. 132.

(C.E. Bosworth)

3. A town of Ṭuk̲h̲āristān [*q.v.*], on the modern K̲h̲ānābād river, the ancient river of Ṭālaḳān, considered by the *Ḥudūd al-ʿālam* as the easternmost town of that province, hence adjacent to Badak̲h̲s̲h̲ān; this same source spells the name also as Ṭāraḳān and Ṭāyaḳān (tr. 63, 109, comm. 339-40; cf. Marquart, *Ērānšahr*, 229-31). It lay on the road running eastwards from Balk̲h̲, K̲h̲ulm and Ḳunduz [*q.vv.*] to Kis̲h̲n in Badak̲h̲s̲h̲ān; cf. Barthold, *An historical geography of Iran*, 24. Marco Polo calls it Taican, and mentions its

castle, its corn market and the important deposits of pure salt in the mountains to the south (Yule-Cordier, *The book of Ser Marco Polo*, London 1903, i, 153-6; the salt industry is still important in the district today). In the 8th/14th century, Mustawfī, *Nuzha*, 156, tr. 153, describes it as populous and flourishing, most of the people being weavers. From the 17th to the mid-19th centuries, Ṭālaḳān was a strategic fortress in the Özbeg amīrate of Ḳataghān founded by Maḥmūd Bī. The English traveller William Moorcroft passed through Ṭālaḳān, estimating the population as considerable but fluctuating, most of these being transhumant Özbegs but with a large minority of sedentary Tādjīk traders, and counting some 1,500 houses (Moorcroft and G. Trebeck, *Travels in the Himalayan provinces of Hindustan and the Panjab... from 1819 to 1825*, London 1841, repr. Karachi 1979, ii, 456 ff., 482). But in 1859 Ḳataghān was annexed to Afghānistān by the Amīr Dūst Muḥammad's son Sardār Muḥammad Afḍal Khān, despite resistance by the Mīr Atālīk Sulṭān Murād, and from this time onwards, Ḳataghān became an integral part of the kingdom of Afghānistān (J.L. Lee, *The 'Ancient Supremacy'. Bukhara, Afghanistan and the battle for Balkh, 1731-1901*, Leiden 1996, 267-71). The old citadel was destroyed and a new cantonment and bazaar laid out nearby.

The present town of Ṭālaḳān (lat. 36° 44' N., long. 69° 32' E.) is the chef-lieu of Takhār province created in 1964 when the former province of Ḳataghān was divided into three. It has a thriving bazaar and is noted for its fine cloth. The ruins of the earlier town, Tepe Shahr, lie to the west of the modern settlement (W. Ball, *Archaeological gazetteer of Afghanistan*, Paris 1987, i, 267).

Bibliography: See also Government of India, *Gazetteer of Afghanistan*, Calcutta 1895, ii, section *Afghan Turkistan*; L. Adamec, *Historical and political gazetteer of Afghanistan*, i, *Badakhshan and Northeastern Afghanistan*, Gratz 1972. (J.L. Lee)

ṬĀLAḲĀNĪ (or Ṭāliḳānī), Āyatullāh Sayyid Maḥmūd (1911-79), prominent Iranian cleric and political activist, one of the outstanding representatives of Shī'ī modernism in Iran and a key figure in the Islamic Revolution in Iran of 1978-9.

He was born in a village of the Ṭālaḳān valley [see ṬĀLAḲĀN. 2] to the northwest of Tehran, to a father who was himself an *'ālim* and political activist. After studying in Ḳum and Nadjaf, including under such noted teachers as the Āyatullāh Ḥā'irī Yazdī [see ḤĀ'IRĪ, in Suppl.], he settled at Tehran in 1939, teaching at the Sipahsālār Seminary. He suffered spells of imprisonment and exile from the capital for his religious activities, but after the fall of Riḍā Shāh [*q.v.*] in 1941, returned to Tehran and collaborated with Mahdī Bāzargān and Yād Allāh Saḥābī in various Muslim societies, such as the *Ḳānūn-i Islāmī*, and later he supported Muṣaddiḳ's [*q.v.*] National Movement. In 1948 he became prayer leader at the Hidāyat Mosque, and this became his main centre of activity for the rest of his life.

In the 1950s to the 1970s, he was again involved in various anti-government organisations, including the National Resistance Movement (*Nahdat-i Muḳāwamat-i Millī*), gave help to the extremist group of the *Fidā'iyyān-i Islām* [*q.v.*] and had contacts with the *Mudjāhidīn-i Khalḳ*, set up in 1971 by three of his former pupils and fellow-prisoners. He was imprisoned and exiled from Tehran on various occasions up to 1978. He performed many services important to the triumph and consolidation of the Islamic Revolution; he became a member of both the Revolutionary Council and the Assembly of Experts, and Khumaynī appointed him *Imām Djum'a* of Tehran, but before his death on 9 September 1979 he openly criticised the clergy's over-engagement in political affairs and the politicisation of religion. He clearly preferred clerical oversight (*wiṣāyat-i fuḳahā'*) to clerical rule, having struggled all his life against one-man rule, political or religious, but strove to maintain the unity of the Islamic movement, and emphatically endorsed the correctness of Khumaynī's leadership. Because of his often-ambiguous statements, such diverse groups as Muṣaddiḳ's National Front, 'Alī Sharī'atī [*q.v.*], the Islamic Republic leaders and the *Mudjāhidīn-i Khalḳ* have all claimed inspiration from his ideas.

His published works include a multi-volume interpretation of the Ḳur'ān, *Partawī az Ḳur'ān*, expressing *inter alia* a developmental and progressive notion of human history; a re-issue, with his own commentary, of the 1909 treatise on government, *Tanbīh al-umma wa-tanzīh al-milla*, by the pro-Constitutionalist Sh. Muḥammad Ḥusayn Nā'īnī [*q.v.*], which expresses the view that representative government and the rule of law are desirable and both compatible with Shī'ī Islam; and *Islām wa mālikiyyat* ("Islam and ownership") (1965), the first serious and detailed discussion of Islamic economics in Persian.

(ROSWITHA BADRY, shortened by the Editors)

AL-ṬALAMANKĪ, Abū ʿUmar Aḥmad b. Muḥammad ... b. Ḳarlamān al-Maʿāfirī (340-429/951-1037), Andalusian scholar of the religious sciences, born at Talamanca near Madrid in a frontier zone frequented by ascetics of the *ribāṭs*.

He studied at Cordova, his main master being Ibn ʿAwn Allāh (d. 378/988), an open partisan of the reality of saints' miracles in the polemics then aroused on this subject in the capital, a position equally shared by al-Ṭalamankī (see M. Fierro, in *BSOAS*, lv [1992], 236-49). In the years 375-81/985-91, he travelled abroad and made the Pilgrimage, acquiring a solid grounding in the Ḳur'ānic readings, *ḥadīth* and Ṣūfism, and studying *fiḳh* with both Mālikī and Shāfiʿī masters. On his return, he became *imām* of the Mutʿa mosque at Cordova and taught there without requiring payment. When *fitna* compelled him to leave the capital, he moved permanently to Almeria and Murcia, finally going to teach in the Upper March and acquiring a great number of pupils. At the end of his life, he retired to a *ribāṭ* at Talamanca.

Al-Ṭalamankī's importance resides not only in his numerous pupils but also in his innovatory role in intellectual circles. His biographers stress his expertise in Ḳur'ānic studies but also in non-rationalist theology (*uṣūl al-diyānāt*), and his Ṣūfī tendencies are reflected in the fact that he appears as a link in the mystical *silsila* going up to the Almeria Ṣūfī Ibn al-ʿArīf (d. 536/1141 [*q.v.*]). He wrote many works, notably in the Ḳur'ānic sciences, ascetism and theology, plus a *Fahrasa* and a *Futūḥ al-Shām* (ms. Real Academia de la Historia, Madrid coll. Gayangos, no. XVIII). He opposed the extreme doctrines of the Bāṭiniyya and criticised, amongst others, the Ṣūfī Ibn Masarra, but also equally refuted the Mālikī jurist Ibn Abī Zayd al-Ḳayrawānī, who denied the reality of saints' miracles.

During a stay at Saragossa in 425/1035, al-Ṭalamankī was accused of being too radical in his condemnation of reprovable actions, of becoming guilty of *mukhālafāt al-sunna* and of being a Ḥarūrī or Khāridjite. The basis of this last accusation would seem to be his opinion that the *bayʿa* was due to God and, in regard to the exhortation of *al-amr bi 'l-maʿrūf wa 'l-nahy ʿan al-munkar*, that the head of the community should be the best Muslim and that all Muslims judged by him to be in rebellion against God were to be put to death. Another accusation seems to have arisen from al-Ṭalamankī's being at the head of a group (*djamāʿa*), whose leading man (*awwal*) he was. The *ḳāḍī* of Saragossa rejected the accusations and produced a certificate attesting his innocence. It is not impossible that these attacks on al-Ṭalamankī were related to his stance on the imāmate, crucial at that time. Against the partisans of the Umayyads and Ḥammūdids, and against those who ventured to propose the ambiguous solution consisting in designating the *imām ʿabd allāh*, generally identified with the ʿAbbāsid caliph, al-Ṭalamankī's solution seems to have been that the *imām* ought to be the best Muslim of the community, quite apart from his *nasab*. This way was the one to be followed a century later by the Ṣūfī Ibn Ḳasī [*q.v.*].

TALAS [see TARĀZ].

ṬALʿAT BEY (PASHA), MEHMED (1872-1921), a moving spirit in the Committee of Union and Progress (CUP, *Ittiḥād we Teraḳḳī Djemʿiyyeti* [*q.v.*]) before and after the 1908 revolution, minister and Grand Vizier (1917-18). He was born in the border town of Edirne to a lower middle-class family. His father died when he was eighteen, and he became the family's bread winner, entering the postal service as a clerk. Ṭalʿat also taught Turkish and learned French at the *Alliance Israëlite Universelle* school in Edirne. He became active in the underground opposition against Sultan ʿAbd ül-Ḥamīd II [*q.v.*] and was arrested in 1895. After serving two years in prison, he was pardoned and exiled to the bustling, cosmopolitan city of Salonika, where he again joined the secret constitutional movement. In 1906, he was one of the founders of the Ottoman Liberty Committee (*ʿOthmānlī Ḥürriyyet Djemʿiyyeti*), which then affiliated with the CUP.

After the restoration of the constitution in July 1908, Ṭalʿat, described as the "the internal secretary", was perhaps the single most important member of the CUP, though he lacked the charisma of an Enwer Pasha [*q.v.*]. He was elected deputy for Edirne in 1908, and served that constituency until 1918. Unable to take power directly, the Committee tried to control the government through parliament. But rivalry between its secret bodies like the central committee (*merkez-i ʿumūmī*) and the parliamentary group made this difficult, and Ṭalʿat, who was a member of both bodies, had the unenviable task of mediating between them and reconciling their differences. He was elected Vice-President of the Chamber, and in July 1909 led the parliamentary delegation to the capitals of Europe to explain the revolution.

The Unionists wanted to exercise power indirectly by having their deputies appointed as under-secretaries to important ministries. But when this manoeuvre failed, they decided to assume office directly. Therefore, in August 1909, Ṭalʿat entered the cabinet in the critical post of Minister of the Interior in the cabinets of Ḥilmī [*q.v.*] and Ḥaḳḳī Pasha [*q.v.*]. He was forced to resign on 10 February 1911 because chauvinists in the assembly claimed that he had not taken sufficiently harsh measures to quell rebellions in Albania, Macedonia and the Yemen. He was elected president of the parliamentary party (21 February 1911) and again became Interior Minister (and later Minister of Posts and Telegraph) in Saʿīd Pasha's [*q.v.*] cabinet in 1912. When the CUP was ousted from power in July 1912 by a military *coup d'état*, Ṭalʿat rallied the Unionists and organised a Committee of National Defence during the Balkan Wars on the model of the Jacobins in the French Revolution, emerging as the CUP's "Danton".

Ṭalʿat was instrumental in organising the Unionist

coup d'état of 23 January 1913 and the recapture of Edirne from the Bulgarians. He again entered the Saʿīd Ḥalīm Pas̲h̲a cabinet as Interior Minister in June 1913 following the assassination of Maḥmūd S̲h̲ewḳat Pas̲h̲a [*q.v.*]. His appointment was a victory for the civilian wing of the CUP over the military faction which sought D̲j̲emāl Pas̲h̲a's appointment to this post. As Interior Minister, he was held responsible for the brutal implementation of the 1915 law to deport the Armenian population from the war zones. When Saʿīd Ḥalīm resigned in February 1917, Ṭalʿat was appointed Grand Vizier with the rank of Pas̲h̲a. He retained the portfolio for interior affairs and also acted as Finance Minister until D̲j̲āwīd Bey's appointment. Because of his personal integrity and modesty, and his tendency to please everyone, he was acceptable to the various factions in the CUP, which he kept united. His government's dependence on Germany forced him to declare war on the United States and to make concessions when he negotiated the Treaty of Brest-Litovsk in 1918. When he saw that the war was lost, he resigned on 8 October to make way for a non-Unionist government which might obtain better armistice terms from the victors. He then convened the last congress of the CUP on November 1 and dissolved the organisation. On the same day, he and some other prominent Unionists left Istanbul for Germany, where he lived until his assassination in Berlin on 15 March 1921 by Soghomon Tehlirian, an Armenian nationalist.

(FEROZ AHMAD)

ṬALʿAT PAS̲H̲A, MEḤMED [see Suppl.].

TALBIYA (A.), the invocation made in a loud voice and repeatedly by the pilgrim when he enters the state of ritual taboo (*iḥrām*) for the Pilgrimage at Mecca [see ḤAD̲J̲D̲J̲].

This moment begins on entering the *Ḥaram* or sacred area and at the points where the pilgrims gather together (*mawāḳīt*) on the boundaries of the enclosure. Amongst the practices to be followed by the pilgrims are prayers and movements (see T. Fahd, *Les pratiques musulmanes*, in *Atlas des religions*, Encylopaedia Universalis, Paris 1988, 319-23). On entering the sacred territory, the pilgrim expresses his intention to make the Pilgrimage by repeating the formula "Here I am! Here I am! O Allāh, Who has no associate! To You are praise, grace and power! Here I am!" It is after this necessary condition, with the state of ritual taboo and by this predisposition, that the ritual of the Pilgrimage properly begins.

Like other parts of the Meccan Pilgrimage, the *talbiya* goes back to ancient times, certainly to that of Ḳuṣayy [*q.v.*], reformer of the cult in Mecca. All the tribes had such a formula when visiting their idols, and especially when undertaking the Meccan Pilgrimage, the greatest and most famous in the Arabian peninsula. Muḳātil b. Sulaymān (d. 150/767) in his *Tafsīr* of Ḳur'ān, XXII, 31, gives a list of 56 *talbiyas*, of a composite and even artificial nature (see text and comm. by M.J. Kister, Labbayka, Allāhumma, labbayka. *On a monotheistic aspect of a Jāhiliyya practice*, in *JSAI* [1980], ii, 33-57, repr. with 9 pp. of additional notes in his *Society and religion from Jāhiliyya to Islam*, Variorum, London 1990, no. 1). Also, Sayyid Muʿaẓẓam Ḥusayn gathered together 28 formulae of the pre-Islamic tribes uttered when entering the *Ḥaram* (*Talbiyât al-Jâhiliyya*, in *Procs. of the Ninth All-India Oriental Conference*, 1937, 361-9), mentioning only as his source Abu 'l-ʿAlā' al-Maʿarrī, who, in his *Risālat al-G̲h̲ufrān*, gives seven versified *talbiyas* (Cairo 1382/1963, 535). Kister has also analysed the material in Muḥammad b. Ḥabīb's *Muḥabbar*, 311-15, Muḳātil (see above) and al-Yaʿḳūbī in his *Taʾrīk̲h̲*, i, 296-7.

Talbiya denotes the act of reciting formulae beginning with *labbay-ka*, (< form II verb *labbā*, in the sense of form IV *alabba* "halt, set foot in a place", referring to the arrival of the pilgrims at the boundaries of the *Ḥaram* and their alighting from their mounts, and then placing themselves, by this formula, at the disposal of Allāh, master of the place, by entering into a state of sacralisation.

An example, using the numbering adopted by Kister from Muḳātil, is as follows:

The *talbiya* of the Ḥums [*q.v.*] (nos. 1, 17, 32), a group concerned with the religious cult and religious life in Mecca, grouping together such leading tribes as Ḳuray s̲h̲, K̲h̲uzāʿa, Kināna and ʿĀmir b. Ṣaʿṣaʿa:

Labbayka Allāhumma! Labbayka! Lā s̲h̲arīk laka illā s̲h̲arīk[an] *huwa laka tamlikuhu wa-mā malaka*! (no. 1), translatable as:

"Here we are (as if it were *labbaynā-ka*), O Allāh! Here we are! You have no associate, unless it is an associate whom You dominate and who has no power (or possibly, "unless it is an associate of whom You are master with what he possesses)!" (i.e. taking *mā* here as a relative pronoun rather than as a negative).

There is also another *talbiya* of the Ḥums (no. 45) and *talbiyas* of Tamīm (no. 3) and Rabīʿa (nos. 4, 17, 38). Noteworthy is the one of Bakr b. Wā'il (no. 50), a component tribe of Rabīʿa, with some Christian sections, notably in the S̲h̲aybān and ʿId̲j̲l [*q.vv.*]. These Christians seem to have attended the Pilgrimage under the banner of Rabīʿa, with the aim of trading:

Labbayka Allāhumma! Labbayka! Labbayka ʿan Rabīʿa, samīʿa wa-muṭīʿa, li-rabb[in] *mā yuʿbadu fī kanīsa wa-bīʿa, ḳad k̲h̲allafat awt̲h̲ānahā fī ʿiṣmat*[in] *manīʿa*:

"Here we are, O Allāh, here we are! Here we are in the name of the Rabīʿa, submissive and obedient to a certain (*mā*) God, worshipped in a church and a synagogue. They have left behind them their idols in a well-guarded place."

The *mā* could be taken as a negative, but this seems unlikely, for Allāh of the Kaʿba was, in the eyes of Arab Christians in pre-Islamic times, if only nominally, the one whom the Jews and Christians used to invoke in their places of worship. If the Rabīʿa, pagans and nomads, did not come for gain, the Christians amongst

them came under their banner to trade. It is unthinkable that trading should be excluded in such a panegyric. If the Ḳur'ān, II, 198, considers it as licit, it must have been practised, if only by Christians and Jews, whilst Judaeo-Christians (? Ebionites) [see ṢĀBI'A] who lived at Mecca must inevitably have been associated in this great annual event which brought prosperity to the town.

The above examples (see for further analyses of *talbiyas*, Kister, *op. cit.*) give an idea of the *talbiyas*' form, close to that of rhymed and assonantal *sadj*ʿ [*q.v.*]. They announced the entry of the official tribal representatives into the *Ḥaram* and could not have an individual character. Whereas Islam, substituting the individual for the tribe and preaching brotherhood between believers, made the *talbiya* into a personal invocation, that of the individual before Allāh, who was to perform the rites of the Pilgrimage with a personal guide; hence the phrase "Here we are" becomes "Here I am".

The Islamic *talbiya* is pronounced with the *tahlīl* [*q.v.*], "the joy felt at seeing the new moon", which opens the ceremonies. One should note that the moon is called *hilāl* in the last two nights (26th and 27th) of the lunar month and the first two (1st and 2nd) of the following month. It is thus called because people raise their voices to hail it (*TʿA*, s.v.). The pilgrim is only *muḥrim* when he has pronounced the *talbiya* in a loud voice (al-Bukhārī, *Ḥadjdj*, 147; Abū Dāwūd, *Manāsik*, 56). According to al-Bukhārī, *Ṣayd*, 18, the Prophet ordained the *ihlāl* for the pilgrim, saying that he received the command to do this from Djibrīl (Gabriel), and Ibn Ḥanbal, i, 217, says that the *talbiya* is the ornament (*zīna*) of the Pilgrimage.

The passive verb *uhilla* is used in the Ḳur'ān II, 173, etc., in the sense of bloody offerings to the gods. Should one see here sacrifices made at the appearance of the new moon, as Ḳur'ān II, 189, suggests? In the *Ḥadīth*, *ahalla* is used for sacrifices to Manāt (Muslim, *Ḥadjdj*, 26; Ibn Ḥanbal, vi, 192).

Finally, one may note that *talbiya* has become a synonym of *iḥrām*, sacralisation, and *ihlāl*, jubilation (*TʿA*, s.vv.), i.e. psalmody, with the jubilation of the invocation formula by which the *muḥrim* pilgrim proclaims his *islām*, submission, to the One God (*tawḥīd*).

TALDJI'A [see ḤIMĀYA].

TALFĪḲ (A.), a notion in Islamic law.

1. In classical Islamic law.

The basic meaning of *lafaḳa* and form II *laffaḳa* is "to sew (a garment) together (by joining two lengths of cloth)", whence "to patch together", and by an extension of meaning, "to piece together (a verse or story), to concoct", which is close to the legal meaning. In legal jargon, *talfīḳ* connotes the bringing together of certain elements of two or more doctrines in such a manner as to create therefrom yet another, different doctrine. It is to be noted that no technical dictionary lists the term (in any of its forms), and that the strictly technical connotation attached to the concept in modern legal reform is absent from classical and mediaeval juristic discourse. In fact, the verb form *lafaḳa* seems to have been as commonly in use as the verbal noun *talfīḳ*.

In pre-modern juristic works, the notion of *laffaḳa*/*talfīḳ* arises in the context of departing from the doctrine of the *mudjtahid* [see IDJTIHĀD], whom the layman otherwise follows. One type of such a departure is to combine in a single transaction two or more elements from the doctrines of two or more *mudjtahids*. This combination may acquire one of two forms. The first is what may be termed a synchronic combination, as when an individual enters into a marriage contract without having a guardian (*walī*) or witnesses. Here, the individual would be combining elements of the Ḥanafī and Mālikī schools, for the Mālikīs consider matrimonial contracts to be valid without the existence of witnesses (though they would be required for the consummation of marriage); and Abū Ḥanīfa held that the marriage of a free woman who is of age and of sound mind—whether a virgin or not—is valid through her consent, even if no guardian is involved. The second is what may be called a diachronic combination, namely, when another school's or *mudjtahid*'s doctrine is followed in a transaction whose juridical effect (*athar*) has not been completely exhausted. An example in point is the case of an individual who exercises the right of pre-emption (*shufʿa* [*q.v.*]) according to the Ḥanafī school, which allows the adjoining neighbour to exercise such a right. Once in possession of the property, and in a future sale, he adopts the Shāfiʿī or Mālikī doctrine which restricts the right of pre-emption only to the co-owner and does not acknowledge the adjoining neighbour as enjoying this right. Both of these forms of *talfīḳ* were considered downright unlawful. A *talfīḳ* may be deemed lawful only if a *mudjtahid* shows that his combination is grounded in textual evidence (*dalīl*).

Wiederhold, *Legal doctrines in conflict: the relevance of* madhhab *boundaries to legal reasoning in the light of an unpublished treatise on* taqlīd *and* ijtihād, in *Islamic Law and Society*, iii/2 (1996).

(WAEL B. HALLAQ)

2. In modern Islamic legislation.

Talfīḳ, an extension of the eclectic (*takhayyur*) expedient, designates any modern legislative enactment which combines, in a single statutory provision, parts of doctrines of more than one recognised Sunnī school. In its extreme form, the juristic opinions invoked may not only be mutually contradictory, but the statutory provision in its entirety might be such that it would not have been approved by any of the authoritative schools or jurists.

The components of the doctrines are selected on the basis of their suitability for changing social conditions regardless of their historical and systematic contexts. This expedient, inspired strongly by the liberally-oriented modernist movement in Islam, has been used extensively in matters of personal status, succession and *waḳf*. Although traditionally the ruler has the right to impose on the *ḳāḍīs* the chosen opinions of the ancient authorities, today the application of *talfīḳ* by sovereign parliaments actually undermines the doctrine of *taḳlīd* [*q.v.*], and signifies the transition of Islamic law from jurists' law to statutory law [see TASHRĪʿ].

Bibliography: N.J. Coulson, *A history of Islamic law*, Edinburgh 1964, 197-200; J.N.D. Anderson, *Law reform in the Muslim world*, London 1976, 55-58; J. Schacht, *An introduction to Islamic law*, London 1964, 68 n., 106; A. (A. LAYISH)

ṬALḤA B. ʿUBAYD ALLĀH, prominent Companion of Muḥammad, is counted among the first

eight converts to Islam and the ten *mubas͟hs͟hara*, those to whom the Prophet had promised Paradise. He belonged to the clan of Taym b. Murra of Ḳurays͟h and thus was a kinsman of Abū Bakr, but was about twenty years younger than he. The two were evidently closely associated and were known as the "two mates (*ḳarīnān*)." According to the prevalent explanation, they were thus named because during the early persecution of the Muslims they were once tied together with a single rope. According to another explanation, the young Ṭalḥa was made by his father a close associate of Abū Bakr. Ṭalḥa's mother was al-Ṣaʿba, daughter of ʿAbd Allāh b. ʿImād al-Ḥaḍramī, confederate of Ḥarb b. Umayya.

According to his own account, Ṭalḥa was told by a monk in Buṣrā about the advent of "the last of the prophets." After hurriedly returning to Mecca, he was introduced by Abū Bakr to Muḥammad and accepted Islam. He continued carrying on his caravan trade in Syria and did not join the emigration to Abyssinia. At the time of Muḥammad's and Abū Bakr's *hid̲j̲ra*, he met them on the way at al-K̲h̲arrār as he came from Syria. He provided them with clothes from Syria and information about the Muslims in Medina. Then he went on to Mecca and later escorted the family of Abū Bakr, including ʿĀʾis͟ha, to Medina. Just before the battle of Badr, Muḥammad sent him, together with Saʿīd b. Zayd b. ʿAmr b. Nufayl, to spy on the Meccan caravan. The two were thus not present at the battle, but were given their share of the booty. At Uḥud he greatly distinguished himself by personally shielding the Prophet. He killed two Meccans and received numerous wounds, one of which left one or two of his fingers paralysed. It was for his bravery on that occasion that Muḥammad promised him Paradise. He participated in all later campaigns and battles of the Prophet.

After Muḥammad's death, Ṭalḥa backed his kinsman Abū Bakr. Isolated reports of Ibn Isḥāḳ and others that he initially stayed with ʿAlī and refused to pledge allegiance to Abū Bakr are unreliable. He took a prominent part in the battle of D̲h̲u ʾl-Ḳaṣṣa which opened the war of the *Ridda*. Before Abū Bakr's death he is said to have vainly protested against the caliph's choice of ʿUmar as his successor, complaining about the latter's rough treatmemt of Muslims even during Abū Bakr's reign. It is not impossible that he already aspired himself to the caliphate. ʿUmar appointed him one of the six electors and candidates for the succession. At the time of ʿUmar's death, however, he was not present in Medina and thus did not participate in the election of ʿUt̲h̲mān. When he returned to Medina, he displayed his dissatisfaction about his exclusion from the election remarking that he was not someone whose views could be ignored. ʿUt̲h̲mān is said to have offered to resign to allow a fresh election, but Ṭalḥa, having made his point, pledged allegiance to him. ʿUt̲h̲mān at first made special efforts to gain his backing by generous gifts. According to Ṭalḥa's son Mūsā, the caliph's presents to Ṭalḥa amounted to 200,000 dīnārs. ʿUt̲h̲mān also allowed him to exchange his share in the oasis of K̲h̲aybar for the highly lucrative estate of al-Nas͟htāstad̲j̲ near Kūfa. Ṭalḥa soon, however, turned against him and eventually became his harshest critic among the major Companions. He wrote letters to the provincial garrison towns summoning them to revolt against the caliph. During the siege of ʿUt̲h̲mān's palace in Medina, he took possession of the treasury keys and kept close contact with the besieging Egyptian rebels. He evidently shared their aim of forcing ʿUt̲h̲mān out of office and expected, with strong backing from ʿĀʾis͟ha, to be chosen as his successor.

After the murder of ʿUt̲h̲mān, Ṭalḥa at first had some support among the Egyptian rebels and the Ḳurays͟h present in Medina. The Kūfan rebels favouring ʿAlī, however, soon gained the upper hand, being backed by the great majority of the Anṣār. Ṭalḥa was dragged by the Kūfan leader al-As͟htar to the mosque to pledge allegiance to ʿAlī against his will, though no physical force or threats were used in the presence of ʿAlī. He and al-Zubayr, who also pledged allegiance against his will, absconded within days to Mecca, where they joined ʿĀʾis͟ha in claiming revenge for the blood of ʿUt̲h̲mān and declaring ʿAlī responsible for the murder. They jointly led a Meccan army to Baṣra seeking support and promising a new election after the removal of ʿAlī. There was intense rivalry between Ṭalḥa and al-Zubayr as the latter, having loyally backed ʿUthmān to the end, considered himself better entitled to the succession. Ṭalḥa was treacherously murdered by ʿUt̲h̲mān's cousin Marwān b. al-Ḥakam in the Battle of the Camel (15 D̲j̲umādā I 36/8 December 656) as ʿAlī and the Kūfans were gaining the upper hand. Marwān, fighting in the Meccan army, hit Ṭalḥa's knee with an arrow, causing profuse bleeding from which he died. The reports that Ṭalḥa was killed by Marwān have been dismissed by L. Caetani and other modern scholars as anti-Umayyad fiction. They are corroborated, however, by the fact that Marwānid propaganda in Syria during the second *fitna* proudly proclaimed Marwān as the first avenger of the caliph ʿUthmān on account of his deed.

Ṭalḥa's eldest son, the pious Muḥammad, was also killed in the Battle of the Camel. Mūsā b. Ṭalḥa, who survived the battle, was pardoned by ʿAlī and allowed to take possession of Ṭalḥa's vast fortune, including land holdings in ʿIrāḳ and the Sarāt in Arabia, for his family. Ṭalḥa's wealth seems to have been surpassed only by that of ʿUt̲h̲mān among the early Companions. Like ʿUt̲h̲mān, he is described as a generous benefactor of the early Muslim community.

Bibliography: Ibn Saʿd, iii/1, 152-61; Ibn Ḥad̲j̲ar, *al-Iṣāba*, Cairo 1323-25, iii, 290-2; Caetani, *Annali*, ix, 380-99 and indices s.v.; N. Abbott, *Aishah, the Beloved of Mohammad*, Chicago 1942, index s.v.; W. Madelung, *The succession to Muḥammad*, Cambridge 1997. (W. MADELUNG)

ṬALḤAT AL-ṬALAḤĀT "Ṭalḥa of the Ṭalḥas", the name by which the early Islamic Arab commander Abū Muḥammad Ṭalḥa b. ʿAbd Allāh b. K̲h̲alaf al-K̲h̲uzāʿī was known. Ibn K̲h̲allikān, ed. ʿAbbās, iii, 88, tr. de Slane, ii, 53, explains that he got this cognomen because his mother's name was Ṭalḥa bt. Abī Ṭalḥa. On his mother's side he was connected with Ḳurays͟h (Caskel-Strenziok, *Ǧamharat an-nasab*, ii, 555).

He appears in Umayyad history as governor of Sīstān around the end of the caliphate of Yazīd I, being appointed by the governor of K̲h̲urāsān Salm b. Ziyād [*q.v.*] just after an Arab raid into eastern Afg̲h̲ānistān had ended in disaster and Arab captives had to be ransomed from the local rulers of Zamīndāwar and Kābul. The chronology is uncertain, but Ṭalḥa apparently began his term of office in early 64/end of 683 or mid-64/early 684; coins minted by him in Sīstān are extant for the years 64 and 65. After incurring Salm's wrath, he lost office, was reappointed, but died shortly afterwards and was buried in Sīstān, probably in 65/684-5, mourned by such poets in his entourage as Ibn Ḳays al-Ruḳayyāt and Abū Ḥuzāba al-Ḥanẓalī. It was presumably when

Ṭalḥa was governor of Sīstān that Ruzayḳ, the great-grandfather of Ṭāhir b. al-Ḥusayn [*q.v.*], founder of the line of Ṭāhirid governors in Khurāsān, became his *mawlā*.

Bibliography: In addition to the Arabic histories of Balādhurī, *Futūḥ*, and Ṭabarī, see also the Persian ones of Gardīzī and the anonymous *Taʾrīkh-i Sīstān*. These are utilised in C.E. Bosworth, *Sīstān under the Arabs, from the Islamic conquest to the rise of the Ṣaffārids (30-250/651-864)*, Rome 1968, 45-6, and G. Rotter, *Die Umayyaden und der zweite Bürgerkrieg (680-692)*, Wiesbaden 1982, 87-8. (C.E. Bosworth)

AL-ṬĀLIʿ (A.), literally "that which rises".

1. Astronomical aspects.

Al-ṭāliʿ is that point of the ecliptic which is rising over the horizon at a given moment, called the ascendent or horoscopus (and sometimes, incorrectly, the horoscope); see the diagram in MAṬĀLIʿ. The determination of the ascendent is necessary in mathematical astrology [see NUDJŪM, AḤKĀM AL-] before one can calculate the instantaneous positions of the 12 astrological houses (*al-buyūt*); with these determined, one can then investigate in which houses the sun, moon and five naked-eye planets are situated and then make the appropriate astrological prognostications.

Muslim astronomers generally determined the ascendent by first finding the time of day or night [see MĪḲĀT], this by means of an observation of the altitude of the sun or a bright star and the application of a trigonometric calculation or the use of an astronomical instrument such as an astrolabe or quadrant [see ASṬURLĀB and RUBʿ]. Then by using tables of ascensions [see MAṬĀLIʿ] or an astrolabe, the instantaneous position of the ascendent could be ascertained. The opposite point of the ecliptic, called the descendant (*al-ghārib*), and the points of the ecliptic instantaneously culminating on the meridian at upper and lower mid-heaven (*wasaṭ al-samāʾ*) could be found in the same way. These four points provided the basis for determining the houses, the first starting with the ascendent, the fourth with lower mid-heaven, the seventh with the descendant and the tenth with upper mid-heaven. Various mathematical procedures were available for smoothing the lengths of the houses around the ecliptic (*taswiyat al-buyūt*).

The Rasūlid astronomer Abu 'l-ʿUḳūl (in Taʿizz, *ca.* 700/1300) compiled an extensive set of tables from which one could simply read the longitude of the ascendent at day as a function of the solar longitude and the solar altitude, and at night as a function of the solar longitude and the altitude of various fixed stars. Likewise, some astrolabe plates, particularly those of the Andalusian Ibn Bāṣo (Cordova, *ca.* 700/1300), have special markings for finding the houses for a particular latitude directly. But generally the determination of the houses at a particular time in a specific latitude was a tedious mathematical operation.

The positions of the sun, moon and planets at that time could either be calculated from the tables in an astronomical handbook of the genre known as *zīdj* [*q.v.*] or taken from an ephemeris giving positions for each day at midday [see TAḲWĪM]. The location of each of the seven bodies in a given house had astrological significance, as well as their positions relative to each other, and particularly with respect to the moon (see *ibid.*).

The resulting horoscope [see ZĀʾIRADJA] might be included in an ephemeris, showing prognostications for the beginning of a given year or for an eclipse occurring during that year, or in a nativity book, showing prognostications for each year in the life of an individual. A string of horoscopes might be recorded in an astrological history, be it of individuals or dynasties, or of conjunctions of Jupiter and Saturn, which according to a theory adopted from Sāsānid astrology were deemed to be of singular astrological significance for religious and political changes.

A popular notion (associated with Vettius Valens) was that the length of life (*ʿumr al-mawlūd*) of an individual was related to the horoscopus at birth. Another was that the duration of the foetus in the mother's womb was related to the horoscopus at conception (*masḳaṭ al-nuṭfa*) and the horoscopus at birth.

Seikaly *et alii* (eds.), *Quest for understanding. Arabic and Islamic studies in memory of Malcolm H. Kerr*, Beirut 1991, 223-31; and D.A. King, *Some Arabic copies of Vettius Valens' table for calculating the duration of life*, in G. Endress (ed.), *Symposium Graeco-Arabicum II*, Amsterdam 1989, 25-8. (D.A. King)

2. Astrological aspects.

These start from the application of the term in astronomy (see 1. above) to a star (*nadjm*) whose movement is from above to below the horizon, or of a planet (*kawkab*) whose movement is from south to north, traversing the plane of the ecliptic. One speaks therefore of the ascending node of a planetary orbit, of ascending degrees and ascending latitudes. The ascending signs denote those during which the sun appears to rise on the horizon, sc. Capricorn, Aquarius, Pisces, Aries, Taurus and Gemini. Hence, in astrological terminology, "the ascendent is the zodiacal sign which rises on the horizon at the first moment of a man or woman's birth" (Littré, s.v.). The astrologers derive indications from these astral positions and from their movements.

Other terms used to describe such positions and movements are: *ḳirānāt* or *iḳtirānāt* "conjunctions", in regard to the relationships between stars; *mumāzadjāt* "coincidences" of planets between themselves; *ittiṣālāt* relations of planets between themselves; *ishrāf* "apogee" of a planet; *hubūṭ* "declension" of a planet; *raʾs*, Lat. *caput*, the ascendent node in opposition to *dhanab*, Lat. *cauda*, descendant node (the pl. *ruʾūs* denotes "the direction of the zenith". For the main planets of the solar system, the line of the nodes, taken into consideration, is connected with the plane of the ecliptic (cf. Nallino, in his *Raccolta*, v, 396); *ghurūb* "setting" of the planets; *rudjūʿ*, their retrograde motion; *istiḳāma* their "direct course"; *muḳābala* "opposition" of the planets in the signs of the Zodiac; *ḥurūḳ* "fire", which springs into flame on the planets when they find themselves in the signs of the Zodiac (involving here the "comet tails", *shuhub*, Grk. αἰφλόγος, Lat. *flammae accense*, see Nallino, *op. cit.*, 16); *mudabbir*, Grk. κύριος "regent", said of a planet whose ascendent is in one of the signs of the Zodiac; and *ṭulūʿ al-shaʿrā al-ʿabūr* "heliacal rising of Sirius". All these terms play a decisive role in interpreting the movements of the planets and stars within the twelve signs of the Zodiac.

In regard to the ascendent, one can derive examples from the revolutions of the years and their ascendent stars (*taḥwīl al-sinīn wa-ṭawāliʿihā*), e.g. indications of the revolution of the years when the ascendent is the sign of Leo, or the sign Virgo with Mercury as regent, Libra with Venus, Scorpio with Mars, etc., and the same procedure for the conjunctions, oppositions, appearance of comets' tails, etc.

For the applications of these principles in daily life, see FA'L; in astrological predictions, see DJAFR; ḤURŪF; in divination through weather phenomena, see MALḤAMA; in the construction of horoscopes, see NUDJŪM, AḤKĀM AL-; and in hemerology, *electiones*, see IKHTIYĀRĀT and SAʿD AND NAḤS. Thus omens at birth, and the choice of days and hours, derive from the principles governing the connections of the stars with each other. Knowledge of these connections makes up the essence of astrological divination, of theurgy [see SIḤR] and the talismanic art [see ṬALSAM].

The anonymous ms. Aya Sofya 2684, used for this article, gives indications for the signs of the Zodiac and their regents, sc. Taurus-Mars, Taurus-Venus, Gemini-Mercury, Cancer-the Moon, Leo-the Sun, etc. (see Fahd, *Divination*, 494).

Bibliography: See also Fahd, *La divination arabe*, Paris 1987, 488 ff. (T. FAHD)

ṬALĪʿA (A.), a term of military organisation, meaning an advance guard or reconnaissance force (pl. *ṭalāʾiʿ*).

It is said to refer to either an individual or a small group (three or four men) which was sent ahead of the main army to obtain information regarding the enemy (Lane, i, 1870a), although it is evident from descriptions of battles, at least from the later Middle Ages, that much larger bodies of soldiers were called by this term. According to *TʿA*, the *ṭalīʿa* was like a *djāsūs* [*q.v.*], and in fact, even in later times, the line between reconnaissance and espionage is not always clear. The term is often translated as vanguard, but this leads to some confusion, since the latter word should be reserved for the *muḳaddama*, which represents a separate corps of the regular army, such as in the *taʿbiʾa* formation (see ḤARB. ii. The Caliphate, at vol. III, 182). In later military manuals, much attention is devoted to the role of the advance guard. Al-Anṣārī (d. 811/1408) writes that they should be a small group of lightly-armed cavalry, whose soldiers (and horses it might be added) should be carefully picked. The importance of secure communications with the main body and its commander is emphasised, as is the necessity of caution, especially against enemy ambushes. These reconnaissance troops are also known as *kashshāfa*, literally "scouts" (G.T. Scanlon, *A Muslim manual of war*, Cairo 1961, 51-3 of Arabic text; see also ḤARB. iii. The Mamlūk Sultanate, at vol. III, 185). Another synonym for *ṭalīʿa* is the Persian term *yazak*: the Mongol advanced guard at Gaza in the summer of 658/1260 is referred to as *ṭalīʿa* in an Arabic source (Ibn al-Furāt, *Taʾrīkh*, ms. Vatican Ar. 726, fol. 245a) and *yazak* by Rashīd al-Dīn (*Djāmiʿ al-tawārīkh* = *Histoire des Mongols de la Perse*, ed. Quatremère, Paris 1836, 346-7). Shortly afterwards, on the eve of the battle of ʿAyn Djālūt [*q.v.*] the Mamlūk advance guard commanded by Baybars is referred to by one source as a *ṭalīʿa* (al-Maḳrīzī, *Sulūk*, Cairo 1934-73, i, 430) and by another as a *shālīsh* (Ibn al-Dawādārī, *Kanz al-durar*, viii, ed. U. Haarmann, Freiburg-Cairo 1971, 49). But the latter Persian term (also written *čālīsh*) is usually understood to be the equivalent to *muḳaddama*, as is clearly seen from a description of the Mamlūk order of the battle at Ḥimṣ [*q.v.*] in 681/1280 (Baybars al-Manṣūrī, *Zubdat al-fikra*, ms. B.L. Add. 23325, fols. 113b-114a).

(R. AMITAI-PREISS)

ṬĀLIB ĀMULĪ, an Indo-Persian poet of the late 16th and early 17th centuries, b. at an unknown date (*ca.* 987/1579?), d. 1036/1626-7.

A native of Āmul in Māzandarān, he was a cousin of the famous physician and poet Ḥakīm Ruknā Kāshī, who had gone to India before Ṭālib's arrival in that country. Despite the fact that his works include *ḳaṣīda*s in praise of Shāh ʿAbbās I [*q.v.*], there is no evidence that he was ever attached to the Ṣafawid court, and his earliest patrons seem to have been high officials. Via Kāshān and Marw, he eventually migrated to seek his fortune in India, and after being patronised by various provincial governors and leading officials, finally gained entry to the court of the Mughal Emperor Djahāngīr [*q.v.*]. The high point of his career was the Emperor's appointment of him as poet laureate at his court, but he seems to have developed some sort of mental illness in the last years of his life, dying comparatively young.

Ṭālib's complete poems as published (*Kulliyyāt*, ed. Ṭāhirī Shihāb, Tehran 1346/1967) comprise some 23,000 couplets. They include *ḳaṣīda*s, including some addressed to ʿAlī, an indication of the poet's possibly Shīʿī sympathies, various other types of verse-form, including *mathnawī*s, but above all, *ghazal*s, which are central to his literary contribution.

Ṭālib was generally praised by the *tadhkira* writers for the quality of his verse, although Luṭf ʿAlī Beg Ādhar in his *Ātashkada* was disapproving, reflecting his dislike for the "Indian style" (*sabk-i hindī* [*q.v.*]). Ṭālib in fact contributed to what might be called the transitional phase of this style. The merit of his verse lies chiefly in the novelty of similes and metaphors and in his innovative skill in the construction of word compounds. The dominant sentiment is, however, one of sadness arising from a sense of failure and disappointment.

Bibliography: In addition to the standard *tadhkira* writers, up to and including Shiblī Nuʿmānī, *Shiʿr al-ʿAdjam*, iii, Aʿẓamgaṛh 1945, see Rieu, *B.M. catalogue*, ii, ms. Add. 5630; *Bankipore cat.*, iii, Calcutta 1912; Browne, LHP, iv; Dihkhudā, *Lughat-nāma*, s.v.; Khʷādja ʿAbd al-Rashīd, *Tadhkira-yi Ṭālib Āmulī*, Karachi 1965; N.L. Rahman, *Persian literature in India during the time of Jahangir and Shah Jahan*, Baroda 1970; *Urdū dāʾira-yi maʿārif-i islāmiyya*, xii, Lahore 1973; Nabī Hādī, *Mughaloṅ ke malik al-shuʿarāʾ*, Allāhābād 1978; Aḥmad Gulčīn Maʿānī, *Kārwān-i Hind*, i, Mashhad 1369/1990; Dhabīḥ Allāh Ṣafā, *Tārīkh-i adabiyyāt dar Īrān*, v/2, Tehran 1372/1993; Rypka *et alii*, *Hist. of Iranian literature*; S.A.H. Abidi, *Ṭālib-i-Āmulī, his life and poetry*, in *IC*, xli/2 (1967).

(MUNIBUR RAHMAN, shortened by the Editors)

ṬĀLIBŪF (TALIBOV), ʿABD AL-RAḤĪM, Persian writer and intellectual of the 19th century (b. Tabrīz 1250/1834, d. 1329/1911).

At *ca.* sixteen, he left for Tiflis (Tbilisi) in Transcaucasia, where he learned the Russian language and was exposed to the writings of Russian writers as well as to Western political ideas. Subsequently, he settled in Tamir Khān Shūra (present-day Buynaksk), capital of Dāghistān. In *ca.* 1306/1888 he joined Sayyid Muḥammad Shabistarī (afterwards editor of *Īrān-i naw*)

in starting in Istanbul the paper *Shāhsawan*, of which only one number was published (see E.G. Browne, *The press and poetry of modern Persia*, Cambridge 1914, 106-7; Muḥammad Ṣadr Hāshimī, *Tārīkh-i djarāʾid u madjallāt-i Īrān*, Iṣfahān n.d., iii, 56). In 1906, after the proclamation of a constitutional régime in Persia, he was elected in his absence to the Persian parliament but, for reasons which remain unclear, he decided against taking up his seat and stayed on in Russia. He died in Tamir Khān Shūra.

Ṭālibūf was the author of several books, both original and translated, which enjoyed much prestige during their time. Among them, *Safīna-yi Ṭālibī* "Ṭālib's journal" (Istanbul 1311-12/1893-4), *Masālik al-muḥsinīn* "The ways of the charitable" (Cairo 1323/1905), and *Masāʾil al-ḥayāt* "Problems of life" (Tiflis 1324/1906) deserve special consideration because of their literary significance. The first-named work, also called *Kitāb-i Aḥmad*, was inspired, according to the author, by Rousseau's *Emile*. In the second, Ṭālibūf presents an imaginary travelogue describing the experiences of a group of individuals who set out on an educational trip for the peak of Damāwand, and uses the narrative of the journey to expound his own views on various social, cultural and ethical subjects. Similar in form is his *Masāʾil al-ḥayāt*, which has politics and society for its theme. Ṭālibūf also wrote sundry articles which were published in the journals of the day such as *Andjuman* and *Ḥabl al-matīn*. In all his works, he used a simple Persian style, an achievement all the more creditable in view of the fact that his own language was Ādharī [*q.v.*] Turkish. Ṭālibūf's ideas attracted a keen response from the enlightened and progressive elements of the society, and played a prominent role in the late 19th-century political and intellectual awakening in Persia.

Bibliography: 1. Works (not mentioned in the text): *Nukhba-yi sipihrī* (an abbreviated version of the Prophet's biography taken from the *Nāsikh al-tawārīkh*), Istanbul 1310/1892; *Risāla-yi Fīzīk* (tr. from Russian, on Physics), Istanbul 1311/1893; *Pandnāma-yi Mārkūs, Ḳayṣar-i Rūm* (tr. via Russian of the *Meditations* of the Roman emperor Marcus Aurelius), Istanbul 1312/1894; *Risāla-yi hayʾat-i djadīda* (tr. via Russian of Camille Flammarion's French work on astronomy), Istanbul 1312/1894; *Īḍāḥāt dar khuṣūṣ-i āzādī*, Tehran 1312/1907; *Siyāsat-i Ṭālibī* (published posthumously), Tehran 1329/1911.

2. Studies. Muḥammad Ḳazwīnī, *Wafayāt-i muʿāṣirīn*, in *Yādgār*, v/4-5; Īradj Afshār, in *Yaghmā*, iv/5; idem, introd. to *Āzādī wa siyāsat*, Tehran 1357/1978; Mahdī Malikzāda, *Tārīkh-i inḳilāb-i mashrūṭiyyat-i Īrān*, i, Tehran 1328/1949; Aḥmad Kasrawī, *Tārīkh-i mashrūṭa-yi Īrān*, i, Tehran 1357/1978; Bozorg Alavi, *Geschichte und Entwicklung der modernen persischen Literatur*, Berlin 1964; Rypka *et alii*, *Hist. of Iranian literature*, Dordrecht 1968; Farīdūn Ādamiyyat, *Andīsha-hā-yi Ṭālibūf*, in *Sukhan*, xvi/5-8; Yaḥyā Āryanpūr, *Az Ṣabā tā Nīmā*, i, Tehran 1350/1971; ʿAlī Kātibī *et alii* (eds.), introd. to *Siyāsat-i Ṭālibī*, Tehran 1357/1978; Īradj Pārsī-nizhād, in *Madjalla-yi Īrānshināsī*, ii/3, Bethesda, Md. 1990.

(Munibur Rahman)

ṬALĪḲ [see ṬULAḲĀʾ].

TAʿLĪḲ, Taʿlīḳa (A., pls. *taʿlīḳāt, taʿālīḳ*) in scholarly activity refers to the "appending upon (*ʿalā*)" a text or the "deriving from (*ʿan*)" an author and then to the resulting notes, glosses, comments, excerpts and appendices. Similar in a way to *ḥāshiya* [*q.v.*], it is, however, much less firmly anchored in manuscripts than *ḥāshiya* was originally. In later centuries, it came to be used quite frequently in titles of essays. Earlier, its supposed use as a title was more descriptive than formal and was often the choice of convenience by someone other than the author. Among titles listed in the *Fihrist*, *Taʿlīḳāt* appears only for two alchemical works (*Fihrist*, 359, ll. 5, 16) and is of uncertain meaning. In later bibliographies, some titles of works by philosophers and scientists were expanded, obviously not by their authors, by the addition of "in the form of notes" (*ʿalā djihat/ṭarīḳ al-taʿlīḳ*, see Ibn Abī Uṣaybiʿa, ii, 138-9 [al-Fārābī], ii, 96 [Ibn al-Haytham]); some were stated to be *taʿlīḳ*, *taʿālīḳ* (Ḳifṭī, 362-3 [Yaḥyā b. ʿAdī]; Ibn Abī Uṣaybiʿa, ii, 103-5 [Ibn Riḍwān and Afrāʾīm]; *ibid.*, i, 322, l. 13, *taʿālīḳ ḥikmiyya* [Abū Sulaymān al-Sidjistānī] also may not be a formal title). The originality of the title *Taʿlīḳāt* in preserved works of al-Fārābī and Ibn Sīnā is also subject to doubt. Yet the use of the word as a descriptive title may indeed have originated among problem-centred disciplines such as philosophy, natural science and grammar, rather than in the religious sciences, but it appears rather early in jurisprudence.

Other technical usages of *taʿlīḳ* include one of the science of *ḥadīth* that came into use, originally in connection with the *Ṣaḥīḥs* of al-Bukhārī and Muslim, for traditions "derived from (*muʿallaḳ ʿan*)" an authority without the indication of a complete *isnād* or the complete text. Note further the use of *taʿlīḳ* for a particular script [see KHAṬṬ, at vol. IV, 1124-5] and as a grammatical term. See also ṬALĀḲ.

Bibliography: Title indices s.v., as, for instance, in Brockelmann, Sezgin, Ḥādjdjī Khalīfa; Lane, 2137a-b; J. Michot, *Tables de correspondance des "Taʿlīqāt" d'al-Fārābī, des "Taʿlīqāt" d'Avicenne et du "Liber Aphorismorum" d'Andrea Alpago*, in *MIDEO*, xv (1982), 231-50; J.E. Brockopp, *Slavery in Islamic law*, unpubl. Yale Univ. diss., 1995, 75 ff., for possible 4th/10th-century legal titles. For the *ḥadīth* term, see Ibn al-Ṣalāḥ, *Muḳaddima*, chs. 1 and 11, and the introduction of Saʿīd ʿAbd-al-Raḥmān Mūsā al-Ḳ-r-ḳī's edition of Ibn Ḥadjar, *Taghlīḳ at-taʿlīḳ*, ʿAmmān 1405/1985, i, 283 ff., and *passim*. For the grammatical term, see R.M. Rammuni, in *Intern. Journal of Islamic and Arabic Studies*, iii (1986), 27-42.

(F. Rosenthal)

TAʿLĪḲĪ-ZĀDE, Meḥmed b. Meḥmed el-Fenārī, Ottoman court historiographer (*shehnāmedji*) in the sixteenth century. Taʿlīḳī-zāde was born in the province of Aydîn in Western Anatolia at some time in the 1540s. He was a descendant of the famous Fenārī family; as his name shows, his father must have been an expert in calligraphy, especially in the *taʿlīḳ* script. From 969/1562 he served as secretary (*kātib*) to Prince Murād in Manisa. When the latter ascended the throne in 982/1574, Taʿlīḳī-zāde found employment as a *kātib* in the imperial chancery. In 991-3/1583-5, he took part in the military campaigns against Persia where he performed secretarial services. In *ca.* 998/1590 he was appointed assistant to the chief *shehnāmedji* Loḳmān. In 1004/1596, when the latter showed reluctance to accompany Meḥemmed III on his Hungarian campaign, his office was given to Taʿlīḳī-zāde. He held this post until 1009/1601 and probably died between 1011 and 1020/1603 and 1611.

Prior to his appointment as court historiographer, Taʿlīḳī-zāde wrote three works (*Firāset-nāme*, 1574-5: on the connection of a man's outward features and his character; *Tebrīziyye*, 1585, and *Gürdjistān seferi*, 1585, on the Persian campaigns). As *shehnāmedji* he left to us another three compositions. The *Shemāʾil-nāme-yi āl-i*

ʿOthmān (1593) outlines the distinctive features of the Ottoman dynasty, while the *Shehnāme-i hümāyūn* (1596) and the *Egri fethi ta'rīkhi* (1598, in verse; the title has been established by Woodhead, *see Bibl.*) describe the Hungarian campaigns of Sinān Pasha and Meḥemmed III respectively. While the first court historiographers imitated the famous *Shāh-nāme* of Firdawsī in form and language, Taʿlīḳī-zāde, with one exception, composed prose works in Ottoman *inshā'* style. Shortly after his dismissal, the *shehnāmedji* post seems to have been abolished.

Bibliography: Nedjīb ʿĀṣim, *ʿOthmānlî ta'rīkh-nüwīsleri we müwerrikhleri: shehnāmedjiler*, in *TOEM*, ii, no. 7 (1911), 432-4; Christine Woodhead, *From scribe to littérateur: the career of a sixteenth-century Ottoman* Kātib, in *BSMES Bull.* ix/1 (1982), 55-74; eadem, *An experiment in official historiography: the post of Şehnāmeci in the Ottoman Empire*, in *WZKM*, lxxv (1983), 157-82; eadem, *"The Present Terror of the World"? Contemporary views of the Ottoman Empire c. 1600*, in *History*, lxxii/234 (1987), 20-37 (a thorough analysis of the *Shemā'il-nāme*); eadem, *Taʿlīḳī-zāde's* Şehnāme-i hümāyūn. *A history of the Ottoman campaign into Hungary 1593-94*, Islamkundliche Untersuchungen, 82, Berlin 1983 (ed. of the work in transcription). The four miniatures in the manuscripts of the *Egri fethi ta'rīkhi* were published by G. Fehérvári, *The "Egri Fetihname" in the Topkapı Sarayı Müzesi Kütüphanesi* (in Hungarian), in *Az Egri Múzeum Évkönyve 1969*, Eger 1969, figs. 1-10 (according to the author, the correct title of this work is *Shehnāme-yi sulṭān-i selāṭīn-i djihān*) and Géza Fehér, *Turkish miniatures from the period of Hungary's Turkish occupation*, Budapest 1975, pls. XLVIII-LI.

(P. Fodor)

TĀLĪKŌṬĀ, a small town of the mediaeval central Deccan, now in the Bīdjapur District of the Karnataka State of the Indian Union (lat 16° 31' N., long. 76° 20' E.). It is famed as the assembly point and base camp for the combined forces of the South Indian sultanates (the ʿĀdil Shāhīs, Barīd Shāhīs, Ḳuṭb Shāhīs and Niẓām Shāhīs [*q.vv.*]). These all marched southwards some 50 km/30 miles southwards to the Krishna river and the villages of Rakshasa and Tangadi, crossed the river and, at a point 20 km/12 miles south of the Krishna, after several skirmishes, the Muslim forces engaged those of Vidjayanagara [*q.v.*] at a village called Bannikaṭṭi on (most probably) 20 Djumādā II 972/23 January 1565. This historic battle is usually termed that of Tālīkōṭā, although it should more accurately be called that of Bannikaṭṭi. In it, the power of the Hindu ruler of Vidjayanagara, the 80-year old Rāma Rādjā, was broken and the Rādjā himself executed by the victorious Niẓām Shāhī.

(C.E. Bosworth)

TAʿLĪMIYYA [see ISMĀʿĪLIYYA].

TĀLISH, a district on the southwestern shores of the Caspian Sea, originally wholly within Persia until the Gulistān Treaty of 12/24 October 1813 between Russia and Persia awarded to Russia the greater part of Tālish, that north of the Astārā river. This last part has successively been ruled by Imperial Russia, the Soviets and (since 1991) the Azerbaijan Republic. The part of the Iranian Tālishī people remaining within Persia occupies an area of the modern province (*ustān*) of East Azerbaijan to about 50 km/30 miles south of the Astārā river.

1. Geography and history.

The region comprises an inland mountain region and a narrow coastal strip, fertile, with dense vegetation (a home of the endangered Caspian tiger) and a high rainfall (approx. 125 cm/50 inches of rain p.a. at Lankorān [*q.v.*], the main urban centre of Tālish); in the north, Tālish merges into the steppelands of Mūḳān [*q.v.*] or Mūghān.

According to Marquart, *Streifzüge*, 278-9, the name is first found in the Armenian translation of the Alexander Romance as Tʿalish. At the time of the Arab conquests, in 24 or 25/645-6, al-Walīd b. ʿUḳba b. Abī Muʿayṭ raided al-B.b.r (? cf. Minorsky, *Ḥudūd al-ʿālam*, comm., 391; the anonymous author does not mention Tālish), al-Ṭ.y.lasān (= Tālish) and the steppe region of Mūḳān (al-Balādhurī, *Futūḥ*, 327; al-Ṭabarī, i, 2805). According to al-Aṣmaʿī, in Yāḳūt, *Buldān*, i, 812, iii, 571, the Persian pronunciation of the region's name was Tālishān (a plural form?), and in early Islamic times it was an administrative district (*ʿamal*) of the province of Gurgān. Ḥamd Allāh Mustawfī (8th/14th century) mentions a village Tālish on the road from Sulṭāniyya to Ardabīl (hence south of the earlier Tālish) (*Nuzha*, 180, tr. 173). In the Il-Khānid period, the Ispahbadhs of Gīlān seem to have had a principality on the borders of Gīlān and Mūḳān, with a fortress and villages in Tālish (Minorsky, *A Mongol decree of 720/1320 to the family of Shaykh Ẓāhid*, in *BSOAS*, xvi [1954], 524-5), and in later times, a local *khān* had his seat at Lankorān and was subject to the kings of Persia; but the district played little part in the wider affairs of Persia until the advance of Tsarist Russia through eastern Transcaucasia. Peter the Great first occupied the region; it was returned to Persia in 1732, again occupied by the Russians 1796-1812 but finally lost in the next year. Hence after 1813, the greater part of Tālish came within Russian territory, in which the greater part of the Tālishī people now found themselves, many of them continuing to nomadise in the Mūḳān steppes, but a smaller part of them has remained within Persia. Most of the Tālishīs are Shīʿīs.

(C.E. Bosworth)

2. Language.

Tālishī is a North-Western Iranian language, close to Tati [*q.v.*]. The language (or dialect) has a range of mutually intelligible sub-dialects, stretching from the north to the south. The consonantal system of Tālishī does not differ from that of Persian, whereas the range of its vowels is enlarged, in comparison to Persian, by the addition of *ə*, a central vowel, and at least in northern and central sub-dialects, also by *ü*, a front vowel. As is the case with most of the modern Iranian dialects of ancient Media, Tālishī possesses two cases: the direct or the subject case, and the oblique or the genitive and object case. In Asālimī, a central Tālishī dialect, the case endings typically are: sing. dir. *-ø*, pl. dir. *-e*, sing. obl. *-i*, pl. obl. *-un*.

The verbal system diverges from most other Western Iranian dialects by employing the present stem

for the Imperfect and the past stem for the Present, e.g., Asā(limī) *vrij-/vrit-* "to run," *a-vrij-im* "I was running" (*a-* is the durative marker), *b-a-vrit-im* "I run, I am running". Further, verbal affixes, including the negative *nə/ni*, cause a reshuffling of the elements of conjugation in the Present, e.g. *ni-m-a-vrit* "I don't run, am not running" where the personal "ending" precedes the marker and the stem.

Syntactically, Tālis͟hī, like Tati, employs the ergative construction in past transitive verbs based on the past stem; accordingly, the agent of the verb is put in the oblique case, the logical direct object in the direct case and the verb agrees with its direct object, e.g. Asā. *esbun* (obl. pl.) *gušd harda* (sg.) "the dogs ate flesh".

Bibliography: The Northern Tālis͟hī spoken to the north of the Arax river has been adequately studied and published by B.V. Miller in *Tales͟hskiĭ yazïk* ("Tālis͟hī language"), Moscow 1953. A sketch of Māsūla'ī, together with some texts and a glossary, by G. Lazard is published in *St. Ir.*, vii/6 (1978), 251-68, and viii/2 (1979), 36-66, 269-75; and a grammatical outline of Asālimī by E. Yarshater in *ibid.*, xxv/1 (1996), 77-104. See also M. Bazin, *Le Tâleche, une région ethnique au nord de l'Iran*, ii, Paris 1980, 69-70, 189 ff. and figs. 94, 95; idem, *Recherche des rapports entre diversité dialectale et géographie humaine: l'exemple du Tāleš*, in *Interdisziplinäre Iran-Forschung*, Wiesbaden 1979, 1-14; L.A. Pireyko, *Talïs͟hsko-Russkï slovar* ("Tālis͟hī Russian dictionary"), Moscow 1976; ʿAlī ʿAbdolī, *Farhang-i Tātī u Tālis͟hī* ("T. and T. [-Persian] dictionary"), Tehran 1984. TALK͟HĪṢ [see MUK͟HTAṢAR].

TALL (A.), usually written Tell in European geographical terminology, means in Arabic "hill, mound, tumulus", but has in the Mag͟hrib a specific meaning unconnected with archaeology.

According to Maurer, in Troin (ed.), *Le Maghreb*, the primary meaning in Arabic dialect is said to be "marly, grey or darkish soil" (cf. W. Marçais and A. Guiga, *Textes arabes de Takroûna. II. Glossaire*, i, Paris 1958, 495: "sol gras et argileux"). By extension, it designates the whole region where this type of soil is found, and is contrasted on one hand to the regions of the high northern plains of a more crusted, clayey nature and, in a certain manner, to the idea of *ṣaḥrāʾ*. The definition in terms of soil has then inclined towards a bio-climatic definition designating that part of the Mag͟hrib still under a marked Mediterranean influence. It denotes a band of territory running west-south-west to east-north-east of very variable width extending from the Moroccan G͟harb to northern Tunisia. Despite a relief much broken up and containing a mosaic of plains, hills and mountains, liable to intense erosion, the Tell constitutes the part of the Mag͟hrib useful for agricultural purposes; the conjunction of soils of the *tell* type and more abundant rainfall (over 300 or 400 mm) permits agriculture there without irrigation. The parts of this made up of plains have been the main sites for economic changes, whereas the mountains have had their development frustrated by communication difficulties.

TALL BĀS͟HIR (present-day (Tkish.) Tilbeşar Kalesi; Armenian Thilpašar, Thil Aveteač; Frankish Turbessel), a fortress and walled town of the north Syrian borderlands, in present-day southern Turkey, 25 km/15 miles south-east of the city of Gaziantep (ʿAyntāb [*q.v.*]), near the village of Gündoğdu.

Although mentioned as early as Assyrian times, the detailed history of Tall Bās͟hir begins at the end of the 5th/11th century, testimony to its position in the path of powers seeking to expand east or west. In 489/1096 the Sald͟jūḳ ruler of Aleppo, Riḍwān b. Tutus͟h [*q.v.*], captured it from Yag͟hīsiyān, ruler of Anṭākiya. The following year Tall Bās͟hir and the fortress of al-Rāwandān [*q.v.*] were acquired by Baldwin II, Count of Edessa, who gave both sites as a fief to his nephew Joscelin I, Count of Courtenay. Tall Bās͟hir remained in Frankish hands until 546/1151, when Joscelin II lost it to Nūr al-Dīn Maḥmūd b. Zangī [*q.v.*], for whom Tall Bās͟hir played an important role in checking his rivals: the Artuḳids to the east, and the Dānis͟hmendids and Sald͟jūḳs to the north. Tall Bās͟hir's strategic and economic importance were reflected in the elaboration and extent of its arrangements: a fragmentary 6th/12th century Arabic source describes an inner circuit wall comprising 15 salients, an outer circuit wall and a suburb (ms. Bibl. Nat. 2281, fol. 57b). In 571-2/1176, together with other north Syrian strongholds, including ʿAyntāb, Tall Bās͟hir was ceded to the Ayyūbid Ṣalāḥ al-Dīn [*q.v.*], although it was to remain mostly in the control of its Zangid fief-holder, Badr al-Dīn Duldirim al-Yārūḳī, until 615/1218-9, when it was taken by the Rūm Sald͟jūḳ ruler ʿIzz al-Dīn Kaykāwūs I. Shortly afterwards, it fell to al-Malik al-As͟hraf I, Ayyūbid ruler of the D͟jazīra, who gave it to the S͟hihāb al-Dīn Ṭog͟hrïl, regent to the ruler of Aleppo, al-Malik al-ʿAzīz. Withstanding an attack by the K͟hʷārazmians in 638/1240-1, Tall Bās͟hir was given in 646/1248 by al-Malik al-Nāṣir of Aleppo to al-Malik al-As͟hraf III in exchange for the latter's possession of Ḥimṣ. The fortifications survived destruction by the Mongols, since al-As͟hraf paid homage to Hülegü, but were then dismantled by the Mamlūk sultan Baybars towards the end of the 7th/13th century, leaving, according to Ibn S͟haddād, an administrative presence and a civilian settlement. Today, little remains of the site save for the fortress mound, upon which there are traces of a gateway.

(E. Honigmann-[D.W. Morray])

AL-TALL AL-KABĪR, Tell el-Kebir, a fairly recent village agglomeration of some 5 settlements in the Egyptian Nile Delta, 50 km/30 miles west of Ismāʿīliyya [*q.v.*] at the eastern end of al-S͟harḳiyya province.

Located in Wādī Ṭumaylāt, ancient fortifications

and mounds of buried cities mostly of Ptolemaic times underline the former strategic importance of the settlement. During the late Middle Ages, the Wādī Ṭumaylāt had ceased to be a place of permanent settlement, and it was only in the middle of the 19th century that the Wādī was recultivated. Hanadī, Nafaʿāt and Ṭumaylāt nomads now settled in the vicinity of the former fortifications, giving to the place the name al-Tall al-Kabīr. In 1857-8, the railway which followed the Wādī Ṭumaylāt reached the village, and the Ismāʿīliyya Canal (dug 1858-63 in order to supply the new urban settlements in the Suez Canal region with fresh water) also improved the local agriculture. In consequence, the population of al-Tall al-Kabīr rose to over 3,000 by the end of the late 19th century. During the last phase of the Anglo-Egyptian war of 1882, al-Tall al-Kabīr became famous as Aḥmad ʿUrābī Pas̲h̲a moved his military headquarters to this place. Al-Tall al-Kabīr became the last line of defence against the British troops under General Sir Garnet Wolseley advancing from Ismāʿīliyya to Cairo through the Wādī Ṭumaylāt. On 13 September 1882, 6,000 to 7,000 Egyptian regulars and some 20,000 peasant soldiers were overrun during one hour of short but severe fighting, and at least 2,000 Egyptians were killed. On 12 and 13 January 1952, al-Tall al-Kabīr again came into the news when British troops leaving the Canal Zone entered the region in order to fight Egyptian partisans.

(R. Schulze)

AL-TALLAʿFARĪ, S̲h̲ihāb al-Dīn Muḥammad b. Yūsuf b. Masʿūd b. Sālim, a well-regarded minor poet of Ayyūbid times, born in Mawṣil on 25 D̲j̲umādā II 593/15 May 1197 and died in Ḥamāt on Wednesday, 10 S̲h̲awwāl 675/17 March 1277.

He claimed Arab descent from the Banū S̲h̲aybān [*q.v.*]. His father, known as Ibn ʿUrrād̲j̲, who was born in Tallaʿfar (Tallyaʿfar) near Mawṣil in 560/1165 and died in Naṣībīn on Tuesday, 3 Muḥarram 615/(Sunday!) 1 April 1218, was well educated, a poet and expert in ancient Arabian and Persian history, with strong S̲h̲īʿī sympathies; he was on familiar terms with the Ayyūbid ruler al-Malik al-As̲h̲raf Mūsā of Mayyāfāriḳīn (later of Damascus). His son spent his life at the courts of the Ayyūbid rulers of Mayyāfāriḳīn, Aleppo, Damascus, and, eventually, Ḥamāt, and also traveled widely in the region. We hear of only one trip outside of it, to Cairo, where he was in Ramaḍān 638/March-April 1241 (Ibn K̲h̲allikān, ed. Iḥsān ʿAbbās, vii, 40). Precise details as to how he fared during the Mongol invasion are lacking. He became well known as a poet already as a young man (if Yāḳūt, i, 863-4, refers to him rather than his father) and was in close contact with contemporary poets and littérateurs. It was poetical rivalries, especially one with Sulaymān b. Bulaymān (595-686/1199-1287), that appear to have done the most to publicise his troubles as a compulsive gambler who gambled away whatever gifts and stipends he received at court, allegedly making himself homeless at times and even provoking an official edict against gambling with him. His morals, in general, were severely criticised, yet he lived a long and productive life. As a poet, he enjoyed fame for his skilful use of lyrical/erotic imagery, and he is said to have worked in all the popular poetic genres of the time.

Bibliography: His biography and that of his father appear in the *Ḳalāʾid (ʿUḳūd) al-d̲j̲umān fī farāʾid s̲h̲uʿarāʾ al-zamān* by his contemporary (who died, however, two decades before him), Ibn al-S̲h̲aʿʿār, parts VII and X = vols. vi, 44-56, and viii, 512-24, of the facsimile published by F. Sezgin, Frankfurt am Main 1410/1990. Biographies by younger contemporaries are Ibn al-Ṣuḳāʿī, *Tālī*, ed. J. Sublet, Damascus 1974, nos. 226 and 121, and al-Yūnīnī, iii, 218-28, iv, 323-4 (the Ḥaydarābād ed. conflates his with his father's data, as shown by manuscripts of the work made available by Dr. Li Guo). Among later biographies are D̲h̲ahabī, *Taʾrīk̲h̲ al-Islām* and *ʿIbar, anno* 675; Ṣafadī, *Wāfī*, v, 255-63, xv, 356-58; Kutubī, *Fawāt*, ii, 546-55, i, 350-1, ed. Iḥsān ʿAbbās, iv, 62-71, ii, 57-59; Ibn Kat̲h̲īr, *Bidāya*, xiii, 272; Ibn Tag̲h̲rībirdī, *Nud̲j̲ūm*, vii, 255-57; Ibn al-ʿImād, *S̲h̲ad̲h̲arāt*, v, 349. See further Brockelmann, I², 300, S I, 458; F. Rosenthal, *Gambling in Islam*, Leiden 1975, 147-49, 176. The long promised edition of his collected poems seems not yet to have appeared; the so-called *Dīwān* (Cairo 1298 [not available], Beirut 1310, 1326) contains only a small selection of poems.

(F. Rosenthal)

ṬĀLŪT, the Islamic equivalent to the biblical Saul based on a familiar form in the Arabic reproduction of ancient names (often in assonant pairs), *fāʿūl* (Ṭālūt-D̲j̲ālūt, Yād̲j̲ūdj-Mād̲j̲ūd̲j̲, Hārūt-Mārūt, Hārūn, Ḳārūn, Dāwūd, Tābūt, etc.). He occurs in the Ḳurʾān only in II, 246-51, a parallel with the Biblical I Samuel, v-xviii. Chosen by God to lead Israel in response to their request for a king, Ṭālūt is poor but wise and physically powerful. Although considered unworthy of kingship by the people, he is confirmed through an unnamed prophet by the divine sign of angels bearing the Ark (*Tābūt*) containing the *Sakīna* and a remnant of the house of Moses and Aaron (Hārūn). On a campaign against Goliath (D̲j̲ālūt [*q.v.*]), God divides Ṭālūt's army on the basis of how they drink from a river, a motif reminiscent of the episode of Gideon in Judges, vii, 4-7. Ṭālūt's army is victorious despite Israel's fear, but it is David (Dāwūd [*q.v.*]) who slays Goliath.

The story is filled out substantially in the exegetical literature, which exhibits great familiarity with motifs from the Bible and Midrash. The traditions making up the longer exegetical narrative derive from a consistent set of sources which can be traced according to their motifs and styles of narration. The unnamed prophet of the Ḳurʾān is usually Samuel (As̲h̲mawīl or S̲h̲amwīl [*q.v.*]), but occasionally Jeremiah, Simon, Joshua or Elisha. Ṭālūt is unfit for kingship because his tribe is Benjamin, which is disqualified because of its evil acts (Wahb in al-T̲h̲aʿlabī alludes to the episode of the tribe's evil nature in Judges, xix-xx). Before becoming king, Ṭālūt, whose name refers to his great height, was a poor donkey herder, tanner, or water carrier. God gave Samuel a staff and/or a horn of oil with which to determine whom God chose to be king of Israel. Only Ṭālūt fits the signs, and subsequently advances against Goliath, king of the Canaanites or Amalekites, or a Copt, who had Berber soldiers in his armies. In one version, Ṭālūt excuses many from his army before encountering the river (cf. Deut., xx, 5-7; Ḳurʾān, IX, 91-2). His troops

number from 4,000 to 300,000, but only 310 (or 313/319) pass the test at the river, a number equal to the number of fighters at Badr (cf. al-Bukhārī, *maghāzī*, 6; al-Tirmidhī, *siyar*, 38; Ibn Mādja, *djihād*, 25). Ṭālūt pledges to give his daughter to whomever will smite Goliath, but refuses David until he kills 200 of Ṭālūt's enemies. He eventually gives David a third (or half) of his kingdom, or his signet ring as a sign of rule, but envies Israel's love of David and tries repeatedly to kill him. In some versions, he attempts to co-opt his daughter into helping him, but to no avail. In one humorous episode, Ṭālūt impales a wine-skin put in place of David in his bed. When Ṭālūt is splashed with the red wine, he remarks how David was a drunkard. In rage at his repeated failures, Ṭālūt kills all the sages of Israel except one surviving woman who knows the ineffable name of God. He subsequently regrets his violence against David and/or the sages and seeks atonement, but Samuel has since died. With the help of the woman, a prophet (usually Samuel or Elisha, but even Joshua) is called from the dead. Ṭālūt learns that his atonement is possible only if he and all his heirs are killed in sacred warfare (*djihād fī sabīl Allah*), which he orchestrates for himself and his sons.

TAMAHAK [see ṬAWĀRIK. 2].

TAMASHEK [see ṬAWĀRIK. 2].

TĀMASNA (Berber, "the palm of the hand, plain"), the ancient name for the Atlantic coastal plain of Morocco bounded by the rivers Bouragrag and Umm al-Rabīʿ, "from Salā to Marrākush (Ibn Khaldūn, *ʿIbar*, i, 60). This "Moroccan meseta", known for its fertile soil, has traditionally been an area for cereal growing, the products being exported to al-Andalus in mediaeval times. It forms a natural passage between two key regions, those of Fās and of Marrākush, limited on the east by deep valleys covered with forest. Its richness and its position explain its lively history.

The place-name Tāmasna appears for the first time in the list of regions conquered by Idrīs I and then in the succession of his son Idrīs II [*q.vv.*]. Until the 6th/12th century, this region was merged into the kingdom of the Barghawāṭa [*q.v.*], which was also termed the kingdom of Tāmasna. After the elimination of these so-called "heretics", the ruined countryside remained abandoned, and the Almohad caliph al-Manṣūr established there nomadic Arab tribes (Khulṭ, Sufyān and Djābir). The Marīnids used it as pasture land and entrusted their beasts to the Hilāl, who intermarried with the Zenāta and Hawwāra Berbers. The mixture of the two races gave birth to new tribes using the Arabic language who became sedentarised and known under the name of Shāwiya (or Chaouïa) [*q.v.*]. This name ended up by replacing the ancient Tāmasna used in the official documents of the *Makhzen* up to the 19th century. However, "Chaouïa" denotes a more restricted region.

The place-name Tāmasna has now completely disappeared. Only a place within Rabat (Bāb Tāmasna), recalling a gate now disappeared, and the patronymic "Masnāwī") retain a feeble echo of it.

TAMATTUʿ [see IḤRĀM; MUTʿA].

TAMAZIGHT (Berber).

1. This is a general term used by many Berber speakers [see BERBERS at vol. I, 1173] to designate their native language (dialect). It is increasingly used not only by them but by many other Berber speakers, non-speakers, and outsiders as well, to designate the Berber language, particularly—but not exclusively—in associations for the promotion of Berber culture and language. It is the feminine form of *Amazigh*, which is used more and more—along with its plural form *Imazighen*—to replace, in both noun and adjective uses, the traditional term *Berber* as it applies to people, artifacts, etc.

2. More specifically it is a term used to designate the Berber dialect group of the Middle Atlas mountains of Morocco, one of three groups widely, if somewhat grossly, construed as representing Berber in Morocco's territory: the other dialect groups in this paradigm are Tarifit in the north of the country and Tashelhit [*q.v.*] in the High Atlas, Sūs river valley and Anti-Atlas regions in the south. Tamazight territory, in this sense, extends from roughly Demnat in the south-west north to the corridor between Rabat and Taza. The towns and river valleys on the Sahara side of the Middle Atlas—Tinghir, Tafilelt, Oued Ziz, Djebel Sargho, Ouarzazate, Oued Dra—are the eastern limits of Tamazight, while to the north-west its territory extends to within a few tens of kilometres from Rabat (Ait Buzemmur). Within this whole area, Tamazight is the primary language. However, except in the most remote areas, there is widespread bilingualism with Arabic, especially in the towns, where Arabic generally dominates.

The region's history of tribal movement, immigration and displacement has left its mark on language patterns. Like the other two groups, Tamazight dialects, though mutually intelligible for the most part, exhibit a fair degree of variation in phonology and vocabulary, and some of its dialects (e.g. Ait Seghrouchen of Imouzzer) in fact more closely resemble certain Tarifit and even Algerian dialects than their immediate neighbours. With regard to the general description of Berber contained in the art BERBERS at vol. I, 1181-5, only a few specific features need to be noted:

Phonology. Tamazight dialects are characterised by the spirantisation of "short" (or lax) occlusives: *b* > [β], *t* > [θ], *d* > [ð], *g* > [y], *k* > [c] or [š] as opposed to Tashelhit where these are usually occlusive like the corresponding "long" (tense) consonants, used in derived morphological forms: [b], [t], [d], [g], [k]. By virtue of massive borrowings of Arabic words, the phonemic inventory includes all the Arabic phonemes.

Morphology. The demonstrative adjectival suffixes used with nouns or pronoun bases are *-ad* "near", *-inn* "distant" and *-enna* "the one in question" with a form *-dex* or *-tex* that can be suffixed to them for additional immediacy. The first three numbers are native, with distinct masculine and feminine forms; the rest are borrowed from Arabic.

Syntax. Most dialects have developed the equivalent of a relative pronoun, *enna*, used to introduce the subordinate relative clause. The intensive aorist verbal form is always preceded by a *lla* or *da*, along with any satellites, when it is used in its common habitual or progressive meaning: *lla as akkan elflus* "they give him (*as*) money".

Bibliography: See BERBERS. V. Bibl., and for further bibl. and a grammatical description of a typical dialect of the central Moroccan (Tamazight) group, see T.G. Penchoen, *Tamazight of the Ait Nadhir*, Malibu, Calif. 1973; also E.T. Abdel-Massih, *Tamazight verb structure*, The Hague 1968.

(T. PENCHOEN)

TAMERLANE [see TĪMŪR LANG].

TAMGHA (T.) means brand, sign, seal and, by extension, tariff or commercial tax. The exact etymology is somewhat unclear, but the original Turkish meaning was a brand or sign placed on livestock or personal property. As brands, certain *tamghas* became identified with specific Turkish tribes. Maḥmūd al-Kāshgharī's [*q.v.*] illustrations of the distinctive brands of the twenty-two branches of the Oghuz (Türkmen), the oldest surviving identifications, are well known (*Dīwān lughāt al-turk* [written 464/1072], tr. R. Dankoff and J. Kelly as *Compendium of the Turkic dialects*, Cambridge, Mass. 1982-5, i, 101; for variants found in Rashīd al-Dīn [early 8th/14th century] and Yazīdjī-oghlu ʿAlī [second quarter 9th/15th century], see F. Sümer, *Oğuzlar (Türkmenler): tarihleri-boy teşkilatı-destanları*, [3]Istanbul 1992, 170-1). Similar signs have been found on grave stones and other objects, some dating perhaps from prehistoric times, widely distributed across Central Asia and as far west as the Lower Danube (B. Ögel, *İslâmiyetten önce Türk kültür tarihi*, [2]Ankara 1984, 134, 136, and index).

In addition to providing the aforesaid illustrations, al-Kāshgharī defines *tamgha* as "the seal of the king or other" and as synonymous with the Arabic *ṭābiʿ* (*Dīwān*, i, 321). The title of "keeper of the seal" (*tamghadjī*) appears in the earliest Turkish inscriptions, i.e. those from the Orkhon river valley [*q.v.*] composed in the 8th century (H. Orkun, *Eski Türk yazıtları*, Ankara 1986, i, 52, l. 1 Ş 13). M.F. Köprülü thus concluded that *tamghas* were used as legal symbols in the sense of a dynastic or personal arms (*Ortazaman Türk devletlerinde hukukî senbôllerdeki motifler*, in *Türk Hukuk ve İktisat Tarihi Mecmuası*, ii [1932-9], 37-50; his promised exhaustive study of the word was never published). After the Mongol invasion, *tamghas* appeared on both documents (see e.g. V. Minorsky, *The clan of the Qara-Qoyunlu rulers*, in *Fuad Köprülü armağanı*, Istanbul 1953, 381; İ.H. Uzunçarşılı, *Osmanlı devleti teşkilâtına medhal*, [2]Ankara 1970, 199, 277-8) and coins, notably those of the Djalāyirids, Aḳ Ḳoyunlu, Golden Horde, Crimean Tatars (İ. and C. Artuk, *İstanbul arkeoloji müzeleri teşhirdeki islâmî sikkeler kataloğu*, Istanbul 1970-4, ii, 828, 839, 814-15, 818, respectively—see i, p. xlvii, regarding the *tamgha* of the Ḳînîk tribe on the coinage of Ṭoghrïl Beg—and İ. Artuk, *İA*, art. *Sikke*, 630-1) and even the Georgians (D.M. Lang, *Studies in the numismatic history of Georgia*, New York 1955, 40).

Also after the Mongol invasion, *tamgha* appeared as the name of a tax on the urban population, i.e. as a tax on commercial goods and services (including prostitution). It was introduced to the Middle East during the reign of Hülegü (654-63/1256-65). The amount varied. It may have been as much as 10% before Ghazan (694-703/1295-1304) reduced it by half (I.P. Petrushevsky, *The socio-economic conditions of Iran under the Īl-Khāns*, in *Camb. hist. of Iran*, v, 494, 506, n. 3, 508; on amounts, cf. E. Ashtor, *A social and economic history of the Near East in the Middle Ages*, Berkeley, etc. 1976, 274-5; A.K.S. Lambton, *Mongol fiscal administration in Persia*, in *SI*, lxxiv [1986], 84-5). For some time, the *tamgha* seems to have replaced the *zakāt* [*q.v.*] under the Mongols (Petrushevsky, *op. cit.*, 532). As a tax, *tamgha* was sometimes used synonymously with the Persian term *bādj* [*q.v.*]. It was a major source of revenue for the Mongols (W. Barthold, *İlhanlılar devrinde malî vaziyet*, in *THITM*, i [1931], 152-4, tr. W. Hinz as *Die persischen Inschriften an der Mauer der Manūčehr-Moschee zu Ani*, in *ZDMG*, ci [1951]; and A.Z.V. Togan, *Mongollar devrinde Anadolu'nun iktisadi vaziyeti*, in *THITM*, i [1931], 18-21, tr. G. Leiser as *Economic conditions in Anatolia in the Mongol period*, in *AI*, xxv [1991]). The *tamghadjī* thus became the tax collector. Because the *tamgha* was a non-canonical tax, Muslim jurists urged its abolition, but they had little success. Bābur [*q.v.*], the Mughal conqueror of India (932-7/1526-30), abolished it several times, testifying to its importance (Barthold, *İlhanlılar*, 154). It was retained in Persia until the reign of Ṭahmāsp I (930-84/1524-76). The *dāmgha resmi* remained as a market tax, especially on textiles and metals, in the Ottoman Empire until its collapse (Gibb and Bowen, *Islamic society and the West*, ii, 8-9). As a term for a tax, *tamgha* entered Arabic, Persian and many other languages, including Russian. Furthermore, it is still a common word for brand or stamp in Turkish, Arabic and Persian.

Humphrey, *Horse brands of the Mongolians: a system of signs in a nomadic culture*, in *The American Anthropologist*, i (1974), 471-88.

(G. LEISER)

TAMGRŪT, important town in the Wādī Darʿa (Dra), in the south of Morocco and the site of the mother *zāwiya* of the religious brotherhood of the Nāṣiriyya [*q.v.*]. It is a fair-sized town with houses of red clay, surrounded by groves of palm and fruit trees, on the left bank of the Wādī Darʿa, which is here 120 to 250 feet wide but of no depth and runs between hills about 300 yards apart. Tamgrūt is surrounded by low walls pierced by 4 gates: in the north, Fumm (class. *fam* "mouth") al-Sūḳ, in the northeast, Fumm Tāʾurīrt, in the southwest, Bāb al-Rizḳ and to the east, Fumm al-Sūr. An important market is held there on Saturdays.

The *zāwiya* of Tamgrūt, which owes all its importance to the Shaykh Muḥammad b. Nāṣir, was founded in 983/1575-6 by a member of a Marabout family of the Wādī Darʿa, Abū Ḥafṣ ʿUmar b. Aḥmad al-Anṣārī from the *zāwiya* of Sayyid al-Nās. It was the fame as mystics of two holy men who lived in the *zāwiya* of Tamgrūt, Sayyidī ʿAbd Allāh b. Ḥusayn and Sayyidī Aḥmad b. Ibrāhīm, that led the Ṣūfī novice Muḥammad b. Nāṣir, born at Ighlān in 1015/1603, to settle there. On the death of Sayyidī Aḥmad b. Ibrāhīm, he became head of the *zāwiya*, and founded his order there, directly based on the teaching of al-Shādhilī [*q.v.*]. He died here in Ṣafar

1085/May 1674 and his descendants from father to son without interruption have since been heads of the *zāwiya* of Tamgrūt. The latter contains the tombs of Muḥammad b. Nāṣir and his successors together in a mausoleum, rebuilt in 1869 after a fire and surmounted by a pyramidal cupola of green tiles, with a *djāmūr* with three golden balls on top. On the fine library there, see Muḥammad al-Mannūnī, *Dalīl makhṭūṭāt Dār al-Kutub al-Nāṣiriyya bi-Tamghrūt*, Rabat 1405/1985; Latifa Benjelloun-Laroui, *Les bibliothèques au Maroc*, Paris 1990, 280-5.

The *zāwiya* of Tamgrūt and the holy men who lived in it have formed the subject of a monograph by Aḥmad b. Khālid al-Nāṣirī al-Salāwī [see AL-NĀṢIR AL-SALĀWĪ], author of the *Kitāb al-Istiḳṣā'*, entitled *Ṭalʿat al-mushtarī fi 'l-nasab al-djaʿfarī* (2 vols. lith. Fās n.d. [1309]). Tamgrūt was the birthplace of Abu 'l-Ḥasan al-Tamgrūtī [*q.v.*], a noted official of the Saʿdian court.

AL-**TAMGRŪTĪ**, ABU 'L-ḤASAN ʿALĪ B. MUḤAMMAD B. ʿALĪ B. MUḤAMMAD, a Moroccan writer, a native of Tamgrūt [*q.v.*], died at Marrākush in 1003/1594-5 and was buried in the sanctuary of Ḳāḍī ʿIyāḍ. He held an official position at the court of the Saʿdian Sultan Abu 'l-ʿAbbās Aḥmad al-Manṣūr al-Dhahabī (986-1012/1578-1602). He was placed by this ruler in charge of the embassy to Sultan Murād III in Istanbul along with another court dignitary, Abū ʿAbd Allāh Muḥammad b. ʿAlī al-Fishtālī, d. 1021/1612-13. Al-Tamgrūtī prepared an account of his journey (*riḥla*) which he called *al-Nafaḥāt al-miskiyya fi 'l-sifāra al-turkiyya*: it was afterwards used, as one of his sources, by the author of the *Nuzhat al-ḥādī*, al-Ifrānī [*q.v.*] (or Ufrānī). It contains interesting information about the court of Marrākush at the end of the 10th/16th century. An edition, with a translation, of al-Tamgrūtī's work by H. de Castries, appeared at Paris in 1929.

Lévi-Provençal, *Les historiens des Chorfa*, 98-9. (E. LÉVI-PROVENÇAL)

TAMIL [see LABBAI; MARAKKAYAR].

TAMĪM B. **BAḤR** AL-**MUṬṬAWWIʿ**, Arab traveller in Central Asia in early ʿAbbāsid times and the only Muslim one who has left us a record of his visit to the capital of the Uyghur Turks (pre-840) on the Orkhon river [*q.v.*] in Mongolia, most probably Ḳarabalghasun, the Khara Balghasun of the modern Mongolian Republic. It may be assumed that Tamīm was an Arab, possibly one of those settled within Khurāsān, and his *nisba* implies that he had been a fighter for the faith against pagans. He certainly seems to have been a great traveller in the steppes, since he says that he also visited the Turkish Kimäk [*q.v.*] and their king on the Irtīsh river [*q.v.* in Suppl.] in Siberia. What is extant of his report has been recovered from the Mashhad ms. of Ibn al-Faḳīh's *K. al-Buldān*, though citations were earlier known in e.g. Yāḳūt. Tamīm's report, perhaps dateable to 821, i.e. during al-Ma'mūn's caliphate, contains precious information on the Toḳuzghuz or Toghuzghuz Turks [*q.v.*] in particular, and supports the equation of them at this time with the Uyghurs.

Bibliography: V. Minorsky, *Tamīm ibn Baḥr's journey to the Uyghurs*, in *BSOAS*, xii (1948), 275-305. See also TOGHUZGHUZ. (C.E. BOSWORTH)

TAMĪM B. AL-**MUʿIZZ LI-DĪN ALLĀH**, ABŪ ʿALĪ, poet and Fāṭimid prince, born in al-Mahdiyya (present-day Tunisia) in 337/949, died in 374/985 in Egypt (but Ibn Taghrībirdī and Ibn Kathīr mention his death *sub anno* 368/978-9).

Though Tamīm was al-Muʿizz's eldest son, he was passed over as *walī al-ʿahd*, successor to the Fāṭimid throne in the newly-founded capital al-Ḳāhira. The official reason given by al-Maḳrīzī (*al-Muḳaffā*, ii, 588), was the fact that Tamīm did not have any male offspring necessary to avoid problems for the dynasty in future, the throne being inherited from father to son. On the other hand, Tamīm's dissipated way of life and rumours about his involvement in a conspiracy by the sons of previous Imāms, like al-Ḳā'im and al-Mahdī, against al-Muʿizz, might have influenced the latter's decision too (see M. Canard, tr., *Vie de l'ustadh Jaudhar*, 213, n. 467).

After his younger brother Nizār had been installed in 365/976 as the Fāṭimid Imām al-ʿAzīz bi 'llāh, Tamīm concentrated on composing poetry only. Quite often his poems, especially some long *urdjūza*s, were dedicated to the glory of the Fāṭimid dynasty, as represented in both his father's and his brother's reign. Tamīm's laudatory poems are moreover remarkable for some scattered references to the Ismāʿīlī creed of the Fāṭimid family, and in this way Tamīm presented himself as a self-appointed propagandist of the dynasty. But these poems of his were quite often composed with an introductory section or *nasīb*. An elegant *takhalluṣ* was then necessary to ensure the smooth transition from the profane subject of love for some distant girlfriend to the more serious praise and love for the existing Imām (P. Smoor, *Fāṭimid poets and the "Takhalluṣ" that bridges the nights of time to the Imām of time*, in *Isl.*, lxviii [1991], 232-62).

Generally speaking, Tamīm's poems belong to different genres, among which are some *marthiya*s, elegies on the premature deaths of his brothers ʿAbd Allāh and ʿAḳīl, on his father al-Muʿizz, and on the often violent deaths of his ʿAlid ancestors during previous centuries. On the dynastic level, Tamīm as a Fāṭimid poet tried to compare with an earlier poet, sc. the ʿAbbāsid caliph Ibn al-Muʿtazz [*q.v.*], in some *naḳā'iḍ* [*q.v.*] poems in which he contradicted his ʿAbbāsid adversary by pointing out how the ʿAlid's right to the caliphal throne had been usurped.

Tamīm's more frivolous poetry is remarkable for its description of expeditions to a monastery, or to a wine tavern and its cup-bearers, both girls and boys. One poem (*Dīwān*, 440-2, rhyme *hunna*) holding descriptions of wine and beautiful girls, and finally entailing praise of Tamīm's brother the Imām al-ʿAzīz, came to be criticised severely, even after a time interval of some one hundred years, by the Fāṭimid Dāʿī al-Mu'ayyad fi 'l-Dīn al-Shīrāzī [*q.v.*] (see Smoor, *Wine, love and praise for the Fāṭimid Imāms*, in *ZDMG*, cxlii [1992], 94-100). As a counter-balance to his *mudjūn*, or more probably as a matter of convention, Tamīm composed a small number of poems in an ascetic and pious mood (in the style of the *zuhdiyyāt*). He must have felt not a little admiration for Abū Nuwās, a few of whose poetic lines being quoted here and there

in Tamīm's *Dīwān* as proverbial sentences or as parts of a slave girl's song. When Tamīm died, his brother the Imām al-ʿAzīz personally arrived from ʿAyn Shams in order to perform the *ṣalāt* over him in the graveyard of al-Ḳarāfa. Finally, his remains were entombed in the precincts of the Fāṭimid palace of al-Ḳāhira.

TAMĪM B. AL-**MUʿIZZ**, Abū Yaḥyā and Abū Ṭāhir AL-ṢANHĀDJĪ, the fifth Zīrid ruler in Ifrīḳiya, b. Ṣabra 422/1031, d. after an exceptionally long reign covering 454-501/1062-1108.

ʿImād al-Dīn al-Iṣfahānī, in his *Kharīdat al-ḳaṣr*, Tunis 1966, i, 141-2, makes him a Ḳaḥṭānī Arab, with a genealogy back to Noah and Adam, see also Ibn Taghrībirdī, *Nudjūm*, Cairo n.d., v, 198. He inherited a kingdom dislocated by the invasions of the Banū Hilāl [*q.v.*], and after almost half-a-century of effort, did not succeed in "restoring Ṣanhādjī power in its state of disarray" (H.R. Idris, *Zīrīdes*, Paris 1962, i, 249). On the political career of Tamīm, see *ibid.*, i, 249-57, 283-302 and index, with full bibl.; here, he will be treated mainly as man and as poet. He is said to have been highly energetic, but in fact he spent his life in struggles without any clearly-defined policy or singleness of purpose and without any lasting success on all the fronts involved: in Sicily, inside his own kingdom, and against his Ḥammūdid neighbours. After a reign of almost 50 years, he left a kingdom in a worse state than before.

His qualities of heart, his culture and his fine appearance were praised. He was tall and fair-complexioned, a great lover of pretty women, above all the *banāt al-rūm* (al-Iṣfahānī, i, 156), most of whom were Christian slaves, which made him love Christian ceremonial and the singing which accompanied it (*ibid.*, i, 146). It is related that he had 110 sons and 60 daughters. Since he was a great Maecenas and lover of pleasures, his court attracted poets, cultivated persons and musicians, from Sicily, Muslim Spain and the East. Like his Fāṭimid homonym [*q.v.*], he appreciated the beauty of young boys, good wine and singing. What survives from his *dīwān* is devoted almost exclusively to these themes. Like him also, he relied, for his salvation, on the Creator's goodness and the salvational value of the sole testimony of faith (*shahādat al-ikhlāṣ*), see al-Iṣfahānī, i, 152. One seeks in vain—and this is certainly not due to the choice of his anthologists—for the slightest sign in any verse of his poetry which would allow one to suspect the political disappointments of his reign, as if the misfortunes of his subjects and his kingdom hardly touched him so long as wine flowed at his palace. A poet of his court, Ibn al-Ḥaddād, on one occasion abandoning the current platitudes of *madīḥ* or eulogy for *hidjāʾ* or satire, tells us that "He personally preferred the Byzantines" (*al-Rūm aḥsan ʿindī*) for governing his kingdom (Ibn al-Abbār, 23). This is worth stressing. Tamīm tells us about his defiance of death (Ibn ʿIdhārī, *Bayān*, Leiden 1948, repr. Beirut 1983, i, 303), but he spent the whole of his life looking after his health (*ibid.*, i, 304); all his verses reveal a sensualist eager for all the joys of life.

His *dīwān*, said to have been "voluminous and celebrated" (*ibid.*, i, 303), has not come down to us. Al-Iṣfahānī (i, 142-3) was able at Damascus to borrow a copy from his grandson ʿAbd al-ʿAzīz b. Shaddād in 571/1175-6, and he has provided for us the longest and most numerous extracts (i, 143-60), classified by rhyme-order. These have served as a basis, together with other fragments drawn from various anthologies, for the reconstruction of what remains of his *dīwān* by Muḥammad al-Marzūḳī (*al-Mahdiyya wa-shāʿiruhā Tamīm*, Tunis 1980, 91-128). Tamīm undoubtedly possessed a truly poetic sense. His verses are highly flowing and perfectly adapted for singing. They were used thus and form a veritable hymn to the beauty which their author admired, above all in pretty girls and handsome boys. They continually evoke, with a poignant nostalgia, the fleeting moments of intense mental intoxication. If we had nothing else of him but his *dīwān*, one would conclude that his age was one of a happy freedom from care. The breaking waves did not spoil his epicurism. In order to enjoy life to the full, he took excessive care of his health and bodily fitness, but nevertheless finally died paralysed.

(M. TALBI)

TAMĪM B. **MURR** (or Tamīm bt. Murr, when the tribe or *ḳabīla* is referred to), a very large "Northern" tribe which before Islam and in its early days lived in central and eastern Arabia. Its *nasab* is: Tamīm b. Murr b. Udd b. Ṭābikha b. Ilyās b. Muḍar b. Nizār b. Maʿadd b. ʿAdnān.

1. Source material.

The literary output about the Tamīm in the form of monographs is now lost. For example, Abu 'l-Yaḳẓān (d. 190/806), a *mawlā* of the Tamīm, compiled a monograph *Akhbār Tamīm*, and also a *K. Ḥilf Tamīm baʿḍihā baʿḍ^an^*; Ibn al-Kalbī wrote *K. ʿAdī b. Zayd* [*q.v.*] *al-ʿIbādī* and *Ḥilf Kalb wa-Tamīm*; and Abū ʿUbayda [*q.v.*] compiled *K. Ayyām Banī Māzin wa-akhbārihim* which he dedicated to the pre-Islamic battles of one of Tamīm's subdivisions.

Before reaching the literary stage, the materials included in these and other early monographs were preserved by tribal informants, e.g. al-Kalbī (who is quoted by his son, Ibn al-Kalbī, in his *Djamharat al-nasab*) had a Tamīmī informant, Shabba b. Iyās b. Shabba b. ʿIḳāl b. Ṣaʿṣaʿa b. Nādjiya . . . b. Mudjāshiʿ b. Dārim, whose father was an indirect source of Abū ʿUbayda (who quoted from him, via another Tamīmī, a report regarding al-Farazdaḳ's [*q.v.*] father, Ghālib b. Ṣaʿṣaʿa [*q.v.*] b. Nādjiya).

Indeed, most of what we know about Tamīm's genealogy, and much of what we know about their history, is based on materials transmitted by informants who were either members of the Tamīm or their *mawālī*, and the clash between them and non-Tamīmī

(or rather anti-Tamīmī) informants was inevitable. Was al-Akraʿ b. Ḥābis [*q.v.*] (Mudjāshiʿ b. Dārim) really "the arbiter of the Arabs (*ḥakam al-ʿarab*)" before Islam—in other words, was he the holder of an inherited arbiter's office at the market of ʿUkāẓ? Abū Ghassān Muḥammad b. Yaḥyā al-Kinānī was of the opinion that he was not: he only arbitrated one case, following which the Tamīm gave him this epithet. Was Ḥanẓala b. al-Rabīʿ al-Usayyidī one of the Prophet's scribes, and did he write down Ḳurʾān verses? According to al-Wāḳidī [*q.v.*] (who no doubt based himself on an earlier source), Ḥanẓala received the epithet *al-kātib* ("the scribe") having written for the Prophet one single letter, "because literacy (*al-kitāba*) among the Arabs was limited".

The place of honour in Tamīm's pre-Islamic glory is given to Ḥādjib b. Zurāra's [*q.v.*] bow (*ḳaws Ḥādjib*). During severe drought Ḥādjib asked for Kisrā's [*q.v.*] permission to graze his tribe's herds at the fringes of the sown land. As a guarantee of good conduct he pledged his bow, a humble item which, however, acquired great value through the prestige and authority of its owner.

No wonder that the Tamīm (or rather the Dārim) were very proud of this story in which the Persian emperor allegedly showed great respect to traditional tribal values, whereas Tamīm's adversaries in their turn attempted to belittle the importance of the emperor's gesture.

2. Genealogy.

The Tamīm were divided into three branches the eponyms of which were Tamīm's three sons, Zayd Manāt, ʿAmr and al-Ḥārith. In the Zayd Manāt b. Tamīm branch, the Saʿd b. Zayd Manāt (Saʿd Tamīm, "Saʿd al-Aktharīn", "Saʿd al-Suʿūd") were said to have equalled in number the whole of Muḍar; one of these Saʿd was al-Aḥnaf b. Ḳays [*q.v.*]. The children of Saʿd b. Zayd Manāt except Kaʿb and ʿAmr—these two were referred to as *al-buṭūn*—formed a group called *al-abnāʾ* (*nisba*: al-Abnāwī).

Most Saʿdīs belonged to the line of Kaʿb b. Saʿd. Two of Kaʿb's sons (probably ʿAmr and ʿAwf) were called *al-mazrūʿān*ʿ "because of their large number and their numerous herds", while the rest of his sons were called *al-adjārib* ("the scabby ones"). ʿAmr b. Kaʿb's son Muḳāʿis was the father of several tribal groups. The Ṣuraym b. Muḳāʿis were the group of the founders (or alleged founders) of two sects of the Khāridjites [*q.v.*], the Ṣufriyya [*q.v.*] and the Ibāḍiyya [*q.v.*]. Among Muḳāʿis's offspring, the ʿUbayd b. Muḳāʿis line was the most significant one. All of ʿUbayd's children but Minḳar were called *al-lubad* (or *al-libad*), their central component being the Murra b. ʿUbayd, the group of al-Aḥnaf b. Ḳays. The two most famous Minḳarīs were the Companions Ḳays b. ʿĀṣim and ʿAmr b. al-Ahtam [*q.vv.*], who was the great-grandfather of the orator Khālid b. Ṣafwān [*q.v.*].

The other strong subdivision of the Kaʿb b. Saʿd was the ʿAwf b. Kaʿb. Among ʿAwf's children, the offspring of Ḳurayʿ b. ʿAwf included the Banū Anf al-Nāḳa; four other children of ʿAwf formed a group called *al-adjdhāʿ* (or *al-djidhāʿ*). A family of one of the *adjdhāʿ* groups held an office related to the Meccan pilgrimage which in later times was considered one of the greatest merits of the Tamīm (Ibn Abi ʾl-Ḥadīd, *Sharḥ Nahdj al-balāgha*[2], ed. Ibrāhīm, Cairo 1378/1959 f., xv, 126-7).

The main group among the Mālik b. Zayd Manāt was the Ḥanẓala b. Mālik [*q.v.*] (Ḥanẓalat Tamīm, "Ḥanẓala al-Akramīn"). Five (or six, or four) components of the Ḥanẓala—the less numerous ones—formed the *barādjim* group (pl. of *burdjuma* or "knuckle") against their brothers, Yarbūʿ, Mālik and Rabīʿa, sons of Ḥanẓala.

The most prominent figures among the Yarbūʿ b. Ḥanẓala at the time of the Prophet were Mālik b. Nuwayra [*q.v.*], "the *ʿarīf* [*q.v.*] of the Thaʿlaba b. Yarbūʿ" (a subdivision of the Yarbūʿ) and his brother, Mutammim b. Nuwayra [*q.v.*].

The Yarbūʿ were one of the *djamarāt al-ʿarab* or "the burning coals of the Arabs", i.e. tribes which were able to defend themselves without allying themselves with other tribes. The main component of the Yarbūʿ was Riyāḥ b. Yarbūʿ. The Riyāḥ did not attach themselves to Yarbūʿ's other sons. Four of these sons born by the same mother formed a group called *al-aḥmāl*, while three other sons formed a group called *al-ʿuḳad* (or *al-ʿuḳadāʾ*). Separate groups among the ʿUḳad were the Ghudāna b. Yarbūʿ, Ṣubayr b. Yarbūʿ, Kulayb b. Yarbūʿ (one of whom was the poet Djarīr [*q.v.*]) and the ʿUḳfān who descended from al-ʿAnbar b. Yarbūʿ.

The dominant group among the Mālik b. Ḥanẓala (according to some, among the Tamīm as a whole) was the Dārim b. Mālik, or rather the ʿAbd Allāh b. Dārim. The offspring of Mālik's other sons formed three groups: the children of Ṭuhayya. The two most commonly mentioned are ʿAwf and Abū Sūd (or Abū Sawd), but some add Djushaysh or Ḥushaysh or Khushaysh and (al-)Ṣudayy. Most genealogists, however, include (al-)Ṣudayy in another group of Mālik's descendants whose members were called, again after their mother, Banu ʾl-ʿAdawiyya (or Balʿadawiyya). The Banū Ṭuhayya and Banu ʾl-ʿAdawiyya formed the *djimār* group and "were with the Yarbūʿ". Yet another group of Mālik b. Ḥanẓala's descendants, *al-khishāb* (or *al-khashabāt*), included the offspring of Mālik's sons, Rabīʿa, Rizām and Kaʿb.

Among the Dārim b. Mālik b. Ḥanẓala independent tribal groups can be discerned through their *nisbas*: Nahshal, Manāf, Sadūs, Abān and Mudjāshiʿ b. Dārim. A biographical dictionary, with reference to a certain *muḥaddith* or traditionist, uses four *nisbas* while moving from the general to the particular: al-Tamīmī, *thumma* al-Ḥanẓalī, *thumma* al-Dārimī, *thumma* al-Mudjāshiʿī. The three best known Mudjāshiʿīs were al-Akraʿ ("the bald") b. Ḥābis, al-Farazdaḳ and al-Ḥārith b. Suraydj [*q.v.*].

The dominant line among the ʿAbd Allāh b. Dārim was Zayd b. ʿAbd Allāh. All but one of Zayd's descendants formed a group called *al-aḥlāf*; the pedigree of al-Mundhir b. Sāwā [*q.v.*], the governor of Hadjar [see AL-ḤASĀ] at the time of the Prophet, goes back to one of the *aḥlāf* groups, the ʿAbd Allāh b. Zayd b. ʿAbd Allāh b. Dārim.

The ʿAmr b. Tamīm branch ("ʿAmr al-Ashaddīn") included several subdivisions, the most important one being Banu ʾl-ʿAnbar (or Balʿanbar) b. ʿAmr. Al-Ḥārith b. ʿAmr was given the nickname al-Ḥabiṭ (which was probably pejorative) and his offspring were known as al-Ḥabiṭāt (*nisba*: al-Ḥabaṭī); ʿAbbādān near Baṣra was called after one of them, the *murābiṭ* [see RIBĀṬ] ʿAbbād b. al-Ḥuṣayn. The main component of the Mālik b. ʿAmr b. Tamīm was the Māzin b. Mālik. Other groups were the Ḥirmāz b. Mālik and the Ghaylān b. Mālik.

The least important branch of Tamīm was al-Ḥārith b. Tamīm and its members were the clients of the Nahshal b. Dārim. Rather than referring to the members of this branch by the *nisba* al-Ḥārithī, the more distinctive *nisba* al-Shakarī or al-Shaḳirī was preferred, al-Shaḳira being the nickname of al-Ḥārith's son, Muʿāwiya.

A BASIC GENEALOGICAL CHART OF THE TAMĪM b. MURR

- Tamīm
  - Zayd Manāt
    - Saʿd
      - ʿAbshams
      - Kaʿb
        - ʿAwf
          - Ḳurayʿ
          - Bahdala
        - ʿAbd al-ʿUzza
          - Ḥimmām
        - ʿAmr
          - Muḳāʿis

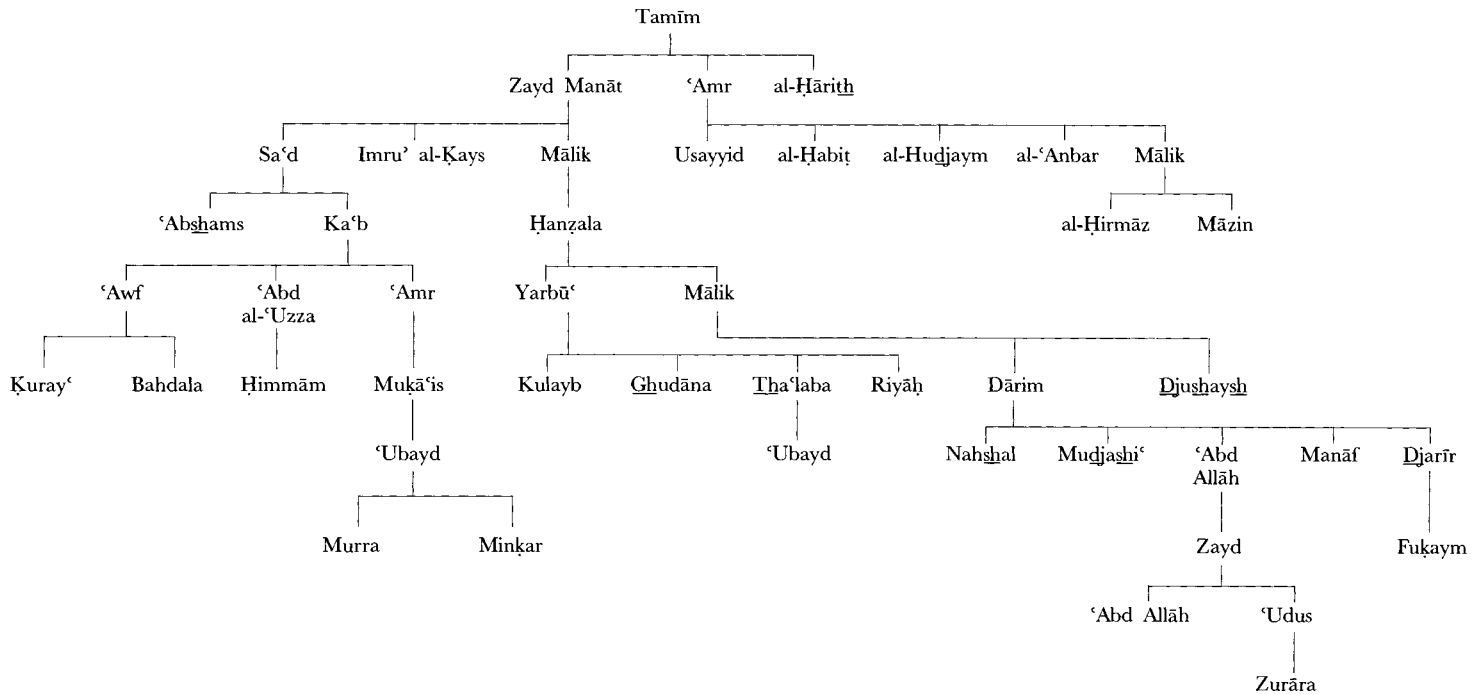
      - al-Ḥirmāz
      - Māzin
  - al-Ḥārith


3. History.

Tamīm's territory before Islam was in Nadjd around al-Yamāma [*q.v.*] and it stretched to the Gulf, Baṣra, and al-ʿUdhayb near Kūfa (for detailed evidence see al-Ḥasan b. ʿAbd Allāh al-Iṣfahānī [Lughda], *Bilād al-ʿarab*, ed. Ḥ. al-Djāsir and Ṣ.A. al-ʿAlī, Riyāḍ 1968, *passim*; see also the relevant entries and maps in U. Thilo, *Die Ortsnamen in der altarabischen Poesie*, Wiesbaden 1958). They owned several rich grazing areas such as Ḥazn Banī Yarbūʿ, al-Faldj and al-Dahnāʾ [*q.v.*].

Not all Tamīmīs were nomadic before Islam. Many of them were semi-nomads or sedentaries inhabiting the oases and villages of al-Washm and eastern Arabia. In the early Islamic period, more Tamīmīs became sedentary and settled in permanent settlements and villages while other tribes gradually claimed parts of their territory. But many, perhaps most Tamīmīs remained pastoral (or semi-nomadic), reluctant to abandon their fine grazing grounds and watering-places; hence the frequent mention in the genealogical literature of the nomadic sections of the tribe. The Tamīmīs who settled in ʿIrāḳ were not cut off from their nomadic brothers who were a kind of military, political and economic hinterland.

Beside the battles described in the *ayyām* literature, Tamīm's historiography of the pre-Islamic period is dominated by two crucial relationships, with the Sāsānids [*q.v.*] and Ḥīra and with Mecca. We turn first to the Sāsānid/Ḥīran connection. The Tamīm, among other tribes, were instrumental in the transportation and defence of Sāsānid and Ḥīran trade. Trade interests were presumably behind at least some of Tamīm's long-range expeditions to the Yemen. For example, al-Aḳraʿ b. Ḥābis (Mudjāshiʿ b. Dārim) attacked, after the second battle of al-Kulāb (which took place after 620), the Ḥārith b. Kaʿb [*q.v.*] in Nadjrān [*q.v.*].

The institution of *ridāfa* or viceroyship to the king of Ḥīra in which the Tamīm and other tribes participated was essential in establishing Ḥīra's control over the Bedouin. The privileges associated with it, some ceremonial and some material, served to buy off potentially dangerous tribes. Tamīm could offer the Sāsānids a strong military potential. Obviously, the cooperation was not one between equals, since the Bedouin depended on food supplies from settlements controlled by the Sāsānids. Hadjar, for example, was the largest date-producing oasis of Northern Arabia and access to its market was vital for the Bedouin roaming its vicinity.

Hadjar was an important venue of Tamīmī-Persian cooperation. Al-Mundhir b. Sāwā (of ʿAbd Allāh b. Zayd b. ʿAbdallah b. Dārim), in his capacity as the governor of al-Baḥrayn [*q.v.*] or of Hadjar, only had authority over the Arabs. In Baḥrayn, precisely as in Ḥīra, ʿUmān and Yemen (after the Sāsānid conquest of *ca.* 575), there was also a superior Persian governor. All this changed with the advent of Islam, when al-Mundhir became the Prophet's governor in al-Baḥrayn or in Hadjar.

Tamīm's Meccan connection is less obvious than the Sāsānid/Ḥīran one. It is true that the pre-Islamic history of Mecca was recorded during the Islamic period, when the name Ḳuraysh [*q.v.*] stood for power and wealth, but Tamīm's relationship with pre-Islamic Mecca is no doubt a solid historical fact (see M.J. Kister's articles in the *Bibl.*; the first, or the second, husband of Khadīdja [*q.v.*] before she married the Prophet had been a Tamīmī; see Kister, *The sons of Khadīja*, in *JSAI*, xvi [1993], 59-95, at 59-66; on this and other Tamīmīs who settled in Mecca in the Djāhiliyya, see idem, *On strangers and allies in Mecca*, in *JSAI*, xiii [1990], 113-54, at 113-26).

The evidence about Tamīm's connection with the Prophet is a plethora of confused and contradictory reports because every trivial detail acquired in due course immense importance. What is more, the evidence was further obscured by a process of redaction (cf. E. Landau-Tasseron, *Process of redaction: the case of the Tamīmite delegation to the Prophet Muḥammad*, in *BSOAS*, xlix [1986], 253-270, esp. 256-7, 270).

Both Baṣra and Kūfa were extensions of Tamīm's Arabian territories and there were large Tamīmī groups in both. The Tamīmīs in Baṣra belonged to the Saʿd, the Ḥanẓala and the ʿAmr; members of the same groups were among the early settlers in Kūfa as well. Many Tamīmīs settled in the regions of Persia conquered by Baṣran and Kūfan troops.

Tamīm's weight in the tribal population of ʿIrāḳ and the eastern provinces meant that they were involved in every major event of early Islam which took place in these regions. Five hundred of them are said to have been killed in the Battle of the Camel [see DJAMAL], in which the Saʿd did not participate. Shortly afterwards, the Saʿd were part of ʿAlī b. Abī Ṭālib's [*q.v.*] army at Ṣiffīn [*q.v.*], together with many fellow tribesmen from Baṣra and Kūfa. There were no Tamīmī units on Muʿāwiya's side. Tamīm's strong support for ʿAlī at Ṣiffīn was not the best prelude for a prosperous relationship with the Umayyads; but no government could control ʿIrāḳ and the eastern provinces without Tamīm's participation and support. The many Tamīmīs who held government positions under the Umayyads and ʿAbbāsids reflect their tribe's influence in ʿIrāḳ (especially in the south), ʿUmān, al-Baḥrayn and throughout the east; few Tamīmīs officiated as governors elsewhere.

TAMĪM AL-DĀRĪ, a Christian from Palestine [see FILASṬĪN] who became a Companion of the Prophet Muḥammad. He converted to Islam at the time of the Prophet while other members of his family remained Christians and paid the poll-tax. Tamīm is said to have received from the Prophet a grant of land; a *wakf* [*q.v.*] carrying his name still exists in Hebron [see AL-KHALĪL].

Tamīm's origin is disputed. His *nisba* al-Dārī is said to relate to a subdivision (*baṭn*) of the Lakhm [*q.v.*] called al-Dār, and his pedigree testifies to his Arab origin. However, al-Shaʿbī [*q.v.*] lists him among the non-Arabs (*ʿadjam*) who fought at Badr [*q.v.*] (al-Balādhurī, *Futūḥ*, 455, l. 3).

After his conversion, Tamīm lived in Medina. He emigrated (or rather returned) to Syria after the murder of ʿUthmān b. ʿAffān (35/656). According to a report purporting to describe a meeting between Tamīm and Rawḥ b. Zinbāʿ [*q.v.*], Tamīm was then the governor (*amīr*) of Bayt al-Maḳdis. However, other versions of the same report place the meeting in *Masdjid Ibrāhīm*, i.e. Hebron (see e.g. al-Musharraf b. al-Muradjdjā, *Faḍāʾil Bayt al-Maḳdis*..., ed. O. Livne-Kafri, Shfaram 1995, 349), and it cannot be ruled out that in this context Bayt al-Maḳdis means Hebron. Tamīm's tomb is said to be located north of Bayt Djibrīn [*q.v.*]. The inscription on his tombstone reportedly stated that he died in 40 A.H. (660-1); but according to some he died before then.

The links between Tamīm and Mecca, which go back to pre-Islamic times, were probably based on trade; Tamīm and his brother used to conduct trade with Mecca and after the Prophet's Hidjra they made Medina their destination. Tamīm was a wine merchant: according to his own somewhat unorthodox testimony, he used to grant the Prophet every year a wine-bag until the drinking of wine was forbidden. This trade is also mentioned in a report about a slave of his called Sirādj; together with his master and other slaves, Sirādj carried wine to Medina, and in due course became *sādin Bayt al-Maḳdis* (cf. A. Elad, *Medieval Jerusalem and Islamic worship*, Leiden 1995, 55, l. 6).

Tamīm, possibly conceived of by Islamic tradition as representing Christian monasticism, is associated with several devotional practices. For example, he made the pilgrimage to Mecca on foot, running and resting along the way (al-Wāsiṭī, *Taʾrīkh Wāsiṭ*, ed. K. ʿAwwād, Beirut 1406/1986, 150).

Tamīm reportedly introduced in Islam's public worship several innovations, the Christian-Palestinian origin of which is openly admitted. He introduced oil-lamps in the Prophet's mosque and built in it a pulpit [see MINBAR] modelled on the pulpits of Syrian churches. Some claimed that, under ʿUmar b. al-Khaṭṭāb, Tamīm started story-telling in Islam [see ḲĀṢṢ]. Reportedly, he was the source of eschatological traditions on the Antichrist and the Beast [see AL-DADJDJĀL; AL-DJASSĀSA]; the *ḥadīth al-djassāsa* has a unique position since the Prophet himself "transmitted it on Tamīm's authority". Tamīm was likewise famous as an intrepid traveller, allegedly penetrating to the lands of darkness (*bilād al-ẓulma*) and the lands "behind the Byzantines" (Aḥmad b. Muḥammad al-Ḳurṭubī, *al-Taʿrīf fi 'l-ansāb*, ed. Ẓalām, Cairo 1407/1987, 252).

The letters regarding Tamīm's grant are generally considered an early forgery. It appears that between the murder of ʿUthmān and Tamīm's death several years later, the members of Tamīm's clan seized former Byzantine domains and were allowed to hold them; the letters were supposed to legitimise this situation, which won official approval.

TAʾMĪM (A., Pers. *millī, kardan*, Tkish. *devletleştirme*), all neologisms for nationalisation (in Turkish, probably with *Verstaatlichung* in mind), i.e. the state's assumption of control or ownership of natural resources, services or economic enterprises, from private individuals or corporations. The explicit or implicit reasoning offered is that nationalisation conforms with social advancement and the public good. The term was employed in 19th-century Europe, together with the political and socio-economic philosophy implied. Its use in Muslim lands dates from the 20th century, after both World Wars, when several Muslim states became semi- or entirely independent, automatically receiving ownership of certain natural resources from their former colonial rulers. However, the issue became prominent chiefly after the Second World War, when the number of Muslim states rose substantially and some of their ruling élites were influenced by radical ideologies, both leftist and rightist. Nationalisation was considered a panacea for the problems of the people. Socialist and Communist writers in Arabic and Persian during the 1940s and 1950s, and in Turkish during the 1960s, pointed out what they perceived as the success of nationalisation in the Soviet Union and, later, in China, Great Britain and France. They recommended, as part of economic planning, rapid nationalisation of their countries' main resources, sc. land and oil. Not surprisingly, these were nationalised first (with others, such as foreign schools and companies, rail and sea transport, to follow) in several states. For oil, the main argument was that it belonged to the nation, which was taking it over to consolidate independence, secure social justice and ensure economic development. Its nationalisation in Iran (passed by Parliament, the law was approved by the Shāh on 2 May 1951) served as a model for other Muslim oil producers, such as Libya (1970), Algeria (1971), and ʿIrāḳ (1972), together with Syria, regarding the latter's transit fees, and Indonesia. By 1976, most major operating oil companies in the Middle East and North Africa had been taken over by the governments. In some states, like Iran, Saudi Arabia, Libya and ʿIrāḳ, oil revenues were used, at least partly, for public investment and industrial development. Agricultural countries with no substantial oil revenues nationalised land, together with, firstly, foreign, and then local capital. In 1952 Syria started expropriating land and

redistributing it, followed by Egypt in 1952 and at later stages in 1954, Indonesia annulled its union with the Netherlands and nationalised all Dutch plantations. In 1956, Egypt nationalised the Suez Canal Company; in 1957, financial, monetary and banking networks; in 1958, all foreign schools; and, in the early 1960s, private newspapers, public utilities, transportation, insurance companies, foreign trade, the larger industries and the fortunes of 400 wealthy Egyptians. By then, Indonesia had nationalised the remaining Dutch properties in 1958. Algeria (1963) and Tunisia (1964) nationalised agricultural lands owned by foreigners and then other economic assets. In 1964, ʿIrāḳ nationalised all banks, insurance companies and 32 large industrial firms. Libya nationalised all foreign banks in 1969, and all foreign oil interests, as well as Italian properties, in 1970. A conference of non-aligned states meeting in Algiers in September 1973 proclaimed nationalisation to be a legitimate procedure. Finally, immediately following the 1979 Islamic Revolution, the Iranian government nationalised all banks, insurance companies and most large manufacturing and mining enterprises, as part of the Islamisation of the economy.

(J.M. Landau)

TAMĪMA (a., pl. *tamāʾim*, synonyms *taʿwīdh*, *ʿūdha*), amulet, talisman (for a wider consideration of this last, see ṬILSAM). In origin, it means a stone with white speckles on a black field or vice-versa, threaded on a thong or cord and worn round the neck to avert danger. The Arabs placed such stones on their children, believing that it would protect them from the evil eye, ill fate, sickness and death, having thereby recourse to someone other than God, Who alone is capable of preventing evil and fixing the destiny of His creatures. Hence insofar as this practice was associated with another power than God's, Islam condemned such belief; but, when these *maʿādhāt* contain verses of the Ḳurʾān and invoke the Most Beautiful Names of God, they are licit.

But the root *t-m-m* also contains the idea of completion and perfection. Hence wearing an amulet, it is hoped, is an efficacious remedy and a perfect cure. In the invocation *aʿūdhu bi-kalimāt Allāh al-tāmmāt*, the last word means that "God's words are profitable for whoever invokes them; they preserve him from evil and suffice for him" (*TʿA*, s.v.).

Taʿwīdh "placing oneself under the protection of God" is frequent in the Ḳurʾān (II, 67; III, 36; XI, 17; etc.), and these verses are often used in the preparing of amulets. These invocations may be written down and hung from the neck or simply pronounced or yet again soaked in some water which is then drunk, hence the name of the philtre given to them (whence *filaktūrāt* = φυλακτήρια).

Ḥadīth also provides significant elements for this usage, still current in certain milieux. "Amongst the ten faults detested by the Prophet... [is] wearing *tamāʾim*", says a *khabar* repeated four times by Ibn Ḥanbal (i, 38, 381, 397, 439; see also al-Nasāʾī, *zīna*, 17; Abū Dāwūd, *khātam*, 3). Likewise attributed to him is the saying "Whoever bears a *tamīma*, may God not bring him to a safe goal (*lā atamma lahu*). Another *ḥadīth* puts on the same level three actions very different from each other: "drinking a drug (*tiryāḳ*) or wearing a *tamīma* or speaking poetry" (Abū Dāwūd, *ṭibb*, 10; Ibn Ḥanbal, ii, 223). Three practices stem from paganism (*shirk*): *ruḳā* or charms [see RUḲYA], *tamāʾim* and *tiwala* "spells by means of which a woman seeks to gain a man's love" (Abū Dāwūd, *ṭibb*, 17; Ibn Mādja, *ṭibb*, 39).

The effects expected from these amulets are various: as well as protection from the evil eye, they may be used to excite love or hatred between men and women, win over one person's love for another by arousing a voracious passion, excite sexual desire or destroy it, create discord and enmity between persons, cause people to fall ill or die by slow poisoning, wasting away or disjunction of limbs, protect oneself against the malevolence of others, etc. (see Fahd, in the volume devoted to *Sciences occultes en Islam*, in BEO, xliv [1992], 40-1). On the whole practice, inherited from the *Djāhiliyya* and Islamised thanks to the usages of the Prophet himself, see Fahd, in the volume of *Sources orientales*, vii, called *Le monde du sorcier*, Paris 1966, 179

ff., in which numerous examples are given. See also, as part of these usages of natural or white magic, NĪRANDJ, RUKYA and SIHR.

(T. FAHD)

TAMMĀM B. GHĀLIB, Abū Ghālib Tammām b. Ghālib b. ʿUmar, also known by the name **IBN AL-TAYYĀN(Ī)** (sometimes AL-TAYYĀN), Andalusian lexicographer and philologist, d. 436/1044. He was considered by his contemporaries as the undisputed master of the science of language (*kāna mukaddam^an fī ʿilm al-lisān, musallamat^an lahu al-lugha*: Ibn Ḥayyān, ed. al-Abyārī, Cairo-Beirut 1989; Ibn Bashkuwāl, *Ṣila*, i, 201), which earned him the title of *al-lughawī* "the lexicographer, lexicologist" which biographers often attach to his name, sometimes followed by the epithet *adīb* (*ibid.*, ii, 665; al-Ḥumaydī, *Djudhwa*, ii, 639-40; al-Kifṭī, *Inbāh*, Cairo 1986, i, 294).

Originally from Cordova, where he was born at an uncertain date, probably during the second half of the 4th/10th century, he spent much of his life in Murcia and died in Almeria. He studied in the city of his birth as a pupil of his father, Ghālib (who was himself the pupil, among others, of the eminent Abū Bakr Ibn al-Kūṭiyya [d. 367/977], *apud* Ibn Bashkuwāl, *Ṣila*, ii, 665; cf. Ibn al-Khaṭīb, *Iḥāṭa*, Cairo 1973, i, 256, who mentions him among the masters of Aḥmad b. ʿAbbās Ibn Zakariyyā [d. 427/1036]), attended courses given by numerous Cordovan masters, including ʿAbd al-Wārith b. Sufyān Ibn Djubrūn [d. 395/1005] and was specifically the disciple of the very eminent grammarian and lexicographer Abū Bakr al-Zubaydī (d. 379/989).

Although he received a thorough education in all branches of knowledge, including *adab* and poetry (al-Ḥumaydī, *Djudhwa*, ii, 639-40, quotes four verses rhyming in *-ri* which are attributed to him), he distinguished himself particularly in the realm of the linguistic sciences.

Very meagre information is available regarding his activity as a teacher, but it is known that he taught in Murcia (Ibn Saʿīd, *Mughrib*, i, 166) and in Almeria, whither he was summoned by the governor of the town who entrusted to him the education of his son and the sons of other dignitaries (Ibn Khayr, *Fahrasa*, 360). Among those who studied with him, we know of a certain Ibn Maḍāʾ (*var.* Ibn Maḍā) Abū ʿAbd Allāh Muḥammad (not to be confused with the author of the *K. al-Radd ʿalā ʾl-nuḥāt*) (Ibn Bashkuwāl, *Ṣila*, ii, 746, where Ibn al-Tayyānī should be read in place of al-Bayyānī; *Inbāh*, iii, 215), and according to a statement by Abū Bakr Muḥammad Ibn Hishām al-Mushafī (d. 481/1089), he met Tammām twice in Murcia; he does not, however, indicate whether he was a student of his or not.

As for his writings, biographers attribute two works to him: *al-Mūʿab* and *Talkīḥ al-ʿayn* (Ismāʿīl Bāshā, i, 245-6; Kraemer, 218-19; Kaḥḥāla, iii, 92-3; Ziriklī, ii, 70; Sezgin, *GAS*, viii, 256; al-Sharkāwī, 205, 220) while the ancient sources speak, often without indicating the title, of a single and unique work. The latter unanimously stress the intellectual rigour and the piety of Ibn al-Tayyānī. As illustration of his supreme morality and his disregard for personal gain, they relate the anecdote according to which Mudjāhid al-ʿĀmirī [*q.v.*], prince of Denia and of Algeciras, offered him 1,000 dīnārs in exchange for the dedication of his work to himself, but Tammām refused the money and would not accede to his request, declaring that he was not prepared to lie and that his book had been composed for the benefit of every *ṭālib* ("person who desires to learn") and not for any specific person.

In his article *al-Mūʿab, précieux dictionnaire arabe aujourd'hui retrouvé, al-Mūʿab muʿdjam ʿarabī badīʿ fukid fa-wudjid*, in *Lughat al-ʿArab*, iv/1 (1914), 5-14, Père Anastase-Marie al-Karmalī showed, largely through a process of comparing the edited texts of certain biographies (in particular those of the *Ṣila* and the *Djudhwa*) and manuscript texts which he seems to have possessed, that *talkīḥ al-ʿayn* is not the title of a work but is, in fact, an erroneous reading of the expression *bi-fatḥ al-ʿayn* which originally followed the title *al-Mūʿab*. It is introduced in order to specify that this word should be read as the passive participle, with *fatḥa* on the *ʿayn*. P. Anastase-Marie is probably right that Tammām b. Ghālib in fact compiled only one dictionary of the Arabic language, which he intitled *al-Mūʿab* "accumulated, complete (work)". However, the present writer considers that the expression *talkīḥ al-ʿayn* could well be another title by which *al-Mūʿab* was known, or even a qualificative which recalls the close connection existing between this dictionary and the famous *Kitāb al-ʿAyn* of al-Khalīl b. Aḥmad (cf. Ibn al-Khayr, *op. cit.*, claiming to have studied *Talkīḥ al-ʿayn*; al-Ṣafadī, *Wāfī*, x, 398, where this title only is mentioned).

At all events, the work is described on the one hand as a most useful dictionary, extremely thorough and comprehensive, and on the other as a dictionary possessing the distinction of containing everything that is correct in the *K. al-ʿAyn* of al-Khalīl including all the indications drawn from the Kurʾān, *ḥadīth* and poetry, while excluding forged attestations, erroneous readings and corruptions. In addition, it integrates all the material presented by Ibn Durayd in his *Djamhara*; as a result *al-Mūʿab* may be regarded as enfolding these two works, showing to the best advantage the material contained in the *K. al-ʿAyn* and the *Djamhara* (al-Suyūṭi, *Muzhir*, i, 88-9).

As regards his method of composition, the above-mentioned article by P. Anastase-Marie (11-14) supplies a clear description and an informative example. It emerges that Ibn al-Tayyānī organised the entries in his dictionary according to the patterns and forms of verbs and nouns, classifying these verbs and nouns in alphabetical order according to the last radical. Each entry is followed by a very brief definition and only such poetical or prosaic attestations as are strictly necessary, and in most cases he neglects to indicate his sources (cf. al-Wadghīrī, 61-6).

The *Mūʿab* seems to have enjoyed great success, particularly among scholars of al-Andalus, as is demonstrated by the compliments addressed to it by Ibn Ḥazm (*Risāla fī faḍl al-Andalus*, in al-Makkarī, *Nafḥ*,

ed. ʿAbbās, iii, 171-2) and al-Shakundī (*Risāla fī 'l-difāʿ ʿan al-Andalus*, in *ibid.*, 190), citing it among the illustrious works which constitute the pride of the Andalusians. But for reasons which remain mysterious, this dictionary did not appeal to the general public and soon fell into oblivion.

The discovery of the manuscript of *al-Mūʿab* in the second decade of this century by P. Anastase-Marie, and the knowledge that the material was at that time preserved in the Library of the Mission of the Carmelite Fathers of Mesopotamia (Baghdād) was welcome news to students of Arabic lexicography. But in view of the declaration by that eminent scholar that the work would never leave that place (*lā yakhrudju minhu abad al-dahr: art. cit.*, 11), it appears, regrettably, that the dictionary itself will remain inaccessible for a considerable period of time.

(OMAR BENCHEIKH)

TAMMĀM B. GHĀLIB [see AL-FARAZDAK].

TAMMĀR (A.), the seller of dates, often found as a *nisba* of merchants who traded in dates and known also as one for traditionists and holy men, such as Dāwūd b. Ṣāliḥ al-Tammār, ʿAbd al-Malik al-Tammār and ʿAlī b. Shuʿayb al-Tammār (see al-Samʿānī, *Ansāb*, ed. Ḥaydarābād, iii, 72-4; Ibn al-Athīr, *al-Lubāb fī tahdhīb al-ansāb*, Cairo 1939, 180-1).

The date-palm fulfilled many uses in the Islamic societies of the Arab and Persian lands, not merely with its fruit as food but with its wood, branches and fronds for a variety of uses, from basket-weaving and constructing boats to building houses; see for these, NAKHL. Some places had special markets for date-selling, and al-Samhūdī mentions a *sūk al-tammārīn* in Medina (*Wafāʾ al-wafā*, ii, 758-9). The *ḥisba* literature records that the *muḥtasibs* should regularly inspect the shops of *tammārūn* in order to ensure that dates were stored in containers, which were to be cleaned daily, ensuring that the dates did not rot.

Dates were produced in the oases of the Arabian peninsula, in those of North Africa, along the Gulf shores of Persia and in the province of Kirmān, etc., with the Sawād of Baṣra especially famed for its abundance of dates, their cheapness and their manifold varieties. Trade in dates was always extensive, and Kirmān, for instance, produced so much that caravans of *tammārūn* travelled thither, and in an exceptionally good harvest year, 100 *manns* of dates sold for as little as a dirham. In North Africa, a camel-load of dates could reportedly be bought for two dirhams, and dates were exported across the Sahara by merchants in exchange for gold and slaves.

(M.A.J. BEG)

TAMMŪZ, the tenth month in the Syriac calendar. Its name is derived from that of the fourth Jewish month with which it roughly coincides. It corresponds to July in the Roman calendar and like it has 31 days. According to al-Bīrūnī, in Tammūz the lunar stations 8 and 9 rise and 22 and 23 set; the days on which one rose and the other, 14 days apart from it, set were the 10th and 23rd. According to al-Kazwīnī, on the other hand, stations 7 and 8 rise, 21 and 22 set, on the 4th and 17th respectively. In the year 1300 of the Seleucid era (A.D. 989), according to al-Bīrūnī, the stars of the stations mentioned by al-Kazwīnī rose and set on the 9th and 23rd. See also TAʾRĪKH. I.

Bibliography: Bīrūnī, *Āthār*, ed. Sachau, 60, 70, 347-50 (in the English translation, the pagination of the Arabic text is given at the side); Kazwīnī, *ʿAdjāʾib al-makhlūkāt*, ed. Wüstenfeld, i, 44-5, 49, 78-9, German tr. Ethé, 93-4, 101-2, 160-1; Ginzel, *Handbuch d. meth. u. techn. Chron.*, i, 1906, 263 ff. (M. PLESSNER)

TAMR [see NAKHL].

TAMTHĪL (A.), literally "the adducing of a likeness, example; representation".

1. In grammar.

Here, it is used in various senses. As a denominative from *mathal* "example", it denotes the citing of examples and the technique of definition by exemplification (cf. Versteegh, 59, n. 8), while from *mathal* in the extended meaning of "proverb", it denotes the creation or use of such expressions; thus the phrase *ʿalayhi mālᵘⁿ* is called a *tamthīl* by al-Mubarrad [*q.v.*] (*al-Muktaḍab*, i, 51) "because [the debt] has got on top of him", a usage which clearly overlaps with *tamthīl* in rhetoric.

As a denominative from *mithāl* "pattern", *tamthīl* has become synonymous with *wazn* "measure" in morphology, but by far its most interesting syntactic application is found in the *Kitāb* of Sībawayhi [*q.v.*]. Ayoub, 14, paraphrases the term as "a systematic recourse to paradigm and to a relation of equivalence between an utterance and a sequence that 'is not said'", the essential feature being that the ideal patterns represent a theoretical standard which is never realised. Hence Sībawayhi can say that *mā ṣanaʿta wa-akhāka* "what have you been doing with your brother?" is semantically and structurally equivalent to **mā ṣanaʿta akhāka*, even though the latter is an incomprehensible (*muḥāl*) utterance which cannot be said (*ibid.*, 3). By this means, Sībawayhi is able to invoke paradigms of the highest abstraction, unsayable for that reason alone, which is good evidence of his theoretical sophistication. Later grammarians replaced this device with *takdīr* [*q.v.*], raising many important questions for which answers have yet to be found.

Bibliography: G. Troupeau, *Lexique-index du Kitāb de Sībawayhi*, Paris 1976; G. Ayoub, *De ce qui "ne se dit pas" dans le livre de Sībawayhi: la notion de Tamṯīl*, in Kees [C.H.M.] Versteegh and M.G. Carter, *Studies in the history of Arabic grammar II*, Amsterdam 1990, 1-15; C.H.M. [Kees] Versteegh, *The explanation of linguistic causes. Az-Zağğāğī's theory of grammar*, Amsterdam 1995. (M.G. Carter)

2. In rhetoric.

Here, it means literally "providing a *mat͟hal*". One of the meanings of *mat͟hal* being "proverbial saying", in works of rhetoric and poetics *tamt͟hīl* often simply means "producing a proverb" [see mat͟hal]. Since Ḳudāma b. D͟jaʿfar [*q.v.*], the term has also been used for specific forms of figurative speech, and in particular, through the influential studies of ʿAbd al-Ḳāhir al-D͟jurd͟jānī [*q.v.*] in his *Asrār al-balāg͟ha*, for a simile [see tas͟hbīh] or a metaphor [see istiʿāra] based on analogy which is sentence-based and not the mere substitution of one word for another; a standard example is the Ḳurʾānic comparison of "those burdened with the Torah but who do not understand it" to an "ass carrying books" (LXII, 5). Scholastic rhetoric in the school of al-Sakkākī [*q.v.*] often discusses it under simile (*tas͟hbīh tamt͟hīlī*) and metaphor (*istiʿāra tamt͟hīliyya*). It is clear that *tamt͟hīl* underlies many old-established proverbs, and that it may produce new poetic utterances that may serve as proverbs. Since *mat͟hal* has also been used for "parable" or "fable", *tamt͟hīl* sometimes refers to the genre of allegorical tales.

The *maṣdar* of the form V verb, i.e. *tamatht͟hul*, is often used to denote the activity of someone who quotes a line or two of poetry to encapsulate the gist of the situation in which he finds himself—just as one would use a proverb. As a literary technique, it is very popular in e.g. the *Arabian Nights*.

Bibliography: W. Heinrichs, *The hand of the northwind*, Wiesbaden 1977, *passim*; G. Schoeler, *Der poetische Syllogismus*, in *ZDMG*, cxxxiii (1983), 43-92, *passim*; K. Abu Deeb, *Al-Jurjānī's theory of poetic imagery*, Warminster 1979, *passim*. On *tamt͟hīl* as allegorical tale, see e.g. Ulfat al-Rūbī, *al-Mat͟hal wa 'l-tamt͟hīl fī 'l-turāt͟h al-naḳdī wa 'l-balāg͟hī ḥattā nihāyat al-ḳarn al-k͟hāmis al-hid͟jrī*, in *Alif* (Cairo), xii (1992), 75-103. Some more details and references on *tamt͟hīl* as used by Ḳudāma and Abū Hilāl al-ʿAskarī (who calls it *mumāt͟hala*), Ibn Ras͟hīḳ, Ibn Sinān al-K͟hafād͟jī and ʿAbd al-Ḳāhir are given in istiʿāra.

(G.J.H van Gelder)

TANAS, conventionally Ténès, a town on the coast of Algeria (lat. 36° 30' N., long. 1° 18' E.) equidistant from Algiers and Arzew. This Berber town had near it in Antiquity a Phoenician trading-post and then a Punic landing-stage. Although the site has no protection against westerly and northwesterly winds, the mouth of the Wād ʿAllāla gives natural protection for ships. The different Latin names (Cartenna, Cartinna, Cartennas and the pl. Cartennae) suggest that there were two townships, the ancient, Berber one in a loop of the Wād 1.5 km/1 mile south of its mouth, and its satellite, the port. In Roman times it came within the western part of Mauritania Caesarensis, with a colony of veterans of Augustus in 30 B.C. In the 4th century A.D. the region was laid waste during the revolt of Firmus (370-5), and Cartennae took part in the Rogatist schism.

In Islamic times, two colonies of maritime adventurers, *baḥriyyūn*, from al-Andalus installed themselves at Tanas in 262/875-6. Their numbers increased, but many of them emigrated to Pechina to found a petty state there. The town had a stronghold (*ḥiṣn*) and the "mosque of Old Tanas" has a mixture of Idrīsid and Ag͟hlabid styles reflecting the different occupations of the town in the 4th-5th/10th-11th centuries. The river provided water for irrigation, hence agriculture as well as maritime trade flourished there. According to al-Bakrī, the town wall had five gates. The town was at this time (5th/11th century) called Tanas al-Ḥadīt͟ha in distinction from the *ḥiṣn* and the Roman ruins, called Tanas al-Ḳadīma. In 298/910 the Fāṭimids occupied the town, but it was soon afterwards taken by Zīrī b. ʿAṭiyya al-Mag͟hrāwī, a vassal of the Umayyads of Cordova. In 473/1080 the Almoravid Yūsuf b. Tās͟hufīn captured it and the Mag͟hrāwa lands as far as Algiers. At this time, the town had several baths, and it flourished through being on a road connecting eastern with western Algeria, al-Masīla with Tilimsān or Tlemcen. At the opening of the 7th/13th century Tanas formed part of the domains of Mandīl b. ʿAbd al-Raḥmān al-Mag͟hrāwī, a vassal of the Ḥafṣids, after the fall of the Almohads. It seems to have been a centre of some intellectual life, with theologians and other scholars whom the local rulers attracted, notably the sultan Yag͟hmurāsan b. Zayyān, founder of the Zanāta Berber line of the ʿAbd al-Wādids (r. 633-81/1236-83). The most famous were the two brothers Abū ʿAbd Allāh Muḥammad and Ibrāhīm b. Yak͟hlaf al-Tanasī al-Maṭmāṭī, the latter (d. 680/1282) the author of a commentary in ten volumes on the *Talḳīn* of the *ḳāḍī* ʿAbd al-Wahhāb (d. 422/1030), and also Muḥammad al-Tanasī, *imām* of Breshk, and his two sons, both of them with the profession of *mudarris* in Tlemcen as the *awlād al-Imām*, Abū Zayd (d. 743/1342) and Abū Mūsā (d. 749/1348). In 688/1289 Yag͟hmurāsan's son in Tlemcen Abū Saʿīd captured Tanas from the Mag͟hrāwa and Lamdiyya from the Banū Tūd͟jīn, but his descendant Abū T͟hābit failed to subdue the Mag͟hrāwa in 752/1351 after besieging without success the fortress of Ad͟jrū which dominated Tanas. In the 7th-8th/13th-14th centuries the port of Tanas was active in the commerce with the coasts of Murcia in Spain. It continued to be involved in warfare between the Marīnids and ʿAbd al-Wādids, and in 870-1/1466 it submitted to a Ḥafṣid army under the sultan Abū ʿUmar ʿUt͟hmān al-Mutawakkil, marching on Tlemcen, who coined money there. At the opening of the next century, the Swīd Arabs in the service of the ruler of Tanas became the nucleus of the Mḥāl confederation of Arabs of Hilālian origin, and their chief Ḥamīd al-ʿAbd, ally of the Spaniards in Oran, was defeated by the Turks and lost Tanas. Internecine strife within the ruling family and popular discontent favoured the installation at Tanas of the Barbarossa brothers, so that it now became a base for the Turks of Algiers to attack the Spanish. In 1533 the Turkish garrison there comprised a mere 25 men under a *ḳāʾid* and a governor sent out from Algiers.

By *ca.* 1700 Tanas was best known for the export of cereals to Europe, with tribes like the Banū Mādūn occupied in this export trade from local ports in the region. Just before 1830, the vine growers of the Tanas coastland exported part of their abundant production to Portugal, Leghorn and Marseilles, since the vine flourished on the silico-calcareous soils of the Ẓahra. One of the most venerated local saints, Sīdī Marwān, with a *ḳubba* on the summit of Cape Ténès, watched over a flourishing maritime activity, and he distributed spoils taken from the enemy to the local poor. Abundant vegetations favoured stock-rearing, with sheep and goats, and there were flourishing handicrafts. At this time, the town had four mosques and

the walls were covered with vines and fruit trees.

Tanas remained relatively untouched by the French military initiatives in Algeria until 1843, being, after the Treaty of Tafna with the Bey of Constantine in 1837, the sole port, with Cherchel, available for ʿAbd al-Ḳādir to export wool, cereals, etc. towards Algiers and foreign lands and to supply the regions still free. Hence its traffic and commerce grew in 1838, despite the presence of a French naval force. The first attack on Tanas came in January 1842, and the French entered the town on 1 May 1843, founding a Ténès-Camp as opposed to the Muslim town, Ténès-Ville. ʿAbd al-Ḳādir installed himself at the end of 1845 on the Rhīw heights, but was repulsed. During the Crimean War, Ténès gained fresh life as a depot for forage and corn which were then exported to the scene of military operations. But the town remained largely depressed, and a period of famine saw the population drop *ca.* 30% between 1866 and 1872. Old Ténès, attached to the new Ténès-Ville from 1851, decayed and in 1854 had only 1,154 inhabitants. Although it remained a regional market centre, only with the beginning of construction of a new port in 1868, not completed till 1914, did it begin to acquire an appreciable share of activity amongst the ports of Algeria. By 1924 a narrow-gauge railway line connected Ténès and Orléansville, but this had little traffic and closed in 1937, most of the traffic of the Shlef region gravitating towards the great ports of Algiers and Oran. Emigration from Ténès and the Ẓahra, especially of the young, began in 1914 for participation in the First World War and for work afterwards in metropolitan France, with remittances forming a perceptible element in the economy of the region, and continued until the coming of independence.

AL-TANASĪ, Muḥammad b. ʿAbd Allāh b. ʿAbd al-Djalīl Abū ʿAbd Allāh (d. 899/1494), Maghribī scholar.

Devoting himself to philological-theological studies, thus qualifying for an eminent rank in several fields of religious scholarship in Tlemcen or Tilimsān [*q.v.*], then the capital of the ʿAbd al-Wādids [*q.v.*] of West Algeria, al-Tanasī was eventually attracted by court life, figuring as poet and court historian. In his comprehensive work *Naẓm al-durr*, consisting of sections on ʿAbd al-Wādid history (H. Kurio, *Geschichte und Geschichtsschreiber der ʿAbd al-Wādiden*, Freiburg 1973, 15-26; ed. M. Bū-ʿAyyād, *Taʾrīkh Banī Zayyān*, Algiers 1985), on administration and court etiquette (a short account in Kurio, *Berberkönige und Schriftgelehrte*, Hamburg 1992, 72-5) anecdotes, and on poetics (ed. N. Soudan, *Westarabische Tropik*, Wiesbaden 1980) and Ṣūfī sayings, he gives his patrons, most likely of Berber origin, an Arab (ʿAlid) profile [see IDRĪSIDS]. Contemporary and fellow-citizen of the better-known theologian Muḥammad b. Yūsuf al-Sanūsī [*q.v.*], al-Tanasī ranked among the intellectual élite of Tilimsān at his time.

(H. Kurio)

TANĀSUKH (A.), *maṣdar* of form VI of the root *n-s-kh*, a term with both legal and, above all, religious connotations. According to the *LʿA*, the simple form *nasakha* has two principal meanings: (1) to copy a writing (*iktitābuka kitāb^an ʿan kitāb^in*), the original and the copy both being called *nuskha* since each "replaces" the other (*ḳāma maḳāmahu*); and (2) to suppress a thing in order to replace it by another (*ibṭālu

'l-shay' wa-iḳāmatu āḳhara maḳāmahu, whence the sense of "to abrogate" [see NASKH]). *Tanāsakha* thus suggests the notion of things which succeed one another, each in its turn "replacing" the preceding (*tadāwala fa-yakūnu ba'ḍuhā makāna ba'ḍ*[in]). In the language of *fiḳh*, in the context of the laws of succession, *tanāsukh* is evoked in reference to the fact that "heirs die after other heirs in such a way that the initial heritage remains undivided" (al-Khwārazmī, *Mafātīḥ al-'ulūm*, ed. van Vloten, 21, ll. 1-2).

Tanāsakha does not occur in the Ḳur'ān. This verb is found once (?) in *ḥadīth*, in a homily attributed to the founder of the city of Baṣra, 'Utba b. Ghazwān [*q.v.*]: *lam takun nubuwwat*[un] *ḳaṭṭu illā tanāsakhat ḥattā yakūna ākhiratu 'āḳibatihā mulk*[an] (Muslim, *zuhd*, 14; Ibn Ḥanbal, *Musnad*, Cairo 1313, iv, 174; al-Ṭabarānī, *al-Mu'djam al-kabīr*, xvii, Cairo 1980, §§ 280-1). According to the *Lisān*, *tanāsakhat* is said to be here the equivalent of *taḥawwalat min ḥāl*[in] *ilā ḥal* "to change, move from one situation to another".

The term *tanāsukh* is above all known for the way it is used in so-called "heresiographical" literature to denote the concept of transmigration, this transmigration being itself, according to the context, understood in two very different senses: (1) the "transmigration of spirits" (*tanāsukh al-arwāḥ*) from one body to another, otherwise known as metempsychosis (or more correctly, according to some, "metensomatosis"); and (2) in beliefs current among certain extremist Shī'ī sects (*ghulāt*), the transmigration of a divine element from one *imām* to another.

(1) To signify metempsychosis, *tanāsukh* is in fact the term most often used, but it is not the only one. Al-Mas'ūdī, for his part, has recourse to various derivatives of the verb *naḳala* "to transfer": *nuḳla, tanaḳḳul, intiḳāl* (*Murūdj*, ed. Pellat, §§ 687, 1396). The same vocabulary is sometimes used by al-Nawbakhtī (*Firaḳ*, 35-7) and Ps. al-Nāshi' (*Uṣūl al-niḥal*, § 57). Another term, coined in modern times, is *taḳammuṣ*.

The spiritual principle transmigrating is called *rūḥ*, pl. *arwāḥ*, less frequently *nafs*, pl. *nufūs* or *anfus*. The body in which it is incarnated is the object of more varied nomenclature: *djism, djasad, badan, ṣūra* ("form"), *ḳālab* (lit. "mould") and *shakhṣ* ("silhouette" ?).

The notion of metempsychosis naturally evokes that of metamorphosis (*maskh* [*q.v.*]), the difference being that *maskh* is always used in reference to a transformation from one body to another, inferior, body—from human to animal, in most cases. (It should be noted, however, that in current Arabic usage, *maskh* is itself sometimes employed to denote metempsychosis in general.) Following the lead of an anonymous theologian (*mutakallim*), a believer in *tanāsukh* quoted by al-Bīrūnī (*Taḥḳīḳ*, 49, ll. 2-7), it became customary to distinguish between four types of metempsychosis, expressed by four *maṣdars* of identical assonance: *naskh, maskh, raskh* and *faskh*. These terms are variously explained. According to al-Īdjī [*q.v.*], *naskh* ("substitution") is said to refer to the passage from one human body to another human body, *maskh* ("transformation") to passage from human to animal, *raskh* ("immobilisation") to transformation into a vegetal state, and *faskh* ("disintegration") to that into mineral form (cf. al-Shahrastānī, *Livre des religions*, i, 512). In reality, it is above all a question of reincarnation in the form of animals and also, in a more exalted context, the form of angels.

Muslim historians of religion locate beliefs in metempsychosis on the one hand outside Islam, on the other within Islam proper.

Outside Islam, it is principally the Indians who are credited with such a doctrine (cf. the testimony of Yaḥyā b. Bishr al-Nihāwandī, *ca.* 377/987, quoted by Ibn al-Djawzī, *Talbīs*, 80). A well-known phrase occurs in the preface to ch. v of *India* by al-Bīrūnī: "Just as the *shahāda* is the distinguishing mark of the Muslims, [belief in] the Trinity that of the Christians, observance of the Sabbath that of the Jews, so [belief in] transmigration is characteristic of the Indians" (*Taḥḳīḳ*, 38, ll. 4-6). Indians in general is the meaning here: al-Bīrūnī, on this point, is much better informed than al-Shahrastānī, according to whom only *certain* Indians held such beliefs (cf. *Livre des religions*, ii, 62, 530, 535). Besides "Hinduist" Indians (the "Brahmins" or *Barāhima* [*q.v.*]), the Buddhists (known as *Sumaniyya* [*q.v.*]) are also known as believers in metempsychosis (cf. Gimaret, in *JA* [1970], 297-9). The same applies to Mānī and the Manichaeans (cf. *Farḳ*, 271); according to al-Bīrūnī, Mānī was said specifically to have brought this doctrine back from his sojourn in India (*Taḥḳīḳ*, 41, ll. 15 ff.). Al-Shahrastānī, without further precision, mentions the *tanāsukhiyya* among the Dualists (*Livre des religions*, i, 671-2). Possibly he was also thinking of the Khurramiyya [*q.v.*], the inheritors of Mazdakism.

Other believers in *tanāsukh* are cited not in the East but in the West of the *dār al-Islām*. These are in the first instance the Greek philosophers, namely, Socrates, Plato and their disciples (cf. *Farḳ*, 271, ll. 11 f.; al-Mas'ūdī, *Murūdj*, § 1396); in this context, al-Bīrūnī quotes a passage from the *Phaedo* (*Taḥḳīḳ*, 43, ll. 9 ff.). Then there are the self-styled Ṣābians of Ḥarrān, inheritors of neo-Platonism (cf. in particular 'Abd al-Djabbār, *Mughnī*, v, 152, ll. 12-14, following Ibn al-Ṭayyib al-Sarakhsī [d. 286/899]; and *Livre des religions*, ii, 169).

Within Islam, belief in metempsychosis is said to be characteristic of, on the one hand, a certain number of extremist Shī'ī sects, and on the other, curiously, of some marginal Mu'tazilīs.

Among the *ghulāt* Shī'īs, this is said to apply to certain of the Kaysāniyya [*q.v.*], these being the supporters of 'Abd Allāh b. Mu'āwiya [*q.v.*] (cf. Halm, 69-78). Sa'd b. 'Abd Allāh al-Ḳummī also attributes it to the Mukhammisa [*q.v.*] as well as to their 'Alyā'iyya rivals, disciples of Bashshār al-Sha'īrī (Halm, 222-6). It permeates the "Book of Shadows" (*K. al-Aẓilla*), supposedly relating conversations between Dja'far al-Ṣādiḳ and the *ghālī* al-Mufaḍḍal b. 'Umar al-Dju'fī (Halm, 240-74). Finally, it is still today part of the creed of the Druzes (*Durūz* [*q.v.*]) and of the Nuṣayriyya [*q.v.*].

On the Mu'tazilī side, there were certain disciples of al-Naẓẓām [*q.v.*] who were said to have become believers in it, in particular Aḥmad b. Ḥābiṭ [*q.v.*] or Khābiṭ, as well as a follower of the latter named Ibn Bānūsh or Mānūsh (cf. *Farḳ*, 273-6; *Livre des religions*, i, 221-7).

A number of "orthodox" theologians (in the broad sense of the term) applied themselves to opposing, among other "erroneous doctrines", the theory of metempsychosis. These included 'Abd al-Djabbār (*Mughnī*, xiii, 405-30), al-Baghdādī (*Uṣūl al-dīn*, Istanbul 1928, 235-6), al-Djuwaynī (*Irshād*, ed. Luciani, 158, ll. 5 ff., and 160, ll. 21 ff.) and the *ḳāḍī* Abū Ya'lā (*Mu'tamad*, Beirut 1974, §§ 199-202). According to Ibn al-Nadīm, the Imāmī theologian al-Nawbakhtī is himself said to have composed a *Radd 'alā aṣḥāb al-tanāsukh* (*Fihrist*, ed. Tadjaddud, 225, ll. 27).

(2) In the second sense of the term, more characteristic of the Shī'a, the notion of *tanāsukh* is closely linked to that of *ḥulūl* "immanence" or "inhabitation" of the divinity or of a divine element in such-

and-such a creature. A characteristic of various extremist Shīʿī groups is actually the fact that they went so far as to deify ʿAlī and his successors to the Imāmate. Consequently, they used to say that "the spirit of God" (*rūḥ Allāh, rūḥ al-ilāh*) or "the spirit of sanctity" (*rūḥ al-ḳudus*) or a "divine particle" (*djuzʾ ilāhī*) had "inhabited" (*ḥallat*) ʿAlī, then, from him, had "transmigrated" (*tanāsakhat*) into the person of al-Ḥasan, then of al-Ḥusayn, etc., until the end of the chain. Some, furthermore, placed the beginning of the process earlier than this, with Muḥammad, or even with Adam. Such was the belief, among the Kaysāniyya, of the above-mentioned supporters of ʿAbd Allāh b. Muʿāwiya, as well as of the Bayāniyya, disciples of Bayān b. Simʿān [*q.v.*] (cf. *Livre des religions*, i, 448-51). This was also the case with the Khaṭṭābiyya [*q.v.*], disciples of Abu ʾl-Khaṭṭāb al-Asadī (cf. *ibid.*, 522-5); the disciples of al-Muḳannaʿ [*q.v.*] (cf. *Farḳ*, 258, ll. 5-10); and certain followers of Abū Muslim al-Khurāsānī [*q.v.*] (cf. *Livre des religions*, i, 453-4).

(D. Gimaret)

al-**TANĀWUTĪ**, the *nisba* of many spiritual *shaykhs* of the Ibāḍiyya [*q.v.*] referring to the Tanāwut, a Berber tribe of the Nafzāwa country in southern Tunisia and Wargla (Wārdjalān). To the 5th/11th century belongs:

1). Abū Yaʿḳūb Yūsuf b. Muḥammad al-Tanāwutī, who often appears in later tradition. His son 2). Ismāʿīl, but still more his grandson 3). Abū Yaʿḳūb Yūsuf b. Ismāʿīl, had the reputation of being very devout and miraculously gifted. The most important bearer of the name is the last-named's son:

4). Abū ʿAmmār ʿAbd al-Kāfī al-Tanāwutī, fellow-pupil and friend of Abū Yaʿḳūb Yūsuf b. Ibrāhīm al-Sadrātī al-Wārdjalānī. He came of a wealthy family and had an allowance of 1,000 dīnārs a year for his studies in Tunis, of which he gave half to his teachers. His interest in learning, particularly in Arabic philology, was intense. His principal teacher in theology was Abū Zakariyyā Yaḥyā b. Abī Bakr al-Wārdjalānī [*q.v.*] who also taught Abū Yaʿḳūb. Abū ʿAmmār lived principally in Wargla. In the spring, he roamed with his herds far to the south among the oases of Mzab [*q.v.*]. His co-religionists revere him as one of the renewers of their religion (*muḥyī ʾl-dīn*). On the question of the verdict on the caliph ʿAlī, always a fundamental one with the Ibāḍīs, he inclined to leniency. On the other hand, he shared the general bitterness of the Berbers against the incoming Arab Bedouins [see hilāl]. He declared that the property they had acquired in the Maghrib was theft (*ghasb*) and, like his friend Abū Yaʿḳūb, he received a painful impression of the Bedouins of the Ḥidjāz on a pilgrimage to Mecca, so that their consciences troubled them as to whether they, who in the Maghrib carefully avoided any, even business, intercourse with the Arabs, could purchase goods from them in the Ḥidjāz; they consoled themselves with the reflection that the Ḥidjāz had belonged to the Arabs from the very beginning.

Among the writings of Abū ʿAmmār are noted *al-Mūdjiz fī taḥṣīl al-suʾāl*, a "Refutation of all enemies of truth", i.e. one of those *farḳ* books in which the Ibāḍīs used carefully to define their doctrines as distinct from all other schools; also *Sharḥ al-djahālāt*, but particularly the *Sīra*, in which Masqueray recognised "le règle des clercs", a fundamental work for the spiritual organisation of the *ʿazzāb* leaders and their *ḥalḳa* disciples. A long illness prevented Abū ʿAmmār from ever answering a list of queries from ʿAbd al-Wahhāb b. Muḥammad b. Ghālib b. Numayr al-Anṣārī regarding the Ibāḍīs' teaching on their differences from other sects. A reply was only given after his and ʿAbd al-Wahhāb's deaths by Abū Yaʿḳūb al-Wārdjalānī and is contained in the latter's *Kitāb al-Dalīl*. According to this, Abū ʿAmmār died before 570/1174. His teaching was continued, notably by 5). Abū Yaʿḳūb Yūsuf b. Muḥammad al-Tanāwutī, the younger, whose name is identical with that of the individual first named in this article.

6). ʿAdī b. al-Luʾlu' al-Tanāwutī, who lived for a time on the island of Djerba [see djarba], is said to have been the first man in Wargla to be killed by the invading Arabs. His brother was the father of Umm al-Muʾmin, a woman revered for her miracles. As in the cases above named, the brothers 7). Yaḥyā and 8). Abu ʾl-Rabīʿ Sulaymān b. Ayyūb b. Muḥammad b. Abī ʿAmr al-Tanāwutī are of interest to the biographers on account of their piety and miracles which they describe.

ṬANBŪR [see ṭunbūr].

ṬANDJA, the name for the town of Tangier on the northern Moroccan shore of the Straits of Gibraltar.

Ṭandja is an Arabised form of the Roman *Tinjis*, but it is very probable that the name is Berber in origin, judging by the frequency of toponyms beginning with *tin-*, e.g. Tinmal, Tinghir, etc. Situated some 12 km/7 miles east of Cape Spartel, where the Atlantic begins, Ṭandja has for long been coveted on account of its strategic position, with Phoenicians, Carthaginians, Romans, Vandals, Portuguese, Spaniards and English successively controlling it since its foundation in the 7th century B.C. The European occupation 1471-1684, its vulnerable geographical position as a *thaghr* [see thughūr. 2], as well as its essentially military population, have been factors hindering the town from developing truly urban structures and institutions such as are found in towns of the interior of Morocco.

Pre-Islamic history. Archaeological evidence shows a Phoenician presence in this part of the Tingitanian peninsula during the 7th and 6th centuries B.C., but it was not till *ca.* 400 that the Carthaginians founded the small trading-post of Tingis. After the fall of Carthage in 146 B.C., the town, with the rest of North Africa, came under Roman aegis. In 38 B.C. the

emperor Claudius raised it to the rank of a colony and its people became Roman citizens. Tangier also became the capital of Mauritania Tingitana and benefited from the convergence on it of trade routes from Salé and Volubilis, but was caught up in the disturbances affecting the empire at the beginning of the 5th century A.D. It then passed under Byzantine control, but the imperial representative chose to reside not there but at Ceuta or Sabta [*q.v.*].

The Islamic period. Ṭandja came under Muslim control when Mūsā b. Nuṣayr [*q.v.*] seized the town and installed there his Berber lieutenant, Ṭāriḳ b. Ziyād [*q.v.*]. The conquest of Spain in 711 gave the town a privileged position as a place of linkage between the two shores, and it also became the place of residence for Arab governors appointed from the East; but for Ṭandja, as for the rest of North Africa, the 2nd/8th century was dominated by Khāridjite revolts. According to historical tradition, the *sharīf* Idrīs (I) found refuge there at the end of the century, but the town was soon abandoned for a more central Idrīsid capital at Volubilis (Walīla). Thus it lost its position as the first town of the Maghrib al-Aḳṣā. It still played an important role in the traffic between North Africa and al-Andalus, but tended to be overshadowed by Sabta.

The period of European colonisation. After attempts at occupation from *ca.* 1400 onwards, the Portuguese occupied Sabta and then, in 1471, Ṭandja, to remain there for two centuries. In 1671 it passed briefly under English control as part of Catherine of Braganza's dowry when she married Charles II. The English were especially concerned to make Tangier a base for their fleet in the Mediterranean, hence built defensive ramparts and towers, and for trading purposes, a mole was built out into the sea in 1663. It nevertheless remained primarily a military centre, with soldiers making up half of its 3,000 inhabitants. During these centuries, Ṭandja was completely cut off from its hinterland, but there had always been harrying of the town by Muslim *mudjāhidūn* from the Moroccan interior, and the English position was harassed by the attacks of al-Khaḍir Ghaylān of the Banū Gurfaṭ; only with the accession of the ʿAlawid sultans in Morocco in *ca.* 1666 did Ghaylān make a truce with the English in face of the common enemy.

The return to Moroccan control. It was the great Mawlāy Ismāʿīl (1082-1139/1672-1727 [*q.v.*]) who achieved the reputation of "liberator of the *thughūr*". The English tried to achieve a "lasting truce", but Ottoman pressure from the sultan Meḥemmed IV, that a *sharīf* should no longer tolerate the presence of infidels on his soil, with hopes dangled before Ismāʿīl of suzerainty over the central Maghrib, led to a long siege of the town and, finally, the English evacuation of Tangier in 1684, after destruction of the mole and main fortifications. Ismāʿīl now entrusted the town to the "army of the Rīf" commanded by ʿAlī b. ʿAbd Allāh al-Tamsamānī, who rebuilt the town and peopled it with immigrants from the central Rīf. Also, the sultan delegated the conduct of European affairs to the governor, who henceforth combined with his administrative duties diplomatic ones. When Ismāʿīl died, Aḥmad b. ʿAlī came to rule a virtually independent principality stretching from Ṭandja to Oujda or Wadjda. In the latter part of the 18th century, however, Mawlāy ʿAbd Allāh installed black troops, *ʿAbīd*, in Ṭandja as a counterweight to the power of the Rīfian army; but the sultans were unable to dispense with the services of Aḥmad b. ʿAlī al-Rīfī's family, and these continued to govern the town and its region into the 19th century.

Tangier in the 19th century. It was now that the town took on its appearance familiar till today, as a part of the general process of Morocco's opening-up to the European powers. This began with the establishing of consuls towards the end of the 18th century, these being transferred from Rabat because of Tangier's better access to maritime and postal communications, and nearness to continental Europe. For the sultan's administration, this was felt to be advantageous since it confined the European presence to a peripheral town. The increasing importance of these diplomatic connections led the Moroccan government, after the French naval bombardment of the town and the rout of the Moroccan army at Isly in 1844, to install in 1845 a representative (*nāʾib*) in Tangier charged with diplomatic duties. Its commercial importance now grew, especially as a supply of foodstuffs for the British garrison in Gibraltar; by *ca.* 1850 20% of Morocco's export trade was shipped via Tangier, and it became the main embarkation port for pilgrims to Arabia. The town developed especially after the 1856 Anglo-Moroccan trade treaty which abolished state monopolies. The population grew from 5,000 in 1810 to *ca.* 20,000 in 1878, with Jews making up one-fifth of the population. The European population was 700 in *ca.* 1862, rising to 5,000 by the end of the century in the wake of various treaties with European powers. This growth had implications for daily life and the appearance of modern urban institutions, such as a *conseil sanitaire* set up by the European consuls in 1874, and schools for the children of the European and Jewish communities. Printing was introduced, and the first newspapers known in Morocco were produced there, such as the *Times of Morocco* (1870) and *Le Reveil* (1883).

Tangier in the 20th century. On various occasions in the opening years of the new century, Tangier was a place of world interest because of colonial rivalries over Morocco, with a consequent tense and nervous climate of feeling. From the Moroccan side came acts of banditry and the targetting of Europeans, with in 1903 and 1904 the *sharīf* Aḥmad al-Raysūnī attacking the town and seizing the Greek-American Ian Perdicaris and the Englishman Walter Harris. In 1905 the Kaiser Wilhelm II landed there to assert "the rights of Germany" accorded to France by the 1904 Franco-Moroccan entente. The 1912 Protectorate agreement, however, gave Tangier a special status, in view of its strategic position on the Straits and its role as viewed by European powers, but definition of its special status only came after the First World War.

The international Status of Tangier and its zone 1923-56. The Algeciras conference of 1906 did not regulate the status of the town as the French and Spanish wanted, and Britain, in particular, did not wish to see the town under control of a power which could menace its naval hegemony in the Straits of Gibraltar region. The question was not resolved till the Paris agreement of 1923 with its "statute for the zone of Tangier", which remained in force till Moroccan independence in 1956, though suspended 1940-5 when Francoist Spain took advantage of the European war to occupy Tangier and attach it to its existing protectorate of northern Morocco.

The statute provided for political and military neutrality, unfettered economic freedom and an international administration. The sultan of Morocco retained his authority over his Muslim and Jewish subjects, with a *mandūb* or delegate in the town. Under the statute, Tangier developed greatly in the economic and financial direction, with 85 banking agencies in 1950, compared with four in 1900, and 4,000 limited companies, but commercial and industrial development remained

behind, mainly because of the separation of the town and its zone from the rest of Morocco, despite the opening of a railway link connecting Tangier with Fās and Rabat in 1927. But the town's prosperity attracted a large number of immigrants from the Moroccan interior, especially from the Spanish zone where the land was poor and there was an absence of any economic development. In the period of international control, the Moroccan population of Tangier quadrupled, and in 1952 Europeans, mainly Spanish, formed one-quarter of the total of 164,000 inhabitants.

Tangier after independence. Despite its separation from the rest of Morocco, Tangier took part in the struggle for independence, by providing a haven for nationalists fleeing the French and Spanish zones and by being the place where Muḥammad V in 1947 claimed the right of Morocco to independence, its own sovereignty and adhesion to the Arab world. But the consequences of independence were economically deleterious for Tangier, with the loss of its international status and the flight of outside capital, so that the artificial quality of its prosperity became apparent. The rural exodus continued, so that the population reached 293,000 in 1982. In the absence of any strategic economic plan for northern Morocco, the town's economy has become more and more dependent on smuggling and the drugs traffic. Thus the development of the town and its hinterland remains a social and economic challenge which independent Morocco has not yet succeeded in solving.

(MOHAMED EL MANSOUR)

TANGA and **TANKA**, terms of Islamic coinage. The present article covers what were two articles in *EI*[1] by J. Allan. Both words are spelled تنكه in Arabic, but are traditionally pronounced *tanga* or *tenge* in Persian and Turkish-speaking lands and *tanka* in the Indian sub-continent. The etymology appears to be somewhat uncertain. The earliest appearance of the word occurs in a coin legend on the bilingual Arabic/Sanskrit silver issued by the Ghaznawid ruler Maḥmūd b. Sebüktigin [*q.v.*] in Maḥmūdpūr (Lāhawr) in 418 and 419/1027-8, where the word *tankam* was used to translate the Arabic *dirham* in the Sanskrit legend giving the denomination and date. Various derivations are put forward in Edward Thomas's footnote on pp. 48-9 of his *Chronicles of the Pathan Kings of Dehli*, one of which suggests that the word represented a weight in the Indian ponderal system similar to that of the *tola* [*q.v.*], *ca.* 10.7-11.2 gr, and then became a name for gold and silver coins struck to that weight in the pre-Mughal Islamic coinages of the subcontinent. Another authority believed the word derived from *tang*, which in Čaghatay Turkish is said to have meant "white", the colour of the metal silver, and thus became a popular name for silver coin, as in the case of the Greek *asper* and the Turkish *akče*.

The numismatic evidence given above would suggest that *tanka* was the generic name for coined money at the time when Maḥmūd of Ghazna struck his silver in Lāhawr, but that it became the name of a specific denomination when Shams al-Dīn Iltutmish (607-33/1210-36 [*q.v.*]) regularised the currency as part of his general administrative reforms. Although gold coinage with the weight of the tola is known to have been struck by both Maḥmūd of Ghazna and the Ghūrid Muʿizz al-Dīn Muḥammad b. Sām [*q.v.*], it was the silver tola-weight coinage of Iltutmish which became the standard for all fine silver tankas issued by most states in pre-Mughal India. Tola-weight gold tankas came into general circulation under Nāṣir al-Dīn Maḥmūd Shāh I (644-64/1246-66). After about a century, during which gold and silver tankas were issued in abundance by many states, they gradually dropped out of use and were replaced by billon coins until Shīr Shāh Sūrī (945-52/1538-45) revamped the currency by reviving the tola-weight fine silver coinage, but using another traditional Indian name, the *rūpiyya* or rupee [*q.v.*]. The Mughal ruler Akbar (963-1014/1556-1605 [*q.v.*]) then applied the name *tanka* to his 2-*dām* copper coin weighing around 41.5 gr. The tenth part of the tanka which weighed 4.15 gr he named the *tanki*. When Akbar revived the large-scale striking of gold, he called the tanka-weight coin the *muhur*, a name it retained thereafter.

In the West, where the word was pronounced *tanga* or *tenge*, the name was given to the reform silver coinage introduced by Tīmūr in 796/1394, which was described as half the weight of the Indian tanka and nominally worth four dirhams. Album has pointed out, however, that it originally weighed about 6.2 gr, it was reduced to 5.1 gr in 828/1425, and to 4.78 gr in around 895-8/1490-3. During the reign of Shāh Rukh (807-50/1404-46 [*q.v.*]), it became known as the *shāhrukhī*, then in the period of Tīmūrid decline and thereafter its weight standard became subject to widespread variation. The *tanga* continued to be the generic name for the principal silver denominations issued by the Ḳarā Ḳoyunlu, Aḳ Ḳoyunlu, Shaybānids and many minor Persian and Central Asian dynasties. *Tanga* is probably the most appropriate name for the heavy silver coinage that was struck by the Ottoman rulers from Sulaymān I to Murād III in the former Persian territories of Ādharbāydjān and ʿIrāḳ. The name then passed into use in Russia, where the half-kopeck copper coin was known as the *denga*. In the 19th and early 20th centuries the khānates of Turkistān, the Mangits of Bukhārā, the Rulers of Khīwa (Khʷārazm), Khoḳand and Kāshghar also named their silver and base metal coins *tenge*, with multiples and fractions being issued on a quasi-European pattern in the latter part of their usage.

Finally, in his *EI*[1] art. *Tanga*, Allan asserted that the word was connected with the Turki word *tamgha* [*q.v.*], an official mark or die [see SIKKA]. While this otherwise unsupported etymology seems rather far-fetched, it might have been inspired by the three-circle triangular design which Tīmūr used as a personal device on his reform tankas.

TANGIER [see ṬANDJA].

TANKIZ (corresponding to Tkish. *deñiz* "sea") al-Ḥusāmī al-Nāṣirī, Sayf al-Dīn (d. 740/1340), Mamlūk commander and governor of the province of

Damascus 712-40/1312-40 during the third reign of al-Nāṣir Muḥammad b. Ḳalāwūn [*q.v.*].

Tankiz rose to favour as one of that sultan's bodyguard (*khāṣṣakiyya*), fought against the Il-Khānid Mongols in Syria and became *nā'ib al-salṭana* for the province. When in Syria, he remained high in the sultan's favour, travelling almost every other year to Cairo, where he was received with great honour and overwhelmed with rich presents. His son ʿAlī was made an *amīr*, and in 736/1336 two of the sultan's daughters were married to Tankiz's sons (al-Shudjāʿī, *Ta'rīkh al-Malik al-Nāṣir Muḥammad b. Ḳalāwūn*, ed. and tr. B. Schäfer, Wiesbaden 1977-85; text 42 ff., tr. 63 ff.). The expansion of the capital Cairo under the sultans was paralleled in the provinces of the kingdom. Tankiz's foundations and reconstructions changed the townscape of Damascus. Besides nine *ḥammāms*, he built the impressive mosque named after him, where he was ultimately buried, and the mausoleum of Sitt Sutayta, which included a *ribāṭ* [*q.v.*] for women built posthumously for his wife Sutayta in 730/1330.

His pride and wealth excited jealousy at the Mamlūk court. The sultan's suspicions grew, especially as, if al-Maḳrīzī is to be believed, Tankiz planned to overthrow the sultan (*Sulūk*, ed. M. Ziyāda and S.ʿA.F. ʿĀshūr, Cairo 1930-73, ii, 509). The sultan ordered his arrest, and he was brought to Alexandria, imprisoned and then executed in Dhu 'l-Ḥidjdja 740/May-June 1340 or the next month; his treasury and properties were confiscated.

(S. Conermann, shortened by the Editors)

TANNŪR [see MAṬBAKH].

TANPINAR, AḤMED ḤAMDĪ, Turkish poet and novelist, born in 1901 in Istanbul, died on 24 January 1962. His father was the Ḳāḍī Hüseyin of Batum. After graduating from the Istanbul Faculty of Literature, he taught in various schools in Anatolia 1923-32, and subsequently taught history of art, aesthetics and mythology in the Istanbul Academy of Fine Arts. In 1930, he published the journal *Gürüş* with Ahmed K. Tecer. He was a professor of literature at Istanbul University 1939-42, and then was the Member of Parliament representing Maraş 1942-6. After 1946, he went back to his teaching at Istanbul University. His works were published in journals such as *Dergâh*, *Milli Mecmua*, *Hayat*, *Görüş*, *Varlık*, *Oluş*, *Ülkü*, *Aile*, and the newspapers *Tan* and *Cumhuriyet*.

Tanpınar was one of the most prolific modern Turkish authors, who began by writing poetry and then turned to writing essays, novels, short stories, literary criticism and literary history. Until 1932, his works reflected the influence of Western literature and thought, but thereafter he began to look for a synthesis of Western and Eastern traditions. His well-known novel *Huzur* is full of psychological dilemmas and analysis, discussions of history and architecture, and the dichotomy of East and West. Tanpınar strove to solve the realities hidden in the inner psyches of people rather than to reflect the observable reality of life; the use of nature and references to folk legends characteristic of his works are said to be reflections of his own childhood experiences. The best example of his poetic style is *Bursada zaman*. T.S. Halman says of his poetry that he "specialized in simple lyrics of genteel sensibilities expressed in tidy stanzaic forms and the traditional syllabic meters" (Halman, *op. cit.* in *Bibl.*, 28). Tanpınar's other well-known work, *Beş şehir*, is about his impressions of the five cities of Istanbul, Bursa, Konya, Erzurum and Ankara.

Bibliography: 1. Selected works. (Çiğdem Balim)

TAÑRİ (T.), Heaven, God. In the eastern Turkish dialects the vocalisation is usually palatal: Čaghatay, *tengri* (written تینکری) and similar forms in the other dialects. The trisyllabic forms in Teleut (*täñärä*) and in the Altai dialect (*täñäri*) are worthy of note; the Kazan Tatar dialect has alongside of *tängri* (god) a word *täri* = image of a saint, ikon (we may here mention the proper name *Täri-birdi*, where *täri* of course means God). The Oghuz dialects (Ottoman Turkish, Azerbaijani and Turkmen) have a non-palatal vocalisation, as has Yakut (*tañara*) and Chuvash (*tură* < *tañri*).

For the lexicographical material, see Sir Gerard Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, Oxford 1972, 523-4, and idem, *Sanglax*, London 1960, 54; W. Radloff, *Versuch eines Wörterbuches der Türk-Dialecte*, St. Petersburg 1888-1911, iii, 823, 1043-4, 1047-8, 1065; O. Böhtlingk, *Über die Sprache der Jakuten. Jakutisch-Deutsches Wörterbuch*, St. Petersburg 1851, 90; and lastly Maḥmūd al-Kāshgharī, *Dīwān lughāt al-Turk*, ed. Kilisli Rifʿat Bey, Istanbul 1333-5, iii, 278-9, Tkish. tr. Besim Atalay, iii, 376-8, Eng. tr. Dankoff and Kelly, ii, 342-3, who says "*tängri* means God; the infidels however call heaven *tängri* and likewise everything that impresses them, e.g. a high mountain or a large tree. They worship such things and they call a wise man *tängrikän*". This word *tängrikän* appears also as an old Turkī title (see Radloff, *Wörterbuch*, iii, 1048; F.W.K. Müller, *Uigurica*, Berlin 1908ff., 47: *tängrikän* = ruler). With the meaning "God" (in the

Manichaean system) we find *tängrikän*, for example, in the Manichaean confession of sins (*Chuastuanift*, ed. A. von le Coq, Berlin, 1911, 10). The word *tängrim* (i.e. *tängri* with the pronominal suffix of the first person) seems to be used in the Turfan texts in the titles of princesses or queens (cf. Müller, *op. cit.*, 48, who compares the modern usage of *khanîm* and *bēgam*). We may here give a few derivatives of *tängri*: *tängriči* (in the Manichaean confession of sins, see *JRAS* [1912], 289, 299) = "preacher, chosen one" (lit. man of God); Kuman, *teñrilik* = "divine"; Uyghur, *tengrilik* = "pious". The Mongol *tängri* (God) is a loanword from the Turkish (for this form, see *Bibl. Buddhica*, xii, 51).

The word is presumably of Hsiung-nu (East Hunnish) origin, *tañri (in Turkish with assimilation either > *täñri* or > *tañrî*). In most modern Central Asian dialects, Turkish *täñri* has two meanings, "God" and "Heaven"; in Oghuz it only means "God".

To define the conceptions implied by the word *tängri* so far as the beliefs of Turkish paganism is concerned, it will be advisable to deal first with the Old Turkish inscriptions and then with the material collected in modern times from Teleut and Altai shamanism.

In the Old Turkish inscriptions, *täñri* is one of the three world potencies: (father) Heaven, (mother) Earth and (child) Mankind. The ruler governs mankind by order of *täñri*; his duty is to conquer the whole world. These three potencies existed from time immemorial: "When the blue Heaven above and the brown Earth beneath arose, between the twain Mankind arose." A connection with Chinese ideas is apparent. Along with the three potencies (whose mightiest is *täñri*), other deities are also mentioned, namely *umay* (goddess of women in child-bed) and *yer-sub* (spirits of earth and water).

On the conception of *täñri* in modern Turkish shamanism (i.e. mainly among the Teleut and Altai Turks) see H. Vámbéry, *Die primitive Cultur des Turko-Tatarischen Volkes*, Leipzig 1879, 150 ff.; W. Radloff, *Aus Sibirien*, Leipzig 1884, ii, 1 ff., and the texts collected by Radloff in the first volume of his *Proben der Volksliteratur der türkischen Stämme Süd-Sibiriens*, St. Petersburg 1866-1904. This paganism, as might be expected, did not remain entirely free from foreign, e.g. Christian and Buddhist influences; when, for example, in a shaman's conjuration we find the expressions *Pyrkan Tengre* and *Pyrkan Kan* (Radloff, *Aus Sibirien*, ii, 33, 44), it is natural to recognise in *Pyrkan* the Mongol (also old Turkish) word *Burkhan* = Buddha. That the pagan Turkish creation myth shows traces of Jewish, Christian and Buddhist influences was noted by Radloff himself (*op. cit.*, ii, 5-6). When it is said that the evil spirit Erlik created a heaven for himself, like the god of heaven, one is tempted to think of Zoroastrian influence (the "counter-creations" of Ahriman).

According to Turkish shamanism, the most powerful god, Tengere Kayra Kan, created the heavens and also the evil spirit Erlik, the good spirits, mankind and the earth. The form *tengere* (following the orthography in Radloff) corresponds to the Teleut *Tänärä* and Altai *Tänäri*. Kayra Kan must be identical with the Altai *Kayrakkan* (cf. Radloff, *Wörterbuch*, ii, 22), a word used to describe gods and spirits; Tengere Kayra Kan is therefore the "god of heaven".

There are seventeen different regions in heaven arranged in succession one above the other; there the good spirits live. The highest of these minor deities are Bäy Ülgön, Kysagan Tengere and Mergen Tengere. The gods of heaven are not directly appealed to like the spirits of earth and of water, but through the intermediary of the spirits of ancestors, i.e. a shaman (*kam*) is required for the purpose. In a Teleut shaman's prayer (Radloff, *Volkslitteratur*, i, 238) the heavens above are appealed to as the Creator. In an Altaic myth (Radloff, *ibid.*, i, 61 ff.) a hero seeks the hand of the daughter of the god of heaven, Tämän Ökö.

When it is said of the thunderstorm in the dialect of Kazan: "The old man of the heavens (*täñri babai*) is thundering", this is a relic of old pagan ideas (cf. Radloff, *Wörterbuch*, ii, 1425, iii, 1047, iv, 1564).

Speaking generally, one may say that, apart from foreign influences, so far as they can be eliminated, in the Turkish conception Täñri is regarded as the heavens, as an element, and also as the spirit ruling in heaven. This spirit was probably originally conceived as a kind of force, a something which would be called *mana* in modern ethnology. The concept of a personal god of heaven must have developed out of this.

Turkish *kök täñri* "blue Heaven" has its counterpart in Mongolian *köke tenggeri*, also *köke möngke tenggeri* (the blue eternal Heaven). Under the influence of foreign religions, the undivided notion of *kök täñri* "the blue Heaven" (a) in the external, material sense: "the space above the earth" + (b) "the power which influences all earthly things", was split up; (a) was expressed by *kök*, (b) by *täñri* (or foreign words, such as *khudā*, *allāh*).

In Buddhist Old Turkish texts, *tängri* corresponds to the Sanskrit *deva* "god" in Buddhist mythology, a concept which is better conveyed by the word "angel", because this being lacks several qualities which to us are necessarily associated with the idea of "god". The feminine equivalent *devī* is given *by tängri khatun*; *tängri kïz* is Turkish for *devakanyā* (divine maiden, apsaras). The king of the gods (*devarādja*) Indra is *tängrilär elik/eligi Khormuzda*; Brahmā is called *Äzrua tängri*. These beings have thus Iranian names, Ōhrmazd and (perhaps) Zurwān. The goddess Śrī is called *Kut Tängri Khatunî* or (without *Khatun*) *Kut Tängrisi*. The name *Kut Tängrisi* seems also to be given to Kubera (e.g. Müller, *Uigurica*, 45). In a collection of *dhāraṇīs* for travellers, the *Tišastvastile* (ed. Radloff and A. von Staël-Holstein, St. Petersburg 1910 = *Bibl. Buddhica*, xii), we find a *deva* named *Tängridäm*, whom Radloff takes for Kubera so that the latter has therefore another Turkish name. But this is doubtful, for in one passage (22) of this work, Kubera (*Kupiri*) is mentioned by name and *Tängridäm* is mentioned soon after as a different deity; but it must be allowed that in the text there are elsewhere illogicalities (see, e.g. Turkish text, 23-4). For Kubera in this work, see also 97, n. 2; Buddha himself is often called *Tängri Tängrisi*. The god of heaven (*devaloka*) is called in Turkish *Tängri Yir*, and the *Vaimānika* gods, as a rule peculiar to Jaina mythology but also found, e.g. in the *Tišastvastile*, are called *Waimanuki-tängrilär*.

The Manichaean Turkish terminology which is influenced by the Buddhist one (see *Chuastuanift*, ed. Le Coq, 5; *JRAS* [1911], 278) shows the word in the following use. Tängri corresponds here to the Iranian *Yazd* (or *Bag*); in the first place, this means the highest principle of the Manichaean system, and secondly, the subordinate spirits of light or gods (*yaruk tängrilär*) in contrast to the demons (*yäklär*). The first man is called *besh tängri*, five-god (from his five components, known from the Manichaean myth: air, wind, light, water and fire). The name *tängri* is also given to the five elements, e.g. *oot tängri* = god of fire. Tängri is found with the meaning "heaven" (e.g. *Chuastuanift*, 16 = *JRAS* [1911], 291, l. 167). Paradise is called *Tängri Yer*. This Manichaean terminology corresponds pretty well to the Buddhist. One or two peculiarities may

still be pointed out: the occurrence of the already-mentioned term *tängrikän* (*Chuastuanift*, 10; *JRAS* [1911], 281, l. 22), in the name of a deity (*Äzrua Tängrikän*), translated by von le Coq (*JRAS*, *loc. cit.*) "Azrua the Lord", and the peculiar combination *Arkhon Yer Tängri*, the "archon earth-god", in which perhaps the word *tängri* is used for one of the powers of darkness (see *JRAS* [1911], 303, n. 31).

In Christian Turkish usage we find *Tängri* = God; *Tängri-Oghlï* = "Son of God" and *Mshikha Tängri* = the God Messiah. In the Christian fragments published by Müller in his *Uigurica*, we also have the word *Tängridäm*, which we frequently find in Buddhist Turkish; it occurs twice in these Christian texts and seems here to mean simply "God". The Kuman usage gives nothing worthy of special remark.

As regards the earlier Muslim Eastern Turkish texts, the Arabic and Persian terms (*Allāh*, *Khudā*) begin to compete with Turkish *Täñri*. The oldest (Ḳara-Khanid) sources of the 11th century still preserve *täñri* or (more frequently) employ the term *bayat* (*Ḳutadhghu bilig*, ed. R.R. Arat, 48, l. 284, *ʿAtabat al-ḥaḳāʾiḳ*, ed. Arat, 2, l. 3). Later on, a competition can be detected: *bayat* fades out and the authors begin to prefer the Islamic terms. Here are some examples of the relation *täñri: allāh/khudā*. In Rabghūzī's (1310) and Bābur's (1483-1531) works, *täñri* is the usual word; but in Gadāʾī (1405-92?), the relation is 6:15, and in modern Uzbek all three words exist; *khudo*, *tañri*, *olloh*. To investigate the subtle social and semantic differences between these terms in the Turkic world is a difficult task. For an introductory discussion of this subject, see Gerhard Doerfer, *Türkische und mongolische Elemente im Neupersischen*, ii, Wiesbaden 1965, 577-85 (*täñri*) and 379 (*bayat*).

Bibliography: Given in the article.

(V.F. Büchner-[G. Doerfer])

TANSAR, Kitāb, "the Letter of Tansar", a political treatise from Sāsānid Persia, known in the Islamic world through an Arabic translation, probably by Ibn al-Muḳaffaʿ [*q.v.*], from a lost original in Pahlavi.

It was ostensibly written by "Tansar" (a misreading, in Pahlavi script, for Tusar, perhaps an abbreviation of **Tus-artēshtār*, Avestan *Tusa-raθaēštar-* "T. the warrior"), the chief priest of the first Sāsānid king, Ardashīr I (*ca.* 224-40), to Gushtāsp, the king of Ṭabaristān, encouraging him to submit to Ardashīr and, more generally, justifying the Sāsānid polity. Brief quotations explicitly from this epistle can be found in al-Masʿūdī (*Tanbīh*, 99-100, quoting "Tansar", "but some call him *Dwsr*") and al-Bīrūnī (*Taḥḳīḳ mā li 'l-Hind*, 53, quoting the *Kitāb Tūsar*) and there is a third incorrectly credited quotation in Ibn al-Faḳīh, 197; this is all that survives of the Arabic text. But a complete, if painfully ornate, Persian translation of the letter of "Tansar" was included by Ibn Isfandiyār in his *Tārīkh-i Ṭabaristān*, where the underlying Arabic version is expressly attributed to Ibn al-Muḳaffaʿ. This attribution is presumably correct, despite the fact that the letter is not named in any old list of Ibn al-Muḳaffaʿ's writings. The Persian text was first published, with a French translation, by J. Darmesteter in *JA*, série 9, vol. iii (1894), 185-250, 502-55, then republished from a better manuscript by M. Mīnuwī (*Nāma-yi Tansar*, Tehran 1932), and again by ʿA. Iḳbāl in his edition of the whole of Ibn Isfandiyār's history (Tehran 1942, 12-41), and translated into English, with an introduction and valuable notes by M. Boyce (*The Letter of Tansar*, Rome 1968). There is also a Danish translation by Hertha Kirketerp-Møller, *Tansar's brev til Gushnasp, Konge at Tabaristan*, Copenhagen 1965.

"Tansar"/Tusar is clearly a historical person, but the text preserved by Ibn Isfandiyār contains several obvious anachronisms, and it has been suggested that the whole letter is a literary fiction from the late Sāsānid period (6th century). However, Darmesteter and Boyce have both maintained, with plausible arguments, that it does contain a genuine kernel from the time of Ardashīr.

TĀNSIN, or Mīrzā Tānsen (d. 997/1589), a celebrated Indian musician (*kalavant*). A native of Gwalior, he became a disciple of Shaykh Muḥammad Ghawth Gwāliyārī [*q.v.*] and so possibly formally converted to Islam, though neither he nor his son Vilas adopted Muslim names. Tānsen became an adept at the Dhurpad and Bishanpad modes of Indian classical music which had developed in Gwalior under patronage of Rādjā Man (9th/15th century), with many creations by Nayak Bākhshu, Tānsen's predecessor, but not apparently his preceptor. Tānsen received generous patronage from Rādjā Rāmčandra of Bhaṭṭa (in Central India), but the latter was induced to send Tānsen to Akbar's court, where his presence is first noticed in 986/1578-9. Tānsen was regarded as an unequalled master in composition (in Hindi) as well as vocalisation. Abu 'l-Faḍl, in a short obituary notice, claimed that no musician "with such sweetness, graceful composition and creation of effect has appeared in the last one thousand years." Tānsen died at Lahore on 19 Djumādā II 997/15 April 1589 and was buried there; his ostensible grave at Gwalior cannot therefore contain his mortal remains. Many of his compositions survive.

Bibliography: Badāʾūnī, *Muntakhab al-tawārīkh*, ed. Ali Ahmad and W.N. Lees, Bibl. Ind., Calcutta 1864-69, ii, 264-5, 355; Abu 'l-Faḍl, *Akbar-nāma*, ed. Ahmad Ali, iii, 536-7; ʿAbd al-Ḥamīd Lāhōrī, *Pādshāh-nāma*, ed. Maulvi Kabiruddin and Maulvi Abdur Rahim, Bibl. Ind., Calcutta 1867-8, ii, 5-7; Islām Khān, *Dībāča-yi Dhurpad-hai Nayak*, in *Madjmūʿ al-afkār*, ed. Iqtidar H. Siddiqui, Patna 1993, 17-21. These texts, which are either contemporary or were written within sixty years of Tānsen's death, constitute the only reliable source for our knowledge of him, although an incredibly large number of legends have grown up around him.

(M. Athar Ali)

ṬANṬĀ, Egyptian city of more than 400,000 inhabitants (1996), the capital of the central Delta and the fourth city of the province. This commercial crossroads, situated 90 km/55 miles to the north of Cairo, occupies an exceptional position, being equidistant from the two branches of the Nile, equidistant from Damietta, Rosetta and Alexandria. The city is definitely of ancient origin: it is constructed on tells, currently obliterated by more modern buildings, where members of the Egyptian Expedition nevertheless identified crude bricks from the Pharaonic era, and where vestiges dating from the XXVIth dynasty have been found. The Egyptologist G. Daressy proposes that the ancient origin of Ṭanṭā is to be identified in the town of Tawa, situated 3 km/2 miles to the north-west. In the Coptic period, as an episcopal city, Ṭanṭā

is cited under the name of Tantâtho in the *Acts of the Martyrs*, and under that of Tanitad in *The history of the Patriarchs of Alexandria*.

After the Arab conquest, the city took the name of Ṭandatā (numerous variants). In 344/955 Ibn Ḥawḳal described it as a populated agricultural centre, endowed with a great mosque and *sūḳs*, the seat of a governor (*ʿāmil*) and site of a weekly market. Ibn Djubayr confirmed these observations at the time of his visit in 579/1183, describing Ṭandatā as a huge and densely populated village, with a well-attended mosque. But it was with the *madjdhūb* Sayyid Aḥmad al-Badawī (d. 67/1276 [*q.v.*]), that Ṭanṭā acquired renown, as al-Badawī became the most revered saint in Egypt. After his death, his disciples formed the Suṭūḥiyya brotherhood, later known as the Aḥmadiyya, which turned the central Delta into a seed-bed of sanctity. In the early 8th/14th century, a *mawlid* (dialectal, *mūled*) was instituted in al-Badawī's honour, combining patronal festival, fair and pilgrimage, the most important in Egypt. There were as many as three annual *mawlids* in honour of al-Badawī, all determined according to the solar calendar: the major one in July, the minor one in the spring for the benefit of the nomads, and the *radjabiyya* in February.

The broad popular appeal of the cult centred on the saint accounts for the importance of the sanctuary; on the *zāwiya* built after his death, sultan Ḳāyitbāy constructed a mosque-tomb. Numerous *waḳfs* were conferred upon the mosque during the Mamlūk period, in particular the neighbouring village of Ḳuḥāfa. The Mamlūk *amīrs* came regularly to visit the tomb. The city seems to have declined at the start of the Ottoman period, and it was with the object of reviving the commerce of the Delta that in 1769 ʿAlī Bey al-Kabīr had the great mosque rebuilt, also endowing the tomb with a *maḳṣūra* and numerous *waḳfs*. Successive renovations were undertaken, in particular by ʿAbbās I Ḥilmī in 1851, and finally by President Sādāt, who added two minarets and a huge peristyle to the entrance to the tomb. The central cupola is reserved for al-Badawī; in a corner there is the footprint of the Prophet indented on a black stone, installed quite recently and the object of fervent veneration. Two other cupolas are located above, to the west, the cenotaph of ʿAbd al-ʿĀl, successor of al-Badawī, and to the east that of ʿAlī al-Mudjāhid, *khalīfa* of the Aḥmadiyya in the 18th century. There are numerous tombs of saints in Ṭanṭā, thirty-seven at the latest count, the most important after al-Badawī being that of *shaykha* Ṣabāḥ.

The great mosque of Ṭanṭā is called al-Djāmiʿ al-Aḥmadī, referring to Aḥmad al-Badawī, and it has become, after al-Azhar, the second most important centre of Islamic education in Egypt, specialising in the reading of the Ḳurʾān, whence the adage: "the only Ḳurʾānic teaching is Aḥmadī, the only science is Azharī". The *waḳfiyya* of ʿAlī Bey al-Kabīr fixed the number of students at 700. There were about a thousand in the 19th century, when studies at the great mosque of Ṭanṭā were officially affiliated to al-Azhar. A library was created in 1898. In 1914, the Azharī institute left the precincts of the mosque to occupy a modern building. A secular university was also established in Ṭanṭā from 1962 onwards.

The sanctified aura of the city has contributed to the development of its commercial role. The *mawlid*, as well being as a pilgrimage, was a fair and market which attracted crowds of local peasantry and numerous traders from Cairo; it was for them that ʿAlī Bey established in Ṭanṭā a *ḳaysariyya* called the Ghūriyya, and at the time of Bonaparte's Egyptian expedition the city contained a dozen caravanserais. The fair took place at the gates of the city, on a huge open site near the village of Sīgār. Here animals were sold, linen and cotton fabrics, European merchandise, and, most of all, slaves. The fair attracted customers and visitors from all parts of Egypt, from the Levant, Turkey and Sudan. As the capital of popular Egyptian Ṣūfism, Ṭanṭā acquired among Europeans a reputation for fanaticism.

In spite of such disorders, the 19th century was a time of vigorous expansion for the city of Ṭanṭā. The administrative role of the city, which had become the seat of the *mudīriyya* of Gharbiyya in 1836, enabled it to supplant its rival al-Maḥalla al-Kubrā [*q.v.*]. The Alexandria-Cairo railway, inaugurated in 1856, passed through Ṭanṭā and thereby reinforced its status as a mercantile centre. The trade in cotton brought additional prosperity to the town, with the establishment of warehouses and a Cotton Exchange, and the date of the major *mawlid* was moved to October, to follow the harvest. The cotton boom of the 1860s attracted large numbers of Greek migrant workers and also Levantines and Europeans. Churches were established, and European missionaries (Soeurs de Notre-Dame des Apôtres, Pères des missions africaines de Lyon) founded schools. Immigration also expanded the Jewish community, one of the oldest in Egypt, and in 1905 the Alliance Israélite Universelle was permitted to found a school there. These developments took place in spite of the fact that, in July 1882, riots had culminated in the slaughter of about a hundred Christians and Jews.

The spectacular growth in population (10,000 inhabitants in 1821, 33,725 in 1882, 54,437 in 1907) presented an urgent need for urban expansion. The old city, situated around the sanctuary and characterised by dingy, narrow and insalubrious alleyways, still enclosed within a double wall *ca.* 1800, was partially modernised from the reign of the Khedive Ismāʿīl onward. Through the appropriation of *waḳf* territory, Ismāʿīl provided the means for the city's expansion towards the west, where new administrative and residential premises were built alongside a canal. A municipal commission was created in 1893. *Ca.* 1900, the Sikka Djadīda was opened, connecting the new station to the tomb of al-Badawī. An administrative and commercial metropolis, Ṭanṭā still had little in the way of industrial activity.

These transformations of the city of Ṭanṭā marginalised the *mawlid*. The abolition of slavery, and the development of communications and of distribution networks led to a perceptible decline of the major *mawlid* at the end of the 19th century: from 500,000 visitors to the major *mawlid* in the 1860s, numbers had fallen to no more than 100,000 in 1900.

Early in the 20th century two fairs were inaugurated; they became more regional and their role in economic activity declined. The major *mawlid*, still spectacular, continues, however, to attract between one and two million pilgrims every year, although the encampments and the cosmopolitan festivities are being gradually blighted by the urbanisation which is encroaching on the suburb of Sīgār. Ṭanṭā has, in fact, experienced the urban and demographic explosion which has affected the whole of Egypt during the 20th century: the city which numbered around 95,000 inhabitants in 1937 had nearly 140,000 ten years later, and 342,641 in 1977.

AL-ṬANṬĀWĪ, Muḥammad ʿAyyād, a product of al-Azhar who is best known as the informant and teacher of European Arabists. He was born 1810 in Nidjrīd near Ṭanṭā in Egypt and died on 29th October [O.S.] 1861 in St. Petersburg, Russia.

Having received his primary education in a *maktab* in Ṭanṭā, al-Ṭanṭāwī moved to Cairo at the age of thirteen to continue his studies at al-Azhar. Among his teachers were Ibrāhīm al-Bādjūrī and Ḥasan al-ʿAṭṭār; one of his fellow-students was Ibrāhīm al-Dasūḳī (1811-83). After his father's death in 1827, al-Ṭanṭāwī was forced to return for two years to Ṭanṭā. Returning to Cairo, he was engaged as a teacher in al-Azhar, where, in his own opinion, he was the first to lecture on al-Ḥarīrī's *Maḳāmāt* and al-Zawzanī's commentary to the *Muʿallaḳāt*.

To make ends meet, al-Ṭanṭāwī taught Arabic to European diplomats and to the specialists summoned by Muḥammad ʿAlī [*q.v.*] to Egypt. Among his students were E.W. Lane, F. Fresnel, F. Pruner, A. Perron, G. Weil, and the Russian diplomats N. Mukhin and R. Frähn. When J.F. Demanges (1789-1839), teacher of Arabic at the Institute of Oriental Languages of the Ministry of Foreign Affairs in St. Petersburg, died, the two Russians were influential enough to bring about al-Ṭanṭāwī's invitation to St. Petersburg in 1840 as Demanges' successor.

Al-Ṭanṭāwī arrived to St. Petersburg on 29 June [O.S.] 1840. In 1847 he became the third occupant of the Arabic Chair at the University of St. Petersburg, a position he held until his death. Among his students at the Institute and at the University the following can be mentioned: P.S. Savel'ev, V.V. Grigor'ev, and the Finnish traveller to the Arabian peninsula G.A. Wallin, with whom al-Ṭanṭāwī established a close friendship. Al-Ṭanṭāwī's two decades in Russia left few imprints; the testimonies of his contemporaries make it clear that his Azharī methods did not bear fruit. Only those already familiar with Arabic profited from his teachings.

Already in Cairo, al-Ṭanṭāwī had learnt French by exchanging lectures with Fresnel; in St. Petersburg he used the same method with Wallin when studying German. He had also some knowledge of Russian. During his years in Russia, he travelled in Europe; in 1844 he had the opportunity to make a visit to his native country, Egypt.

Of al-Ṭanṭāwī's literary output two works must be mentioned: his *Traité de la langue arabe vulgaire* (Arabic title, *Aḥsan al-nukhab fī maʿrifat lisān al-ʿarab*; published in Leipzig 1848), one of the most interesting sources for our knowledge of the Arabic of Egypt in the 19th century; and his *Tuḥfat al-adhkiyāʾ bi-akhbār bilād al-Rūsiyā* (ed. Muḥammad ʿĪsā Ṣāliḥiyya, Beirut 1992), the Introduction of which is a relation of his itinerary from Cairo to St. Petersburg, the rest a history and description of the Russian Empire.

Bibliography: al-Ṭanṭāwī's *Autobiography* (up to 1840) was published by J.G.L. Kosegarten as *Autobiographie des Scheich Ettantawi zu Petersburg*, in *Zeitschrift für die Kunde des Morgenlandes*, vii (1850), 48-63, 197-200, with additional information by J.F. Gottwaldt in *ZDMG*, iv (1850), 243-48; I. Yu. A collection of articles in honour of the sixtieth birthday of Professor Heikki Palva*, Studia Orientalia 75, Helsinki 1995, 271-87; K. Öhrnberg (ed.), *G.A. Wallin's notes on Arabia in the 1840s* (in press; contains the correspondence between al-Ṭanṭāwī and Wallin).

(K. Öhrnberg)

ṬANṬĀWĪ DJAWHARĪ [see djawharī, ṭanṭāwī, in Suppl.].

TANŪKH, a pre-Islamic confederacy of various Arab tribes that adopted a common genealogy.

The essential reliability of the Arabic historians' accounts of this confederacy is supported epigraphically by a Sabaic, a Greek, an Aramaic, and a Syriac inscription and also by Ptolemy, in spite of some conflicting reports on its early history in the Arabian peninsula, with details that so far have not been open to verification.

1. The Arabian Peninsular stage. The history of Peninsular Tanūkh belongs to the "Migration Period" in the history of Arabia, which witnessed the movement of tribes, mainly from the south, to the centre, to the north of the Arabian Peninsula, and ultimately to the Fertile Crescent. As far as Tanūkh is concerned, various historical traditions speak of their migration from Tihāma to Baḥrayn in Eastern Arabia, but the details are difficult to accept without the availability of epigraphic and non-Arabic sources. Their arrival in Baḥrayn is, however, supported by a precious Sabaic inscription. It was in Baḥrayn that the Tanūkh is supposed to have become a confederacy and to have acquired its confederate name, to which the lexicographers refer in the phrase *muḳām wa-tanūkh*, "halt and sojourn," an etymology equally difficult to accept or reject. It was also in Baḥrayn that they are said to have been joined by the Azd (under Djadhīma) and the Lakhm, two important tribes that appear associated with them when they reached the Fertile Crescent, especially its eastern half, ʿIrāḳ. Whether they became constituent members of the Tanūkh confederacy or remained closely allied to them is not clear.

2. Mesopotamia. Less shadowy than their Peninsular history is the Mesopotamian one, both in the south, in al-Ḥīra and in the north, around al-Ḥaḍr or Hatra.

(a) In the south, the Tanūkh is associated with the most important Arab urban centre in pre-Islamic times, al-Ḥīra [*q.v.*]. The mysterious Mālik b. Fahm is sometimes represented as an Azdī and sometimes as a Tanūkhid, and he is the one who is credited with the foundation of al-Ḥīra. Certainly historical is Djadhīma al-Abrash [*q.v.*] of the 3rd century A.D., whose kingship over Tanūkh is attested by a bilingual inscription (Greek and Aramaic) found at Umm al-Djimāl in Trans-Jordan. His family relationships may solve the problem of how al-Azd, Tanūkh, and Lakhm became related. According to one tradition, he married Lamīs, the sister of the Tanūkhid Mālik b. Zuhayr, thus connecting the Azd with Tanūkh, while his own sister, Raḳāsh, married ʿAdī of the Lakhm tribe, thus connecting the Lakhm with Tanūkh. Djadhīma was a large historical figure in the history of the Arabs before Islam. According to the Arabic tradition, he warred with Zenobia (al-Zabbāʾ) of Tadmur or Palmyra, at whose hands he met his death. After his death, al-Ḥīra became a strictly Lakhmid city, ruled by the House of Naṣr, whose first king was ʿAmr son of ʿAdī, Djadhīma's nephew. But Tanūkh remained a factor in the history of their relatives, the Naṣrids of al-Ḥīra: they were considered one of the three groups that constituted the population of al-Ḥīra, the other two being al-ʿIbād and al-Aḥlāf "the allies or protected tribes"; in addition to al-Ḥīra, they lived in the area west of the Euphrates between al-Ḥīra and Anbār and were called ʿArab al-Ḍāḥiya "the Arabs of the Marches"; one of the military divisions in the army of the Lakhmids under Nuʿmān, namely, Dawsar, was said to be a Tanūkhid division. Apparently, the Tanūkhids fell out with the Lakhmids in the 6th century, since they were defeated by the Lakhmid king, Ḳābūs b. al-Mundhir, at the battle of Ḳuhād.

(b) The Arabic sources speak of an encounter with the Sāsānid king, Shāpūr Dhū 'l-Aktāf [*q.v.*], as a result of which they moved under al-Ḍayzan b. Muʿāwiya into al-Ḥaḍr or Hatra, in northern Mesopotamia. This is again a detail that is impossible to accept as it stands. That they had some relation or association with Hatra must be accepted as historical, since their move to northern Mesopotamia in the vicinity of Hatra is indubitably attested in an authentic Syriac source, the *History of Aḥudemmeh*, the 6th-century Monophysite Patriarch of the Orient in Mesopotamia, who converted them to Christianity, to which they became very devoted. This raises the question of their alleged Christianity while they were still in southern Mesopotamia and their Christian war cry *Yā āl ʿIbād Allāh*, which they used in their wars with the Sāsānid king of the 3rd century. Perhaps only some of them were Christianised in southern Mesopotamia while others were not, such as those who moved on to northern Mesopotamia, and this may reconcile the seeming contradiction in the sources. The Christianity of those in the south is attested by a monastery, Dayr Ḥanna, which a Tanūkhid clan by the name of the Banū Saṭiʿ erected in al-Ḥīra.

3. In Bilād al-Shām, Byzantine Oriens. This is the region where the history of Tanūkh is no longer engulfed in some unverifiable details, and this is true of it in pre-Islamic and mediaeval Islamic times.

(a) Apparently after their defeat by the Sāsānids, some of them emigrated to Byzantine territory in Oriens, and became the first group of Arab *foederati* or allies to enter the service of Byzantium, whose principal Arab allies they became in the 4th century. Al-Masʿūdī assigns to them three kings: al-Nuʿmān, ʿAmr and al-Ḥawārī, whose names cannot be checked with non-Arabic sources. The Arab allies, *foederati* of Byzantium in this century in Oriens, are represented by two large historical figures: Imruʾ al-Ḳays "King of all the Arabs" (d. 328), attested in the Namāra [*q.v.*] inscription, and Queen Mavia of the 370s, attested in the ecclesiastical Greek historians. Imruʾ al-Ḳays was a Lakhmid who had some Tanūkhid blood in him, but Mavia's tribal affiliation is unknown, hence her Tanūkhid affiliation is only a possibility. The Tanūkhid *foederati* were zealous orthodox Christians, and Mavia's wars with the Arian Valens were waged along doctrinal lines. Tanūkhid relations with the central government were chequered. Around A.D. 380 they apparently revolted, but their revolt was quelled in 383 by the *magister militum* of Theodosius I, the Frank Richomer, in the same year, and their defeat preluded their final eclipse as the dominant *foederati* of Byzantium in the 4th century. But throughout the three pre-Islamic centuries, the Tanūkhids remained federates of Byzantium, and as such they appear fighting against the Muslims during the period of the Arab conquest of Bilād al-Shām. They fought at Dūmat al-Djandal, at the Yarmūk, and took part in the abortive Byzantine counter-offensive against Ḥimṣ in A.H. 17. Their status as *foederati* came to an end shortly after the Yarmūk when Abu ʿUbayda treated with them in the vicinity of Chalcis/Ḳinnasrīn and of Beroea/Ḥalab; some of them adopted Islam while others remained staunchly Christian. In A.H. 17, a group among them participated in translating the Gospel into Arabic. The reference in the Arabic Islamic sources to the two *ḥāḍirs* of the Tanūkhids near Ḥalab or Aleppo and Ḳinnasrīn argues for the reliability of the sources on the principal area of their settlement in Byzantine Oriens, which they naturally continued to occupy in the Islamic period, a fact that receives further confirmation from the non-Arabic Syriac sources, both literary and epigraphic. If Queen Mavia's tribal affiliation was with the Tanūkhids, then these could be associated with the earliest reference to poetry, epinician odes composed in Arabic on the occasion of her victory over Valens, and vouched for by a non-Arabic Greek source, Sozomen. A *dīwān* for Tanūkh is attested later in Islamic times, which presumably contained poetry composed in this pre-Islamic period.

4. The Islamic period. With the rise of a new order in Bilād al-Shām, that of the Islamic caliphate, those Tanūkhids who did not cross to Anatolia formed part of the *Adjnād* of Bilād al-Shām [see DJUND] and served the Umayyads, for whom they fought at Ṣiffīn with Muʿāwiya against ʿAlī, and again at Mardj Rāhiṭ with Marwān b. al-Ḥakam. Their South Arabian sympathies ranged them against the Umayyad Marwān II, whose army, composed of north Arabian Ḳaysīs, they attacked when he passed through Ḳinnasrīn and Khunāṣira in 127/744-5. With the *translatio imperii* from Umayyad Damascus to ʿAbbāsid Baghdād, their fortunes deteriorated, as did Umayyad Bilād al-Shām in general. The final act of this deterioration came in the reign of the ʿAbbāsid al-Mahdī (158-69/775-85) who, when visiting northern Syria, was greeted by 5,000 Tanūkhid horsemen under the leadership of Layth b. Mahaṭṭa. The caliph asked them to accept Islam, which they refused to do, but after their chief was beheaded, they complied and their churches were destroyed. Again, the accounts of the Arabic Islamic

sources, which located them in the district of Ḳinnasrīn and Aleppo, are confirmed both by the non-Arabic Syriac sources, Bar Hebraeus and Michael the Syrian, who speak of them as residing in this area when they tell the story of their encounter with al-Mahdī, and what is more, by a Syriac contemporary inscription. Their encounter with al-Mahdī brought to a close the history of the Tanūkhids as an autonomous Christian community in Bilād al-Shām and from now onwards they appear at various junctures as Muslim Arabs. Their association with Ḳinnasrīn and Aleppo also came to a close during the reign of al-Mahdī's son, Hārūn, when rebels attacked their settlements near Aleppo. Consequently, they left the region of Aleppo and Ḳinnasrīn and moved elsewhere, where the Arab geographers found them, in al-Lādhiḳiyya and in Djabal Bahrā' and Djabal Tanūkh, the mountainous range that extended from al-Lādhiḳiyya to Ḥimṣ. Their greatest contribution to Arabic and Islamic culture in this period was in the person of the great philosopher-poet, Abu 'l-ʿAlā' al-Maʿarrī, who was a Tanūkhid.

5. In mediaeval Lebanon. The last stage of their historical role in Bilād al-Shām was set in a new area, Lebanon, where the Tanūkhids suddenly appeared in the district of al-Gharb, which lies to the south of Beirut and where they established their supremacy in mediaeval times till the Ottoman occupation of the region. The erstwhile Christian Tanūkhids thus became the first Muslim group to establish itself in Christian Lebanon, more specifically a clan within them, the Banū Buḥtur. Later, these Tanūkhids of Lebanon walked another step in their religious journey when they, Sunnī Muslims, became involved in the Druze movement. They served the ʿAbbāsids by acting as a check on the Maronites in the north of Lebanon and against the Byzantines, who would attack from the west, sc. the sea. Al-Gharb prospered under the Tanūkhid enlightened administration, and so did Beirut, which flourished as a port for Damascus and the hinterland, especially after contacts were made with the Italian merchant republics. The victory of the Ottoman Sultan Selīm I at Mardj Dābiḳ [*q.v.*] spelt disaster for them, and they were superseded by the Maʿns [*q.v.*] of al-Shūf, who became the new masters of central and northern Lebanon. The final phase of their decline was their massacre in their own mansion and at a feast at which they were the hosts!

Nowadays, they are represented in Lebanon by a shrine of one of them, al-Sayyid, who was a Druze. This shrine at ʿAbayh has become a pilgrimage centre to which thousands of Druzes flock every year. Their presence in Beirut, attested during the Crusades, is now confined to a street called Shāriʿ al-Tanūkhiyyīn.

(IRFAN SHAHÎD)

AL-TANŪKHĪ, DJAMĀL AL-DĪN ʿABD ALLĀH (820-84/1417-79), called by the Druzes *al-Amīr al-Sayyid*, Druze writer on theology, philosophy, mysticism, etc.

He was born at ʿAbayh in the district of the Lebanese Shūf [*q.v.*], a descendant of the Tanūkhī *amīrs* who ruled the Gharb of Lebanon during Mamlūk times and to whom Epistle 50 of the Druze Scriptures was addressed. Al-Sayyid ʿAbd Allāh was taught by private teachers grammar, rhetoric, arithmetic, logic, poetry, and history. He stayed several years in Damascus consulting its libraries for his studies. Equal devotion went to the study of the Ḳur'ān and the Druze Scriptures. His writings are imbued with this education: a lexicon of the Arabic language (*al-Lugha al-ʿarbā'*), a biography of the Prophet (*Siyāsat al-akhyār wa-kamālāt al-Nabī al-mukhtār*), and fourteen volumes on theology, ethics and commentaries on three Druze Epistles, called by the Druzes *Sharḥ al-Amīr al-Sayyid*. Through his commentaries on the Epistles (no. 5, *al-Mīthāḳ*, no. 13, *Kashf al-ḥaḳā'iḳ*, and no. 25 *Sharṭ al-Imām*), his treatises and the many letters which he wrote throughout his life, he succeeded in creating unity in the various explanations of the terminology by which, until today, the *ʿuḳḳāl* of the Druzes understand the Scriptures. In meeting houses (*madjālis al-dhikr*) erected in all Druze localities, where disciples gathered to study his preaching and commentaries, he provided them with guides for comportment called *Ādāb al-Amīr al-Sayyid*. Following the Druze Scriptures, al-Sayyid elaborated the moral principles and "the lawful and the prohibited" (*al-ḥalāl wa 'l-ḥarām*) into fifteen subjects with headings such as "marriage", "heritage", "child education", "expenditure", "obligation of the borrower and lender", which soon became a kind of elementary code on which the Druzes still rely in their everyday life and in the religious courts established since 1950s. The Druzes continue to consider al-Tanūkhī as the most revered individual after the propagators (*al-ḥudūd*) of their religious doctrine (*al-daʿwa*) in the 5th/11th century.

(KAIS M. FIRRO)

AL-TANŪKHĪ, AL-MUḤASSIN b. ʿALĪ, Abū ʿAlī (329-84/941-94), littérateur, judge and secretary in

Mesopotamia and Western Persia during the 4th/10th century, stemmed from a family of transmitters of *Ḥadīth*. Born in 329/940-1 in Baṣra, he began the study of *adab* at an early age with Yaḥyā al-Ṣūlī and later continued with Abū 'l-Faradj al-Iṣfahānī and others. Less than twenty years old, he was appointed supervisor of measures and weights at the mint in Sūḳ al-Ahwāz. Shortly thereafter, the vizier al-Muhallabī had him appointed *ʿāmil* near the ʿAbbāsid capital, and a little later he became *ḳāḍī* of some districts in Khūzistān. From 363/973 until 365/976, the year his son ʿAlī was born, he fulfilled the same function in al-Wāsiṭ. Thereafter, he changed into the class of the *kuttāb*, working as a secretary in the *ḥukm* and *wakf* department in Baghdād. Thus he came closer to the people in power, in particular, to the Būyid ʿAḍud al-Dawla [*q.v.*], whose companion he became until, in 371/981-2, he fell from grace and was put under house arrest. Fleeing from Baghdād for some time but then returning, he lived in seclusion and under difficult circumstances until his death in 384/994.

Al-Tanūkhī is known as the author of three or four transmitted works, all compilations of anecdotes: *al-Faradj baʿd al-shidda; Nishwār al-muḥāḍara wa-akhbār al-mudhākara; al-Mustadjād min faʿalāt al-adjwād*; and (least certain, cf. Fähndrich, *A propos . . .*) *ʿUnwān al-ḥikma*. All four of them were compiled under a guiding principle, namely (apart from the last one), deeds of *karāma*, of salvation from difficult situations, be they financial, political, social or personal. This is most obvious in *al-Faradj*, in which al-Tanūkhī continues the literary genre known under the name of his book's title, and *al-Mustadjād*, both of whose very titles indicate this interest. However, the stories transmitted in the *Nishwār* also have this preference, thus presenting an interesting aspect of man's relation both to God and destiny and also to the hierarchy of power. In addition, the author takes a specific interest in reporting events which he saw or was informed about from oral sources. This makes his compilations, in particular his *Nishwār*, an invaluable source about life and procedures within the 4th/10th century ʿAbbāsid bureaucracy.

(H. Fähndrich)

TANWĪN (A.), the grammatical term nunation, the suffixed *-n* normally marking indefinite nouns (but not diptote nouns, those not fully inflected) as well as a good number of proper names and several adverbs.

This very varied distribution of the phenomenon is the result of a complex evolution which is only explicable from a diachronic and a comparativist viewpoint. Without going into the details of a complicated discussion (see H. Fleisch, *Traité de philologie arabe*, i, Beirut 1961, 342-5), one may note the existence in Akkadian of mimation, the suffix *-m* used for determination, as well as in Epigraphic South Arabian the suffixed definite article *-n* and an ending *-m* which seems to have an indefinite meaning but which is also found in certain proper nouns. The different usages of the *tanwīn* in Arabic would thus correspond, at least in part, to the different stages in the evolution of the system of the marking of determination and indetermination in Semitic. This situation, further complicated by certain special usages connected with poetic declamation (the *tanwīn al-tarannum* of the Banū Tamīm, see Fleisch, 192-3), led the Arab grammarians, who worked within a strictly synchronic framework, to reject the idea that the *tanwīn* could be in itself a mark of indetermination; in their eyes, this was "the basic state" (*aṣl*) of the noun, i.e. its case which is not marked, which does not need to be marked by any special sign. The *tanwīn*, at least in its usage of the linguistic phenomenon *-un, -an, -in*, simply marks that a noun is *mutamakkin*, i.e. that it has a complete inflexion. This enables account to be taken at the same time of its presence in proper nouns (which are in their very nature definite) and of its absence in nouns imperfectly declined. A supplementary rule stipulates that *tanwīn* is incompatible with the definite article *al-* and with the state of annexation. Other uses, clearly more marginal, are considered as different *tanwīn*s—to some extent, simple homonyms—each of these being the object of special analysis.

Istanbul, i, 13-15. For the Semitic context, see W. Diem, *Gedanken zur Frage der Mimation und Nunation in den semitischen Sprachen*, in *ZDMG*, cxxv (1975), 239-58.

(J.-P. Guillaume)

ṬANYŪS, SHĀHĪN, (1815-95), Maronite mule driver and blacksmith, who in 1858 became the leader of a peasant rebellion against the *shaykh*s of the al-Khāzin family, *muḳāṭaʿadjī*s of Kisrawān, Mount Lebanon. He was chosen by several rebellious villages as their leader and, after the flight of a number of *shaykh*s, established his authority over most of Kisrawān [*q.v.*]. He enjoyed some *de facto* recognition by the Maronite patriarch and the Ottoman authorities. In 1860, when relations between the Maronites and the Druze deteriorated, he tried to mobilise support in Kisrawān for the Christians in the southern districts, but did not himself participate in struggles against the Druze. The failure of his attempts led to a decrease

of his authority, and in spite of French support, his troops were defeated in 1860 by Yūsuf Karam, a warlord from the north.

TANZANIA, Muslims in.

1. *The pre-colonial period*. Archaeological findings as well as the oldest extant written records indicate that Muslims found their way to and established themselves on the islands off, and in the coastal area of, what is today known as Tanzania in the first *hidjrī* century [see dar es salaam; kilwa; pemba; swahili; zanzibar]. The oldest extant African source on the history of Tanzania is the *Kilwa Chronicle* dated around 1530.

Muslims remained coastal dwellers exclusively for many centuries partly due to their seaward orientation and the links they maintained with the heartlands of Islam through the use of the monsoons. Ecological, economic, political and logistical factors of the interior also played a role. The sparse population, constant movement of disorganised ethnic groups, their fissiparousness and lack of political entities, the tsetse-fly belt, and lack of natural venues of penetration made progress inland problematic. Even coastal settlements experienced the ferocity of the Zimba as late as the second half of the 16th century. In some instances, vested interest were also a contributory factor, as some ethnic groups had evolved their own trading patterns and were bringing cattle, ivory and copper to the coast, thus making it unnecessary for the coastal people to undertake the arduous journeys inland.

The earliest known Muslim penetration of the Tanzanian hinterland began in the 16th century via the Rovuma River and somewhat later via the Ruvu/Ruaha, the Wami and Pangani rivers. In some instances they followed the routes already established by the Nyamwezi, Sukuma and Yao. This gradual penetration was primarily carried out by the descendants of the earlier Arab and Persian settlers who had married local African women along the coast and had given rise to a new "coastal" culture and language which took its name from the Arabic word for "coast" *sāḥil* (pl. *sawāḥil*), whence Swahili. Islam acted as a detribalising force, bringing into being a new group of people who read and wrote Arabic, knew Arabic literature and law, attended the mosque and observed the requirements laid down. Arab influence changed some Bantu kinship systems from matriliny to patriliny in descent, inheritance and succession. It introduced a monetary economy, promoted the cultivation of cash crops (e.g. coconut and mango) and with it new concepts of land tenure. Even the traditional division of labour was modified so that in the coastal areas agriculture became the responsibility of the men. In the interior, persons born of Bantu parents became acculturated Swahili, adopting the external signs of Swahili culture, i.e. an Arabic name, the *kanzu* (*gallābiyya*), the *kofia* (stitched cap > Ar. *kūfiyya* "head kerchief"), the language, passages of the Ḳur'ān and circumcision. The appeal of Islam derived from a mixture of tolerance and snobbishness. The acculturated Swahili retained much of their traditional beliefs and practices, and their ethical demands fitted easily into the African kinship morality. At the same time, the Swahili claimed that they alone possessed *utaarabu*, the genteel manners and values of Arab civilisation. They saw the local people as contemptible *washenzi*, uncouth, raw natives, people still under tribal bondage, while the Swahili were *wangwana*, freemen who were not subject to any local chief. Adoption of Islam was seen as a sign of progress, status and prestige.

The penetration of the hinterland was first given an impetus with the arrival of the Portuguese in the 16th century, who became competitors of the Arabs and the coastal people. The coastal people became known in Swahili as *Wamrima*. A further impetus came with the arrival of the ʿUmānīs in the 17th century. After the establishment of the Zanzibar sultanate in the 1830s, new routes into the interior were opened up and permanent Swahili posts were established in Unyamwezi at Unyanyembe and Msene as well as at Ujiji and Karema on the eastern shores of Lake Tanganyika and at Mtengera in Uhehe.

In 1839 Sayyid Saʿīd b. Sulṭān (see below) negotiated a treaty with a delegation of Nyamwezi visiting Zanzibar, according to which his Arab and *Mrima* subjects would be exempt from paying tax to the local ruler in Unyanyembe. One of the earliest Muslims to take up residence in Unyanyembe was Djuma b. Radjab al-Murdjibī, Ḥamīd b. Muḥammad al-Murdjibī's grandfather. His father, Muḥammad b. Djuma al-Murdjibī (d. 1881), married into the Fundikira family in Unyamwezi and owned large plantations at Ituru near Tabora. Richard Burton noted in 1857 that the Coast Arab and the *Wamrima* had established themselves at Msene a few miles to the west of Unyanyembe due to their antipathy to the ʿUmānīs. The lines of division between the people from the coast and the Zanzibaris, the people of mixed race and the pure-bred Arab, although often blurred, led to a mutual distrust between the two groups which became a persistent feature among Muslims in the interior. A similar phenomenon developed in the south among the Yao, who from the 1880s increasingly became Muslims taking over the trade from the Arabs and *Wamrima*.

When a new Nyamwezi ruler tried to impose payment of tax on them, the Arabs and *Wamrima* deposed him and set up their own puppet. This led to serious tension between the local people and the people from the coast under Mirambo (d. 1884) to the detriment of their trade and by implication to the influence of Muslims in the area. In some areas the Arabs and the *Wamrima* were in control, in other areas, particularly in the south they were clients (*mawālī*, sing. *mawlā*) of the local rulers.

The reasons for the increasing involvement of the *Wamrima* with a scattering of Arabs upcountry was that, although there had been a few Indian traders and merchants on the coast since the time of the Portuguese occupation in the early 16th century, Sultan Sayyid Saʿīd b. Sulṭān (1806-56 [*q.v.*]) invited and encouraged Indian businessmen to his new domains. Although they were not much liked by the Arab settlers, Saʿīd was well aware of their role in regard to the inflow of capital and expansion of trade. Their number grew from an estimated 1,000 in 1840 to about 6,000 in 1860. The Muslims among them became permanent settlers. With them came the business acumen and the means to finance the caravans, not only on the coast but also upcountry, as in the case of Mūsā Mzuri (d. 1861), an Indian Khodja Ismāʿīlī who was the principal financier of caravans at Unyayembe. But it also meant that the coastal trade was

taken over by them, forcing the Arabs and *Wamrima* to go inland in search of markets. One of these was Matimula, a *Mrima* from Kilwa who had settled at Karema around 1870. Another was Songoro, who established his authority around the southern shore of Lake Victoria. At the same time, New England merchants and later European traders established themselves in Zanzibar. The rising demand for ivory in America, Europe and India, and by implication the higher prices paid for good quality ivory also contributed to the intensification of the contacts with the interior. The Sultan's new clove plantations and the French sugar plantations on the islands of the Indian Ocean needed labour, and this too became a lucrative trade. By 1880 the Sultan had established a military post in Mamboya some 120 miles inland from Bagamoyo to protect his interests. By this time also, there were sizeable Muslim communities at Kagei, Tabora (Kazeh) as well as at previously-named places.

Prior to the colonial period, the penetration of Muslims into the interior of Tanzania was essentially infiltrative and diffuse. It is estimated that the number of pure Arabs may have been a hundred or two, whereas the *Wamrima* may have numbered a thousand or two. At every point they were interwoven with the indigenous political and social scene. The Muslims took part in local quarrels, established themselves as local political figures, married local women. Some of the traders were accompanied by *walimu* (Ar. *muʿallim*), who introduced Islamic education and offered their amulets and prayers as an complementary source of blessing.

2. *The colonial period.* By the time the Germans began to show an interest in the area in 1884, the number of Muslims, particularly among the ethnic groups along the coast and its immediate hinterland, had grown to the point where they were able to oppose and threaten the German occupation of the area under Abushiri b. Salim al-Harthi in 1888. The strength of Islam at this time can be seen in the fact that Abushiri sought guidance from the Muslim astrologer-poet Abd Allah bin Saʿid al-Buhriy in Tanga about the outcome of the struggle. He consulted the Islamic books purporting to foretell the future (*Vita vya Wadachi*, 54 ff.). Abushiri, however, was not only opposed to the German occupation, but his family had for more than a century intrigued against the Āl Bū Saʿīd dynasty in Zanzibar, reflecting Arab clan rivalries, and may have hoped that the time had come to topple the rulers in Zanzibar. The situation all along the coast became so serious that the German government bad to intervene by sending Hermann von Wissmann as Imperial Commissioner. He arrived with an army of some 600 Sudanese recruited in Egypt and some 50 Somalis. As soon as Abushiri had been crushed, the Germans re-instated the Arab *liwali* at Tabora who had been deposed by Mirambo and denied the office by Mirambo's successor. When the Germans reached Speke Sound at the southern end of Lake Victoria, they were greeted by the indigenous population as liberators from their Muslim oppressors. The Muslim opposition to German rule reappeared in the hinterland of Kilwa under one Hasan bin Omari in 1894, supported by the Indian traders, but was dealt with swiftly and severely.

In spite of the Muslim opposition, the Germans realised that if they were to pacify and govern the country they would have to make use not only of their Sudanese and Somali soldiers, but would also have to use the only literate people available to them at this time, i.e. the Arabs and the *Wamrima*. Some of these were appointed as officials and agents, i.e. as *wulāt* (sing. *wālī*, Swa. *liwali* > *al-wālī*) and *ʿuḳadāʾ* (sing. *ʿaḳīd*; Swa. *akida*). Others were appointed as artisans, foremen, interpreters, teachers, etc. The Germans also encouraged the Indians, some of whom were Muslims, to settle near the new administrative centres they were establishing around the country. Swahili was adopted as the official language and initially written in Arabic script. These administrative arrangements laid a solid foundation for the growth of the Muslim community in Tanzania.

Although some *ṭuruḳ* had had a few followers in the country before the German occupation, it was during the pre-1914-18 War period that the Ṣūfī orders took root in Tanzania. The Ḳādiriyya, it is claimed, was brought from Barawa in Somalia during the 19th century by one Sayyid ʿUmar al-Ḳullatayn, whose grave is at Welezo, four miles from Zanzibar town. It was symbolised by its green flag carried in procession before adherents met for *d̲h̲ikr*. It appears under a variety of local names, e.g. D̲j̲īlāniyya, Kirāma, etc. The Uwaysiyya, founded by Uways b. Muḥammad al-Barāwī (d. 1909), at the end of the 19th century, a sub-order of the Ḳādiriyya, listed Barg̲h̲āsh b. Saʿīd Āl Bū Saʿīd, Sultan of Zanzibar 1870-88, and Ḥamīd b. T̲h̲uwaynī b. Saʿīd, who ruled 1893-6, amongst its members, even though they belonged to the Ibāḍī *mad̲h̲hab*. The S̲h̲ād̲h̲iliyya were brought into the country by the Sudanese and spread rapidly. One of its best-known leaders was Muḥammad Maʿrūḍ (1853-1905). Its main symbol was a white flag. There are also the Rifāʿiyya and the ʿAlawiyya.

The *ṭuruḳ* played a considerable role in some of the anti-colonial struggles. It has been suggested that they were involved in the al-Bushiri uprising in 1888 and to some extent also in the Maji-Maji uprising in 1905-6. It is quite clear that they were involved in the uprising connected with the widely circulated so-called Mecca Letter in 1908, purporting to come from Mecca and calling the faithful to rise up against the infidels in millennial terms. The letter in fact came from Zanzibar and had been written by one Muḥammad b. K̲h̲amīs al-Barwānī, alias Rumaliza, who had fought with Mkwawa, the Hehe ruler, against the Germans between 1888 and 1898 in the Iringa region. In Tabora, the letter was circulated by the Ḳādirī S̲h̲ayk̲h̲ Zāhir b. Muḥammad al-D̲j̲abrī al-Barāwī.

The introduction of Western-type education during the German period, and more systematically during the British Mandate from 1919, had a detrimental effect on Muslims as non-Muslims took over more and more of the administrative positions previously held by Muslims. Whereas previously the impression had been that the colonial masters preferred Muslims, it became increasingly clear that they now preferred those who had the kind of training they considered essential for the administration of the country. The Muslims, for their part, withdrew increasingly from the colonially-controlled systems and perpetuated their own traditions through the *madāris*, institutions which the Germans had already begun to push aside. Although the period between the wars and up to independence in 1961 was a problematic one for the Muslims, a not inconsiderable amount of intellectual and literary activity took place. The most important development inspired by S̲h̲ayk̲h̲ al-Amīn al-Mazrūʿī (1891-1947) of Mombasa and taken up by S̲h̲ayk̲h̲ ʿAbd Allāh Ṣāliḥ Fārsī (1912-82) of Zanzibar was the Swahili rendering of the Ḳurʾān which appeared in 1984. Attempts were made by the British administration to involve at least some Muslims in the new

structures. Thus two Indians were included when the Legislative Council was set up in 1926 and one further Indian member was added in 1929. It was only with the return of some of the troops after the 1939-45 war that a new impetus was given to the community through those who had met fellow-Muslims in the various war zones, but particularly in the Middle East.

3. *Independence.* The process towards independence started to some extent with the establishment of the Tanganyika African Association (TAA) in 1929 and the Muslim Association of Tanganyika (MAT) in 1934. Its aim was to do away with all cultural, educational, ethnic, political, sectarian and other differences in order to promote a solid African brotherhood. Its aims coincided with the main teachings of Islam, and the association found much support among Muslims. Its work was re-organised in 1955 under the Tanganyika African National Union (TANU) with a greater stress on preparation for independence. The *ṭuruḳ* supported TANU, and Muslims were well represented in its leadership and ranks just as they had been in TAA. An illustration of the local role of the *ṭuruḳ* and its integration into national politics was Shaykh Ramiya of Bagamoyo. He was a former slave who had become a merchant and landowner. As a member of the Ḳādirī order, he undertook extensive Islamic studies and won great respect among the local people. He co-operated with the British and was appointed *liwali.* Many Africans in the area benefited from the social solidarity of the brotherhood and from their allegiance to a powerful patron. In 1938 his son and successor Shaykh Muḥammad declared that the Prophet was not an Arab but a man for all races. This was an expression of the African identity of the community. Shaykh Muḥammad encouraged his followers to join the national party and himself became a local representative. After independence, President Julius Nyerere appointed him *ḥakīm.* Arab and Indian Muslims, however, felt ill at ease, particularly with TANU's secular outlook on education and its socialist principles which they feared would impair their religious and commercial interests. As a result, they established the All-Muslim National Union of Tanganyika (AMNUT) in 1957. AMNUT suggested that independence should be delayed until Muslims had reached the same educational levels as other groups in the country. Ultimately, their interests were taken up by the East African Muslim Welfare Society (EAMWS) which had been established under the patronage of the Āgā Khān, the leader of the Ismāʿīlī Shīʿī community in 1945. Its outlook was transnational, pan-Islamic and more concerned with each community's interests than the national interests of TANU. After independence, EAMWS was allowed to continue its work, being regarded as a religious organisation, but due to its increasingly political activities it was proscribed in 1968. Its place was taken by the Baraza Kuu La Waislamu Tanzania (BAKWATA), which had close ties with TANU. The majority of Muslims who are Sunnī and follow the Shāfiʿī *madhhab* claimed that the principles of *ujamaa* promulgated by TANU were easily identifiable with many teachings within Islam and that the principle of self-reliance accorded with their views. Its position within TANU can be seen in that the first Vice-President, Rashidi Kawawa, was a leading member of BAKWATA, as was the leader of the Umoja wa Wanwake Tanzania (UWT), Bibi Titi Mohamedi. When the first president of Tanzania, Julius Nyerere, retired in 1985, the party chose Ali Hassan Mwinyi from Zanzibar as his successor. The position of the Muslims had now improved to the point where BAKWATA was able to arrange a high-level visitation by an international group of leading Muslim scholars in 1987. At the same time BAKWATA requested the government to re-establish the Islamic *ḳāḍī* courts which had existed in the country in the colonial and pre-colonial period. This genuine Islamic profile came as a result of a more international outlook in the organisation which brought about economic aid from the Muslim world for the building of schools, mosques and for scholarships. Religious materials for use in primary and secondary school have been prepared under BAKWATA's auspices. In spite of this, some Muslims were dissatisfied with what they saw as BAKWATA's inadequate stand on matters Islamic. They formed the Baraza La Umoja Wa Korani Tanzania (BALUKTA) under the leadership of Shaykh Yahya Hussein in 1987 to propagate the reading of the Ḳurʾān and to promote religious and higher education for Muslims. It has also been in the forefront in organising the Pilgrimage to Mecca. BALUKTA has not confined itself to these activities. In 1992 it accused the vice-chairman of the ruling party of swindling large amounts of money which should have been used for *ʿĪd* and *Mawlid* prayers. The leaders were imprisoned, but then released, and the organisation de-registered. In 1988 the new Minister of Education, Kighoma Malima, suggested that Muslim students should receive preferential treatment in the selection process for secondary education. This and other moves were strongly supported by various groups including Warsha ya Waandishi wa Kiislamu (WARSHA) representing Muslims in the 20-40 age group, who broke away from BAKWATA in 1982, the Union of Muslim Youth, the Union of Muslim Students at the University of Dar es Salaam and the Union of Muslim Preachers. WARSHA is critical of the political and economic system of Tanzania. They are also involved in changing the traditional *madrasa* system of rote memorisation of the Ḳurʾān to a more varied Islamic education. The Union of Muslim Youth published a Ten-Year Development plan in 1984 in which they emphasised the need for a separate Islamic development in society. It was their insistence which made BAKWATA request the re-introduction of *ḳāḍī* courts in 1987. Beside the Union of Muslim Students at the University, there is also the University Muslim Trusteeship which stresses that the teachings of the Ḳurʾān are a complete code of life. The most recent organisation set up in 1992 is the Baraza Kuu ya Waislamu (National Muslim Conference), which is seeking to replace BAKWATA as the umbrella organisation of all Muslims in Tanzania.

The Indian Muslims representing various tendencies within Shīʿī Islam, whose numbers had continued to grow throughout the colonial period, evolved their own structures. The above-mentioned, well-organised Khodja Ismāʿīlī community has played an important role in the political life of Tanzania, particularly through the long-serving Minister of Finance Amir Jamal. The Ismāʿīlī community, although exclusivist in its nature, has made significant contributions in the fields of education, industry, medicine and social services. Wherever the community is to be found they have established *Djamāʿat Khānas*, which function as centres for their administrative, religious and social functions. Although the Āgā Khān advised them to identify totally with the new independent Tanzania, some found it prudent to leave the country in view of the attitude and tensions resulting from the indigenous perception of their business practices.

The Twelver Shīʿī Community has established itself as an educational and intellectual presence prima-

rily through the work of Sayyid Saʿid Akhtar Rizvi. Under his leadership, the Bilāl Muslim Mission was established in Dar es Salaam in 1967. It publishes among other things *The Light*, in which issues such as the Islamic concept of state and authority are discussed, as well as various Ḳurʾānic doctrines and religious practices. Through his work a number of Tanzanian Africans have accepted the Ithnā ʿAsharī tradition and have had the opportunity to study in Iran. Wherever there are sufficient numbers of the community, they have established *imāmbāras* as centres of religious and community life.

The Mustaʿlian Bohora community in Tanzania first appeared in Zanzibar in 1748 from Bombay. At the beginning of the 1950s they established the Daʾudi Bohra Jamat Corporation. They have primarily been involved in the ironmongery and watch trade. Like the Khodja Ismāʿīlīs, they have their own *Djamāʿat Khānas* and are the most exclusivist of all the Indian communities. This is particularly marked through the Seifi Foundation and Public Charity Trust, established primarily to set up members of the community in business.

(S. von Sicard)

TANZĪL [see WAḤY].

TANẒĪM AL-NASL, TANẒĪM AL-USRA (A.), family planning, denotes the conscious planning of the occurrence of a pregnancy, including decisions on the interval between pregnancies.

Social and legal aspects.

Family planning has become a major issue of religio-political controversy over the last decades, particularly since the late 1950s and early 1960s, when several Islamic countries (first Egypt, Pakistan and Tunisia) began to respond to the dangers of rapid population growth. Governments gradually realised that growing population pressure impedes their economic development. (Egyptian economists and students of humanities had been aware of the unfavourable development since the early 1930s, and some had attempted to alert the authorities to these facts. The first *fatāwā* pro- and contra-family planning had been published at the same time. But these early efforts remained without effect.) The accelerated population growth in North Africa and Middle East, like elsewhere in the developing countries, resulted from a dramatic decrease in the mortality rate, especially since World War II, unaccompanied by a parallel decrease in birth rates. The fall in the death rate and the higher life expectancy has been caused by the expansion and improvement of medical and health facilities and sanitation infrastructure, particularly since independence. Before, deaths had cancelled out births, and the high birth rate served to reproduce a relatively stable population density.

With the exception of Saudi Arabia and other oil-rich countries which could support a growing population, most Islamic countries decided to implement national family programmes in the 1960s. These were often accompanied by legislative measures and different developmental efforts (such as health, education, rural development and industrialisation programs). The success of these measures varied, due to numerous factors, such as administrative bottlenecks; shortage of trained personnel; lack of funding and coordination between private foundations and associations and state organisations and institutions concerned with family planning services; uneven country-wide distribution of family planning assistance; regional disparities in developmental efforts; educational, information and custom's problems; non-implementation of legislation; discontinuity of family planning policy as a result of change of government or policies; short-lived attempts to control internal migration; and/or exclusively growth-oriented development policies.

Until the 1980s, only modest achievements with regard to family planning could be noted. Optimistic predictions for a favourable population development were realised to have been founded on false suppositions. In general, fertility rates can only drop slowly as they react to gradually increasing pressures from modernisation, urbanisation and industrialisation. Sobering results of census data and gloomy predictions for the future of the economy, drawn from demographic data, led several governments to act more strongly and effectively in order to regulate the population growth. They recognised that the rapid increase in population had nullified economic gains and that the population growth has to be brought into equilibrium with the limited national resources. Until this time, the growing rate could not be matched with economic and service development (employment, health services, transport, housing, industrialisation and agricultural productivity). It was feared that this would result in a vicious cycle of poverty, ill-health, illiteracy, overpopulation and unemployment, being compounded with social frustration and social unrest.

Constant rise of population has brought about a surplus of labour that could not be absorbed by the economy of the countries; the dependency burden is high dne to the disproportionate growth in the number of young people, and the discrepancies within the socio-economic strata are aggravated. Increased internal rural migration to large urban centres has brought a host of problems, such as rapid and disorganised growth (growing slum quarters), deficits in social, technical, and economic supplies, extremely high population density, traffic congestion, air and water

pollution, land speculation and housing problems. These problems are obvious in metropolitan areas like Karachi, Cairo or Tehran.

The population growth rate of the whole North African and Middle Eastern region averaged about 3.1% *per annum* between 1980 and 1990. Although a slight decline has been apparent over the last years, the population growth rate is still higher than the global average rate (1.7%) or the average rates for East Asia (1.7%), South Asia (1.6%) and Latin America (2.1%). Fertility appears to be highest in Ḳaṭar, Kuwait, Saudi Arabia and the UAE (more than 4%) and lowest in Lebanon (less than 1%?). Moreover, the urban population of the whole region increased on an average rate of 4.7% between 1985 and 1990. The largest populous country among the states with a Muslim majority is Pakistan, with about 119 million inhabitants in 1994, Egypt, Iran and Turkey following with about 60 million each.

Sample surveys and census analysis of fertility and birth control practices in different Islamic countries suggest that the main variables of differences in regional population growth are the following: socio-economic class or mode of livelihood in a more general sense, the status of women (educational level, employment opportunities outside of agriculture, husband-wife relationship, valuation of women's role) and the family structure (patriarchal-traditional or modern), social environment (urban milieu or rural communities), and connection of family programmes with other health programs, especially those in maternal and child health.

Nonetheless, some progress in stabilising population has been made in the region due to more forcefully propagated anti-natalist policy (including media campaigns and sex education in schools) since the 1980s/early 1990s. Contraceptive use among married women of reproductive age and awareness of population issues have increased.

Economic pressures have certainly induced changes, particularly in the attitudes of urban middle class couples and the younger generations. Rising levels of individual expectations for a better standard of living and of parental aspirations, together with new systems of economic production that reduce the opportunities for unskilled workers and demand for child labour, have effected a re-evaluation of attitudes to child bearing in the urban centres. However, as long as comprehensive social security systems are not implemented, poor families, especially in rural areas and agricultural economies, will continue to view their children as potential wage earners and as a security against disability or old age.

The experiences in the past decades have proved that any fundamental solution to the problem of reducing fertility rate has to involve major social and economic structural change as well. The relatively positive effects of population policy in Tunisia and Turkey have to be seen in connection with several legal and administrative measures taken as complementary measures for decreasing the birth rate and aimed at emancipating women and creating social security institutions. Reformed Codes of Personal Law (raised marriage age, prohibition of polygamy, reform of divorce rules, full rights of citizenship, etc.) have improved the status of women. The remission of taxes for families with numerous children or family allowances has been abolished or limited. Liberal family planning laws have legalised abortion (during the first three months or 10 weeks) and sterilisation, also for social reasons (Tunisia 1973; Turkey 1983).

A recent example of the effects of a radical reversal in family planning policy owing to political change and economic pressure is Iran. Since 1970, the Iranian government embarked on a population control policy. Abortion was legalised in 1973, also as a response to the high rate of dangerous illegal abortions, particularly in Tehran. Sterilisation became legal in 1976. After the Revolution in 1979, K͟humaynī ordered family planning clinics to stop abortions and sterilisations. The new government propagated marriage. The legal marriage age has been lowered to 13 years for girls and 15 years for boys, polygamy was reinstituted, and temporary marriages [see MUTʿA] encouraged. Child-bearing was postulated as the main duty of women, and procreation of Muslims was deemed essential. Birth control opportunities became extremely limited and family programmes practically inoperable. The effect of the war, dwindling resources, and high inflation rate forced the government to reverse its position on population control. The year 1368 *s͟h*/1989-90 was declared "Birth control year". The UN Fund for Population was asked for assistance; birth control devices were purchased, and even voluntary sterilisation has been legalised.

Since the beginning, several governments and population planners have sought endorsement of their family planning policies by religious authorities for inducing people to accept birth control more readily and for legitimising their political measures. The *fatwās* [*q.v.*] sanctioned family planning in most cases by restating the historical *id͟jmāʿ*. Given the strong emphasis which Islam places upon family and the traditional role assigned to husband and wife, the rulings governing contraception and abortion appear remarkably liberal. The Ḳurʾān (XXIV, 30-5) recommends marriage and procreation for those who are physically and economically able and advises abstinence for all others. (As a result, all contemporary Muslim societies are almost totally "married societies"; "singleness" is a rare phenomenon.)

In contrast to the enduring view of the Catholic Church, in Islam the basic purpose of marriage is explicitly stated to be not only procreation but the gratification of spiritual and physical needs. This means that sexual intercourse has a positive value independent of reproduction itself. Muslim open attitudes towards sexuality have definitely encouraged the discussion and sanction of contraceptive methods. In Islamic jurisprudence, these discussions were primarily concerned with *coitus interruptus* [see ʿAZL], historically the most common contraceptive method known to men. Lacking a direct reference in the Ḳurʾān to answer the question of birth control, the jurists have turned to the number of Traditions relating to *ʿazl*, most of them being permissive, for proving their sanction of withdrawal; in the case of a free woman, her previous consent was usually demanded. This provision was required because sexual fulfilment and progeny were considered to be her rights. The ethical permissibility of *ʿazl* was extended by analogy (*ḳiyās*) to include other known contraceptive techniques (condoms; tampons; intravaginal suppositories; herbal potions; magic). The major schools of Islamic jurisprudence viewed contraception as an allowable but reprehensible (*makrūh*) practice; since procreation was a good action, abstention from it was an omission of a preferred action. Under certain conditions, birth control could become recommended. Several jurists recognised not only personal and medical reasons but also social and economic indications, and even, most generally, the fear of "bad times" (*fasād* or *sūʾ al-zaman*). The only jurist who condemned *ʿazl* absolutely was Ibn Ḥazm [*q.v.*]. He based his argument

on a *ḥadīth* which compares *ʿazl* to "hidden infanticide" (*al-waʾd al-khafī; waʾd* having been prohibited by Ḳurʾān, LXXXI, 8). Religious permission of contraception was part of the popular consciousness, and birth control information and its remedies were available, B. Musallam concluded, after extensive studies on the mediaeval Arabic discussion on contraception and abortion in Islamic jurisprudence as well as in medicine, *materia medica, belles lettres*, erotica and popular literature. Practically all contraceptive techniques used by the Europeans till the 19th century were known in the mediaeval Middle East.

Although on abortion (*idjhāḍ, isḳāṭ al-ḥaml*) the Muslim jurists failed to reach a consensus, on the whole it was religiously tolerated before "quickening", especially in case of medical reasons. All Muslim jurists agreed on the prohibition of abortion after quickening (*nafkh al-rūḥ*) of the foetus [see NAFS; RŪḤ] at the end of the fourth month.

In order to understand contemporary discussions on birth control, it is important to underscore the fact that religious permission applied to individual couples and not to government activities, and that it was essentially connected with the possibility of failure, inherent in all mediaeval techniques; the latter aspect could easily be reconciled with the concept of predestination.

With the involvement of the state, a new political dimension has been added to the issue of family planning. The positive responses of some contemporary *ʿulamāʾ* to national family planning programmes, probably also the first successes in planning and the spread of Islamic fundamentalism, have brought about fierce opposition to birth control. Concerning family planning, at least three distinct attitudes in contemporary Islam can be deduced from publications, statements, and conferences on Islam and population policy. The controversy has once again come to light with regard to the World Population Conference in Cairo in Sept. 1994.

1. Religiously conservative (among them less educated local *fuḳahāʾ*) and politically radical circles, either extreme Islamists or extreme nationalists, reject birth control in any form. The dominant theological argument for pro-natalism is the belief in God's omnipotence and His active providence [see RIZḲ]. The popular *ḥadīth* "Marry and multiply so that God will be proud of you on the Day of Resurrection" (or similar versions) is often quoted to demonstrate Islam's prohibition of family planning. Opponents of birth control have never distinguished between limitation and organisation or regulation, i.e. *tanẓīm al-nasl* is tantamount to *taḥdīd* or *ḳillat al-nasl*. They believe that procreation is the principle purpose of marriage and emphasise women's "natural" role; availability of contraceptive means would contribute to a decline of social morality. Family planning is seen as an imported concept. Opponents furthermore argue that there is no need for family planning; the Muslim countries are able to support millions more of inhabitants. The question should be better utilisation of resources and skills (e.g. irrigation and cultivation of the desert), not limitation of population. Multiplicity would mean power, influence, and military strength. The adherents of this view hope for Islamic solidarity and for an economic cooperation (including labour migration) between rich and poor Islamic countries. In this context, they forget that most oil-producing countries are pursuing a pro-natalist policy in order to reduce their dependency on foreign workers.

Even among opponents (such as ʿAllāl al-Fāsī, the late founder of the Istiklāl party; ʿAbd al-Ḥalīm Maḥmūd, Shaykh al-Azhar, 1973-8; Abu ʾl-Aʿlā Mawdūdī [*q.v.*]; the famous *ʿulamāʾ* Abū Zahra 1976, al-Būṭī 1976; the Azharī Ibn al-Dardīr 1990; the Saudi *muftī* Ibn Bāz 1988), some admit that contraception, including abortion and sterilisation, may be used in a restricted sense (medical and eugenic indication) in individual cases. (Some hardliners restrict birth control to the cases when there is a mortal danger to the woman in case of pregnancy.) The consent of the husband and wife and the consulting of at least one trustworthy and pious Muslim physician is required in these cases. Social motives for birth control are rejected as mere convenience. Only a few scholars have doubted the analogy of *ʿazl* to modern contraceptive methods. They differentiate between natural and artificial, unhealthy and harmless, as well as abortive and contraceptive methods. The Saudi al-Khaṭīb (1982, 135 ff.) only accepts the rhythm method and the regular practice of lactation, as also the Egyptian Muḥammad Mutawallī al-Shaʿrāwī only *ʿazl* (*al-Fatāwā*, Cairo 1982, i, 18-19).

This first major attitude comes close to the official position of the Gulf states and Saudi Arabia, although even there family planning services are available in clinics. The Saudi *Madjlis hayʾat kibār al-ʿulamāʾ* (Council of the Assembly of Senior *ʿUlamāʾ*), besides the Muslim Brotherhood [see AL-IKHWĀN AL-MUSLIMŪN], called upon the Muslim countries to boycott the World Population Conference in Cairo in 1994. Consequently, Saudi Arabia, as well as ʿIrāḳ, Sudan and Lebanon for political reasons, did not participate.

2. A second group, apparently the majority, takes the position that temporary prevention of child birth is permissible, provided that this is with the mutual consent of the married couple; this provision will pose major problems because of the still dominant patriarchal family structures. By analogous reasoning, modern contraceptive methods are allowed as long as they will not destroy fecundity or the ability to procreate. In most cases, abortion and sterilisation are not viewed as acceptable forms of contraception, unless a physician deems it necessary for medical or eugenic reasons.

The word control is avoided. The terms family planning, spacing of births and responsible parenthood are used instead.

Despite this agreement, there are sometimes remarkable differences in opinion and emphasis concerning the following aspects: the role of the state in implementing family planning programmes (although they all agree that compulsion must be avoided); the difference in priority for mother and child's health and welfare ("child spacing") and for a small family and higher living standard ("family planning"); the acceptance of social motives for family planning; the legality of voluntary abortion (before quickening) and ("reversible") sterilisation. As examples for a more conservative position, the opinion of Maḥmūd Shaltūt [*q.v.*] or the official position of Algeria can be mentioned, as examples for a more open position, the statements of Aḥmad al-Sharabāṣī (1965) or the Egyptian *muftī* Muḥammad Ṭanṭāwī (1989) and the practice in Egypt.

Arguments often put forward by these Muslim scholars in countering the opponents of family planning are as follows: trust in God (*tawakkul* [*q.v.*]) should not be confused with passivity and indifference (*tawākul*); procreation is not the exclusive or principal purpose of marriage; "quality" is better than "quantity", i.e. a huge, but weak and underdeveloped nation cannot

be the subject of pride for the Prophet or God on the day of judgement.

3. A third, not very numerous group of Muslims fully agree with all methods of voluntary birth control, including abortion and sterilisation for social reasons if performed by medically qualified persons. This group consists mainly of the academic intelligentsia (physicians, lawyers, etc.) and the economic élite (e.g. in Turkey, Vehbi Koç), among them women in influential positions and feminists (e.g. Nawāl al-Saʿdāwī in Egypt). The adherents of this position are concerned with economic and social stability and progress and the improvement of the woman's status. Their view is similar to the official stances of Tunisia and Turkey.

(ROSWITHA BADRY)

TANZĪMĀT (A.), the plural of the form II verbal noun meaning "ordering, setting in order, regulating". It is used in modern Turkish and in Western languages as a singular noun with the connotation of "reforms". In Ottoman history, *Tanzīmāt* is employed in three senses, to designate (1) the edict of 3 November 1839, the Khaṭṭ-i Humāyūn [*q.v.*] or Khaṭṭ-i Sherīf of Gülkhāne; (2) the sum of reforms from that date until some time between 1871 and 1881; and (3) Ottoman history in its entirety during those years. The most convenient end for the reform period is the prorogation of the first Ottoman parliament in 1878. Some historians have chosen as the limit the death of the Grand Vizier Kečedjizāde Meḥmed Amīn ʿĀlī Pasha [see ʿĀLĪ PASHA MUḤAMMAD AMĪN] in 1871, or the exile of Midḥat Pasha [*q.v.*] in 1877, or one of the early years of the reign of Sultan ʿAbd al-Ḥamīd II [*q.v.*], such as 1881 when the Ottoman Public Debt Administration [see DUYŪN-I ʿUMŪMIYYE] was established.

1. *The* Khaṭṭ-i Sherīf *of Gülkhāne.*

In 1839 the Ottoman government faced extraordinary military and financial difficulties. The army of the rebellious governor of Egypt, Muḥammad ʿAlī Pasha [*q.v.*] had on June 24 inflicted a major defeat on the forces of Sultan Maḥmūd II [*q.v.*]. Maḥmūd died a week thereafter. His son, ʿAbd al-Medjīd [*q.v.*], was sixteen years old at his accession. The foreign minister, Muṣṭafā Reshīd Pasha [*q.v.*], who had had experience as a diplomat in London and Paris and was a convinced Westerniser, persuaded the young sultan to issue the solemn proclamation, the *Khaṭṭ-i Sherīf* of Gülkhāne, often called by Turks the *Tanzīmāt fermānî*. The edict was Reshīd Pasha's creation and was publicly read by him in the open space of Gülkhāne along the Ṭopḳapî palace wall, the sultan being present.

The *Khaṭṭ* built on the innovations of Maḥmūd II, in the later years of whose reign the term *Tanzīmāt-i Khayriyye* ("beneficent orderings") had already designated administrative changes. The *Khaṭṭ* repeated some earlier government statements of intent, but in a more formal manner. It made promises in three broad areas: there should be security of life, honour, and property, all classes of people to be treated alike, trials to be public, no-one to be put to death except after a regular sentence, and all confiscation abolished; a system of collecting fixed taxes should replace tax-farming; military conscription should be regularised and the term of service reduced from lifetime to four or five years. The edict further promised good administration, limits on military spending, adequate salaries for bureaucrats so that bribery would disappear, and a new penal code for all subjects. The most striking promise was that the reforms would apply without exception to "the people of Islam and other peoples among the subjects of our imperial sultanate."

The general purpose of the edict was to strengthen the Ottoman Empire. It was further designed to attract the support of the European powers, by proving that the progressive empire was worth defending. This second aim was immediately achieved as the Powers, although for their own reasons, forced Muḥammad ʿAlī to retreat. The edict also aimed at alleviating the treasury crisis by allowing the Sublime Porte [see BĀB-I ʿĀLĪ] to send its own tax collectors to the provinces. A further specific aim of Reshīd and others was achieved with the sultan's promises about security of life and abolition of confiscation. The power of the sultan to deal arbitrarily with his statesmen, such as had only recently led to the destitution and death of Reshīd's predecessor, Pertew Meḥmed Pasha [*q.v.*], was to be limited.

The edict had a dual personality. It began platitudinously with the assertion that the empire had grown weak because of non-observance of the Ḳur'ān and of the sacred law. But it went on to propose "new institutions" and "complete renovation of the ancient usages". The assistance of God and the Prophet was then invoked for the reforms to prosper. The edict's combination of traditional Islam with new institutions foreshadowed the split personality of the entire reform period. In a second sense, the edict reflected a dualism in Ottoman society also. It laid down the principle that all subjects were equal before the law. But to proclaim that non-Muslims should be treated like Muslims contravened the view of what was right that was held by most of the Muslim people. In making a formal enunciation of this as doctrine (Maḥmūd II had done so less formally), Reshīd aimed at countering separatism among Christian minorities, such as had already led to the revolt that created an independent Greece. With this start, the reform statesmen hoped to foster an Ottoman patriotism—Ottomanism (*ʿOthmānlîlîḳ*)—that should appeal to all the empire's peoples and hold it together.

2. *The general nature of the reform period.*

The *Tanzīmāt* period is divided by the Crimean War and the issuance at peace-making time of the second great reform document, the *Khaṭṭ-i Humāyūn* of 1856. The ending of the *Tanzīmāt* is marked by a third great document, the constitution of 1876, with the two-year parliamentary period that it inaugurated. These pronouncements and the reforms that followed each came about, not because the populace demanded changes, but because some of the highest officials deemed them desirable. Reform in the *Tanzīmāt* period proceeded from the top downwards. The leading statesmen overshadowed the sultans of the period—ʿAbd al-Medjīd (1839-61), ʿAbd al-ʿAzīz (1861-76 [*q.v.*]), and Murād V (June to August 1876 [*q.v.*]). In the first stage of the *Tanzīmāt*, the dominant reformer was Reshīd Pasha. Leadership in the second stage fell to his disciples, ʿĀlī Pasha and Fu'ād Pasha [*q.v.*]. After ʿĀlī's death and a few years of capricious government, Midḥat Pasha provided the leadership that produced the constitution. Then ʿAbd al-Ḥamīd (1876-1909) reversed the roles in government. During his reign, the palace dominated the Sublime Porte and its ministers.

The reforms exhibited certain characteristics that persisted throughout the entire *Tanzīmāt* period. All of them were encompassed in the general aim of preserving the Ottoman Empire by strengthening it. For over a century, the empire had been in decline as compared to the Western European states, and most importantly, as compared to its immediate neighbours, the Austrian and Russian empires. The first response to this imbalance was the Ottoman effort to improve the armed forces. Military modernisation continued through the *Tanzīmāt* period, but was not dominant as it had been under Maḥmūd II. It was eclipsed by the effort to strengthen the central government and

to increase its control over the provinces. At the same time, the Porte embarked on the beginnings of representative government by including members of the non-Muslim minorities in some government councils. Further, government functions proliferated well beyond the traditional ones of administering justice, collecting taxes and maintaining armed forces. Matters that had traditionally been left to private hands, especially education, gradually came under government administration. In consequence of these trends, another characteristic of the period developed—a significant growth in the size of the bureaucracy.

Almost all the reforms involved a greater or less degree of Westernisation. At times, specific Western models were adopted or adapted. French institutions supplied the usual examples, except for army and navy. The French language became more widespread in the empire, especially among the leading reformers. Westernisation inevitably implied secularisation. Particularly in law and education, secular institutions developed that paralleled Muslim institutions [see IṢLĀḤ. iii]. This dualism was matched by another—the increasing tendency for the Porte to treat all the sultan's subjects simply as individuals, while at the same time preserving the corporate organisation of the non-Muslim *millets* [*q.v.*], from which individuals traditionally derived their own identity.

The path of reform was not smooth. Conservatives and groups upholding their own self-interest opposed it. Further, European powers often intervened in Ottoman domestic affairs. Sometimes the Powers pressed for changes, usually in favour of Christian minorities. At times, the Porte welcomed such diplomatic pressure if it helped to achieve a government objective. More often, the Porte tried to avoid the interference, or to lessen it by partial compliance, or to counter it entirely. Exceptionally, the Powers twice used military force to help preserve the Ottoman Empire, in 1839-41, against Muḥammad ʿAlī, and in 1854-6 when British, French, and Sardinian armies fought with the Ottomans against Russia. But when the empire was fighting to suppress a Cretan uprising in 1866-9, and then a Serbian rising in 1875-6, several powers favoured the rebels and put strong diplomatic pressure on the Porte, attempting to impose their own solutions.

The rebellions, including others, also slowed the progress of reforms. Some rebellions arose essentially over local conditions of taxes and land tenure or provincial administration, including some *Tanẓīmāt* reforms. But some rebellions gained greater significance if they turned nationalist, as was increasingly the case as time passed. Serbians, Montenegrins, Romanians and Bulgarians all harboured nationalist sentiments, and independent Greece sought to expand its territories at Ottoman expense. In the Lebanon, revolts were more over local issues, land, and sectarian differences. Various European powers were attracted to support some of these revolts; Russia, especially, was supportive of Balkan nationalist rebellions, both diplomatically and militarily.

The Porte tried to counter such interference not only by improving the armed forces but also by diplomatic means. The network of permanent Ottoman ambassadors resident in other countries, begun only in the 1830s, was greatly expanded. The diplomats learned French and the European formalities of international dealing. Also, the Porte tried at all times to keep at least one power as a supporter, and more if possible.

The most dangerous threat to Ottoman integrity arose when rebellion by members of a Christian minority was backed by one or more great powers. The outcome of such rebellions would determine whether the Ottoman Empire lived or died. Between 1839 and 1876 the empire lost no territory definitively. However, several Balkan provinces attained autonomy, and the successors of Muḥammad ʿAlī loosened Egypt's ties to Istanbul. Continuing financial problems and economic underdevelopment slowed the reform process, though the Porte tried to attack these problems. Public opinion could also be an impediment to government-led reform. In Istanbul, an independent press grew up in the 1860s, often expressing hostility to the Porte's actions [see DJARĪDA. Introd. and iii]. The Porte also coped with public opinion in Europe, which sometimes reverted to the image of the "terrible Turk." By diplomatic representations, news stories supplied to Western journals and subsidies to editors, the Porte presented the Ottoman case.

3. *The first stage, 1839-53.*

The seventeen months following the *Khaṭṭ-i Sherīf*'s promulgation, until Reshīd Pasha's dismissal as Foreign Minister on 11 March 1841, were filled with new departures. The principal deliberative body, the Supreme Council of Judicial Ordinances (*Medjlis-i Wālā-yi Aḥkām-i ʿAdliyye* [*q.v.*]), was provided with new rules that were a form of parliamentary procedure. The council could interpellate ministers, debate freely and decide by majority vote what measures to recommend to the sultan. In all provincial capitals, the Gülkhāne *khaṭṭ* was ceremonially read, after which regulations on its implementation flowed from Istanbul. An advisory council (*medjlis*) was created in 1840 for each province (*eyālet* [*q.v.*]) and sub-province (*ḳaḍāʾ*). It was intended to be a check on the wide authority of the governor and to prevent illegal acts on his part. Each council was composed of representatives of the Muslim and non-Muslim communities, indirectly elected, together with local officials, always Muslim. The most radical innovation was the abolition of tax-farming (*iltizām* [*q.v.*]) and the appointment by the Porte of a tax-collector (*muḥaṣṣil*) with wide powers in each province. He would collect especially the tithe on agricultural production. Additionally, many customary fees collected by local officials and *ʿulemāʾ* were abolished, as was the corvée [see ḤAWĀLA]. The innovations were an effort to centralise the fiscal powers, to increase revenue for the imperial treasury and to end corruption in tax-farming. When ʿAbd al-Medjīd opened the first session of the Supreme Council in the new year (A.H. 1256), he praised the innovations and reaffirmed the parliamentary procedure. Inspectors were also sent to some provinces to check on local officials and to hear complaints. Reshīd dismissed, and even imprisoned, some officials who were not observing the new regulations. They had been levying the old fees or demanding taxes beyond the proper amount. A few of these even were *muḥaṣṣils*.

Some reforms were unsuccessful. The provincial councils did not always meet. If they did, they often fell under the control of the old notables, both Muslim and Christian, who might dominate the governor. The *status quo* was little changed in most provinces. The direct collection of taxes produced far too little revenue, so that by the end of 1841 tax-farming was reinstituted [see MĀLIYYE]. Not enough good *muḥaṣṣils* had been found. Further, opposition to the new reform was widespread, both among Muslim and Christian landowners and notables who resented losing the corvée and whose taxes would increase, and also among peasants who wanted immediate application

of their freedom from fees and from tax-farmers. In various localities there were risings of peasants. In Nish, the Bulgarian rebellion against local officials and landowners carried faint nationalist overtones, but this was not true of risings in Anatolia.

Other reforms produced better results. In the summer of 1840 the Porte, having earlier considered a foreign loan, issued debt certificates [see KĀʾIME] that were acceptable in government offices in payment of obligations. They also could circulate among private individuals like paper money. The first *ḳāʾime* carried an interest rate of 12½ per cent. Other issues followed. The *ḳāʾime* did alleviate the treasury crisis; in effect, it was a domestic loan. It aided commerce by functioning like paper money. Over-issue after 1852 led to its depreciation and to abolition in 1862. Also, a more modern penal code, still based on Muslim law, was enacted in 1840, fulfilling another promise of the *Khaṭṭ-i Sherīf*. It paid special attention to punishing the misconduct of public officials. Further in 1840, a commercial court to deal with cases between Ottomans and Europeans was set up in the Ministry of Commerce. It helped to facilitate the empire's growing international trade.

The Porte in this period of two years achieved also a higher international standing. Britain, Austria, Prussia and Russia combined to force Muḥammad ʿAlī out of Syria. He and his heirs were allowed to retain the governorship of Egypt. In the diplomatic arrangements preceding this action, the Ottoman Empire was accepted by the other powers as an equal partner. All signed the Convention for the Pacification of the Levant in 1840, and all plus France signed the Straits Convention of 1841, closing the Bosphorus and the Dardanelles to warships. In this fashion, the Ottoman Empire was first admitted into the workings of the European state system.

When in 1841 Reshīd was replaced as Foreign Minister by more conservative statesmen, and sent off to Paris as ambassador, change continued at a slower pace. It quickened again in 1845 on his return to be Foreign Minister, followed in 1846 by his first Grand Vizierate. One promise of the Gülkhāne *khaṭṭ* was carried out in 1843 by a law limiting the term of army service to five years. It also set up five armies for separate regions of the empire. By 1845 some new lower military schools (*iʿdādī*) were established to prepare students for the higher military schools that Maḥmūd II had created. Provincial government received more attention. In 1844 and 1846, ʿAbd al-Medjīd himself went on inspection trips in nearby Anatolia and Rumelia, hearing complaints and asking about economic development. In 1845 an assembly of provincial representatives was summoned to Istanbul. They stayed for two months, expressing their wishes on tax reform and economic improvement. The number of *eyālets* was increased from 28 to 36 in 1846. The local *medjlises* continued not to be very effective. The number of able government officials remained low. Therefore, inspection commissions, five to Anatolia and five to Rumelia, were again sent out to seek out injustice and to encourage economic improvement. In 1852, in an effort to make provincial government more efficient, the powers of the governors were again broadened.

In Istanbul, several steps toward more orderly government were taken. The Sublime Porte, the office building for some of the chief ministries, was rebuilt in 1844. Reshīd had an archive building constructed in 1846. It was planned by the architect Fossati, who was soon to restore Aya Sofya. The modernised structure of government was outlined in the first government year-book (*sāl-nāme* [*q.v.*]) in 1847. In the same year, ʿAbd al-Medjīd examined the Morse telegraph, displayed to him by two Americans. He ordered a line to be built from Istanbul to Edirne, but it was not immediately constructed. The sultan also had built in 1853 the Dolma Baghče palace, planned by Balyan. It was modern, with ornate French and Italian painted ceilings and French bric-à-brac. In 1848 mixed tribunals, on which non-Muslim members sat with Muslims, were established to deal with commercial cases involving foreigners. A code of commerce of French inspiration, the first Westernised law code, was promulgated in 1850. In the same year, a system of quarantine, designed to prevent the spread of disease by pilgrims returning from Mecca, was established.

An education commission was created in 1845. Among its members were Reshīd's disciples, ʿĀlī and Fuʾād. It planned three levels of state-sponsored schools—primary, middle, and upper—as well as a university. In 1847 a Ministry of Public Education was created. The university was impractical. But in 1847 a few middle schools (*rüshdiyye*) were opened, and in the following year a teachers' training college [see MAʿĀRIF. I. i]. In 1851 an Academy of Arts and Sciences (*Endjümen-i Dānish*) was founded. Part of its mission was to prepare textbooks. Generally, it was to advance language simplification, Turkish history, and translations of European books in the sciences and arts. A Turkish grammar by Fuʾād and Aḥmed Djewdet [*q.v.*] was one of the few fruits of the Academy. Djewdet also soon began his monumental history.

A number of the reforms furthered *ʿOthmānlïlïḳ*. When ʿAbd al-Medjīd traveled in Rumelia, the equality of Ottomans of whatever religion was reaffirmed; all were compatriots. In 1850 a *fermān* opened the army to non-Muslims, but implementation was deferred. The education commission envisaged schools recognising no religious distinctions. Christians sat on the commercial court and benefited from the commercial code. But the Porte also confirmed separate religious identities in 1850 by recognising Protestants as a separate *millet*, the result of British and American pressure. Most of the Protestants were converts from the Armenian Gregorian church, and the Armenian clergy were embittered by this. The touchiest matter of all involving equality without regard to belief concerned freedom of religious conversion from Islam to another belief. There was no problem if a Christian became a Muslim. But if a Muslim apostatised and became a Christian, Islamic law stipulated the death penalty [see MURTADD]. The British ambassador Stratford Canning wrung from the Porte in 1844 a partial concession—Christians who had adopted Islam would not be put to death if they were reverting to their original religion.

Economic advance was slow. Commercial treaties with Britain in 1838 and with other states soon afterwards restricted Ottoman customs rates and banned monopolies. Monopolies in foreign trade were in fact generally eliminated, and Ottoman markets were more open to foreign goods. Some guild monopolies persisted. The empire's foreign trade increased considerably in the three decades after 1840, but state revenues were decreased by the lower customs duties as well as by the temporary elimination of the *iltizām*. Reshīd believed that prosperity would come with liberal economic and commercial policies, like those upon which Britain had embarked in the 1820s.

The monetary situation was much improved in this

period. The paper money had helped the treasury out of its financial crisis, but it circulated mostly in Istanbul alone. Silver coinage had been much debased over nearly a century. In 1844, however, the silver *meḏjīdiyye* [see SIKKA. 2] of 20 piastres was introduced, and the empire adopted a bimetallic standard, with 100 silver piastres to one gold pound. These measures stabilised the coinage.

The Porte encouraged the development of agriculture and manufacturing, with occasional successes. Foreign capital was attracted in modest amounts. The Porte established an agricultural school in 1850. In 1851 the Ministry of Commerce and Agriculture collected over 3,000 articles that were sent to the great Crystal Palace Exhibition in London. Raw materials, especially silk and various handicrafts, won prizes. The Ottoman Empire participated in the Paris Exhibition of 1855 also. In addition to increasing commerce and revenue, the Porte thereby improved the international image of the empire.

The international relations of the empire were generally good during the first phase of the *Tanẓīmāt*. An 1847 agreement with Persia on their common frontier made the repetition of past wars unlikely. Rebellions in Moldavia and Wallachia [see BOGHDĀN; EFLĀḲ] were put down by invading Russian troops, but with Ottoman agreement, sealed at the convention of Balta Liman in 1849. In that year also, the Porte enhanced its image in Britain and France by admitting thousands of Hungarian and Polish fighters fleeing the failed Hungarian revolution. The Porte then refused to surrender them, and especially Louis Kossuth, on Austrian and Russian demands, Fu'ād being the principal negotiator in these matters. In 1852 the Porte was restrained by Austrian pressure from repressing a revolt in Montenegro.

4. *The Crimean War and the* Khaṭṭ *of 1856.*

The crisis of 1852-3 and the Crimean War of 1853-6 resulted from miscalculations on all sides. Beginning as a dispute between Russia and France over Greek and Latin rights in the Holy Places, the dispute embroiled the Ottomans because they were the sovereign power over Palestine. When the Russians further demanded that they be recognised as protectors of the Orthodox Church in the Ottoman Empire, the two parties failed to reach agreement. The European Concert of Powers also failed to find a solution. The Ottomans, sensing British support, declared war on Russia in October 1853. By the spring of 1854, Britain and France joined the war on the Ottoman side. The war eventuated in an allied victory, the sole Ottoman victory over Russia in the seven wars they fought between 1768 and 1917.

Times of crisis and war speed up change. Further, in the Crimean case, Britain and France urged changes on the Porte. In 1854 the *Meḏjlis-i ʿĀlī-yi Tanẓīmāt*, the Council of Reforms, was created to take over some functions, especially in drafting reform regulations, from the Supreme Council. In the same year, the first municipality in the empire was established in the sixth district of Istanbul, Ghalata and Beyoghlu, where many Christians lived [see BALADIYYA. 1]. The municipal council, set up soon after, functioned fairly effectively. To pay for war expenses more *ḳāʾimes* were issued, but they depreciated rapidly. The Porte then contracted its first foreign loan. In 1856 the Ottoman Bank, the first modern bank, was established in Istanbul, largely with British capital.

In 1855 non-Muslims were declared eligible for army service. The old exemption tax (*ḏjizye*) was abolished. But it was obvious that Christians did not want to serve, and that Muslims did not want to serve under Christian officers. A new exemption tax was then instituted, the *bedel-i ʿaskeriyye* [*q.v.*]. The war also hastened the construction of the Ottoman telegraph system. The first telegram that went out from Istanbul to Europe announced the capture of Sevastopol in September 1855. During the War, many Westerners flooded into Istanbul, where Parisian costumes and Western customs began to appeal to some elements of upper Muslim society. ʿAbd al-Meḏjīd was the first sultan ever to attend a Western social gathering. In celebration of the Crimean victory, he went to a ball given by the British Ambassador.

The Congress of Paris, where the Grand Vizier ʿĀlī Pasha represented the Porte, produced a peace treaty on 31 March 1856, that allowed the Ottoman Empire to gain back a little territory from Russia. It also neutralised the Black Sea, meaning that Russia could have no warships there. In 1870 Russia unilaterally overturned this. The treaty admitted the Ottoman Empire into the "public law and system" of Europe, which meant that the empire was now formally a member of the Concert of great powers. The treaty further, in article nine, recognised the "high value" of the recent *Khaṭṭ-ī Humāyūn*, and declared that the communication of this decree to the powers gave them no right to interfere in Ottoman internal affairs. These two articles—membership in the Concert and non-intervention in Ottoman affairs—thereafter became the principal diplomatic implements of the Porte.

The *Khaṭṭ-ī Humāyūn* of 18 February 1856, like the *khaṭṭ* of 1839, made many promises; in fact, some of them were in both decrees. But the decree of 1856 had a different origin and a different tone. It was drawn up not just by ʿĀlī Pasha, then the Grand Vizier, and Fu'ād Pasha, then the Foreign Minister, but in repeated meetings with the British, French and Austrian ambassadors. This *Khaṭṭ-ī Humāyūn* had no split personality. It did not mention the Ḳurʾān, the sacred law or ancient glories. It had a new economic emphasis, on setting up banks and drawing on European skills and capital. It again promised no tax-farming, and annual budgets and some new law codes. It put a major emphasis on the equality of all Ottoman subjects before the law, in taxes, in government positions and in military service. It reaffirmed the representative principle, specifying greater non-Muslim participation in provincial councils, and for the first time non-Muslim representation on the Supreme Council. Yet this emphasis on *ʿOthmānlïlïḳ* was paralleled by reaffirmation of the rights of non-Muslim *millets*, and by a provision for reforming the administration of each *millet* to make it more representative. Thus was the dualism of *ʿOthmānlïlïḳ* and *millet* maintained.

5. *The second stage, 1856-75.*

To many Muslims, the *khaṭṭ* appeared to be an *imtiyāz fermānï*, a decree of special concessions. They also resented the foreign influence it exhibited. Most Christians at first welcomed the edict, hoping for quick changes, but their higher clergy disliked it, fearing that *millet* reform would reduce their powers.

Change came more rapidly than before the Crimean War, partly as a result of European pressures, and partly because the two dominant statesmen pushed it. Reshīd Pasha held two brief Grand Vizierates after 1856, but died in January 1858. ʿĀlī Pasha and Fu'ād Pasha were already forging ahead of their former patron. From May 1855 to September 1871, for all but 46 months, one or the other was Grand Vizier. Almost always the other was then Foreign Minister.

Both were Westernisers. Both struggled to save the empire intact, to promote *ʿOthmānlîlîk* and to reduce separatist sentiment among minorities. In a remarkable memorandum of 1867, ʿĀlī, the more cautious of the two, and the more Muslim of the two, said that some cargo must be jettisoned to save the ship. He was not speaking of territorial withdrawal, but of absolute equality between non-Muslims and Muslims. He spoke especially of government employment and schools, as had the *khaṭṭ*, but he seemed also to be hinting at the *Code Napoléon* when he proposed a Western-style civil code. Fu'ād, more secular and more Westernised, would make slightly greater changes. Both were rather autocratic in temperament and neither believed that the empire was ready for parliamentary government, although Fu'ād might have been willing to have it at a later date.

In 1859 a conservative and Islamic conspiracy developed in opposition to the government that was preaching *ʿOthmānlîlîk*. It accused the Westernisers of violating Islamic law. The conspiracy, known as the Kuleli incident, was betrayed. The Muslim clerics and army officers in its leadership were sentenced to prison or exile to the provinces. The abortive conspiracy, however, represented a current of opposition to the *Tanẓīmāt* that never vanished.

On the death of ʿAbd al-Medjīd in 1861, his brother ʿAbd al-ʿAzīz came to the throne. The latter was less a Westerniser and less interested in reform, with one exception: he sought to build up the armed forces. In 1869 a reorganisation of the army specified a four-year term of service and 16 years in the reserves. Its theoretical strength was 700,000, but there were not enough trained officers. ʿAbd al-Azīz loved the navy especially. He sought to strengthen it with purchases of ironclads, and the Ottoman fleet became one of the world's largest; the personnel, however, were poorly trained.

As promised in the *khaṭṭ*, the three major non-Muslim *millets*—Greek Orthodox, Armenian, and Jewish—were reorganised. In each *millet* there had begun a ferment among artisans and intellectuals who wanted to get rid of the autocracy and corruption of their own dominating clergy. The latter had to be prodded by the Porte to get the reforming process done. The reforms that resulted decreased clerical control, and gave laymen for the first time a major voice in *millet* governance. The Armenian constitution of 1863 created an assembly of 140, including only 20 clergy, that would elect the Patriarch and two councils; this was the most complete constitution. A series of laws for the Greek *millet* between 1860 and 1862 also created an assembly with a lay majority to elect the Patriarch. The Jewish constitution of 1865, too, included an assembly of 100, only 20 being rabbis, to elect the Grand Rabbi of Istanbul and two councils. Because Jews were organised by congregation, there was no Patriarch or priestly hierarchy as in the other *millets*, but the Grand Rabbi of Istanbul was recognised as head of the whole *millet* for civil purposes. These were hesitant steps towards representative government. But the fact that *millets* were confirmed as separate entities did not fit with *ʿOthmānlîlîk*. Instead, a *millet* basis was preserved for the later development of nationalism. To the dismay of the Orthodox Patriarch, a *fermān* of 1870 recognised a Bulgarian Exarchate independent of the Greek Patriarch in Istanbul. Bulgarians were gratified to be out from under the Greek clergy's administration, but it also contributed to a nascent Bulgarian nationalism.

Fair and efficient governing of the provinces, while maintaining a central control in Istanbul, was always a problem for the Porte. A Balkan inspection tour by the Grand Vizier Ḳibrîslî Meḥmed Pasha in 1860 revealed no systematic oppression, as various powers had alleged, but it did find malfeasance by some Ottoman officials and Greek Orthodox clergy. During the next few years, special commissioners went out to the provinces to hear complaints, dispense justice and bolster the local administrations. Some provinces were by now semi-autonomous. Moldavia and Wallachia, semi-autonomous since 1856, combined their two legislatures into one in 1862 under one prince, and in 1866 imported Karl of Hohenzollern to take the throne; the Porte could only accept this. In semi-autonomous Serbia [see ṢIRB], the Porte was obliged to restrict its garrisons, and in 1867 to remove the last soldiers from Belgrade, leaving only an Ottoman flag flying over the fortress. North African provinces were always a special case. Algiers had been lost to France in 1830. Tunis, nearly independent, faced a similar French threat in the 1870s.

Egypt [see MIṢR] posed a unique problem. Since the days of Muḥammad ʿAlī, Egypt had acted like an independent state. Ismāʿīl Pasha, [*q.v.*] repeatedly sought more concessions from the Porte. At first, the Porte resisted. ʿAbd al-ʿAzīz, accompanied by Fu'ād Pasha, visited Egypt in 1863 and tried to treat Ismāʿīl as if he were just another *wālī*. But in 1866, Ismāʿīl, probably through the lavish use of money in Istanbul, secured a new *fermān* guaranteeing his right to pass on the government in direct line to his son. The next year, he secured from the sultan the exceptional title of Khedive [see KHIDĪW]. In demonstration of his near-sovereignty, Ismāʿīl presided at the opening of the Suez Canal in 1869 and received European royalty, not ʿAbd al-ʿAzīz. Meanwhile, massacres in Lebanon and Syria [see LUBNĀN; AL-SHĀM. 2 (a)] prompted an international intervention, carried out by French troops, to restore order. The Porte sent Fu'ād as Special Commissioner to do the same and to forestall further French action. By 1864, a new statute for Lebanon, as agreed by the Porte and the powers, set up a Christian governorship with a fairly representative council. The influence of the clergy was diminished.

Two months after the Lebanese statute was adopted, a plan for reorganising all the empire's provinces was elaborated. Midḥat, who had been a successful governor in Nish, was called to Istanbul to work out the new system with Fu'ād, then Grand Vizier. The provinces were renamed *wilāyets*. Each *wilāyet*, larger than the former *eyālet*, was divided into *sandjaḳs* [*q.v.*], which were divided into *ḳaḍā*'s, which were divided into *nāḥiyes*, much like the French system of *départements* and subdivisions. A council at each level excepting the *nāḥiye* was to have two Muslim and two Christian members "elected" from an official list. A deliberative assembly in each *wilāyet* would also be "elected". The *wālī*, appointed by Istanbul, would have wide powers. The *wilāyet* system represented an effort to provide good government with centralised power in the *wālī*'s hands but with representation of all sects. A civil court in each unit except the *nāḥiye* was to have three Muslims and three non-Muslims.

Midḥat was sent to test the new system as *wālī* of the new Tuna *wilāyet* in Bulgaria. His success there led to the *wilāyet* system being applied in 1867 to almost all areas except Baghdād and the Yemen. Crete [see IḲRĪTISH] was added in 1868 after the rebellion of 1866 was suppressed. Baghdād [*q.v.*] was added in 1869 when Midḥat was sent there as *wālī*. There, too, his record was generally good. The *wilāyet* sys-

tem lasted until the end of the Ottoman Empire. A major problem that confronted some *wālīs* was the great influx of Turkic and other Muslim peoples fleeing Russia. Between 1856 and 1880, the Porte admitted nearly a million Crimean Tatars [see KĪRĪM] and about a million and a half Circassians [see ČERKES], all of whom had to be settled in various *wilāyets* [see MUHĀDJIR. 2].

In the central government, Christian and Jewish members were appointed to the Supreme Council. The non-Muslims were the first ever to sit on a major council. They were, however, members of families with close connections to the Porte. The Council itself re-absorbed the *Tanẓīmāt* Council in 1861. In 1868 the Supreme Council was again split, this time into a *Shūrā-yi Dewlet*; a Council of State; and a Council of Justice, the *Dīwān-i Aḥkām-i ʿAdliyye*. The Council of State was an institution widespread in Europe of the time; its best-known example was in Napoleon III's France. It was to prepare laws and regulations and to oversee state administrative functions. Its expanded membership was about 30 per cent non-Muslim. Midhat Pasha was its first president, before he went to Baghdād. Its parliamentary procedure was a little more sophisticated than that of the earlier Supreme Council. The Council of Justice, headed by Djewdet Pasha, acted like a supreme court in all cases—civil, commercial and criminal—that were brought under the new Westernised codes, but not in *Sharīʿa* matters. Its membership was 40 per cent non-Muslim. In 1869 Djewdet became Minister of Justice, a transformation of his presidency of the Council of Justice. The new ministry organised the the *nizāmiyye* courts into a hierarchy, including provincial courts. Because religious tribunals continued to exist, some confusion resulted.

Meanwhile law [see ḲĀNŪN] itself underwent transformation, both by single *fermāns* and by adoption of codes. White slavery was forbidden in 1854 and black in 1857, although implementation took forty years or more [see ʿABD]. In 1858 a new penal code, on the French model unlike the code of 1840, was drafted by a commission headed by Djewdet. He also chaired a commission that elaborated a new property law, this one based on religious law. It was an attempt to regularise the forms of land tenure, requiring registration of ownership to receive a title deed (*sened tapu*). Some customary peasant cultivators were reluctant to register in their own names, fearing increased taxation. Therefore, the opportunity for big landowners to acquire more property remained open. There is still debate about the ultimate consequences of the 1858 code for small landholders and large estate owners.

Djewdet again chaired the commission that undertook to codify a large portion of civil law, omitting matters of personal status like marriage and divorce. Between 1869 and 1876 the commission produced 16 books containing 1,851 articles on the law of transactions, contracts and civil procedure. The codification was in European style, lending clarity, but the law itself was religious. The commission selected the best among varying Ḥanafī interpretations. In essence, the *Medjelle-yi Aḥkām-i ʿAdliyye* was a guide to the law for judges in both *nizāmiyye* and *Sharīʿa* courts [see further, MEDJELLE].

Some laws were fashioned so as to attack the capitulations [see IMTIYĀZĀT] and to undermine extraterritorial rights. From the time of the Congress of Paris, ʿAlī Pasha had issued several statements and memoranda pointing out to the powers the unfairness and deleterious effects of extra-territorial privileges and of the European abuses of them. Several new laws attacked those privileges. A press law in 1865 allowed foreigners to publish periodicals in the Ottoman Empire only if they accepted the control of Ottoman officials and courts. A land law of 1867 allowed foreigners to own real property in the empire if they conformed to police regulations, accepted the Ottoman courts' jurisdiction and paid Ottoman taxes. The Powers reluctantly accepted this. In 1869 a law on nationality and naturalisation, adopting secular standards instead of the previous religious ones, provided that every one domiciled in the empire was an Ottoman subject unless he could prove the contrary. The law specified further that no Ottoman subject could assume another nationality without the Porte's consent. This struck at the abuse by the Powers, who gave protective foreign nationality to members of Ottoman minorities.

Progress in education was uneven. Specialised higher schools of military science and medicine continued to function, and to these in 1859 had been added the School of Civil Administration. An Ottoman school in Paris was established about 1857 to help complete the education of selected Ottoman students. Elementary and higher elementary schools spread slowly. In 1867 the Minister of Education claimed 11,008 elementary schools, *mekteb-i ṣibyān*, and 108 higher schools, *rüshdiyye*, figures that may be inflated. After French pressure, ʿĀlī and Fuʾād worked out plans for a western-style lycée, opened in 1868. The lycée of Ghalaṭa Saray admitted boys of all creeds and languages, but even in the first year, Muslims were less than half. Instruction was almost entirely in French, and most teachers and the first headmaster were French. From the start the school was successful, combining a good education with *ʿOthmānlīlīk*. In 1869 the Council of State elaborated a comprehensive education law [see MAʿĀRIF. I. i] setting up five levels: two elementary (*ṣibyān* and *rüshdiyye*), two secondary (*iʿdādiyye* and *sulṭāniyye*), and higher technical schools and a university. On the first two levels, schools rapidly increased. Only a few *iʿdādiyye* were opened, and Ghalaṭa Saray long remained the only *sulṭāniyye*. In 1870, starting at the top, a university (*dār ül-fünūn*) was opened in Istanbul [see DJĀMIʿA]. It closed in 1871 when some lectures by Djemāl al-Dīn al-Afghānī [*q.v.*] provoked great complaints from members of the *ʿulemā*ʾ.

Economic progress was also slow. The Porte encouraged agriculture. The export of farm products and raw materials increased during the period of the rise in world prices, from the 1850s to the early 1870s. Where tribal opposition was subdued, more land came under cultivation. The Porte by an *irāde* of 1857 tried to attract foreign investment and expertise, offering free land and exemption from military service and taxes for six to ten years. Manufactures also were encouraged. But the competition of industrialised European nations hurt Ottoman manufactures, especially textiles. An Industrial Reform Commission tried in the 1860s to revive some industries in Istanbul, creating companies out of former guilds, providing some capital and lowering taxes. In the 1870s the number of small factories began to increase around Izmir, Istanbul and Salonika. Some of them were state-owned, some private, and some owned by European entrepreneurs. Steam power began to come into factories, and handwork declined.

When commercial treaties with many nations were renegotiated in 1861-2, the Porte managed to get import duties raised from 3 to 8 per cent, and export taxes lowered from 12 to 1 per cent. During the

whole period, the number of steam vessels calling at Ottoman ports increased. Railroad building began with the Crimean War. The first two lines were in the privileged provinces of Egypt and Romania. The third linked Izmir and Aydın. The Porte encouraged this and other short lines connecting interior towns to ports that were built by foreign concessionaires and technicians. The telegraph expanded much faster than the railway. By 1878 it linked all Ottoman regions, serving not only government but private individuals, businesses and entrepreneurs as well.

In further encouragement of production and export, a special commission in 1863 organised a huge exposition (*sergi-yi ʿumūmī-yi ʿot͟hmānī*) in Istanbul. About 15,000 articles, agricultural and manufactured, were displayed. The venture had grown out of the work of an imperial cotton commission, established by the Porte to encourage cotton production and export to take advantage of the world shortage of cotton during the American Civil War. In 1867 the Ottoman Empire participated in another great exposition in Paris. Sultan ʿAbd al-Azīz visited it, as part of the first trip which any sultan had ever made outside his territories in peace time. The visit helped to promote Ottoman products, but the origins of the trip were diplomatic, so that during the Cretan rebellion the sultan could represent to the powers a progressive empire. He succeeded in enhancing the Ottoman image. He also learned something about European technology and industrialisation, and came home more enthused than ever about British warships, Prussian land forces and railroad building.

The fiscal and monetary situation caused great difficulties for the Porte. In 1861, shortly after ʿAbd al-Azīz's accession, there were riots in Istanbul. The *ḳāʾime*, the only circulating money there, declined sharply by 100 per cent. Bakeries were sacked. Fuʾād Pas͟ha arranged for the first ever governmental budget to be drawn up for 1863-4. The Imperial Ottoman Bank was established in 1862 with French and English capital, and was given a monopoly of bank-note issue. Another loan was negotiated in Europe, and with its proceeds the paper money was retired. By 1863 the situation was calmer. But the loan, the fifth since the Crimean War, increased the public debt, on which the Porte had great difficulty in paying the interest. The annual budgets often bore little relation to reality. The bank, however, cautious in its issue of banknotes, was effective. In the Tuna *wilāyet*, Midḥat Pas͟ha created agricultural credit cooperatives that greatly aided peasants; from these cooperatives the modern Ziraat Bankası is derived.

Journalism developed rapidly in the 1860s and after [see ṢIḤĀFA]. Previously, there had been one official and one semi-official newspaper. Now an independent press grew up. The reaction of the Porte was to issue regulations in 1864 requiring that all newspapers and editors be officially licensed. ʿĀlī Pas͟ha explained in 1866 that the Porte's policy was to allow freedom of the press. But in the next year, harsh journalistic criticism of the government led to "ʿĀlī's decree" that allowed suspension of any paper. The influence of the press was considerable, however, despite the minuscule size of the reading public. It disseminated information. It began to use simpler language, fewer Arabic and Persian words and more Turkish and some French. It was used to shape public opinion, especially by the New Ottomans. Ibrāhīm S͟hināsī Efendi [*q.v.*] and Aḥmed Midḥat Efendi [*q.v.*] represent early and late *Tanẓīmāt* journalism.

In 1861 was founded the *D̲jemʿiyyet-i ʿIlmiyye-yi ʿOt͟hmānī*, the Ottoman Scientific Society, basically the creation of the learned Meḥmed Ṭāhir Münīf Efendi. Its journal, the *Med̲jmūʿa-yi Fünūn*, published articles on many subjects, often infused with knowledge from Western sources. An increasing number of European works were translated into Turkish. One of the earliest was Fénélon's *Télémaque*, the first novel published in Turkish, and one with political overtones. Cultural life expanded to importation of European theatre, architecture with some western influence, some city planning and the creation of public parks.

Journalism was the major occupation of some of the Yeñi ʿOt͟hmānlïlar [*q.v.*]. They represented an ideological and political movement aimed at altering the government and influencing public opinion. These New Ottomans disliked ʿĀlī intensely, Fuʾād a little less, but thought both to be too secular, too autocratic and too compliant to the demands of foreign powers. They believed in freedom from tyranny and personal liberties [see ḤURRIYYA. ii]. Although one differed from another, most favoured government by consultation [see MAS͟HWARA; S͟HŪRĀ. 3], a written constitution, an elected parliament, and adoption of some Western institutions and methods. They were Ottoman patriots, resentful of giving up any territory, resentful of foreign interference in Ottoman affairs, resentful of special privileges for Christians. They supported *ʿOt͟hmānlïlïḳ* and Res͟hīd's *k͟hatt* of 1839, while detesting the *k͟hatt* of 1856. Nāmïḳ Kemāl [see KEMĀL, MEḤMED NĀMÏḲ] best expressed these views, and he also, in his play of 1873 *Waṭan* ("Motherland") infused a highly emotional content into his Ottoman patriotism.

A small secret group of these agitators was formed in Istanbul in 1865. During the next two years, they criticised the government in their newspapers. A plot in 1867 to riot and possibly to kill ʿĀlī Pas͟ha was betrayed. This led the Porte to exile several New Ottoman leaders and caused a number of them to flee to Paris. There they found support from the Egyptian prince Muṣṭafā Fāḍil Pas͟ha who, for his own reasons, opposed the Ottoman government of the moment, and claimed to speak for what he called "jeune Turquie". He composed in early 1867 a famous public letter addressed to Sultan Abd al-ʿAzīz, urging a constitution. In exile, the New Ottomans published several newspapers, to be smuggled back into the empire and to enlighten Europe. After the death of ʿĀlī Pas͟ha, they filtered back to Istanbul, where Nāmïḳ Kemāl and Ḍiyāʾ (Ziyā) Efendi soon played important political roles.

ʿAbd al-Azīz felt freer after the death of Fuʾād Pas͟ha in 1869 and of ʿĀlī Pas͟ha in 1871. The palace again began to rival the Porte as the centre of government. The sultan changed Grand Viziers eight times in the five years 1871-5. Maḥmūd Nedīm Pas͟ha [*q.v.*], who was twice in the post for a total of 19 months, was the sultan's favorite, and shifted round provincial *wālī*s at a ridiculous rate. Popular opinion turned against Maḥmūd Nedīm, partly because of the whimsical administration, partly because he took bribes from the Khedive Ismāʿīl of Egypt, and partly because he was strongly influenced by Russia. Opinion also built up against the sultan, principally on account of his lavish spending. One aspect of the sultan's conduct did meet with considerable approval, his increasing use of the title *K͟halīfa* [*q.v.*]. Also, Pan-Islam [*q.v.*] appealed to many Ottoman Muslims, being a reaction to European pressures and an answer to the pan-Slavism that grew in the 1870s. Islamic sentiment was reinforced by calls for help from the k͟hānates of Central Asia that had recently been conquered or

were threatened by Russia. Indonesian Muslims, too, appealed for help to oppose the Dutch. The Ottoman Empire was in no position to give military aid, but developed somewhat closer relations with the Central Asian Turks, especially with Kāshghar; meanwhile, Djemāl al-Dīn al-Afghānī was preaching Islamic revival.

6. *The crisis period 1875-8 and the Constitution.*

In 1875-6, in addition to the Islamic sentiment, four major currents converged to throw the Ottoman Empire into its worst crisis since 1839. Nationalist revolt by two minorities, an economic and fiscal crisis, rising discontent with the sultan and interference by the great powers, all led to a greater unrest that seemed to reinforce the New Ottomans' desire for a constitution. A revolt broke out in Herzegovina in July 1875 and spread to Bosnia. Local problems, including tax collection, caused the revolt, but it soon became more nationalist and infected with Russian Pan-Slavism; some Serbian and Montenegrin volunteers aided the rebels. The Porte, again headed by Maḥmūd Nedīm, failed to take action vigorous enough to stop the revolt. The European powers tried, without success, to settle the conflict by diplomacy. Meanwhile, the Ottoman treasury faced its own crisis. Drought and then an extraordinarily severe winter in Anatolia in 1873-4, followed by flooding, meant that less tax revenue was received. At the same time, the Porte had accumulated an enormous debt from its loans, now harder to negotiate after the European financial panic of 1873 [see DUYŪN-I ʿUMŪMIYYE]. By October 1875, the Porte could no longer meet the interest payments on the debt, and defaulted on half the interest due. The military failure and the bankruptcy brought many conservatives to oppose Maḥmūd Nedīm and to be more inclined to accept a change in government. By April 1876 the bankruptcy was total; the Porte paid no interest at all to its bondholders. In the next month, Bulgarian revolutionaries staged a rising. This time the Porte suppressed it, with cruelties that became known in Europe as the "Bulgarian massacres"; Europe forgot the Bulgarian massacre of many Turks.

On 11 May Maḥmūd Nedīm was forced out of office by the rioting of theological students. On 30 May a small group of high officials, civil and military, of which Midḥat Pasha was one, deposed ʿAbd al-ʿAzīz in a bloodless coup. Murād V, a liberal-minded nephew of ʿAbd al-ʿAzīz, succeeded to the throne. Expectations of a constitution rose. Five days after his deposition, ʿAbd al-ʿAzīz committed suicide. In June 1876 autonomous Serbia and Montenegro, with aid from Russian "volunteers", openly went to war against their sovereign. Discussions of a constitution were slowed down by these events, but proceeded sporadically among the highest officials. They came to no conclusion because of Murād's health. He had a nervous breakdown, could not function as sultan, and on 31 August he was in turn deposed without incident. His place was taken by a brother, ʿAbd al-Ḥamīd II, who promised Midḥat that he would promulgate a constitution. In September, the Ottoman army began to defeat the Serbs until its further advance was stopped by a Russian ultimatum on 31 October. The Powers meanwhile planned an international conference to settle Balkan affairs.

The prospect of greater foreign intervention sped up the discussion of a constitution; Ottoman officials would show that they themselves were reorganising and needed no plans made by foreigners. A commission under Midḥat's chairmanship had been formed in October. Nāmiḳ Kemāl and Ziyā were members. Both the Belgian constitution of 1831 and the Prussian one of 1850 were influential. After many arguments in the commission and consideration of several drafts, the constitution was sent to ʿAbd al-Ḥamīd. He added a clause to article 113 granting the sultan powers, in a state of siege, to exile dangerous persons. Midḥat was appointed Grand Vizier on 19 December. On the 23rd, the constitution was formally promulgated, although ʿAbd al-Ḥamīd did not attend the ceremony. Midḥat, in a brief speech, said that the constitution would inaugurate a new era of enduring prosperity.

The constitution [see DUSTŪR. ii; ḤUKŪMA. i] was the last great document of the *Tanẓīmāt.* Like the *khaṭṭs* of 1839 and 1856, it served a diplomatic purpose, to convince the powers that the Ottoman Empire was reforming and should remain intact. Indeed, article one asserted that the empire was a whole, not divisible for any reason whatever. But the international conference, meeting in Istanbul, refused to accept this and made its own plans for rearranging the Balkans. More than a diplomatic document, however, the constitution was a domestic product created by reformers, including some military men, who believed that some kind of representative government was necessary, if only to curb the sultan's excesses. Others, like the New Ottomans, believed firmly in the principle of government by consultation.

The constitution created a council of ministers, an elected chamber of deputies, an appointed senate, an independent judiciary, parliamentary control of the budget and considerable provincial decentralisation. But the sultan retained important powers. He appointed the ministers and the members of the senate. His approval was required before any bill became law. He was also declared caliph, and his person to be sacred. In effect, the government was to be a limited autocracy. A bill of rights contained in the constitution was fairly comprehensive. It applied to all Ottoman subjects without distinction as to religion. All were to be called ʿOthmānlīs and to be equally eligible for public office. All would be equal before the law. This was a strong reaffirmation of *ʿOthmānlîlîḳ.*

The Constantinople Conference (*Terskhāne Ḳonferansî*), convened at the same time as the promulgation of the constitution, rejected it as the solution to the Balkan questions. Midḥat's government in turn, with approval from a great gathering of notables, rejected the conference's plans to divide the Balkans. It was possible that Russia would try to enforce the conference decisions by military action. Meanwhile, on 5 February 1877, ʿAbd al-Ḥamīd exiled Midḥat, presumably relying on article 113, although there was no state of siege. The views of the sultan and the Grand Vizier were too far apart to allow them to work together. Midḥat wrote the sultan a letter saying that he could not obey imperial commands that were not in the national interest; Midḥat wanted to be a constitutional Prime Minister.

The *Tanẓīmāt* continued for a time in the parliament. Elections, although indirect, were successfully held and the Chamber of Deputies met in two sessions, from March to June 1877 and from December 1877 to February 1878. Its debates and its work were sensible. At that point, ʿAbd al-Ḥamīd dissolved the parliament, fearing its criticism and its rivalry. ʿAbd al-Ḥamīd was a reformer intent on saving the Ottoman Empire, but he intended to be master. He also feared deposition, like his two predecessors. Under the constitution, he should have called new elections in six months. He waited, however, for thirty years, until

the Young Turk Revolution of 1908, when a new generation took over the burden of reform.

The task of the *Tanẓīmātdjīs* had been difficult. They were probing to discover how fast they could go to make reforms meaningful without provoking a conservative reaction. They needed to find out how much they could borrow from Christian Europe and still preserve the self-esteem of a people steeped in tradition. Reshīd, ʿĀlī and Fuʾād were cautious reformers, trying to institute change without disruption; Midḥat was rather less cautious.

The *Tanẓīmāt* was either a qualified failure or a qualified success. It did much in the short run to keep the empire intact, but peripheral areas were slipping away. At the end of the *Tanẓīmāt*, the Russian War of 1877-8 led to the Treaty of Berlin under which Romania, Serbia and Montenegro were given complete independence. A small Bulgaria became autonomous, Bosnia and Herzegovina were occupied by Austria. Russia gained Bessarabia, Ḳarṣ and Ardahān. Cyprus in 1878 also fell under British administration. Greece was given Ottoman Thessaly in 1881, France occupied Tunis in 1881 and Britain occupied Egypt in 1882. Such territorial losses tore from the empire major productive areas. The Balkan and Anatolian losses caused a large inflow of Muslim refugees. The *Tanẓīmāt* initiated public borrowing abroad, and never solved the debt problem. The indemnity that the empire had to pay to Russia after the 1877-8 War made the problem worse. Only with the foreign imposition of the Ottoman Public Debt Administration in 1881 was the financial situation brought under control. Economic development was slight. When good political systems or administrative regulations were initiated, there were not enough competent officials to administer them. Perhaps the greatest failure of the *Tanẓīmāt* was that *ʿOthmānlīlīḳ* did not take hold. It found some believers, but the minority peoples in general drifted toward nationalism and separation from the empire.

Yet the Ottoman Empire of 1878 was considerably different from what it had been in 1839. Then, the reform emphasis was on security of life and property, on fair taxation and on fair military service. By 1878 the emphasis was on equality and representative government. The *Tanẓīmāt* also was a seed-time. When the Young Turks and then the Republican régime arrived, they inherited from the *Tanẓīmāt* beginnings in many areas: a new bureaucracy in a centralised administration, a new system of provincial government, expanded areas of government activity, some modern law codes, a written constitution, an elected parliament, parliamentary procedure, an effective diplomatic establishment, modernised armed forces, a system of state schools and a trend toward secularisation of law and institutions. They inherited also from the *Tanẓīmāt* various concepts, some of which had been partly realised: equality before the law, the treatment of people as individuals and not just as members of a *millet*, individual rights and civil liberties and the separation of powers (especially in regard to the judiciary). Finally, they inherited the concept of the state as an indivisible territorial unit, not just the accumulated possessions of a sovereign monarch, and the concept of *waṭan*, Motherland, added to the traditional concepts of *dīn we dewlet*, faith and state.

ṬAPU (T.), a term of Ottoman fiscal administration.

Poetic texts from the 8th/14th to 10th/16th centuries give the meanings "presence, proximity, lord, highly placed personage, service, duty, reverence" (*Tarama sözlüğü*, v, 3748 ff.). In *ḳānūnnāme*s of the 9th/15th and particularly of the 10th/16th century, however, the word has a much more technical meaning, and signifies the holding of state-owned lands (*mīrī*) by a subject of the sultan, involving the mediation of an officially appointed tax-collector (holder of *tīmār*, *zeʿāmet* or *khāṣṣ*, administrator of a *waḳf*). The term has been translated as "title deed", by which an inhabitant of the Ottoman Empire could prove his right of usufruct (*ḥaḳḳ-ī taṣarruf*) to the *mīrī* land in his possession; it also appears to have been used as a shorthand version of *resm-i ṭapu*, the tax payable when *ṭapu* land was leased by the cultivator. Thus the *ḳānūnnāme* of Bāyezīd II for the *sandjaḳ* of Khüdāwendigār (Bursa) abolished the payments known as *öksüz ṭapusu* (*ṭapu* dues payable by orphans) as a blameworthy innovation. Handing over a piece of land to the would-be cultivator was known as *ṭapuya wirmek*. In many instances, the *ṭapu* dues collected were assigned to the *sipāhī*. The amount of permissible *resm-i ṭapu*, according to the *ḳanūnnāme* of Mora dated 1129/1716, was limited to maximally a year's income from the land in question, after tithes had been subtracted.

Conditions of holding a piece of land by *ṭapu* showed certain common features throughout the Ottoman Empire, while exhibiting quite a few local variations as well. *Ṭapu*-held land consisted of fields, and was in principle leased to the cultivator in perpetuity, as long as the latter cultivated the land. Land left fallow for three years (this period could be extended if the land was infertile) could be taken from the holder and turned over to another. According to the *ḳānūnnāme* of Vize, it did not matter if the original holder of the land had been the one who had first brought it under cultivation; once the land was reassigned, he had lost all rights to it. Some *ḳānūnnāmes*, such as that of Bolu, specified that the former holder of the land might re-acquire his right of possession against payment of *resm-i ṭapu*. While in most places, the peasant's house and garden or vineyard were regarded as freehold property (*mülk*), the *ḳānūnnāme* of İčel mentions a *ṭapu* called *ew ṭapusu*, graded into three categories, *aʿlā*, *ewsaṭ* and *ednā*. Certain kinds of land could not be given out as *ṭapu* lands, such as meadows, the village threshing floor and at least in the early 10th/16th century, the lands assigned to the *sipāhī* as his "home farm".

At least before the late 10th/16th century, *ṭapu* land passed to sons and brothers only; this form of inheritance, different from that applicable to *mülk*, was

known as *intiḳāl-i ʿādī*. The rights of widows were only recognised in some places; while the *ḳānūnnāme* of Khüdāwendigār specified that a woman who cultivated her holding could not be deprived of it, the *ḳānūnnāme* of Čemishgezek determined that wives and daughters possessed no rights whatsoever to the holding. From the late 16th century onwards, certain *ḳānūnnāmes*, such as that of the province of Ḳaramān, permitted daughters to take over their fathers' lands in the absence of male descendants. But while sons inherited without paying, daughters and other family members, such as brothers or grandsons, paid a due known as *resm-i ṭapu*. In some places it was specified that if brothers offered to pay the *ṭapu* due, the administrator could not hand over the land to anyone else. In 1022/1613 the Ohri *ḳānūnnāmesi* declared that the holdings known as *bashtina* would be treated in analogy to other state lands: sons inherited without payment, brothers could take over provided they paid *resm-i ṭapu*, while in this case, daughters and sisters were excluded altogether.

In the *ḳānūnnāme* of Ḳaramān, the reason given for the recognition of daughters' rights was that, a peasant having invested labour in his holding, his descendants should not be deprived of the fruits of their father's labour. In the course of time, the impact of *sherʿī* rules of inheritance was felt to an increasing degree. However, even after the law of 1274/1858 had enlarged the number of persons eligible to inherit a peasant holding, only sons, daughters, fathers and mothers fell into this category (Ö.L. Barkan, *Türk toprak hukuku tarihinde Tanzimat ve 1274 (1858) tarihli arazi kanunnamesi*, repr. in his *Türkiye'de toprak meselesi, toplu eserler*, Istanbul 1980, i, 291-375).

The *arāḍi ḳānūnnāmesi* of 1274/1858 reorganised the modalities of holding-state owned land, with the aim of increasing tax revenues and reasserting the rights of the state to *mīrī* land. The law thus should be viewed as part of the *Tanẓīmāt* process of state centralisation, undoing the process by which local notables had acquired *de facto* control over much of this land (Kemal Karpat, *The land regime, social structure and modernization in the Ottoman Empire*, in W.R. Polk and R.L. Chambers (eds.), *Beginnings of modernization in the Middle East. The nineteenth century*, Chicago and London 1968, 69-90; A. Salzmann, *An ancient régime revisited. "Privatization" and political economy in the eighteenth-century Ottoman Empire*, in *Politics and Society*, xxi/4, 393-423). The new legislation was not concerned with *mülk* properties. It recognised the prescriptive rights of people who had occupied a given piece of land without dispute for a period of ten years; neither a previous holder nor the state itself could evict any person after ten years' undisputed possession. In principle, the establishment of the cadaster involved recognising the tenure of the cultivators as permanent; but there were exceptions, as in the Ḥawrān, where in 1285-86/1869, *mīrī* lands hitherto farmed by peasants apparently were sold at auction.

Possession of lands was legalised by issuing a document known as the *ṭapu senedi*. A new office, known as the *Taḥrīr-i emlāk neẓāreti*, was formed in order to put together the new cadaster; every property owner was issued a document known as the *wergi nüfūs tedhkeresi*, which was to serve both as his identity card and as an indication of his future tax status. This cadaster was completed first in the *sandjaḳs* of Bursa and Yanya, and gradually applied to the entire Ottoman territory. In outlying provinces such as Baghdād, Baṣra, the Ḥidjāz and Ṭarābulus-u Gharb the cadasters were only completed at the beginning of the 20th century (S.J. Shaw, *Nineteenth-century Ottoman tax reforms and revenue system*, in *IJMES*, vi [1975], 426-7).

A major novelty of the 1274/1858 law was the fact that *ṭapu* could no longer be issued to collectivities, which in the 10th/16th century had sometimes been done when nomads were involved. Nor was it permissible to grant the lands of a single town or village to one or two persons. However, in certain provinces, such as Lower ʿIrāḳ, this rule was easily circumvented, tribal chiefs having the agricultural/grazing lands of the entire group registered in their own names (Albertine Jwaideh, *Aspects of land tenure and social change in Lower Iraq during late Ottoman times*, in Tarif Khalidi (ed.), *Land tenure and social transformation in the Middle East*, Beirut 1984, 345-7). In Lower ʿIrāḳ, tribal inhabitants were disadvantaged, as the Ottoman state maintained that between 1831 and 1869 tax farmers had received the usufruct rights normally granted through the *ṭapu senedi*; the cultivators in question thus were regarded as tenants of the tax farmers, and as such, in spite of their long-term residence in the area, could not claim the lands they worked by prescriptive right. This situation resulted in the uneasy coexistence of Ottoman and tribal landholding systems at least in lower ʿIrāḳ, and in significant tension between government officials and cultivators.

Bibliography: Given in the article. For many of the *ḳānūnnāmes* from which information has been drawn for this article, there is a new edition in Ahmed Akgündüz (ed.), *Osmanlı kanunnâmeleri ve hukukî tahlilleri*, Istanbul 1990-, 8 vols. at the time of writing (1996). (SURAIYA FAROQHI)

ṬARAB (A.), a term denoting poetic and musical emotion, evoking a broad spectrum of sentiments, from the most private to the most violent: pleasure, enjoyment, emotional trauma, exaltation (Shiloah, appendix ii) and even a trance capable of resulting in death. Located in the centre of a conceptual net with multiple connections, *ṭarab* makes it possible to sketch the contours of an aesthetic.

The etymology of the word could derive from the agitation of camels, quickening their pace when returning to the encampment (*ṭirāb*). At a very early stage, *ṭarab* is associated with natural audible phenomena such as the song of birds (Imruʾ al-Ḳays, quoted in *LA*, s.v.) or the effect of the singing of camel-riders, singing which would itself originally have been a cry of anguish (al-Ibshīhī, 176).

In the classical period, the word *ṭarab* implies the notion of a more or less regular agitation: the *ʿIḳd al-farīd* describes the caliph Muʿāwiya dancing ecstatically on hearing fine verses chanted (Ibn ʿAbd Rabbih, 18); the prophet Dāwūd is shown to be feverish and emotionally aroused when singing the Psalms (al-Ibshīhī, 176); Ibn al-Djawzī denounces *ṭarab* because "it excites the human being and induces him to lean to right and left" (quoted by Molé, 148). These phenomena of trance (described by numerous accounts in the *K. al-Aghānī*) suggest a connection with the root *ḍ-r-b*, as when al-Ghazālī describes an uncontrolled trance as *iḍṭirāb* (343).

These connotations extend to the aesthetic sphere, with the more precise sense of "vibration": "Her words are moving (*yuṭrib*) and her voice is soft/She makes me vibrate (*tuhizzu-nī*) as javelins vibrate" (Muḥammad Sharaf al-Dīn, Yemeni poet of the 10th/16th century). Furthermore, bees are reputed to be the creatures most responsive to song (Ibn ʿAbd Rabbih, 5). This association with the buzzing of the insect (as well as with the song of birds) suggests that, in its most extreme manifestations, *ṭarab* is a living metaphor—dra-

matised and ritualised—for the vibratory processes so characteristic of Arabic vocal art (Shiloah, 121-31), such as trills, leaps in vocal register and vibrations of other kinds. This applies equally to instrumental techniques: "When the plectra (of the lute) are beating, persons susceptible to *ṭarab* feel light [at heart]" (*idhā khafaḳat al-maḍārib, khaffat al-maṭārib*, see *TA*, s.v.). More generally, it seems that *ṭarab* responds to a voluntarily unified and total aesthetic of poetic and musical expression.

Ṭarab was the object of numerous denunciations on the part of the religious authorities. It was under the influence of the *fuḳahā'* that musical instruments were described by the pejorative phrase *ālāt al-ṭarab* (Ibn Abi 'l-Dunyā, 3rd/9th century; Robson, 19). Following controversies over musical emotion, *ṭarab* came ultimately to denote music, in particular the music of entertainment, with a negative nuance which has gradually diminished ('Abd al-Karīm 'Allāf, *al-Ṭarab 'ind al-'arab*, Baghdād 1963), but has never disappeared completely. Similarly, *taṭrīb* denoted a vocal technique (*LA*) for the cantillation of the Ḳur'ān (Ibn Ḳayyim al-Djawziyya, 136), playing, according to this author, the role of the sugar which makes medicines palatable. The practice of *taṭrīb* was condemned by numerous religious authorities, but according to a consensus, it was acceptable so long as it did not affect the comprehension of the verbal message.

A polysemantic concept, *ṭarab* is a symbol of cultural kinship ("He who is not moved, is not numbered among the Arabs", *alladhī lā yaṭrab laysa min al-'arab*) but also of separation ("The player on the reed pipe does not move his own tribe", *zāmir al-ḥayy lā yuṭrib*. It has local equivalents in the non-Arab or recently arabised Muslim world: in Mauritania, *ḥawl* (Guignard); among the Berbers of Morocco, *amarg* (Lortat-Jacob); among the Persians, *ḥāl* (During); and in Afghānistān, *mast* (Slobin). It may also be interpreted in association with certain marginal or unofficial aspects of Islam.

Although generally secular, *ṭarab* can be taken as related to its mystical equivalent, *wadjd*, the emotion codified by Ṣūfī practice, of which the psychological mechanisms are similar. Like *wadjd*, *ṭarab* emanates from a conception of experience and existence (*wudjūd*) which relates to transcendence (al-Ghazālī, 371-2). It is sudden awareness of an existential rending (Rouget, 409), provoked by a fortuitous encounter or an unexpected discovery (*wadjd*) of a personal sense, in the intensity of the present moment; for Hudjwīrī, "*ṭarab* does not come on demand (*ṭalab*)" (Nicholson, 413). Time also plays a role, in terms of nostalgia, often expressed in the generic poetry of *ṭarab*, and concerning individual life as well as collective destinies: "I have never had a day like the day [spent] with her/Even though other days have been great and glorious" (Ibn 'Abd Rabbih, 3-4).

Thus *ṭarab* constitutes a sensual rather than an intellectual aesthetic. By so doing, it seems to draw a separating line between on the one hand music, poetry and dance, and on the other, the plastic and decorative arts, often governed by more hieratical conceptions [see FANN]. In offering mediation between symbolically fundamental opposites such as emotion and reason, profane and sacred, nature and culture, the concept of *ṭarab* offers an essential clue to the understanding of Arabo-Islamic civilisation.

TARABA [see TURABA].

ṬARABĀY, a Bedouin clan of the Banū Ḥāritha tribe in northern Palestine.

Several members of the family administered the Ottoman *sandjak* of Ladjdjūn, Palestine, in the 16th and 17th centuries. In 1480 a certain Ḳaradja b. Ṭarabāy was appointed by the Mamlūk sultan to guard the strategic roads through Mardj Ibn 'Āmir and act as tax-farmer of a number of villages. During his campaign in Syria and Egypt, the Ottoman Sultan Selīm I established cordial relations with the Ṭarabāys and granted them the *sandjak* of Ladjdjūn. Ḳaradja was succeeded by his son Ṭarabāy, who gained the confidence of the Ottomans, especially for his opposition to the rebellious governor Djānbirdī al-Ghazzālī in 1520. In the course of the 16th century, the Ṭarabāys were more deeply drawn into the various conflicts between regional administrators and chieftains, thereby straining their relations with the central authorities. However, with some intervals they kept their *sandjak* ('Alī b. Ṭarabāy, 'Assāf b. Ṭarabāy and Ṭarabāy b. 'Alī, who died in 1601). From 1601 until 1647 the *sandjak* was in the hands of Aḥmad b. Ṭarabāy, who was in almost continuous conflict with the Druze *amīr* Fakhr al-Dīn Ma'n [*q.v.*], who administered the neighbouring *sandjak* of Ṣafad and attempted to expand his influence in the region. Aḥmad was succeeded in 1647 by his sons Zayn (d. 1660) and Muḥammad (d. 1671), but by 1677 the family had lost its control of Ladjdjūn.

(R. VAN LEEUWEN)

ṬĀRĀBĪ, MAḤMŪD, the leader of a revolt in the Bukhārā oasis, one with popular religious and social overtones, against Mongol domination (636/1238-9).

Maḥmūd was a sieve-maker from the village of Ṭārāb or Tārāb, four *farsakhs* from the city of Bukhārā on the Khurāsān road (see al-Sam'ānī, *Ansāb*, ed. Ḥaydarābād, ix, 5; Yāḳūt, *Buldān*, ed. Beirut, iv, 4; Barthold, *Turkestan down to the Mongol invasion*[3], 114 n. 9, 117, 132), who led a movement against the financial oppression of the Mongol *basḳaḳs* or tax-collectors and also, it appears, against local landowners and other representatives of the leading secular and religious classes, including the *ṣudūr* of the Āl-i Burhān (on whom see Bosworth, *EIr*, art *Āl-e Borhān*; and see ṢADR). His ostensible shamanistic and thaumaturgic powers secured him a large following, and his force was able to occupy Bukhārā itself, killing or expelling Mongol officials, re-

placing the Burhānī *ṣadr* with another religious leader who had thrown in his lot with him, Shams al-Dīn Maḥbūbī, and proclaiming himself sultan of Bukhārā. His forces bloodily crushed a Mongol army sent from Karminiya, but Maḥmūd himself and Shams al-Dīn Maḥbūbī were killed. Maḥmūd's brothers Muḥammad and ʿAlī assumed leadership, but were decisively defeated by a Mongol army sent from Khudjand by the governor Maḥmūd Yalawač [*q.v.*]; only Yalawač's intercession with the Great Khān Ögedey [*q.v.*] saved Bukhārā from the threatened savage sacking.

ṬARĀBULUS AL-GHARB or simply Ṭarābulus, with the local variants of Iṭrābulus, Iṭrābulus al-Gharb and Ṭrablus, the name for the city of Tripoli, of Africa or of Barbary, in Libya, a designation which is also extended to Tripolitania, a region of North Africa bordering the Mediterranean which, with Cyrenaica and the Fezzan, constitutes the State of Libya [see LĪBIYĀ; BARḲA; FAZZĀN].

1. General.

The name derives from an Arabisation of the Greek term *Tripolis* which dates back to ancient times. The qualificative al-Gharb (= "of the West") was added after the Turkish conquest in 958/1551 to distinguish it from the Syrian city of Tripoli, Ṭarābulus al-Shām [*q.v.*].

The city of Ṭarābulus is situated at lat. 32° 54' N. and long. 13° 11' E., while the region of Ṭarābulus, or Tripolitania, extends from the Tunisian frontier along the coast as far as Ḳūs/Ḳaws (Marble Arch). This arch, constructed by the Italians in 1929, some 210 km/130 miles to the east of Syrte, marks the limits of the province, which extends to the south, in the desert, along the line of latitude 28° N., and encloses an area of 250,000 km². Tripolitania under Italian rule comprised six provinces: Ṭarābulus, Sabha, Ghariyān, Miṣrāṭa, Zāwiya and Khums.

Numerous Islamic dynasties took turns in dominating the city (the Aghlabids, Zīrids and Almohads), which also experienced periods of foreign occupation (Normans from Sicily, Genoese, Sicilians, Spaniards and the Knights of Malta) before being conquered in 1551 by the Ottoman Turks. (G. OMAN)

2. In pre- and early Islamic times.

Ṭarābulus was established by the Phoenicians and was later enlarged by the Greeks and the Romans. According to G.D.B. Jones, 92, the core of the primary settlement of the Phoenicians in Oea must be located at the elevation within the triangle formed by Borg el Hahie. This place, now covered by buildings, has not been excavated.

The port of Oea—which was named Tripoli in the 3rd century A.D. (J. Desanges, *Quelques considérations sur l'usage du grec dans les ports de l'Afrique romaine*, in *Graeco-Arabica*, vi [1995], 30 ff.)—was active during the Graeco-Roman period, but because of the direction of the prevailing wind in North Africa and the difficulty in navigating across it, the main sea routes were usually those between Tripoli and the ports of Greece rather than those between Cyrenaica and Tripoli (M.G. Fulford, *To East and West. The Mediterranean trade of Cyrenaica and Tripolitania in Antiquity*, in *Libyan Studies*, xx [1989], 171). Moreover, navigation was easy from Tripoli via Pantelleria to Sicily.

Nevertheless, in Byzantine times interregional trade linking Cyrenaica with Tripoli and Carthage developed. Byzantine Tripoli was an active port from where surplus agricultural produce was exported, along with wild animals, and was also an entrepôt in the sea route from Alexandria to Carthage, and via it to Spain and England. Hagiographical works inform us that, on the eve of the Arab conquest, the Patriarchate of Alexandria financed long-run shipping activities originating along the axis Alexandria-Tripoli-Carthage. The impact of such maritime activities had a clear impact on the social structure of Tripoli and the adjacent area of Tripolitania (see V. Christides, *The conquest of Libya by the Arabs and the spread of Islam into the Maghrib*, forthcoming).

Even before the final conquest of Egypt by the Arabs (25/645), the way to Cyrenaica, Tripolitania and the rest of Maghrib was open, and a series of expeditions against Cyrenaica and Tripolitania, which formed the spearhead of the Muslim conquest of North Africa, started. ʿAmr b. al-ʿĀṣ, in a spectacular march moving from Alexandria (22/642), conquered Barḳa and, by-passing the fortified towns of Apollonia Sozusa (Sūs), Paraetonium (Marsā Maṭrūḥ), and Ptolemais (Ṭulmayṭa), reached Tauchira (Tukra).

The town of Tripoli was the Arabs' next target. ʿAmr soon afterwards launched a second rapid cavalry raid, later in that same year; by-passing Teuchira, where the Byzantines were still entrenched, he appeared in front of the gates of Tripoli. This town was well fortified and, according to Pseudo-Raḳīḳ al-Ḳayrawānī, numerous ships had moved into its port (*Taʾrīkh Ifrīḳiya wa 'l-Maghrib*, ed. M. Kaʿbī, Tunis 1968). ʿAmr did not possess any siege machines, so he applied his usual strategy of besieging the city and waited patiently. After a month, the Arabs penetrated into the city through a neglected opening and sacked it (Ibn ʿAbd al-Ḥakam, *Futūḥ Miṣr*, ed. Torrey, 171, and al-Kindi, *al-Wulāt wa 'l-ḳuḍāt*, Cairo, 10, place the final surrender of Tripoli in 22/642; al-Bakrī (tr. de Slane, *L'Afrique septentrionale*, repr. Paris 1913, 24) places it a year later in 23/643-4). The Byzantine army, along with the majority of the population, abandoned the city and embarked in their ships.

While the Arabs seemed to have secured Barḳa and even Zawīla on the threshold of Fezzān, Tripoli was reconquered by the Byzantines. In the successive Arab raids which followed, the situation in Tripoli is hardly mentioned in the Arabic sources. A. Ṭāhā has shown, basing himself on indirect evidence, that Tripoli was most probably retaken by Ibn Ḥudaydj in 47/667 (*The Moslem conquest and settlement of North Africa and Spain*, London and New York 1989, 60).

There is no concrete evidence whether Tripoli was in Arab hands when ʿUḳba b. Nāfiʿ [*q.v.*], avoiding the coast of North Africa, undertook his expedition to the extreme Maghrib. The Byzantines reconquered Barḳa in 71/690 (Ibn ʿAbd al-Ḥakam, 202-3) and, most probably, Tripoli was again reoccupied by them. It was firmly secured by the Arabs only in the time of al-Ḥasan b. al-Nuʿmān, and had become an important port for the Muslims when Mūsā b. Nuṣayr completed and stabilised the conquest of North Africa (91/710).

Tripoli during the Arabo-Byzantine struggle in North Africa presents a vivid and typical example of Byzantine defence policies, i.e. concentration on the heavily-fortified coastal towns and dependence on the Byzantine navy. This policy seems to have boomeranged for the Byzantines who were always ready to abandon the city, leaving in their ships and carrying with them the Romanised inhabitants of the

coastal towns, known in Arab sources as the Afāriḳ.

The process of Arabisation and Islamisation in Tripoli in this early period is little known, and archaeological evidence is lacking. The tradition that ʿAmr built a mosque in Tripoli is legendary and has not been confirmed by any discoveries (see G.R.D. King, *Islamic archaeology in Libya, 1969-1989*, in *Libyan Studies*, xx [1989], 193-208).

(V. CHRISTIDES)

3. From ʿAbbāsid times to the Ḳaramānlīs.

The Aghlabid Amīrate. In 184/800, an Aghlabid amīrate was established in Ifrīḳiya, where it lasted more than a century, until 297/909. It was during this period, from 212/827 onwards, that the Aghlabids planned the invasion of Sicily. With the exception of an expedition launched against Tripoli in 265/878-9 by the Ṭūlūnids from Egypt under the command of Aḥmad b. Ṭūlūn—an expedition which ended in defeat—contacts with the East were virtually broken. See further, AGHLABIDS.

In 359/969 Djawhar al-Ṣiḳillī [*q.v.*] set out from Tripoli to conquer Egypt. Three years later, al-Muʿizz b. Bādīs [*q.v.*] was to transfer the headquarters of his Fāṭimid kingdom to Egypt, leaving the Berber chieftain Buluggīn b. Zīrī as his lieutenant in Ifrīḳiya. The latter was to be the founder of the Zīrid amīrate, which included Tripoli.

The Zīrid Amīrate (the Banū Khazrūn and the Banū Hilāl). In 391/1000 the governor of Tripoli ceded the city to Yānis al-Ṣiḳillī, Fāṭimid governor of Cyrenaica. Following this decision, the Zīrid *amīr* Bādīs sent one of his generals to confront the latter. Meanwhile Falfūl, of the Banū Khazrūn, took possession of the city, which was to be governed by this family for a half-century. The refusal of the Zīrids to offer obeisance to the Fāṭimids of Egypt in 442/1950 and their recognition of the Sunnī ʿAbbāsid caliph of Baghdād provoked, by way of punishment, the migration of tribes of the Banū Hilāl [*q.v.*] towards the Maghrib. A branch of the latter, the Banū Zughba, occupied Tripoli. See further, ZĪRIDS.

The Normans (529-53/1135 to 1158-9). In 529/1135, the Normans of Sicily, under Roger II, occupied the island of Djarba [*q.v.*], but their attempt in 1143 to capture Tripoli was a failure. Two years later an expedition commanded by the admiral George of Antioch succeeded in taking possession of the town: this was on 17 or 18 June 1146. In 1148 the same fate befell al-Mahdiyya, Sfax and Gabès. The Norman domination of Tripoli lasted barely twelve years. In 553/1158-9, when news of the Almohad advance became widely known, the inhabitants of Tripoli rebelled and succeeded in expelling the Normans.

It was perhaps in anticipation of this occupation that the Norman kings of Sicily had minted miniature gold coins, of approximately one gram in weight, called *ṭarī* [*q.v.*], with the *shahāda* engraved on one side and on the other, in the form of a T, the cross of St. Antony.

The Almohads (*al-Muwaḥḥidūn*, 524-668/1130-1269 [*q.v.*]). In 554/1159, the Almohads occupied Mahdiyya, Sfax and Tripoli, creating for the first time a unitary state in North Africa. During the period of their domination, Tripolitania was thrown into chaos by the incursions of two adventurers, Ḳarāḳush, of Ghuzz, i.e. Turcoman origin, from Egypt, and ʿAlī al-Māyurḳī, from the family of the Banū Ghāniya [*q.v.*] in Majorca, who had inherited Almoravid ambitions regarding the colonisation of Africa.

In 626/1229, the governors of Ifrīḳiya belonging to the family of Abū Ḥafṣ proclaimed themselves independent and inaugurated the Ḥafṣid dynasty [*q.v.*]. Later, a similar declaration in Libya was witnessed on the part of a Berber family, the Banū Thābit or Banū ʿAmmār of the Hawwāra tribe. The first to achieve quasi-independence was Muḥammad b. Thābit b. ʿAmmār in *ca.* 716/1326-7.

Filippo Doria (755/1354). In the year 755/1354, or according to other sources, the following year, the Genoese Filippo Doria succeeded, by means of a trick, in taking possession of the city of Tripoli. A few months later, the Genoese managed to sell the city for 50,000 gold *mithḳāls* to Aḥmad b. Makkī, who recognised the sovereignty of the Marīnid sultans [*q.v.*] until 766/1364-5.

Intervention by the Aragonese kings of Sicily. Towards the end of the 14th century, the Aragonese kings of Sicily took a renewed interest in North Africa and sought to recapture the island of Djarba which had been lost in 1134. In 790/1388, the Admiral of Sicily Manfredi Chiaramonte succeeded in taking the island of Djarba, but the inhabitants rose in revolt. However, five years later in 795/1392, King Martino of Sicily took possession of the island with the declared consent of the population. This occupation lasted until 801/1398, when the Ḥafṣid sultan of Tunis regained control of both Djarba and Tripoli.

The Spanish and the Knights of Malta (1510-51). On 25 July 1510 the Spanish took Tripoli by assault. Later, in 1539, Charles V offered the city to the Knights of the Sovereign Order of Malta. The latter rebuilt and enlarged the Castle; however, on 14 August 1551 they were obliged to capitulate when besieged by a formidable Turkish fleet.

The Ottoman conquest of Tripoli (958/1551). After the defeat of the Knights of Malta, the government of Tripoli was entrusted to Murād Agha, the first Turkish governor, who succeeded in inflicting another crushing defeat on the Maltese with a surprise attack on the town of Zuwāra.

In 964/1556 Murād Agha died and was succeeded by Ṭorghud (Dargut, Dragut, Dorghut, etc.) ʿAlī [*q.v.*] well-known for his privateering activities. His period of rule was marked by two memorable events: the repulse of another expedition against Tripoli sought by the Grand Master of Malta, in which 14,000 Spanish, German and Italian soldiers participated, and the assault on Malta which was threatening the Turkish conquest of Africa. Ṭorghud actually died at Malta on 23 June 1565. He was succeeded by Yaḥyā Pasha, who died the following year, or, according to other sources, by Ulugh ʿAlī (known as Lucciali in Calabrian accounts), Ṭorghud's lieutenant and a renowned corsair in his own right, who later became Captain-General of the Ottoman fleet and died in 1587. Little is known of the Turkish governors who followed; their names were Djaʿfar Muṣṭafā Pasha, and Ramaḍān Pasha, who was killed in 1584.

In 1587, according to the Maltese archives, when Ḥasan Agha was governing Tripoli, the Knights of Malta tried once again to put troops ashore in support of local insurgents against the Turkish government. The years between 1590 and 1610 saw a series of Turkish governors busily engaged in suppressing revolts in Tripoli and its environs.

Relations with the European powers. For many years, Tripoli accepted no consular representatives of European states. All matters concerning the city were handled directly by the Sublime Porte in Constantinople. During the 17th century, some consulates were estab-

lished, their primary objectives being purely commercial. Later, these consulates were to assume political importance, on account of the frequent "incidents" provoked by corsair activities and continual military interventions by the warships of the European states.

The first consul of whom anything is known was a certain Du Molin, appointed in 1630 by an emissary of Louis XIII. Some years later, in 1658, Samuel Toker was transported to the city by an English fleet, to take up his appointment as consul on behalf of England. With the Knights of Malta, on account of the objectives of their Order, there existed a permanent state of war against the unbelievers, although this was occasionally interrupted by courteous diplomatic exchanges. The ransoming of slaves, and religious aid to Christian merchants and artisans, were promoted by Redemptorist missionaries and Brothers of St. Francis sent by Propaganda Fide.

Tripoli under the Dayîs and the Turkish and Levantine Beys (17th century). The history of Tripoli in the 17th century is a succession of struggles and revolts, both within and in the neighbourhood of the city. Appointed governor of the city in 1610 was a certain ʿAlī Bek, of Genoese origin, who used to send the sum of 300 crowns and 64 aspers to his sister, living in the vicinity of Genoa.

Another individual, Sulaymān Safar Day, succeeded in gaining quasi-independence but was hanged by Khalīl Bey, Captain-General of the Ottoman fleet, for ignoring the emissaries sent by the Sublime Porte. After him, Muṣṭafā Sharīf Day also lost his life in tragic circumstances *ca.* 1631. Another chief of the local militia, Ramaḍān Day, governed from 1631 to 1633 before handing over power to a Levantine corsair, Meḥmed Pasha Saḳîzlî from Chios, who governed from 1633 to 1649, obtaining the title of Pasha from Sultan Murād IV. He also succeeded in extending his domain as far as Cyrenaica and the Fezzan. His work was continued by ʿOthmān Pasha, likewise a freedman from the Greek island of Chios, who governed until 1672 and was one of the most powerful and energetic pashas of the 17th century.

In the years that followed, Tripoli seems to have found no genuine or effective leaders, and it was not until the period between 1687 and 1701, under the rule of the Montenegrin Meḥmed Imām Pasha, that the city enjoyed stable government. His nephew, Khalīl Beg, was deposed by corsair chiefs and Janissaries towards the end of 1709. On returning from Istanbul, where he had gone in search of the aid necessary for the assertion of his rights, he found in control of Tripoli a man who showed no inclination to allow himself to be supplanted, Aḥmad Ḳaramānlī, founder of the dynasty which was to govern Tripoli for the next 124 years.

Bibliography: The principal comprehensive work concerning the history of Tripoli of the West remains that of E. Rossi, *Storia di Tripoli e della Tripolitania dalla conquista araba al 1911*, Rome 1968, 398, published posthumously through the good offices of Maria Nallino. In the *Prefazione*, pp. xv-xxii, he lists in detail all the sources and the bibliography which he has used. Other bibliographical notices are to be found in *Gli studi sul Vicino Oriente in Italia dal 1921 al 1970. II. L'Oriente islamico*, Rome 1971, chs. by U. Rizzitano, *Gli studi di storia araba*, 61-2, and S. Bono, *Gli studi sulla storia del Maghreb dal sec. XVI al 1830*, 69-88. The most recent (1982) and apparently most complete study of the Turkish period (1510-1911) is that of S. Bono in the series *Quaderni dell'Istituto Italiano di Cultura di Tripoli*, entitled *Storiografia e fonti occidentali sulla Libia (1510-1911)*.

For information relating to numismatics and epigraphy, see G. Cimino, *La zecca di Tripoli d'Occidente sotto il dominio dei Caramanli*, in *Rivista Italiana di Numismatica*, Milan (1916), 527-40; idem, *Storia e numismatica dell'Africa del Nord*, in *Libya*, Rome-Milan (1927), iii, 202-27; E. Rossi, *Le iscrizioni arabe e turche del Museo di Tripoli (Libia)*, Department of Antiquities, Tripoli 1953, 107. (G. OMAN)

4. The rule of the Ḳaramānlīs (1123-1251/1711-1835).

For this, see ḲARAMĀNLĪ.

5. From 1835 to the present day.

The Ottoman sultan Maḥmūd II's expedition of May 1835 ended the power of ʿAlī II b. Yūsuf Pasha and the Ḳaramānlī line of virtually independent governors, and the Turks were able to re-establish their power over the whole of Tripolitania as far east as the site of former Barca [see BARḲA], although most of Cyrenaica was speedily to fall under the control of the Sanūsiyya [*q.v.*] Ṣūfī order. The town of Tripoli now became the capital of the Ottoman *pashalïḳ* of that name.

After the Italians landed on the Libyan coast in September 1911, Tripoli became the capital of the colony of Libya, and has remained that of the independent Libya proclaimed in 1951. The Italians began extensive remodelling of the old town, with a garden city to the southwest of the old Muslim town and the Jewish *ḥāra* (now that of modern administrative offices, foreign embassies, etc.), demolition of part of the town walls and restoration of other parts of them, the construction of a modern port and the building of a Roman Catholic cathedral for the influx of Italian colonists (since 1970 turned into the Djamāl ʿAbd al-Nāṣir Mosque).

The modern city of Tripoli (lat. 32° 54' N., long 13° 11' E.) has now become a centre of east-west communications along the southern Mediterranean coast, with the Tunis-Benghazi road running through it, a railway running westwards to Zuwāra and one eastwards to al-Khums, and an international airport constructed some 34 km/21 miles south of the city. The post-1955 oil boom in Libya, plus a very high birth rate in the country at large, have caused a dramatic growth in Tripoli's population, estimated at 820,000 in 1980. As well as being the national capital, Tripoli is also the chef-lieu of the *muḥāfaẓa* or governorate of Tripoli [see LĪBIYĀ. 3-4].

Bibliography: J. Wright, *Libya, a modern history*, London 1982. (C.E. BOSWORTH)

ṬARĀBULUS (or AṬRĀBULUS) AL-**SHĀM**, the Greek Tripolis, called "of Syria" in the Arabic sources to distinguish it from Ṭarābulus al-Gharb [*q.v.*] "of the West", Tripoli in Libya, an historic town of the Mediterranean coast of the Levant, to the north of Djubayl and Batrūn [*q.vv.*]. It lies partly on and partly beside a hill at the exit of a deep ravine through which flows a river, the Nahr Ḳadīsha (Arabic, Abū ʿAlī). West of it stretches a very fertile plain covered with woods, which terminate in a peninsula on which lies the port of al-Mīnā. The harbour is protected by a series of rocky islets lying in front of it and by the remains of an old wall.

1. History up to the Mamlūk period.

The old Phoenician name of the town, which is first mentioned in the Persian period, is unknown; its Greek name came from its division into three quarters each separated by walls, the Tyrian, Sidonian and Aradian. In early Christian times, it soon became

a bishopric, allegedly founded by St. Peter himself, who installed there Tripoli's first bishop. The old town lay on the site of the present port. It was protected by its situation and the defences of the quarters and was very difficult to take, but was constantly threatened by the danger of being cut off on the land side from all connection with the outer world and even from supplies of drinking water. This was shown when Muʿāwiya, in the caliphate of ʿUthmān, sent a body of troops under the leadership of an Azdī named Ṣufyān b. Mudjīb thither, who built a fort in order to cut off the town completely. The inhabitants were reduced to such straits that they sent to the Byzantine emperor and begged him to send ships with all speed to their assistance. The emperor did so, and the Tripolitans succeeded in boarding the ships by night and thus escaped. To populate the empty town, Muʿāwiya made a considerable number of Jews (al-Balādhurī; al-Yaʿḳūbī says Persians) settle there. Muʿāwiya is said to have sent there annually some troops under an *ʿāmil*, who, when the town was blockaded by sea, withdrew again except for the *ʿāmil* and a handful of men. Soon afterwards, there was a Byzantine attempt to recover Tripoli, which was repelled by the Arabs, with the Byzantine commander being chased out to sea, captured and killed (al-Balādhurī, *Futūḥ*, 127-8; cf. F.McG. Donner, *The early Islamic conquests*, Princeton 1981, 154-5, 246-7). Byzantine hopes of recovering the town continued, and in the 10th century, one of Greek resurgence, several attacks are recorded in the Greek and Arabic sources: an attack by Nicephorus Phocas in 968, destruction of the town in 975 by John Tzimisces, further attacks by the governor of Antioch and Basil II in the 990s, etc.

Al-Yaʿḳūbī in his geographical work mentions Ṭarābulus's splendid harbour as capable of holding a thousand ships (*Buldān*, 327, tr. Wiet, 178), and some fifty years later, al-Iṣṭakhrī and Ibn Ḥawḳal speak of the great fertility of the surrounding area, with its palms and sugar-cane fields. Ṭarābulus was considered as the port for Damascus, and it was defended by garrisons (*yurābaṭu*) of troops from Damascus and other *djunds* who rallied there for offensive operations or when attack was threatened (al-Iṣṭakhrī[1], 61; Ibn Ḥawḳal, ed. Kramers, 175, tr. Kramers and Wiet, 172). An excellent description is given by the Persian traveller Nāṣir-i Khusraw (438/1047) of the town under the Fāṭimids. The whole countryside, he says, consists of fields and gardens with sugar-cane, citrons, bananas, oranges, lemons and date-palms; the town was protected on three sides by the sea, on the land side by a wall with a broad ditch. In the centre stood a splendid mosque; the town had 20,000 inhabitants, of whom the majority were Shīʿīs, and many villages belonged to it. The garrison of the ruling power was maintained by the tolls paid by the many ships that arrived there, while the ruler himself had ships which used to go to the Mediterranean coasts from there (*Safar-nāma*, ed. M. Dabīr-Siyāḳī, Tehran 1335/1956, 14-15, tr. W.M. Thackston, Albany 1986, 12-13).

In the Crusading period, a County of Tripoli was created and given to Raymond of Toulouse, but the capital itself had still to be taken from the Muslims. Raymond began the siege in 493/1101, and to isolate the town more effectively, built a fort on a hill on the ravine of Ḳadīsha, called Mons Peregrinus or the Pilgrims' Hill (by the Arabs Sandjīl, i.e. St.-Gilles), at the foot of which in course of time a little town arose. He died in 499/1105 in this fortress without having attained his goal, and it was not till 12 July 1109 that the beleaguered town capitulated. Al-Idrīsī, who wrote in 1154, mentions the fortress "built by the Frank Ibn Sandjīl", and gives a list of towns and villages belonging to Ṭarābulus and of the rocky islets off the harbour (see *ZDPV*, viii, 135-6, Ar. text, 17). In 1170 the town suffered severely from a terrible earthquake. After the fall of Jerusalem in 1187, Ṭarābulus held out for another century as an important base for the Christians, until in 688/1289 the army of the Mamlūk sultan al-Manṣūr Ḳalāwūn [*q.v.*] appeared before it and it had to surrender on 26 April. This proved a turning point in its history, for the sultan, learning a lesson from the past, built a new Tripoli on the Pilgrims' Hill, while the old town was destroyed and sank to be an insignificant little harbour known as al-Mīnā (from the Greek λιμήν). Al-Dimashḳī, who wrote about it *ca.* A.D. 1300, describes the plentiful supply of water in the town—in addition to the running water on all sides, an aqueduct 200 ells long and 70 ells high was built—and the gardens, with excellent fruit in plenty. He also mentions the various localities belonging to Ṭarābulus, including Botrys, Buḳayʿa and the Djabal al-Nuṣayriyya (*Nukhbat al-dahr*, ed. Mehren, 207, 253).

2. From the Mamlūk period onwards.

As the chef-lieu of an Ottoman *sandjak* after the conquest of Syria, becoming an *eyālet* in *ca.* 1078/1570, Ṭarābulus served as a port of entry for Ḥimṣ and Ḥamāt within the Syrian interior. It was twice occupied and sacked during the next century, in 1016/1607 by ʿAlī b. Djānbulāṭ, the ally of Fakhr al-Dīn Maʿn, and then in 1033/1624 by Fakhr al-Dīn himself. The population declined from 1,743 families in 1545 (1,294 Muslim, 316 Christian and 178 Jewish) to 1,320 families in 1623 (749 Muslim, 432 Christian and 139 Jewish) with the town's economic importance decreasing as that of Beirut, Ṣaydā (Sidon) and ʿAkkā (Acre) rose.

The town falls into two parts on each side of the Nahr Abū ʿAlī, with the old town on one side, with its markets grouped round the Great Mosque and the Ḳubba quarter. The *sūḳ*s with their stone arcading and their old khāns (Khān al-Kharrāṭīn "of the tailors", Khān al-Ṣābūn "of soap", built in the 11th/17th century, etc.) are still very active; they open out on to the river, where stands the 8th/14th century al-Madrasa al-Burṭāsiyya mosque. The Ṭaylān mosque, from 736/1336, with two white domes, is one of the town's finest monuments, standing a little aside from the centre.

Ṭarābulus continued to decline in the 18th century, and only after 1801 did Muṣṭafā Barbar Aba, Aḥmad Djazzār Pasha's commandant of the town, establish a certain amount of order there in conjunction with the Amīr Bashīr Shihāb of Mount Lebanon. In 1861 it became the centre of a *liwāʾ* in the *wilāyet* of Beirut, and in 1876, under Midḥat Pasha [*q.v.*], subsequently gov-

ernor of Damascus, entered the modern age of westernisation: a road and a railway were constructed to Ḥimṣ. *Ca.* 1880, the town had six quarters, Ḥaddādīn, Nūrī, Muḥayṭira, Rummānī, Suwayḳa and Bāb al-Ḥadīd, but towards the end of the century, the population spilled out from the ancient limits. A road to Beirut was opened in 1909 and a rail link with Aleppo in 1911. At that time, the grouping of Ṭarābulus and al-Mīnā had 32,500 inhabitants, with 24,000 in the first and 8,500 in the second (comprising 24,100 Sunnī Muslims, 6,800 Greek Orthodox and 1,500 Maronites).

Tripoli was involved in the upsets of the last decades of Ottoman rule. This last was exercised through the great Sunnī families of the town who, after the Young Turk Revolution of 1908, acquired a greater degree of autonomy; thus the *ʿulamāʾ* of the town were able to nominate their *muftī* directly. The Committee of Union and Progress came to power in Istanbul with the parliamentary elections when the Turkish constitution was restored, but their authority was badly received in Tripoli, nostalgic for the Ḥamīdian period. When the *amīr* Fayṣal entered Damascus on 1 October 1918, he nominated the *muftī* ʿAbd al-Ḥamīd Karāma as governor of Tripoli, but the French landed there on 12 October 1918.

With the creation of Greater Lebanon, the Mandatory power separated Tripoli from Syria, and henceforth, the French occupation represented a challenge for the town's Muslim population (over 3/4 of the whole). Karāma lost his posts as *muftī* and governor, and now became *zaʿīm* or leader of the anti-French movement. At the time of independence in 1942, Tripoli had been traumatised by the dismemberment of the Ottoman Empire, its separation from Syria and incorporation within Lebanon. In 1945 ʿAbd al-Ḥamīd Karāma was nominated Prime Minister, but was unable to secure recognition as *zaʿīm* of the Sunnī community of the whole of Lebanon nor even to satisfy the aspirations of the people of Tripoli.

It was at Tripoli that the first Lebanese civil war broke out in 1958, led by Ras̲h̲īd Karāma, ʿAbd al-Ḥamīd's son. Against the President Camille Chamoun's attempts to attach his country to the West, the people of Tripoli were attracted to Nasserism and the ideal of Arab unity. Twelve years later, it was in the quarters of old Tripoli that the "state of those outside the law" (*dawlat al-maṭlūbīn*) saw the light of day. A few years after the beginning of the second civil war in 1975, the Movement for Islamic Unification (*ḥarakat al-tawḥīd al-islāmī*), a federation of all the Sunnī Islamist groups in the town, was formed under the leadership of S̲h̲ayk̲h̲ Saʿīd S̲h̲aʿbān, who then took control. In 1983 Tripoli became the refuge for Yasser Arafat and the PLO when they were ejected from Beirut, but they were dislodged by Syrian army bombardments. After Syrian repression of the town's quarters in autumn 1985, S̲h̲ayk̲h̲ S̲h̲aʿbān went over to the Syrian side.

Tripoli had over 300,000 inhabitants in 1995, and has resumed its place as the second economic centre of Lebanon, based on the agricultural riches of the plain of Kūra to the south and east, with its olive groves, and those of Akkār towards the north and central Syria. The cultivation of fruit and vegetables is increasing in this well-watered region, being modernised with both internal capital and finance from outside Lebanon. Industry is also well represented, with an oil refinery to the north of the town (at the terminus of the pipe-line, at present out of service, bringing the oil of Kirkuk to the Mediterranean coast) and the biggest cement factory in Lebanon, that of Chekka, to the south.

AL-ṬARĀBULUSĪ AL-RAFFĀʾ, ABU 'L-ḤUSAYN AḤMAD b. Munīr b. Aḥmad b. Mufliḥ Muhad̲h̲d̲h̲ab al-Dīn [al-Mulk], prominent poet of Syria in the time of Nūr al-Dīn Zangī and rival of S̲h̲araf al-Dīn al-Ḳaysarānī [*q.v.*]. He was born in 473/1080 in Ṭarābulus al-S̲h̲ām (Tripoli, Lebanon) and died in Aleppo on D̲j̲umādā II 548/September 1153. His father sang and recited poetry in the markets of Tripoli. Al-Ṭarābulusī was a S̲h̲īʿī Rāfiḍī, and was held in prison for a certain time because of his satires (*hid̲j̲āʾ*) against Böri b. Tug̲h̲tigin, the *amīr* of Damascus 522-6/1128-32, who even threatened to cut out his tongue. He was released after the intervention of the chamberlain Yūsuf b. Fayrūz. After that he lived in exile and was only allowed to return by Böri's son Ismāʿīl. But soon afterwards, he provoked the anger of this ruler, too, and was forced to hide. Then he lived in Ḥamāt, S̲h̲ayzar (in the fortress of the Banū Munḳid̲h̲) and Aleppo. He witnessed the second siege of Damascus under Nūr al-Dīn Maḥmūd b. Zangī, whom he praised in his most eloquent laudatory poems. His *Dīwān* has been edited.

ṬARABZUN, the Turkish form of TREBIZOND, Greek Τραπεζοῦς, a town on the Black Sea shores of northern Anatolia.

At the dissolution of the Byzantine Empire after the Frankish-Venetian conquest of Byzantium in 600-601/1204, Ṭarabzun, which had been occupied briefly by the Sald̲j̲ūḳs at the end of the 6th/11th century, became the centre of a principality governed by a branch of the Comnene dynasty. The latter continued to use the Byzantine imperial title, and the strong walls of the Citadel and Middle City (Orta Ḥiṣār), which go back to Roman times, were supplemented by a town wall constructed by Alexius II in 724/1324. For the 9th/15th century, Clavijo and Bessarion have left descriptions of the Comnene palace, which was located in the Citadel, and presumably was also used by Selīm I and Süleymān I, who resided in Ṭarabzun as princes. Ṭarabzun's walls withstood numerous sieges, and allowed the tiny principality to survive until 865/1461. Hostilities with the Sald̲j̲ūḳs were probably caused by the commercial links of Ṭarabzun with the Crimean ports (620/1223); in the course of this war, there was fighting around Sinop, and an attack against Ṭarabzun itself. In 628/1231, after a lost battle against the Sald̲j̲ūḳs, the remnants of the defeated K̲h̲ʷārazm-

shāh's army sought refuge on Trapezuntine territory. The commercial importance of the town during the 7th/13th century was considerable, as caravans to or from Persia brought goods for trans-shipment. The Venetians having lost control over the Bosphorus following the reestablishment of the Byzantine Empire with Genoese help (659/1261), the Genoese also traded in Ṭarabzun, concentrating their attentions upon the exportation of alum. Both Genoese and Venetians lived in special town quarters. Pero Tafur, who visited Ṭarabzun in 841/1437-8, thought that the town held 4,000 inhabitants (*Travels and adventures*, tr. M. Letts, New York and London 1926, 131; A. Bryer and D. Winfield, *The Byzantine monuments and topography of the Pontos*, 2 vols., Washington 1985, i, 178-249).

After the Ottoman takeover of Ṭarabzun by Meḥemmed II in 865/1461, the last Comnenus ruler of the city was banished from the area. Immediately following the conquest, soldiers who had participated in the fighting (*ghāziyān-i Ṭarabzun*) and some Christian lords who had joined the Ottomans were awarded *tīmārs*. By 821/1486, most of the Christian aristocracy and the original conquerors must have been obliged to leave the area, for a *mufaṣṣal* register from the reign of Bāyezīd II shows that of 207 *tīmārs* then existing in the area, only 21 were in the hands of Christian *sipāhīs*. Among the new *tīmār*-holders there were numerous Albanians, Janissaries recently Islamised and also some Christians, including the so-called *gebrān-i wilāyet-i Torul* (Ardasa). By 924/1515, *tīmār*-holding had become a Muslim occupation (Ö.L. Barkan, *Osmanlı imparatorluğunda bir iskân ve kolonizasyon metodu olarak sürgünler*, in *İstanbul Üniv. İktisat Fak. Mecmuası*, xv [1953-4], 217-24; Heath Lowry, *Privilege and property in Ottoman Maçuka in the opening decades of the Tourkokratia: 1461-1553*, in *Continuity and change in late Byzantine and early Ottoman Society*, ed. idem and A.A. Bryer, Birmingham and Washington 1986, 97-128). Ottoman military presence was further assured by an auxiliary cavalry consisting of *müsellems*, local Christians enjoying tax-exemptions in exchange for military service. However, by 921/1515 these men had been reclassified as *reʿāyā*.

In addition, townsmen were brought into Ṭarabzun proper from Amasya, and settled in a *maḥalle* named after their hometown. The Chrysokephalos church was transformed into a mosque by order of Meḥemmed II, and subsequently was known as the ʿAtīḳ Djāmiʿ. Tradition also claimed that the St. Eugenios church was converted into a mosque at this time. But this probably only happened around 905-6/1500; the edifice was known first as the Yeñi Djāmiʿ and later as the Yeñi Djumʿa Djāmiʿi (Lowry, *Trabzon's* Yeni Cuma Camii (*New Friday Mosque*), in *Boğaziçi Üniv. Hümaniter Bilimler Dergisi*, iii [1975], 91-102). Ṭarabzun's third major church, known as the Aya Ṣofyā and located at a distance of 3 km west of the city walls, was also converted into a mosque. After Byzantine frescoes had been uncovered there in Republican times, the building was turned into a museum in 1964.

Among the pious foundations established in Ottoman times, the most prominent was the Khātūniyye ʿImāreti, dedicated to the mother of Selīm I. An account book dated 1000-1/1591-2 lists mills and meadows in nearby Değirmenderesi, two *ḥammāms*, a sizeable number of olive trees, but also taxes such as *bād-i hawā* and tithes from various private properties, which normally should have accrued to the state treasury. The foundation also collected customs duties from some smaller ports near Ṭarabzun. The Khātūniyye ʿImāreti owned shops in the vicinity of the *bedestān* as well as the *bedestān* itself, in addition to the land on which the *sarāy-i ʿatīḳ* and the sultan's stable were located. The *ʿimāret* disbursed food to large numbers of people: the officials in charge of the storehouse needed to account for 26,253 *ūḳiyyes* of meat and 2174 *kīles* of rice, while the same document mentions 1789 live sheep in the care of the *ʿimāret* kitchen (BBA, *Maliyeden müdevver* 15996). The foundation also lent out money, at times entering into partnerships with merchants (R. Jennings, *Pious foundations in the society and economy of Ottoman Trabzon, 1565-1640*, in *JESHO*, xxxiii [1990], 313-34).

While the town of Ṭarabzun was Islamised rapidly, nearby rural *ḳaḍās* such as Mačuḳa (Maçka) retained many features inherited from the Byzantine period. The *taḥrīr* of 921/1515 shows 2623 households headed by Christian adult males residing in Mačuḳa, in addition to 188 widow households. Tax-paying Muslims numbered 51. Between 865-6/1461 and 960/1553, the period covered by the *taḥrīrs* extant for this region, the Muslim population increased to 101 households, mostly local people who had converted. While many properties held by monasteries were converted into *tīmārs* following the Ottoman conquest, the three major monasteries located in the valley of Mačuḳa itself, namely, Vazelon, Soumela and the Peristera, retained much of their property down into the 20th century. On his visit to Ṭarabzun in 1112-13/1701, Pitton de Tournefort put up in a convent building in the town proper, which was still owned by a local monastery.

For the 11th/17th century, our major source is Ewliyā Čelebi, who visited Ṭarabzun at the very beginning of his travels. Based on the account of Meḥmed ʿĀshīḳ, himself a native of Ṭarabzun, Ewliyā describes the (still surviving) fortifications along with their gates. He was especially impressed by the Khātūniyye and its food stores kept by the *ʿimāret*. There was a daily distribution of soup and bread to *medrese* students, while on Friday nights, pilav, *zerde* and meat stew were handed out. Ewliyā also was much interested in the ethnography of the area, and provides information on the goldsmiths, Ṭarabzun's most prestigious craft. He further devotes considerable space to the trade in and the preparation of anchovy, a local speciality to the present day. Kātib Čelebi's *Djihān-nümā* contains very similar information, including details on fruit and fish (Istanbul 1145/1732, 429-30).

Well into the 10th/16th century, Ṭarabzun owed much of its importance to seaborne trade; Italian merchants had visited the town frequently before the Ottoman conquest, and some of them elected to stay on as Ottoman subjects (Lowry, *The question of Trabzon's* Efrenciyan *population, 1486-1583*, in *VIII. Türk Tarih Kongresi*, ii, Ankara 1981, 1493-1501). The late 9th/15th century *taḥrīr* still separates them into Venetians and Genoese. Toward the end of the 10th/16th and the beginning of the 11th/17th century, the trade of Ṭarabzun seems to have been less than prosperous. While in 952/1545-6 customs duties were farmed out for 453,333 *aḳčes* a year, the same farm in 1036/1622-3 produced only 500,000 *aḳčes*. Yet in the middle of the 10th/16th century 60 *aḳčes* had been equivalent to an Ottoman gold piece, while in 1032/1622-23, the rate was 170-200 *aḳčes* for 1 gold coin (DBŞM. 17229). This crisis must have been in part due to the Ottoman-Persian wars, which closed off the city's major trade route, and to the Djelālī rebellions, which caused many people, particularly among the non-Muslims, to leave the area. Cossack raids were also troublesome. Commercial crisis may also explain the difficulties of the *bedestān*; in 1022/1613, the building (which survives, and may at least partly go back to

pre-Ottoman times) had been lying in ruins for several years (K. Kreiser, *Bedestan-Bauten im Osmanischen Reich*, in *Istanbuler Mitteilungen*, xxix [1979], 397-8). In order to finance repairs, the administration of the Khātūniyye *ʿimāret* gave out a long lease and demanded rent in advance. By 1042/1632-3 the *bedestān* was again ruined in a Cossack raid; however, this time the building was repaired rather more rapidly than before, and Ewliyā claimed that much business was done here.

One of Ṭarabzun's major export goods during the 11th/17th and 12th/18th centuries was wine; this came from the vineyards near the town, but also from other localities on the eastern Black Sea coast, particularly Giresun. Ewliyā Čelebi refers to the "delicately perfumed" grapes tended in the numerous vineyards around the town. The wine trade to the northern shores of the Black Sea had existed in Byzantine times, but expanded greatly when the Ottoman closure of the Black Sea largely eliminated the competition of Mediterranean wines. Both Christian Abaza and Russians purchased Ṭarabzun wine in sizeable quantities, until the opening of the Black Sea to European navigation after 1188/1774 resulted in the decline of this trade. After the mid-13th/19th century, wine was only made for local use, and following the exodus of the Pontus Christians in the population exchange of 1923, vinification ceased entirely and vineyards contracted to the point of insignificance (X. de Planhol, *Grandeur et décadence du vignoble de Trébizonde*, in *JESHO*, xxii [1979], 314-29).

In the early 13th/19th century the Trabzon region suffered much from the tension between locally powerful families, particularly the Ṭuzdju Oghullarî, and the governors appointed by Maḥmūd II; in Ramaḍān 1231/August 1816 the entire town was occupied by Ṭuzdjuoghlu Memish Agha. Sporadic unrest continued until 1834. In the 1820s, British diplomatic officials produced plans for the re-routing of British exports to and imports from Persia by way of Trabzon, and in 1826, the first goods destined for Erzurum and Tabrīz appeared in the harbour. From 1836, transport was assured by British, French, Ottoman, Austrian and Russian steamers, and trade increased in the mid-19th century. In his report on the state of the Ottoman Empire in 1861, M.B.C. Collas claimed that, after Istanbul, this was the most commercially active Ottoman city. To Trieste and Britain both Persian silk and locally grown hazelnuts were despatched, while refined sugar and textiles were sent from Britain, in addition to Belgian arms and paper. The trade in livestock was also important, as animals sent to Istanbul from eastern Anatolia often passed through Trabzon (*La Turquie en 1861*, Paris 1861, 209). In 1900 trade had grown to the point that 487 steamers carrying 522,000 tons were employed, in addition to thousands of sailing ships. However, there were constant difficulties due to the state of the Trabzon-Erzurum land route, passable only for pack animals, and Russian customs policy aimed at diverting the trade to Transcaucasia. From the early 1880s, much of the trade between Persia and Britain passed again through the Persian Gulf ports. Trabzon traffic stagnated in absolute terms, while its market share decreased (C. Issawi, *The Tabriz-Trabzon trade, 1830-1900. Rise and decline of a route*, in *IJMES*, i [1970], 18-27). Cuinet, who described the state of Trabzon in 1890, mentions the complaints of local merchants on account of the poor state of Trabzon's port. Among commercially-significant local products, he lists silk and cotton fabrics, in addition to fruit exported to Russia, hazelnuts, tobacco and beans.

During World War I, Trabzon was in the line of fire; most market links were severed, and a large number of the town's young men perished in the Caucasus campaign of 1914. It was bombarded several times by Russian fleets; the attack of 1915 causing over 1,300 casualties and widespread destruction. In 1916, a Russian army occupied Trabzon; during this period intercommunal tensions between Turks, Pontic Greeks and Armenians dramatically increased. In the power vacuum following the withdrawal of Russian troops, fierce intercommunal fighting ensued. In 1918, Trabzon was reoccupied by Ottoman troops. The town was an important organisational centre for resistance against the partition of Anatolia. In 1923 it was the scene of the murder of Muṣṭafā Ṣubḥī, a central figure of the Turkish Communist party recently founded in the Soviet Union, who was passing through Trabzon in an attempt to reach Ankara.

After the agreement concerning the Turco-Greek exchange of populations negotiated at Lausanne, the local Greek community, which had numbered 91,000 in Cuinet's time, was expelled from the area in 1923.

Throughout the Republican period, the economy of Trabzon has suffered from structural problems. Agriculture predominates, but suitable land is in short supply. Farmers working minuscule plots produce tobacco, hazelnuts and tea for the market, and depend both on the vagaries of world demand and government decisions concerning the quality and price of tea. Population densities are among the highest in Turkey, and would be even higher if it were not for emigration, especially to Istanbul. Trabzon itself possesses little industry, but a commercial tradition going back into the Ottoman period, when the town was known for its Muslim bourgeoisie, has helped Trabzon maintain its trade, though the port, modernised in 1954, handles much less traffic than nearby Samsun. In the 1980s transit trade with Iran once again became important. A technical university was founded in 1963, and expanded to a full-scale one in 1982. But since the tertiary sector generates few jobs, the town, with a population of 108,000 in 1980, has grown less than other comparable urban centres.

Bibliography: The articles *Ṭarabzun* in *EI*[1] (J.H. Kramers) and *Trabzon* in *İA* (M. Şehabeddin Tekindağ) contain numerous references. An exhaustive bibl. of travellers who have visited Ṭarabzun, and a listing of secondary literature published until the late 1970s, can be found in Bryer and Winfield, *Pontos*, pp. XXII-LI. Trabzon *sālnāmes* are presently being reprinted. See further J.M. Kinneir, *Journey through Asia Minor, Armenia and Koordistan in the years 1813 and 1814*, London 1818, 337-41; Col. B. (SURAIYA FAROQHI)

ṬARAFA, a name given to a number of Arab poets, chief among whom was the pre-Islamic composer of a *Muʿallaḳa* [*q.v.*] ʿAmr b. al-ʿAbd b. Sufyān, so-called, according to some, because of his use of the participle *muṭṭarif* (although, by analogy with al-Mutalammis [*q.v.*] and similar sobriquets, we might expect him to be known as *al-Muṭṭarif*), while according to others, it is a *nomen unitatis* from *ṭarfāʾ*, a type of tamarisk (see further Sezgin, *GAS*, ii, 115, and M. Seligsohn, *Dîwân Ṭarafa ibn al-ʿAbd al-Bakrî*, Paris 1901, 3-4). Ṭarafa was purportedly related to the poets Muraḳḳish the Elder and Younger [*q.vv.*] and to al-Mutalammis; his sister Khirniḳ composed verse; and his tribe, the Ḍubayʿa, belonged to the Ḳays b. Thaʿlaba, a sub-sect of Bakr b. Wāʾil [*q.v.*], which also boasted the poets al-Aʿshā and ʿAmr b. Ḳamīʾa. It is unclear whether these familial ties were uterine or whether the poets constituted an Arabian guild of craftsmen, of the type discussed for ancient Mesopotamia by W.G. Lambert, *Ancestors, authors and canonicity*, in *Journal of Cuneiform Studies*, xi (1957), 1-14. Whether Ṭarafa was a Christian or a staunch pagan cannot be determined from his verse; no confidence should be placed on his father's name (al-ʿAbd, an indeterminate theophoric), or on the name of al-Mutalammis's father, which is variously given as ʿAbd al-Masīḥ and ʿAbd al-ʿUzzā: see Ch. Pellat, art. AL-MUTALAMMIS.

According to Ibn Ḳutayba (*Shiʿr*, 91-2), the poet Labīd referred to Ṭarafa as *ibn al-ʿishrīn*, the one in his twenties, thereby either referring to or occasioning the legends of Ṭarafa's premature death: see also Ibn al-Sallām al-Djumaḥi, *Ṭabaḳāt fuḥūl al-shuʿarāʾ*, Cairo n.d., 45, who slots him in the fourth echelon (*ibid.*, 115).

Nothing concrete is known about Ṭarafa. Several episodes in his "life" are lovingly, albeit variously, related by the mediaeval literati, although not by Abu 'l-Faradj in the *Aghānī*, which contains no chapter devoted to him. These reconstructions show that Ṭarafa's poetry was subjected to an exhaustive philological and biographical scrutiny at a very early stage, with the episodes in his life being "corroborated" by allusions in his verse. Indeed, it can be argued that the values reflected in the Ṭarafa legend, fidelity, to the point of extinction, to regal command, a hedonistic love of life and a fierce, indomitable independence, are more appropriate to a later age, celebrating loyalty to one's monarch and exultation in the Bedouin spirit of one's ancestors, suggesting that Ṭarafa was held up as an emblematic paragon of sorts. Scrutiny of Ibn Ḳutayba's entry on Ṭarafa (*Shiʿr*, 88-96) reveals two biographies, one narrating his death (88-90), and a condensed version of his short life and gruesome death ascribed to Ibn Ḳutayba himself (90-1). A full, manifestly fabricated, account of the events leading to Ṭarafa's death is given by al-Anbārī [*q.v.*], *Sharḥ al-ḳaṣāʾid al-sabʿ al-ṭiwāl al-djāhiliyyāt*, ed. Muḥammad ʿAbd al-Salām Hārūn, Cairo 1963, 115-28.

Standard episodes are: his precocious, proverbial, upstaging of al-Mutalammis (or al-Musayyab b. ʿAlas [*q.v.*]) upon his inappropriate application to a camel stallion of an epithet more fitting to a she-camel; the death of his father when Ṭarafa was still a child: a literal reading of v. 1 of poem 1 in Ahlwardt's edition of the *dīwān* (W. Ahlwardt, *The divans of the six ancient Arabic poets*, London 1870); banishment from his people, caused by his incessant and unregenerate profligacy; the affair of the camels, variously said to belong to his brother Maʿbad (which is also said to have been his father's name) or to Ṭarafa himself: Ṭarafa is generally represented as the culprit, preoccupied with his verse composition to the detriment of his pastoral duties, although according to al-Anbārī, the camels were confiscated by ʿAmr b. Hind, the Lakhmid ruler (A.D. 554-69) [see LAKHMIDS]; the repossession of the camels by means of poetry; Ṭarafa's participation in the revolt of ʿAmr b. Hind's brother, ʿAmr b. Umāma, and his voyage to the Yemen; the vituperative attacks on ʿAmr, his brother Ḳābūs, and ʿAbd ʿAmr b. Bishr, said by some to be Ṭarafa's cousin, which led to his death; his breach of court etiquette by his effrontery towards ʿAmr's sister; the letter of al-Mutalammis and Ṭarafa, addressed to the governor of al-Baḥrayn, ordering the death of the bearer (see A.J. Arberry, *The seven odes*, London 1957, 67-8; A.F.L. Beeston, *Background topics*, in A.F.L. Beeston

et alii, *The Cambridge history of Arabic literature. Arabic literature to the end of the Umayyad period*, Cambridge 1983, 22; Pellat, *art. cit.*; J.E. Montgomery, *The deserted encampment in ancient Arabic poetry: a nexus of topical comparisons*, in *JSS*, xl [1995], 292); Ṭarafa's death and burial. It can safely be maintained that no historical credence should be accorded to any of these incidents, as they are all reconstructions, based on, often with details drawn from, verses in the poet's *dīwān*. It would be foolhardy even to associate Ṭarafa with Lakhmid politics in al-Ḥīra [*q.v.*].

A similar degree of scepticism has surrounded the poetic remains of the Bakrī, from the mediaeval period to the present. The *dīwān* exists in a spartan version which goes back to al-Aṣmaʿī, while the recension by Ibn al-Sikkīt, via al-Shinḳīṭī, is slightly more voluminous. It is impossible to determine which poems are authentic; which are fragmentary (Ahlwardt, poem 11, is a 14-line *nasīb* [*q.v.*]—or is it *ghazal* [*q.v.*]?—combining skillfully the amatory topics of *aṭlāl*, desert encampments, *tashbīh*, description of beloved, *aṭlāl* and *khayāl*, phantasm of the beloved); which are falsely ascribed (such as Ahlwardt, poem 3, the reminiscences of the proud leader of a noble troop of raiders now dead); and which are fabricated to provide support for the poet's legend (such as, for example, Ahlwardt, poems 6, 7 and 16: *hidjāʾ* [*q.v.*] of the Lakhmids and ʿAbd ʿAmr; poem 18, a verse apology addressed to ʿAmr b. Hind; poem 13, comparing Ṭarafa's devotion to Salmā with Muraḳḳish's devotion to Asmāʾ, a piece which has the playfulness and wit of an ʿAbbāsid composition, replacing the poet's desert journey with that of the *khayāl*). The majority are occasional poems, largely concerned with the themes of tribal might and generosity or with the righting of a wrong and restitution of rights (Ahlwardt, poems 1, a demand for the restoration of property, and 2, an expression of disgust and dismay upon betrayal by friends, are examples). They reveal a fluid style of composition: Ahlwardt, poem 12, is a bipartite piece commencing with an *aṭlāl* section (vv. 1-5) and culminating in a lampoon aimed at a certain ʿAbd al-Ḍallāl, of which vv. 6-13 are direct attack, whereas 14-17 are sententious reflections on honour and ignominy (not devoid of flourishes of formal rhetoric), setting the standard from which Ṭarafa's adversary has so conspicuously deviated. In three poems (Ahlwardt, 5, 10 and 17) Ṭarafa expresses his gratitude for acts of generosity towards his people in time of need. They are addressed to the Banū Ḳays b. Thaʿlaba, the Banū Saʿd b. Mālik and an individual known as Ḳatāda, respectively. Poem 5 is 76 verses in length, while 10 has 17 verses and 17 has eleven. From a generic point of view, it is impossible to decide whether these poems are *madḥ* or *fakhr* [*q.vv.*], presumably because of the close tribal ties existing between the poet and his dedicatees. Personal and tribal vaunting is an integral feature of these poems, suggesting that the service paid to the dedicatee is more a bond of fealty and loyalty than a mere poetic extolling of their greatness for posterity. As such, they are indispensable for a just appreciation of the origins and significance of the pre-Islamic panegyric. Ahlwardt, poems 8, 9 and 14, are monopartite boasts of the generosity and military prowess of Ṭarafa's tribe; 8 and 9 are of a more generalised character, of 16 and 10 verses respectively; while 14 is a 22-verse chronicle in celebration of the battle known as *Yawm Taḥlāḳ al-Limam* (the "Day of the Shaving of the Beards") and contains a splendid evocation of the tribe's splendour in war (ll. 11-22). Ahlwardt, poem 19, is a minatory tribal boast directed at an unnamed adversary, whom the commentators identify as the Taghlib, connecting the piece with the peace settlement bringing to an end the War of Basūs. This poem contains a heavily symbolic *aṭlāl*, reclaimed by nature (ll. 1-7), two sections of admonitions (ll. 8-12 and 17-21), a narrative of al-Ghallāḳ, whoever he may have been (l. 13-16), and two lines of sententiae capping the work, a technique identical with poem 12. There also exists a monothematic poem of 31 verses, treating of aphoristic and sententious moralisings, edited from a manuscript in the Chester Beatty Library by Arberry, *A poem attributed to Tarafa ibn al-ʿAbd*, in *JSS*, x (1965), 149-58.

Conspicuous in the *dīwān* is the poet's *Muʿallaḳa*. There has been much dispute over its authenticity, and, as Arberry, *The Seven Odes*, 82, remarks, "the various recensions exhibit considerable divergence in the order and contents of the poem". These versions are most probably the products of the exercise of editorial discernment on the part of the mediaeval scholars. It is of some 105 verses (the exact number is disputed) and is tripartite in structure, with a *nasīb* and an astonishing camel-description in which the animal is anatomically dissected, limb by limb, joint by joint, by the poet, from bottom to top, and in which the poet eschews the use of any extended similes involving onager, oryx or ostrich, a practice followed by many of his contemporaries. The description is not, however, static, as some scholars maintain, for Ṭarafa is at pains to remind the audience that this massive camel is engaged on a desert journey of consummate significance for the poet and his companion, a journey in which a "man-made" camel responds to the decisions of a man of action. The polythematic third section is a reflection on the poet's relationship with his family, his observations on this mortal coil, and his bitter celebration of his own identity.

(J.E. Montgomery)

TARANČIS, a Turkic Muslim people originally from the Kāshghar oasis in southern Sinkiang [*q.v.*]/Xinjiang, where some of the original stock remained.

Most of them were displaced, at the same time as the Dungans or Tungans [*q.v.*] (T'ung-kan/Hui) towards the middle Ili valley to the northwest of Chinese Turkestan, where they were able to take advantage of this fertile region by displacing the Dzungars (also called Kalmucks), who had lived there until they were massacred in 1758 by the Ching/Qing power. Six thousand Taranči families are said to have been installed there by 1834, 4,100 on the right bank of the Ili and 1,900 on the left one (Radloff, 1893, 331). They enjoyed a certain prosperity there before becom-

ing the object of more and more frequent military requisitions by the Manchus as Muslim rebellions in Sinkiang increased, culminating under the Khodjas from 1863 onwards, setting the Tarančis at odds with the Chinese authorities (notably the general Tso Tsung-t'ang, 1812-85) as well as with their Tungan neighbours. Taranči fortunes enjoyed a short blossoming parallel with the rise of the Khokandī Yaʿkūb Beg [*q.v.*]. Under the headship of the Sultan Aʿlā Khān (or Abu 'l-Aʿlā), in the year 1865 (proclaimed as the year 1 of an "era of Islam" (*tārīkh-i Islām*) which was to last for seven years), they formed the independent sultanate of Kuldja [*q.v.*]. This region was conquered and then temporarily governed by the Russian empire 1871-82 as the "district of Kuldja". After its retrocession to China (Treaty of St. Petersburg of 12 February 1881, which gave the Russians certain commercial and consular privileges), 45,373 out of 51,000 Tarančis passed over to Russian territory and were settled in the Semireč'e *oblast'*, mainly at Djārkent, founded for this purpose in 1882, but also at Vernyi (Almati), and in the Transcaspian region around Bayram Ali (Barthold, *EI*[1] art. s.v.). Displaced on various occasions by the formation of new Cossack colonies, according to the Russian census of 1897 there were *ca.* 70,000 in Turkestan, including 56,000 in the Semireč'e, 5.87% of the total population. This did not prevent Russian influence growing in Kuldja and Kāshghar, as part of a local version of the "Great Game" involving rivalry between Britain and Russia within China, from 1884 (the date of the setting-up of the province of Sinkiang by Peking) to 1962 (the date of the closing of the Russian consulates).

The Tarančis were sedentary agriculturists. Their mosques resembled pagodas and they had numerous *madrasas* (Ujfalvy, 1879). In physical type, culture, religion and language, they were close to the Iranised sedentaries of Transoxania, the Sarts [*q.v.*] of Russian sources of the 19th and early 20th centuries, except that their womenfolk enjoyed greater liberty, not being veiled, until the conservative reaction of the Khodjas. They specialised in kitchen garden produce and trade, and one of the two bazaars in Kuldja bore their name. They spoke an eastern Turkic dialect called Karluk, close to Uzbek and belonging to the group of sedentary speech of western and eastern Turkestan (A. Samoylovitch, in *EI*[1], art. *Turks. II. Languages*). However, the Russian orientalist N. Pantusov, who discovered in 1876 at Kuldja the *Kitāb-i ghazāt dar mulk-i Čīn*, written *ca.* 1292-3/1875-7 by Molla Bilāl, who had taken part in the 1863 rebellion, found differences between the Taranči dialect and that of their original stock in Kāshghar. In this book can be found the dating of the displacement of the "Sarts of Kāshghar", who were to become the Tarančis, to the Ili valley, as occuring *ca.* 1760. This manuscript, essential for showing the historical movements and specific cultural features of the Tarančis, reveals *inter alia* peculiarities of their language: an Arabo-Persian stratum common to all the Turkic oasis dialects of Central Asia, but also a large number of Kalmuck, Mongol and Chinese loanwords which made their language intelligible only with difficulty for the speakers of other Turkic languages, including their neighbours, and this contributed to their isolation (Radloff, 1886).

Certain sources have suggested that the Tarančis are the descendants of the ancient Uyghurs or call them "Uyghurs of the Ili" (Kabirov). However, it is through their cultural and ethnic nature that the Tarančis have made themselves a sub-strain of the contemporary Uyghurs, who were in 1989 about six millions in Sinkiang and 185,000 (half a million in their own estimation) in Kazakhstan. Today, amongst these last, 150,000 call themselves of Taranči origin, which means essentially that they came from the Semireč'e, as opposed to the "Kāshgharlïk" who have come directly from Kāshghar, like the majority of the Uyghurs in Uzbekistan and Kirghizia. This fact was noted by Barthold, according to whom both the Tarančis and the "Turks of Kāshghar" have misleadingly taken the name of Uyghurs. This illustrated one of the frequent misunderstandings of this part of the world regarding ethnic origins and the spread of ethnic names. From the Chinese side, 79,296 Tarančis were counted in Sinkiang still in 1945, after which date they disappear from separate mention in the censuses, at the side of 2,988,528 Uyghurs.

From the beginning of the 20th century onwards, the history of the Tarančis become mixed with that of the general populations on each side of the Chinese-Russian frontier, each of the communities being affected by events which touched their respective centres of power. The revolt of the nomads in Russian Central Asia in 1916, like the events marking the 1917 revolution in Turkestan, was the stimulus for vast movements of peoples across the frontier in the direction of China (thus close to 10,000 Tarančis out of the 16,000 residents there left Djārkent in 1917 (Barthold), who came back some decades later with the formation of the People's Republic of China. From 1924, specific Taranči nature was no longer recognised in the USSR as a criterion for ethnic differentiation. The politics of nationality amongst both Russians and Chinese after 1949 assimilated them to the Uyghurs, and they no longer figure in census reports. Henceforth, their ethnic and cultural strains have been merged into those of the Turkish-speaking Muslim minorities fragmented by the policies and the demographic pressures of the Chinese on one hand, and the affirmation of Kazakh nationality, since the independence of Kazakhstan in December 1991, on the other.

TARANTO [see ĪTALIYA].

TARĀWĪḤ (A.), pl. of *tarwīḥa*, the term for *ṣalāts* which are performed in the nights of the month of Ramaḍān. Tradition says that Muḥammad held these prayers in high esteem, with the precaution, however, that their performance should not become obligatory (al-Bukhārī, *Tarāwīḥ*, trad. 3). ʿUmar is said to have been the first to assemble behind one *ḳārī'* those who performed their prayers in the mosque of Medina singly or in groups (*loc. cit.*, trad. 2); he is also said to have preferred the first part of the night for these pious exercises.

The religious law recommends the performance of the *tarāwīḥ* shortly after the *ṣalāt al-ʿishā'*. They consist of 10 *taslīmas*, each containing 2 *rakʿas*; after every four *rakʿas* a pause is held, hence the name *tarāwīḥ* "pauses". In the Mālikī law school, they consist of 36 *rakʿas*. They belong to the *ṣalāts* that are *sunna* and are as popular as any rite connected with Ramaḍān [*q.v.*]. Shīʿī *fiḳh* prefers a thousand supererogatory *rakʿas* throughout the month of Ramaḍān.

In Mecca, people assemble in groups varying from 10 to 150 persons, behind one *imām*, who acts in this case unofficially, even if he should be an appointed official. The recitation of the Ḳur'ān has a prominent place in these *ṣalāts*. Certain groups abide behind their *imāms* reciting the Ḳur'ān once or several times in the nights of Ramaḍān. Even after the *tarāwīḥ*, many people stay for pious exercises.

In Atcheh, every night large crowds assemble in order to perform the *tarāwīḥ*. Usually, however, it is the *tönku* alone who takes the active part in them, the others limiting their part to a loud joining-in with the *āmīn* and the eulogies on the Prophet.

ṬARĀZ, the Arabic name for TALAS, a river of Central Asia and a town of pre-Islamic and early Islamic times on its bank. The exact site is unknown, but was probably near the later Awliyā Atā/Aulie Ata, modern Dzhambul. This last is now just within the Kazakhstan Republic, but the old name Talas has been revived for a modern settlement some distance to the east, on the left bank of the Talas River and just within Kirghizia. The original Talas certainly lay in the river valley, between two mountain ranges which run westwards and end in the Aḳ Ḳum desert.

The valley carried an important trade route eastwards to the Ču [*q.v.*] valley and the Semireč'e [see YETI SU]. Talas was an ancient town, mentioned in the report of the Byzantine envoy Zemarchos, who travelled to the encampment of the Ḳaghan of the Western Turks in 568, and known as a commercial centre to the Chinese Buddhist pilgrim Hüan Tsang (*ca.* 630) as Ta-lo-si. Its origin was possibly Sogdian, and as late as the 5th/11th century, Maḥmūd Kāshgharī states that both Sogdian and Turkish were spoken at Talas and the nearby towns of Isfīdjāb and Balāsāghūn [*q.v.*] (*Dīwān lughāt al-turk*, Tkish. tr. B. Atalay, i, 30, Eng. tr. R. Dankoff and J. Kelly, i, 84). Recent archaeological excavations in the region have shown that various faiths were professed there in early times, including Zoroastrianism, Christianity and Buddhism, and inscriptions have been found in the Talas valley in the Old Turkish "runic" alphabet and in Uyghur script.

Talas first comes into prominence in Islamic history as the general locale of the battle fought in Dhu 'l-Ḥidjdja 133/July 751 between the Chinese governor of Ḳuča, Kao Sien-chih, and his Turkish allies, and the Arab commander Ziyād b. Ṣāliḥ al-Khuzāʿī [*q.v.*], a battle which checked Chinese ambitions of establishing direct control over Central Asia (see Barthold, *Turkestan down to the Mongol invasion*[3], 195-6; H.A.R. Gibb, *The Arab conquests in Central Asia*, London 1923; R. Grousset, *L'empire des steppes*[4], Paris 1952, 170-1, Eng. tr. *The empire of the steppes. A history of Central Asia*, New Brunswick, N.J. 1970, 119-20; W. Samolin, *East Turkistan to the twelfth century. A brief political history*, The Hague 1964, 66-7; D.M. Dunlop, *A new source of information on the Battle of Talas or Aṭlakh*, in *Ural-altäische Jahrbücher*, xxxvi [1965], 326-30). In 280/893 the Sāmānid Amīr Ismāʿīl b. Aḥmad [*q.v.*] raided Talas, which O. Pritsak believes was now the capital of the Western Turk *Ḳaghan*, Oghulčaḳ Ḳadïr Khān, and turned the Christian church there into a mosque (*Von den Karluk zu den Karachaniden*, in *ZDMG*, ci (1951), 288-9; Samolin, *op. cit.*, 78-9). In the next century, a local ruler (*dihḳān*) of Talas is mentioned, perhaps a tributary of the Sāmānids. Talas is now, in the 4th/10th century, described by the Islamic geographers. Ibn Ḥawḳal and al-Muḳaddasī state that it was strongly fortified and populous, a centre for trade with the Ḳarluḳ [*q.v.*] Turks who lived in the steppes beyond the town; the second of these authors mentions goatskins as one of the products of Talas (see Le Strange, *The lands of the Eastern Caliphate*, 468-7). According to the *Ḥudūd al-ʿālam*, both Muslim and [infidel] Turks inhabited this haunt of merchants, the *dar-i Khallukh* (tr. 119, comm. 358).

Under the Ḳarakhānids [see ILEK-KHĀNS], Talas became of special importance. It formed part of Ḳadïr Khān Yūsuf's patrimony, which extended from Eastern Turkestan through the Semireč'e to the eastern part of the middle Sir Daryā province (of which Talas, with Isfīdjāb, was reckoned a part), and after his death in 423 or 424/1032, fell to his second son Yïghantigin Muḥammad (d. 449/1057), who now assumed the title Bughra Khān. We begin to possess Ḳarakhānid coins minted at Talas, e.g. by Tamghač Bughra Khān

Ḥasan or Hārūn b. Sulaymān b. Ḳadir Khān Yūsuf (d. 496/1103), head of the eastern branch of the family and dedicatee of the *Kutadghu bilig* [*q.v.*]. In 607/1210 there took place at Talas a battle between the Khwārazm Shāh ʿAlāʾ al-Dīn Muḥammad and his ally the Ḳarakhānid ʿUthmān b. Ibrāhīm, and the pagan Ḳara Khitay [*q.v.*], which was indecisive but which exhausted the Ḳara Khitay resources and paved the way for the ephemeral triumph in Central Asia of the Nayman Mongol Küčlüg (see Djuwaynī-Boyle, i, 342-7; Barthold, *Turkestan*³, 159, 358-9).

It was soon after this, in 1221, that the Taoist traveller Ch'ang-ch'un crossed the Talas River (*t'a-la-su*) on a stone bridge (E. Bretschneider, *Mediaeval researches from eastern Asiatic sources*, London 1910, i, 73 and n. 185). Under the Mongols, the Talas region was ruled by governors, who minted coins there. In 1253 Rubruck passed through the Talas valley, where he mentions a Muslim town *Kinchac* = Kemdjek, a town generally mentioned together with Talas in the Persian historical sources of the period (see P. Jackson (tr.) and idem and D.O. Morgan (comm.), *The mission of Friar William of Rubruck*, London 1990, 143, 144-5). It was on the banks of the Talas River that the first Mongol *ḳuriltay* [*q.v.*] held in Central Asia took place in spring 1269, when agreement was reached between Ögedey's descendant Ḳaydu and the Čaghatayid Baraḳ over their respective territories (Barthold, *Four studies*, i, 126; cf. J.A. Boyle, *The descendants of Genghis Khan*, New York and London 1971, 139-40).

It is in Mongol times that the name of the town of Yangī ("The New") appears alongside that of Talas, sometimes in the combination Yangī-Ṭarāz, as in Mirkhwānd (cited in Barthold, *Four studies*, ii, 95 n. 2; cf. Mīrzā Muḥammad Ḥaydar Dughlāt, *Taʾrīkh-i Rashīdī*, ed. and tr. N. Elias and E.D. Ross, London 1895, 79 n. 3); but thereafter, Talas largely disappears from mention in the historical sources.

Bibliography: Largely given in the article, but see also the indices to Barthold, *Four studies on the history of Central Asia*, Leiden 1956-62, i, and a modern study of the town, T.N. Senigova, *Srednevekoviy Taraz*, Alma Ata 1972. (C.E. Bosworth)

TARBIYA (A.), the general term in more recent Arabic for education, pedagogy (Pers. *āmūzish* wa *parwarish*; late Ottoman and Republican Turkish until roughly the early 1980s, *maarif* and *talim ve terbiye*, most recently, *eğitim*).

This topic at the elementary and pre-university or college level is dealt with in KUTTĀB; MADRASA. I. 1; PESANTREN; ṢAGHĪR, and at the university and college level in DJĀMIʿA; KULLIYYA; MADRASA. I. 2, 6.

ṬARD [see ṢAYD].

ṬARDIYYA (or *ṭaradiyya*) indicates a hunting poem; as a technical term, the word is already used in pre-modern times (e.g. by al-Nuwayrī, *Nihāyat al-arab fī funūn al-adab*, ix, Cairo 1933, 245, l. 1; cf. also Dozy, *Suppl.*, ii, 34, who quotes from al-Maḳḳarī). (The hunting poems composed in the metre *radjaz* are already dealt with in the article RADJAZ; in what follows, special attention is paid to aspects not taken into consideration there.)

Arabic hunting poems are thematically self-contained, in most cases composed in the *radjaz* metre and safely attested to from the time of al-Shamardal b. Sharīk (d. after 109/728 [*q.v.*]; for two pieces of 32 and 21 lines each, both describing the hunt with birds of prey, cf. T. Seidensticker, *Die Gedichte des Šamardal ibn Šarīk*, Wiesbaden 1983, nos. 20, 39). The evolution of the genre up to al-Shamardal can be sketched as follows: 1. Already in pre-Islamic times, descriptions of sporting hunts constitute sometimes elements of the final *fakhr* of the polythematic *ḳaṣīda*. 2. Still in pre-Umayyad times, *ḳaṣīdas* began to be composed in the *radjaz* metre, and thus such hunting episodes might well have been transformed into *radjaz* as part of *ḳaṣīdas*. 3. From *ca.* 80/700 onwards, when *radjaz* poetry was experiencing its apogee, these episodes grew independent. This filiation is corroborated by al-Shamardal's introductory formula *ḳad aghtadī* and the figure of the hunting servant, both known from the *fakhr* of pre-Islamic *ḳaṣīdas* (see Seidensticker, *op. cit.*, 15-16). The second step cannot with certainty be documented from the poetic material known to us. Fragments of several *urdjūzas* ascribed to al-Shamardal's contemporary Abu 'l-Nadjm al-ʿIdjlī [*q.v.*], however, seem to indicate that this poet composed *radjaz ḳaṣīdas* containing a *nasīb* as well as a hunting episode, though these parts are transmitted separately. In two instances, a hunter lying in wait in his hide is depicted, who manages to kill an onager (cf. *Dīwān*, ed. ʿA. Aghā, Riyāḍ 1981, nos. 25, 56; ed. J. Hämeen-Anttila, Helsinki 1993, nos. 30, 64). In a third instance, an ostrich is hunted and killed by a horseman, which is close to the aristocratic type of hunt known from the ancient *ḳaṣīdas* (ed. Aghā, no. 4; ed. Hämeen, no. 2): fragments of a *nasīb*, however, are not transmitted in this last case. Besides, the formula *ḳad aghtadī* is not employed by Abu 'l-Nadjm.

Pieces such as al-Shamardal's *radjaz* poem no. 20, with the formulaic *ḳad aghtadī* introduction, the mentioning of dawn as the time of departure, the devotion of the main part to the description of the hunting animal in action, and the final part relating the preparation of the hunters' meal, have determined the shape of *ṭardiyyas* of later times to a great extent. Several decades after him, a somewhat obscure *rādjiz* named Ghaylān b. Ḥurayth composed two hunting poems (cf. *Five Rağaz collections*, ed. Hämeen-Anttila, Helsinki 1995, 219-20 no. 3, 221 no. 7), the first of which seems to imitate al-Shamardal's poem no. 20 (or was contaminated with it in the course of transmission). We are first on firm ground with the *ṭardiyyāt* of Abū Nuwās (d. *ca.* 200/815 [*q.v.*]). He has left a large number of hunting poems, 30 pieces being undisputed in authorship, many others stemming from him with high probability (see *Dīwān*, ed. E. Wagner, ii, Wiesbaden 1972, 176-327; ed. A.ʿA. al-Ghazālī, Beirut 1953, 624-71). Metres other than the *radjaz* are rarely employed (he has only four poems in *sarīʿ* and *madīd*); besides *ḳad aghtadī* and an introductory *lammā* (cf. already al-Shamardal, nos. 22, 26, and Ghaylān b. Ḥurayth, no. 7), he would start with *anʿatu* and *yā rubba* as opening expressions. In the final parts of his *ṭardiyyāt*, we often find an enumeration of the animals killed (cf. already al-Shamardal, no. 20, ll. 26-7), descriptions of their preparation as food and concluding expressions as, for example, *yā laka min* or *niʿma 'l-rafīḳu/'l-khalīlu*, both said in praise of the hunting animal. Introductory and concluding formulae, the mentioning of dawn and of the preparation of the meal are sometimes omitted; the length of the poems varies between one and three dozens of lines, and a great variety of hunting animals are treated (dogs, cheetahs, goshawks, tiercels, sakers, peregrines and merlins). In some cases, Persian words are employed with conspicuous frequency. Notwithstanding all these variations, Abū Nuwās's *ṭardiyyāt* seem to be strongly determined by form and contents.

Ibn al-Muʿtazz (d. 296/908 [*q.v.*]), a man of letters and caliph for one day, is the next author who has left a greater number of *ṭardiyyāt* (cf. *Dīwān*, ed.

B. Lewin, iv, Istanbul 1945, nos. 1-53; ed. M.B. Sharīf, ii, Cairo 1978. nos. 66-120). No profound changes have taken place since Abū Nuwās' days. The *radjaz* metre still predominates (only about half a dozen poems being composed in metres other than the *radjaz*, among which the *mutaḳārib* prevails), and there are no new introductory formulae. The structure of the poems follows more or less the schemes known from Abū Nuwās, with the exception perhaps of the concluding formulae, which Ibn al-Muʿtazz seems to have neglected. If there was any change, it was in characterisation and description, above all, by way of imagery. Sometimes, quite surprising similes are used, and by the choice of the *secunda comparationis* for the hunting animals, an atmosphere of luxury is given to many of the poems.

Less committed to the tradition of Abū Nuwās was Ibn al-Muʿtazz's contemporary al-Nāshiʾ al-Akbar (d. 293/906 [*q.v.*]), a well-known Muʿtazilī author. The collection of his fragments by H. Nādjī (in *al-Mawrid*, xi/1-4 [1982], and xii/1 [1983]) contains some three dozen hunting poems. Nearly half of these are composed in metres other than the *radjaz* (chiefly in *mutaḳārib, madīd, basīṭ* and *ṭawīl*). About one-third of the poems start with one of the formulae already known; concluding formulae as well as descriptions of the hunters' meal are missing. On the whole, al-Nāshiʾ tends to concentrate on depictions of the hunting animal, hence approaching the *waṣf* genre. Unique features are the hunt with the desert lynx (*ʿanāḳ al-arḍ*) and the weasel (*ibn ʿirs*) and the waiting for the lion in hides (cf. ed. Nādjī, nos. 23, 63, 116, 125).

A later poet was Kushādjim (d. *ca.* 360/971 or earlier [*q.v.*]), who has left 17 *ṭardiyyāt*. More than his two predecessors just mentioned, he closes his poems either by a summarising remark or a final formula (as, e.g., *akrim bi-*, cf. *Dīwān*, ed. Kh. M. Maḥfūẓ, Baghdād 1970, nos. 353, 467). But in doing so, he did not go beyond what was already achieved by Abū Nuwās. Around this time, a sideline had come to the fore in the *ṭardiyyāt*, sc. poetry on fishing with a net. One such piece is ascribed to al-Ṣanawbarī (d. 334/945 [*q.v.*]; *Dīwān*, ed. I. ʿAbbās, Appendix no. 72), and al-Sarī al-Raffāʾ (d. *ca.* 362/972 [*q.v.*]), who occasionally earned a living as a fisherman, cultivated this topic particularly. Half-a-dozen *urdjuza*s are transmitted from him (cf. *Dīwān*, Cairo 1355, 6-7, 13, 146, 204, 267), one of them with a *ḳad aghtadī* introduction (10). Two pieces are composed in *ṭawīl* (157, 170). With this exception, the *ṭardiyyāt* do not seem to have developed much further after the second half of the 4th/10th century. The genre loses importance also with respect to quantity, though hunting poems were still composed until the 8th/14th century and after.

(T. Seidensticker)

TARDJAMA (A., pl. *tarādjim*), verbal noun of the verb *tardjama* "to interpret, translate, write the biography of someone (*lahu*)". For the function of interpreter, see TARDJUMĀN.

1. In literature.
2. Translations from Greek and Syriac.
3. Translations from Middle Persian (Pahlavī).
4. Modern translations into Arabic.
   (a) The 19th century.
   (b) The 20th century.
5. In modern Persian.
6. In Turkish.

1. In literature.

Here, it may form part of the title of a biography, or, especially in contemporary North Africa, the biography (or autobiography) itself. Hence *ʿilm al-tarādjim* is a branch of historical research, sometimes equated by the Twelver Shīʿa with *ʿilm al-ridjāl* [*q.v.*]. The term dates to at least the early 5th/11th century, where it appears in the titles of three works by al-Thaʿālibī (350-429/961-1038 [*q.v.*]), *Tardjamat al-shuʿarāʾ*, *Tardjamat al-kātib fī ādāb al-Ṣāḥib*, and *Tardjamat al-Mutanabbī*; Yāḳūt, *Udabāʾ* (e.g. i, 26-7), refers to earlier scholars who compiled *tarādjim*.

Even when autobiographical, a *tardjama* is generally written in the third person, suggesting a distancing from self and an appeal to set standards and understandings of religious and narrative authority. Its components include a genealogy, an account of formal education and—especially for North Africa—Ḳurʾānic memorisation, a list of teachers (often including close relatives, which indicates family support for religious learning), the books and subjects studied, travels, and selections from the subject's poetry, aphorisms, or other contributions to learning. A *tardjama* purports to represent words and deeds reliably and with credible witnesses, although, as quotation marks are not used in classical texts, the Arabic stylistic tag "he said to him", *ḳāla lahu*, does not clearly distinguish between speech and paraphrase. The *tardjama* records the evidence of a person's character and actions. Even modern *tarādjim* contain no speculation concerning "inner" self or motive, although the juxtaposition of anecdotes that demonstrate piety and devotion to Ḳurʾānic studies suggest intent. A *tardjama* provides dates whenever possible, since the ability to date events distinguishes the traditionally educated and the élite (North Africa, *nās khāṣṣa*) from "commoners" (*ʿawāmm*), who lack such distinction. Specific dates thus further enhance claims to authority and status.

A *tardjama* represents the actions and attributes that legitimate the piety, literary and scholarly authority of its subject. Other activities, no matter how significant for understanding the role of the individual, are not part of the reported scholarly persona. There is no mention of marriages, and female relatives generally appear only when they encourage Ḳurʾānic memorisation and recital. In most instances, the family or household contexts in which early learning occurs cannot be directly ascertained from a *tardjama* unless the father or other relatives play a direct role in Ḳurʾānic education. Thus Mukhtār al-Sūsī's (1900-63) *al-Maʿsūl* (Casablanca 1961), a compendium of biographies of men of learning from Morocco's Sūs region, contains numerous entries which suggest that many of its subjects came from households where the father or another close relative is literate and takes an active role in encouraging Ḳurʾānic recitation (e.g. ix, 35-6, 101, 168). Likewise, peer learning, a crucial element in understanding traditional education, is passed over in silence, as are most political activities. Men of learning may be landlords, politicians and shrewd entrepreneurs, but these activities fall outside the scope of the *tardjama*, which concentrates upon elements that link individuals with the sacred religious and literary centre of society.

There have always been alternative forms of biography and self-representation, many of which blend into one another. These include lives of the Prophet and others (*sīra* [*q.v.*]); *ṭabaḳāt* [*q.v.*], alphabetical compendia of jurists, poets, and compilers of tradition; the chronicles of caliphs and rulers; the lives and miracles of saints (*manāḳib* [*q.v.*]); and pilgrimage accounts; and, since at least the early 19th century, memoirs influenced by Western methods and conceptions.

The emergence of the self, a conscious and self-reflexive "me" or "I", as an explicit subject in biographies and autobiographies, an important element of Western social thought since the 18th century, gradually entered Arabic, Turkish, Persian, and Urdu literature. Thus Ṭāhā Ḥusayn's third-person representation of himself in *al-Ayyām*, the first part of which was published in 1929, sometimes assumed to be a "realistic" image of an Egyptian childhood and mosque school education, is strongly influenced by European literary forms, as is the Algerian Malek Bennabi's *Mémoires d'un témoin du siècle* (Algiers 1965), originally written in French. The Moroccan ʿAllāl al-Fāsī (d. 1974), a popular lecturer at the Ḳarawiyyīn mosque-university in Fez in the early 1930s and subsequently a key leader in Morocco's nationalist movement, spoke only Arabic, yet the style of his autobiographical writings (e.g. *al-Naḳd al-dhātī*, Cairo 1952) suggests the influence of "modern" representations of self influenced at least indirectly by European forms.

The social and political context in which *tarādjim* are written must also be considered in both traditional and contemporary exemplars of the genre. In general, a *tardjama* represents religious scholars to specific, known audiences, whether an international network of scholars or more regional and local ones. Indeed, for a younger generation of state-educated North Africans, *tardjama* implies a traditional form of biographical narrative and religious authority; the term is not used for more "modern" forms of biography and autobiography. Until the availability of printing in the 19th century for Morocco and the 1970s for the ʿUmānī interior, *tardjamas* circulated only in manuscript form through networks of religious scholars known to one another. Thus access to *tardjamas*, as well as the ability to create them, implied religious and scholarly authority. Well after the introduction of printing, *tardjamas* continued to circulate in manuscript form. For instance, al-Sūsī's *Maʿsūl*, cited above, circulated for at least two decades prior to its private printing in 1961. In the Ibāḍī interior of northern ʿUmān, several compilations of *tarādjim* continue to circulate only as manuscripts.

There are several points of resemblance between *tardjamas* in regional contexts as disparate as ʿUmān and Morocco. In the *tardjamas* of both literary traditions, genealogies link men of learning with their distinguished ancestors, and the enumeration of scholars under whom the subjects studied does the same for their claims to scholarly authority. Selections from the subjects' sayings and actions exemplify character; lists of distinguished students represent their continued authority; and the sayings of associates who admire them enhance authority.

Tardjamas are not ordered by the chronological sequence of events, although genealogical descent and the details of early studies usually come first. Anecdotes or incidents intended to show character do not distinguish between youth or maturity. Because the persona of a man (or occasionally woman) of learning is linked to fixed qualities, sequence and chronology become peripheral.

In Morocco, as in ʿUmān, it is difficult to separate a *tardjama* from its intended audience. It is almost always prepared in response to a specific request, often for inclusion in compilations that reveal complex, mutually supportive networks of patronage among men of learning. Thus al-Sūsī portrays judges, court functionaries, teachers, and others with claims to learning as regularly offering hospitality and gifts to writers of such compendia, to poets and to others who could enhance their reputations. In this respect, *tardjamas* differ according to social and political contexts and over time. They are not self-contained. For the late 19th and 20th centuries, *tardjamas* were intended for audiences with access to additional (usually word-of-mouth) complementary narratives. In the contemporary era, as in the past, their compilation is a means of securing status and a reputation for learning.

Chamberlain, *Knowledge and social practice in medieval Damascus, 1190-1350*, Cambridge 1994, esp. 18-21, 149-50, 154-60. For the modern era, see D.F. Eickelman, *Knowledge and power in Morocco*, Princeton 1985, and idem, *Traditional Islamic learning and ideas of the person in the twentieth century*, in *Middle Eastern lives*, ed. M. Kramer, Syracuse 1991, 35-59. On genealogical representations of self, see A. Sebti, *Au Maroc: Sharifisme citadin, charisme et historiographie*, in *Annales: Économies, Sociétés, Civilisations*, xli (1986), 433-57. M.K. Hermansen, *Interdisciplinary approaches to Islamic biographical materials*, in *Religion*, xviii (1988), 163-82, offers a comprehensive general account, as does G. Makdisi, Ṭabaqāt-*biography: law and orthodoxy in Classical Islam*, in *Islamic Studies, Occasional Papers*, viii, Islamabad 1994, for the mediaeval period. M.H. Zaidi, *Biography in modern Urdu literature*, in *South Asian Digest of Regional Writing*, v (1976), 99-120, discusses modern trends.

(D.F. Eickelman)

2. Translations from Greek and Syriac.

Tardjama (Arabic), and the Persian and Turkish forms, *tardjuma* (*kardan*) and *tercüme* (*etmek*), are the most commonly used terms for "translation" from one language to another. Two other terms used in this sense in Arabic, especially in the first few centuries of Islam, are *naḳl* and, to a lesser extent, *tafsīr* (see the references by G. Endress, in *GAP*, iii, 3).

Translation had played a crucial role in the cultural history of multilingual Near Eastern peoples ever since the beginning of the second millennium B.C., with the translations of Sumerian texts into Akkadian. The conquest of the Near East by Alexander the Great and the ensuing spread of Greek and Hellenism led to two significant developments, before the rise of Islam, in the two major indigenous linguistic and cultural groups, the Aramaic and the Persian. Among the former, considerable sections of whom had in the meantime embraced Christianity, an initial attitude of antagonism against pagan Hellenism eventually gave place to assimilation just at the time when the Muslim Arabs were moving into Syria and Palestine. Helped by their knowledge of Greek and their training in the study of the Greek church fathers, Syriac-speaking scholars were translating in the 7th century pagan Greek works, primarily in the fields of Aristotelian logic and medicine (S. Brock, in *Bibl.*, section 3). In the Sāsānid empire, the devastation of Alexander's conquests was incorporated into an imperial ideology that simultaneously glorified the Sāsānid dynasty and promoted the assimilation of Hellenism through translations from Greek into Pahlavi, which appear to have

reached their high point during the reign of Khusraw Anūshirwān (A.D. 531-78). As the *Dēnkard* IV has it, Alexander's conquest caused the books containing the Avesta and the Zand to be scattered throughout the world, but the Sāsānids, starting with their founder, Ardashīr I, took it upon themselves to collect these texts as well as other non-religious writings on science and philosophy which were conformable to Zoroastrian teachings (M. Shaki, *The Dēnkard account of the history of the Zoroastrian scriptures*, in *ArO*, xlix [1981], 119). In this fashion, philosophical and scientific writings of all cultures were seen as ultimately either derived from or conformable with the Avesta, and translation as the means to "repatriate" them into Persian. This culture of translation in late Sāsānid times, officially sponsored by the state, continued even after the fall of the Persian empire, and during the Umayyad and early ʿAbbāsid periods gave rise to numerous translations from the Pahlavi into Arabic [see the following section].

With the advent of Islam and a new political order, yet another language with universalist claims, the last in a long series, made its appearance in the Near East. The move of Arab rulers and tribesmen into areas whose populations did not speak Arabic made translation into Arabic inevitable both in government circles and in everyday life during the Umayyad period. Necessity dictated that, for reasons of continuity, the early Umayyads keep both the Greek-speaking functionaries and the Greek language in their imperial administration in Damascus. The *Fihrist* (242, ll. 25-30) mentions that Sardjūn b. Manṣūr al-Rūmī (the Byzantine), who served as secretary to the first Umayyad caliphs from Muʿāwiya to ʿAbd al-Malik, was asked by the latter to translate the administrative apparatus (*dīwān*) into Arabic. Also related to the needs of the ruling élite in Umayyad times was the translation, sponsored by Hishām's secretary Sālim Abu 'l-ʿAlāʾ, of the Greek mirror for princes literature in the form of correspondence between Aristotle and Alexander the Great (M. Grignaschi, *Le roman épistolaire classique*, in *Le Muséon*, lxxx [1967], 223, following the *Fihrist*, 117, l. 30). Similar needs must have occasioned the translation of the Syriac medical compendium (*kunnāsh*) of Ahrun [*q.v.* in Suppl.] by Māsardjawayh [*q.v.*], allegedly for Marwān I or ʿUmar II, if indeed the sources in this regard are to be relied upon. In private life, social and commercial intercourse in Syro-Palestine and Egypt, heavily Greek-speaking until well after the end of the Umayyads, made translation a quotidian reality. Bilingual Greek and Arabic papyri of deeds and contracts attest to this fact for 7th-8th century Egypt; the practice was doubtless ubiquitous. Due also to the existence of numerous Greek speakers in these areas, translation from the Greek must have been easily available on an individual basis to everybody, scholar or otherwise. Even as late as the 4th/10th century, Ḥamza al-Iṣfahānī relates how he asked a Greek prisoner of war and his son to translate orally for him a text on Graeco-Roman history (cited by F. Rosenthal, *Historiography*, 74 n. 1). All these activities of translation during the Umayyad period are instances of random and *ad hoc* accommodation to the needs of the times, generated by Arab rule over non-Arab peoples. Deliberate and planned scholarly interest in the translation of Greek works (and Syriac works inspired by Greek) into Arabic appears not to have been present in Umayyad times. The report that the prince Khālid b. Yazīd [*q.v.*] had had Greek books on alchemy, astrology, and other sciences translated into Arabic has been demonstrated to be a later fabrication (M. Ullmann, *Ḫālid ibn Yazīd und die Alchemie. Eine Legende*, in *Isl.*, lv [1978], 181-218).

It was with the accession of the ʿAbbāsids to power and the transfer of the seat of the caliphate to Baghdād under al-Manṣūr that translation into Arabic from Greek (on occasion through Pahlavi or Syriac intermediaries) became a movement, a historically significant social phenomenon. What sets the translation movement in Baghdād apart from the incidental translation activities of Umayyad times and other periods of Islamic history is that it lasted uninterruptedly for well over two centuries, that it was commissioned by both the ʿAbbāsid aristocracy and the majority of all literate classes of Baghdādī society, that it was financially supported with an enormous outlay of funds, both public and private, and that it eventually proceeded on the basis of a scholarly methodology and philological exactitude that spanned generations and reflected, in the final analysis, a social attitude; more than any other characteristic it defines the public culture of early Baghdādī society. At the end of the Graeco-Arabic translation movement, the majority of pagan Greek books on science and philosophy (high literature and pagan history were excluded) that were available in Late Antiquity throughout the eastern Byzantine empire and the Near East had been translated into Arabic. To these should be added a few other marginal genres of writings, such as Byzantine military manuals, popular collections of wisdom sayings (gnomologia), and even books on falconry (for details, see *Bibl.*, section 2). In sheer quantity of volumes translated, let alone in quality of translation, the achievement was stupendous.

Historical sources credit al-Manṣūr with having initiated the translation movement (al-Masʿūdī, *Murūdj* viii, 286 ff.; Ṣāʿid, *Ṭabaḳāt al-umam*, 48; Ibn Khaldūn-Rosenthal, iii, 115). The ʿAbbāsids came into power as the result of a civil war, and al-Manṣūr addressed the task of reconciling the different interest groups that participated in the ʿAbbāsid cause and legitimising the rule of the ʿAbbāsid dynasty in their eyes by expanding his imperial ideology to include the concerns of factions that were carriers of Sāsānid culture. These included, among others, Persianised Arabs and Aramaeans, Persian converts to Islam, and especially Zoroastrian Persians—at the time of al-Manṣūr still the majority of Persians—who, as a number of Persian revivalist insurrections of the time (like that of Sunbādh [*q.v.*]) indicates, had to be convinced that the Islamic conquests were irreversible. This was done by promulgating the view that the ʿAbbāsid dynasty, in addition to being direct descended from the Prophet, was at the same time the successor of the ancient imperial dynasties in Mesopotamia, culminating in the Sāsānids. As the most effective means for the diffusion of this ideology, al-Manṣūr incorporated the translation culture of the Sāsānids as part of his overall imperial ideology, and employed the same technique as the Zoroastrians did for spreading *their* millennarianism: astrological history (political astrology), i.e. accounts and predictions of dynastic reigns in terms of cyclical periods governed by the stars [see ḲIRĀN]. His court astrologer, Abū Sahl b. Nawbakht (see D. Pingree in *EIr*, i, 369), composed a book in which he incorporated the account of the transmission and preservation of the sciences from *Dēnkard* IV (mentioned above) and placed heavy emphasis on the role of translation in the renewal of knowledge as ordained by the stars for each people (fragment from the *K. al-Nahmaṭān*, quoted in the *Fihrist*, 238-9; see Pingree, *The Thousands of Abū Maʿshar*,

London 1968, 7 ff.). Astrological history performed for al-Manṣūr and his immediate successors both a political function in that it presented the political dominion of the ʿAbbāsid state, whose cycle was just beginning, as ordained by the stars and ultimately by God, and hence inevitable, and an ideological function in that it inculcated the view of the ʿAbbāsids as the legitimate successors, in the grand astrological scheme of things, of the ancient Mesopotamian empires, something which entailed translation of ancient texts as part of the renewal of sciences incumbent upon each imperial dynasty. Al-Manṣūr's adoption of this aspect of Sāsānid ideology and its culture of translation indirectly initiated the Graeco-Arabic translation movement and gave it official sanction.

The initial translations of Greek works were made from Pahlavi intermediaries or compilations (Duneau, Nallino, Kunitzsch, in *Bibl.*, section 6), and they were preponderantly of astrological character, as ʿAbbāsid interest in political astrology required. However, the translation movement was further invigorated and its role enhanced also by other causes which uniquely combined to sustain it for well over two centuries. The exigencies of religio-political confrontation played a major role. Religious debate within Islam and polemics between Islam and other religions became particularly acute after the ʿAbbāsids came to power, both because the revolution raised expectations that were bound to be thwarted and because of the universalist claims of Islam as a religion put forth by the new imperial ideology. Under al-Mahdī, attempts to resolve the conflict were on occasion violent—like his persecution of the Manichaeans who, long suppressed under the Sāsānids, re-emerged during the Umayyad period and returned en masse to ʿIrāḳ, the place of origin of their founder, Mānī [*q.v.*]—but for the most part they rested on disputation. The need to understand better the rules of dialectical argumentation prompted al-Mahdī to commission from the Nestorian Patriarch Timothy I, with whom he debated, a translation of the best handbook on the subject, Aristotle's *Topics* (H. Putman, *L'église et l'Islam sous Timothée I*, Beirut 1975, 106). Within Islam, there was injected into theological discussion a cosmological element, and in particular atomism, apparently by the Manichean sects (the Bardesanites; cf. van Ess, *Theologie und Gesellschaft*, Berlin 1991, i, 418 ff.; A. Dhanani, *The physical theory of Kalām*, Leiden 1994, 182 ff.). The need for an alternative cosmology occasioned the translation of Aristotle's *Physics*, a work which, like the *Topics*, was to be re-translated repeatedly. Further development of such discussions eventually led, by the middle of the 3rd/9th century, to the translation, in the circle of al-Kindī [*q.v.*], of theologically significant Aristotelian and Neoplatonic texts (G. Endress, in *GAP*, ii, 428).

By the time of the civil war between al-Amīn and al-Maʾmūn, the ideological orientation given to the ʿAbbāsid state by al-Manṣūr had won wide acceptance and the translation movement was firmly entrenched in the cultural life of Bag̲h̲dād. Al-Maʾmūn, back in Bag̲h̲dād as both a fratricide and regicide, made use, among other things, also of the culture generated by the translation movement in order to re-establish and expand the centralised authority of the caliph. He engaged in an intensive propaganda campaign that aimed at portraying him as the champion of Islam abroad and as the final arbiter about the true interpretation of Islam at home. In order to achieve the first objective, he initiated an aggressive foreign policy against the Byzantines, who were portrayed not merely as infidels but also as culturally benighted and inferior both to their own ancestors, the ancient Greeks, and to the Muslims, who appreciated and translated ancient Greek science. The cultural superiority of the Muslims was presented as being due to Islam itself as a religion: the Byzantines had turned their back to ancient science because of Christianity, while the Muslims had welcomed it because of Islam (cf. A. Miquel, *La géographie humaine du monde musulman jusqu'au milieu du II^e siècle*, Paris-The Hague 1975, ii, ch. 8, esp. 458-81). Anti-Byzantinism thus became pro-Hellenism. The second objective could be achieved only by divesting the criteria for religious authority from the religious and *ḥadīth̲* scholars among the common people and concentrating them in the person of the caliph; this in turn could be effected only by making the caliph's personal judgment in interpreting the religious texts, based on reason, the ultimate criterion, not the dogmatic statements of religious leaders based on transmitted authority. One of the public relations campaigns through which these policies were pursued was the dissemination, by his commander and right-hand man, ʿAbd Allāh b. Ṭāhir [*q.v.*], of the dream which al-Maʾmūn allegedly had about Aristotle (this version, earlier than that in the *Fihrist*, 243, l. 3, survives in Ibn Nubāta, *Sarḥ*, Cairo 1964, 213). According to this original version, the philosopher states that personal judgment (*raʾy*) is the ultimate criterion for the best [political and religious] speech, thereby promoting both the rationalist Ḥanafī orientation of the *miḥna* [*q.v.*] as instituted by al-Maʾmūn and the philhellenism of his campaign against Byzantium. The effectiveness of the dream depended on the culture of Hellenism generated by the translation movement, which it presupposed; the dream was thus the consequence of the translation movement, not its originator, as the *Fihrist* would have it, while at the same time it provided further incentive for its more aggressive prosecution.

The impetus given to the translation movement by ʿAbbāsid ideology was further sustained by secondary causes generated by it, which continued to be active even after the original ideologies ceased to be relevant. The ideological campaigns of al-Manṣūr and his immediate successors achieved what they were designed to accomplish; those of al-Maʾmūn, which aimed to re-establish the caliph's political and religious authority, suffered a setback with the termination of the *miḥna* [*q.v.*] under al-Mutawakkil and were subsequently rendered irrelevant by the humiliation of the office of the caliph at the hands of the Turkish military. By that time, however, the translation culture had become the fashion among the élite in Bag̲h̲dād, who continued to support it well into the Būyid century (945-1055). Sponsorship was not restricted to any specific source; the sponsors came from all ethnic and religious groups that played politically and economically significant roles during the first two centuries of Bag̲h̲dād: Muslim Arab aristocrats, foremost among whom were members of the extended ʿAbbāsid family; Nestorian Arabs who converted to Islam in office, like the Wahb family: secretaries, *wazīrs*, and scholars (Sourdel, *Le vizirat ʿabbāside*, Damascus 1959-60, i, 312 ff.); Zoroastrian and Buddhist Persians who converted to Islam in office, like the Nawbak̲h̲t, Munad̲j̲d̲j̲im, and Barāmika families [*q.vv.*]: astrologers, literati, theologians, secretaries and *wazīrs*; Arabised Persian Muslims, like the Ṭāhirids: generals and politicians (C.E. Bosworth, *The Ṭāhirids and Arabic culture*, in *JSS*, xiv [1969]), and like the Zayyāt family: manufacturers and merchants, secretaries (Sourdel, *op. cit.*, i, 254 ff.);

and Arabised Persian Nestorians, subsequently converted to Islam, like the al-Djarrāḥ family: secretaries (Sourdel, *op. cit.*, 520 ff.).

Equally as significant as the support of the political and social élite was the active sponsorship of scientists and scholars of all groups, who commissioned the translation of Greek texts for their practice and research. Noteworthy among them were Muslim Arab aristocrats like al-Kindī, scientist and philosopher (Endress, in *GAP*, ii, 428); the Gondēshāpūr medical heads, the Persian Nestorian families of Bukhtīshū', Māsawayh and Ṭayfūrī (J.C. Sournia and G. Troupeau, *Jean Mésué*, in *Clio Medica*, iii [1968], 109-17); and the upstart brothers, the Banū Mūsā [*q.v.*], of questionable pedigree (see further R. Rashed, in *Bibl.*, section 6).

The translators from Greek and Syriac themselves (see the list given by Ibn Abī Uṣaybi'a, i, 203-5) belonged to the Christian churches dominant in the Fertile Crescent: Melkites (the Biṭrīḳ father and son, Ḳusṭā b. Lūḳā [*q.v.*]), Jacobites ('Abd al-Masīḥ b. Nā'ima al-Ḥimṣī, Yaḥyā b. 'Adī [*q.v.*]), and Nestorians (the family of Ḥunayn b. Isḥāḳ [*q.v.*], Mattā b. Yūnus [*q.v.*]). Ethnically, they were preponderantly Aramaeans, in some cases Arabs (Ḥunayn). Called upon by their various sponsors to translate Greek works into Arabic, they had the pre- and early Islamic Graeco-Syriac translations to fall back on as models; however, this proved of limited usefulness. The Graeco-Syriac translations of non-Christian texts did not cover the wide range of subjects in demand for translation into Arabic, and, having been made for scholarly purposes in completely different circumstances than those into Arabic, they were not subject to the keen criticism and demand for precision. The translators, therefore, on the one hand improved their knowledge of Greek beyond the level of Syriac scholarship, and, on the other, developed an Arabic vocabulary and style for scientific discourse that remained standard well into the present century (see M. Ullmann, *Nicht nur*..., *sondern auch*..., in *Isl.*, lx [1983], 34-6; for details, see *Bibl.*, section 5). Throughout the various stages of the movement, the translations themselves were repeatedly revised with three objectives in mind: greater fidelity to the original, a more natural Arabic style, and greater accuracy in the technical terminology (see Endress, in *GAP*, iii, 3-23, and *Bibl.*, section 4). The translators, who worked as private individuals unaffiliated with any institution (the *Bayt al-ḥikma* [*q.v.*] was the 'Abbāsid palace library whose chief function was to store Arabic translations of Sāsānid literature and history: Ḥamza al-Iṣfahānī, *apud* G. Schoeler, *Arabische Handschriften*, ii, Stuttgart 1990, 308; F. Rosenthal, in *JAOS*, cxv, 109a), invested time and effort into their work because it was a lucrative profession. According to the *Fihrist* (243, ll. 18-20), Abū Sulaymān al-Sidjistānī said that the Banū Mūsā used to pay monthly 500 dīnārs "for full-time translation" (*li 'l-naḳl wa 'l-mulāzama*). Ḳusṭā b. Lūḳā, as a young man out to make his fortune, left his home town of Ba'albakk and went to Baghdād where he translated, for pay, some of the books he had taken with him (*Fihrist*, 243, l. 18). The high level of translation technique and philological accuracy achieved by Ḥunayn's school and other translators early in the 4th/10th century was due to the incentive provided by the munificence of their sponsors, a munificence which in turn was due to the prestige that Baghdādī society attached to the translated works and the knowledge of their contents.

The translation movement was naturally transformed during the Būyid era into the Islamic scientific and philosophical tradition (Endress, *Die Wissenschaften*, in *GAP*, iii, 24-152); by the end of the 4th/10th century, the work of scholars who wrote in Arabic far surpassed, from the point of view of the society that demanded it, the scientific and philosophical level of the translated works, and royal or wealthy sponsors commissioned original works in Arabic rather than translations of Greek works. Most of the seminal Greek works had been translated; for the little that was left untranslated there was no longer any social or scholarly need.

After the end of the translation movement there are almost no recorded instances, before the modern age, of Arabic translations from the Greek. On an individual level, it was always possible to find a Greek speaker in the Islamic world for oral translation; al-Ṣafadī's informant on Greek matters, for example, the famous scholar Shams al-Dīn al-Dimashḳī [*q.v.*], would appear to have received his information from some such source in Damascus (see *Ghayth*, Beirut 1975, 54). The only exception is the Ottoman scholar Es'ad al-Yanyāwī who lived during the Tulip Period [see LĀLE DEVRI]. Dissatisfied with the early 'Abbāsid translations of Aristotle, he learned Greek from certain Greek functionaries in the Ottoman administration and translated anew into Arabic some Aristotelian treatises (M. Türker, *Fārābī'nin 'Şerā'iṭ ul-yaḳīn'i'*, in *Araştırma*, i [1963], 151-2, 173-4). This effort, which appears to have been short-lived, is to be seen as part of the trend for modernisation in 17th-18th century Ottoman culture through translations and compilations from European languages into Turkish (cf. V.L. Ménage, *Three Ottoman treatises on Europe*, in *Iran and Islam* [= In memoriam V. Minorsky], ed. C.E. Bosworth, Edinburgh 1971, 421-33), and, within that context, in relation to the resurgent Aristotelianism among Greek intellectuals.

The particular linguistic achievement of the early 'Abbāsid Graeco-Arabic translation movement was that it produced a scientific literature with a technical vocabulary for its concepts, as well as a high *koiné* language that made Classical Arabic a fit vehicle for the intellectual achievements of Islamic scholarship; its particular historical achievement was to preserve for posterity both lost Greek texts and more reliable manuscript traditions of those extant. On a broader and more fundamental level, the translation movement made Islamic civilisation the successor to Hellenistic civilisation. As such, not only did it ensure the survival of Hellenism at a time when the Latin West was ignorant of it and the Byzantine East busy suppressing it, but proved that it can be expressed in languages and adopted in cultures other than Greek, and that it is international in scope and the common property of all mankind.

Bibliography: Fundamental for the historical and philological study of the Arabic translations from Greek and Syriac and their legacy in Islamic scholarship is the book-length article by G. Endress, *Die wissenschaftliche Literatur*, in *Grundriss der Arabischen Philologie* (*GAP*), ed. H. Gätje and W. Fischer, Wiesbaden, 1987-92, ii, 400-506 and iii, 3-152, with practically exhaustive bibliography until its appearance. This to be complemented, for a study of the translations as a social phenomenon, by D. Gutas, *Greek thought, Arabic culture. The Graeco-Arabic translation movement in Baghdād and early 'Abbāsid society*, London 1998.

1. Sources. The only extant document on the Graeco-(Syro-)Arabic (and incipient Arabo-Syriac) translation movement from a leading participant is the autobibliographical letter (*Risāla*) by Ḥunayn b. Isḥāḳ to 'Alī b. Yaḥyā b. al-Munadjdjim (d. 275/

888) on the translations of Galenic works, ed. and revised by G. Bergsträsser, *Ḥunain ibn Isḥāq über die syrischen und arabischen Galen-Übersetzungen*, AKM XVII, 2, Leipzig 1925, and *Neue Materialien zu Ḥunain ibn Isḥāq's Galen-Bibliographie*, AKM XIX, 2, Leipzig 1932. On the text of Ḥunayn, see also R. Degen, *Wer übersetzte... Zugleich ein Beitrag zur Textgeschichte der "Risāla" des Ḥunain b. Isḥāq*, in *WOr*, x (1979), 73-92; on its place in the context of Arabic philological scholarship, see F. Rosenthal, *The technique and approach of Muslim scholarship*, Rome 1947, 26-33. Only slightly less valuable than Ḥunayn's letter is the *Fihrist*, which derives its information on the translation literature from Yaḥyā b. ʿAdī (d. 974) and the Aristotelian school of Bag̲h̲dād which he headed. Valuable primary sources, insofar as they do not derive from the *Fihrist*, are also the bibliographical works by Ibn *D̲j̲uld̲j̲ul*, Ṣāʿid al-Andalusī, Ibn Abī Uṣaybiʿa and Ibn al-Ḳifṭī [*q.vv.*]. See further, Endress, in *GAP*, ii, 474-6. The much-discussed passage by al-Ṣafadī, *G̲h̲ayt̲h̲*, i, 46 (Cairo 1305) on translation techniques is translated, along with most of the other information on the subject, by F. Rosenthal, *The Classical heritage in Islam*, London and Berkeley 1975 (= tr. of *Das Fortleben der Antike im Islam*, Zürich 1965), 15-23. Al-Ṣafadī's account is theoretical and does not correspond to the facts, as demonstrated by J.N. Mattock in his article in *Symposium Graeco-arabicum II* (below, section 4).

2. Translated works. The bibliography of the translated Greek works has benefited from the pioneering study by J.G. Wenrich, *De auctorum graecorum versionibus et commentariis syriacis arabicis armeniacis persicisque commentatio*, Leipzig 1842, and the classic work by M. Steinschneider, *Die arabischen Übersetzungen aus dem Griechischen* (originally in various journals, 1889-96; see *GAP*, ii, 481), repr. Graz 1960, both of which have been now superseded by more recent bibliographical works, primarily those by F. Sezgin and M. Ullmann. For the various fields, see the following (in alphabetical order): (a) Agriculture: *GAS*, iv, 301-29; Ullmann, *Die Natur- und Geheimwissenschaften im Islam*, HO, Erg. bd. vi/2, Leiden 1972, 427-39. (b) Alchemy: *GAS*, iv, 31-119; Ullmann, *Geheimwiss.*, 145-91 [see AL-KĪMIYĀʾ]. (c) Astrology: *GAS*, vii, 30-97; Ullmann, *Geheimwiss.*, 277-302. (d) Astronomy: *GAS*, vi. (e) Botany: Ullmann, *Geheimwiss.*, 70-4. (f) Geography: *GAS*, x and ff., forthcoming. (g) Grammar: F. Rundgren, *Über den griechischen Einfluss auf die arabische Nationalgrammatik*, in *Acta Universitatis Upsaliensis*, Nova Series 2.5 (1976), 119-44, reviewed by C.H.M. Versteegh, in *BiOr*, xxvi (1979), 235-6; Versteegh, *Hellenistic education and the origin of Arabic grammar*, in *Studies in the History of Linguistics* 20, Amsterdam 1980, 333-44. Peeters, *Le tréfonds oriental de l'hagiographie byzantine*, Brussels 1950, 165-218.

3. Syriac translations. See in particular S. Brock, *From antagonism to assimilation. Syriac attitudes to Greek learning*, in *East of Byzantium. Syria and Armenia in the formative period*, ed. N. Garsoian *et al.*, Washington DC 1980, 17-34, and his other articles conveniently collected in the Variorum volume *Syriac perspectives on Late Antiquity*, London 1984; also the articles by H. Hugonnard-Roche, referred to in his study published in the volume by D. Jacquart, below, section 5. See also A. Baumstark, *Geschichte der syrischen Literatur*, Bonn 1922; A.O. Whipple, *Role of the Nestorians as the connecting link between Greek and Arabic medicine*, in *Annals of Medical History*, N.S. viii (1936), 313-23; G. Klinge, Die *Bedeutung der syrischen Theologen als Vermittler der griechischen Philosophie an den Islam*, in *Z. für Kirchengeschichte*, lviii (1939), 346-86; G. Troupeau, *Le rôle des syriaques dans la transmission et l'exploitation du patrimoine philosophique et scientifique grec*, in *Arabica*, xxxviii (1991), 1-10.

4. Stages of the translation movement. Studies on the language and techniques of translation in its various stages: (a) To the oldest stage belongs the translation of Aristotle's *Rhetoric* and Euclid's *Elements*. The former is studied in the exhaustive commentary appended to the edition by M.C. Lyons, *Aristotle's Ars Rhetorica. The Arabic version*, 2 vols., Cambridge 1982; the latter is studied in a number of articles by S. Brentjes; see in particular *Textzeugen und Hypothesen zum arabischen Euklid*, in *Archive for History of Exact Sciences*, xlvii (1994), 53-92. (b) Similar analyses of the translations prepared in the circle of al-Kindī in the subsequent stage, which antedates that of Ḥunayn, are offered by Endress, *Die arabischen Übersetzungen von Aristoteles'*

Schrift De Caelo, diss. Frankfurt am Main 1966, and his *Proclus Arabus*, Beiruter Texte und Studien 10, Beirut 1973. (c) Ḥunayn's translations are analysed in the pioneering study by G. Bergsträsser, *Ḥunain b. Isḥāḳ und seine Schule*, Leiden 1913. The language of Ḥunayn's nephew and collaborator, Ḥubaysh, is studied by H.H. Biesterfeldt, *Galens Traktat dass die Kräfte der Seele*..., AKM 40.4, Wiesbaden 1973. A first attempt at a "translation grammar" (*Griechisch-arabische Übersetzungsgrammatik*) of versions prepared in this school was made by H.-J. Ruland, *Die arabische Übersetzung der Schrift des Alexander von Aphrodisias über die Sinneswahrnehmung*, in *Nachr. d. Akad. d. Wiss. Göttingen, Phil.-Hist. Kl.* (1978), no. 5, 196-202. (d) Translations of the final stage, as represented by Ḳusṭā b. Lūḳā's translation of Ps.-Plutarch's *Placita philosophorum*, are analysed by H. Daiber, *Aetius Arabus*, Wiesbaden 1980. (e) Stage of scholarly emendation, i.e. on the basis of contents rather than original texts: H. Hugonnard-Roche, *Remarques sur la tradition arabe de l'*Organon *d'après le manuscrit Paris, Bibliothèque Nationale, ar. 2346*, in Ch. Burnett (ed.), *Glosses and commentaries on Aristotelian logical texts*, London 1993, 19-28. (f) An illuminating comparison between two translations of the same Greek text, one from stage [b] and the other from stage [d], is given by J.N. Mattock, *The early translations from Greek into Arabic: an experiment in comparative assessment*, in *Symposium Graeco-arabicum II*, ed. Endress, Amsterdam 1989, 73-102.

5. The language of the translations; lexicography. A survey of the language of the translations at all stages and of the development of scientific Arabic is given by Endress, *Die griechisch-arabischen Übersetzungen und die Sprache der arabischen Wissenschaften*, in *Symposium Graeco-arabicum II* (section 4), 103-45, revised repr. under the title *Die Entwicklung der Fachsprache*, in *GAP*, iii, 3-23. On the significance of the Graeco-Arabic translations for Arabic syntax and vocabulary, see Ullmann, *WKAS*, ii, 2, pp. ix-xi, and the references cited there. Specific studies on the development of Arabic technical terminology, on the basis of the translation literature, in the fields of logic, philosophy, astronomy, and medicine are collected in D. Jacquart, *La formation du vocabulaire scientifique et intellectuel dans le monde arabe*, in *Études sur le vocabulaire intellectuel du Moyen Age*, vii, Turnhout 1994. Graeco-Arabic historical glossaries are appended to a number of editions of translated Greek works. See now Endress and Gutas, *A Greek and Arabic lexicon. Materials for a dictionary of the mediaeval translations for Greek into Arabic*, Leiden 1992 ff., see especially Fasc. 1, Introduction and List of Sources.

6. The significance of the translation literature. This has been much discussed in secondary literature. Among the most important contributions are the following, listed in chronological order:

G. Flügel, *Dissertatio de arabicis scriptorum graecorum interpretibus*, in *Memoriam anniversariam*... *Scholae Regiae Afranae*... *celebrandam indicit*... *Baumgarten-Crusius*... *Rector et Professor I.*, Misenae (Meissen) 1841, 3-38; C.A. Nallino, *Tracce di opere greche giunte agli arabi per trafila pehlevica*, in T.W. Arnold and R.A. Nicholson (eds.), *A volume of Oriental studies presented to E.G. Browne*, Cambridge 1922, 345-63, repr. in Maria Nallino (ed.), *Raccolta di scritti editi e inediti*, Rome 1948, vi, 285-303; J. Ruska, *Über das Fortleben der antiken Wissenschaften im Orient*, in *Archiv für Geschichte der Mathematik, der Naturwissenschaften und der Technik*, x (1927), 112-35; H.H. Schaeder, *Der Orient und das griechische Erbe*, in *Die Antike*, iv (1928), 226-65, repr. in his *Der Mensch in Orient und Okzident*, Munich 1960, 107-61; W. Jaeger, *Die Antike und das Problem der Internationalität der Geisteswissenschaften*, in *Inter Nationes*, i, Berlin 1931; C.H. Becker, *Das Erbe der Antike im Orient und Okzident*, Leipzig 1931; M. Plessner, *Die Geschichte der Wissenschaften im Islam*, Philosophie und Geschichte 31, Tübingen 1931; J. Schacht, *Über den Hellenismus in Baghdad und Cairo im 11. Jahrhundert*, in *ZDMG*, xc (1936), 526-45; G.E. von Grunebaum, *Islam and Hellenism*, in *Scientia* (*Rivista di Scienza*), lxxxv (1950), 21-7; R. 3. Translations from Middle Persian (Pahlavī).

Translations of Middle Persian books were an important vehicle of cultural influences from Sāsānid Persia, but also from India and Greece. Two principal waves of transmission can be distinguished. For one, the translations from Middle Persian to Arabic made during the early ʿAbbāsid period, first and most famously by Ibn al-Muḳaffaʿ (d. *ca.* 137/755 [*q.v.*]). Then, beginning about two centuries later, we find translations of Sāsānid books, either from Arabic or directly from Middle Persian, into New Persian, notably under the patronage of the Sāmānids. Although the number of books translated in both waves must have been very great indeed, only a small portion has survived till the present, and of these only a minute number have come down to us in the original language as well. The reason for this is that the Middle Persian books that have been preserved by Zoroastrians are almost entirely of religious content, while those translated by (or for) Muslims were virtually without exception of a non-religious nature. Thus the extant corpus of Middle Persian books and that of Arabic (or New Persian) translations from the Middle Persian complement one another and overlap only to a very small degree.

The largest portion of the extant Arabic translations is represented by what can broadly be called wisdom literature (Persian *andarz*), either in the form of isolated wise maxims, or else of wisdom embedded in stories of vaguely didactic content. By far the most famous work of this genre is the book of *Kalīla wa-Dimna* [*q.v.*], translated by Ibn al-Muḳaffaʿ from a source in Middle Persian (now lost, but largely reconstructable from an extant Syriac translation), which in turn derived for the most part from extant Sanskrit works of political science (*arthaśāstra*). Other much-read works of a similar nature are the book of *Bilawhar wa-Būdhāsaf* [*q.v.*], which derives, presumably via a lost Sāsānid work, from an Indian account of the life of the Buddha, and *Sindbād and the seven viziers* [see SINDBĀD AL-ḤAKĪM], of which the lost Sāsānid original would appear to have been influenced by, rather than translated from, Indian sources. All three of these books were put into Arabic verse already by Abān al-Lāḥiḳī (d. *ca.* 200/815 [*q.v.*]), but the extant Arabic versions of the last two are anonymous and relatively late.

But wisdom can also be dispensed without an encompassing narrative, as it is, for example, in Ibn al-Muḳaffaʿ's *Kitāb Ādāb al-kabīr*, a collection of maxims presumably taken from Persian books, but not specifically attributed. Paraenetic works attributed (rightly or wrongly) to one or another of the Sāsānid kings include a "testament" (*ʿahd*) of Ardashīr and a *Kārnāmadj* of Anūshīrwān (both preserved in Miskawayh's *Tadjārib al-umam* and translated by Grignaschi; the former has also been edited by Iḥsān ʿAbbās, Beirut 1389/1967). A *Kitāb al-Tādj fī sīrat Anūshīrwān*, attributed to Ibn al-Muḳaffaʿ, has likewise been edited and translated by Grignaschi. See also the article TANSAR (LETTER OF). A very large number of didactic sayings are credited either to specified ancient Persian sages, or merely to "the Persians" in the classic Arabic *adab* collections of al-Djāḥiẓ, Ibn Ḳutayba, Ḥamza al-Iṣfahānī, al-Thaʿālibī, etc., and a small number of these dicta have been traced also to extant Middle Persian books. Of special interest is Miskawayh's Arabic *Djāwēdhān khiradh*, which, beside much other material, contains a collection of sayings by Ādhurbādh son of Māraspand, most of which occur, though in a different order, in two extant Middle Persian collections ascribed to the same sage, and a lengthy "memorandum" ascribed to Buzurgmihr [*q.v.*, though the information in the article is mostly wrong], this also extant in the original language. The same book contains at least two (unattributed) sayings found also in the extant Middle Persian *Handarz of Ōshnar.*

Sāsānid historical literature was represented most famously by Ibn al-Muḳaffaʿ's translation of the Persian *Book of Kings*, cited in Arabic sources either with its Persian title (*Khwadhāy-nāmag*), or with the Arabic *Siyar al-mulūk.* Both the Middle Persian and the Arabic texts are now lost, but the latter is quoted frequently by Muslim authors (especially Ibn Ḳutayba) and it appears to have been the principal source for the accounts of pre-Islamic Persia that we find in the Muslim historians. Authors such as Ḥamza and al-Bīrūnī even mention various "versions" of the *Book of Kings*, but it is difficult to decide whether these were separate translations from the Middle Persian or only various reworkings and expansions of the work by Ibn al-Muḳaffaʿ. A Sāsānid version of the *Life of Alexander* of Pseudo-Callisthenes still survives, not in the original language, but in a Syriac translation (as Nöldeke has demonstrated), and was clearly one of the sources of the Muslim accounts of the deeds of Dhu ʾl-Ḳarnayn.

A third genre is what the Muslim literati call *khurafāʾ* or *asmār*, that is, prose narratives without ostensible didactic pretences, often of erotic content. Ibn al-Nadīm gives a long list of works of this nature which had been translated from (Middle) Persian to Arabic, mostly without indication of author or translator. Most are presumably lost, but the book that he calls *Hazār dāstān* ("Thousand stories"), was perhaps a remote ancestor of the surviving book of *Alf layla wa-layla* [*q.v.*].

There is also evidence for Arabic translations of Greek philosophical writings, not from Syriac, but via Middle Persian. Ibn al-Nadīm and others state that Ibn al-Muḳaffaʿ composed abridgements of Aristotle's works on logic, evidently referring to the extant Arabic epitomes of three sections of the *Organon* that are ascribed in the available manuscripts not to Ibn al-Muḳaffaʿ but to his son Muḥammad. In either case, the works could hardly have been translated from any language other than Middle Persian and must be the oldest surviving philosophical writings in Arabic (see in detail van Ess, ii, 27).

Translations of Sāsānid writings on astronomy and astrology must have exerted considerable influence on Muslim writers, as is evident from the numerous Mid-

dle Persian technical terms occurring in Arabic works on these subjects, and it is presumably also through Sāsānid translations that Indian astronomical and mathematical theory found its way to the Muslim world. As is known, the European term "sine", Latin *sinus* "breast", is a mistranslation of Arabic *djīb* (misread as *djayb* "breast-pocket"), a transcription, presumably via a Middle Persian intermediary, of Sanskrit *jīva* "bow-string, half chord". However, the number of extant Arabic scientific works that can reasonably be claimed to be direct translations from Middle Persian is small. These include the *Agriculture* of Cassianus Bassus Scholasticus (in Arabic, Ḳusṭūs) which, as Nallino has shown, has survived in two different versions, one made directly from the Greek, the other from a lost Middle Persian translation (see also Ullmann, 433-7), and the same scholar has demonstrated that the Arabic translation (lost, but well represented by quotations) of the astrological compendium of Vettius Valens (Arabic Wālīs) similarly derives from a lost Middle Persian translation (Ullmann, 281-2; the fragments now ed. D. Pingree, Leipzig 1986). The Arabic version of the astrological *Paranatellonta* of Teucros (Arabic Tinkalūs), again known only from quotations, also seems to derive from a Sāsānid translation (Ullmann, 278-9). A treatise on the magical qualities of various gemstones, which survives as one of the chapters in the *Pahlawī Riwāyat* (ed. and tr. A.V. Williams, Copenhagen 1990, ch. 64), exists also in an Arabic translation that was pirated by at least four different Muslim authors (see Ullmann, 102-4). On the other hand, the many books on astrology, alchemy and other pseudo-sciences ascribed in Arabic manuscripts to Zoroaster (Zardusht), Djāmāsp, Buzurgmihr and other sages from Persian history and legend appear either to derive from apocryphal "oriental" writings in Greek or else to be the composition of Muslim pseudepigraphers (Ullmann, 183-6, 294-7).

The translation of Sāsānid books into New Persian began under the Sāmānid rulers in Transoxania. The "old preface" found in many manuscripts of Firdawsī's *Shāh-nāma* mentions a Persian prose version of the *Book of Kings* sponsored by the governor of Ṭūs, Muḥammad b. ʿAbd al-Razzāḳ, in 346/957, prepared with the participation of four men bearing obviously Zoroastrian names; it is thus likely that the "four men" contributed material from Middle Persian books, though it would be most surprising if the authors had not also used the then well-known Arabic offshoots of the Persian *Book of Kings* (see de Blois, *Persian literature*, v, 120-2). In 339/950 the Sāmānid Nūḥ II commissioned a Persian translation of the *Book of Sindbād* by Abu 'l-Fawāris Fanārūzī; this is lost, but it was still known to the author of the oldest extant Persian *Sindbād-nāma*, Ẓahīrī Samarḳandī (*ca.* 558/1161), who claims that before that time the book had existed "in Pahlawī", apparently implying that Fanārūzī had made his translation not from Arabic but from Middle Persian; however, one must ask whether Ẓahīrī is likely to have had reliable information on this matter. In the introduction to his versification of the story of *Wīs-u Rāmīn* [*q.v.*], Fakhr al-Dīn Gurgānī (*ca.* 441/1050) says explicitly that his source was a book "in Pahlawī". But on the whole it would seem that Sāsānid literature made its impact on Islamic Persia indirectly, via Arabic translations.

The Zoroastrians in Islamic Persia and in India translated a large number of (for the most part) still extant Middle Persian religious writings into New Persian prose and verse. None of the surviving translations seems to predate the 7th/13th century, and they have had no resonance outside of the Zoroastrian communities.

4. Modern translations into Arabic.

(a) The 19th century.

The 19th-century translation movement in Egypt and Lebanon was to prove as significant in the Arab renaissance (*nahḍa*) as translations from Greek had been in intellectual activity in the ʿAbbāsid period. Pre-19th-century Arab society had little concrete knowledge of the West. When the Egyptian viceroy Muḥammad ʿAlī (*r.* 1805-49 [*q.v.*]), in his desire to establish a strong and viable state with a powerful military machine, created new European-style schools, he needed textbooks and manuals. Translations of European military, medical, scientific and technical works were made and published by government presses at Būlāḳ (founded *ca.* 1821) and elsewhere. Building on a limited band of competent translators, later supplemented by graduates of educational missions to Europe, the School of Languages (*Madrasat al-Alsun*) (founded 1835), was to institute the training of translators. The field of state-sponsored translation expanded to embrace travel literature, histories of the ancient world, the Middle Ages and the Kings of France, Voltaire's lives of Peter the Great and Charles XII of Sweden, William Robertson's history of the Emperor Charles V, and Montesquieu's finest work, *Considérations sur les causes de la grandeur des Romains et de leur décadence*. The peak decades of translation activity in Egypt were the 1830s and 1840s and then the 1880s and 1890s. After the educational system and the translation movement was devastated by the military and political collapse of Muḥammad ʿAlī's régime, translations were made largely on an individual initiative.

The Levant had been provided with books from Egypt and the press of the Anglican Church Missionary Society in Malta (1826-42), until the presses of the American (founded 1836) and Jesuit missionaries (founded 1848) in the Lebanon met the demand for textbooks, polemics and religious literature for the mission's schools and preaching; much of this material was translated. Much energy was devoted to the first complete translation of the Bible, accomplished by the Jesuits (1876-80) with the help of Ibrāhīm al-Yāzidjī, and by the Americans (1865) aided by other leading writers: Buṭrus al-Bustānī, Aḥmad Fāris al-Shidyāḳ, Nāṣīf al-Yāzidjī and the Muslim Yūsuf al-Asīr. From

the 1850s and 1860s onwards, the burgeoning private presses in Lebanon and Egypt increasingly responded to growing public demands.

From the late 1840s, imported literary forms captured the public's imagination. The first wave of new fictional writing involved a process of translation, adaptation, or imitation of mainly French novels, short stories and drama. The process of altering the text to suit an Arab milieu led to liberties being taken: passages were dropped, endings changed, the narrative interspersed with Arabic verse, and in drama with music and song. In drama, the principal early adaptations were made in Syria by members of the Nakkā̲s̲h̲ family, Adīb Isḥāḳ, the S̲h̲uhaybir brothers and Aḥmad Abū K̲h̲alīl al-Ḳabbānī, in Egypt by Yaʿḳūb Ṣanūʿ and Muḥammad ʿUt̲h̲mān D̲j̲alāl. The plays of Molière, Corneille, Racine, and the Italian Goldoni were an early source of inspiration.

Works of questionable literary value, sentimental stories, historical romances, science fiction, crime and detective stories were popular; Alexandre Dumas père, Jules Verne, Ponson du Terrail, Leblanc (his Arsène Lupin detective novels), and Eugène Sue were amongst the favourite authors. Later translators were to adapt Walter Scott, Conan Doyle, Wilkie Collins, Disraeli, Dickens and Thackeray. Translations ranged from Aesop's *Fables*, Defoe's *Robinson Crusoe*, Anna Sewell's *Black Beauty*, Wyss' *The Swiss Family Robinson*, Bernardin de Saint-Pierre's *Paul et Virginie* and the stories of Hans Christian Andersen, to the edifying literature of the Catholic priest and writer Christoph von Schmid and the Belgian Jesuit Henri Lammens. With the rise of journalism in the 1860s and 70s, newspapers and magazines in Beirut, Alexandria and Cairo, heavily dependent on translated material to fill their columns, regularly published translated western fiction.

The quality of translations showed a marked improvement early in the 20th century, when some distinguished authors with a powerful command of Arabic, but deficient in foreign languages, became involved in the process: in the free translations from French and English of Muṣṭafā al-Manfalūṭī and the poet Ḥāfiẓ Ibrāhīm's fine translation of Hugo's *Les Misérables*. Poetry was the genre least influenced by translation; Sulaymān al-Bustānī's rendering of Homer's *Iliad* (1904) was a rare translation of literary merit. Aside from literature, some of the most thought-provoking translations to appear were Fatḥī Zag̲h̲lūl's renderings of Jeremy Bentham's works, including his Utilitarianist *Principles of morals and legislation* and Edmond Demolins' *À quoi tient la supériorité des Anglo-Saxons?* (1899), and S̲h̲iblī S̲h̲umayyil's translation of Ludwig Büchner's lectures on Darwin (1884).

Nuṣayr (283-84) gives a total of 804 books translated in Egypt in the 19th century: 55% from French, 21% from English and 10% from Arabic into Turkish. Of these, 677 were translations into Arabic and 113 into Turkish. Most of the translations were in the practical sciences (159), then the social sciences, pure sciences, literature (124), and geography. In Lebanon there was a different emphasis; of a total of 542 translations, with 298 in the religious sciences and 119 in literature (Khoury, 16), 223 were from French and 160 from English (Khoury, 155). In addition to the obvious impact on terminology and vocabulary, translations helped develop a new direct, concise, and intelligible style of Arabic prose, more concerned with content and meaning, and free of traditional rhetorical embellishments and rhymed prose. In literature as in many other fields, translations were an essential precursor to creative and original activity by Arab authors. Translation was one of the principal, if imperfect, means by which western techniques, ideas and values were transmitted to the Arab world.

Bibliography: R.G. Khoury, *Bibliographie raisonnée des traductions publiées au Liban à partir des langues étrangères de 1840 jusqu'aux environs de 1905*, thèse Doctorat d'Université, Paris n.d.; ʿĀyida Ibrāhīm Nuṣayr, *Ḥarakat nas̲h̲r al-kutub fī Miṣr fi 'l-karn al-tāsiʿ ʿas̲h̲ar*, Cairo 1994; D̲j̲amāl al-Dīn al-S̲h̲ayyāl, *Ta'rīk̲h̲ al-tard̲j̲ama wa-ḥarakat al-t̲h̲aḳāfa fī ʿaṣr Muḥammad ʿAlī*, Cairo 1951; D̲j̲ak Tād̲j̲ir, *Ḥarakat al-tard̲j̲ama bi-Miṣr k̲h̲ilāl al-ḳarn al-tāsiʿ ʿas̲h̲ar*, Cairo *ca.* 1945; Laṭīf Zaytūnī, *Ḥarakat al-tard̲j̲ama fī ʿaṣr al-nahḍa*, Beirut 1994. (b) The 20th century. [See Suppl.].

5. In modern Persian.

The modern period of translation in Persia began with the reign of Fatḥ ʿAlī S̲h̲āh Ḳād̲j̲ār (1797-1834), which was contemporary with important political contacts between France and Persia and with the wars between Russia and Persia. In this period, Persians were particularly interested in learning about the military arts and weapons of war. For this purpose, they had no choice but to translate scientific and technical texts from French, English, German and Russian.

Some of the people who were assigned to translate books, reports and newspaper articles for the information of the Shah and the highest government circles, or who acted as translators in state negotiations between European powers and Persian authorities, were Armenians, and sometimes Jews, as these had learned European languages in the Ottoman Empire, in Russia and in India. Missionaries were also made use of as translators. The brothers Burgess were well-known translators from the time of Muḥammad S̲h̲āh (1834-48) onwards; they took part in the translation of news reports and journalistic articles in the first printed newspapers in Iran (see C. and E. Burgess, *Letters from Persia*, ed. L.B. Schwartz, New York 1942). Among the French, Jules Richard should be mentioned. He came to Persia during the days of Muḥammad S̲h̲āh and worked as a translator and teacher; his son followed the same occupation. The first Persian to translate books from European languages into Persian seems to have been Mīrzā Riḍā Muhandis Tabrīzī, one of the five students who had been sent to Europe at the suggestion of ʿAbbās Mīrzā Nā'ib al-Salṭana (d. 1833). Among his works is a translation of a biography of Napoleon, although we do not know from which book it came. He also translated Montesquieu's famous book *Considérations sur les causes de la grandeur des Romains et de leur décadence*. Manuscripts of these two works are extant.

Translating historical and geographical books gained momentum in the era of Nāṣir al-Dīn S̲h̲āh (1848-96). In addition, the necessity of having some European journals translated in order to be informed about political events and currents led to the creation, by order of Nāṣir al-Dīn, of the "Royal House of Translation" (*Dār al-tard̲j̲uma-yi humāyūnī*) within the organisation of the court; its managing director was Muḥammad Ḥasan K̲h̲ān Ṣanīʿ al-Dawla, who later received the honorific of Iʿtimād al-Salṭana (d. 1896) and studied the French language. He put a number of translators to work in that centre on the Arabic, Turkish, Urdu, and European languages. Gradually, the method and style of translating spread from that institution to others. Luckily, a large portion of the manuscripts of the translations made in that office by such translators during Nāṣir al-Dīn S̲h̲āh's time is still extant in the following libraries: Salṭanatī (Gulistān), Millī,

Tehran University, Millī Malik, and ʿUmūmī Iṣfahān (collection of Ẓill al-Sulṭān); they belong to the fields of history, geography, medicine, chemistry and scientific terminology, such as that of agriculture and photography. The number of books translated into Persian in this period is probably close to two hundred titles. From among the translators of that time, the following should be mentioned by way of example: Ṣanīʿ al-Dawla, Uwānis Khān, Mīrzā Raḥīm, Sayyid Ḥusayn ʿArab, Muḥammad Zakī ʿAlīʾābādī (the translator of Hammer-Purgstall's Ottoman history), ʿAbd al-Ghaffār Nadjm al-Dawla, ʿĀrif Arzurūmī and Muḥammad Kāẓim Maḥallātī.

In addition to the Royal House of Translation, the teachers at the *Madrasa-yi Dār al-Funūn* were forced, for the sake of teaching, to translate European scholarly texts; in particular, some of the lectures of the Austrian, French and Italian teachers at the *Dār al-Funūn*, which were held in German and French, were translated into Persian and printed for the benefit of the students (see Ḥusayn Maḥbūbī Ardakānī, *Tārīkh-i muʾassasāt-i tamaddunī-i djadīd dar Īrān*, i, Tehran 1354/1973).

From the time of Muẓaffar al-Dīn Shāh's rule (1896-1907), we know of translations that were made by professors at the *Madrasa-yi ʿUlūm-i Siyāsī* (founded in 1899), such as those that were made by Muḥammad Ḥusayn Furūghī and his son Muḥammad ʿAlī Furūghī. To that category belong books on basic rights, finance, physics, and some of the historical works of Charles Seignobos. Alongside such translations that were made for teaching on all levels, some novels by Alexandre Dumas and histories of Europe were translated by Muḥammad Ṭāhir Mīrzā Ḳādjār. Mīrzā Ḥabīb Iṣfahānī produced a fine translation of James Morier's *The adventures of Hajji Baba*, which has the form of an adaptation, and into which he admixed Persian poetry.

From the end of Muẓaffar al-Dīn Shāh's rule, and particularly after the adoption of the Constitution, translation activities became ever more widespread. Translation of philosophical inquiries, such as works of Plato and Descartes by Muḥammad ʿAlī Furūghī, parts of the above-mentioned book of Montesquieu by Bahāʾ al-Mulk Ḳaragözlü and also by ʿAlī Akbar Dihkhudā, James Fraser's history of Nādir Shāh by Abu ʾl-Ḳāsim Nāṣir al-Mulk, some French novels and literary texts by Yūsuf Iʿtiṣām al-Mulk, the astronomy of Camille Flamarion by Ṭālibūf [*q.v.*], and the writings of Jules Verne by Ḥasan Taḳīzāda [*q.v.*], were published. The journal *Bahār*, which was published for two years at that time under the editorship of Yūsuf Iʿtiṣām al-Mulk, paid special attention to the translation of European works.

At the beginning of Riḍā Shāh's rule (1925-41), two statesmen were especially concerned with the translation of European books. One of them was Sayyid Ḥasan Taḳīzāda, who discussed translating European scientific and intellectual texts several times in the journal *Kāwa* and in other articles of his. He considered them necessary for the intellectual and social progress of Persian society. The other person was Dr. Muḥammad Muṣaddiḳ [*q.v.*], who commissioned Naṣr Allāh Falsafī to translate F. de Coulange's book *La Cité antique*, and had it published at his own expense and distributed free of charge among lovers of learning. During the period of Riḍā Shāh, the *Kumīsyun-i maʿārif*, which was formed by several public and academic persons like Muṣaddiḳ, Maḥmūd Iḥtishām al-Salṭana ʿAlāmīr, Ḥasan Mushīr al-Dawla Pīr-niyā and Mahdīḳulī Mukhbir al-Salṭana Hidāyat, showed special interest in translation. It had several history books and also some Iranistic studies translated into Persian. The history currriculum by Albert Malet is one of their major contributions.

After the Second World War, when the activities of leftist groups began, the young turned to translating the works of socialist and communist writers and poets, essentially Russian and French ones. The journal *Sukhan*, which was published from 1323/1944 under the editorship of Dr. Parwīz Nātil Khānlarī, made a remarkable attempt to translate short stories and poems from a variety of languages.

An important step forward during this period was the foundation of the "Publications of the University of Tehran" (*Instishārāt-i Dānishgāh-i Tihrān*) in 1326/1946. Not only did a number of translations appear in that series but, in addition to it, the "Committee for Scientific Terminology" (*Andjuman-i iṣṭilāḥāt-i ʿilmī*) was also created, which worked to harmonise technical terms coined by translators.

In 1953 the "Institute for Translation and Publication of Books" (*Bungāh-i Tardjuma wa Nashr-i Kitāb*) was founded under the supervision of Iḥsān Yārshāṭir, and this organisation promoted translation in several categories: philosophy and theosophy, novel and poetry, drama, Iranian studies, and books for children and adolescents.

At the same time, the "Franklin Organisation for Publication" (*Muʾassasa-yi intishārāt-i Frānklīn*) under the editorship of Humāyūn Ṣanʿatī was founded. Its goal was restricted to the translation or books written by American scholars and writers. This organisation, with the help of several publishers, had scholarly and literary works translated in an efficient and far-and-wide-reaching way; from among the historical works one might mention those of Will Durant.

6. In Turkish.

The birth of modern Turkish literature in the second half of the 19th century is directly related to European influence, and translations played a central role in introducing new literary genres such as drama, novel, journalism and literary criticism. It was only in the literature of the *Tanẓīmāt* [*q.v.*] that translation assumed a central position and became a primary activity.

In the spirit of the times for Westernisation, organisations founded by the government played a vital role. The "Translation Chamber" at the Sublime Porte (*Bāb-ı ʿĀlī Terdjüme Odası*) (1833) taught European languages to Muslims and trained translators of official documents (see further on this, tardjumān. 2.). The

Academy (*Endjümen-i Dānish*) (1851) organised the selection, translation and production of teaching materials in science, history and literature for the university (*Dār ül-Fünūn*). The Ottoman Scientific Society (*Djemʿiyyet-i ʿIlmiyye-i ʿOthmāniyye*) (1860) produced the Turkish *Journal of Sciences* (*Medjmūʿa-yi Fünūn*) (1862-82). All the prominent translators of the time were also prominent literary figures who worked in or for these establishment, for example Münīf Pasha, Aḥmed Wefīḳ Pasha (known for his translations from Molière), Shināsī, Nāmiḳ Kemāl (the first translator of Montesquieu), Aḥmed Midḥat, Muʿallim Nādjī [*q.vv.*]. These people were responsible for setting the norms for translation and in original writing affected by translations.

In 1859, the first translations, mainly from French literature, introduced new genres such as western poetry, philosophical dialogue and the novel. The *Terdjüme-yi manẓūme* "Translations of verse" by Shināsī were the first Western poetry translations into Turkish. He used *ʿarūd* [*q.v.*] for his translations in order to make his translations acceptable for the Ottoman reader. Aḥmed Midḥat's translations of fiction resembled the originals in basic structure and line of action, but the stylistic features and the moral structure were supplied by him. Münīf Pasha's *Muhāwarāt-i ḥikemiyye* "Philosophical dialogues" were a selection from Voltaire, Fénélon and Fontenelle, whilst the Grand Vizier Yūsuf Kāmil Pasha's version of Fénélon's novel *Les aventures de Télémaque* (1699) was published in 1862.

The role of the press [see DJARĪDA. iii] in transmitting new forms and ideas through translations is significant. Newspapers such as *Djerīde-yi Ḥawādith* (1840), *Terdjümān-i Aḥwāl* (1860), *Taṣwīr-i Efkār* (1862), *Terdjümān-i Ḥaḳīkat* (1878), and many others which assumed the role of informing and educating the public, made abundant use of translated literary and non-literary material. Thus in 1862, the newspaper *Rūznāme-yi Djerīde-yi Ḥawādith* published a summary of Hugo's *Les Misérables* and later serialised a translation of the same novel, but so abridged that it was reduced to a crime story; Turkish readers were not yet familiar with the full-length European novel and its characteristic features of plot and character. In 1869, Pelicco's *Mes prisons*, Chateaubriand's *Atala*, in 1870 Saint-Pierre's *Paul et Virginie*, in 1871 Voltaire's *Micromégas* and Dumas Père's *Le Comte de Monte Cristo* were all serialised. Many translations like this which appeared in newspapers and periodicals aided the simplification of the Ottoman syntax and the growth of new vocabulary; new terms, concepts, and styles were introduced.

During the 1870s, translations and adaptations dominated the Ottoman stage. Aḥmed Wefīḳ Pasha is well known for his translations/adaptations of French comedy, which made drama acceptable to Turkish audience. After 1908, Shakespeare's *Julius Caesar, Hamlet, Macbeth, Romeo and Juliet*, and *King Lear* were translated by ʿAbdullāh Djewdet, a prominent Young Turk [see further, MASRAḤ. 3].

By the first half of the 20th century, there was abundant native literature being produced, so that the production of translations now became a secondary activity. Under the Republic, a *Telif ve Tercüme Heyeti* "Compilation and Translation Committee" was established in 1940 which until 1958 translated and published around one thousand works from world literatures. From the 1980s onwards, Departments of Translation Studies were opened at several universities. In the 1990s, contemporary works from world's literatures are readily available, published by numerous private publishers and government agencies.

(ÇIĞDEM BALIM)

TARDJĪʿ-BAND and **TARKĪB-BAND**, name of two specifically Persian developments of the (originally Arab) *musammaṭ* [*q.v.*] form of poetry. In older literature the term *tardjīʿ-band* (and also *tardjīʿ*) is usually also applied to *tarkīb-band* (which could therefore be considered a subdivision of *tardjīʿ-band*). The plural *tardjīʿāt* is even today used to designate both *tardjīʿ-bands* and *tarkīb-bands* as well as other forms of *musammaṭ* poetry (whereas *tardjīʿ-bandhā* in modern usage would exclude *tarkīb-bands*, etc.) With Ḥāfiẓ as one notable exception, practically all *kulliyyāts* of Classical Persian poetry have a (normally quite short) *tardjīʿāt* section.

The *tardjīʿ-band* and the *tarkīb-band* can both be described as a stanzaic poem consisting of a series of short *ḳaṣīdas* separated (or perhaps rather connected) by a series of isolated verses which mark the end of each stanza. If one and the same verse is repeated after each stanza we have (in modern usage) a *tardjīʿ-band* (or "return-tie" in the words of E.G. Browne, who also refers to the repeated verses as the "refrain"). If, however, each stanza is concluded with a new/different verse, we have a *tarkīb-band* (or "composite tie"). The isolated verses follow the *mathnawī* rhyme scheme. All parts of a *tardjīʿ* or a *tarkīb-band* must follow the same rhythm.

It follows from this that the rhyme scheme of a *tardjīʿ-band* is: *aa, ax, ..., ax, BB, cc, cx, ..., cx, BB, dd, dx, ..., dx, BB, nn, nx, ..., nx, BB* (*BB* = refrain), and that the rhyme scheme of a *tarkīb-band* is: *aa, ax, ..., ax, bb, cc, cx, ..., cx, dd, ee, ex ....., ex, ff, mm, mx, ..., mx, nn*. Each single *ḳaṣīda* part is termed *khāna* and each of the single separating verses is termed *band*, but the term *band* is also used loosely to designate each complete stanza (i.e. *ḳaṣīda* plus single verse), and this usage is more common.

The length of the single stanzas exhibit a variation similar to that of the *ghazal* (and is consequently considerably shorter than the length of an ordinary *ḳaṣīda*). The total number of stanzas may be anything from two upwards, but rarely exceeds 25.

From the time of Farrukhī Sīstanī [*q.v.*] onwards, most Classical Persian lyrical poets have tried their hand at *tardjīʿāt*. As for the content, the *tardjīʿ-band* and the *tarkīb-band* are like a *ḳaṣīda*, and this form may be considered a means of extending the *ḳaṣīda* beyond the limits which its monorhyme form imposes upon the poet. Perhaps the best-known Classical Persian *tardjīʿ-band* is the one by Saʿdī with the refrain *binshīnam u ṣabr pīsh gīram, dunbāla i kār i khʷīsh gīram*. A remarkable post-classical specimen is the mystical *tardjīʿ-band* by Hātif Iṣfahānī (full text and tr. in Browne, *LHP*, iv, 284-97). Among the *tarkīb-bands*, special mention must be made of Muḥtasham Kāshānī's (d. 995/1588 [*q.v.*]) *marthiya* on the Imām Ḥusayn (Browne iv, 172-7), which has inspired numerous imitations so that *tarkīb-band* has subsequently become a favourite medium for *marthiyas*. In the *tarkīb-band* of Muḥtasham Kāshānī, each *khāna* comprises seven verses and this variety is called a *haft-band*. The *haft-band* form is particularly common in *marthiyas*.

The modern Turkish terms are *tercî-i bent* and *terkîb-i bent* (with a "spurious *iẓâfet*"). Sixteen specimens by various Ottoman poets are given in Fahir Iz, *Eski Türk edebiyatında nazım*, i, Istanbul 1967, 479-516. The Ottoman poets, too, show a tendency to use the *terkîb-i bent* for *mart̲h̲iyas*. *Tard̲j̲īʿāt* also occur in Classical Urdu poetry, but they are rather uncommon with the exception of one variety, namely, the *tarkīb-band* with two verses in each *k̲h̲āna* (rhyme scheme *aa, aa, bb, cc, cc, dd, ee, ee, ff, ..., mm, mm, nn*), which is invariably used for religious *mart̲h̲iyas*. In Urdu, this form is termed *musaddas* (against Persian and Arabic usage, where *musaddas* would mean a *musammaṭ* poem with the rhyme scheme *aaaaab, cccccd, eeeeef, ..., mmmmmn.*) The main representative of this form is Bābar ʿAlī Anīs (1802-74 [*q.v.*]). The Urdu *mart̲h̲iyas* are often lengthy poems. Anīs has one *mart̲h̲iya* with 243 stanzas. The well-known *musaddas-i Ḥālī* [see MUSAMMAṬ. 2], which may be called a *mart̲h̲iya* on Islam itself, runs to 300 stanzas.

Bibliography: The standard description of the *tard̲j̲īʿ-band* and *tarkīb-band* is given in D̲j̲alāl al-Dīn Humāʾī, *Funūn-i balāg̲h̲at wa ṣināʿāt-i adabī*, i, Tehran 1354/1975, 180-211. ʿAlī Akbar Dihk̲h̲udā, *Lug̲h̲at-nāma*, Tehran 1946-, gives copious quotations from traditional definitions and descriptions of *tard̲j̲īʿāt* s.v. See also the *Bibl.* to MUSAMMAṬ. 2.

(F. THIESEN)

TARD̲J̲UMĀN, TURD̲J̲UMĀN (A.), pls. *tarād̲j̲im, tarād̲j̲ima*, appearing in Ottoman Turkish as TERD̲J̲ÜMAN, interpreter. The word is of Aramaic origin, and is familiar in the form *Targum* for the Aramaic translations or paraphrases or interpretations of the Hebrew Old Testament which came into use when the use of Hebrew as a living, spoken language amongst ordinary people declined. The Arabic term, and the verb *tard̲j̲ama* "to translate", was certainly in familiar usage by ʿAbbāsid times.

1. In the Arab lands in mediaeval times. We know of interpreters in the ʿAbbāsid caliphate, some of whom must have been attached to the *dīwāns* with regard to financial and diplomatic matters and correspondence, from the early 3rd/9th century onwards, such as the Sallām al-Tard̲j̲umān who allegedly travelled at this time to the barrier of Gog and Magog in Inner Asia [see AL-WĀT̲H̲IK]. The near universal takeover of military power by non-Arabs, above all Turks, throughout the central and eastern parts of the Islamic world at this time, must have necessitated the employment in Islamic administrations of persons who knew Turkish. Al-Ṭabari, iii, 1539 (year 251/865), mentions a body of people in Bag̲h̲dād who knew Turkish and who could address rioting Turkish soldiery on behalf of the caliph al-Mustaʿīn and his commanders. In the time of the Būyids, Miskawayh on more than one occasion mentions one Muḥammad b. Yināl al-Tard̲j̲umān, who acted as a liaison officer between the Turkish troops and the caliph al-Mutakkī, becoming *ṣāḥib al-s̲h̲urṭa* or police chief of Bag̲h̲dād in 329/941 (see *The eclipse of the ʿAbbasid caliphate*, ii, 12, tr. v, 12).

Interpreters must always have played an important part in the diplomatic and commercial relations of Islamic states with foreign, non-Arabophone, powers, but we only began to get information on this topic in the period of the Crusades and after. In mediaeval Spain, the Arabic term entered the language as *trujaman*, in Valencian dialect *torcimany* (R. Dozy and W.H. Engelmann, *Glossaire des mots espagnols et portugais dérivés de l'Arabe*, ²Leiden 1869, 351; for other Latin and Romance forms, see L. de Mas Latrie, *Traités de paix et de commerce et documents divers concernant les relations des chrétiens avec les Arabes de l'Afrique septentrionale*, Paris 1866, 189 ff., and Cengiz Orhonlu, *IA* art. *Tercüman*). *Torcimani* likewise appear in regard to treaties with the Muslim North African powers (see de Mas Latrie, *op. cit.*). Contacts between the Muslim powers and the Crusaders in the Levant must have frequently necessitated the use of interpreters and translators. The formal oaths taken at the conclusion of a peace treaty between Baybars I and the Franks in 672/1273-4 were sworn at Cairo in the presence of translators (*bi-ḥuḍūr al-tarād̲j̲ima*) and formal witnesses (Ibn Nāẓir al-D̲j̲ays̲h̲ [*q.v.* in Suppl.], *Tat̲h̲kīf al-Taʿrīf bi 'l-muṣṭalaḥ al-s̲h̲arīf*, ed. R. Veselý, Cairo 1987, 170-1). The diplomatic correspondence and the trade treaties between the Mamlūks of Egypt and Syria and the Italian mercantile cities and states in the later Middle Ages provide information on the role of interpreters. For the conclusion of a treaty at Florence in 1487 between Lorenzo the Magnificent and the Mamlūks, the envoy sent from Cairo by Ḳāʾit Bay as negotiator and interpreter was a certain "Malfota" (? Muḥammad b. Maḥfūẓ al-Mag̲h̲ribī); the text of the treaty mentions *inter alia* interpreters' fees, *[ḥuḳūḳ] al-tarād̲j̲ima* (see J. Wansbrough, *A Mamluk treaty with Florence*, in S.M. Stern (ed.), *Documents from Islamic chanceries*, Oxford 1965, 42, Arabic text of treaty 54, Eng. tr. 64). Twenty years later, a treaty was negotiated in Venice by a well-known Mamlūk envoy, the polyglot dragoman Tag̲h̲rī Berdī, described as "Ibn ʿAbd Allāh", who, despite his Turkish name, was probably a Spanish renegade, though whether of Christian, Jewish or Marrano origin is uncertain. In the document, Tag̲h̲rī Berdī's titles appear as *al-Turd̲j̲umān (li-abwābinā al-s̲h̲arīfa)/turziman de nostra Porta Sancta e la seraphi* (idem, *A Mamluk ambassador to Venice in 913/1507*, in *BSOAS*, xxvi [1963], 503 ff.).

The Mamlūk empire had, in fact, an internationally-ranging diplomatic correspondence. From al-Ḳalḳas̲h̲andī's manual on secretaryship, the *Ṣubḥ al-aʿs̲h̲ā*, we get explicit information on the translation procedures in the *dīwān al-ins̲h̲āʾ* when a letter arrived from e.g. the Palaeologi emperors of Byzantium or the Italian mercantile powers. The two official *tard̲j̲umāns* there in 814/1411 (sc. the reign of al-Malik al-Nāṣir Farad̲j̲ [*q.v.*]) are named as S̲h̲ams al-Dīn Ṣonḳor and Sayf al-Dīn Sūdūn, both obviously Turks (viii, 121, 124). The staff of the chancery were able to send out letters to the Mongol K̲h̲āns in *mug̲h̲ulī* language (in Uyg̲h̲ur script?), and the clerks specifically responsible for these in the first half of the 8th/14th century are cited from Ibn Faḍl Allāh al-ʿUmarī [*q.v.*] as Aytamis̲h̲ al-Muḥammadī, Ṭāyirbug̲h̲ā al-Nāṣirī and ʾ.r.g̲h̲.d.l.ḳ al-Tard̲j̲umān, these being succeeded by Ḳūṣūn al-Sāḳī (vii, 294). When a letter for the Mamlūk sultan arrived at Malatya in eastern Anatolia, on the borders of the empire, from a son of Tīmūr, written in Persian (*ʿad̲j̲amī*), the local governor himself translated it and sent the translation with the original letter on to Cairo (vii, 294). However, when an envoy arrived, via Hormuz, with a letter from the king of Ceylon (*Saylan*) in 682/1283-4, no-one in Cairo could interpret it, and the Singhalese envoy had to communicate the gist of its contents as best he could (vii, 77). See further, W. Björkman, *Beiträge zur Geschichte der Staatskanzlei im islamischen Ägypten*, Hamburg 1928, 45-6. Also, the modest genre of grammars and vocabularies of Ḳipčaḳ Turkish written in Arabic which grew up in late Ayyūbid and Mamlūk times (7th-9th/13th-15th centuries) (see O. Pritsak, in *PTF*, i, 74-6, and ḲĀMŪS. iii) may have been meant, *inter alia*, for the use of a body of interpreters/liaison officers between

non-Arabophone Mamlūks freshly arrived from the Ḳïpčaḳ steppe or Circassia (how the Čerkes newly-brought from the Caucasus, and who may not have known any Turkish, coped, is unknown).

Interpreters were an indispensable class of officials at seaports, such as Alexandria, which were accessible to foreign trade and where the European traders had *funduḳs* [*q.v.*] or factories. Nearly all commercial transactions necessarily took place through their intermediacy, for which they received fees, whose high level was at times a source of complaint. They seem to have been appointed by the local port authorities, and might be Muslims, Jews or Christians. In certain places, a special interpreter was appointed to oversee the interests of a particular foreign power. There were also interpreters to be found in such centres of Christian pilgrimage as Jerusalem. See, on the procedures at e.g. the Egyptian and Syrian ports, W. Heyd, *Histoire du commerce du Levant au Moyen-Age*, Leipzig 1885, i, 429 ff.

Bibliography: Given in the article.

2. In the Ottoman empire.

Under the Ottomans, the rôle and functions of official interpreters at the Mediterranean and Black Sea ports remained broadly the same as in earlier times, except that the Ottoman empire, through its conquests in the Balkans and its moves against Italy, was now in much closer contact, whether through war, diplomacy or trade, with the European powers than had been the case in Ayyūbid and Mamlūk times. Hence there is now much more reference in the sources to interpreters and translators (Ital. *drogman, drogoman*, Fr. *truchement*).

These may have existed as aides to the sultans from the time of Meḥemmed II the Conqueror, but are attested definitely in the 10th/16th century as part of the *dīwān-i hümāyūn* [*q.v.*]. They formed part of the staff of the Chief Secretary, the *re'īs ül-kuttāb*, responsible, within the department of the Grand Vizier, for dealing with foreign powers. From this century onwards, we have fairly full lists of interpreters (cf. von Hammer, *GOR*[1], vii, 627), the earliest of these all being converts to Islam, mostly from Europe and including Austrians, Hungarians, Poles and Greeks. A dragoman, the *su bas̲h̲ï* ʿAlī Beg, brought the peace treaty of 908-9/1502-3 from Bāyezīd II to Venice. The Greek Yūnus Beg (d. 948/1541-2) was often sent as an emissary to Venice, and was the founder of a mosque in Istanbul, the Durug̲h̲mān Mesd̲j̲idi (*Sid̲j̲ill-i ʿOt̲h̲mānī*, iv, 677; Ḥüseyin Aywansarāyī, *Ḥadīḳat ul-d̲j̲ewāmīʿ*, no. 226); his successor Aḥmed was originally a Viennese called Heinz Tulman. Another interpreter about whom we have information is the Hungarian Murād Beg, who was captured by the Turks at Mohács [*q.v.*] when he was 17, became a convert and an interpreter, wrote an apolegetical treatise for Islam and a trilingual hymn in Turkish, Latin and Magyar (published by F. Babinger, *Der Pfortendolmetsch Murad und seine Schriften*, in Babinger *et alii* (eds.), *Literaturdenkmaler aus Ungarns Türkenzeit*, Berlin and Leipzig 1927, 33-54), and translated Cicero's *De Senectute* into Turkish for presentation to Süleymān the Magnificent. Only occasionally do we hear of native-born Muslims who voluntarily learnt European languages, as opposed to learning them by mischance or misfortune or as captives. This was the case in the 11th/17th century with a Turkish cavalryman from Temes̲h̲war in Ottoman Hungary, ʿOt̲h̲mān Ag̲h̲a, who spent eleven years as a prisoner of the Austrians and learnt German in addition to the Serbian and Magyar which he already knew; after escaping, he served as interpreter to the Pas̲h̲a of Temes̲h̲war in his dealings with the Habsburgs and others (see the Ger. tr. of his memoirs by R.F. Kreutel and O. Spies, *Leben und Abenteuer des Dolmetschers ʿOsman Ağa*, Bonn 1954, and Kreutel, *Zwischen Paschas und Generalen*, Graz 1966). In the mid-17th century, in the Grand Vizierate of Aḥmed Pas̲h̲a Köprülü, two Greeks had been appointed as Chief Dragoman to the Imperial *Dīwān* (*terd̲j̲ümān-ï dīwān-ï hümāyūn*), and after this, the office became the special preserve of Christian Greek families from the Phanar/Fener quarter of Istanbul (the Phanariots), such as the Mavrogordatos, Kallimachis, Ghikas and Hypsilantis. In the course of the 18th century the function acquired a staff of several translators, whose head, the *terd̲j̲ümān bas̲h̲ï*, often rose to appointment as Voivode or governor of one of the Transdanubian principalities [see BOG̲H̲DĀN; EFLĀḲ]. It still remained rare for Turks to have any knowledge of a Western language. The first mention which we have of a Turkish diplomat with such skills seems to be that of Saʿīd Efendi, who had accompanied his father Meḥmed Efendi when the latter went as ambassador to Paris in 1721 and who apparently acquired a good facility in spoken French. Only in the early 19th century did it become reasonably common to know a European language, usually French; a forward-looking statesman like Muṣṭafā Res̲h̲īd Pas̲h̲a [*q.v.*], who had served as ambassador in Paris and London before becoming Grand Vizier, would certainly be conversant with the Western languages used there. Hence the Porte's dependence on its Phanariot Greek dragomans for the greater part of its knowledge of the Western world continued into the early 19th century, until the outbreak of the Greek Revolt in 1821 made Maḥmūd II doubt the loyalty of the Greek Chief Dragoman, Constantine Mourouzi, so that he was dismissed and executed. His successor, Stavraki Aristarchi, was likewise dismissed in 1822, but was fortunate enough only to suffer exile; never again would a Greek translator serve in the Imperial *Dīwān*. When reports and other documents from Europe then began to pile up, the sultan had recourse (and even then still to converts, what Carter Findley has called "marginal men") to the teachers of foreign languages in the Army Engineering School, the first of these being Yaḥyā Efendi (d. 1823 or 1824), followed by Isḥāḳ Efendi. A formal Translation Bureau was now set up, the *Bāb-ï ʿAlī Terd̲j̲üme Odasï*. From the 1830s, the Translation Office grew in size and prestige, as Turkey became inexorably entangled in warfare and diplomacy with Muḥammad ʿAlī on the one hand, and the European Powers on the other, making a high level of competence in French and, later, English, vital, e.g. for the correct drawing up of treaties and agreements in parallel versions in different languages. By 1841 it had a staff of thirty, and outward-looking Muslim Turks now saw it as a path to preferment, so that such notable statesmen of the *Tanẓīmāt* [*q.v.*] period as Meḥmed Emīn ʿAlī Pas̲h̲a (d. 1871 [see ʿALĪ PAS̲H̲A MUḤAMMAD AMĪN]) and Kečed̲j̲izāde ʿIzzet Fu'ād Pas̲h̲a (d. 1869 [see FU'ĀD PAS̲H̲A]) served in it; by the mid-century it was a vital component of the Foreign Ministry (*K̲h̲ārid̲j̲iyye Neẓāreti*) which had been formally set up in 1836. Under ʿAbd ül-Ḥamīd II, the Grand Vizier acquired a special translator of his own, the *terd̲j̲ümān-ï ṣadāret-i ʿuẓmā*. See C.V. Findley, *Bureaucratic reform in the Ottoman empire. The Sublime Porte, 1789-1922*, Princeton 1980, 91-3, 132-5, 139, 186, 243-4 and index; B. Lewis, *The Muslim discovery of Europe*, London 1982, 77 ff., 86-7; Findley, *Ottoman civil officialdom. A social history*, Princeton 1989, 133-4, 262-3 and index.

Ottoman Turkey was not, however, alone in depending till a late date largely on renegades or even non-Muslims for their dealings with the non-Islamic outside world. Other Muslim powers seem to have relied largely on non-Muslims, some of them not even their own subjects. Thus a Moroccan ambassador to Spain at the end of the 17th century had to use an Arabic-speaking Syrian Christian who was an interpreter in the Spanish service; and as late as the early 19th century, a Persian envoy to Europe was accompanied by a Christian, probably from the Armenian community in Persia, who was his only link with an alien world (Lewis, *op. cit.*, 80).

Interpreters were also needed by the Ottoman administration in the provinces, where they were attached to the staffs of the provincial governors, and also needed, as indicated above, in the military and other technical schools established from the late 18th century onwards.

The remaining great function of dragomans in Ottoman times was as interpreters attached to foreign embassies and consulates, thus forming the channel of communication between the representatives of the European powers and the Turkish authorities, and also as interpreters and intermediaries employed by Western trading companies. The dragomans attached to foreign missions also had the function, expressly conceded in the capitulations [see IMTIYĀZĀT], of representing the consuls in cases before the Turkish courts in which the consul's subjects were involved. Such dragomans were expected to act as the eyes and ears of their employers, i.e. to gather intelligence. In the 16th and 17th centuries, they were usually Turkish subjects from the Levantine peoples who knew Italian, Italian being at that time the lingua franca of the eastern Mediterranean basin. Despite the *berāt*s or patents of protection which they held from the Ottoman state [see BERĀT], they were often maltreated by the Turkish authorities, and were accordingly reluctant to deliver strong messages from their European employers. The system was unsatisfactory, and to circumvent it the French in 1670 began to send out boys to the convents of the Capuchins in Istanbul and Izmir to acquire a knowledge of Turkish and become interpreters. At the end of this century, a few Greeks were brought to England by the Levant Company and sent to Gloucester Hall (the later Worcester College) at Oxford to learn English, but the experiment was not a success. The trading companies depended very considerably on their dragomans; in the later 17th and early 18th centuries, the English Levant Company had four dragomans at Istanbul (and later, an additional four students, *giovani di lingua*), three at Aleppo and two at Izmir (see A.C. Woods, *A history of the Levant Company*, Oxford 1935, 225-8). It must be remembered that until the early 19th century, the British minister in Istanbul was indeed the representative of his sovereign, but had his salary paid by the Levant Company, so that merchants trading in the Ottoman empire regarded the ambassador as equally charged with their interests, if not more so. In any case, after 1804 when the British minister was instructed by the government in London to give his whole attention to political and diplomatic affairs, dependence on Levantine dragomans continued for the next three-quarters of a century; a family like the Pisanis served the British Crown almost hereditarily from the early 18th century till 1882. Some British diplomats had long wished to reduce or even end dependence on local Levantine or British dragomans in what was often highly sensitive diplomatic business (though others felt that these dragomans often gave loyal and valuable service). But it was not till the later 19th century, when it was seen that powers like Russia, French and Austria were successfully training their own people at home for service in Turkey, that Britain began to follow suit; only from 1877 were interpreters recruited from British subjects only and by civil service competitive examination in London. See A. Cunningham, "*Dragomania*". *The dragomans of the British embassy in Turkey*, in *St. Anthony's Papers*, no. 11 (1961), 81-100, repr. in his *Eastern questions in the nineteenth century. Collected essays*, ed. E. Ingram, London 1993, ii, 1-22.

By the opening of the 19th century, the issuing to Ottoman citizens of protective *berāt*s by foreign embassies and consulates, bestowing the status and privileges of dragoman, was becoming an abuse, especially as dragomans traditionally enjoyed a commission from successful petitioners for consular protection. Being a *berātlï* or *barataire* meant that D̲h̲immī subjects of the Porte were taken under consular protection and thus avoided payment of the *d̲j̲izya* and other taxes for which the *reʿāyā* were liable. Selīm III protested, and the sale of *berāt*s to Jewish and Armenian merchants by the British ambassador was stopped by the Treaty of the Dardanelles of 1809. However, the numbers of dragomans under the capitulations was now vastly exceeded, as traders and others sought dragoman status; by *ca.* 1808 the Russians were said to have enrolled 120,000 Greeks as "protected persons" [see IMTIYĀZĀT. ii, at vol. III, p. 1187]. Ottoman government restiveness again grew in face of the number of its citizens abstracted from its control and its fiscal net, and in 1863 an agreement with foreign missions was achieved by which the powers of foreign embassies and consulates to appoint dragomans were restricted. When, on the eve of the First World War, the Ottoman government unilaterally abolished the capitulations in September 1914 (they were only briefly revived 1920-3), it refused henceforth to recognise foreign diplomatic or consular officials with the title of dragoman [see *ibid.*, at vol. III, 1188b], which thereafter died out.

However, as noted above, by the later 19th century most foreign powers had begun to introduce schemes for training their own interpreters. In Britain this was done by training student-interpreters recruited to the Levant Consular Service, who studied languages at Cambridge University and then went out into the field. When the young Reader Bullard, subsequently British Minister in Tehran, went out to Istanbul in 1908, he had studied under the great Persian scholar E.G. Browne. At the Istanbul embassy, he first served as Third Dragoman under the first or Chief Dragoman G.H. Fitzmaurice and the Second Dragoman Andrew Ryan (later to publish his autobiography, Sir Andrew Ryan, *The last of the Dragomans*, London 1951). At that time, the Chief Dragoman accompanied the Ambassador on important interviews and acted as the chief intermediary with the Turkish government (see Sir Reader Bullard, *The camels must go. An autobiography*, London 1961, 44 ff.).

(C.E. BOSWORTH)

ṬARĪ, the Arabic orthography for *tari*, a term used by Western sources together with Latin *tarenus* and Greek ταρίον, to indicate a gold coin called in Arabic *rubʿ*, *rubāʿī*, struck in Sicily by the Fāṭimids and the Kalbids, who acknowledged formally their authority. The name—deriving from the Arabic adjective *ṭarī* "fresh, new"—may have described the grade of preservation of the coins, that is "uncirculated *rubāʿī*",

with the noun dropped in the language of the native speakers. This explanation can be connected with the circulation of sealed purses containing *taris* whose weight and fine gold content had been previously verified by the minter.

A first attempt made by the Aghlabid *amīrs* to introduce the dīnār [*q.v.*], a gold coin of 4.25 g, in Sicily failed, and the quarter-dīnār, i.e. the *rubāʿī*, became the only gold coin in use. Under the Fāṭimids many *taris* were issued from the Palermo mint, but only at the time of the third Fāṭimid caliph al-Manṣūr does the mint name appear on the coins. The analyses of fine gold content present in the *taris* issued by the Arab authorities in Palermo show an average from 80% to 100%, with a reduction in the last years of Arab domination that could be attributed, according to Paul Balog, to provincial mints in Sicily.

The weakening of the central power and the consequent birth of several independent principalities was followed by the Norman invasion of Sicily. During the long struggle between Arabs and Normans (444-57/1052-64), the Palermo mint kept on striking Fāṭimid coins in the name of the nominal ruler, the caliph of Egypt al-Mustanṣir. After 1064, the Kalbī *amīrs* ceased regularly issuing coins. Certain *taris*, which seemed to be an official product of the Palermo mint, may have been issued by the ruling rebel *amīrs* of Sicily; they show a marked diminution of the gold content (only 53%). According to P. Balog, an anonymous quarter-dīnār, on which he reads the mint name *Sīrakūsā*, could have been issued by the rebel *amīr* of Syracuse, Ibn Thumna. A further support to the existence of the provincial issues of the Arab rebel *amīrs* comes from N. Lowick's description of two anonymous quarter-dīnārs bearing the legend: "struck in Ḳalʿat Dj.rdj.nt (Girgent) in the year 468".

At first the Normans used the Arabic coinage or produced a currency resembling the stellate *taris* of al-Mustanṣir, of pale gold and with an imitation of the original legends in Kūfic script. After the conquest of Palermo in January 1072, Robert Guiscard issued two *taris*. In the issue of 466/1073-4, his name and titles are written in the centre of reverse: *bi-amr Abārt al-dūḳa al-adjall malik Ṣiḳilliyya.* In these first years of the Norman rule, Palermo recognised two chiefs, Robert and Roger, each one issuing coins in his name in the same mint. Their titles show the complex feudal relationship existing between the two brothers. The title *al-dūḳa Rudjār/Rudjdjār*, should be attributed to Robert's son, Roger Borsa, as his uncle, the Count Roger, used the title of "Comes" in its Arabic transliteration (*ḳūmis bi-Ṣiḳilliyya*, 481/1088-9) or translating it with an Arabic equivalent (*sulṭān Ṣiḳilliyya*, after 1090). Later, the Normans moulded their regal titles upon those of the Fāṭimid caliphs. After these early issues, Roger struck a series of anonymous *taris* with a capital T (= the Cross of St. Anthony; see ṬARĀBULUS AL-GHARB. 3.) in the centre of the obverse and the Muslim credo on the reverse. After 1081, when he received the investiture of *Magnus Comes*, his name and title were added in the obverse margin. L. Travaini has argued that the anonymous T *tari* could have been struck until 1105, when his elder son Simon died, or even during Roger II's minority. He changed the capital T into a small tree and distinguished his name with the adjective *al-thānī* "the second". After his coronation in 524/1030, his name was directly followed by the title *al-malik* "the King", and the Muslim credo was dropped in favour of the Christian cross with the Greek legend IC/XP/NI/KA on the reverse.

A group of *taris* of this type have Roger's protocol in three horizontal lines on the obverse: *al-malik Rudjdjār al-muʿazzam al-muʿtazz bi-llāh.* It is likely that a new type of *tari*, bearing a circular Arabic legend on the obverse and a cross on a long staff similar to the Latin cross on the reverse, was introduced after the monetary reform (1140). The large amount of coins, and the presence of brocages (i.e. the sticking of a coin to the upper die after striking, thereby producing an impression on the reverse of the next blank, making the reverse a mirror image of the obverse) in this period, seem to prove a quick production and careless striking due perhaps to the increase of commercial activity and the need of *taris* of the new type. A new mint was opened in Messina and it was at the apex of its activity during the reign of William I.

The Norman Kings as well as the Hohenstaufen Emperors continued to strike *taris* resembling in their main features the second type issued by Roger II, with some variations according to the rulers.

The last *taris* following as the Arab coinage are dated 1278, when Charles I of Anjou reformed the monetary system and adopted the *carlino d'oro.* The word *tari* indicated then a weight of account, the so-called *trappeso*, and only during the reign of the Aragonese dynasty in Sicily was it used for a silver coin. Later, it was another name for the *doppio carlino* in the Kingdom of Naples.

From the metrological point of view, the average weight till the reign of William I (1154-66) conforms to 1 g, that is, the standard weight of the quarter-dīnār and not the *trappeso* of 0.88 g, which was introduced later. The presence of heavy (the so-called multiples) or cut *ṭarīs* gives evidence that their circulation was by weight and not by number.

As regards the coinage of the mainland, the southwestern part of Italy adopted the "Sicilian *tari*" since the beginning of the 10th century. The issues in the name of several Fāṭimid caliphs are bigger in size than the quarter-dīnārs, and show that the die-engravers were not familiar with Arabic writing. The attribution of the coins lacking the mint-date legend remain still uncertain. Many coins bear the name or initials of Norman sovereigns, who could have minted either at Salerno or at Amalfi.

The Salerno mint was closed by Henry VI, while the mint of Amalfi was active till 1222, when the Amalfitan *taris* stopped circulating.

TAʿRĪB (A.), verbal noun of the form II verb *ʿarraba*, literally, Arabisation or Arabicisation.

It is used primarily as a grammatical term, in reference to the method or process by which foreign words are incorporated into Arabic; more broadly and loosely, it means the translation of foreign scientific, literary and scholarly works into Arabic.

1. In the sense of the rendering of foreign notions or words in Arabic.

Like most languages, Arabic was subject, since pre-Islamic times, to the impact of interference by other idioms, spoken by peoples with whom the Arabs had contacts. Persian and Aramaic provided the largest number of foreign words borrowed by Arabic, along with other languages such as Greek, Geʿez, Hebrew, and Coptic. Reflecting this phenomenon, the Ḳurʾān contains quite a few words of non-Arabic origin, some of which are readily identifiable while others, having been morphologically assimilated, are more difficult to trace. Islam and the Ḳurʾān rendered the Arabic language holy, with the result that Arab writers became highly sensitive to the existence of alien intruders in it. Arab philologists in the early centuries of Islam often addressed the problem, among them Sībawayhi (died *ca.* 180/796 [*q.v.*]), who devoted several chapters to the matter in his great grammar, *al-Kitāb*, and Abū Manṣūr al-Djawālīḳī (d. 539/1144 [*q.v.*]), whose *al-Muʿarrab min al-kalām al-aʿdjamī* seems to have been the first systematic and comprehensive study of alien words in Arabic, both in the Ḳurʾān and elsewhere.

Classical and mediaeval Arab grammarians and writers concerned with *taʿrīb* dealt with the identification of foreign words, discussion of their standing in Arabic and of the criteria by which that standing should be determined. Purists, worried about the contamination of the language by foreign elements—e.g. al-Djawharī, author of the *Ṣiḥāḥ* (d. 393/1002 [*q.v.*]), and al-Ḥarīrī (d. 516/1122 [*q.v.*])—were prepared to admit only those non-Arabic words that had entered Arabic in pre-Islamic or early Islamic times, namely, in the first two centuries of Islam. Moreover, in their view such words were admissible only when compatible with the paradigms (*awzān*) of the language, that is, assimilated morphologically and phonetically. Such words, identified as *muʿarrabāt* ("Arabicised"), could be treated on equal footing with "native" Arabic words, and new terms could in turn be derived from them. They were distinguished from words which entered the language at a later stage and did not conform to the paradigms; these last came to be known as *muwalladāt* ("bastardised" [see MUWALLAD. 2.]), and could not be considered as part of the Arabic lexicon. More liberal philologists, most notably Sībawayhi, were inclined to accept foreign words even without such restricting conditions. But it was the purists who won the day in defending the rigid standards in respect of borrowing, and literary Arabic thus remained largely impervious to alien intruders until the modern era. Words which became part of popular Arabic usage during centuries of contacts with other peoples and Ottoman rule remained outside the canon of the language and outside its standard lexicons.

The encounter with modernity since the early 19th century generated a need for rapid linguistic adaptation so as to permit the expression of hitherto unknown notions, in science and technology as well as in social matters. *Taʿrīb* at first seemed to be a convenient and practical response to the challenge and was employed frequently. Arabic now borrowed from French and Italian, to a lesser extent from English, either directly or via Turkish, which had faced a similar challenge somewhat earlier. Such mass resort to *taʿrīb*, dangerously amplified by another product of modernity, printing, alarmed the guardians of the language. A vivid debate developed among writers in the late 19th century and afterwards over the benefits and perils of *taʿrīb*, echoing the debates of their predecessors but with greater zeal. The leading protagonist of borrowing during the first half of the 20th century was ʿAbd al-Ḳādir al-Maghribī, one of the founders of the Arab Academy of Damascus, although he too advocated caution and selectivity. With the foundation of language academies in Syria, Egypt and ʿIrāḳ, these institutions became the main arenas for such debates. On the whole, Arabic displayed remarkable resilience and creativity even in the face of these formidable modern challenges, drawing linguistic solutions from its own rich resources, most typically through *ishtiḳāḳ* ("derivation" [*q.v.*]). Many of these solutions came to replace words previously adopted in haste through *taʿrīb*.

(A. AYALON)

2. Arabisation as a weapon of modern political policy. [See Suppl.].

TA'RĪF (A.), lit. "making known", hence "definition".

1. As a term in logic.

Ibn Sīnā appears to have been the first philosopher to use the word *ta'rīf* as a general term for definition that encompasses both "Aristotelian definition" (*ḥadd* [*q.v.*]) and descriptive definition, *rasm*, Gr. ὑπογραφή. Ibn Sīnā defines *ta'rīf* more generally as "an intentional act, by means of speech or sign, that causes the person perceiving it to conceive of the thing defined" *huwa an yaḳṣida fi'l al-shay' idhā sha'ara bihi shā'ir taṣawwara shay'an-mā huwa 'l-mu'arraf wa-dhālika 'l-fi'l kad yakūn kalām wa-kad yakūn ishāra* (*Manṭiḳ al-mashriḳiyyīn*, 29). In logic, *ta'rīf* refers either to a word (*ism*), or to a statement (*ḳawl*) that is a definition (*ḥadd*), or to a statement that is a descriptive definition (*ibid.*, 34). Elsewhere, Ibn Sīnā describes three basic types of *ta'rīf*: 1. *t. ḥaddī* from the genus and specific differences (*fuṣūl*), e.g. man is a rational animal; 2. *t.* by means of genus and proprium (*khāṣṣa*), e.g. man is an animal capable of laughter; 3. *t.* by means of incidental properties (*a'rāḍ*) and propria, e.g. man is a biped, wide-nailed, capable of laughter by nature (*al-Djadal*, 214). The latter two are examples of descriptive definition (*rasm*), while the first is definition proper (*ḥadd*). Later authors of both logical and theological works, and their commentators, such as Nadjm al-Dīn al-Kātibī, al-Urmawī, al-Īdjī and al-Taftazānī devoted chapters of their treatises to discussions of definitions (*ta'rīfāt*), using or adapting Ibn Sīnā's basic distinctions and adding scholastic nuances of their own.

2. As a term of grammar.

Here it is the fact or process of making a word grammatically definite (*ma'rifa*, contrast *nakira*, *tankīr* "indefinite, indefinition"). Definition is (i) formal, with prefixed *alif-lām* or annexation to another definite element; or (ii) semantic, i.e. proper names and pronouns. Analysis of *al-alif wa 'l-lām*, as the definite article is termed, into a phonological component (*hamzat al-waṣl*) and the defining element /l/ has led to the alternative name *lām al-ta'rīf* for this item, whose functions are further distinguished between generic (*lām al-djins*, subdivided into literal and figurative meanings, see al-Shirbīnī, § 11.741, for terminology and Simon, 166 ff., for rhetorical implications) and particularising, *lām al-'ahd* "the *lām* of familiarity". Definition is also conferred by the vocative particle *yā* and the categorical negative *lā*, though the latter is not treated as such by the Arab grammarians.

Definition (or a weaker type, *takhṣīṣ* "specialisation", cf. al-Shirbīnī, § 19.71; Gätje, 30 ff.) is a necessary property of the subject of a nominal sentence, though not of the agent of a verb; with indefinite subjects inversion must occur, e.g. *fī 'l-dāri radjul^{un}*. A hierarchy of definite elements has been established: for theological reasons the name of God and pronouns referring to Him take first place, followed by personal pronouns (in the order 1st, 2nd, 3rd person), demonstratives and vocatives together, then words bearing the article and relative nouns (both pairs regarded as equally definite), and finally, nouns annexed to definite elements. The place of proper names in this sequence was disputed between Baṣrans and Kūfans (*al-Inṣāf*, problem 101).

(M.G. CARTER)

ṬARĪFA, a place in the south of the Iberian peninsula, now in the province of Cadiz, and the most southerly point of Europe, only 13 km/8 miles from the African coast.

Its name appears to come from that of Ṭarīf Abū Zur'a, a client of Mūsā b. Nuṣayr [*q.v.*], the master of Ifrīḳiya, who decided on 91/709-10 to explore the territory on the other side of the straits before embarking on its conquest. According to the *Akhbār madjmū'a*, ed. and tr. Lafuente y Alcántara, 506/18-20, and 'Arīb b. Sa'd, Mūsā accordingly sent Ṭarīf with 100 cavalry and 400 infantry on a reconnaissance trip. They crossed and touched land opposite Tangier in a place thereafter known as *djazīrat Ṭarīf*, the later Ṭarīfa, and from there undertook their incursions into nearby territory, returning with plunder and captives. Although al-Maḳḳarī, ed. 'Abbās, i, 229-30, following al-Rāzī and Ibn Ḥayyān amongst others, make much of this personage, it is strange that the eastern sources do not generally mention him. According to J. Vallvé, however (*Nuevas ideas sobre la conquista árabe de España*, Madrid 1989), the true etymology may lie in Ar. *ṭaraf*/*ṭarf*, meaning *inter alia* "point, cape". This agrees with the tradition of Orosius, known to Muslim historians and geographers, and would agree with the above-mentioned fact of its being the southernmost point of the European continent.

According to al-Ḥimyarī, *Rawḍ*, ed. Lévi-Provençal, 118, the western part of this "peninsula" touches the Atlantic, the "Sea of Darkness", and there was there a small town, i.e. Ṭarīfa, with an earth wall and with markets and baths. According to al-Zuhrī, *Dja'rāfiya*, ed. Hadj-Sadok, in *BEO*, xxi (1968), 187-8, tunny fishing was practised there, these fish being abundant in that part of the straits.

Ṭarīfa was thus the first part of Andalusian territory to be occupied by the Muslims. From its nearness to the Maghrib coast, it was on many occasions, together with Algeciras and Gibraltar, a point of embarkation and disembarkation for troops, traders and travellers between the Iberian Peninsula and the Maghrib and rest of the Islamic world. It was taken in 1292 by the Castilian king Sancho IV, temporarily recaptured by the Muslims but definitively conquered by Guzman the Good in 1294.

(FÁTIMA ROLDÁN CASTRO)

TARIFIYT, the Berber language of the Rīf [*q.v.*], the northeastern part of Morocco, generally comprising an area from the west of Elhoceima to the Algerian border in the east, and from the coast of the Mediterranean in the north to the plains that separate the Rīf mountains from the Middle Atlas range in the south. In this region live also groups that speak Arabic, like the Oulad Settout and the Ahl Angad. The language of the Senhaja of Sraïr (Ketama region) differs considerably from other northeastern dialects and cannot be included in Tarifiyt. It is rather arbitrary to establish linguistic boundaries with some of the dialects bordering it to the south (Ait Ouarain) and to the east (Beni Snous). The main towns where Tarifiyt is spoken are Nador and Elhoceima. Many speakers of Tarifiyt have now emigrated to the Netherlands and Belgium.

Tarifiyt shows considerable dialectal variation, and mutual understanding between different variants can be difficult. Typical for most Tarifiyt forms of speech are phonetical developments like spirantisation of stops, the turning into a vowel of postvocalic *r* (*ṯammurṯ* → *ṯammuaṯ* "land"), *l* → *ṛ* (different from *r*) and *ll* → *dž*, e.g. the Arabic noun *l-lila* "night" has been borrowed as *džiṛəṯ*.

Tarifiyt is to be included in the "Zenatic" group of Berber dialects, and shares many grammatical features with dialects like Chaouia, Ouargli and Mzabite. The connections with important Berber dialects like Tashelḥīt [*q.v.*], Kabyle or Touareg [see ṬAWĀRIḲ] are much less pronounced.

Tarifiyt has a rich traditional oral literature, featuring short songs (*izṛan*), fairy tales (*ṯiḥuža*) and many other genres. Moreover, there is a rich culture of modern song-writing. Written literature has been slowly emerging since 1990. Poetry written in the Arabic or Latin alphabet has been published in Morocco and in the Netherlands.

(M.G. KOSSMANN)

ṬĀRIḲ B. ZIYĀD, Berber commander of the Muslim troops who undertook the conquest of the Iberian Peninsula in 92/711; his birth and death dates are uncertain. At this time, he was residing in Tangier, exercising the role of governor on behalf of the *wālī* of Ifrīḳiya Mūsā b. Nuṣayr [*q.v.*].

As in all issues concerning the early stages of the Muslim presence in al-Andalus, it is no simple matter, considering the mass of contradictory data supplied by the Arab sources, either to draw conclusions regarding the personality of Ṭāriḳ, or to determine with any precision the circumstances of his entry into al-Andalus. The question is so tangled, that even an interpretation of events as far removed from classical conceptions as that of J. Vallvé (*Nuevas ideas sobre la conquista árabe de España*, Madrid 1989), who maintains that the Muslim disembarkation took place at Cartagena, to the south-east of the Peninsula, while apparently difficult to accept in its entirety nevertheless demonstrates the existence of various obscure points necessitating a revision of certain received ideas relating to the conquest of al-Andalus.

The difficulties facing the historian of the conquest of al-Andalus result essentially from the absence not only of contemporary texts, but even of those of a period reasonably close to the events described (with the exception, however, of two Christian sources, the *Chronica byzantia-arabica* of 741 and the *Continuatio Hispana* of 754, both extremely brief). The earliest surviving sources, the *Futūḥ Miṣr* of the Egyptian Ibn ʿAbd al-Ḥakam and the *Taʾrīkh* of Ibn Ḥabīb in al-Maghāmī's edition, both from the 3rd/9th century, unfortunately demonstrate a marked propensity to accept legendary accounts, or to exaggerate the quantities of booty subsequently amassed in the country. The sources available are often late works, juxtaposing material of very diverse provenance and uneven worth, the utilisation of which merits a thorough historiographical analysis, a project yet to be undertaken. Such is the case, significantly, of two anonymous texts which are fundamental for the history of the first century of the Muslim presence in al-Andalus, the *Akhbār madjmūʿa* and the *Fatḥ al-Andalus*, on which contemporary criticism is in disarray, with opinions ranging from those who believe that these involve the embryonic written version of ancient oral traditions, to those who maintain that these are simply late compilations based on summaries of earlier texts (P. Chalmeta, *Invasión e islamización*, 50; L. Molina, *Los Akhbār madjmūʿa y la historiografía árabe sobre el periodo omeya en al-Andalus*, in *al-Qanṭara*, x [1989], 513-42, and the *Estudio* of his edition of the *Fatḥ*). All of this should not obscure the fact that the general lines of the historical record remain clearly established, and that it is appropriate to take account of them.

According to the opinion most widely held among chroniclers, Ṭāriḳ b. Ziyād was a Berber client of Mūsā b. Nuṣayr [*q.v.*], having participated under the latter's orders in the conquest of the Maghrib, as commander of the vanguard. When Mūsā returned to Ifrīḳiya, he left Ṭāriḳ in charge of a contingent of troops, most of them Berber, based in Tangier. From there, he made contact with the governor of Ceuta, the legendary Count Julian. This individual, probably a Visigoth—information concerning one of his descendants gives the *nisba* al-Ḳūṭī—but at all events a dependant of the Visigothic king of Toledo, incited Ṭāriḳ to invade the Peninsula. Some versions allege that Julian's representative was none other than Mūsā himself, and that the latter succeeded in obtaining authorisation from the caliph in Damascus, but considering the later course of events, it seems more likely that Ṭāriḳ acted on his own initiative without waiting for the explicit consent of his superior. Before Ṭāriḳ's expedition, there had been one or several minor incur-

sions into the coastal region of al-Andalus, the most significant—and according to many authors, the only one—having been led by Ṭarīf, another Berber, with a small contingent of five hundred men, in 91/710. Finally, in the spring of the following year (Radjab 92/April 711), with forces virtually exclusively Berber, Ṭāriḳ crossed the Strait on boats supplied by Julian, and disembarked at the foot of a mountain which was henceforward to bear his name, Gibraltar (Djabal Ṭāriḳ). Numerous Arab sources agree in fixing the number of ships at four, and the strength of the commando force—in one or several waves—at 12,000. These figures cannot be verified absolutely, but they are probably not far from the truth, since it is unlikely that the fleet available for crossing the Strait could have been much larger, or that Ṭāriḳ's forces could have been reduced to a few hundreds, if their later successes are anything to judge by. This indicates that the crossing must have taken place at a leisurely pace, with dozens of trips for each boat, and over several days, and all of this without any serious resistance from the majority of the local inhabitants. With prompt action, the latter could have foiled the invasion with ease. In the event, the landings took place either with the connivance or the indifference of the indigenous people.

The Visigothic king Roderic, whose principal concern at this time was fighting the Basques, hastily led out his army to confront the Muslims, who in the meantime had built fortresses in Gibraltar, from where they conducted minor raids into the surrounding countryside to obtain provisions. The encounter took place at the end of Ramaḍān and the beginning of Shawwāl (July) near a river which may legitimately be identified with the Guadalete or the Barbate—not far from the lagoon of La Janda—but, in any case, in a place near to the point of landing. This means that in three months or thereabouts, the Muslims had scarcely moved at all, giving the Spanish troops time to coalesce into a powerful army, rather than exploiting the element of surprise. From a strategic perspective, this decision was ill-advised. There can be little doubt that the defeat inflicted on Roderic's army was largely due to the fact that a large contingent of his troops, traditionally identified with supporters of the family of the previous king, Witiza, contributed actively or passively to the rout and death of Roderic. Bearing in mind the behaviour of the Muslims before the battle, and of Witiza's supporters during it, it is to be doubted whether any of the protagonists could have imagined that the entire Peninsula was to fall into the hands of the Muslims: neither Ṭāriḳ's soldiers, who had just spent three months on a scrap of land with no clear idea of what to do next, nor the traitors of the Visigothic army whose sole objective was to regain power and eliminate Roderic. Nevertheless, as the result of an unexpected and uninspiring victory, Ṭāriḳ was made aware that the Visigothic state had suffered a heavy blow and that its internal cohesion was vastly inferior to what he had imagined. He now understood that he held a unique opportunity to make himself master of the country, or simply to transform what had begun as a coastal raiding expedition into a profitable campaign against the affluent cities of the interior.

The next stage of Ṭāriḳ's itinerary was Écija, where the remnants of the Visigothic army, including Witiza's supporters, had taken refuge. The battle was as hard-fought as that of Guadalete, and again, victory fell to the Muslims, who this time, according to some sources, were helped by Julian himself. The defeated army took refuge in the town of Écija, and capitulated soon after. From this time onwards, there was nothing to impede Ṭāriḳ's advance; he divided his forces into four groups, setting out for Málaga, Granada, Cordova (under Mughīth al-Rūmī) and Toledo (under Ṭāriḳ in person). The capital of the Visigothic kingdom, abandoned by its dignitaries, fell without resistance into the hands of Ṭāriḳ, who according to various sources, continued his march towards the north, reaching Guadalajara and then Astorga. The encounter between Ṭāriḳ and Mūsā b. Nuṣayr, who had in the meantime arrived in the Peninsula with a predominantly Arab army, took place at Toledo or in its vicinity. Mūsā seems to have been intent on punishing his subordinate severely, but ultimately confined himself to a harsh reprimand. From this time onwards, as a personality Ṭāriḳ fell into obscurity, decidedly overshadowed by his patron, with whom he returned to the east in 95/714. His last known action was involvement in a trial against Mūsā; still resenting the humiliation inflicted on him at Toledo, he readily joined the accusers.

(L. Molina)

ṬARĪḲA.

Ṭarīḳa (Ar., pls. *ṭuruḳ*, *ṭarāʾiḳ*) is a term which can signify the "manner of behaving" (*sīra*); it thus qualifies the "method" (*madhhab*) of a person, the conduct which is typical of him and which should generally be imitated. These definitions supplied by the *LʿA* (Beirut 1988, viii, 155) accord with Ḳurʾānic usages of *ṭarīḳa* (cf. in particular, XX, 63, 104). The Ṣūfīs adapted these conceptions, viewing them from a spiritual perspective, but they were careful first of all to relate the term to its most concrete sense: that of "way" or "path". In this context, *ṭarīḳa* is synonymous with *ṭarīḳ*, and the Ṣūfīs often use either term indis-

criminately (cf. for example al-Hudjwīrī, *Kas͟hf al-maḥdjūb*, Beirut 1980 (Arabic tr.), in numerous instances; Abū Ṭālib al-Makkī, *Ḳūt al-ḳulūb*, Cairo 1351/1932, ii, 282; Ibn al-ʿArabī opts for the word *ṭarīḳ*, cf. *al-Futūḥāt al-makkiyya*, Cairo 1329, in particular ii, 382-4). The assimilation of the two terms is apparent in the plural *ṭuruḳ*, which the Ṣūfīs give to *ṭarīḳa* as well as to *ṭarīḳ*; only a few writers use *ṭarāʾiḳ*, cf. e.g. Muḥammad al-Sanūsī, *al-Salsabīl al-maʿīn fi 'l-ṭarāʾiḳ al-arbaʿīn* and *al-Manhal al-rawī fī asānīd al-ʿulūm wa-uṣūl al-ṭarāʾiḳ*, both Beirut 1968.

I. The Nature and Development of the Term in Ṣūfism

1. The Way. In Muslim mysticism, the *ṭarīḳa* thus denotes the way which guides man from the manifest Law (*S͟harīʿa*) to the divine Reality (*Ḥaḳīḳa*), i.e. to God Himself (*al-Ḥaḳḳ*). While *Ḥaḳīḳa* represents the destination of the journey, all Ṣūfīs agree in declaring that the only means of achieving this consists in passing through the various stages of the initiatory process (*sulūk al-ṭarīḳa*); the latter were sketched by the early masters, and treatises on Ṣūfism refer to them according to different gradation [see sulūk]. For those travelling towards God (*al-sālikūn*), the *ṭarīḳa* consists in traversing the various spiritual abodes and stations (*manāzil, maḳāmāt*); this definition from ʿAbd al-Razzāḳ al-Ḳās͟hānī (*Iṣṭilāḥāt al-ṣūfiyya*, Cairo 1981, 65) has been widely adopted, notably by al-Djurdjānī in his *Taʿrīfāt* (Beirut 1991, 154). The *ṭarīḳa* is thus not only internal perception of the hidden meaning of the Law (e.g. Isfarāyinī, *Le révélateur des mystères*, tr. H. Landolt, Lagrasse 1986, Persian text, 120); it also purports to be a total discipline aimed towards the progressive purification of the soul. While the *sālik* proceeds along the way in a manner of relative lucidity, the *madjd͟hūb* or "one enraptured by God" is no less required to pass through various gradations in condensed form, with the fulguration that characterises his state (al-S͟haʿrānī, *Durar al-g͟hawwāṣ fī fatāwī al-K͟hawwāṣ*, Cairo 1985, 139); it is in this context that the majority of writers include the *aḥwāl* or "spiritual states" among the markers of the Way [see ḥāl]. The *ṭarīḳa* thus constitutes the "foundation" (*uṣūl*) of all spiritual progress in Islam, as is underlined by Abū Sulaymān al-Dārānī (quoted by Ibn al-ʿArabī in *Rūḥ al-ḳuds*, Cairo 1989); it alone epitomises the experience lived in Ṣūfism (H. al-S͟harḳāwī, *Muʿdjam alfāẓ al-ṣūfiyya*, Cairo 1987, 201, and S. al-Ḥakīm, *al-Muʿdjam al-ṣūfī*, Beirut 1981, 722, both using the word *ṭarīḳ*). In practice, it includes all the means (doctrines, rituals, techniques of meditation, etc.) which enable man to comprehend the profound identity of the *S͟harīʿa* and the *Ḥaḳīḳa*.

2. The method. In the first centuries of Islam, the *ṭarīḳa* denotes the spiritual modality peculiar to one or other Muslim personality (for example, al-Hudjwīrī, *op. cit.*, 270, referring to ʿUmar b. al-K͟haṭṭāb). This original sense never disappeared completely; thus Ibn K͟haldūn states that the "People of the Bench" (*Ahl al-ṣuffa* [*q.v.*]) who had chosen to reside in the mosque of the Prophet "did not worship God in a particular manner (*ṭarīḳa*)" (cf. his *S͟hifāʾ al-sāʾil li-tahd͟hīb al-masāʾil*, Tunis 1991, 182), while Nadjm al-Dīn al-G͟hazzī, a biographer of the 10th/16th century, uses the word to describe the spiritual temperament of Abu 'l-Suʿūd al-Djāriḥī of Cairo (*al-Kawākib al-sāʾira bi-aʿyān al-miʾa al-ʿās͟hira*, Beirut 1945, i, 48). Where it is a case of a master who has formed a school, *ṭarīḳa* abandons its aspect of individual progress to become a veritable method (al-Hudjwīrī, *op. cit.*, 420; and mostly with the word *ṭarīḳ*: 419, 426, 442, etc.). Furthermore, the term is also used in this sense (close to that of *mad͟hhab*) both in the context of Islamic law (G. Makdisi, *Ibn ʿAqīl et la résurgence de l'Islam traditionaliste au XI^e^ siècle*, Damascus 1963, 197) and in theology (L. Massignon, *La passion de Ḥallâj*, ²Paris 1975, iii, 95). It may be noted that, in symmetrical fashion, Abū Nadjīb al-Suhrawardī writes *mad͟hhab* instead of *ṭarīḳa* to denote the Ṣūfī Way (*Ādāb al-murīdīn*, Cairo n.d., 37). The acceptance of *ṭarīḳa* as meaning a spiritual method persisted in subsequent centuries, coexisting with the connotations later to be attributed to the word. When the *s͟hayk͟h*s of the Ṣūfī orders wished to summarise the teaching of their Way, they grouped together under this term various principles and precepts regarded as essential for the guidance of disciples (for the S͟hād͟hilīs, see e.g. ʿAlī ʿAmmār, *Abu 'l-Ḥasan al-S͟hād͟hilī*, Cairo 1952, ii, 43). In the works of the Persian master Nūr ʿAlī S͟hāh, from the end of the 12th/18th century, the *ṭarīḳa* becomes a complete initiatory doctrine, encompassing numerous facets (M. de Miras, *La méthode spirituelle d'un maître du Soufisme iranien*, Paris 1973, chs. 17-18).

3. The Ṣūfī order. In the 6th/12th and 7th/13th centuries, aspirants towards progress on the Way became ever more numerous; they were also more prone to attaching themselves to a particular master than was previously the case. Numerous spiritual families were constituted then, most of them still in existence today. These major *ṭarīḳa*s progressively gave birth to multiple branches sometimes called *ṭāʾifa*s [*q.v.*]. However, it was to remain the prerogative of the *s͟hayk͟h*s to dispense initiatory instruction outside the framework of the *ṭuruḳ*. For the Ṣūfīs, the latter responded to the need to redress the loss of spirituality occasioned by the length of time that had elapsed since the Prophetic period; the role of the *s͟hayk͟h* was thus to alleviate the deficiencies of individual guidance. On the historical plane, there are certain factors which explain, if not the emergence of these communities, at least the acceleration in the progress of their formation. The Mongol invasions had shattered the complacency engendered among Muslims by what was seen as a relatively homogeneous and powerful Sunnī universe. The decline and subsequent disintegration of the ʿAbbāsid caliphate led to the collapse of traditional religious structures. The authority of the Ṣūfī *s͟hayk͟h*s was strengthened, at the expense of the temporal authority and the *ʿulamāʾ* class. In this atmosphere, the *ṭarīḳa* supplied an area of solidarity as well as the vision of a coherent world transcending the vicissitudes of history. Furthermore, the emergence of *ṭuruḳ* cannot be dissociated from the Sunnī revival inaugurated by the Saldjūḳs in the Middle East and later by the Ayyūbids and the Mamlūks in the Syro-Egyptian region. These various régimes sought to borrow the charisma of the *s͟hayk͟h*s, henceforward to be more of a unifying force than the majority of the *ʿulamāʾ*; by building *k͟hānḳāh*s, *ribāṭ*s and *zāwiya*s [*q.vv.*] they gave to the mystical life a material foundation greatly to the advantage of the nascent orders.

In common with other Ṣūfīs, the eponymous masters of these orders were above all the trustees of an initiatory heritage. They certainly imbued the latter with the force of their personalities, thus creating the schools of spirituality which claim association with them. Nevertheless, in the majority of cases they had no intention of founding an order or even a method. This accounts for the fact that the term *ṭarīḳa* is often given as a synonym of *silsila* [*q.v.*] (cf. e.g. M. al-Zabīdī, *Itḥāf al-asfiyāʾ bi-rafʿ salāsil al-awliyāʾ*, ms. dated

1339 A.H., private collection, fol. 2): this "chain" dating back to the Prophet guaranteed for the Ṣūfīs the authenticity of their initiatory filiation, in a culture where genealogy played a predominant role. After the manner of other Islamic sciences, Ṣūfism had recourse to "supportive lineages" (*isnād* [*q.v.*]) in order to legitimise its Muḥammadan origin. Indeed, al-Sanūsī went so far as to compare the criteria for the evaluation of initiatory transmission with those of *ḥadīth* (*Salsabīl*, 6). This perception of the *ṭarīḳa* is observed in the expression *ṭarīḳat al-khawādjagān* ("way of the masters"): it denotes a line of *shaykhs* of Central Asia in the 7th/13th century—reckoned to be the initiators of the Naḳshbandiyya—and not a constituted order (J.S. Trimingham, *The Sufi orders in Islam*, Oxford 1971, 62-3; L. Lewisohn (ed.), *The legacy of medieval Persian Sufism*, London-New York 1992, 312 ff.).

The true foundation of the *ṭuruḳ* is in fact to be traced back to the successors—immediate or more distant—of these eponyms. Raising their masters to the status of exemplars, they finalised or developed their teaching. Over a period stretching, in general terms, from the 7th/13th to the 10th/16th century, there was a transition from fairly casual methods reflecting the spiritual temperaments of the initiators to precise rules and exercises. A spirit of teamwork was then constituted, in varying degrees; it could be defined as the awareness of belonging to a specific group possessing its own doctrines and most of all its own rituals. The hagiographical literature [see MANĀḲIB] internal to each *ṭarīḳa* plays a predominant role in this process. In certain cases, it emanates from masters who have succeeded the eponymous *shaykh*, a factor which confers on their work the status of a founding text (e.g. the *Laṭāʾif al-minan* of Ibn ʿAṭāʾ Allāh al-Iskandarī, third *shaykh* of the Shādhilī order). Such veneration for the initial masters, developed to varying degrees within each *ṭarīḳa*, constituted one of the grievances of the Islamic jurists (*fuḳahāʾ*) against the Ṣūfīs. In the hagiographical literature it is often evident that the initiatory lineage is henceforward perceived as a *ṭarīḳa*, in other words an organism in which members share the same spiritual references. This onset of awareness could take place several centuries after the death of the eponym (cf. D. DeWeese, *Sayyid ʿAlī Hamadānī and Kubrawī hagiographical traditions*, in *The legacy of medieval Persian Sufism*, 121-57).

The disciples (*murīd*, "aspirants on the Way" [*q.v.*], or *ikhwān*) sometimes led a communal way of life (*al-muʿāshara*). Besides supererogatory practices not confined to the Ṣūfīs, they applied themselves twice a day to the *wird* [*q.v.*], which comprised various forms of prayer. The latter have similar forms from one order to another, but certain very specific *awrād* (sing. *wird*) are presented as having been dictated to the master by the Prophet in the course of visions (e.g. the *awrād fatḥiyya* of ʿAlī al-Hamadānī; cf. *al-Kawākib al-sāʾira*, i, 107). The disciples also recite litanies (*aḥzāb*, sing. *ḥizb*), composed by the eponym of the Way or one of his successors (cf. the *Ḥizb al-Baḥr* of al-Shādhilī, well known outside Shādhilī circles). The *waẓīfa* comprises various elements of prayer which are to be said daily, but in certain cases the term refers to the session of *dhikr* [*q.v.*] of the Ṣūfīs. This session is also known as *ḥaḍra* (or "presence" [of the Prophet]), *ʿimāra* or simply *madjlis*. It takes place once or several times a week. Also practised in the mediaeval period was the *samāʿ* [*q.v.*] "collective spiritual hearing", in the course of which those attending would listen to poetry chanted with or without instruments. Spiritual retreat (*khalwa* [*q.v.*]) is exercised in varying fashion according to the orders. It is one of the mainstays of the Khalwatiyya (which takes its name from this term), while other *ṭuruḳ* advocate it without much enthusiasm and only for short periods.

The followers of a *ṭarīḳa* often congregated in a place regarded as their own, such as the *zāwiya* or the *ribāṭ*, constructed at the initiative of the *shaykh* or of a benefactor. However, certain *ṭuruḳ*, particularly those the members of which belonged to the world of the *ʿulamāʾ*, pursued their practices in any kind of religious establishment. From the 7th/13th century onwards, Ṣūfism was to an ever-increasing extent integrated into the Muslim city. *Shaykhs* and their disciples were admitted to the mosques, and sometimes even constructed mosques of their own. They held major sessions of *dhikr*, similar to those still performed today in certain Muslim countries.

The masters sometimes gave specific instructions to their disciples: to perform a certain rite at a particular time, to perform a certain task rather than another, etc. On occasion, they even proscribed a practice allowed within the community of Believers (ʿAbd al-Wahhāb al-Shaʿrānī provides numerous examples of these directives in his *Adjwiba marḍiyya ʿan aʾimmat al-fuḳahāʾ wa ʾl-ṣūfiyya*, ms. Cairo) For this reason, the *fuḳahāʾ* accused the Ṣūfīs of instituting a law reserved for a spiritual élite and of somehow setting themselves above the *Sharīʿa*; Ibn Khaldūn refutes this accusation in his *Shifāʾ al-sāʾil*, 237.

4. Modes and rites of affiliation. Although the terminology varies with periods and regions of the Muslim world, two overall types of affiliation to a *ṭarīḳa* may be mentioned: in the first instance, association through *irāda* ("willingness" to pass through the stages of the Way; hence the term *murīd*); the aspirant then puts himself under total obedience to a master, who takes charge of his spiritual education (*tarbiya*). The second mode (al-Zabīdī specifically uses the word *ṭarīḳa*, in the sense of "modality", to denote each of these forms of affiliation; cf. *ʿIḳd al-djumān al-thamīn fi ʾl-dhikr wa-ṭuruḳ al-ilbās wa ʾl-talḳīn*, ms. dated 1339 A.H., private collection, fol. 52) consists in the simple reception of *baraka* conveyed by an initiatory lineage; this constitutes *tabarruk*, a more casual and less exacting means in terms of initiation. This type of affiliation thereby affects not only the Ṣūfiyya but also numerous individuals from the most diverse backgrounds: under the Mamlūks and the Ottomans, the sultan and the humble artisan are likewise associated, closely or distantly, with a *ṭarīḳa* (cf. E. Geoffroy, *Le soufisme en Egypte et en Syrie sous les derniers Mamelouks et les premiers Ottomans*, Damascus 1995, ch. viii). It then becomes possible to speak of a mass phenomenon. The juxtaposition of spheres of association around a single initiatory source appears clearly in the case of the Shādhiliyya; in fact, while its masters advocate a close relationship between master and disciple, they also assert that only the reading of their *awrād* and *aḥzāb* admits the faithful to their spiritual family (ʿAlī ʿAmmār, *Abu ʾl-Ḥasan al-Shādhilī*, Cairo 1952, ii, 31). The modality of *tabarruk* allows and explains the practice of multiple affiliation, or in other words the action, on the part of a *murīd*, of "taking the Way" of several *shaykhs*, certain associations being of greater value in his eyes than others. Such an accumulation is justified by the desire to multiply ways of access to the *baraka*, "the Muḥammadan influx" mentioned above. Although multiple affiliation reached its zenith at the end of the mediaeval period, it is a constant feature of Ṣūfism; in fact, the earliest mystics of Islam used to go from one master to another, seeking "the freshest

source", as was suggested by Abu 'l-Ḥasan al-S̲h̲ād̲h̲ilī (Ibn al-Ṣabbāg̲h̲, *Durrat al-asrār*, Cairo 1993, 176).

Attachment to a *ṭarīḳa* is realised by the performance of initiatory rites which, in this case also, take on different meanings according to differences in space and time. The most important of these rites, at least in the Ṣūfism of the Mas̲h̲riḳ, consists in the presentation of the "cloak" (*k̲h̲irḳa* [*q.v.*]) by the master to the disciple. Also worth mentioning are the sealing of the pact (*ak̲h̲d̲h̲ al-ʿahd, bayʿa*), the teaching of sometimes personalised formulas of invocation (*talḳīn al-d̲h̲ikr*, or the practice of letting the tassel of the disciple's turban hang down (*irk̲h̲ā' al-ʿad̲h̲aba*).

5. Towards "fraternalism". The material configuration of Ṣūfism in *ṭuruḳ* and in their various decentralised networks did not come about until the 8th/14th and 9th/15th centuries, and in very uneven fashion. In the Persian domain, for example, the pyramidal delegation of spiritual authority appeared earlier than in the Arab zone; there, masters appointed representatives (*k̲h̲ulafā'*) in regions where their authority was established (in Arab countries, use was also made of the word *muḳaddam* "one sent in advance" by the *s̲h̲ayk̲h̲*, or *ma'd̲h̲ūn* "one authorised" by the *s̲h̲ayk̲h̲* to initiate others). More generally, the structuring of Ṣūfism into what are commonly called "fraternities" or "brotherhoods" did not emerge until a later stage; in the 12th/18th century, the attacks of nascent Wahhābism were not unconnected with a certain stiffening of the *ṭuruḳ*, which was to be further augmented during the 19th century. The Ottoman sovereigns attempted to institutionalise Ṣūfism by associating themselves systematically with one or with several orders, and in particular by installing a *s̲h̲ayk̲h̲ al-ṭuruḳ* in every mayor city of the empire [see S̲H̲AYK̲H̲]. In 20th-century Egypt, this was to lead to the legal recognition of the *ṭuruḳ*, and to the inauguration of a Council elected by the *s̲h̲ayk̲h̲*s of different orders, with a senior figure presiding.

Later Ṣūfism is characterised by a relative exclusivism of ways, in their relations with one another, by a willingness to display initiatory affiliation (notably through the wearing of a particular colour: black for the Rifāʿīs, red for the Aḥmadīs, etc.), or by the hereditary transmission of the function of *s̲h̲ayk̲h̲*, a fact which often reflects shortcomings in the initiatory system.

6. The universal Way. At no time, however, has the mystical practice of Islam been reduced to "fraternalism". The term "fraternity" or "brotherhood" is in any case a misnomer, since it takes account only of the horizontal dimension of the *ṭarīḳa*, while the latter is essentially a vertical way. It should be stressed here that the proliferation of "particular initiatory ways" (the correct translation of *ṭuruḳ*) is founded on the Ṣūfī adage according to which "there exist as many paths [leading to God] as there are human beings". Thus al-Suhrawardī devotes the fourth chapter of his *ʿAwārif al-maʿārif* to the various means employed by the Ṣūfīs for the accomplishment of the Way. The *ṭuruḳ* are thus one, as al-Sanūsī asserts, "since they have a single objective" (*Salsabīl*, 6). This is not simply a case of *petitio principii*. The Ṣūfīs have generally maintained a spiritual frame of reference broader than that of their order; this is furthermore attested by the practice of multiple affiliation, still functioning in certain circles. They have thus been willing, by minimising specific features, to subsume their own way within a universal Way. The expression *had̲h̲ihi 'l-ṭarīḳa* which is familiar in their writings, denotes this Way as well as those who travel by it; the *sālikūn* thus constitute a major spiritual community (cf. al-Ḳus̲h̲ayrī, *Risāla*, Cairo 1957, 2-3; al-Hud̲j̲wīrī, 269, 419, 426; Ibn al-ʿArabī, *al-Futūḥāt al-makkiyya*, ed. O. Yahia, Cairo, i, 341, iii, 368; Ibn K̲h̲aldūn, *S̲h̲ifā' al-sā'il*, 182-3). In the final analysis, *ṭarīḳa* has meaning for the Ṣūfīs only in terms of the relationship which it establishes with the Prophet. In fact, the *s̲h̲ayk̲h̲* of a *ṭarīḳa*, irrespective of its importance, never does more than represent him; he cannot guide others on the Way, let alone found an order, without the Messenger's authorisation. Besides an abstract allegiance to the latter, certain masters have claimed to have no spiritual guide other than the Prophet. In such cases, Muḥammad has initiated them in nocturnal or in waking visions. This modality is correctly called "the Muḥammadan Way" (*al-ṭarīḳ* or *al-ṭarīḳa al-muḥammadiyya*; cf. Murtaḍā al-Zabīdī, *ʿIḳd al-d̲j̲umān al-t̲h̲amīn*, fol. 74), although the expression is used to cover a wide range of meanings (*ṭarīḳa muṣṭafawī* is also found, al-Muṣṭafā being one of the sobriquets of the Prophet; cf. Isfarāyinī, *Le révélateur des mystères*, Persian text, 120). Furthermore, *ṭarīḳa*, even in its sense of "particular way", is not invariably indicative of a materialised order; it often simply evokes the beneficial effect of a *spiritual influence* traversing time. This is the correct understanding of the phrase *ṭarīḳa ḥallād̲j̲iyya* (referring to al-Ḥallād̲j̲; e.g. Massignon, *Passion*, i, 84) or indeed *ṭarīḳa akbariyya*: the influence of Ibn al-ʿArabī is not confined to a specific order, but has experienced numerous modes of diffusion (see Geoffroy, *Soufisme en Egypte et en Syrie*, 222-3). Similarly in the *ṭarīḳa uwaysiyya*, initiation is transmitted through the intermediary of the "spiritual form" (*rūḥāniyya* [*q.v.*] of deceased prophets or saints, thus beyond the normal parameters of space and time (al-Sanūsī, *Salsabīl*, 31; J. ter Haar, *The Importance of the spiritual guide in the Naqshbandi Order*, in *The legacy of medieval Persian Sufism*, 312-18; J. Baldick, *Imaginary Muslims*, London-New York 1993; and see UWAYSIYYA).

It should be noted in conclusion that the various meanings of the term *ṭarīḳa* evoked in this article (spiritual temperament, method, the Way in general, initiatory lineage, a particular Ṣūfī order) very often occur side-by-side in the work of a single author.

Bibliography: Given in the text. It should be noted that each major *ṭarīḳa* is the object of an article in *EI*². For an overall perspective on the *ṭuruḳ*, reference may be made to J.S. Trimingham, *The Sufi orders in Islam*, and to the collective work entitled *Les Voies d'Allâh. Les ordres mystiques dans le monde musulman des origines à aujourd'hui*, ed. G. Veinstein and A. Popovic, Paris 1996.

(E. GEOFFROY)

II. THE TERM CONSIDERED GEOGRAPHICALLY

1. In the central Arab and Persian lands of the Middle East.

See the separate articles on the various Ṣūfī orders, and TAṢAWWUF. 2. Ibn al-ʿArabī and after, 3. In 19th and 20th century Egypt, and 4. In Persia.

2. In North Africa.

The emergence of fraternities or brotherhoods, as properly defined, in North Africa was preceded by two associated phenomena. On the one hand *ribāṭs* [*q.v.*], where communities of volunteers subjected themselves to devotional or ascetic practices, were proliferating; on the other, a number of solitary ascetics, plebeian or educated, adopted the mystical life on an individual basis and took responsibility for the spiritual education of close disciples. Among the most renowned of these early mystics, in the 6th/12th century, were the following Andalusians of the Almeria school: Ibn

al-ʿArīf, Ibn Barradjān and Ibn Ḳasī [*q.vv.*]. As for the Maghrib proper, still in the 6th/12th century, worthy of mention are Abū Yaʿzā, Ibn Ḥirzihim and in particular their direct disciple Abū Madyan [*q.vv.*]. Ibn al-ʿArabī, among others, was to give an account of the burgeoning of this form of the mystical life (*The Sufis of Andalusia*, tr. R.W.J. Austin, London 1971, French tr. G. Lecomte, *Les Soufis d'Andalousie*, Paris 1979; also C. Addas, *Ibn ʿArabi ou la quête du Soufre rouge*, Paris 1989, Eng. tr., *The quest for the Red Sulphur. The life of Ibn ʿArabī*, Cambridge 1993).

Little is known of the initial evolution of brotherhoods *stricto sensu*, which took place from the 8th/14th century onwards. Ṣūfism, organised around *zāwiyas* or in looser networks, became numerous in the towns, where it attracted adherents from very diverse backgrounds, including numerous scholars. It became progressively integrated into the religious culture, especially in Morocco: *taṣawwuf* was often taught there in the *madrasas*, and conversely, *fiḳh* was a part of the instruction given in *zāwiyas*. In the countryside, the *ṭuruḳ* reinforced Islamisation while introducing communal rites into which popular practices, often of magical nature, could be integrated. A "Ṣūfism of the masses" took shape there from the 9th/15th century onwards, playing the role of a powerful factor in social cohesion. Relationships between the brotherhoods and the political authorities were ambiguous and variable. The sultans usually approved of the establishment of *zāwiyas*, which effectively performed a stabilising role, a function of social centralisation which enhanced the administrative coherence of a kingdom. The strict Sunnism of the brotherhoods, their insistence on respect for the Law and their social discretion, often created a climate of confidence, while their participation in the military struggle against foreign invasions (contribution of the Shādhiliyya-Djazūliyya to the war against the Portuguese in the 15th-16th centuries) underlined the total integration of Ṣūfī affiliates into the social order of their country. Nevertheless, central authorities sometimes mistrusted the autonomous tendencies of certain *zāwiyas*, which had become rich and militarily powerful. In the 11th/17th century, the Moroccan Shādhilī *zāwiya* of Dilāʾ [*q.v.* in Suppl.] defeated the last of the Saʿdians and all but succeeded in taking control of the sultanate (see M. Ḥadjdjī, *al-Zāwiya al-Dilāʾiyya*, Rabat 1964).

By far the most popular and widespread fraternal movement in North Africa belongs to the Shādhilī tradition [see SHĀDHILIYYA]. Abu 'l-Ḥasan al-Shādhilī was a native of northern Morocco, where he was a disciple of ʿAbd al-Salām Ibn Mashīsh [*q.v.*], in his turn a disciple of Abū Madyan. He began his preaching activities in Ifrīḳiya, then settled in Egypt where he died in 656/1252. He did not found an order as such, but his successors Abu 'l-ʿAbbās al-Mursī (d. 686/1287) and then ʿAṭāʾ Allāh al-Iskandarī [*q.v.*] organised and revitalised the Shādhilī liturgical and spiritual tradition. The latter spread in continuous fashion in Egypt and Ifrīḳiya and, in a more spectacular manner, in Morocco. The orders emanating from the Shādhiliyya do not constitute an organisation or even a clearly defined mystical current, but rather a multiplicity of sub-orders, some of them quite substantial, acknowledging the spiritual authority of Abu 'l-Ḥasan. Among the most widespread, mention should be made of the Shādhiliyya-Zarrūḳiyya, arising from the reformist activities of Aḥmad al-Burnusī, known as al-Zarrūḳ (d. 899/1494), a Moroccan scholar who toured Egypt and North Africa and gave a new impetus to the Shādhilī tradition (cf. A.F. Khushaim, *Zarruq the Sufi*, Tripoli 1976); numerous more recent brotherhoods lay claim to his spiritual heritage, including the Rashīdiyya (= Yūsufiyya, 10th/16th century) and its derivative branches, the Nāṣiriyya in Morocco, Shaykhiyya in Algeria and Shabbiyya in Tunisia (on these sub-groups, emerging in the 11th/17th century, see C. Depont and O. Coppolani, *Les confréries religieuses musulmanes*, Algiers 1884, repr. Paris 1987; G. Drague, *Esquisse d'histoire religieuse du Maroc. Confréries et zaouias*, Paris 1951). The Djazūliyya, arising from the preaching of the saint and charismatic hermit al-Djazūlī [*q.v.*], enjoyed great success on account of the simplicity of its ritual, based around the recitation of a manual of litany prayers, the *Dalāʾil al-khayrāt*. It did not require any particularly rigorous personalised initiation, but simple allegiance to the *shaykh* (*tabarruk*); it marked the start of what has been referred to above as a "Ṣūfism of the masses". Several more recent brotherhoods were to claim association with the spirituality of al-Djazūlī, such as the Ṭayyibiyya, arising in the 11th/17th century and spreading through Morocco and Algeria, and the Hanṣaliyya, emerging in the 12th/18th century in Morocco ([*q.v.*]; and see also M. Morsy, *Les Ahansala: examen du role historique d'une famille maraboutique de l'Atlas marocain du XVIII^e siècle*, Paris-The Hague 1972). The Shādhilī movement continued to operate over the centuries, some branches disappearing, other more dynamic ones coming to light. Among the latter, worth mentioning is the Darḳāwa [*q.v.*], founded by the Moroccan Abū Ḥāmid al-ʿArabī al-Darḳāwī (d. 1823). Schooled in the tradition of al-Zarrūḳ, al-Darḳāwī launched a movement designed to revive the original purity of Ṣūfism, which he reckoned had been corrupted by maraboutism and superstitions. His preaching was widely disseminated, provoking the emergence of new sub-brotherhoods such as the Būzīdiyya, which included among its members the great neo-Ṣūfī master Aḥmad Ibn ʿAdjība ([*q.v.*]; see also J.-L. Michon, *Le Soufi marocain Aḥmad ibn ʿAjība et son Miʿrāj*, Paris 1973). In the 20th century, Aḥmad Ibn ʿAlīwa ([*q.v.*], also known as Ibn ʿAlawī) a product of the Darḳāwī-Būzīdī tendency, attempted in turn to revive the fraternal spirit and fraternal activities. His personal charisma and his thought attracted numerous disciples, including several Europeans (cf. M. Lings, *A Moslem saint of the twentieth century: Shaikh Aḥmad al-ʿAlawī*, London 1961, French tr. *Un saint musulman du 20^e siècle, le cheikh Aḥmad al-ʿAlawī*) and his ʿAlawiyya *ṭarīḳa* spread far beyond the frontiers of the Maghrib.

Among the major brotherhoods present in the Maghrib, one of the most prominent is the Ḳādiriyya [*q.v.*]. The hagiographical account attributing its establishment in the West to two of the sons of ʿAbd al-Ḳādir al-Djīlānī [*q.v.*] is not entirely plausible, but its diffusion nevertheless seems to have been both ancient and extensive. Locally, it has lost ground to rather more dynamic tendencies, but significant groups continue even today to claim lines of initiatory descent traced back to al-Djīlānī. In Morocco, communities claiming inspiration by al-Djīlānī, known as Djīlāla, remain active, although this inspiration is sometimes rather vague; ʿAbd al-Ḳādir al-Djīlānī may be invoked as a great saint and intercessor, without any specific affiliation to a Ḳādirī *silsila*. The Khalwatiyya is also firmly implanted in North Africa, largely through the influence of the important Raḥmāniyya order [*q.v.*] which spread from Kabylia to cover the entire Algero-Tunisian region from the end of the 18th century onwards. Finally, to be noted are orders situated at the confluence of several major traditions. ʿAbd al-

Salām al-Asmar (late 18th century), the renewer of the ʿArūsiyya brotherhood, diffused principally in Ifrīḳiya, had visited Shādhilī and Ḳādirī masters, although he did not personally adopt any specific *ṭarīḳa*. More striking still is the example of Aḥmad al-Tidjānī (d. 1815), who received a Ḳādirī, Shādhilī-Ṭayyibī and Khalwatī spiritual education, but felt a vocation to propagate a new way in 1781. A proselytising organisation allowing its members no association with any other brotherhood, the Tidjāniyya [*q.v.*] is a fine example of an autonomous and original *ṭarīḳa*. Originating in southern Algeria, it spread principally in Morocco, in the western Sahara and in Sudanese Africa (cf. J.M. Abun-Nasr, *The Tidjaniyya, a Sufi order in the modern world*, London 1965).

Mention should also be made of various popular brotherhoods, owing as much to shamanistic sources as to the spirit of the *ṭarīḳa*. Their approach is often twofold, as in the case of the ʿĪsāwiyya [*q.v.*]: its founder, Muḥammad b. ʿĪsā al-Mukhtār (d. 931/1524), was a pious Moroccan ascetic brought up in the Shādhilī-Djazūlī tradition, but ʿĪsāwī adherents added to the usual practices of *dhikr* rites involving spectacular trances and contacts with spirits, usually with the objective of securing recovery from illness (cf. R. Brunel, *Essai sur la confrérie des Aissaouas au Maroc*, Paris 1926). Similar observations apply to the related Moroccan order of the Ḥamdūshiyya, which emerged in the 11th/17th century (cf. V. Crapanzano, *The Hamadsha. A study in Moroccan ethnopsychology*, Berkeley, etc. 1973) or to certain Moroccan Djīlāla. More marginal still are the Gnāwa, whose rites of trance for therapeutic purposes are explicitly related to a Black African tradition. They are not usually considered mystics, their objective being not union with the divine but conciliation with the world of djinns (V. Pâques, *La religion des esclaves. Recherches sur la confrérie marocaine des Gnawa*, Paris 1991).

The spirituality of the Maghribī brotherhoods is profoundly Sunnī and firmly rooted in orthodox Islam. The obligation to observe conventional cultic practice is stressed by all the great masters, and access to elevated mystical experiences does not absolve the aspirant from his fundamental duties. Severe asceticism is not encouraged, the emphasis being rather on interior detachment and spiritual effort within the framework of secular life. A frequent and fundamental element of the rituals of the brotherhoods consists in the recitation of litanies (*ḥizb*, pl. *aḥzāb*) like those composed by Abu 'l-Ḥasan al-Shādhilī. Generally, the pursuit of miracles and of states of trance is denounced, although this does not discourage the ecstatic ceremonies performed by the ʿĪsāwiyya and the Ḥamdūshiyya. Furthermore, even the generally "sober" tradition of the Shādhiliyya has embraced numerous ecstatic saints such as ʿAbd al-Raḥmān al-Madjdhūb (cf. A.-L. de Prémare, *Sidi ʿAbd-er-Raḥmān El-Medjdūb*, Paris 1985). Moreover, the multiplication of practices of a magical nature in the context of the brotherhoods is widespread. It is, in fact, very difficult to distinguish between the value attributed to a certain *ḥizb* or formula, to the presence of a living or deceased *shaykh*, and an attitude relating to pure magic. Visiting the tombs of saints is the occasion for multiple practices involving conjuration, healing of the sick, divination, etc. (cf. E. Dermenghem, *Le culte des saints dans l'islam maghrébin*, Paris 1954, repr. 1982; F. Reysoo, *Pèlerinages au Maroc*, Neuchâtel-Paris 1991).

The situation of the *ṭuruḳ* in the contemporary period is far from easy. While the accusation of collaboration with the French occupier is untenable in the majority of cases (cf. e.g. the role of the *amīr* ʿAbd al-Ḳādir in Algeria), the brotherhoods have nonetheless remained a favourite target for the Salafī movements (which denounce them as one of the principal causes of the decadence of North African Islam) and for those of Marxist leanings (who consider them centres of obscurantism and social regression). The position of the *ṭuruḳ* in secular Tunisia or in Algeria is therefore somewhat delicate. On a more global scale, modernisation of attitudes and behaviour have weakened the appeal exerted by traditional brotherhoods. But it would be a mistake to conclude that the latter must be on the verge of disappearance: their attendances remain considerable, and in view of current disillusionment both with Western modernity and with political Islam, their role in the future is likely to be augmented.

3. In northeastern and eastern Africa.

Before the 18th century, most Ṣūfī affiliations, mainly Ḳādiriyya and Shādhiliyya [*q.vv.*], in northeastern and eastern Africa were lineage or family-based. Towards the end of the century, new supra-lineage *ṭarīḳa*s began to appear in the region that are sometimes labelled "neo-Ṣūfī". The new orders transcended lineage or ethnic boundaries, were more hierarchical in structure, and maintained themselves more self-consciously as organisations, centred on the families of their founders (see R.S. O'Fahey and B. Radtke, *Neo-Sufism reconsidered*, in *Isl.*, lxx [1993], 52-87).

The first of these new orders to appear in the region was the Sammāniyya, originating with the Medinan scholar and Ṣūfī Muḥammad b. ʿAbd al-Karīm al-Sammān (1130-89/1718-75; see on his life and writings, *Arabic literature of Africa*, ed. J.O. Hunwick and O'Fahey, i, *The writings of Eastern Sudanic Africa*, Leiden 1994, 91-4; hereafter *ALA*, i). The Sammāniyya was brought to the Nilotic Sudan by the Sudanese Aḥmad al-Ṭayyib wad [= b.] al-Bashīr (1155-1239/1742-1824). The Sammāniyya, which also spread into western Ethiopia, in the Sudan split into several branches, but has been characterised until the present day (1997) by a tradition of scholarship and writing, particularly on history. The *ṭarīḳa* played a very important part in the events leading to the establishment of the Mahdist state in the Sudan under the leadership of Muḥammad Aḥmad b. ʿAbd Allāh (1844-85 [*q.v.*]; see further *ALA*, i, 304-41), who began his career as a Sammānī *murīd* and then *shaykh*. The present outstanding representative of the tradition is Ḥasan Muḥammad al-Fātiḥ Ḳarīb Allāh, former Vice-

Chancellor of the Omdurman Islamic University (see *ALA*, i, 94-122, for his and other Sammānī writings).

The 19th century was Muslim Africa's Ṣūfī century and, as such, was dominated by two men, Aḥmad al-Tid̲j̲ānī (1150-1230/1737-1815) and Aḥmad b. Idrīs (1163-1253/1750-1837 [*q.v.*]). Al-Tid̲j̲ānī's way, which was dominant in Islamic West Africa, was taken to the Sudan first by the Mauritanian missionary and merchant, Muḥammad b. al-Muk̲h̲tār al-S̲h̲inḳīṭī (*ca.* 1820-82; see *ALA*, i, 287-8). Since his time, the Tid̲j̲āniyya have spread widely in the Sudan, especially that branch associated with the Senegalese Ibrāhīm Niasse (1900-75; see *ALA*, i, 286-303). The Tid̲j̲āniyya have spread in recent years in various parts of the Oromo country in Ethiopia, through the agency of such figures as Maḥmūd b. Sulaymān al-Tid̲j̲ānī (early 20th century), a nephew of the Oromo ruler, Abbā D̲j̲ifār II.

Aḥmad b. Idrīs was born near al-ʿArāʾis̲h̲ on the Atlantic coast of Morocco. Despite his importance in the history of the 19th-century Muslim world, little is known of his life (see O'Fahey, *Enigmatic saint. Aḥmad ibn Idrīs and the Idrīsī tradition*, London 1990, and Yaḥyā Muḥammad Ibrāhīm, *Madrasat Aḥmad b. Idrīs al-Mag̲h̲ribī*, Beirut 1993). After studying at the Ḳarawiyyīn [*q.v.*] in Fez, where he learnt from ʿAbd al-Wahhāb al-Tāzī, a student of ʿAbd al-ʿAzīz al-Dabbāg̲h̲, he moved to the East, spending time in Upper Egypt, Mecca and Medina and ʿAsīr, where he died in 1837. Ibn Idrīs himself wrote relatively little (see *ALA*, i, 124-38; see further *The letters of Aḥmad ibn Idrīs*, ed. E. Thomassen and Radtke, London 1993) and seemingly made no effort to organise an order. His importance lies in his students and their impact on northeastern and eastern Africa.

Among Ibn Idrīs's many students was the North African Muḥammad b. ʿAlī al-Sanūsī (1202-76/1787-1859), who established the Sanūsiyya order in Cyrenaica and the central Sahara (see K.S. Vikør, *Sufi and scholar on the desert edge. Muḥammad b. ʿAlī al-Sanūsī and his brotherhood*, London 1995); Muḥammad ʿUt̲h̲mān al-Mīrg̲h̲anī (1208-68/1794-1852), from an old-established Ḥid̲j̲āzī family who propagated the K̲h̲atmiyya in Egypt, the Sudan, the Yemen and parts of Ethiopia and Eritrea (see J.O. Voll, *A history of the Khatmiyyah Tariqah in the Sudan*, Ph.D. thesis, Harvard University 1969); and Ibrāhīm b. Ṣāliḥ al-Ras̲h̲īd al-Duwayhī (1813-74 [*q.v.*]), from whom, in turn, stemmed a series of orders, the Ras̲h̲īdiyya, Ṣāliḥiyya [*q.v.*] and Dandarāwiyya that spread in Egypt, Somalia and Southeast Asia (mainly Malaysia). Although there were disputes among the various orders of the Idrīsī tradition (see further M. Sedgwick, *Succession and inheritance in a Sufi order: the case of Ibrāhīm al-Rashīd*, in *Islam et sociétés au sud du Sahara*, ii, Paris 1997, 149-62, and Hamdan Hassan, *Tarikat Ahmadiyyah di Malaysia*, Kuala Lumpur 1990), they kept a common heritage in Ibn Idrīs's prayers (*awrād*) and litanies (*aḥzāb*). A more modern offshoot of the Idrīsī tradition is the D̲j̲aʿfariyya, established in Upper Egypt and Cairo by Ṣāliḥ b. Muḥammad al-D̲j̲aʿfarī (1910-79, on whose writings, see *ALA*, i, 162-5).

In addition to these major orders, there are a number of smaller local orders, such as the Ismāʿīliyya established in Kordofan [*q.v.*] in the Sudan by a one-time student of al-Mīrg̲h̲anī Ismāʿīl al-Walī (1793-1863; see Mahmoud Abdalla Ibrahim, *The history of the Ismaʿiliyya Tariqa in the Sudan, 1792-1914*, Ph.D. thesis, Univ. of London 1980). Another Sudanese tradition is associated with the Mad̲j̲ād̲h̲īb clan of al-Dāmar, foremost of whom was Muḥammad Mad̲j̲d̲h̲ūb (1795-1831; see A. Hofheinz, *Internalizing Islam. Shaykh Muḥammad Majdhūb, scriptural Islam and local context in nineteenth-century Islam*, dr. philos. thesis, Univ. of Bergen 1996). In East Africa likewise, a number of smaller orders were established in the 19th century: a *s̲h̲ayk̲h̲* from Brava (Barāwa) in southern Somalia, Uways b. Muḥammad al-Barāwī (1847-1909), propagated a branch of the Ḳādiriyya [*q.v.*] with links to ʿIrāḳ. Two other examples are the spread of the Yas̲h̲rūṭiyya (on whom, see J. van Ess, *Libanesische Miszellen. 6. Die Yashrūṭiyya*, in *WI*, xvi, 1-103), a Lebanese order that was taken to the Comoro Islands (D̲j̲azīrat al-Ḳamar) and northern Mozambique, and the Nūrāniyya, an offshoot of the S̲h̲ād̲h̲iliyya established in Zanzibar by the *ḳāḍī* and scholar, ʿAbd al-ʿAzīz al-Amawī (1834-96; see further, O'Fahey and Ann Biersteker, *The writings of the Muslim peoples of Eastern Africa*, = vol. iii of *ALA* [forthcoming]). Another Ṣūfī tradition, that of the ʿAlawiyya of the Ḥaḍramawt [*q.v.*], was also active on the East African coast and islands.

As noted above, the 19th century was Africa's Ṣūfī one. This manifested itself in two ways; one was the resistence to imperialist occupation led by such figures as Aḥmad al-S̲h̲arīf al-Sanūsī in Libya against the Italians, ʿAbd al-Ḳādir al-D̲j̲azāʾirī [*q.v.*] of Algeria against the French and Muḥammad b. ʿAbd Allāh Ḥasan (d. 1922) of Somalia, a Ṣāliḥī *s̲h̲ayk̲h̲* who fought against the Ethiopians, Italians and British. A longer term and, perhaps more important aspect, was the role of the brotherhoods in the Islamisation of nominal Muslims in the region through education, the writing of popular litanies and simple works of dogmatics (written increasingly in the late 19th and early 20th centuries in vernacular languages, Swahili, Fulfulde or Hausa), and *daʿwa* activities.

The new orders spread spectacularly. There were two main ways; one, characteristic of the K̲h̲atmiyya and the revived Ḳādirī orders, was the incorporation of pre-existing holy lineages into the new supra-ethnic orders, where often elaborate hierarchies of *k̲h̲alīfas*, *muḳaddams*, *amīns*, down to the *ḥuwārāt*, female attendants who received the donations of the female devotees, were created, where distinctions between those who administered and those who initiated were maintained. The K̲h̲atmiyya hierarchy, for example, includes a *nāʾib* who was the *s̲h̲ayk̲h̲*'s personal assistant, while the senior *k̲h̲alīfa*, the *k̲h̲alīfat al-k̲h̲ulafāʾ*, had his assistant, *al-nāʾib al-ʿāmm*. The local *k̲h̲alīfa*s were known as *k̲h̲alīfat al-balad* or *k̲h̲alīfat al-nāḥiya* (see further, Ali Salih Karrar, *The Sufi brotherhoods of the Sudan*, London 1992, 130-6). The orders maintained Ḳurʾānic schools (in Sudanese Ar., *k̲h̲alwa* or *masīd* [= *masd̲j̲id*]), organised the weekly *d̲h̲ikr* (usually on a Thursday), had their own distinctive flags, musical instruments and regalia, and maintained the tombs of the founders of the *ṭarīḳa*s and their kin.

The other model was the implantation into hitherto infertile ground of quasi-missionary institutions that acted as foci for new economic and intellectual activity—the classic examples are the Sanūsiyya in Cyrenaica and the Ṣāliḥiyya in Somalia. The basic institution of both orders were socio-religious centres or *zāwiya*s (Somali, *cammaa*), exploiting new agricultural and commercial possibilities, appealing to new groups, offering a new kind of Islamic education and, generally, internationalising African Islam. The Ṣāliḥiyya centres in Somalia were often built on clay soil, previously not utilised by the Somalis, and attracted ex-slaves and other outcaste groups, while the Sanūsī *zāwiya*s were often sited on the boundaries between two tribes or along Saharan trade-routes.

In recent times the tendency, especially in urban areas, has been for the emergence of individual preachers, using cassettes and the like. How the *ṭarīḳa*s will fare in the new dispensation remains unclear.

4. In sub-Saharan Africa.

See for this TAṢAWWUF. 9. In Africa south of the Maghrib during the 19th and 20th centuries.

5. In the Turkish lands, from Anatolia to Eastern Turkestan.

i. Orders indigenous to the Turkish lands.

(a) *The Yasawiyya (Central Asia, Khʷārazm, the Kazakh steppe, the Tatar realm, Eastern Turkestan and Turkey)*

The Yasawiyya played an important role from the 12th century onwards in the Islamisation of the Turkish peoples and the sovereigns of the Golden Horde, having Yasî (or Ḥaḍrat, what is today Turkistān in modern Kazakhistān) as its centre. Certain traditions maintain that the founder, Aḥmad Yasawī (d. 562/1162 [*q.v.*]), was probably a disciple of Abū Yūsuf Hamadānī (d. 534/1140); he in turn was the successor to a tradition, which started with Bāyazīd Bisṭāmī (d. 261/874 or 234/857), as the founder of the *ṭarīḳa-yi khʷādjagān* (with its centre at Marw and Khʷārazm). However, recent works show that the Yasawiyya is much more in keeping with the sect of the Mubayyiḍiyya, a group comprising the followers of Abū Muslim (A. Muminov, *Mübeyyidiyye-Yeseviyye alâkası hakkında*, in *Bir*, Istanbul, i [1994]).

The representatives and disciples of Aḥmad Yasawī, such as Ḥakīm Atā (d. 582/1183) and Saʿīd Atā (d. 615/1218), mainly preached in the regions of the Sîr Daryā, the Volga, Khʷārazm, and as far as eastern Turkestan. The expansion of the order is connected with the concerns for Islamisation (cf. Fuat Köprülü, *Türk edebiyyatında ilk mutaṣavvıflar*, Istanbul 1919, and the works of Devin DeWeese). From the 13th century onwards, the *shaykh*s of this order arrived in Anatolia fleeing from the Mongols. They disappeared from there in the 16th century. In Anatolia the Yasawiyya are associated with an order of *Ḳalandar*s called Ḥaydariyya, established by Ḳuṭb al-Dīn Ḥaydar al-Zāwayī (d. 1221), who appears to have been a disciple of Aḥmad Yasawī.

From the 16th century onwards in Central Asia, the Yasawiyya (also called Sulṭāniyya) lost its influence to the Naḳshbandiyya, with which it has often been associated, primarily with a particular sub-group of this order which was not opposed to the oral, *djahrī*, *dhikr*. At that time it was identified with the order called Djahriyya (i.e. with the Ḳādiriyya).

The principal branch of the Yasawiyya, established in the 16th century by Djamāl al-Dīn ʿAzīzān (d. 912/1507) and located in the region of Samarḳand, was known by the name of ʿAzīziyya (Muḥammad ʿĀlim al-Ṣiddīḳī al-ʿAlawī, *Lamaḥāt min nafaḥāt al-Ḳuds*, Tashkent 1909). On the other hand, the Yasawiyya gained more popular support, and this distanced it from the system of brotherhoods, now leaving its *shaykh*s only in charge of the devotions performed at the tombs of their masters. Today it is represented by the lines of *īshān*s, who possess genealogical documentation (*shadjara*) and even sometimes seals (*muhr*), who are considered the descendants of the founder or of his disciples and who mostly live in the south of Kazakhistān (Dasht-i Ḳîpčaḳ, Turkistān, Čimkent) and in some regions of Turkmenistān (see the studies of S.M. Demidov and A. Muminov).

(b) *The Naḳshbandiyya (Central Asia, Eastern Turkestan, the Tatar realm, Ādharbāydjān, the Caucasus, Khurāsān and Turkey)*

Under Bahāʾ al-Dīn Naḳshband (d. 791/1389) one branch of the movement of the Khʷādjagān adopted the name *ṭarīḳa-yi Naḳshbandiyya*, having the town of Bukhārā as its centre. The second great figure in this order was Khʷādja ʿUbayd Allāh Aḥrār (d. 896/1490 [*q.v.* in Suppl.]), who settled in Tashkent and Samarḳand. He strengthened the *ṭarīḳa* and enabled its expansion beyond Central Asia by sending out many disciples into the Ottoman Empire (Istanbul and Amasya), to Harāt, and to Ādharbāydjān (Tabrīz and Ḳazwīn; see the studies of H. Algar and of Jo-Ann Gross).

The third great representative of the order in Central Asia was Mawlānā Khʷādjagī Ḳāʾānī Dakhbidī, known as Makhdūm-i Aʿẓam (d. 949/1542) at Samarḳand (see the studies of B. Babazanov). His disciple, Khʷādja Muḥammad Islām Djūybārī (d. 971/1563), founded the dynasty of the *shaykh*s called the Djūybārī, which was established in Bukhārā. This group was influential in the Khānate of Bukhārā, and maintained its position in the forefront of religious power until the end of the 19th century.

It was a pupil of Islām Djūybārī who introduced the Naḳshbandiyya to Eastern Turkestan (Yārkand and Kāshghar). It was known there as the ʿIshḳiyya and Āfāḳiyya (see the studies of J. Fletcher and Niẓamüddin Ḥüsäyin, *3. Ḳabahät ʿäḳidä. yäʿni bir ḳätim Appaḳ Khodja Toghrisida*, in *Shindjang Mädäniyati* (Urumči) [1989], 113-54). In the 19th century the order was represented in the principal cities of Central Asia and in particular at Bukhārā, in Farghānā, and in Afghān Turkestan. The order was introduced to the Tatars of the Volga (Ḳāzān, Ufā) at Astrakhān, and into Siberia from Bukhārā and Afghānistān, and also from the Caucasus, where it had existed since the 18th century, and from Turkey (Muḥammad Murād al-Ramzī, *Talfīḳ al-akhbār wa-talḳīḥ al-āthār fī Ḳāzān wa-Bulghār wa-mulūk al-Tātār*, Orenburg 1908).

After the direct introduction of the order into Central Asia in the 15th and 16th centuries, the Ottoman empire welcomed two further branches of the brotherhood. The first was introduced to Istanbul from Mecca and India and was called the Indian Naḳshbandiyya Mudjaddidiyya. The second, which was of Kurdish and Indian origins, was the Khālidiyya, founded by Mawlānā Khālid Baghdādī (d. 1243/1827). It was first of all established in the Kurdish provinces, then at Istanbul (see the works of H. Algar, I. Gündüz, and B. Abu Manneh). At the end of the 19th century the dominant branch of the Naḳshbandiyya in the Ottoman empire was the Khālidiyya, but in Istanbul and some towns in Anatolia there were also some *tekke*s; these were encouraged by the pilgrims originating from Central Asia, who were associated with a Naḳshbandiyya which was strongly pervaded by Ḳalandarī and Yasawī practices (Th. Zarcone, *Histoire et croyances des derviches turkestanais et indiens à Istanbul*, in *Anatolia Moderna/Yeni Anadolu* (Paris-Istanbul), ii [1991], 137-200). Despite the prohibitions by Atatürk and the persecutions of the Soviets and the Chinese, the Naḳshbandiyya is still represented in the different regions of the Turkish world; for Turkey see idem, *Les Naḳşibendi et la République turque de la persécution au repositionnement théologique, politique et social (1925-1991)*, in *Turcica*, xxiv [1992], 133-51; also in Central Asia (in Uzbekistān, to the south of Ḳazakhistān, and in Tādjīkistān) and also Sinkiang (Yārkand, Urumči, Turfān and Kuča) and Afghān Turkestan.

(c) *The Ḳalandariyya (Central Asia, Khurāsān, the Kazakh steppe, Eastern Turkestan and Turkey)*

There has been evidence of wandering dervishes called *ḳalandar*s in Central Asia and Anatolia from the 12th and the 13th centuries. Despite the fact that several orders of Ḳalandarīs were formed between the 12th and the 17th centuries, a large number of *ḳalandar*s remained with no administrative ties but nevertheless abided by precise rules. This movement was well represented in Eastern Turkestan, for example, in the 18th century (*Ẓālilili divanī*, ed. Imīn Tursun, Peking 1405/1985). The *ḳalandar*s were known by several names (*dj̲awlakī*, *ḥaydarī*, etc.) and existed in Anatolia and Istanbul until the 16th century (see A.Y. Ocak, *Kalenderîler* (*XIV-XVII. yüzyıllar*), Ankara 1992). From this date onwards, the Ḳalandariyya disappeared from the western Turkish world, but they remained in Central Asia and Eastern Turkestan until the beginning of the 20th century.

There were four separate orders of Ḳalandarīs. The first was founded in the 13th century in Persia by D̲j̲amāl al-Dīn al-Sāwī (630/1232-3). The second originated in about the same period and was founded by Ḳuṭb al-Dīn Ḥaydar al-Zāwayī (d. 618/1221), as cited previously, and was based at the town of Zāwa [*q.v.*] (or Turbat-i Ḥaydariyya) in K̲h̲urāsān. The third, which was founded in the 15th century by Ḳuṭb al-Dīn Ḥaydar Tūnī (d. 830/1426), was located at Tabrīz (cf. Ḥāfiẓ Ḥusayn Karbalāʾī, *Rawḍāt al-dj̲inān wa-dj̲annāt al-dj̲anān*, Tehran 1344/1965, i, 467). The fourth and last was founded by Bābā Ḥādj̲dj̲ī Ṣafā (d. 1153/1740-1) and was centred on Samarḳand (Abū Ṭāhir K̲h̲ʷādja-yi Samarḳandī, *Samariyya*, in *Du risāla dar tārīk̲h̲-i mazārāt wa dj̲ug̲h̲rāfiyā-yi Samarḳand*, Tehran 1367 *s̲h̲*./1982, 192) but it also had authority over other groups which were established in other towns of Transoxiana, such as Tas̲h̲kent, Buk̲h̲ārā, K̲h̲īwa, Ura-T'ube and Ḳattaḳurg̲h̲ān (A.L. Troitskaya, *Iz proshlogo Kalandarov i Maddakhov v Uzbekistane*, in *Domusul'manskie verovaniya i obryadï ve Sredney Azii*, Moscow 1975, 192-223).

(d) *The Kubrawiyya (K̲h̲ʷārazm, Central Asia, the Kazak̲h̲ steppe and Turkey)*

The principal town of the Kubrawiyya is Kuhna Urgenč [see URGENČ], where the mausoleum of the founder of the order, Nadj̲m al-Dīn Kubrā (d. 618/12221), is preserved. Next in order of importance is Buk̲h̲ārā, where a disciple of Kubrā, Sayf al-Dīn Bāk̲h̲arzī (d. 659/1261), formed a *k̲h̲ānaḳāh* and converted a Mongol sovereign to Islam. Another pupil of his, Bābā Kamāl D̲j̲andī (d. 672/1273), propagated Islam and the brotherhood among the nomadic Turks of the Das̲h̲t-i Ḳïpčaḳ. Later in the Tīmūrid period, ʿAlī Hamadānī (d. 786/1385) and his disciples introduced the order into Badak̲h̲s̲h̲ān and into the north of Afg̲h̲ānistān. The last link of the spiritual lineage of Bābā Kamāl D̲j̲andī, Mawlānā Kamāl al-Dīn Ḥusayn K̲h̲ʷārazmī (d. 958/1551), was active at the time of the S̲h̲aybānids in K̲h̲ʷārazm and in Samarḳand. Despite the fact that the Kubrawiyya declined perceptibly from the 16th century onwards, with the rise of the Naḳs̲h̲bandiyya it maintained a feeble presence in Central Asia until the 19th century through certain *s̲h̲ayk̲h̲*s such as Mawlānā S̲h̲ayk̲h̲ Pāyanday Sāktarī (or Sātaragī) in the neighbourhood of Buk̲h̲ārā, and in particular at Samarḳand around Tas̲h̲kent, at Ḥiṣār and in the Badak̲h̲s̲h̲ān (see the work of DeWeese). Finally, some disciples who were separated from Kubrā fled from the Mongol invasion towards Saldj̲ūḳ Anatolia (Cl. Cahen, *La Turquie pré-ottomane*, Istanbul 1988, 218).

(e) *Other* ṭarīḳa*s*

The Zayniyya, which originated in K̲h̲urāsān (at the beginning of the 15th century), existed at Bursa and then at Istanbul in the second half of the 15th century, before being absorbed by the other orders in the 18th century. At the end of the 14th century the Kāzarūniyya, which originated in S̲h̲īrāz, was welcomed to Bursa by the Ottoman Sultan Bāyezīd I, but it was also to be found at Edirne and also at Erzurūm.

ii. New orders appearing in Anatolia.

(a) *The Bektās̲h̲iyya (Turkey)*

This order took its name from Ḥādj̲dj̲ī Bektās̲h̲ Walī (d. 669/1270-1) and originated in the heterodox religious movements of Anatolia (Bābāʾī, Abdāl, etc.) which were related to the Malāmatiyya of K̲h̲urāsān and remained under the influence of the Central Asian Yasawiyya and Ḳalandariyya. The history of the Bektās̲h̲iyya before the 19th century is not well known. It was established in the form of an order in the 15th and 16th centuries by Bālîm Sulṭān (d. 922/1516) on the basis of the ideas of its eponymous founder. Its centre was in the village of Hacıbektaş in Anatolia (see the studies of J.K. Birge, S. Faroqi and I. Mélikoff). The running of the centre was bicephalous and strongly centralised. The *čelebī* represented the ʿAlawīs (a rural and tribal form of this order); the *dede* the Bektās̲h̲īs. Although banned in 1825, the order re-established itself quietly and was very well represented at the end of the 19th century and at the beginning of the 20th century, particularly in Istanbul; there a *tekke*, that of Merdivenköy, rivalled the mother house of Hacıbektaş (see N. Vatin and T. Zarcone on the *tekke*s of Istanbul, in *Le tekke bektachi de Merdivenköy*, in *Anatolia Moderna/Yeni Anadolu*, ii (1991), and in *Etudes sur l'ordre mystique des Bektachis et les groupes relevant de Hadji Bektach*, Istanbul 1995). At the beginning of this century the principal *tekke*s of the order (except for the Arab and the Balkan provinces) were in certain towns in Turkey; the most important were Hacıbektaş, and Istanbul, and the others were Bursa, Çanakkale, Elmalı, Izmir, Sinop, Tire, etc.

(b) *The Mawlawiyya (Turkey and Ād̲h̲arbāydj̲ān)*

The Mawlawiyya was founded in the Saldj̲ūḳ period by Mawlānā D̲j̲alāl al-Dīn Rūmī at Ḳonya [*q.v.*]. It was organised by his son Sulṭān Bahāʾ al-Dīn Walad [*q.v.*], who determined the rituals to be performed by the order. At its beginning, the Mawlawiyya brotherhood, like several *ṭarīḳa*s in Turkey, was marked by the strain of *ḳalandar*s. From them the order inherited two contrary attitudes (*mes̲h̲reb*) but these have never resulted in separate constituent branches: the S̲h̲amsī (heterodox-ʿAlawī) attitude and the Waladī (orthodox) attitude. At the outset, the brotherhood was essentially concentrated on Ḳonya before spreading out in Anatolia. But there was among them from the start a *mawlawī-k̲h̲āna* at Sulṭāniyya in Ād̲h̲arbāydj̲ān (Ahmet Eflâkî, *Ariflerin menkibeleri*, tr. T. Yazıcı, Istanbul 1973, ii, 274-98). The expansion into Anatolia and the rest of the empire took place at the time of Ulū ʿĀrif Čelebī (d. 720/1320), and especially of Dīwāna Maḥmūd Čelebī (d. 935/1529), though it never crossed the eastern borders.

The Mawlawiyya was introduced into Istanbul at the beginning of the 16th century (in the convent in Galata). Given that Ḳonya was the most important of the *mawlawī-k̲h̲āna*s, the next in order of importance were those of Ḳaraḥiṣār, of Kütahya, and of Manisa (Abdülbaki Gölpınarlı, *Mevlânâ'dan sonra Mevlevilik*, repr. Istanbul 1983, 330-40). At the end of the 19th century, almost all the cities of the empire possessed a *mawlawī-k̲h̲āna* (see S̲h̲erīf-zāde Sayyid Meḥmed Fāḍil Pas̲h̲a, *S̲h̲arḥ-i ḥaḳāʾiḳ-i ad̲h̲kār-i Mawlānā*, Istanbul 1283/1882, 420-1; on the history of the *mawlawī-*

k͟hānas, see *Osmanlı Araştırmaları*, xix [1994]). The order was very centralised and nomination was always made from Ḳonya, but the *mawlawī-k͟hānas* also had great prestige and strongly influenced the history of the order.

(c) *The K͟halwatiyya (Ād͟harbāyd͟jān, the Caucasus and Turkey)*

The *k͟halwatiyya* appeared in Ād͟harbāyd͟jān between the 14th and the 15th centuries and took its name from ʿUmar al-K͟halwatī (d. 800/1397). But its true organiser was a Caucasian, Yaḥyā S͟hirwānī (d. 868 or 869/1463-5). The order was originally established in the Caucasus (S͟hirwān) and in Ād͟harbāyd͟jān (Tabrīz and Bākū), with its centre at Bākū. But then it moved to Amasya (Anatolia) and Harāt (K͟hurāsān), though it did not remain in this last-mentioned place (Maʿṣūm ʿAlī S͟hāh, *Ṭarāʾiḳ al-ḥaḳāʾiḳ*, ii, 366-7). The K͟halwatiyya disappeared from the town of its origin after the 16th century and firmly settled in Amasya, where it obtained the favour of the future Ottoman sultan Bāyezīd II, who then had it transferred to Istanbul (B.G. Martin, *A short history of the Khalwati order of dervishes*, in *Scholars, saints and Sufis*, ed. Nikki R. Keddie, Berkeley etc. 1972, 275-305). Although at Amasya it was called D͟jamāliyya, it was subsequently known in the Ottoman capital as Sünbüliyya. Despite it being divided into multiple branches, the K͟halwatiyya preserved a certain unity and demanded recognition as one of the most powerful Ottoman brotherhoods. It was to gain an introduction into most of the provinces of the empire. At the end of the 19th century in Istanbul, it dominated all the brotherhoods because of the number of its *tekkes*. Certain of its branches, such as the D͟jerrāḥiyya, the Sinānīyya, and the ʿUs͟hs͟hāḳiyya still exist today.

(d) *The Bayrāmiyya and Melāmīlik (Turkey)*

The Bayrāmiyya was instituted in the 15th century at Ankara by Ḥad͟jd͟jī Bayrām Walī (d. 833/1429-30) and was the successor to a Ṣūfī tradition of Ād͟harbāyd͟jānī origin, which claimed a connection with the Malāmatiyya of K͟hurāsān. The order spread out into all of central Anatolia (Aḳsaray, Göynük) but was poorly represented in Istanbul and did not enjoy the success of the other brotherhoods. More or less connected with the Bayrāmiyya were the Ḥamzawīs, the messianic revolutionary movement which took its name from Ḥamza Bālī (d. 981/1573). It developed clandestinely in Istanbul where it continued until the beginning of the 20th century. Another movement called Melāmīlik, established by Meḥmed Nūr al-ʿArabī (d. 1305/1888), and a product of the circle of Ḥamzawīs in the Balkans, made its appearance in Istanbul and Izmir at the end of the 19th century (Gölpınarlı, *Melâmîlik ve Melâmîler*, Istanbul 1931; *Melamî et Bayramî*, ed. N. Clayer, A. Popovic and Th. Zarcone, Istanbul-Paris 1997). The Melāmīlik and the Ḥamzawiyya did not suffer banning under Atatürk in 1925, and their members continued to spread their teaching throughout the Republican period.

iii. Turkish borrowings from the Arab world.

(a) *The Rifāʿiyya (Turkey and Caucasia)*

Founded in ʿIrāḳ by Aḥmad Rifāʿī (d. 578/1182), this brotherhood was attested between the 13th and the 14th centuries throughout the whole of Mongol Anatolia; there it was first known as Aḥmedilik or Baṭāʾiḥiyya (according to Eflākī and Ibn Baṭṭūṭa). Its main centre was in the neighbourhood of Amasya, but there were others at Izmir and Balıkesir. The Rifāʿiyya was introduced somewhat later to Istanbul in the 18th century by Muḥammad Ḥadīdī (d. 1169/1756; Ekrem Işın, *Rıfaîlik*, in *Istanbul Ansiklopedisi*, vi, 325-30). It was marked by the practices of the *ak͟hīs* [*q.v.*] and was often associated with the orders which were quite consonant with regard to the *s͟harīʿa*; in the beginning, it could be observed together with the Mawlawiyya and the Bektās͟hiyya, and in the 20th century with the Melāmīlik of Meḥmed Nūr al-ʿArabī (cf. the work of Gölpınarlı). It should be noted that like the Ottoman Ḳādiriyya (see further below), the Rifāʿiyya evolved without any administrative connection with the mother-house of the order situated at Wāsiṭ in ʿIrāḳ. The Rifāʿiyya were absent from the eastern Turkish world, but in the mid-14th century Ibn Baṭṭūṭa noted that a successor of the founder was leading a *k͟hānaḳāh* in the northern Caucasus (Mād͟jar). When invited by the Sultan ʿAbd ül-Ḥamīd II, Abu ʾl-Hudā al-Ṣayyādī, a Rifāʿī *s͟hayk͟h*, came directly from Syria and, as the representative of a very orthodox branch of the order, established a *tekke* in Istanbul at the end of the 19th century, giving a new direction to this order (B. Abu-Manneh, *Sultan Abdulhamid II and Shaikh Abulhuda al-Sayyadi*, in *Middle Eastern Review*, xv [1979], 131-53). Today the Rifāʿiyya exist in Istanbul (see e.g. the *tekke* of ʿAlī Bābā in the Kasımpaşa quarter) and all over Anatolia.

(b) *The Ḳādiriyya (Central Asia, Eastern Turkestan, the Caucasus and Turkey)*

The presence of members of this order, which traced itself back to ʿAbd al-Ḳādir al-D͟jīlānī (d. 561/1165-6 [*q.v.*]), is attested in Turkey (e.g. at Kastamonu) well before the Es͟hrafiyya branch was established at Iznīḳ. This was the first organised Turkish form of the Ḳādiriyya to be introduced from Ḥamā in Syria by Es͟hrafog͟hlu ʿAbd Allāh Rūmī (d. 874/1469). A second wave called Rūmiyya, introduced from Bag͟hdād in the 17th century by Ismāʿīl Rūmī (d. 1041/1631-2), was to absorb the Es͟hrafiyya. The Ḳādiriyya-Rūmiyya, then well settled in numerous towns of Anatolia, had at its disposal a mother-house in Tusya, later removed to Istanbul. The *tekke* established by Ismāʿīl Rūmī in this town is today still the centre of the Turkish Ḳādiriyya, but it no longer preserves any connection with its mother-house in Bag͟hdād (Seyyid Sırrı Ali, *Tuhfe-i Rûmî. Kâdiriler asitanesi'nin manzum tarihçesi. Tuhfe-i Rûmî*, Istanbul 1992; for a bibliography on the Ḳādiriyya, see Zarcone, *Un document inédit sur les tekke ḳadiri de l'Empire ottoman et du monde musulmane au XIX^e^ siècle*, in *Mélanges offerts à Louis Bazin*, ed. J.-L. Bacqué-Grammont, Paris 1992, 275-83). In the middle of the 16th century the Ḳādiriyya was introduced into the Crimea from Ḥamāt (Ḥāfiẓ Aḥmed Rifʿat, *al-Riyāʾ al-ʿaliyya fī beyān ṭarīḳat al-Ḳādiriyya*, ms. Millet, Istanbul no. 1127, fols. 283b-284a). It was only in the 19th century that the order appeared in the Caucasus, where it still continues today. It is not known whether the Ḳādiriyya was introduced into Central Asia before the 19th century. It appeared next from India in Farg͟hānā (the Niẓāmiyya branch) and in Eastern Turkestan (*S͟had͟jara-yi Ḳādiriyya Niẓāmiyya*, ms. no. 3960, Institut Vostokovedeniya Akademii Nauk Uzbekskoy SSR, Tas͟hkent; Mullā Mūsā Sayrāmī, *Tārīk͟h-i Āminiyya*, repr. Urumči, S͟hind͟jang K͟hālḳ N. 1988, 362-2).

(c) *Other* ṭarīḳas

The Badawiyya appeared in Istanbul in the 19th century; the S͟hād͟hiliyya were introduced into Istanbul in the 19th century; the Saʿdiyya were introduced into Istanbul in the 18th century; and the Tid͟jāniyya were introduced into Turkey in the 20th century.

(Th. Zarcone)

6. In the Balkans.

i. *Early times and the Ottoman period.* The establishment of mystical Muslim brotherhoods in the Balkan Peninsula only really began with the Ottoman conquest of these regions. Before the arrival of the Ottomans in Europe, all that is recorded is the presence, in the 7th/13th century, of one Turkish warrior saint, a more or less mythical figure named Ṣarî Ṣalṭuḳ Dede [*q.v.*], who settled in Dobrudja [*q.v.*], with Turkish tribes originally from Sinūb, thus forming a buffer between the Byzantine Empire and the Golden Horde. Long after his death, Ṣarî Ṣalṭuḳ became the symbol of the Islamisation of the Peninsula, exploited for this purpose particularly by the brotherhood of the Bektāshīs.

If an overall view is taken of the diffusion of Ṣūfī networks in the Balkan region and the role of their members in Rumelian society, it is appropriate to divide the Ottoman era into three major periods.

(a) The period of the first conquests (14th-15th centuries) is also that of the installation of the "colonising dervishes", to borrow the expression of Ömer Lutfi Barkan: dervishes mostly of heterodox origin (Ḳalandarīs, Bektāshīs or others) who emigrated towards the newly-conquered territories and established themselves in regions deserted by Christian populations or at strategic points along the communications routes; dervishes who cultivated the land themselves, worked for the diffusion of Muslim religion and culture, participated in military campaigns or sent contingents of believers to fight on their behalf. In the eastern sector of the territories then under Ottoman control (Thrace, Deli Orman and Dobrudja), the two figures most emblematic of this intensely heterodox Ṣūfism were Sheykh Badr al-Dīn of Samāwnā [*q.v.*] (hanged at Serres in 819/1416) and ʿOthmān Baba (d. 883/1478-9), founder of a *tekke* near Khāṣṣköy (currently Haskovo, in Bulgaria). Both left a lasting imprint upon the populations known today as Ḳîzîlbāsh-Alevis, of Dobrudja, of Deli Orman, of the eastern Rhodope chain and of eastern Thrace. In the 15th century, other brotherhoods began to extend their networks as far as the Balkans, including the Bayrāmiyya (second quarter of the 15th century), the Naḳshbandiyya and the Khalwatiyya (second half of the 15th century).

(b) In the early 16th century, another period begins, characterised in particular by a policy of "Sunnitisation" of the Ottoman empire, to counter the external menace of the Ṣafawids and the heterodoxy of various ethnic groups within the empire. The reign of Selīm I (1512-20) constitutes, in this regard, a "turning-point in political and religious life" in the Balkans, as in the rest of the empire, as has been shown by I. Beldiceanu-Steinherr (*Le règne de Selīm I^er: tournant dans la vie politique et religieuse de l'Empire*, in *Turcica*, vi [1975], 34-48). These changes were to result in a structuring and a renewal of control of certain heterodox groups within a reorganised Bektāshiyya, and in particular, the increase of politically and religiously more orthodox brotherhoods. Among the latter, especially worthy of mention are certain branches of the Khalwatiyya (Djamāliyya, Sunbuliyya) and the Djalwatiyya, which numbered among their adherents *sheykh*s such as Sofyalî Bālī Efendi (d. 1553 in Sofia), Muṣliḥ al-Dīn Nūr al-Dīn-zāde (d. 1574) and ʿAzīz Maḥmūd Hudāʾī (d. 1628), who denounced before the most senior authorities of the empire the heterodoxy of, among others, the followers of Sheykh Badr al-Dīn and the Ḳîzîlbāsh of Deli Orman. There was thus a development of new and essentially urban Ṣūfī networks, in most cases fuelled by foundations on the part of eminent individuals, this extending to the new frontier regions. In the latter, it is important to stress the support and even the active participation contributed by the *sheykh*s to numerous campaigns of

"holy war" against the "unbelievers". Alongside the various Khalwatī networks which became extremely close-knit at this time in the Balkan Peninsula, other ṭuruḳ proliferated in these regions: the afore-mentioned Djalwatiyya; the Ḳādiriyya from the early 17th century onwards, following the journey undertaken by Ismāʿīl Rūmī, founder of a new Ḳādirī network, the two principal centres of diffusion being situated in Istanbul (*āsitāne* of Ṭopkhāne) and Edirne; the Mawlawiyya, who were established only in certain important urban centres (Pečuy/Pecs, Sarajevo, Salonica, Serres, Elbasan, Plovdiv, etc.); and probably also the Rifāʿiyya. The *Seyāḥat-nāme* of Ewliyā Čelebī testifies to this presence of the orders in practically all the Balkan urban centres in the mid-17th century. It should be noted that, despite the efforts of the Ottoman authorities, heterodox Ṣūfism was far from eradicated in the Peninsula; there was even the expansion of a new heterodox movement, originating in Anatolia, in the 16th century, that of the Malāmī-Bayramīs (later the Ḥamzawīs), which had adherents especially in Thrace, in Bosnia-Herzegovina, in the region of Belgrade and perhaps as far as Hungary.

(c) The defeat of the Ottoman armies under the walls of Vienna in 1683, followed by the Austrian and Venetian reconquests, resulted in substantial upheavals for European Turkey: a loss of territories, auguring further and even more significant losses, and a permanent fear of uprisings on the part of Christian populations. It was probably for these reasons that the Ottoman authorities undertook in the Balkans, from the mid-18th century onwards, a policy of reinforcing the Muslim element, either by means of more energetic colonisation or by encouraging the Islamisation of local populations. Although the sources make few explicit references to the role of the *ṭuruḳ* in the process, it is a fact that this was accompanied by the expansion of new networks, which contributed to the cohesiveness of the Muslim populations, both the recently-converted and the recent arrivals in these regions. These new Ṣūfī networks supplanted to some extent the older ones in the towns, but also enjoyed an unprecedented expansion in rural zones, particularly in the regions which currently comprise Albania, Macedonia, Kosovo, northern Greece and Bulgaria. New *ṭuruḳ*, or new confraternal branches, grew extensively in Rumelia at this time, and sometimes at a much later stage, at the turn of the 19th and 20th centuries. Thus there were the Saʿdiyya from the beginning of the 18th century (in the western sector of the Peninsula); the Malāmiyya-Nūriyya, founded in Macedonia by Muḥammad Nūr al-ʿArabī (d. 1888); the Shādhiliyya, with a few exceptional *tekkes* founded at Kosovo and in Bulgarian territory; the Tidjāniyya, who expanded *ca.* 1900 in northern Albania; also numerous branches of the Khalwatiyya, several of which were born in the Balkans (in particular the Djarrāḥiyya, members of which played an active role in the reconquest and recolonisation of the Peloponnese after 1715, the Gulshaniyya-Sezāʾiyya which came into existence at Edirne in the early 18th century, and the Ḥayātiyya, founded at Ohrid during the second half of the 18th century); and two new Naḳshbandī branches (the Mudjaddidiyya, and especially the Khālidiyya in the 19th century). Older orders also consolidated their position, including the Rifāʿiyya from the early 19th century onwards, and the Bektāshiyya who, from the second half of the 19th century, experienced a very significant expansion in southern and central Albanian territories, where they played a dominant role in the Albanian national awakening.

As in the remainder of the Ottoman empire, *ṭuruḳ* were numerous and active in the Balkan lands under Ottoman domination. They played a role there in religious life, representing more or less orthodox (or more or less heterodox) tendencies, but also on the economic and social level (through the influence of *waḳfs*) as well as in cultural, artistic and political domains.

ii. *The post-Ottoman period.* Of the fifteen or so Muslim mystical orders which were implanted during the Ottoman period in the Balkans (and in South-Eastern Europe in general) eleven were to survive (in an organised and structured form, centred around their establishments, i.e. *tekkes* and *zawāyā*) for varying periods of time after the departure of Ottoman troops. Those concerned are the Bektāshiyya, the Ḳādiriyya, the Khalwatiyya, the Malāmiyya-Nūriyya, the Mawlawiyya, the Naḳshbandiyya, the Rifāʿiyya, the Saʿdiyya, the Shādhiliyya, the Sināniyya (a branch of the Khalwatiyya) and the Tidjāniyya. There would seem to be no more than ten existing today, since the Mawlawiyya disappeared in their turn, while the Malāmiyya-Nūriyya, the Shādhiliyya and the Sināniyya have gradually declined.

For various reasons, dictated primarily by the numerical scale of the Muslim populations remaining on the ground, their survival has not been uniform in all the six countries of South-Eastern Europe, these eleven *ṭuruḳ* not having everywhere displayed the same resilience. Account must also be taken of another highly important phenomenon, the fact that the beginnings of the "post-Ottoman" period are located, according to the different regions, at dates between 1699 and 1912. From an overall perspective, the *ṭuruḳ* have survived primarily in the western sector of the Peninsula (Albania and Yugoslavia), to a lesser extent in eastern and southern regions (Rumania, Bulgaria, Greece), and not at all in the northern sector (Hungary, Croatia). This continued existence is owed to nothing other than a twofold struggle: on the one hand against, or at least on the fringes of the newly-created or reconstructed states of which these brotherhoods were henceforward to form a part (particularly during the Communist period), on the other, against or at best on the fringes of the official authorities of local Muslim communities, often hostile to the *ṭuruḳ*. In this last case, account should be taken of various attempts on the part of orders to liberate themselves from the tutelage of the official Muslim authorities by means of creating more or less independent structures, or on the contrary, through the formation of structures of the same type, but by the official Muslim community, designed to control the *ṭuruḳ* (in Yugoslavia, in the 1970s, the creation of the *ZIDRA* in Kosovo, and of the *Tarikatski Centar* in Sarajevo; in Albania, the formation of two organisations of this type in the 1930s, *Drita Hyjnore* and *Kryesija e Sekteve Alevijan*, and, especially, in an exceptional case for this region, the creation of a Bektāshi community which became an independent religious community with the same status as that of the Sunnī Muslims).

The principal items of information regarding the history of this survival, regarding the organisation and functioning of these eleven brotherhoods during the period in question, as well as thorough bibliographies, are to be found in the works and articles cited below, but the situation could be illustrated in terms of three groups of brotherhoods which functioned with varying degrees of activity in accordance with temporal and regional variations. The first group is that of the two "great" orders, comprising the Bektāshiyya (present

especially in Albania, in Kosovo and in Macedonia; also, but only for a short time, in Greece, in Thessaly and western Thrace) and the Khalwatiyya (present almost everywhere, but established most strongly in Albania, Kosovo, Macedonia and Bosnia-Herzegovina). Then there are the six "medium" orders: the Ḳādiriyya (especially in Albania, in Kosovo, in Macedonia and in Bosnia-Herzegovina; also, to a lesser extent, in Deli Orman in Bulgaria); the Malāmiyya-Nūriyya (especially in Kosovo and in Macedonia and possibly also, in smaller numbers, in Deli Orman); the Mawlawiyya (which survived for a considerable time in Bosnia-Herzegovina, in Kosovo and Macedonia and apparently also, to a lesser degree, in Bulgaria); the Naḳshbandiyya (mostly in Bosnia-Herzegovina, and to a lesser degree in Kosovo, in Macedonia, in Deli Orman and in the Bulgarian and Rumanian Dodrudja); the Rifāʿiyya (especially in Kosovo, in Macedonia and Albania and also to a small extent in Bulgaria, as well as in Bosnia-Herzegovina, this last case principally involving Albanians from Kosovo established in the city of Sarajevo); and the Saʿdiyya (mainly in Kosovo, in Macedonia and Albania). Finally, there is the group of three "minor" orders: the Shādhiliyya (in Bulgaria and Kosovo), the Sināniyya (in Macedonia and Kosovo) and the Tidjāniyya (presence recorded only in Albania). It is to be noted that the networks of these brotherhoods are in general divided into regional and even ethnic sub-networks, meaning that it is possible to observe, within a single *ṭarīḳa*, Turkish, Albanian, and Slav "networks", and even, since several decades and especially in Macedonia, Gypsy ones. As for the worship of saints, which constitutes in certain cases the only evidence for the presence of the brotherhoods in the past, this often unites the Muslim and Christian populations.

After the decline which followed the end of the Ottoman period, and that which later accompanied the arrival of the Communist régimes, a revival of certain *ṭuruḳ* has been observed in Yugoslav territories, beginning in the 1970s (in particular under the influence of the Rifāʿī *sheykh* of Prizren and his organisation known as *ZIDRA*). Another renewal has taken place since 1990, in the wake of changes to the political landscape of the Balkans. In particular, in Albania, where all forms of religious activity had been banned, the local Bektāshīs, who held their Sixth Congress in July 1993 (the previous congress had taken place in 1950), have begun to rebuild some of their *tekke*s, while other Albanian *ṭuruḳ* (Khalwatīs, Rifāʿīs, Ḳādirīs, Tidjānīs and Saʿdīs) have reappeared and have attempted to organise themselves, with varying degrees of difficulty. It is currently quite impossible to say what will remain of the mystical Muslim brotherhoods in Bosnia-Herzegovina (where the last of the great *sheykh*s died some years ago), following the end of the civil war which raged between 1992 and 1995, and the partitioning of the region into "ethnic zones" which has ensued. But here as elsewhere, it is not known precisely what kind of evolution is being experienced and is yet to be experienced by the brotherhoods, nor what may be the potential symbiosis between the two existing dynamics: revival of the ancient networks and the diffusion of new ones, emanating in particular from Turkey, a country with which the Balkan Muslims are currently in the process of renewing their links.

7. In Muslim India.

Here, different terms—*ṭarīḳa, maslak, sulūk, khānwāda, silsila, dāʾira, ṭāʾifa, ḥalḳa*—are used for mystic ways and brotherhoods, with slight variations of nuance. *Ṭarīḳa* signifies (a) any mystic path, practice or method (e.g. *ṭarīḳa-yi mudjāhada* (method of striving along the mystical path), *ṭarīḳa-yi mushāhada* (method of contemplation leading to vision)); (b) any mystic school, system or organisation (e.g. the Čishtī *silsila*, the *Ṭarīḳa-yi Khʷādjagān*, the *dāʾira* of Shāh ʿĀlam Allāh of Rae Bareili, etc.); and (c) any minor trend in a major mystic order (e.g. the *Ṭarīḳa-yi Muḥammadiyya*, the *Ṭarīḳa-yi Zubayriyya*, etc., in the Naḳshbandī *silsila*).

The following main *ṭarīḳas* have been active in India: Čishtī, Suhrawardī, Ḳādirī, Shaṭṭārī, Naḳshbandī, Kubrawī, Madārī, Ḳalandarī and ʿAydarūsī. As these *ṭarīḳas* developed, sub-branches sprouted up, e.g. in the Čishtī order there rose the Niẓāmī, the Ṣābirī, the Gīsūdarāzī, the Ḥusāmī, the Mīnāʾī and the Fakhrī branches; the Kubrawī *ṭarīḳa* gave birth to the Hamadānī *silsila* of Kashmīr and the Firdawsī *silsila* of Dihlī and Bihār; the Naḳshbandī *ṭarīḳa* gave rise to the *silsila-yi Bāḳiyya, ṭarīḳa-yi Muḥammadiyya, ṭarīḳa-yi Zubayriyya, ṭarīḳa-i Maẓhariyya*, etc.

There were some regional dimensions also of the growth of these *ṭarīḳas*. The Čishtī and the Naḳshbandī orders spread out all over the country; the Suhrawardīs worked mainly in the Pandjāb and Sind; the Shaṭṭārīs thrived mainly in Mandū, Gwāliyār and Aḥmadabād; the Firdawsī *ṭarīḳa* worked mostly in Bihār; the ʿAydarūsī order found its adherents in Gudjarāt and the Deccan; and the Madārī and Ḳalandarī orders developed mainly in parts of the Pandjāb and Awadh.

The Čishtī and the Suhrawardī *ṭarīḳas* were the first to reach India. Introduced by Khʷādja Muʿīn al-Dīn Ḥasan Sidjzī (d. 1236), the Čishtī order [*q.v.*] developed under Shaykh Niẓām al-Dīn Awliyāʾ of Dihlī [*q.v.*] who gave it an all-India status, with his disciples setting up Čishtī centres all over the country. The Suhrawardī *ṭarīḳa*, introduced by Shaykh Bahāʾ al-Dīn Zakariyyāʾ (d. 1262 [*q.v.*]), reached its highest watermark under Shaykh Rukn al-Dīn Abu 'l-Fatḥ (d. 1334) and Sayyid Djalāl al-Dīn Makhdūm-i Djahāniyān (d. 1386). Though both these *ṭarīḳas* looked to the *ʿAwārif al-maʿārif* of Shaykh Shihāb al-Dīn Suhrawardī [*q.v.*] as their guide, they differed in their organisation of *khānaḳāh* life and relations with the state. Subsequently, the Firdawsī *ṭarīḳa* was introduced into India by Shaykh Badr al-Dīn of Samarḳand. Initially, its saints worked in Dihlī, but later moved to Bihār where the order enjoyed great popularity under Shaykh Sharaf al-Dīn Yaḥyā Manērī (d. 1371).

The Ḳādirī *ṭarīḳa* was established in India by Sayyid Muḥammad Makhdūm Gīlānī (d. 1517), and flourished under Shaykh Dāwūd Kirmānī (d. 1574), Shāh

Ḳumayṣ Gīlānī (d. 1584), Miyān Mīr (d. 1635) and Mullā S̲h̲āh (d. 1661).

The S̲h̲aṭṭārī ṭarīḳa was introduced into India by S̲h̲āh ʿAbd Allāh (d. 1485), who undertook a lightning tour of the country with his disciples wearing military garb, with he himself clad in royal dress. Ultimately he settled at Manḍū. Under S̲h̲ayk̲h̲ Muḥammad G̲h̲awt̲h̲ of Gwāliyār (d. 1562), the ṭarīḳa attained great influence. Its ideology was based on *daʿwat-i samāʾ* (control of heavenly bodies which influenced human destiny) and recommended interiorisation of religious rites.

Late in the 15th century, Sayyid Muḥammad of D̲j̲awnpūr became the centre of the Mahdawī movement and its *dāʾiras* sprang up in Gud̲j̲arāt and other places (see Niẓamī, *Akbar and religion*, Dihlī 1989, 42-51).

In the 16th century, the Naḳs̲h̲bandī ṭarīḳa was introduced by K̲h̲ʷād̲j̲a Bāḳī Billāh (d. 1603) and reached its high watermark under his chief disciple, S̲h̲ayk̲h̲ Aḥmad Sirhindī, popularly known as Mud̲j̲addid-i Alf-i t̲h̲ānī (d. 1624 [*q.v.*]). For about two centuries it was the most influential and popular ṭarīḳa in India and many of the eminent figures of the time like S̲h̲āh Walī Allāh, Mīrzā Maẓhar D̲j̲ān-i D̲j̲ānān, S̲h̲āh G̲h̲ulām ʿAlī and others, belonged to it. K̲h̲ʷād̲j̲a Mīr Nāṣir (d. 1758), though associated with the Naḳs̲h̲bandī *silsila*, founded a new order called *Ṭarīḳa-yi Muḥammadī*. Sayyid Aḥmad S̲h̲ahīd of Rai Bareili (d. 1831), who also belonged to the Naḳs̲h̲bandī order, introduced a new way of mystic discipline, known as *Ṭarīḳa-yi Nubuwwat*. Under S̲h̲āh G̲h̲ulām ʿAlī, the influence of the Indian branch of the Naḳs̲h̲bandī order reached many other Islamic countries (Sayyid Aḥmad K̲h̲ān, *Āt̲h̲ār al-ṣanādīd*, Karachi 1966, 209); thus his disciple K̲h̲ālid Kurdī played an important role in popularising the ṭarīḳa in Syria.

Apart from these *ṭarīḳas* which were the main spearheads of mysticism in India, some minor *silsilas* with limited impact also appeared, e.g. the Mag̲h̲ribī ṭarīḳa represented by S̲h̲ayk̲h̲ Aḥmad Khattū Mag̲h̲ribī of Aḥmadabād (d. 1447) (Nizami, *Shaykh Ahmad Maghribi as a great historical personality of medieval Gujarat*, in *Medieval India—a miscellany*, Aligarh, iii, 234-59) and the Nūrbak̲h̲s̲h̲ī order of Kas̲h̲mīr (M. S̲h̲afīʿ, *Firḳa Nūr Bak̲h̲s̲h̲ī*, in *Oriental College Magazine* [Feb. 1925-Aug. 1926]).

The *ṭarīḳas* thrived in India with remarkable speed. According to al-Ḳalḳas̲h̲andī's *Ṣubḥ al-aʿs̲h̲a* (Eng. tr. O. Spies, 29), there were about 2,000 *rubuṭ* and *k̲h̲ānaḳāhs* in Dihlī and its surroundings during the 15th century; S̲h̲āh ʿAbd al-ʿAzīz refers to 22 eminent figures of every *k̲h̲ānwāda* in Dihlī during the time of the Mug̲h̲al Emperor Muḥammad S̲h̲āh (*Malfūẓāt*, Meerut 1314, 106).

These *ṭarīḳas* has some distinguishing features: (a) Except the Naḳs̲h̲bandī, almost all the *ṭarīḳas* were believers in *waḥdat al-wud̲j̲ūd* [see WAḤDAT AL-S̲H̲UHŪD AND WAḤDAT AL-WUD̲J̲ŪD]. The Naḳs̲h̲bandīs propounded the doctrine of *waḥdat al-s̲h̲uhūd* (unity of the phenomenal world). (2) Except for the Čis̲h̲tīs, all other *ṭarīḳas* had some contact with the rulers and the bureaucracy; the Čis̲h̲tīs considered state service an impediment in spiritual progress. (3) The Naḳs̲h̲bandī practices, according to S̲h̲āh Walī Allāh, were very rigorous, while the Čis̲h̲tī and Suhrawardī ones, which aimed at developing the cosmic emotion, were comparatively mild. S̲h̲āh ʿAbd al-ʿAzīz compared the rigour of the Naḳs̲h̲bandī practices to the discipline of the British Army (*Malfūẓāt*, 18). (4) The Čis̲h̲tīs used *malfūẓāt* (table talk of saints) for the propagation of their teachings; the Naḳs̲h̲bandīs used *maktūbāt* (letters) and the Ḳādirīs, poetry to propagate their ideology. (5) The Čis̲h̲tī ṭarīḳa believed in community living, and constructed *d̲j̲amāʿat k̲h̲ānas*; other *ṭarīḳas* constructed *k̲h̲ānaḳāhs* and hospices with provision for individual accommodation. (6) The Čis̲h̲tīs looked upon efforts for social welfare (*ṭāʿat-i mutaʿaddī*, see *Fawāʾid al-fuʾād*, 13-14) as a means to spiritual progress; other *ṭarīḳas*, particularly the Naḳs̲h̲bandīs, believed in rigorous individual discipline and exercises to reach God. The Čis̲h̲tīs went from Man to God; the Naḳs̲h̲bandīs came from God to Man. (7) The Ḳādirīs emphasised both *d̲h̲ikr-i d̲j̲ahr* (reciting loudly the names of Allāh) and *d̲h̲ikr-i k̲h̲afī* (quiet recitation of the names of Allāh). (8) The S̲h̲aṭṭārīs interiorised mystic discipline and tried to work out an ideological integration of Hindu and Muslim mystic traditions. S̲h̲ayk̲h̲ Muḥammad G̲h̲awt̲h̲'s translation of the *Amritkund* as *Baḥr al-ḥayāt* paved the way for such an integration. (9) In the beginning, an individual belonged to a single ṭarīḳa and integrated his spiritual personality according to its principles. "Hold one door and hold it fast" was the motto of S̲h̲ayk̲h̲ Bahāʾ al-Dīn Zakariyyāʾ, approvingly quoted by Niẓām al-Dīn Awliyāʾ (*Fawāʾid al-fuʾād*, 29). In subsequent centuries, entrants to the mystic path started joining several *ṭarīḳas* at a time, a practice which impaired the stability and impact of the *ṭarīḳas*. Sometimes attempts were made at reconciling conflicting points of teachings and practice. Amīr Abu 'l-ʿUlā Akbarābādī Naḳs̲h̲bandī tried to combine the practices of the Čis̲h̲tīs and the Naḳs̲h̲bandīs (ʿAbd al-Ḥayy, *al-T̲h̲aḳāfa al-Islāmiyya fi 'l-Hind*, Damascus 1958, 183); and S̲h̲āh Walī Allāh considered the difference between *waḥdat al-wud̲j̲ūd* and *waḥdat al-s̲h̲uhūd* as merely a difference of simile and metaphor.

The spiritual practices of different *ṭarīḳas* in India were discussed in a comparative framework by S̲h̲āh Walī Allāh in his *al-Intibāh fī salāsil awliyāʾ Allāh* (Dihlī 1311) and *al-Ḳawl al-d̲j̲amīl* (Kānpur 1307). Almost every ṭarīḳa had one central book on which its ideology was based: the *Fawāʾid al-fuʾād* for the Čis̲h̲tīs, the *Maktūbāt-i Imām Rabbānī* for the Naḳs̲h̲bandīs; the *D̲j̲awāhir-i K̲h̲amsa* for the S̲h̲aṭṭārīs; and the *Maktūbāt* of S̲h̲araf al-Dīn Yaḥyā Manērī for the Firdawsīs.

8. In Indonesia.

The first concrete examples of *ṭarīḳa* practices in Indonesia are attested in the sources from the late 16th century, hence at least three centuries after the coming of Islam to this part of the world.

The three oldest known mystics from Indonesia were all influenced by mystical ideas from India and were active in North Sumatra: Ḥamza Fanṣūrī (second half of the 16th century [*q.v.*]), his pupil Shams al-Dīn al-Samatrāʾī (d. 1040/1630 [*q.v.*]), both belonging to the Wudjūdiyya school of thought which was very much influenced by Ibn al-ʿArabī [*q.v.*]; and, finally, their opponent, the orthodox theologian Nūr al-Dīn al-Rānīrī (d. 1068/1658 [see INDONESIA. vi]). Although the first two seem to have been affiliated to a *ṭarīḳa*, the Ḳādiriyya and the Shaṭṭāriyya [*q.vv.*] respectively, only of the last-mentioned is it beyond doubt that he was an adept of a *ṭarīḳa*, the Rifāʿiyya [*q.v.*].

From the 17th century onwards, the orders in Indonesia developed under the influence of teachers in Arabia, such as the Medinan scholars Aḥmad al-Ḳushāshī (d. 1071/1660 [*q.v.*]), Ibrāhīm al-Kūrānī (d. 1102/1691 [*q.v.*]), and ʿAbd al-Karīm al-Sammān (d. 1189/1775). In the Ḥidjāz, many Indonesian pupils, such as ʿAbd al-Raʾūf al-Sinkilī (d. end of the 11th/17th century [*q.v.*]), Yūsuf al-Makassarī (d. 1111/1699) and ʿAbd al-Ṣamad al-Palimbānī (d. 1190/1776 [*q.v.*]), were initiated into a number of *ṭarīḳas* which they then spread to Indonesia.

Initially, the followers of the various *ṭarīḳas* in Indonesia seem to have been restricted to court circles, where certain mystical concepts, like that of the Perfect Man (*al-insān al-kāmil* [*q.v.*]), were used by the rulers to legitimate their power. Only from the 18th, or perhaps the 19th century onwards do the *ṭarīḳas* seem to have acquired more adherents among the common people.

Although in themselves not politically oriented, in the 19th century the *ṭarīḳas* sometimes provided the organisational networks for anti-colonial rebellions. As a result of this, in the 19th century the mystical orders were much feared by the Dutch colonial administration. However, this political function of the *ṭarīḳas* disappeared with the rise of the nationalist movements at the beginning of the 20th century.

By the turn of the century, the *ṭarīḳas* came under pressure of reformist-oriented Muslims in Indonesia, which led to fierce debates, for instance between adherents and opponents of the Naḳshbandiyya [*q.v.*]. Despite these anti-*ṭarīḳa* attitudes, around 1930 new orders were introduced into the Archipelago, sc. the Tidjāniyya and the Idrīsiyya, which were regarded as being compatible with reformism.

In addition to the *ṭarīḳas* which are known throughout the entire Muslim world, in Indonesia there are also a number of indigenous orders, which have sometimes included pre-Islamic and non-Islamic practices. This led to the establishment of the *Jam'iyyah Ahli Tarekat Mu'tabarah* in 1957. This association unites all brotherhoods in Indonesia of which the *silsila* or chain of affiliation is regarded as sound, and which do not advocate anti-*Sharīʿa* practices. This association, which has been less active in recent years, states that a person can no longer be regarded a Muslim if he participates in an order which is not officially recognised.

In present-day Indonesia, some *ṭarīḳas* have assumed new functions to provide for contemporary needs: among the most well known are the use of *ṭarīḳa* practices to overcome drug addiction and to cure certain mental diseases. Furthermore, the *ṭarīḳas* may serve as the replacement of the traditional social networks which have disappeared through migration to the cities. Although no quantitative data are available, nowadays, possibly as a result of these new functions, the orders seem to have gained a new vitality.

III. IN THE SENSE OF "CHRONOGRAM"

I. DATES AND ERAS IN THE ISLAMIC WORLD

1. In the sense of "date, dating", etc.

i. *Etymology.*

The non-Arabic origin of this word was recognised by the mediaeval philologists, but the often-cited derivation of the participle *mu'arrakh* "dated", from a supposed Persian compound *māh-rōz* "month-day", is naturally fanciful. In fact, it clearly belongs to the common Semitic root for "moon" and "month"; cf. Akkadian (*w*)*arḫu*, Sabaic *wrḫ*, Ethiopic *wärḫ*, Mehri *warkh*, or, with the usual Northwest Semitic soundshifts, Hebrew *yāreᵃḥ* (moon), *yeraḥ* (month), Aramaic *yarḥā*. The root is strikingly absent in Arabic (where the meaning "month" is taken over by *shahr*, cognate with the South Arabian term for "new crescent") except in the words for "date", the consonantism of which indicates that they must have been borrowed from the South, not the North. Of the various Arabic forms, the oldest is perhaps the plural *tawārīkh*, which might be a borrowing of an (unattested) South Arabian word for "datings (to particular months)", from which the singular *ta'rīkh* (also, and perhaps older, *tārīkh*) and the verb *arrakha* ("to date") would be back-formations. The lexicographers also adduce a form *tawrīkh*. Ethiopic *tārīk*, "era, history, chronicle", which has occasionally been cited as the etymon of Arabic *ta'rīkh*, is, in fact, borrowed from Arabic.

ii. *Definitions.*

Calendars are basically of two types: lunar or non-lunar. Lunar calendars have months based on the cycle of the phases of the moon (the synodic month, *ca.* 29.53 days). In the Near East the beginning of the month is reckoned from the first visibility of the new crescent in the evening sky, just after sunset, and it continues until the next sighting of a new crescent, generally 29 or 30 evenings later. Provided the length of the synodic month is known, it is not difficult to construct a mathematically calculated calendar with a regulated succession of "full" (30-day) and "defective" (29-day) months (the Greeks did this in ancient times), but in fact it is impossible to say exactly when the next crescent will be visible, as this depends, among other things, on the weather. In the long run, it makes no difference whether timekeeping is based on the actual sighting of the crescent or on calculation, since the average number of days per month is in both cases the same, but in the short term there is likely to be discrepancy of a day or so between an empirical and a calculated calendar.

Twelve lunar months will total an average of about 354 days and are thus roughly 11 days short of the solar (tropical or sidereal) year. The Muslim calendar ignores this difference with the result that the months move forward fairly rapidly through all the seasons. But most of the nations of the ancient world used luni-solar calendars, where the difference between the lunar and the solar year is compensated by intercalating a thirteenth month every two to three years. (For "intercalation" Arabic uses the Aramaic loanword *kabīsa*.)

Non-lunar calendars are based on notional "months" with a fixed number of days and make no attempt to keep pace with the phases of the moon. The oldest, and probably most elegant, calendar of this type is that of the ancient Egyptians, with twelve months of exactly 30 days each and five monthless days (epagomenai), making a vague year of exactly 365 days, with months moving forward very slowly against the solar year (about one day every four years). The Julian (reformed Roman, or "Old Style") calendar had months of a fixed length of 30 or 31 days, apart from February, which had 28 days normally, and 29 every four years. The Gregorian ("New Style") calendar, introduced in 1582 (at first only in the Roman Catholic countries) and now used throughout the world, differs from the Julian only by omitting three leap-days every 400 years.

Calendars that count years from a fixed date are said to operate with an era, the notional starting-point of the counting being the "epoch" of that era. Thus the epoch of the Christian era is 1 January A.D. 1. Here, as often, the epoch is not identical with the date at which the era was actually introduced.

iii. *The Muslim calendar.*

For determining their religious festivals and for the dating of official documents, Muslims use a pure lunar calendar, without any intercalation and thus independent of the seasons; but for the particularities of everyday life (agriculture, taxation, etc.) they have always relied on the solar or quasi-solar calendars described in the remaining sections of this article. The months of the Muslim year are:

1. (al-)Muḥarram
2. Ṣafar
3. Rabīʿ al-Awwal
4. Rabīʿ al-Ākhir (or al-Thānī)
5. Djumādā 'l-Ūlā
6. Djumādā 'l-Ākhira
7. Radjab
8. Shaʿbān
9. Ramaḍān
10. Shawwāl
11. Dhu 'l-Ḳaʿda
12. Dhu 'l-Ḥidjdja

For the supposed meanings of the names, see below, iv.

All schools of law (apart from the Ismāʿīlīs) agree that every month begins in principle with the actual local sighting of the new crescent and that consequently the duration of any given month cannot be predicted in advance. The only concession to calculation is the generally admitted norm (enshrined in a *ḥadīth*) that if, due to adverse weather conditions, the moon has still not been sighted on the thirtieth evening after the beginning of Ramaḍān, one is still entitled to assume that the fast has ended. In other words, Ramaḍān cannot last for more than 30 days. This is not necessarily true of the other months, and indeed texts occasionally attest months of as many as 31 days. Only the Ismāʿīlīs assigned (and still assign) a fixed length to each of the months and dispense with ocular observation of the moon, but this is rejected by all the other schools [see in detail HILĀL].

Of course, Muslim scientists were aware of the true length of the lunar cycle, and for the purposes of calendrical and astronomical computations they fixed the duration of the odd months (Muḥarram, Rabīʿ I, etc.) at 30 days and that of the even months at 29 days, and added an extra day to Dhu 'l-Ḥidjdja eleven times in 30 years to keep the average length of the months in agreement with the true synodic month. They were, however, not in complete agreement as to which years of the 30-year cycle are to be treated in this way (the various possibilities are played through, from a purely mathematical point of view, in Schram). The years with one extra day are called (as al-Bīrūnī, *Tafhīm*, section 271, explains) "the leap years (*kabā'is*) of the Arabs, not that the Arabs ever actually used or use them, but the authors of astronomical tables need them when they construct tables on the basis

of the years of the Arabs". In other words, the regulated calendar is a convenient mathematical fiction and does not correspond to actual practice. There exist a large number of mediaeval and modern tables for converting Muslim into Julian or Gregorian dates and various computer programs are now available to carry out the same task, and all of these are based, as is inevitable, on this same convention. However, it is important to remember that the real calendar was based on the observation of the moon and that the conversions given in the tables are only approximate. As a rule, the dates mentioned in Islamic sources can only be converted exactly to another calendar if the source gives the day of the week as well, in which case the rough equivalent indicated by the tables can be corrected. When, for example, an author writes that he did something on Friday 8 Dhu 'l-Ḳa'da 437, and our tables equate this date with Saturday 17 May 1046 Julian, then we must assume that the author observed the new crescent one day earlier than the date given in our tables for the beginning of the month and correct the conversion to Friday 16 May. In cases like this, where the day of the week is indicated, it can be observed that the conversions given in the tables are likely to be wrong (rarely by more than one day in either direction) about half of the time, and modern historians should correct them tacitly (there is no need to call attention to the fact). Where the day of the week is not indicated we must normally content ourselves with a rough conversion.

Since the month begins with the sighting of the moon in the evening sky the Muslims reckon the civil day to begin at sunset. Thus, in the above-cited example, Friday 8 Dhu 'l-Ḳa'da actually begins at sunset on what we would call Thursday 15 May and continues until sunset on Friday 16 May. Or at least that is how it is in theory. In practice, mediaeval Muslims, like people elsewhere, normally thought of the day as beginning at sunrise, as can be observed from the fact that in the canonical religious texts dealing with the times of prayer the liturgical day is, as a rule, reckoned to begin with the midday prayer (*ẓuhr*), the first prayer after the rising of the sun, and not with *maghrib*, the first prayer after sunset (see MĪḲĀT, where this fact is not, however, specifically mentioned).

The days (or nights) of the month can be counted consecutively from the first to the last, but in the second half of the month the Muslims (like the ancient Greeks and Romans) also counted backwards, dating events by the number of nights supposedly remaining in the month. Thus, assuming a "complete" 30-day month, typical dating formulae might be:

1st: *li-ghurrati Radjab*
2nd: *li-laylatayni khalatā min Radjab*
3rd: *li-thalāthi layāl*^{in} *khalat* (or *khalawna*) *min Radjab* (etc.)
15th: *li 'l-nisfi min Radjab*
16th: *li-arba'a 'ashrata laylat*^{an} *baḳiyat* (or *baḳīna*) *min Radjab*
17th: *li-thalātha 'ashrata laylat*^{an} *baḳiyat* (or *baḳīna*) *min Radjab*
18th: *li-'thnatay 'ashrata laylat*^{an} *baḳiyat* (or *baḳīna*) *min Radjab*
19th: *li-iḥdā 'ashrata laylat*^{an} *baḳiyat* (or *baḳīna*) *min Radjab*
20th: *li-'ashri layāl*^{in} *baḳiyat* (or *baḳīna*) *min Radjab*
21st: *li-tis'i layāl*^{in} *baḳiyat* (or *baḳīna*) *min Radjab*
22nd: *li-thamānī layāl*^{in} *baḳiyat* (or *baḳīna*) *min Radjab*
23rd: *li-sab'i layāl*^{in} *baḳiyat* (or *baḳīna*) *min Radjab*
24th: *li-sitti layāl*^{in} *baḳiyat* (or *baḳīna*) *min Radjab*
25th: *li-khamsi layāl*^{in} *baḳiyat* (or *baḳīna*) *min Radjab*
26th: *li-arba'i layāl*^{in} *baḳiyat* (or *baḳīna*) *min Radjab*
27th: *li-thalāthi layāl*^{in} *baḳiyat* (or *baḳīna*) *min Radjab*
28th: *li-laylatayni baḳiyatā min Radjab*
29th: *li-laylat*^{in} *baḳiyat* (or *baḳīna*) *min Radjab*
30th: *li-salkhi Radjab*

But since it is not actually known in advance how many nights the current month will have, this backward-dating is purely conventional. This is noted quite clearly by mediaeval authors, for example by al-Ṣūlī (*Adab al-kuttāb*, Cairo 1341/1922-3, 183), when he writes that "careful people" avoid dating in this way "because they do not know how many nights remain, owing to the fact that the month can be either defective or complete", i.e. it can have either 29 or 30 days. See also al-Ḳalḳashandī, *Ṣubḥ al-a'shā*, vi, 237-8, who says that some authorities forbid backward-dating, while others permit it only on the assumption that it implies the unspoken proviso "if the month be complete". In other words, *salkh* always means "the thirtieth day"; if the crescent is sighted after 29 days, then the day "when one night remains" is followed immediately by the first of the next month. It must be stressed again that with backward-dating, as with forward-dating, a precise conversion of Muslim dates is normally only possible if the day of the week is indicated in the source.

Sometimes the month is divided into three segments of (notionally) ten nights each (*al-'ashr al-uwal*, *al-wusaṭ* and *al-ukhar*), whereby we must assume that in "defective" months the last "ten nights" were really only nine. The month can also be divided into ten segments of (notionally) three nights, each segment having a special name [see LAYL AND NAHĀR]. For the contrived Ottoman system of dating by fractions, see the articles by Ritter and Dietrich.

Years are counted according to the era of the Hidjra, which is supposed to have been introduced by the caliph 'Umar in A.H. 17/638. The notional epoch of this era (1 Muḥarram A.H. 1) falls in July A.D. 622, but there is disagreement about the precise date, the Muslim authorities fluctuating between Thursday 15 July and Friday 16 July (see, for example, al-Bīrūnī, *Āthār*, 30, 330); the latter date is the point of departure of the printed conversion tables. Some modern scholars have made a great fuss about this question and claim that the uncertainties involved in the conversion of Muslim dates result from the parallel use of a "scientific" and a "popular" era beginning on 15 and 16 July respectively, but this is without any foundation. It should be clear that if the beginning of *every* month depends on the sighting of the crescent, then the question of whether the first month of the era begins on a Thursday or a Friday makes no difference for the conversion of dates.

iv. *Pre-Islamic and agricultural calendars of the Arabian peninsula.*

The ancient South Arabian inscriptions reveal the use of a number of local calendars, but for most of these it has not been possible to reconstruct a complete series of months. It does, however, seem that at least some of these calendars followed the luni-solar principle. Thus in Ḳatabān we find mentioned in one text the month *dbrm*, in another "former *dbrm*" and in a third "latter *dbrm*", from which one can deduce that the normal year had a single month called *dbrm*, but the intercalated 13-month year two months with this name. For the Sabaean calendar we have at least 13 different month-names, among them a "former" and a "latter" *dns'wr*, but it is not yet pos-

sible to determine their order. On the other hand, the names of Ḥimyarite months of the period immediately before Islam are not only attested in inscriptions, but were also still known to Yamanī authors of the mediaeval period, who list them in Arabicised forms (with variants and for the most part not vocalised, and thus cited below in Arabic script) and give a Julian equivalent for each. Some scholars have suspected that these equivalents are only approximate, but it is certainly possible that the Ḥimyarites of the monotheistic period did indeed adopt the Christian (Julian) calendar, assigning indigenous names to each of the Julian months; the fact that the inscriptions using these names have not revealed any evidence for intercalary months might be seen to support the latter hypothesis. One of these names (Mabkar for May) has survived in Yemen until today, though for the other Julian/Gregorian months the Latin or Syro-Macedonian names (see below, v) are now used. We give here the spellings found in the Ḥimyarite inscriptions (transliteration according to the system used by Sabaicists) with a specimen of the Arabicised forms and with the Julian equivalents according to the mediaeval texts; the year began (as Robin has demonstrated) with April:

1. *d̲ ṯ b t n*	ذو الثابة	(April)
2. *d̲ m b k r n*	ذو المبكر	(May)
3. *d̲ q y ẓ n*	ذو القياظ	(June)
4. *d̲ m d̲ r ʾ n*	ذو المذران	(July)
5. *d̲ ḫ r f n*	ذو الخراف	(August)
6. *d̲ ʿ l n*	ذو علان	(September)
7. *d̲ ṣ r b n*	ذو الصراب	(October)
8. *d̲ m h l t n*	ذو المهلة	(November)
9. *d̲ ʾ l n*	ذو الآل	(December)
10. *d̲ d ʾ w n*	ذو الدثاء	(January)
11. *d̲ ḥ l t n*	ذو الحلة	(February)
12. *d̲ m ʿ n*	ذو معون	(March)

In early South Arabian texts, years are not counted according to an era, but rather each year bears the name of a specifically appointed official (eponym); but from the later periods several different eras are attested, the best known of which is the so-called Ḥimyarite era, with a nominal epoch (according to the short chronology proposed by present author) in the spring of 110 B.C., though some have favoured a long chronology with an epoch in 115 B.C.

The pre-Islamic calendar in central Arabia, and specifically at Mecca, is not attested epigraphically, but is discussed in some detail by Muslim authors of the ʿAbbāsid period, whose testimony, however, requires critical scrutiny. These state that the ancient Arabs used the same month-names as the Muslims, though they also record special *d̲j̲āhilī* names (see al-Bīrūnī, *Āt̲h̲ār*, 61-2; an entirely different list is given by al-Masʿūdī, *Murūd̲j̲*, iii, 423 = § 1311). The philologists proposed etymologies for all of these, but it must be said that, apart from obvious cases like Muḥarram and D̲h̲u 'l-Ḥid̲j̲d̲j̲a, the meanings of most of them can hardly be regarded as certain. For example, if D̲j̲umādā really comes from *d̲j̲amd* and Ramaḍān from *ramaḍ*, then one might ask why only two months intervene between the time of "freezing" and of "burning", and indeed the whole question of whether the central Arabian months were ever fixed to particular seasons is a vexed one.

The Muslim tradition is unanimous in stating that the Arabs of the Ḥid̲j̲āz distinguished between "permitted" (*ḥalāl*) and "forbidden" (*ḥarām*) months, i.e. months during which fighting is or is not permitted, the "forbidden" months being Rad̲j̲ab and then three months around the time of the pilgrimage (D̲h̲u 'l-Ḳaʿda, D̲h̲u 'l-Ḥid̲j̲d̲j̲a and Muḥarram). A similar (if perhaps not identical) practice is attested for North-Eastern Arabia by Procopius (*De bello persico* ii, 16, 18) when he writes that the Byzantines were confident that the Lak̲h̲mid al-Mund̲h̲ir would not attack in the summer of A.D. 541 owing to the fact that the Arabs respected an armistice of two months at the time of the summer solstice; the Muslim historians, however, do not link the "forbidden" months to particular seasons. Ḳur'ān IX, 36 says that the months are twelve, of which four are "forbidden", and the next verse states that postponement (*nasīʾ*) "is an increase in unbelief, in which are led astray those who disbelieved, in that they declare it permissible one year, and declare it forbidden one year, so as to equalise the number of what God has forbidden, and so they declare permissible what God has forbidden". Muslim authors have disagreed over the interpretation of this difficult verse. Some maintain that *nasīʾ* was a procedure by which an official (the *nāsiʾ*) connected with the Kaʿba cult at Mecca altered the distribution of "forbidden" and "permitted" months within a given year (or within two successive years), but say nothing to imply that this involved actual manipulation of the calendar. Others claim that the "postponement" of the forbidden months was the result of the fact that the pagan Arabs intercalated a thirteenth month every two years; *nasīʾ* is thus in effect the old Arabic word for "intercalation" (*kabīsa*), a practice which was abolished with the revelation of the above-cited verse. The latter interpretation has generally been accepted by Muslim astronomers (first, it seems, by the astrologer and charlatan Abū Maʿs̲h̲ar al-Balk̲h̲ī) and has been favoured by modern scholars since Moberg (who summarises his views above, s.v. NASĪʾ), but it is doubtful whether it reflects anything more than learned speculation by the ʿAbbāsid authors. The former (non-calendrical) interpretation was accepted, and the "evidence" for intercalation rejected, with arguments that still seem largely valid, by Mahmoud Effendi and Sprenger, and it is in our opinion supported by an early Sabaic inscription from Haram (CIH 547), not precisely datable, but surely from well before the Christian era. Here the authors offer their excuses to the god Ḥlfn for the fact that they had not performed a certain ritual in the month *d̲mwṣbm*, when war had forced them to flee their country, but "postponed" (*nsʾʾw*) it until the month *d̲ʿṯtr*. As a result of this impiety, the god withheld the waters during the winter and summer growing seasons, whereupon the authors promised not to repeat their transgression in future. It is quite clear from the context that in Haram, at least, the verb *nsʾʾ* has nothing to do with intercalation, but only with the moving of cultic occurrences within the calendar itself. The rather striking similarity between the religious conceptions in this ancient inscription and in Ḳur'ān IX, 37 ("postponement" is in both cases something of which the deity disapproves) makes it seem likely that this is also the meaning of Ḳur'ānic *nasīʾ*.

For the observation of the passing of the seasons the Arabs used (if the evidence of pre-Islamic poetry is regarded) not the months of their calendar, but rather the system of lunar mansions [see ANWĀʾ and MANĀZIL]. This consists of dividing the ecliptic into 28 equal segments corresponding roughly to the location of the moon on each successive night of the sidereal (not the synodic) month. The observation of the positions of the stars belonging to each lunar mansion relative to the horizon at sunset or sunrise is a simple and accurate method of charting the passage

of the year, and it continues to form the principal basis for a large number of traditional agricultural calendars in the Arabian peninsula.

v. *The Julian calendar in the Islamic world.*

The Julian calendar was introduced throughout the Roman Empire and continued to be the basis for practical timekeeping in most parts of the Islamic world. From a chronological point of view, the principal difference between the various forms of this calendar concerns the point where the year begins. In the Maghrib and al-Andalus, as in Western Europe, the year commences with January, and in modern times this form has, under Western influence, become generally accepted in the Muslim countries. The Melkite Christians (mainly in Palestine and Egypt) followed the Byzantines in beginning the year in September, while the Jacobites and Nestorians followed the Macedonian custom of beginning the year in October. Moreover, instead of borrowing the Latin names, the last-mentioned communities retained most of the month-names of the ancient Babylonian lunisolar calendar (still used, with some modification, as the religious calendar of the Jews), but they redefined these to make each one correspond to a Julian month. Thus, while Babylonian Nisannu (Jewish Nīsān) is the month beginning with the sighting of the crescent at about the time of the spring equinox, in the Christianised calendar it has become equated with April. These "Syro-Macedonian" names are still used (now for the Gregorian months) in Western Asia, but in North Africa various versions of the Latin names have been employed. We give here those found in mediaeval texts from Spain and the Maghrib, which apparently go back to an archaic Romance dialect. The Ottoman and modern Turkish forms derive in part from the Syro-Macedonian, in part from the Latin names.

Syro-Macedonian	*Maghribī*	*Modern Turkish*
Kānūn al-thānī	Yannayr	ikinci kânun (January)
Shubāṭ	Fibrayr	şubat (February)
Ādhār	Māris	mart (March)
Nīsān	Abrīl	nisan (April)
Ayyār	Māyuh	mayıs (May)
Ḥazīrān	Yūnyuh	haziran (June)
Tammūz	Yūlyuh	temmuz (July)
Āb	Aghusht	ağustos (August)
Aylūl	Shutanbir	eylûl (September)
Tishrīn al-Awwal	Uktūbar	teşrinievvel (October)
Tishrīn al-Thānī	Nuwanbar	teşrinisani (November)
Kānūn al-Awwal	Dudjanbir	birinci kânun (December)

The Eastern Christian counted years according to the Seleucid era, in the East generally, but wrongly, called the "era of Alexander" (Arabic: *ta'rīkh Dhi 'l-Ḳarnayn*), with an epoch of 1 October 312 B.C. In Egypt and North Africa, years are often reckoned according to the Byzantine fifteen-year cycle of indictions, the "first indiction" beginning in (for example) A.D. 612, 627, 642, etc. The Byzantine indictions begin on 1 September, but the cycle is used also in connection with other methods of determining the New Year. In al-Andalus we find the Spanish era (*ta'rīkh al-ṣufr*; for the name, see AṢFAR), with its epoch on 1 January 38 B.C. It should be mentioned that the so-called Christian era of Western Europe was unknown both to Christians and Muslims in the mediaeval Near East.

vi. *The Coptic calendar.*

The ancient Egyptian vague year (see above, ii) was known to Muslim astronomers from its use in Ptolemy's *Almagest* and they not rarely employed this beautifully simple calendar for their own calculations, but for everyday timekeeping it had been replaced in Egypt, long before Islam, by the so-called Coptic calendar, which is exactly identical with that of the ancient Egyptians apart from the fact that it adds a sixth epagomene every four years (more precisely, at the end of a Coptic year immediately preceding a Julian leap year), with the result that the Coptic calendar is permanently synchronised with the Julian. Thus al-Bīrūnī distinguishes between the "intercalated" (*makbūsa*) year of his Egyptian contemporaries and the "non-intercalated" year that he knew from the *Almagest.* The Arabic spellings of the Coptic month-names vary somewhat, but are in any case fairly accurate representations of the names used in the Ṣaʿīdī dialect of Coptic; the latter are transliterated in the first column of the following table, while the last column gives the Julian equivalent of the first day of each Coptic month in a common year:

1. Thoout	30 days	begins	29 August (Julian)
2. Paape	30 days		28 September
3. Hatōr	30 days		28 October
4. Kiahk	30 days		27 November
5. Tōbe	30 days		27 December
6. Mshir	30 days		26 January
7. Paremhat	30 days		25 February
8. Parmoute	30 days		27 March
9. Pashons	30 days		26 April
10. Paōne	30 days		26 May
11. Epep	30 days		25 June
12. Mesōrē	30 days		25 July
Epagomenai	5/6 days		24 August

If a Coptic year begins in the August preceding a Julian leap year, the extra epagomene immediately before the Coptic New Year means that the first seven months all begin one day later than the dates given in the table (i.e. 30 August, etc.); from Parmoute onwards the Julian equivalents are as given. The Coptic Christians express years according to the era of Diocletian, which they call the "era of the martyrs", with its epoch on 29 August A.D. 284.

vii. *In Persia.*

Islamic Persia inherited from the Sāsānids a calendar which is functionally identical with that of the ancient Egyptians: it had a vague year of 365 days, divided between 12 months of 30 days each plus five epagomenai, in Persian generally known as the "five Gāthās" (*pandj gāh*), or as the "stolen" (*mustaraḳa, duzdīdha*) days. In the early Islamic period these stood after the eighth month, but in A.D. 1007 the Zoroastrians in Western Persia moved the epagomenai to the end of the last month, a reform which was adopted, not at once but eventually, in Eastern Persia as well. The early New Persian forms of the month names are:

1. Farwardīn	30 days	
2. Urdībihisht	30 days	
3. Khurdādh	30 days	
4. Tīr	30 days	
5. Murdādh	30 days	
6. Shahrīwar	30 days	
7. Mihr	30 days	
8. Ābān	30 days	
(Epagomenai	5 days)	before *ca.* 1007
9. Ādhar	30 days	
10. Day	30 days	
11. Bahman	30 days	

12. Isfandārmudh 30 days
(Epagomenai 5 days) after *ca.* 1007

Each of the thirty days of the month had its own special name, but these are not much used by Muslim authors, who generally count the days instead. The five "stolen" days also have, at least among the Zoroastrians, names of their own. The Zoroastrians employ this calendar to determine their religious feasts, several of which continued to be celebrated by Persian Muslims, in particular Nawrōz or Nawrūz [*q.v.*] (the Persian New Year, on 1 Farwardīn), which in late Sāsānid times fell at about the beginning of summer, but by the end of the 10th century had moved forward to about the time of the spring equinox. In the early Islamic period, other festivals such as Mihragān [*q.v.*] (16 Mihr) were much observed, but later these fell into disuse among Muslims.

Different forms of the Zoroastrian calendar were current in early Islamic times in Sogdiana (around Bukhārā and Samarḳand), Khwārazm, Sīstān and Ṭukhāristān; each of these had not only its own month-names, but the first two, at least, began their year five days later than the Persians (i.e. their New Year's day fell on the Persian 6 Farwardīn) and had the epagomenai after the twelfth month (not the eighth).

In Sāsānid times, years were counted from Nawrōz of the accession year of the reigning monarch; in Islamic times the Zoroastrians either continued to count the regnal years of Yazdigird III, the last Sāsānid (era of Yazdigird, begins 16 June 632), or from the year of his death (post-Yazdigird era, or "era of the Magians", begins 11 June 652). Both of these eras are used on the "Arabo-Sasanian" coins of the early Umayyad period, and the post-Yazdigird era was employed by the Zoroastrian rulers in Ṭabaristān, but the Zoroastrians of the present day have retained only the era of Yazdigird.

The Persian year, like the Egyptian, moves forwards against the solar year by about one day every four years, its first day corresponding always to 1 Choiak of the old Egyptian calendar. Muslim sources, from al-Masʿūdī onwards, claim that in pre-Islamic times the Persians used to correct their calendar by intercalating one whole month (30 days) every 120 (or 116) years, but there is no evidence that such a correction was ever actually carried out and the present author has attempted to demonstrate that this supposed intercalation is a myth invented by the Zoroastrian clergy during the Islamic period. In any event, it is uncontested that no intercalations took place after the Arab conquest. Since the beginning of the tax-year (*iftitāḥ al-kharādj*) in Persia still fell on 1 Farwardīn, the problem arose that the landholders were soon being asked to pay their taxes before their fruits had ripened and various attempts were made to rectify the situation. Thus the caliph al-Mutawakkil proposed delaying Nawrōz by 57 days, but the reform does not seem to have been carried out. Half a century later, al-Muʿtaḍid ordered that from the year 282/895 the New Year was to be delayed by 60 days until 1 Khurdādh (corresponding then to 11 June) and, moreover, that the Persian calendar was to be aligned permanently to the Julian by inserting a sixth epagomene every four years. Historians mention the celebration of "al-Muʿtaḍid's Nawrōz" for a century or so after the reform, but otherwise this calendar had little resonance. A similar, but more memorable reform was the Djalālī [*q.v.*] calendar instituted by the Saldjūḳid Djalāl al-Dīn Malik Shāh in 471/1079: Nawrōz was fixed to the vernal equinox (defined as the point when the sun enters Aries), then 15 March Julian, which date is the epoch of the Djalālī era. The months had 30 days each and retained their traditional Persian names (some sources cite special fancy names for the months and days, but it is doubtful whether these were ever used), with Farwardīn beginning at the spring equinox, and five epagomenai at the end of the year (after Isfandārmudh), but a sixth epagomene was added if the sun had not yet entered Aries by noon on the 366th day from the previous New Year. Although the Djalālī era is not often used for datings, the spring Nawrōz has been accepted universally by Persian-speaking Muslims and the Djalālī months formed the basis for agricultural calendars in Persia until the recent past.

Historians of the Mongol period say that Ghazan Khān instituted an Īlkhānī era, but give us no reliable information about its particulars. The modern Persian solar *hidjrī* calendar was introduced in 1925. The year begins at the spring equinox and the months have modernised forms of the traditional Persian names (cited above); the first six months have 31 days each, the next five have 30 and the last (Isfand) has 29 in an ordinary year and 30 in a leap year, giving 365 or 366 days altogether. However, the rule for determining which years are leap years is complicated. The New Year's day (1 Farwardīn) falls in principle on 20 or 21 March Gregorian, but the discrepancy between the Persian and Gregorian systems of calculating the leap years means that some fluctuation occurs (for a table of leap years, see ʿAbd Allāhī, 373-5; Spuler's one is wrong). The same calendar was adopted in Afghānistān in 1957, but instead of the Persian month-names the Arabic names for the roughly corresponding zodiacal signs (beginning with Ḥamal/Aries) are used.

In modern Persia (and Afghānistān) years are counted according to solar years since the Hidjra and can easily be converted to *anni domini* by adding 621 or (in the last two and a half months) 622. Thus the Persian year 1376 *hidjrī shamsī* begins on 21 March 1997 Gregorian, corresponding to *ca.* 12 Dhu 'l-Ḳaʿda 1417 *hidjrī ḳamarī*. For a few years at the end of the reign of Muḥammad Riḍā Shāh, this was replaced by an "imperial" (*shāhanshāhī*) era dating from the accession of Cyrus the Great (559 B.C.), but the *hidjrī shamsī* year has been re-established in the Islamic Republic.

Although the Zoroastrian vague year appears to have gone out of circulation among Persian Muslims by around the end of the 5th/11th century, it lived on, rather surprisingly, as the basis for the navigational calendar of the Arab seafarers in the Indian Ocean. This did not use the Persian month-names but simply counted the days (from 1 to 365), beginning at Nawrōz. For the moment, the oldest known attestation of this calendar is in the almanac of the Yemeni crown prince ʿUmar b. Yūsuf (later al-Malik al-Ashraf), which puts Nawrōz at 8 January (correct for A.D. 1269-72), and it is found also in Ibn Mādjid [*q.v.*], who says (again correctly) that in his time Nawrōz fell on a Friday in Dhu 'l-Ḥidjdja 893 (14 November 1488) and in later authors. It seems that this navigational calendar was still in use until the very recent past, but European observers state (correctly?) that the point of departure of the day-count became fixed at the beginning of the sailing season and thus ceased to regress with the Persian New Year.

viii. *The tax year.*

In the ʿAbbāsid chancery, tax collection was regulated by the Persian calendar, with tax years begin-

ning at Nawrōz, but counted not according to one of the Zoroastrian eras, but by years of the Hidjra. Since the Islamic year is shorter than the Persian vague year, the counting of taxational (*kharādjī*) years lagged behind the years of the religious calendar and had to be corrected from time to time. For example, in the year of the Hidjra 241 (May 855 to May 856) Nawrōz fell on 21 April, that is to say, almost at the end of the religious year. Consequently, the authorities decided to call the tax year beginning on that date not "241" but "242", thus dropping one year from the taxational calendar; this is called *taḥwīl* ("changing" one tax year to another). We have information of several other adjustments of the same type, but also of adjustments that were not carried out when due, and of times when two years had to be omitted from the *kharādjī* calendar to make up for an earlier oversight. It is thus clear that the reconciliation of the tax year with the religious year was not automatic or regular, but sporadic and by specific order of the authorities.

In Egypt, the tax year began with the Coptic New Year (29 or 30 August) and similar attempts were made to keep the counting of tax years roughly in line with the years of the Hidjra. The Ottomans based their financial year on the Julian calendar and at first retained the Byzantine New Year on 1 September, but they moved the beginning of the year to 1 March in 1088/1677. After this time each financial (*māliyye*) year had, in theory, the same number as the *hidjrī* year during which it began, with the omission of one year in every 33, i.e. whenever the 1st of March did not fall within the religious year, the Turkish technical term for the omission being *ṣïwïsh*. Problems, however, arose from the fact that the Ottomans collected taxes according to the Julian year but paid salaries according to the lunar year, which led to difficulties with the bookkeeping whenever *ṣïwïsh* became necessary. Eventually the system broke down: the *māliyye* year 1287/1871-2 should have been followed by *māliyye* 1289/1872-3, but for some reason the year 1288 was not left out, with the result that for the remainder of its history the *māliyye* calendar was out of step with the religious year. It was officially abolished with the adoption of the Western-style Christian era in 1927.

ix. *The Turco-Mongolian calendar.*

Before entering the *dār al-Islām*, the ancient Turks adopted a form of the Chinese luni-solar calendar, either directly from China or via the Sogdians. Later, this passed from the Uyghur Turks to the Mongols, who in turn introduced it in their empire in Persia, where it was quite widely used, alongside the Islamic and Djalālī calendars. The Chinese lunar months begin not with the sighting of the new crescent, as in the Near East, but one or two days earlier with the calculated time of conjunction between the sun and the moon (the true New Moon), the year beginning with the New Moon occurring while the sun is in Aquarius. The year is kept in pace with the solar year by the periodic intercalation of a thirteenth month, which is inserted whenever two New Moons fall during the time that the sun is in one and the same zodiacal sign. The Turkish names for the first and last months derive from Sanskrit or Iranian; the other months have no proper names but are merely counted, as in Chinese ("second moon", etc.). Early Turkish forms, subsequently borrowed both into Mongolian and Persian, with their approximate Julian equivalents, are:

1. aram ay (Jan./Feb.)
2. ekinti ay (Feb./March)
3. üčünč ay (March/April)
4. törtünč ay (April/May)
5. beshinč ay (May/June)
6. altïnč ay (June/July)
7. yetinč ay (July/Aug.)
8. sekkizinč ay (Aug./Sept.)
9. tokuzunč ay (Sept./Oct.)
10. onunč ay (Oct./Nov.)
11. bir yigirminč ay (Nov./Dec.)
12. djakhshapat ay (Dec./Jan.)

The intercalary month is called *shün ay*, a borrowing from Chinese *rùn*.

Years were counted according to the twelve-year cycle of Chinese astrology, where each year of the cycle takes the name of an animal. The Mongols translated the Turkish animal names into their own language, in many cases (nos. 3-5, 8-10) using words that are, in fact, borrowed from Turkish (where, in turn, some of the names derive from Iranian or Chinese); in Persian texts the Turkish and the Mongolian names are used interchangeably (with inevitable variations in the Persian spelling); we quote the underlying Turkish and Mongolian forms.

	Turkish	*Mongolian*	*meaning*
Year 1	ṣïčghan	ḳulughana	rat
Year 2	udh	üker	ox
Year 3	bars	bars	tiger
Year 4	tawïshghan	tawlay	hare
Year 5	lu	luu	dragon
Year 6	yïlan	moghay	snake
Year 7	yunt	morin	horse
Year 8	ḳoñ	ḳonin	sheep
Year 9	bečin	bečin	monkey
Year 10	taḳïghu	takiya	cock
Year 11	ït	noḳay	dog
Year 12	toŋuz	ghaḳay	pig

The animal cycle continued to be used in Persia until the beginning of the twentieth century, generally in conjunction with the months of the Djalālī calendar.

x. *Muslim India.*

It would fall outside the scope of this article to discuss the many local calendars and eras used in the Indian subcontinent; for the Muslim scholarly reception of Indian chronological theory (not practice), we refer to the extensive discussion in al-Bīrūnī's *Taḥḳīḳ mā li 'l-Hind*. The Muslim rulers in India used the Islamic calendar for official datings, but, like their counterparts further west, employed the local calendars as a basis for tax-collecting, with the ambiguous term *faṣlī* (seasonal) designating not one, but a variety of indigenous calendars. The Mughal emperor Akbar [*q.v.*], as part of his religious innovations, officially replaced the Muslim calendar by his own Ilāhī era [*q.v.* in Suppl.], with its epoch at the spring equinox following his accession, i.e. Wednesday 28 Rabīʿ II 963/11 March 1556 Julian, though the new calendar was not actually introduced until the beginning of the 29th year of his reign, when the sun entered Aries (according to the *Akbar-nāma*, tr., iii, 644) on Wednesday 8 Rabīʿ I 992 (11 March Julian = 21 March Gregorian 1584). The year began with the spring equinox, the months (and days) had the same names as the Persian (Zoroastrian and Djalālī) ones (see above, vii), but there were no epagomenai; instead, the duration of each month was fixed at 29, 30, 31 or 32 days (the details are not quite clear, but it seems that the longer months were in the spring and summer). Also, the years were counted in cycles of twelve, with the same names as the months. Thus Akbar's twelfth year is "year Isfandārmudh of the first

cycle", his thirteenth "year Farwardīn of the second cycle". The later Mughals abandoned the Ilāhī calendar, but continued to use datings according to their own regnal years, alongside the Islamic calendar.

Bibliography: 1. General. The classic Muslim work on chronology is Bīrūnī, *al-Āthār al-bāḳiya ʿan al-ḳurūn al-khāliya*, ed. Sachau, Leipzig 1878, tr. idem, *The Chronology of ancient nations*, London 1879, with some additional information in his *K. al-Tafhīm li-awāʾil ṣināʿat al-tandjīm*, ed. and tr. R.R. Wright, London 1934, and the first book of his *al-Ḳānūn al-Masʿūdī*, Ḥaydarābād/Deccan 1954-6. The only comprehensive "modern" work is F.K. Ginzel, *Handbuch der mathematischen und technischen Chronologie*, 3 vols., Leipzig 1906-14. The most practical conversion tables are Wüstenfeld-Mahler-Spuler-Mayr, *Vergleichungs-Tabellen der mohammedanischen und christlichen Zeitrechnung*, 3rd expanded ed., Wiesbaden 1961 (also for the Persian and Coptic calendars). R. Schram, *Kalendariographische und chronologische Tafeln*, Leipzig 1908, is more comprehensive, but presupposes a certain degree of mathematical sophistication. See also M. Ocaña Jiménez, *Nuevas tablas de conversión de datas islámicas a christianas y viceversa*, Madrid 1981 (with valuable essays).

2. Etymology. F. Rosenthal, *A history of Muslim historiography*, ²Leiden 1968, 11-17.

2. Era chronology in astronomical handbooks.

Practically all *zīdj*s [*q.v.*], mediaeval Islamic astronomical handbooks with tables and explanatory text, include an extensive chapter on chronology. This chapter, usually to be found at the very beginning of the *zīdj*, contains the chronological information needed for the calculation and evaluation of planetary positions and other astronomical data from the whole mediaeval period. Thus various calendars and eras are described and methods for converting dates from one calendar into another explained. For each calendar at least the following are given: a list of the names and lengths of the months, a method to compute from a given date the number of days elapsed since the epoch and vice-versa, and a rule for calculating the week day (*madkhal*). A set of numerical tables facilitates the calculations involved. In addition, many *zīdj*s contain lists of festivals in various calendars, mathematical tables for determining the dates of the movable Christian feasts, and regnal lists of caliphs, kings and emperors.

This article describes the aspects of era chronology that are typically found in *zīdj*s and explains the conversion of dates from one calendar into another step by step. More general aspects of calendars used in the Islamic world, including their historical development and the names and lengths of the months, are discussed in 1. above. Depending on the context, the word *ta'rīkh* as it is used in *zīdj*s can be translated into English as "era", "epoch", "calendar" or "date".

a. Calendars and eras. Table 1 shows which calendars are described in detail in a number of important *zīdj*s. For more information about the authors of these works, the reader is referred to the respective articles in this encyclopaedia or the *Dictionary of scientific biography*, New York 1970-80. It can be noted that three calendars occur in practically all *zīdj*s: the purely lunar Muslim ("Arabic" or "Hidjra") calendar, the Byzantine (*Rūmī*) calendar which is essentially equivalent to the Julian, and the Persian Yazdigird calendar with a constant year length of 365 days. The use of most other calendars discussed below is restricted to particular geographical regions or historical periods.

Table 2 displays the precise dates of the most important epochs used in *zīdj*s as well as the differences in days between these epochs, which are needed for the conversion of dates from one calendar into another as described below. Note that, except in the

TABLE 1

Calendars described in detail in some important zīdjs.

Author	*Title*	*Place*	*Year*[a]	Arabic[b]	Byzantine[c]	Persian[d]	Coptic[e]	Jewish	Djalālī	Uighur	various[f]

Ulugh Beg	Zīdj-i Sulṭānī	Samarḳand	850/1445	A	A	L			×	×	F

[a] Since most of the *zīdjs* listed here cannot be dated precisely, this column contains approximate dates of compilation. [b] A: astronomical (epoch Thursday, 15 July 622), C: civil (epoch Friday, 16 July 622) [c] A: Alexander (Seleucid era) [d] E: early variant (extra days inserted after Ābān), L: late variant (extra days inserted at the end of the year) [e] P: Philip, A: Augustus, D: Diocletian [f] Besides the names of less common calendars this column contains the following abbreviations: K: regnal list of kings and caliphs, F: list of feasts and festivals, E: material on the calculation of Easter or the Great Lent.

[1] This material may not have been part of the original work. [2] Based on the Latin translation of the revision by Maslama al-Madjrīṭī. [3] The leap day is inserted at the end of December. [4] Based on an accurate value for the length of a lunation and an intercalation scheme very different from the usual ones. [5] The year starts with Aylūl (September), the tables with Ādhār (March). [6] Djamāl al-Dīn Abi 'l-Ḳāsim b. Maḥfūẓ al-Munadjdjim al-Baghdādī reworked in his *zīdj* (extant in the unique Paris ms. B.N. 2486) material of early Muslim astronomers such as Ḥabash al-Ḥāsib, Kūshyār b. Labbān, and Abu 'l-Wafā' al-Būzdjānī. It seems plausible that, for his extensive chapter on chronology, he borrowed from al-Bīrūnī, but this has not yet been investigated.

TABLE 2

Epochs occurring in zīd̲j̲s and the differences between them in days.

Epoch	Date in Julian calendar	Differences between the epochs in days (sexagesimal/decimal)								
Flood	Fr 18 Feb. 3102 B.C.	**Flood**	860 172	1 014 932	1 019 273	1 122 241	1 236 564	1 359 973	1 363 597	1 526 770

Philip	Su 12 Nov. 324 B.C.	4, 41, 55, 32	42, 59, 20	**Philip**	4 341	107 309	221 632	345 041	348 665	511 838
Alexander	Mo 1 Oct. 312 B.C.	4, 43, 7, 53	44, 11, 41	1, 12, 21	**Alexander**	102 968	217 291	340 700	344 324	507 497
Augustus	Sa 30 Aug. 30 B.C.	5, 11, 44, 1	1, 12, 47, 49	29, 48, 29	28, 36, 8	**Augustus**	114 323	237 732	241 356	404 529
Diocletian	Fr 29 Aug. 284 A.D.	5, 43, 29, 24	1, 44, 33, 12	1, 1, 33, 52	1, 0, 21, 31	31, 45, 23	**Diocletian**	123 409	127 033	290 206
Hid̲j̲ra (A)	Th 15 July 622 A.D.	6, 17, 46, 13	2, 18, 50, 1	1, 35, 50, 41	1, 34, 38, 20	1, 6, 2, 12	34, 16, 49	**Hid̲j̲ra (A)**	3 624	166 797
Yazdigird	Tu 16 June 632 A.D.	6, 18, 46, 37	2, 19, 50, 25	1, 36, 51, 5	1, 35, 38, 44	1, 7, 2, 36	35, 17, 13	1, 0, 24	**Yazdigird**	163 173
Malik-S̲h̲āh	Fr 15 Mar. 1079 A.D.	7, 4, 6, 10	3, 5, 9, 58	2, 22, 10, 38	2, 20, 58, 17	1, 52, 22, 9	1, 20, 36, 46	46, 19, 57	45, 19, 33	**Malik-S̲h̲āh**

Hid̲j̲ra (A) indicates the "astronomical" Hid̲j̲ra epoch. In the sexagesimal numbers under the diagonal, the digits are separated by commas, e.g. 42, 59, 20 denotes $42 \times 60^2 + 59 \times 60 + 20$.

Most important variants: The above date for the epoch of Augustus, signifying his year of accession, is only found in the *zīd̲j̲s* of Ḥabas̲h̲ al-Ḥāsib. Kūs̲h̲yār b. Labbān, Ibn Yūnus and al-Bag̲h̲dādī give the epoch as 13 November 30 B.C., based on the assumption that New Year in the ancient Egyptian and the Coptic calendar coincided in the time of Philip instead of Augustus. Al-Battānī uses 29 Augustus 25 B.C., possibly indicating the year of introduction of the calendar. The data in al-Bīrūnī's *al-Ḳānūn al-Masʿūdī* are inconsistent and point to both the earlier epoch and the later one.

The above date for the epoch of Diocletian is given by Yaḥyā b. Abī Manṣūr and Ibn Yūnus, whereas the Berlin manuscript of the *zīd̲j̲* of Ḥabas̲h̲ al-Ḥāsib and Kūs̲h̲yār b. Labbān use 12 November 284 A.D. A Philip epoch for the Coptic calendar is employed by Ḥabas̲h̲ al-Ḥāsib and al-Battānī.

examples of date conversions, the Hidjra dates given in this article are the common "civil" dates rather than the "astronomical" ones applied in most *zīdjs*. The names of calendars and epochs used in this article are literal translations of the names occurring in *zīdjs*, which in some cases may not be the historically or linguistically most correct ones.

Arabic or Hidjra calendar. Whereas in civil usage the beginnings of the Arabic months are determined by actual observations of the lunar crescent after new moon [see 1. above and RU'YAT AL-HILĀL], most mediaeval astronomers used the schematic calendar with nineteen ordinary years of 354 days and eleven leap years of 355 days in a thirty-year cycle. The number of days in the first *n* years of this cycle is determined by multiplying *n* by the average year length of 354 11/30 days and rounding the result to the nearest whole number. If for *n* = 15 the resulting half of a day is truncated, this leads to the set of leap years 2, 5, 7, 10, 13, 16, 18, 21, 24, 26 and 29. If it is rounded upwards, the fifteenth year of each cycle becomes a leap year rather than the sixteenth. The first variant seems to be more common in early *zīdjs*, the second one in later Persian *zīdjs*.

Whereas most Muslim astronomers used the "astronomical" Hidjra era based on the mean new moon of Thursday, 15 July 622 A.D., al-Bīrūnī and some others adopted the "civil" epoch determined by the first visibility of the lunar crescent on Friday, 16 July [see HIDJRA]. The early ʿAbbāsid astronomer Ḥabash al-Ḥāsib based his rules and tables for the Hidjra calendar on the actual time of the above-mentioned new moon and the traditional Babylonian value for the length of a lunation, which is slightly different from that implicit in the schematic lunar calendar. Thus he arrived at a highly unusual intercalation scheme, in which the years 3, 6, 9, 11, 14, 17, 19, 22, 25, 28 and 30 in the thirty-year cycle were leap years.

Persian or Yazdigird calendar. Because of its constant year length of 365 days, the Persian calendar is very convenient for calculating planetary motions during long periods of time. For this reason, it was adopted as the base calendar in many *zīdjs*. The five extra days of the Persian year are usually called *andardja* (from the Persian *andar gāh(ān)*, "intermediate times"), *mustaraka* ("stolen days") or *lawāḥiḳ* ("appendages"). Various *zīdjs* describe the type of intercalation supposedly carried out in the ancient Persian calendar (see 1. above, section vii, and F. de Blois, *The Persian calendar*, in *Iran*, xxxiv [1996], 39-54), as a result of which the extra days were inserted after the eighth month, Ābān, until approximately the year 397/1007. Starting with Kūshyār b. Labbān, more and more Muslim astronomers moved the extra days back to the end of the year (cf. Table 1). In all *zīdjs* the epoch of the Persian calendar is the beginning of the year of accession of the last Persian king Yazdigird III [see SĀSĀNIDS]; in only a few cases are the Sogdian and Khwarazmian forms of the Persian calendar described. In most *zīdjs* the names of the 30 days of the Persian months and the five extra days are listed.

Byzantine (rūmī) *or Syrian calendar.* This calendar is essentially the same as the Julian, but counts the years according to the Seleucid era, which is mistakenly named after Alexander the Great [see AL-ISKANDAR]. In *zīdjs* it usually employs the Syro-Macedonian month names listed in 1. above, section v, and has Tishrīn I (October) as the first month of the year. Once every four years a leap day is inserted at the end of Shubāṭ (February), leap years being those Alexander years which leave a remainder equal to three when divided by four. Most deviations from these basic characteristics were incidental, e.g. al-Battānī started the year with Aylūl (September), the Latin version of the *Zīdj* of al-Khwārazmī inserted the leap day at the end of Kānūn II (December), and in some tables the months were reckoned from Ādhār (March). Occasionally transliterations of the Latin month names were given.

Egyptian or Coptic calendar (ta'rīkh al-ḳibṭ). In some *zīdjs* this designation stands for the ancient Egyptian calendar as used by Ptolemy [see BAṬLAMIYŪS], which occurs with the Nabonassar (*Bukhtanaṣṣar*), Philip (*bylbs*, usually unvocalised in the manuscripts) and Antoninus (*'ntnns*) epochs. Mostly, however, it is used for the Alexandrian or Coptic variant of this calendar introduced by the Roman emperor Augustus (*'ghsts*), which runs parallel to the Julian calendar. The five extra days of the Coptic year (six in a leap year) are called *nasī* or epagomenai (*'bwghmn'*). As epochs we find the beginning of the year of accession of Augustus and that of Diocletian (*dḳlṭy'nws*). In the first case, leap years are those which leave a remainder zero after division by four, in the second case those which leave a remainder three. Al-Battānī used a Philip era for the Coptic calendar (Tuesday, 29 August 324 B.C.), which he mistook for the epoch of Ptolemy's *Handy tables*.

It may be noted that New Year in the ancient Egyptian calendar coincides with that in the Coptic calendar around the time of introduction of the latter, sc. 25 B.C. However, in a number of *zīdjs* we find rules based on the assumption that New Year in both calendars coincides at the time of the Philip epoch, 324 B.C. As a result, the Augustus and Diocletian epochs in these *zīdjs* are 75 days later than the dates shown in Table 2.

Djalālī calendar. Whereas Islamic religious life was governed by the purely lunar Hidjra calendar, for agricultural and taxation purposes a true solar calendar was found to be indispensable. In *zīdjs* the most extensive descriptions of such calendars concern the Djalālī [*q.v.*] (also called Malikī), which was introduced in the late 5th/11th century by the Great Saldjūḳ Sultan Djalāl al-Dawla Malik-Shāh I [*q.v.*]. New Year in this calendar is defined as the day (from noon till noon) on which the sun reaches the vernal equinoctial point, to be determined by astronomical calculation rather than by a straightforward intercalation scheme. Here the method varies from *zīdj* to *zīdj* depending on solar theory and parameter values. In most cases, the times of successive vernal equinoxes are computed by repeatedly adding a constant length of the solar year to the time of the equinox of the epoch. A more accurate theory is contained in the Khāḳānī Zīdj by the 9th/15th-century computational genius al-Kāshī, who took into account the influence of the motion of the solar apogee on the solar equation and hence correctly obtained varying time spans between consecutive equinoxes. Al-Kāshī constructed his sophisticated table for the computation of vernal equinoxes on the basis of intervals of 33 Djalālī years, practically equal to an integer number of days, and used parabolic interpolation to calculate the equinoxes within these intervals.

Independent of the precise method of computing the vernal equinox, in all *zīdjs* the Djalālī year ordinarily has 365 days, every fourth or incidentally fifth year being a leap year of 366 days. In some *zīdjs* the leap year following four ordinary years occurs alternately after 25 or 29 years, in others after 29 or 33 years. The beginnings of the Djalālī months are said to be defined by the entry of the sun into the

zodiacal signs, but in practice the traditional Persian months of 30 days are used, "*djalālī*" being appended to the original names and a sixth extra day being added in a leap year. The epoch of the Djalālī calendar generally is the vernal equinox of the year 471/1079. Other epochs in use for true solar calendars based on the vernal equinox are the Īlkhān era of Ghāzān Khān [*q.v.*] mentioned by al-Kāshī (Tuesday, 12 Radjab 701/13 March 1302) and the era of Čingiz Khān [*q.v.*] used in the *zīdj* of al-Sandjufīnī, written in Tibet in 1366 (Wednesday, 12 Shaʿbān 603/14 March 1207).

Chinese-Uighur (Turco-Mongolian) calendar. Under the Mongol Īlkhān dynasty [*q.v.*] the so-called Chinese-Uighur calendar was the commonly used one in Persia. It is prominently described in a number of *zīdjs*, mostly in Persian, the earliest of which is the Īlkhānī Zīdj by al-Ṭūsī. The calendar is a luni-solar one and is very similar to the *Revised Ta Ming li*, the calendar of the Chinese Chin Dynasty, which was adopted by Čingiz Khān after the Mongol conquest of northern China in 1215. With the *Ta Ming li*, the Chinese-Uighur calendar shares the underlying solar and lunar parameters, the era of the creation, and the general rules for determining the beginnings of years and months and the position of the leap month. Different from official Chinese calendars, in the Uighur calendar the solar and lunar equations, required for the computation of the true new moons, are calculated as parabolic functions. The determination of the lunar equation involves a period relation of ultimately Babylonian origin, which equates nine lunar anomalistic cycles to 248 days.

In the Chinese-Uighur calendar, days are counted either from the beginning of the current month or in the Chinese sexagesimal cycle. Years are grouped into three consecutive cycles of 60 years which are called by Chinese words Shang-yüan, Chung-yüan, and Hsia-yüan. In the Īlkhānī Zīdj, the epoch of the Chinese-Uighur calendar is Thursday, 30 Rabīʿ I 662/31 January 1264.

(Various technical, philological and historical aspects of the Chinese-Uighur calendar have been discussed in E.S. Kennedy, *The Chinese-Uighur calendar as described in the Islamic sources*, in *Isis*, lv [1964], 435-43*; R.P. Mercier, *The Greek "Persian Syntaxis" and the Zīj-i Ilkhānī*, in *Archives internationales d'histoire des sciences*, xxxiv [1984], 35-60; and C. Melville, *The Chinese Uighur animal calendar in Persian historiography of the Mongol period*, in *Iran*, xxxii [1994], 83-98. The complete method of computing Uighur dates as found in the Īlkhānī Zīdj has been laid out in B. van Dalen, E.S. Kennedy and Mustafa K. Saiyid, *The Chinese-Uighur calendar in Ṭūsī's Zīdj-i Īlkhānī*, in *ZGAIW*, xi [1997], 111-52.)

Others. A number of *zīdjs* contain descriptions of the Jewish luni-solar calendar. These range from simple listings of month names and elementary properties to complete sets of rules and tables for the computation of the Tishri new moon, which determines the beginning of the Jewish year. (The material on the Jewish calendar in the unique manuscript copy of the Mumtaḥan Zīdj has been published in J. Vernet, *Un antiguo tratado sobre el calendario judío en las "Tabulae Probatae"*, in *Sefarad*, xiv [1954], 59-78, repr. in Vernet, *Estudios sobre historia de la ciencia medieval*, Barcelona-Bellaterra 1979, 213-32. A treatise on the Jewish calendar by al-Khʷārazmī has been analysed in: E.S. Kennedy, *Al-Khwārizmī on the Jewish Calendar*, in *Scripta Mathematica*, xxvii [1964], 55-9*.)

A couple of *zīdjs* mention the calendar of the ʿAbbāsid caliph al-Muʿtaḍid [*q.v.*], a modification of the Persian calendar which fixes New Year in June and inserts a leap day once every four years. Its epoch is Wednesday, 13 Rabīʿ II 282/11 June 895. Like his monumental *al-Āthār al-bāḳiya* (tr. C.E. Sachau, *The chronology of ancient nations*, London 1879, repr. Frankfurt 1969), al-Bīrūnī's *al-Ḳānūn al-Masʿūdī* contains a wealth of chronological material, which has not yet been properly investigated (cf. Kennedy, *Al-Bīrūnī's Masudic Canon*, in *al-Abḥāth*, xxiv [1971], 59-81*). Besides the common calendars discussed above, al-Bīrūnī includes details of the calendar reform by al-Muʿtaḍid and of the Jewish, Sogdian/Khwarazmian and Indian calendars (on the last, see Kennedy, S. Engle and J. Wamstad, *The Hindu calendar as described in Al-Bīrūnī's Masudic Canon*, in *JNES*, xxiv [1965], 274-84*).

b. Days since the epoch (*aṣl*). In order to convert dates from one calendar into another, it is necessary to calculate the number of days between the epoch and a given date. This is done by summing the days of the completed (*tāmm*) years, the days of the completed months of the current (*nāḳiṣ* "incomplete" or *munkasir* "broken") year, and the day of the current month. Conversely, it will be necessary to convert a given number of days since the epoch into the corresponding date, which is done by first computing the number of completed years and then distributing the remaining days over the months of the current year.

In many *zīdjs*, the number of days in a given number of completed years is called the *aṣl* ("bases"). The computation of the *aṣl* and, conversely, of the number of completed years from a given number of days since the epoch, are discussed below, examples being given in section c., *Conversions*. Whereas in *zīdjs* all calculations are written out in words, here the following modern notation will be used: a denotes the *aṣl*, c the number of days that have elapsed in the current year (including the current day), d the total number of days that have elapsed since the epoch (including the current day), and C the number of completed years. The following subscripts will be appended to these symbols: H for Hidjra, A for Alexander (Seleucid era), and Y for Yazdigird. All divisions operate with whole numbers, usually discarding a possible remainder. When the remainder is used it will be denoted by r.

Now, for a given number of completed years C, the *aṣl* a is calculated in the following way:

Arabic calendar:

$$a_H = (C_H \times 10631 + 14)/30 \quad (1)$$

Persian calendar:

$$a_Y = C_Y \times 365 \quad (2)$$

Byzantine calendar:

$$a_A = (C_A \times 1461 + 1)/4 \quad (3)$$

It can be noted that all three operations are roughly a multiplication by the average year length. The constants 14 and 1 which are added in the calculations for the Arabic and Byzantine calendars are required in order to have the result increase by an extra day precisely when a leap year is encountered. To obtain the variant of the Arabic calendar in which the fifteenth year of each cycle is a leap year instead of the sixteenth, the constant 14 should be replaced by 15. Note that, instead of adding a constant and then discarding the remainder of the division, one may define a rounding rule for the remainder. For instance, equivalent to the above, the Arabic *aṣl* can be found as $(C_H \times 10631)/30$, where a remainder from 1 to 15 (14 if the fifteenth year of each cycle is a leap year) is discarded and a remainder from 16 (15) to 29 is made into an extra day. For the Byzantine cal-

endar, the remainder of the division ($C_H \times 1461$)/4 should be discarded if it is equal to 1 or 2 and made into an extra day if it is 3.

In most *zīdjs* the rules for the calculation of the *aṣl* are not exact. Often the addition of a constant for the Arabic and Byzantine calendar is disregarded or the rounding rule presented is ambiguous, producing results which may be off by a day. Of the *zīdjs* listed in Table 1 only those by Ḥabash al-Ḥāsib and al-Bīrūnī take extra care to present exact rules.

After the *aṣl* has been determined, the total number of days since the epoch, *d*, can be computed by adding the lengths of the respective completed months of the current year and the day of the current month.

Conversely, in order to calculate the number *C* of years that have been completed on day *d* reckoned from the epoch, the following rules can be used:

Arabic calendar:

$$C_H = (30 \times d_H - 15)/10631 \quad (4)$$

Persian calendar:

$$C_Y = (d_Y - 1)/365 \quad (5)$$

Byzantine calendar:

$$C_A = (4 \times d_A - 2)/1461 \quad (6)$$

In this case, the operations are roughly a division by the average year length and constants are subtracted in all three calculations in order to obtain the correct answer also for the first and last day of every year. For the variant of the Arabic calendar in which the fifteenth year of each cycle is a leap year instead of the sixteenth, 16 should be subtracted instead of 15. The remaining days of the current year, *c*, can be found from the remainder *r* of the above divisions in the following way:

Arabic calendar: $c_H = r_H/30 + 1 \quad (7)$

Persian calendar: $c_Y = r_Y + 1 \quad (8)$

Byzantine calendar: $c_A = r_A/4 + 1 \quad (9)$

(the remainders of the divisions by 30 and 4 are discarded). Note that the results are equal to $d - a$ if *a* denotes the *aṣl* corresponding to the number of completed years *C* obtained above. The rules found in *zīdjs* for the calculation of the number of completed years and the day of the current year from the number of days since the epoch generally appear to be even less exact than those for the *aṣl*.

c. Conversions. The explanation in *zīdjs* of the conversion of dates from one calendar into another varies from convenient shortcuts for particular problems, especially in early *zīdjs*, via extensive theoretical expositions as found, for instance, with Ibn Yūnus, to brief general explanations supplementing the rules for using the tables, in particular in later Persian *zīdjs*.

Using the rules presented in the previous section the conversion of dates can be performed in a general and straightforward way. First calculate the number of days from the epoch of the given calendar to the given date. Then add or substract the number of days between the given epoch and the desired epoch (Table 2) to obtain the number of days from the epoch of the desired calendar to the given date. Finally, transform these into completed years, completed months and the day of the current month in the desired calendar.

Example: Convert 24 Ramaḍān 254 Hidjra into the corresponding Byzantine date.

[1] According to formula (1), the *aṣl* of 253 completed Arabic years is (253 × 10631 + 14)/30 = 89655. (As usual, the remainder of the division is discarded.) (The same result can be obtained by taking 8 × 10631 days for the eight completed cycles of thirty Arabic years and then adding 13 × 354 for the remaining thirteen completed years plus 5 for the leap days accumulated during these thirteen years.) Since Ramaḍān is the ninth month of the Arabic year and each two months number 59 days, the given date is the (4 × 59 + 24 =) 260th day of the year 254 Hidjra. Adding this number to the *aṣl*, we obtain 89915 for d_H, the total number of days since the Hidjra epoch (including the given day).

[2] Now d_A, the total number of days from the Alexander epoch up to (and including) the given date, is determined by adding the difference in days between the two epochs as found in Table 2 to d_H: $d_A = 89915 + 340700 = 430615$. (We thus assume that the given Hidjra date is astronomical; in practice, this will have to be verified on the basis of the week day.)

[3] The number of completed Byzantine years is obtained according to formula (6): $C_A = (4 \times 430615 - 2)/1461 = 1178$ ($r = 1400$), and the remaining days of the current year 1179 Alexander using formula (9): $c_A = r/4 + 1 = 351$. Because 1179 leaves a remainder three when divided by four, the current year is a leap year and Shubāṭ has 29 days. By noting that the first eleven months of a Byzantine leap year number 336 days (simply add the numbers of days or subtract the length of the last month Aylūl from 366), we find that the desired date is the (351 − 336)th day of the twelfth month, i.e. 15 Aylūl 1179 Alexander.

In early *zīdjs* in particular, actual date conversions were not usually carried out by the above general rule, which may involve very large numbers, but by shortcuts based on expressions for the differences between the epochs in years and days. Examples of such expressions are:

– The (astronomical) Hidjra epoch falls 932 Byzantine years and 287 days after the Alexander epoch.

– The Yazdigirdī epoch occurs 259 days after the beginning of 943 Alexander or 989 days after the beginning of 941 Alexander. Since reckoning from 943 Alexander the 1st, 5th, 9th, ... years are leap years instead of the 3rd, 7th, 11th, ..., the constant in formula (6) has to be changed to −4 in order to produce the correct number of completed Byzantine years since the beginning of 943 Alexander. When the beginning of the year 941 is used, the formula need not be changed.

Example: Convert 2 Kānūn II 1168 Alexander into the corresponding Hidjra date.

[1] The Byzantine New Year just preceding the Hidjra epoch is that of the year 933 Alexander. According to formula (3), the number of days of the Byzantine years completed since the beginning of this year is (1168 − 933) × 1461 + 1)/4 = 85834. Adding to this the number of days in the current year, 31 + 30 + 31 + 2 = 94, we obtain 85928 days from the beginning of 933 Alexander until the given date.

[2] The number of days from the (astronomical) Hidjra epoch to the given date is 287 less, i.e. 85641.

[3] The number of completed Arabic years is now found by formula (4): $C_H = (30 \times 85641 - 15)/10631 = 241$ ($r = 7144$). The days of the current year are then obtained using formula (7): $c_H = r/30 + 1 = 239$. These fill up 8 completed months (4 × 59 = 236 days), leaving 3 days in the ninth month. Thus the desired Arabic date is 3 Ramaḍān 242 Hidjra.

As we have seen above, the rules used for date conversions in *zīdjs* are often not exactly formulated. Therefore it is necessary to check the result by means of the week day of the given and the calculated date (see below, d.). Note that, in order to facilitate the conversion of historical dates, many *zīdjs* contain extensive regnal lists of caliphs and other rulers indicating the beginning and duration of their reigns.

d. Madākhil. A *madkhal* (pl. *madākhil*, literally "entrance", translated as *feria, nota* or *signum*) is the week day of the first day of a year or month or of a particular date, represented by a number from 1 (Sunday), 2 (Monday), till 7 (Saturday). In some *zīdjs*, the number is given a separate name, *'alāma* ("indicator"). Most *zīdjs* contain both rules and tables for the calculation of *madākhil*, which, as we have seen, are particularly important for checking the results of date conversions.

Most simply, the *madkhal* of a given year is calculated by adding the *aṣl* of the completed years C to the *madkhal* of the epoch (cf. Table 2) and casting off multiples of seven. For example, for the Hidjra year 254 we add the *aṣl* of the completed years found above, 89655, to 5 (Thursday), the *madkhal* of the astronomical epoch. Discarding multiples of seven we obtain 4, signifying that 1 Muḥarram 254 Hidjra was a Wednesday.

For the Persian and Byzantine calendars we find direct methods for calculating the *madkhal* based on the fact that the number of days of an (ordinary) year is $52 \times 7 + 1$. Thus the *madkhal* of a Persian year is simply found as $(3 + C_Y) \bmod 7$ ($m \bmod n$ denotes the remainder of the division m/n; note that 3 is the *madkhal* of the Yazdigird epoch). Similarly, the *madkhal* of a Byzantine year is obtained as $(2 + C_A + (C_A + 1)/4) \bmod 7$, where the remainder of the division by 4 is discarded.

In order to obtain the *madākhil* of the following months, two and one are added alternately in the case of the Arabic calendar, two for each month and five for the extra days in the case of the Persian calendar, and the respective month lengths minus 28 in the case of the Byzantine calendar. To obtain the *madkhal* of the current date, the day of the current month minus one should be added to the *madkhal* of the current month. After each addition multiples of seven are discarded.

e. Tables. In practically all *zīdjs*, the chronological chapter contains a set of mathematical tables which facilitate the calculations described above. Among these tables the following appear to be standard:

(1) *Tables for the calculation of the* aṣl. Such tables display in three subtables, either in sexagesimal or in decimal notation, the number of days corresponding to groups of years (*al-sinūn al-madjmū'a*), individual years (*al-sinūn al-mabsūṭa*), and months. For instance, for the Arabic calendar the number of days in multiples of 30 years and in 1, 2, ..., 30 single years will be given. Some authors of *zīdjs* combine more than one calendar in a single table by using a sexagesimal set-up with groups of 60 years. In each case, the number of days from the epoch to a given date is obtained by adding the day of the current month to the sum of the appropriate values from the three subtables.

(2) *Direct conversion tables.* From this type of table the dates in one or more calendars corresponding to a set of (often equidistant) beginnings of years in a base calendar can be read off directly. Intermediate dates can then be found readily by adding the years and days in the desired calendar corresponding to the remaining single years and months in the base calendar, which are tabulated in separate subtables, as well as the elapsed days of the current month. For instance, when converting 24 Ramaḍān 254 Hidjra into the corresponding Byzantine date, one may read directly from the table that 1 Muḥarram 241 Hidjra corresponds to the 233rd day of the year 1166 Alexander. Furthermore, one finds that the first thirteen years of the cycle of thirty Arabic years are equal to 12 Byzantine years plus 224 days, and the Arabic months before Ramaḍān to 236 days. Together with the elapsed days of the current month $(24 - 1)$ this yields the $(233 + 224 + 236 + 23 =)$ 716th day since the beginning of the year 1178 Alexander, i.e. the 351st day or 15 Aylūl of 1179 Alexander.

(3) *Tables for the calculation of* madākhil. Tables for *madākhil* make use of the fact that the same dates recur on the same week days after 210 years in the Arabic calendar, 7 in the Persian, and 28 in the Byzantine. The first step in the determination of a *madkhal* is therefore to cast off multiples of the length of the cycle concerned from the given year. For the Persian and Byzantine calendars, most *zīdjs* contain a double-argument table from which the initial week day can be read off directly for every month of every year within the respective cycles. In the case of the Arabic calendar, the initial week days of years 1, 2, ..., 210 are displayed together with a constant for every month which should be added to the initial week day of the given year. In early *zīdjs*, this type of table is often found under the name *al-djadwal al-mudjarrad.*

Besides the types discussed here, many *zīdjs* contain special tables for more complicated calendars such as the Djalālī and the Chinese-Uighur, and tables of feasts and fasts in various calendars. Islamic tables for the determination of the Great Lent and Easter have been analysed in G.A. Saliba, *Easter computation in medieval astronomical handbooks*, in *al-Abḥāth*, xxiii (1970), 179-212*.

f. Various. In early *zīdjs* in particular, we find approximate methods for chronological calculations, such as tables for Arabic *madākhil* based on a cycle of eight years. In the manuscript of the *zīdj* of Ḥabash al-Ḥāsib extant in Berlin, some problems are discussed of the types "Find a date for which the Alexander year is equal to the Hidjra year" or "Find an Alexander year in which Farwardīn occurs twice", whereas al-Bīrūnī presents solutions for problems of "mixed dates", in which day, month, and year are given in three different calendars.

Bibliography: Much of the information contained in this article has been obtained from an inspection of primary sources and has not previously been published. The publications already mentioned deal with specific topics related to era chronology in *zīdjs*. General literature concerning calendars in the Islamic world has been listed at the end of 1. above; the *Bibl.* below presents some additions and various works particularly useful in relation to era chronology in *zīdjs*. Entries with an asterisk were reprinted in E.S. Kennedy *et al., Studies in the Islamic exact sciences* (*SIES*), Beirut 1983.

For more information about *zīdjs*, the reader is referred to ZĪDJ and to Kennedy, *A survey of Islamic astronomical tables*, in *Trans. of the American Philosophical Society*, N.S. lxvi/2 (1956), 123-77 (repr. 1989). Many important investigations of parts of *zīdjs* are contained in *SIES.*

The standard work on general mathematical chronology is still F.K. Ginzel, *Handbuch der mathematischen und technischen Chronologie*, 3 vols. Leipzig 1906-14, repr. Leipzig 1958. A valuable overview of era chronology in the Islamic world is presented in S.H. Taqizadeh, *Various eras and calendars used in the countries of Islam*, in *BSOS*, ix (1937-9), 903-27, and x (1939-42), 107-32. Additions to Sachau's edition of al-Bīrūnī's *Chronology* can be found in K. Garbers, *Eine Ergänzung zur Sachauschen Ausgabe von al-Bīrūnīs Chronologie orientalischer Völker*, in *Isl.*, xxx (1952), 39-80.

Conversions of dates have traditionally been performed with the *Wüstenfeld-Mahler'sche Vergleichungstabellen*, revised B. Spuler and J. Mayr, Wiesbaden 1961, or with R. Schram, *Kalendariographische und chronologische Tafeln*, Leipzig 1908. Now programs for various types of computers are available, partially from the Internet. The DOS programme *CALH* by B. van Dalen (version 1.2, 1997) includes most of the calendars and epochs described in this article.

(B. VAN DALEN)

II. HISTORICAL WRITING

1. In the Arab world.

Ta'rīkh is the most common Arabic word (widely used in New Persian and the Turkic languages as well) for "history, historiography", in the sense of an ordered account of actual events. The word is certainly not archaic and is only clearly attested by the mid-2nd/8th century, when it first appears in the titles of works recounting past events. By the late 3rd/9th century, *ta'rīkh* had become the most common word for this genre of writing. Other terms for historiography were also current, however. Indeed, *akhbār* ("reports, narratives") may be older and in any case was very widely used down to early modern times. Until the mid-3rd/9th century, in fact, works of history were as likely to be identified by their subject matter—e.g. *sīra* (biography), *maghāzī* [*q.vv.*] (campaigns of the Prophet), *futūḥ* (conquests)—as by a word naming the literary genre or class of knowledge to which they belonged. Before the late 19th century, *ta'rīkh* seems to refer only to a kind of writing or knowledge, but in modern Arabic *ta'rīkh* (like English "history", German *Geschichte*, etc.) is equivocal, comprising both events *per se* and the verbal representation of these events.

The etymology of *ta'rīkh* is uncertain, since it is not found in other Semitic languages. Rosenthal relates it to South Arabian *wrkh* "moon" and "month", with a hypothetical derivation *tawrīkh* "determining dates by observing the moon" (it should be also noted that the *Sabaic dictionary* of A.R.L. Beeston *et alii*, 162, further gives the meaning "date" for *wrḫ*, and that the Arabic lexicographers list *tawrīkh* as a variant of *ta'rīkh*, see e.g. *LʿA*, s.v. *'-r-kh* and *w-r-kh*). The original denotation of *ta'rīkh* is in fact "date" or "dating" [see I. 1, above]. When it is attached to literary compositions, then, it should denote a chronologically-ordered account of events. The latter does, in fact, represent the earliest usage (occasionally in the expanded form *al-ta'rīkh ʿalā 'l-sinīn*), but the word was rapidly extended to include any record of events or persons, however organised; e.g. by the mid-3rd/9th century we have al-Bukhārī's *al-Ta'rīkh al-kabīr*, an alphabetically-arranged dictionary of *ḥadīth* transmitters which contains very few dates. In view of this fluidity in language, no effort will be made in what follows to distinguish between *ta'rīkh*, *akhbār*, and other words used for historical writing.

(a) Origins to *ca.* 950.

The bulk of early Arabic historical texts (or more precisely, texts which claim to be early) have not come down to us in their original form but are only preserved as citations and paraphrases in a corpus of digests and compilations assembled between the mid-3rd/9th century and the early 4th/10th century. (The earliest biographies of the Prophet form an important exception, since they were written or redacted in their present form by the early 3rd/9th century—i.e. about half to three-quarters of a century before extant historical texts on other subjects.) It is true that much apparently archaic material can be dug out of the encyclopaedias and biographical dictionaries of later centuries, but this does not alter the nature of the problem. Given the present state of the evidence, then, we can determine what Arabic historiography had become by the end of Islam's first three centuries, but recovering the earlier phases of historical thought and writing has proved an extremely elusive problem. A mountain of research on this issue has yet to produce results which command general assent.

The historical works of the late 3rd/9th and early 4th/10th centuries represent the culmination of historical writing in early Islam in two respects. First, they synthesised a vast corpus of narratives which had been collected and put into circulation over the previous 200 years. Second, they defined the religious and political meaning of these narratives in a manner that later Muslims found nearly definitive for many centuries. The syntheses composed around the beginning of the 4th/10th century attained such prestige that few later historians made any effort to investigate anew the first 200 years of Islamic history; they were usually content to copy and abridge the "classical" syntheses, in particular the vast chronicle of Abū Djaʿfar al-Ṭabarī (d. 310/923 [*q.v.*]). As a result, most of the older sources ceased to be copied or read in any systematic way, though many of them were still extant and consulted (rather haphazardly) down into Mamlūk times.

There is a second reason for the "fossilisation" of historiography dealing with the first two centuries of Islam: after the mid-4th/10th century, the issues and topics (and hence the texts which embodied them) which had long been the focus of historiographic concern no longer seemed highly relevant. Since 132/750 the crucial issue for every historian had been the stance he ought to take toward the ʿAbbāsids. Should they be presented as usurpers of ʿAlid (or even Umayyad) rights, as legitimate successors to an unbroken caliphal succession stretching back to Abū Bakr, or as the restorers of the purity of Muḥammad's *umma*? On one's resolution of this problem rested his interpretation of Islamic history for the century and a half before the ʿAbbāsid Revolution.
